Nel fondo si tiene conto dei principali impatti negativi delle decisioni di investimento sui fattori di sostenibilità, come definito nei seguenti gruppi di temi riportati nell'Allegato 1 della Tabella I del Regolamento (UE) 2022/1288 del Parlamento europeo e del Consiglio del 6 aprile 2022: emissioni di gas serra, biodiversità, acqua, rifiuti nonché problematiche sociali e concernenti il personale.

I gestori del portafoglio si affidano per l'identificazione, la misurazione e la valutazione degli effetti negativi sulla sostenibilità alle analisi esterne delle agenzie di ESG, i documenti pubblici delle imprese nonché a notizie comunicate in dialoghi diretti con i dirigenti delle rispettive imprese. Gli effetti negativi sulla sostenibilità possono essere così analizzati esaurientemente e considerati nelle decisioni di investimento. Sostanzialmente nella valutazione della sostenibilità degli investimenti si ponderano diversi aspetti della sostenibilità in funzione della loro rilevanza per il rispettivo modello di business. Ad esempio, la rilevanza di emissioni di gas serra in settori ad alta intensità di CO2 è decisamente superiore rispetto a settori con intensità di CO2 minore.

Il reporting periodico dei fattori di sostenibilità avviene in base ai dati non elaborati forniti dall'agenzia di rating Sustainalytics.

37

Quali sono stati i principali investimenti di questo prodotto finanziario?

Quadro medio di quattro scadenze (31.03.2022; 30.06.2022; 30.09.2022 e 31.12.2022):

L'elenco comprende i seguenti investimenti che hanno costituito la quota maggiore degli investimenti del prodotto finanziario durante periodo di riferimento, ossia tra il 01.01.2022 e il 31.12.2022:

Investimenti di maggiore entità	Settore	in % di attivi	Paese
Bunzl Plc.	ATTIVITÀ PROFESSIONALI, SCIENTIFICHE E TECNICHE	2,7775	Gran Bretagna
TJX Companies Inc.	COMMERCIO ALL'INGROSSO E AL DETTAGLIO; RIPARAZIONE DI AUTOVEICOLI E MOTOCICLI	2,6175	Stati Uniti d'America
Amgen Inc.	ATTIVITÀ PROFESSIONALI, SCIENTIFICHE E TECNICHE	2,555	Stati Uniti d'America
Industria de Diseño Textil S.A.	ATTIVITÀ PROFESSIONALI, SCIENTIFICHE E TECNICHE	2,545	Spagna
General Mills Inc.	ATTIVITÀ MANIFATTURIERE/	2,49	Stati Uniti d'America
Dte. Börse Commodities GmbH/Gold Unze 999 Zert. v.07(2199)	ATTIVITÀ FINANZIARIE E ASSICURATIVE	2,3975	Germania
BB Biotech AG	ATTIVITÀ FINANZIARIE E ASSICURATIVE	2,3775	Svizzera
Berkshire Hathaway Inc.	ATTIVITÀ FINANZIARIE E ASSICURATIVE	2,35	Stati Uniti d'America
Medtronic Plc.	ATTIVITÀ MANIFATTURIERE/	2,3325	Irlanda
VISA Inc.	ATTIVITÀ FINANZIARIE E ASSICURATIVE	2,28	Stati Uniti d'America
Salesforce Inc.	INFORMAZIONI E COMUNICAZIONI	2,1975	Stati Uniti d'America

Vontier Corporation	ATTIVITÀ MANIFATTURIERE/	2,1925	Stati Uniti d'America
Morningstar Inc.	ATTIVITÀ FINANZIARIE E ASSICURATIVE	2,055	Stati Uniti d'America

Samsung Electronics Co. Ltd. -VZ-	ATTIVITÀ MANIFATTURIERE/	1,97	Corea del Sud

Qual è stata la quota degli investimenti in materia di sostenibilità?

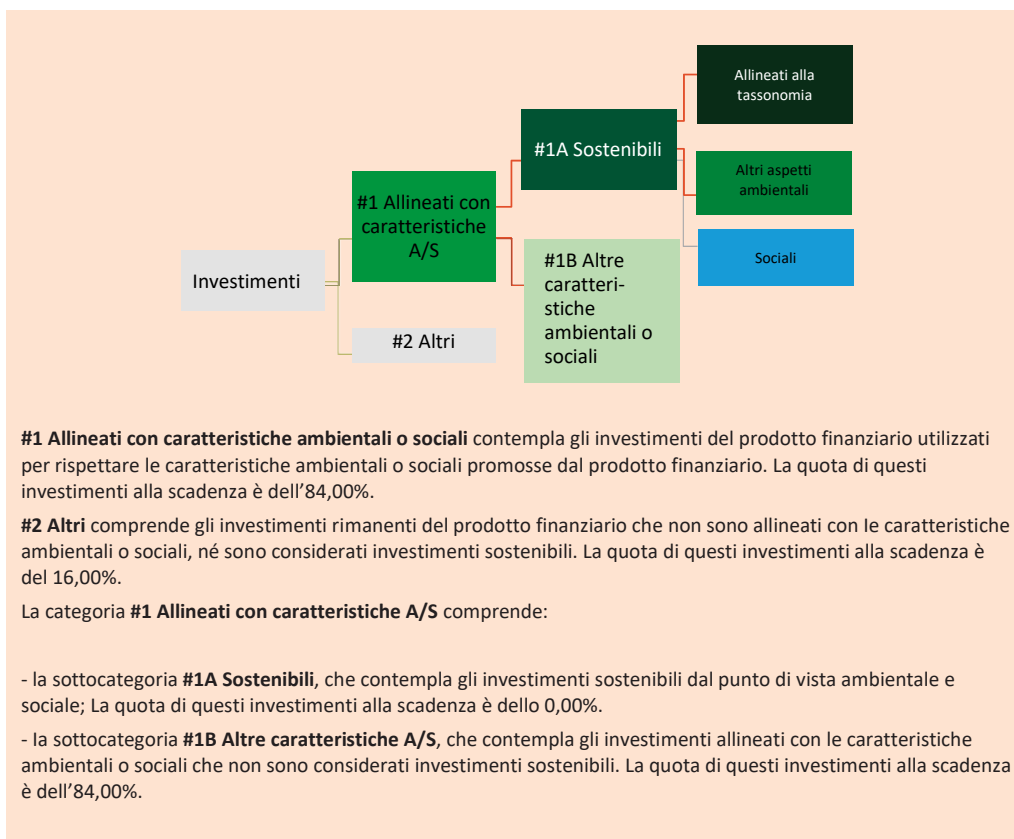

38

L'allocazione degli attivi descrive la quota di investimenti in attivi specifici.

Le attività allineate alla tassonomia sono espresse in percentuale di:

- **fatturato**: riflette il carattere ecologico attuale delle imprese beneficiarie degli investimenti;
- **spese in conto capitale (CapEx)**: rivelano gli investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, utili per la transizione verso un'economia verde;
- **spese operative (OpEx)**: illustrano le attività operative verdi delle imprese beneficiarie degli investimenti.

● Qual è stata l'allocazione degli attivi?

● **In quali settori economici sono stati effettuati gli investimenti?**

Quadro medio di quattro scadenze (31.03.2022; 30.06.2022; 30.09.2022 e 31.12.2022):

Settore	% di attivi
Banche	12,23%
Software e servizi	11,61%
Altro	8,13%
Prodotti e servizi finanziari diversificati	7,10%
Beni strumentali	6,29%
Vendita al dettaglio	6,25%
Servizi sanitari: attrezzature e servizi	5,67%
Farmaceutica, biotecnologie e scienze biologiche	5,60%
Alimenti, bevande e tabacco	4,71%
Mezzi di comunicazione e intrattenimento	4,61%
Tecnologia hardware e apparecchiature	4,34%
Assicurazioni	2,56%
Prodotti per la casa e l'igiene personale	2,34%
Servizi al consumatore	2,19%
Materiali	1,84%
Investimento immobiliare	1,19%
Automezzi e componenti	0,21%

39

Per quanto attinente alla conformità alla tassonomia dell'UE, i criteri per i gas fossili comprendono la limitazione delle emissioni e il passaggio a energia rinnovabile o combustibili a basse emissioni di CO2 entro la fine del 2035. Questi criteri per l'energia nucleare comprendono norme esaustive per la sicurezza e lo smaltimento dei rifiuti.

In quale misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Lo scopo principale di questo fondo consiste nel perseguire le caratteristiche ambientali/sociali. Il Fondo pertanto non si impegna attualmente a investire una quota minima del suo patrimonio complessivo in attività economiche ecosostenibili conformemente all'articolo 3 del regolamento sulla tassonomia dell'UE (2020/852). Ciò riguarda eventualmente dati relativi a investimenti in attività economiche classificate conformemente all'articolo 16 o 10 paragrafo 2 del regolamento sulla tassonomia dell'UE (2020/852) come attività abilitanti o attività di transizione.

● **Il prodotto finanziario investe in attività di gas fossile e/o energia nucleare¹ conformi alla tassonomia dell'UE?**

- Si:**
 in gas fossili **in energia nucleare**
 No

I due grafici che seguono mostrano in verde la percentuale minima di investimenti allineati alla tassonomia dell'UE. Poiché non esiste una metodologia adeguata per determinare l'allineamento delle obbligazioni sovrane* alla tassonomia, il primo grafico mostra l'allineamento alla tassonomia in relazione a tutti gli investimenti del prodotto finanziario comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

40

* Ai fini dei grafici di cui sopra, per «obbligazioni sovrane» si intendono tutte le esposizioni sovrane.
 ** La quota degli investimenti conformi alla tassonomia misurata per ricavi, CapEx e OpEx non può essere misurata sulla base dei dati disponibili nel mercato al momento attuale.
 In questo grafico rientra l'identificazione per il settore di gas fossili ed energia nucleare. Gli investimenti effettuati in questi settori ammontano rispettivamente allo 0,00%.

Le attività abilitanti consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale.

Le attività di transizione sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano, tra l'altro, livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

● **Qual è la quota minima di investimenti in attività transitorie e abilitanti?**

Attività transitorie: 0%
 Attività abilitanti: 0%

La quota degli investimenti conformi alla tassonomia confluiti in attività di transizione e abilitanti non può essere misurata sulla base dei dati disponibili nel mercato al momento attuale. Si presuppone che questi dati saranno disponibili in occasione della prossima chiusura dell'esercizio.

¹ Le attività nel settore dei gas fossili e/o dell'energia nucleare sono conformi alla tassonomia dell'UE solo se contribuiscono alla mitigazione del cambiamento climatico ("Protezione del clima") e non danneggiano seriamente alcun obiettivo della tassonomia dell'UE; vedasi spiegazioni nel margine a sinistra. I criteri completi per attività economiche conformi alla tassonomia dell'UE nel settore del gas fossile e dell'energia nucleare sono stabiliti nel Regolamento delegato (UE) 2022/1214 della Commissione.

- **Qual è l'esito del raffronto della percentuale di investimenti che erano allineati alla tassonomia dell'UE rispetto ai precedenti periodi di riferimento?**

n.d.

Qual è la quota minima di investimenti sostenibili con un obiettivo ambientale che non sono allineati alla tassonomia dell'UE?

Il prodotto finanziario promuove caratteristiche ambientali/sociali, ma non effettuerà alcun investimento sostenibile

La quota minima di investimenti sostenibili con un obiettivo ambientale che non sono allineati alla tassonomia dell'UE ammonta allo 0%

Qual è la quota minima di investimenti socialmente sostenibili?

Il prodotto finanziario promuove caratteristiche ambientali/sociali, ma non effettuerà alcun investimento sostenibile

La quota minima di investimenti sostenibili con un obiettivo ambientale che non sono allineati alla tassonomia dell'UE ammonta allo 0%

41

Quali investimenti sono compresi nella categoria "#2 Altri", qual è il loro scopo ed esistono garanzie minime di salvaguardia ambientale o sociale?

Sono compresi strumenti di copertura, investimenti a scopo di diversificazione (ad esempio materie grezze e altri fondi d'investimento), investimenti per i quali non sono disponibili dati e mezzi liquidi.

"#2 Altri" sono gli investimenti intesi particolarmente alla diversificazione del fondo e alla destinazione della liquidità per la realizzazione degli scopi descritti nella politica d'investimento.

Gli indicatori di sostenibilità utilizzati per misurare il raggiungimento delle singole caratteristiche ambientali o sociali di cui al punto "#1 Investimenti orientati a caratteristiche ambientali o sociali", non sono applicati sistematicamente riguardo al "#2 Altri". Per "#2 Altri" non esiste alcuna protezione minima.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Una misura essenziale riguardava la considerazione delle esclusioni esaustive che vietano permanentemente al fondo numerosi investimenti considerati in generale come critici. Nel fondo si sono esclusi concretamente nel periodo di riferimento investimenti in imprese o prodotti fabbricati dalle imprese che violano le convenzioni delle Nazioni Unite in merito alle munizioni a grappolo, armi chimiche e altre armi destinate a stermini di massa o finanziano tali imprese/prodotti. Altre esclusioni relative a prodotti subentrano quando il fatturato delle imprese dalla fabbricazione e/o distribuzione di determinati beni avevano superato le seguenti dimensioni: carbone (25%), armamenti (10%), armi leggere (10%), intrattenimento per adulti (10%), tabacco (5%). Sono stati inoltre vietati investimenti in imprese per le quali sono state accertate gravi violazioni dei Principi del Global Compact ONU e che non offrivano alcuna prospettiva convincente di rimediare alla situazione. Nel caso di titoli sovrani, erano vietati investimenti in titoli emessi da paesi che nell'analisi annuale della Freedom House (www.freedomhouse.org) erano stati dichiarati come "non liberi".

Un'altra misura essenziale era il processo sostanziale di selezione degli investimenti azionari e obbligazionari per il fondo. A tale proposito il focus resta su imprese che dimostrano già una bassa esposizione a rischi ESG essenziali, o che con la loro attività gestiscono attivamente gli inevitabili rischi ESG e pertanto li riducono.

Per giudicare i rischi ESG rilevanti per le singole imprese nonché valutare la gestione attiva dei rischi ESG all'interno delle imprese, si utilizzano le analisi dell'agenzia di rating esterna Sustainalytics.

Il Punteggio del rischio ESG calcolato da Sustainalytics analizza tre fattori, che sono determinanti per giudicare il rischio: la direzione delle società, i rischi ESG concreti a livello di settore e le specifiche contromisure adottate dalle società e rischi idiosincratici (controversie nelle quali sono coinvolte le società).

Il giudizio relativo al governo d'impresa è una caratteristica importante per valutare i rischi ESG e finanziari collegati a un investimento.

Nel caso di caratteristiche ambientali e sociali, l'analisi mira ai rischi rilevanti per il settore. Nelle aziende di produzione, oltre ai fattori sociali rappresenta un fattore di rischio anche l'uso delle risorse. L'analisi riguarda pertanto caratteristiche ambientali, quali ad esempio le emissioni e l'intensità dei gas serra, la protezione delle risorse naturali, in particolare dell'acqua, il contrasto all'impermeabilizzazione del suolo e la protezione della biodiversità. Le attività delle imprese di servizi hanno effetti nettamente inferiori sull'ambiente, mentre sono in primo piano caratteristiche sociali, che comprendono, ad esempio, condizioni di lavoro eque e remunerazione adeguata, salute e sicurezza sul posto di lavoro, prevenzione della corruzione, delle frodi e controlli sulla qualità del prodotto.

Al centro dell'attenzione del fondo vi è pertanto la considerazione dei rischi ambientali e sociali rilevanti, che possono variare da un'impresa all'altra. Il fondo non ha cercato così solo di evitare rischi ambientali investendo in società i cui rischi ambientali sono già bassi in base alla loro attività, bensì ha considerato anche società che con una politica di gestione adeguata hanno limitato e ridotto i rischi ambientali legati al loro

modello di attività.

Un'altra misura riguardava l'impegno con le società partecipate del fondo. Erano compresi colloqui con i rappresentanti delle imprese, nei quali ad esempio si discuteva e sollecitava il miglioramento di determinati aspetti della buona gestione aziendale. Inoltre è stato utilizzato come importante mezzo di comunicazione soprattutto il diritto al voto nelle assemblee generali annuali. Mentre i colloqui consentono uno scambio di opinioni, di regola non hanno alcun carattere formalmente vincolante. L'esercizio del diritto di voto in un'assemblea generale annuale ha invece anche queste caratteristiche. È pertanto uno strumento efficace per influire sulla direzione delle imprese. Altri dettagli per l'applicazione di queste misure sono disponibili sia nelle Linee guida per l'esercizio del diritto di voto sia nella Relazione per l'esercizio del diritto di voto sul sito web della società di gestione del fondo (<https://www.ethenea.com/dokumente-zu-esg/>).

42

Gli indici di riferimento sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

● ***In che modo l'indice di riferimento differisce da un indice generale di mercato?***

Non è stato designato alcun indice di riferimento per determinare se il fondo sia allineato o no alle caratteristiche ambientali e/o sociali che promuove.

● ***Qual è stata la prestazione di questo prodotto finanziario in relazione agli indicatori di sostenibilità per determinare l'allineamento dell'indice di riferimento con le caratteristiche ambientali o sociali promosse?***

Non è stato designato alcun indice di riferimento per determinare se il fondo sia allineato o no alle caratteristiche ambientali e/o sociali che promuove.

● ***Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?***

Non è stato designato alcun indice di riferimento per determinare se il fondo sia allineato o no alle caratteristiche ambientali e/o sociali che promuove.

● ***Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice generale di mercato?***

Non è stato designato alcun indice di riferimento per determinare se il fondo sia allineato o no alle caratteristiche ambientali e/o sociali che promuove.

Identificativo della persona giuridica: **EUROMOBILIARE INTERNATIONAL FUND SICAV**

Caratteristiche ambientali e/o sociali

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?	
<input type="radio"/> <input type="radio"/> <input type="radio"/> Si	<input type="radio"/> <input checked="" type="radio"/> No
<p><input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo ambientale: _____ %</p> <ul style="list-style-type: none"> <input type="checkbox"/> in attività considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE <p><input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo sociale: _____ %</p>	<p><input type="checkbox"/> Ha promosso caratteristiche ambientali/sociali (A/S) e pur non avendo come obiettivo un investimento sostenibile, aveva una quota del(lo) _____ % di investimenti sostenibili</p> <ul style="list-style-type: none"> <input type="checkbox"/> con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> con un obiettivo sociale <p><input checked="" type="checkbox"/> Ha promosso caratteristiche A/S, ma non ha effettuato alcun investimento sostenibile</p>

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Nel periodo di riferimento (1 gennaio 2022 – 31 Dicembre 2022) il Comparto ha promosso le caratteristiche ambientali e sociali secondo quanto previsto nell'informativa pre-contrattuale resa disponibile al cliente ai sensi del SFDR, poichè:

- (i) ha investito in misura preponderante in società/emittenti che presentano caratteristiche sostenibili, secondo una strategia di investimento "Positive-tilt", limitando al contempo, gli investimenti in strumenti finanziari che non sono particolarmente sostenibili;
- (ii) non ha effettuato investimenti in società/emittenti giudicati come non "socialmente responsabili", tra le altre cose, a causa delle loro attività in determinati settori che hanno un impatto negativo sui fattori ESG.

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, purché tale investimento non arrechi danno significativo a nessun obiettivo ambientale o sociale e l'impresa beneficiaria degli investimenti segua prassi di buona governance.

La **tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non comprende un elenco di attività economiche socialmente sostenibili. Gli investimenti con un obiettivo ambientale potrebbero essere allineati o no alla tassonomia

Trasparenza della promozione delle caratteristiche ambientali o sociali (art. 11 Reg UE 2019/2088 SFDR) (segue)

**In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?**

Il Comparto non ha preso in considerazione i principali effetti negativi dei suoi investimenti sui fattori di sostenibilità nel periodo di riferimento.

Si anticipa che il Comparto ha iniziato in data 1 gennaio 2023 a prendere in considerazione tali effetti. Pertanto, il prossimo rendiconto darà evidenza anche di tali dati.

I Principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

**Quali sono stati i principali investimenti di questo prodotto finanziario?**

L'elenco comprende gli investimenti che hanno costituito la quota maggiore di investimenti del prodotto finanziario durante il periodo di riferimento, ossia: i primi 15 investimenti del Comparto che rappresentano il 34,16% del portafoglio del Comparto.

Informazioni aggiuntive (non certificate) (segue)

Trasparenza della promozione delle caratteristiche ambientali o sociali (art. 11 Reg UE 2019/2088 SFDR) (segue)

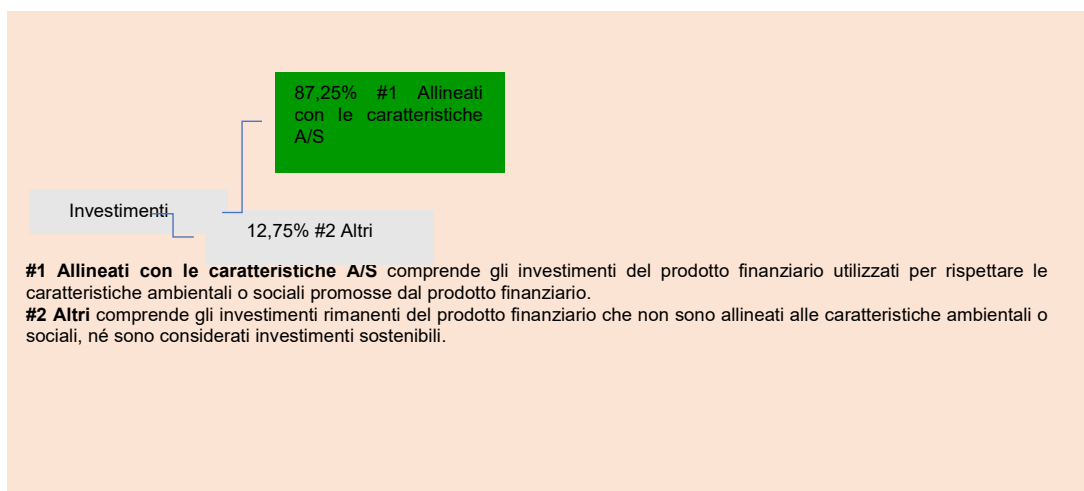

Qual è stata la quota degli investimenti in materia di sostenibilità?

Qual è stata l'allocazione degli attivi?

Nel periodo di riferimento, il Comparto ha investito il 87,25% degli attivi in strumenti finanziari (azioni, obbligazioni, strumenti del mercato monetario o OICR) aventi uno scoring superiore a C-.

La restante quota del 12,75% è stata investita in strumenti finanziari con uno scoring ESG basso o senza scoring, o depositi bancari o liquidità o derivati.

L' Asset allocation
Descrive la quota di investimenti in attività specifiche.

In quali settori economici sono stati effettuati gli investimenti?

Informazioni aggiuntive (non certificate) (segue)

Trasparenza della promozione delle caratteristiche ambientali o sociali (art. 11 Reg UE 2019/2088 SFDR) (segue)

Quali investimenti erano compresi nella categoria “Altri”, qual era il loro scopo ed esistevano garanzie minime di salvaguardia ambientale o sociale?

La categoria “Altri” comprende i seguenti investimenti:

- (a) 2,50% strumenti finanziari (obbligazioni, azioni, strumenti del mercato monetario o OICR) aventi uno *scoring* compreso tra D+ e D-;
- (b) 0% strumenti finanziari (obbligazioni, azioni, strumenti del mercato monetario o OICR) aventi uno *scoring* inferiore a D-;
- (c) 0% in strumenti finanziari derivati privi di *scoring* ESG;
- (d) 10,25% altre componenti inclusi i depositi bancari e la liquidità.

Per tali investimenti resta ferma l'applicazione della predetta politica di esclusione.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Al fine di ritenere soddisfatte le caratteristiche ambientali e sociali promosse dal Comparto, la SGR ha condotto un'attività di monitoraggio nei confronti degli emittenti e degli *asset manager* degli OICR in cui il Comparto ha investito durante il periodo di riferimento, in modo da assicurare il costante rispetto degli indicatori di sostenibilità.

Quali investimenti erano compresi nella categoria “Altri”? Qual era il loro scopo ed esistevano? Garanzie minime di salvaguardia ambientale o sociale?

La categoria “Altri” comprende i seguenti investimenti:

- (a) 0,29% strumenti finanziari (obbligazioni, azioni, strumenti del mercato monetario o OICR) aventi uno *scoring* compreso tra D+ e D-;
- (b) 1,48% strumenti finanziari (obbligazioni, azioni, strumenti del mercato monetario o OICR) aventi uno *scoring* inferiore a D-;
- (c) 1,12% in strumenti finanziari derivati privi di *scoring* ESG;
- (d) 1,48% altre componenti inclusi i depositi bancari e la liquidità.

Per tali investimenti resta ferma l'applicazione della predetta politica di esclusione.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Al fine di ritenere soddisfatte le caratteristiche ambientali e sociali promosse dal Comparto, la SGR ha condotto un'attività di monitoraggio nei confronti degli emittenti e degli *asset manager* degli OICR in cui il Comparto ha investito durante il periodo di riferimento, in modo da assicurare il costante rispetto degli indicatori di sostenibilità.

Informazioni aggiuntive (non certificate) (segue)

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, purché tale investimento non arrechi danno significativo a nessun obiettivo ambientale o sociale e l'impresa beneficiaria degli investimenti segua prassi di buona governance.

La **tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non comprende un elenco di attività economiche socialmente sostenibili. Gli investimenti con un obiettivo ambientale potrebbero essere allineati o no alla tassonomia

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Nel periodo di riferimento (1 gennaio 2022 – 31 Dicembre 2022) il Comparto ha promosso le caratteristiche ambientali e sociali secondo quanto previsto nell'informativa pre-contrattuale resa disponibile al cliente ai sensi del SFDR, poiché:

- (i) ha investito in misura preponderante in società che presentano rating ESG elevati, secondo una strategia di investimento "Best-in-Class";
- (ii) non ha effettuato investimenti in società che presentano rating ESG basso e in emittenti giudicati come non "socialmente responsabili", tra le altre cose, a causa delle loro attività in determinati settori che hanno un impatto negativo sui fattori ESG.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

Il Comparto non ha preso in considerazione i principali effetti negativi dei suoi investimenti sui fattori di sostenibilità nel periodo di riferimento.

Si anticipa che il Comparto ha iniziato in data 1 gennaio 2023 a prendere in considerazione tali effetti. Pertanto, il prossimo rendiconto darà evidenza anche di tali dati.

I Principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

Quali sono stati i principali investimenti di questo prodotto finanziario?

● ● <input type="checkbox"/> Si	● ● <input checked="" type="checkbox"/> No
<input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo ambientale : __% <ul style="list-style-type: none"> <input type="checkbox"/> in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> In attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo sociale : __%	<input checked="" type="checkbox"/> Ha promosso caratteristiche ambientali/sociali (A/S) e, pur non avendo come obiettivo un investimento sostenibile, aveva una quota del(lo) 30% di investimenti sostenibili <ul style="list-style-type: none"> <input type="checkbox"/> con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE <input checked="" type="checkbox"/> con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE <input checked="" type="checkbox"/> con un obiettivo sociale <input type="checkbox"/> Ha promosso caratteristiche A/S, ma non ha effettuato alcun investimento sostenibile

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Gli **indicatori di sostenibilità** misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

Il comparto ha soddisfatto le caratteristiche socioambientali promosse secondo la definizione fornita nell'informativa precontrattuale SFDR per il periodo. Il comparto ha promosso le caratteristiche socioambientali investendo in titoli di emittenti con caratteristiche ESG favorevoli. Le caratteristiche ESG favorevoli sono state determinate in riferimento ai rating ESG, che hanno tenuto conto di caratteristiche ambientali quali l'intensità carbonica, le emissioni di anidride carbonica, il risparmio energetico, la gestione delle acque e dei rifiuti e la biodiversità, oltre che di caratteristiche sociali quali la sicurezza dei prodotti, la catena di fornitura, la salute e la sicurezza e i diritti umani. Non sono stati designati benchmark di riferimento per poter conseguire le caratteristiche socioambientali promosse.

Qual è stata la prestazione degli indicatori di sostenibilità?

La performance degli indicatori di sostenibilità utilizzati dal comparto per misurare il raggiungimento delle caratteristiche socioambientali che ha promosso è stata:

- i) 98,75% il del comparto è stato investito in titoli di emittenti con caratteristiche ESG favorevoli ai sensi dei criteri d'investimento sostenibile (Sustainable Investing Framework) di Fidelity;
- ii) per quanto riguarda i suoi investimenti diretti, lo 0% del comparto è stato investito in titoli di emittenti con esposizione alle Esclusioni;
- iii) 30% il del comparto è stato investito in investimenti sostenibili; e
- iv) 8% il del comparto è stato investito in investimenti sostenibili con un obiettivo ambientale in attività economiche (non considerate ecosostenibili ai sensi della Tassonomia UE); e
- v) 22% il del comparto è stato investito in investimenti sostenibili con un obiettivo sociale.

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

...e rispetto ai periodi precedenti?

Non applicabile in quanto si tratta del primo periodo di riferimento.

Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha in parte realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?

Pur non avendo come obiettivo un investimento sostenibile, aveva una percentuale del 30% degli investimenti sostenibili. Gli investimenti sostenibili hanno avuto un obiettivo ambientale e sociale. Il comparto ha definito investimenti sostenibili:

a) emittenti che svolgono attività economiche che contribuiscono a uno o più degli obiettivi ambientali stabiliti nella Tassonomia UE e sono considerate ecosostenibili secondo la Tassonomia UE. Ciò non ha contribuito all'obiettivo ambientale della Tassonomia UE in materia di mitigazione dei cambiamenti climatici; o

(b) emittenti dei quali la maggior parte delle attività commerciali (oltre il 50% dei ricavi) ha contribuito al conseguimento degli obiettivi socioambientali in linea con uno o più obiettivi di sviluppo sostenibile delle Nazioni Unite; o

(c) emittenti che si danno un obiettivo di decarbonizzazione coerente con un'ipotesi di riscaldamento fino a 1,5 gradi (verificato dalla Science Based Target Initiative o da un Fidelity Proprietary Climate Rating) che si ritiene contribuisca agli obiettivi ambientali; a condizione che non arrechino danni significativi, soddisfino le garanzie minime e i criteri di buona governance.

Gli SDG sono una serie di obiettivi pubblicati dalle Nazioni Unite che riconoscono che porre fine alla povertà e ad altre privazioni deve andare di pari passo con il miglioramento della salute e dell'istruzione, la crescita economica e la riduzione delle disuguaglianze, il tutto affrontando i cambiamenti climatici e impegnandosi a preservare gli oceani e le foreste del pianeta. Per ulteriori informazioni vedere il sito web delle Nazioni Unite.

Dal punto di vista ambientale gli SDG concentrano l'attenzione su acqua potabile e i servizi igienici, energia pulita e accessibile, consumo e produzione responsabili e azione per il clima.

Dal punto di vista sociale gli SDG concentrano l'attenzione su assenza di povertà, sconfitta della fame, crescita economica e occupazione produttiva, industria, innovazione e infrastrutture, città e comunità sicure e sostenibili.

In che modo gli investimenti sostenibili che il prodotto finanziario ha in parte realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?

Gli investimenti sostenibili sono stati sottoposti a screening per il coinvolgimento in attività che arrecano danni e controversie significativi; la valutazione è avvenuta mediante controllo del soddisfacimento da parte dell'emittente delle garanzie minime e degli standard relativi ai principali effetti avversi (PAI) oltre che della performance in base ai parametri PAI,

il che ha comportato: Screening basati sulle norme, vale a dire screening dei titoli individuati nell'ambito degli screening basati sulle norme esistenti di Fidelity (come di seguito indicato); screening basati sulle attività, cioè screening degli emittenti in base alla loro partecipazione ad attività con effetti negativi significativi sulla società o sull'ambiente, compresi gli emittenti che erano considerati avere controversie "molto gravi" sulla base di screening di controversie, che riguardano 1) questioni ambientali, 2) diritti umani e comunità, 3) diritti dei lavoratori e catena di fornitura, 4) clienti, 5) governance; e indicatori PAI, i dati quantitativi (se disponibili) sugli indicatori PAI vengono utilizzati per valutare se un emittente è coinvolto in attività che arrecano danni significativi a eventuali obiettivi ambientali o sociali.

In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?

Per quanto riguarda gli investimenti sostenibili, come sopra indicato, Fidelity ha effettuato una valutazione quantitativa per individuare gli emittenti con performance problematiche in materia di indicatori PAI e sono stati presi in considerazione tutti gli indicatori obbligatori e quelli eventualmente pertinenti per gli effetti avversi sui fattori di sostenibilità di cui all'Allegato 1 degli standard tecnici di regolamentazione SFDR dell'UE (in presenza di dati disponibili).

Gli emittenti con un punteggio basso non erano idonei a diventare "investimenti sostenibili", a meno che la ricerca dei fondamentali di Fidelity non determinasse che l'emittente non stava violando requisiti finalizzati a "non arrecare un danno significativo" o era sulla buona strada per mitigare gli effetti avversi grazie a una gestione o una transizione efficaci.

Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:

Sono stati applicati screening basati su norme: Emittenti individuati non in grado di comportarsi in modo da soddisfare le loro responsabilità fondamentali nei settori dei diritti umani, del lavoro, dell'ambiente e dell'anticorruzione, in linea con le norme internazionali, comprese quelle stabilite dalle Linee guida dell'OCSE per le imprese multinazionali e dai Principi guida delle Nazioni Unite su imprese e diritti umani, dal Global Compact delle Nazioni Unite (UNGC), dalle norme dell'Organizzazione internazionale del lavoro (OIL), dalle Convenzioni dell'OIL, non erano considerati investimenti sostenibili.

La tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'Unione.

Il principio "non arrecare un danno significativo" si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante del presente prodotto finanziario non tengono conto dei criteri dell'UE per le attività economiche ecosostenibili.

Nessun altro investimento sostenibile deve arrecare un danno significativo agli obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

I principali effetti avversi sui fattori di sostenibilità sono stati presi in considerazione e integrati nelle decisioni d'investimento attraverso una serie di strumenti, tra cui:

(i) Due Diligence: analisi dei principali effetti avversi per verificare se sono stati sostanziali e negativi.

(ii) Rating ESG: Fidelity fa riferimento ai rating ESG che tengono conto dei principali effetti avversi sostanziali come emissioni di carbonio, sicurezza dei dipendenti, tangenti e corruzione, gestione delle risorse idriche. Per quanto riguarda i titoli emessi da enti sovrani, i principali effetti avversi sono stati presi in considerazione e integrati nelle decisioni d'investimento attraverso rating che tengono conto dei principali effetti avversi sostanziali come emissioni di anidride carbonica, violazioni sociali e libertà di espressione.

(iii) Esclusioni: Abbiamo adottato un approccio agli aspetti ESG basato sui principi e, in quest'ottica, inseriamo le società che consideriamo investimenti non idonei in un Elenco di esclusioni, tra cui, senza intento limitativo, quanto segue; un elenco di esclusioni a livello aziendale, che includa armi biologiche, armi chimiche, l'uso di scorte, la produzione e il trasferimento di mine antiuomo, il trattato di non proliferazione delle armi nucleari e le linee guida delle Nazioni Unite, della Banca mondiale e di altre autorità globali che sostengono i principi ESG.

(iv) Impegno: Fidelity ha utilizzato l'impegno come strumento per comprendere meglio i principali effetti avversi sui fattori di sostenibilità e, in alcune circostanze, sostenere il miglioramento dei principali effetti avversi e dei parametri di sostenibilità. Fidelity ha partecipato a iniziative individuali e di collaborazione che tengono conto di tutta una serie di effetti avversi principali (es., Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(v) Voto: La politica di voto di Fidelity comprendeva standard minimi espliciti per quanto riguarda la diversità di genere all'interno dei consigli di amministrazione e per l'impegno nei confronti del cambiamento climatico. Fidelity può anche votare per migliorare la performance degli emittenti sulla base di altri indicatori.

(vi) Revisioni trimestrali: monitoraggio dei principali effetti avversi attraverso il processo di revisione trimestrale del comparto.

Fidelity tiene conto di indicatori specifici per i singoli fattori di sostenibilità quando si tratta di valutare i principali effetti avversi degli investimenti. Questi indicatori sono soggetti alla disponibilità dei dati e possono cambiare con il miglioramento della qualità e della disponibilità degli stessi.

Le esclusioni e gli screening di cui sopra (le "Esclusioni") possono essere aggiornati di volta in volta. Per ulteriori informazioni consultare questo sito: ["Criteri di investimento sostenibile"](#).

Quali sono stati i principali investimenti di questo prodotto finanziario?

L'elenco comprende gli investimenti che costituiscono **la quota maggiore di investimenti** del prodotto finanziario durante il periodo di riferimento, ossia: 2022-10-01 - 2023-09-30

Investimenti di maggiore entità	Settore	% di attivi	Paese

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali e presentati sotto forma di media per il periodo di riferimento. La classificazione dei titoli, compresi Settore e Sottosectore, è riferita all'ultimo giorno del periodo di riferimento. I dati comprendono tutti i titoli, esclusi i derivati. A causa della limitatezza dei dati, non siamo in grado di dare informazioni sulla percentuale di investimenti in settori e sottosectori dell'economia che traggono entrate dall'esplorazione, dall'estrazione, dalla produzione, dalla lavorazione, dallo stoccaggio, dalla raffinazione o dalla distribuzione, compresi il trasporto, la conservazione e il commercio, di combustibili fossili.

In che misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Il comparto ha effettuato almeno il 0% di investimenti sostenibili con un obiettivo ambientale allineato alla Tassonomia UE.

La conformità degli investimenti del comparto alla Tassonomia UE non era oggetto di garanzia da parte dei revisori o di revisione da parte di terzi.

L'allineamento tassonomico degli investimenti sottostanti del comparto è misurato dal fatturato.

Il prodotto finanziario ha investito in attività connesse al gas fossile e/o all'energia nucleare che erano conformi alla tassonomia dell'UE¹?

- Sì
- Gas fossile Energia nucleare
- No

Per conformarsi alla tassonomia dell'UE, i criteri per il **gas fossile** comprendono limitazioni delle emissioni e il passaggio all'energia da fonti totalmente rinnovabili o ai combustibili a basse emissioni di carbonio entro la fine del 2035. Per l'**energia nucleare** i criteri comprendono norme complete in materia di sicurezza e gestione dei rifiuti.

Le **attività abilitanti**

¹Le attività connesse al gas fossile e/o all'energia nucleare sono conformi alla tassonomia dell'UE solo se contribuiscono all'azione di contenimento dei cambiamenti climatici ("mitigazione dei cambiamenti climatici") e non arrecano un danno significativo a nessuno degli obiettivi della tassonomia dell'UE - cfr. nota esplicativa sul margine sinistro. I criteri completi riguardanti le attività economiche connesse al gas fossile e all'energia nucleare che sono conformi alla tassonomia dell'UE sono stabiliti nel regolamento delegato (UE) 2022/1214 della Commissione.

consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale.

Le **attività di transizione** sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano, tra gli altri, livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

Le attività allineate alla tassonomia sono espresse in percentuale di:

- **fatturato**: quota di entrate da attività verdi delle imprese beneficiarie degli investimenti

- **spese in conto capitale** (CapEx): investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, ad es. per la transizione verso un'economia verde

- **spese operative** (OpEx): attività operative verdi delle imprese beneficiarie degli investimenti

sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

Qual era la quota di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?

Il comparto ha effettuato investimenti sostenibili nella misura del 8% con un obiettivo ambientale non allineato alla Tassonomia UE, per quanto consentito e coerentemente con la politica d'investimento e le percentuali minime dichiarate nelle informazioni precontrattuali.

Qual era la quota di investimenti socialmente sostenibili?

Il comparto ha effettuato almeno il 22% di investimenti sostenibili con un obiettivo sociale.

Quali investimenti erano compresi nella categoria «Altri» e qual era il loro scopo? Esistevano garanzie minime di salvaguardia ambientale o sociale?

I restanti investimenti del comparto sono stati effettuati in attivi allineati all'obiettivo finanziario dello stesso, liquidità e strumenti equivalenti a fini di liquidità e derivati utilizzati per investimenti e gestione efficiente del portafoglio. Come garanzia minima a livello ambientale e sociale, il comparto ha aderito alle Esclusioni.

I due grafici seguenti mostrano in verde la percentuale di investimenti che erano allineati alla tassonomia dell'UE. Poiché non esiste una metodologia adeguata per determinare l'allineamento delle obbligazioni sovrane* alla tassonomia, il primo grafico mostra l'allineamento alla tassonomia in relazione a tutti gli investimenti del prodotto finanziario, comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla Tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

*Ai fini dei grafici di cui sopra, per «obbligazioni sovrane» si intendono tutte le esposizioni sovrane.

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali solari e presentati sotto forma di media per il periodo di riferimento. I dati sulla Tassonomia UE comunicati possono differire a causa delle differenze nella metodologia di calcolo utilizzata.

Qual era la quota degli investimenti effettuati in attività di transizione e abilitanti?

La SICAV ha investito almeno il 0% in attività transizionali e almeno il 0,07% in attività abilitanti.

Come si rapporta la percentuale di investimenti che erano allineati alla tassonomia dell'UE con i precedenti periodi di riferimento?

Non applicabile in quanto si tratta del primo periodo di riferimento.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Il comparto ha intrapreso le seguenti azioni per soddisfare le caratteristiche ambientali o sociali:

1. Il comparto ha investito in titoli di emittenti con caratteristiche ESG favorevoli.
2. Riesame trimestrale della sostenibilità per discutere e rivedere le caratteristiche socioambientali qualitative del comparto.
3. Il comparto ha applicato le Esclusioni.

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?

Un Indice non è stato designato come benchmark di riferimento per determinare se questo prodotto finanziario è allineato alle caratteristiche ambientali o sociali che promuove.

Gli **indici di riferimento** sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

Modello di informativa periodica per i prodotti finanziari di cui all'articolo 8, paragrafi 1, 2 e 2 bis, del regolamento (UE) 2019/2088 e all'articolo 6, primo comma, del regolamento (UE) 2020/852

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, a condizione che tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e che l'Impresa beneficiaria degli investimenti rispetti prassi di buona governance

La **tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non comprende un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero non risultare allineati alla tassonomia.

Gli **indicatori di sostenibilità** misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

Nome del prodotto:
FAST - Europe Fund

Identificativo della persona giuridica:
549300MOAWQYUPCW2D14

Caratteristiche ambientali e/o sociali

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?	
<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> Si	<input checked="" type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> No
<input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo ambientale : ___% <input type="checkbox"/> in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> In attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE	<input checked="" type="checkbox"/> Ha promosso caratteristiche ambientali/sociali (A/S) e, pur non avendo come obiettivo un investimento sostenibile, aveva una quota del(lo) 75,31% di investimenti sostenibili <input checked="" type="checkbox"/> con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE <input checked="" type="checkbox"/> con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE <input checked="" type="checkbox"/> con un obiettivo sociale
<input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo sociale : ___%	<input type="checkbox"/> Ha promosso caratteristiche A/S, ma non ha effettuato alcun investimento sostenibile

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Il comparto ha soddisfatto le caratteristiche socioambientali promosse secondo la definizione fornita nell'informativa precontrattuale SFDR per il periodo. Il comparto ha promosso le caratteristiche socioambientali investendo in titoli di emittenti con caratteristiche ESG favorevoli. Le caratteristiche ESG favorevoli sono state determinate in riferimento ai rating ESG, che hanno tenuto conto di caratteristiche ambientali quali l'intensità carbonica, le emissioni di anidride carbonica, il risparmio energetico, la gestione delle acque e dei rifiuti e la biodiversità, oltre che di caratteristiche sociali quali la sicurezza dei prodotti, la catena di fornitura, la salute e la sicurezza e i diritti umani. Non sono stati designati benchmark di riferimento per poter conseguire le caratteristiche socioambientali promosse.

Qual è stata la prestazione degli indicatori di sostenibilità?

La performance degli indicatori di sostenibilità utilizzati dal comparto per misurare il raggiungimento delle caratteristiche socioambientali che ha promosso è stata:

- i) 93,33% il del comparto è stato investito in titoli di emittenti con caratteristiche ESG favorevoli ai sensi dei criteri d'investimento sostenibile (Sustainable Investing Framework) di Fidelity;
- ii) per quanto riguarda i suoi investimenti diretti, lo 0% del comparto è stato investito in titoli di emittenti con esposizione alle Esclusioni;
- iii) 75,31% il del comparto in investimenti sostenibili; e
- iv) 52,02% il del comparto in investimenti sostenibili con un obiettivo sociale.

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

...e rispetto ai periodi precedenti?

Non applicabile in quanto si tratta del primo periodo di riferimento.

Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha in parte realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?

Pur non avendo come obiettivo un investimento sostenibile, aveva una percentuale del 75,31% degli investimenti sostenibili. Gli investimenti sostenibili hanno avuto un obiettivo ambientale e sociale. Il comparto ha definito investimenti sostenibili:

a) emittenti che svolgono attività economiche che contribuiscono a uno o più degli obiettivi ambientali stabiliti nella Tassonomia UE e sono considerate ecosostenibili secondo la Tassonomia UE. Ciò non ha contribuito all'obiettivo ambientale della Tassonomia UE in materia di mitigazione dei cambiamenti climatici; o

(b) emittenti dei quali la maggior parte delle attività commerciali (oltre il 50% dei ricavi) ha contribuito al conseguimento degli obiettivi socioambientali in linea con uno o più obiettivi di sviluppo sostenibile delle Nazioni Unite; o

(c) emittenti che si danno un obiettivo di decarbonizzazione coerente con un'ipotesi di riscaldamento fino a 1,5 gradi (verificato dalla Science Based Target Initiative o da un Fidelity Proprietary Climate Rating) che si ritiene contribuisca agli obiettivi ambientali; a condizione che non arrechino danni significativi, soddisfino le garanzie minime e i criteri di buona governance.

Gli SDG sono una serie di obiettivi pubblicati dalle Nazioni Unite che riconoscono che porre fine alla povertà e ad altre privazioni deve andare di pari passo con il miglioramento della salute e dell'istruzione, la crescita economica e la riduzione delle disuguaglianze, il tutto affrontando i cambiamenti climatici e impegnandosi a preservare gli oceani e le foreste del pianeta. Per ulteriori informazioni vedere il sito web delle Nazioni Unite.

Dal punto di vista ambientale gli SDG concentrano l'attenzione su acqua potabile e i servizi igienici, energia pulita e accessibile, consumo e produzione responsabili e azione per il clima.

Dal punto di vista sociale gli SDG concentrano l'attenzione su assenza di povertà, sconfitta della fame, crescita economica e occupazione produttiva, industria, innovazione e infrastrutture, città e comunità sicure e sostenibili.

In che modo gli investimenti sostenibili che il prodotto finanziario ha in parte realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?

Gli investimenti sostenibili sono stati sottoposti a screening per il coinvolgimento in attività che arrecano danni e controversie significativi; la valutazione è avvenuta mediante controllo del soddisfacimento da parte dell'emittente delle garanzie minime e degli standard relativi ai principali effetti avversi (PAI) oltre che della performance in base ai parametri PAI,

il che ha comportato: Screening basati sulle norme, vale a dire screening dei titoli individuati nell'ambito degli screening basati sulle norme esistenti di Fidelity (come di seguito indicato); screening basati sulle attività, cioè screening degli emittenti in base alla loro partecipazione ad attività con effetti negativi significativi sulla società o sull'ambiente, compresi gli emittenti che erano considerati avere controversie "molto gravi" sulla base di screening di controversie, che riguardano 1) questioni ambientali, 2) diritti umani e comunità, 3) diritti dei lavoratori e catena di fornitura, 4) clienti, 5) governance; e indicatori PAI, i dati quantitativi (se disponibili) sugli indicatori PAI vengono utilizzati per valutare se un emittente è coinvolto in attività che arrecano danni significativi a eventuali obiettivi ambientali o sociali.

In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?

Per quanto riguarda gli investimenti sostenibili, come sopra indicato, Fidelity ha effettuato una valutazione quantitativa per individuare gli emittenti con performance problematiche in materia di indicatori PAI e sono stati presi in considerazione tutti gli indicatori obbligatori e quelli eventualmente pertinenti per gli effetti avversi sui fattori di sostenibilità di cui all'Allegato 1 degli standard tecnici di regolamentazione SFDR dell'UE (in presenza di dati disponibili).

Gli emittenti con un punteggio basso non erano idonei a diventare "investimenti sostenibili", a meno che la ricerca dei fondamentali di Fidelity non determinasse che l'emittente non stava violando requisiti finalizzati a "non arrecare un danno significativo" o era sulla buona strada per mitigare gli effetti avversi grazie a una gestione o una transizione efficaci.

Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:

Sono stati applicati screening basati su norme: Emittenti individuati non in grado di comportarsi in modo da soddisfare le loro responsabilità fondamentali nei settori dei diritti umani, del lavoro, dell'ambiente e dell'anticorruzione, in linea con le norme internazionali, comprese quelle stabilite dalle Linee guida dell'OCSE per le imprese multinazionali e dai Principi guida delle Nazioni Unite su imprese e diritti umani, dal Global Compact delle Nazioni Unite (UNGC), dalle norme dell'Organizzazione internazionale del lavoro (OIL), dalle Convenzioni dell'OIL, non erano considerati investimenti sostenibili.

La tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'Unione.

Il principio "non arrecare un danno significativo" si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante del presente prodotto finanziario non tengono conto dei criteri dell'UE per le attività economiche ecosostenibili.

Nessun altro investimento sostenibile deve arrecare un danno significativo agli obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

I principali effetti avversi sui fattori di sostenibilità sono stati presi in considerazione e integrati nelle decisioni d'investimento attraverso una serie di strumenti, tra cui:

(i) Due Diligence: analisi dei principali effetti avversi per verificare se sono stati sostanziali e negativi.

(ii) Rating ESG: Fidelity fa riferimento ai rating ESG che tengono conto dei principali effetti avversi sostanziali come emissioni di carbonio, sicurezza dei dipendenti, tangenti e corruzione, gestione delle risorse idriche. Per quanto riguarda i titoli emessi da enti sovrani, i principali effetti avversi sono stati presi in considerazione e integrati nelle decisioni d'investimento attraverso rating che tengono conto dei principali effetti avversi sostanziali come emissioni di anidride carbonica, violazioni sociali e libertà di espressione.

(iii) Esclusioni: Abbiamo adottato un approccio agli aspetti ESG basato sui principi e, in quest'ottica, inseriamo le società che consideriamo investimenti non idonei in un Elenco di esclusioni, tra cui, senza intento limitativo, quanto segue; un elenco di esclusioni a livello aziendale, che includa armi biologiche, armi chimiche, l'uso di scorte, la produzione e il trasferimento di mine antiuomo, il trattato di non proliferazione delle armi nucleari e le linee guida delle Nazioni Unite, della Banca mondiale e di altre autorità globali che sostengono i principi ESG.

(iv) Impegno: Fidelity ha utilizzato l'impegno come strumento per comprendere meglio i principali effetti avversi sui fattori di sostenibilità e, in alcune circostanze, sostenere il miglioramento dei principali effetti avversi e dei parametri di sostenibilità. Fidelity ha partecipato a iniziative individuali e di collaborazione che tengono conto di tutta una serie di effetti avversi principali (es., Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(v) Voto: La politica di voto di Fidelity comprendeva standard minimi espliciti per quanto riguarda la diversità di genere all'interno dei consigli di amministrazione e per l'impegno nei confronti del cambiamento climatico. Fidelity può anche votare per migliorare la performance degli emittenti sulla base di altri indicatori.

(vi) Revisioni trimestrali: monitoraggio dei principali effetti avversi attraverso il processo di revisione trimestrale del comparto.

Fidelity tiene conto di indicatori specifici per i singoli fattori di sostenibilità quando si tratta di valutare i principali effetti avversi degli investimenti. Questi indicatori sono soggetti alla disponibilità dei dati e possono cambiare con il miglioramento della qualità e della disponibilità degli stessi.

Le esclusioni e gli screening di cui sopra (le "Esclusioni") possono essere aggiornati di volta in volta. Per ulteriori informazioni consultare questo sito: ["Criteri di investimento sostenibile"](#).

Quali sono stati i principali investimenti di questo prodotto finanziario?

L'elenco comprende gli investimenti che costituiscono la quota maggiore di investimenti del prodotto finanziario durante il periodo di riferimento, ossia: 2022-10-01 - 2023-09-30

Investimenti di maggiore entità	Settore	% di attivi	Paese
Novo Nordisk (B)	Sanità	6,52%	Danimarca
Merck (A)	Sanità	5,4%	Danimarca
Experian	Industriali	5,29%	Irlanda
SAP SE	Informatica	5,2%	Germania
Fidelity Institutional Liquidity Fund - A-ACC-EUR	Fondo di tipo aperto	4,17%	Irlanda
Infineon Technologies AG	Informatica	4,16%	Germania
Edenred SE	Finanziari	3,19%	Francia
Air Liquide SA (A)	Materiali	3,16%	Francia
RELX	Industriali	3,05%	Regno Unito
Sage Group	Informatica	2,85%	Regno Unito
Bunzl	Industriali	2,84%	Regno Unito
Coloplast (B)	Sanità	2,69%	Danimarca
Amadeus IT Group SA (A)	Prodotti voluttuari	2,44%	Spagna
Sandvik (B)	Industriali	2,4%	Svezia
Burberry Group	Prodotti voluttuari	2,36%	Regno Unito

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali e presentati sotto forma di media per il periodo di riferimento. La classificazione dei titoli, compresi il settore e il paese, è riferita all'ultimo giorno del periodo di riferimento. I dati comprendono tutti i titoli, esclusi i derivati.

Qual è stata la quota degli investimenti in materia di sostenibilità?

Qual è stata l'allocazione degli attivi?

L'allocazione degli attivi descrive la quota di investimenti in attivi specifici.

#1 Allineati a caratteristiche A/S: comprende gli investimenti del prodotto finanziario utilizzati per rispettare le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

#2 Altri: comprende gli investimenti rimanenti del prodotto finanziario che non sono allineati alle caratteristiche ambientali o sociali, né sono considerati investimenti sostenibili.

La categoria **#1 Allineati a caratteristiche A/S** comprende:

- la sottocategoria **#1A Sostenibili**, che contempla gli investimenti sostenibili dal punto di vista ambientale e sociale;

- la sottocategoria **#1B Altre caratteristiche A/S**, che contempla gli investimenti allineati alle

In quali settori economici sono stati effettuati gli investimenti?

Settore	Sotto Settore	% di attivi
Beni di prima necessità	Prodotti per la cura della persona	1,63%
	Tabacco	0,8%
Finanziari	Servizi finanziari diversificati	9,35%
	Assicurazione	1,7%
Fondo di tipo aperto	Fondo monetario di tipo chiuso	4,17%
Industriali	Società commerciali e distributori	4,16%
	Macchinari	2,4%
	Prodotti per l'edilizia	2,21%
	Servizi professionali	10,82%
	Compagnie aeree	0,61%
Informatica	Apparecchiature e prodotti per semiconduttori	4,16%
	Software e servizi Internet	3,16%
	Servizi IT	2,16%
	Software	10,28%
Materiali	Prodotti chimici	3,98%
Prodotti voluttuari	Tessile e abbigliamento	6,25%
	Hotel, ristoranti e tempo libero	2,44%
	Vendita al dettaglio specializzata	2,34%
	Vendita al dettaglio multilinea	1,46%
	Automobili	0,79%
Sanità	Attrezzature e forniture sanitarie	7,78%
	Strumenti e servizi per le scienze biologiche	4,43%
	Prodotti farmaceutici	11,91%

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali e presentati sotto forma di media per il periodo di riferimento. La classificazione dei titoli, compresi Settore e Sottosettore, è riferita all'ultimo giorno del periodo di riferimento. I dati comprendono tutti i titoli, esclusi i derivati. A causa della limitatezza dei dati, non siamo in grado di dare informazioni sulla percentuale di investimenti in settori e sottosectori dell'economia che traggono entrate dall'esplorazione, dall'estrazione, dall'estrazione, dalla produzione, dalla lavorazione, dallo stoccaggio, dalla raffinazione o dalla distribuzione, compresi il trasporto, la conservazione e il commercio, di combustibili fossili.

Per conformarsi alla tassonomia dell'UE, i criteri per il **gas fossile** comprendono limitazioni delle emissioni e il passaggio all'energia da fonti totalmente rinnovabili o ai combustibili a basse emissioni di carbonio entro la fine del 2035. Per l'**energia nucleare** i criteri comprendono norme complete in materia di sicurezza e gestione dei rifiuti.

Le **attività abilitanti** consentono direttamente ad

In che misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Il comparto ha effettuato almeno il 0,1% di investimenti sostenibili con un obiettivo ambientale allineato alla Tassonomia UE.

La conformità degli investimenti del comparto alla Tassonomia UE non era oggetto di garanzia da parte dei revisori o di revisione da parte di terzi.

L'allineamento tassonomico degli investimenti sottostanti del comparto è misurato dal fatturato.

Il prodotto finanziario ha investito in attività connesse al gas fossile e/o all'energia nucleare che erano conformi alla tassonomia dell'UE¹?

- Sì
- Gas fossile Energia nucleare
- No

¹Le attività connesse al gas fossile e/o all'energia nucleare sono conformi alla tassonomia dell'UE solo se contribuiscono all'azione di contenimento dei cambiamenti climatici ("mitigazione dei cambiamenti climatici") e non arrecano un danno significativo a nessuno degli obiettivi della tassonomia dell'UE - cfr. nota esplicativa sul margine sinistro. I criteri completi riguardanti le attività economiche connesse al gas fossile e all'energia nucleare che sono conformi alla tassonomia dell'UE sono stabiliti nel regolamento delegato (UE) 2022/1214 della Commissione.

altreattività di apportare un contributo sostanziale a un obiettivo ambientale.

Le **attività di transizione** sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio che presentano, tra gli altri, livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

Le attività allineate alla tassonomia sono espresse in percentuale di:

- **fatturato**: quota di entrate da attività verdi delle imprese beneficiarie degli investimenti

- **spese in conto capitale** (CapEx): investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, ad es. per la transizione verso un'economia verde

- **spese operative** (OpEx): attività operative verdi delle imprese beneficiarie degli investimenti

sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

Qual era la quota di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?

Il comparto ha effettuato investimenti sostenibili nella misura del 23,19% con un obiettivo ambientale non allineato alla Tassonomia UE, per quanto consentito e coerentemente con la politica d'investimento e le percentuali minime dichiarate nelle informazioni precontrattuali.

Qual era la quota di investimenti socialmente sostenibili?

Il comparto ha effettuato almeno il 52,02% di investimenti sostenibili con un obiettivo sociale.

Quali investimenti erano compresi nella categoria «Altri» e qual era il loro scopo? Esistevano garanzie minime di salvaguardia ambientale o sociale?

I restanti investimenti del comparto sono stati effettuati in attivi allineati all'obiettivo finanziario dello stesso, liquidità e strumenti equivalenti a fini di liquidità e derivati utilizzati per investimenti e gestione efficiente del portafoglio. Come garanzia minima a livello ambientale e sociale, il comparto ha aderito alle Esclusioni.

I due grafici seguenti mostrano in verde la percentuale di investimenti che erano allineati alla tassonomia dell'UE. Poiché non esiste una metodologia adeguata per determinare l'allineamento delle obbligazioni sovrane* alla tassonomia, il primo grafico mostra l'allineamento alla tassonomia in relazione a tutti gli investimenti del prodotto finanziario, comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla Tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

*Ai fini dei grafici di cui sopra, per «obbligazioni sovrane» si intendono tutte le esposizioni sovrane.

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali solari e presentati sotto forma di media per il periodo di riferimento. I dati sulla Tassonomia UE comunicati possono differire a causa delle differenze nella metodologia di calcolo utilizzata.

Qual era la quota degli investimenti effettuati in attività di transizione e abilitanti?

La SICAV ha investito almeno il 1,44% in attività transizionali e almeno il 0,08% in attività abilitanti.

Come si rapporta la percentuale di investimenti che erano allineati alla tassonomia dell'UE con i precedenti periodi di riferimento?

Non applicabile in quanto si tratta del primo periodo di riferimento.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Il comparto ha intrapreso le seguenti azioni per soddisfare le caratteristiche ambientali o sociali:

1. Il comparto ha investito in titoli di emittenti con caratteristiche ESG favorevoli.
2. Riesame trimestrale della sostenibilità per discutere e rivedere le caratteristiche socioambientali qualitative del comparto.
3. Il comparto ha applicato le Esclusioni.

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?

Un Indice non è stato designato come benchmark di riferimento per determinare se questo prodotto finanziario è allineato alle caratteristiche ambientali o sociali che promuove.

Gli **indici di riferimento** sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

di informativa periodica per i prodotti finanziari di cui all'articolo 8, paragrafi 1, 2 e 2 bis, del regolamento (UE) 2019/2088 e all'articolo 6, primo comma, del regolamento (UE) 2020/852

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, a condizione che tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e che l'Impresa beneficiaria degli investimenti rispetti prassi di buona governance

La **tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non comprende un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero non risultare allineati alla tassonomia.

Gli **indicatori di sostenibilità** misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

Nome del prodotto:
Fidelity Funds - America Fund

Identificativo della persona giuridica:
549300V54PMROCISWF43

Caratteristiche ambientali e/o sociali

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?

Si

No

- Ha effettuato **investimenti sostenibili con un obiettivo ambientale**: __%
- in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE
- In attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE
- Ha effettuato **investimenti sostenibili con un obiettivo sociale**: __%

- Ha **promosso caratteristiche ambientali/sociali (A/S)** e, pur non avendo come obiettivo un investimento sostenibile, aveva una quota del(lo) 47.9% di investimenti sostenibili
- con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE
- con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE
- con un obiettivo sociale
- Ha promosso caratteristiche A/S, ma **non ha effettuato alcun investimento sostenibile**

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Il comparto ha soddisfatto le caratteristiche socioambientali promosse secondo la definizione fornita nell'informativa precontrattuale SFDR per il periodo. Il comparto ha promosso caratteristiche socioambientali investendo in titoli di emittenti con caratteristiche ESG favorevoli. Le caratteristiche ESG favorevoli sono state determinate in riferimento ai rating ESG, che hanno tenuto conto di caratteristiche ambientali quali l'intensità carbonica, le emissioni di anidride carbonica, il risparmio energetico, la gestione delle acque e dei rifiuti e la biodiversità, oltre che di caratteristiche sociali quali la sicurezza dei prodotti, la catena di fornitura, la salute e la sicurezza e i diritti umani.

Non sono stati designati benchmark di riferimento per poter conseguire le caratteristiche socioambientali promosse.

Quando il comparto ha effettuato investimenti sostenibili con obiettivi ambientali ha contribuito all'obiettivo ambientale della Tassonomia UE in materia di mitigazione dei cambiamenti climatici

Quando il comparto ha effettuato investimenti sostenibili con obiettivi sociali ha contribuito al conseguimento degli obiettivi di sviluppo sostenibile incentrati sull'aspetto sociale, come spiegato nella seguente risposta sugli obiettivi d'investimento sostenibili.

I dati sugli investimenti sostenibili contenuti nella presente informativa periodica rappresentano una media dei dati al 31 dicembre 2022 e al 31 marzo 2023.

Qual è stata la prestazione degli indicatori di sostenibilità?

La performance degli indicatori di sostenibilità utilizzati dal comparto per misurare il raggiungimento delle caratteristiche socioambientali che ha promosso è stata:

- i) 82.68% del comparto è stato investito in titoli di emittenti con caratteristiche ESG favorevoli ai sensi dei criteri d'investimento sostenibile (Sustainable Investing Framework) di Fidelity;
- ii) per quanto riguarda i suoi investimenti diretti, lo 0% del comparto è stato investito in titoli di emittenti con esposizione alle Esclusioni;
- iii) 47.9% del comparto in investimenti sostenibili; e
- iv) 27.06% del comparto in investimenti sostenibili con un obiettivo sociale.

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

...e rispetto ai periodi precedenti?

Non applicabile in quanto si tratta del primo periodo di riferimento.

Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha in parte realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?

Pur non avendo come obiettivo un investimento sostenibile, aveva una percentuale del 47.9% degli investimenti sostenibili. Gli investimenti sostenibili hanno avuto un obiettivo ambientale e sociale. Il comparto ha definito investimenti sostenibili:

- a) emittenti che svolgono attività economiche che contribuiscono a uno o più degli obiettivi ambientali stabiliti nella Tassonomia UE e sono considerate ecosostenibili secondo la Tassonomia UE. Ciò ha contribuito all'obiettivo ambientale della Tassonomia UE in materia di mitigazione dei cambiamenti climatici; o
- (b) emittenti dei quali la maggior parte delle attività commerciali (oltre il 50% dei ricavi) ha contribuito al conseguimento degli obiettivi socioambientali in linea con uno o più obiettivi di sviluppo sostenibile delle Nazioni Unite; o
- (c) emittenti che si danno un obiettivo di decarbonizzazione coerente con un'ipotesi di riscaldamento fino a 1,5 gradi (verificato dalla Science Based Target Initiative o da un Fidelity Proprietary Climate Rating) che si ritiene contribuisca agli obiettivi ambientali; a condizione che non arrechino danni significativi, soddisfino le garanzie minime e i criteri di buona governance.

Gli SDG sono una serie di obiettivi pubblicati dalle Nazioni Unite che riconoscono che porre fine alla povertà e ad altre privazioni deve andare di pari passo con il miglioramento della salute e dell'istruzione, la crescita economica e la riduzione delle disuguaglianze, il tutto affrontando i cambiamenti climatici e impegnandosi a preservare gli oceani e le foreste del pianeta. Per ulteriori informazioni vedere il [sito web](#) delle Nazioni Unite. Dal punto di vista ambientale gli SDG concentrano l'attenzione su acqua potabile e i servizi igienici, energia pulita e accessibile, consumo e produzione responsabili e azione per il clima. Dal punto di vista sociale gli SDG concentrano l'attenzione su assenza di povertà, sconfitta della fame, crescita economica e occupazione produttiva, industria, innovazione e infrastrutture, città e comunità sicure e sostenibili.

In che modo gli investimenti sostenibili che il prodotto finanziario ha in parte realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?

Gli investimenti sostenibili sono stati sottoposti a screening per il coinvolgimento in attività che arrecano danni e controversie significativi; la valutazione è avvenuta mediante controllo del soddisfacimento da parte dell'emittente delle garanzie minime e degli standard relativi ai principali effetti avversi (PAI) oltre che della performance in base ai parametri PAI, il che ha comportato: Screening basati sulle norme, vale a dire screening dei titoli individuati nell'ambito degli screening basati sulle norme esistenti di Fidelity (come di seguito indicato); screening basati sulle attività, cioè screening degli emittenti in base alla loro partecipazione ad attività con effetti negativi significativi sulla società o sull'ambiente, compresi gli emittenti che erano considerati avere controversie "molto gravi" sulla base di screening di controversie, che riguardano 1) questioni ambientali, 2) diritti umani e comunità, 3) diritti dei lavoratori e catena di fornitura, 4) clienti, 5) governance; e indicatori PAI, i dati quantitativi (se disponibili) sugli indicatori PAI vengono utilizzati per valutare se un emittente è coinvolto in attività che arrecano danni significativi a eventuali obiettivi ambientali o sociali.

In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?

Per quanto riguarda gli investimenti sostenibili, come sopra indicato, Fidelity ha effettuato una valutazione quantitativa per individuare gli emittenti con performance problematiche in materia di indicatori PAI e sono stati presi in considerazione tutti gli indicatori obbligatori e quelli eventualmente pertinenti per gli effetti avversi sui fattori di sostenibilità di cui all'Allegato 1 degli standard tecnici di regolamentazione SFDR dell'UE (in presenza di dati disponibili).

Gli emittenti con un punteggio basso non erano idonei a diventare "investimenti sostenibili", a meno che la ricerca dei fondamentali di Fidelity non determinasse che l'emittente non stava violando requisiti finalizzati a "non arrecare un danno significativo" o era sulla buona strada per mitigare gli effetti avversi grazie a una gestione o una transizione efficaci.

Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:

Sono stati applicati screening basati su norme: Emittenti individuati non in grado di comportarsi in modo da soddisfare le loro responsabilità fondamentali nei settori dei diritti umani, del lavoro, dell'ambiente e dell'anticorruzione, in linea con le norme internazionali, comprese quelle stabilite dalle Linee guida dell'OCSE per le imprese multinazionali e dai Principi guida delle Nazioni Unite su imprese e diritti umani, dal Global Compact delle Nazioni Unite (UNGC), dalle norme dell'Organizzazione internazionale del lavoro (OIL), dalle Convenzioni dell'OIL, non erano considerati investimenti sostenibili.

La tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'Unione.

Il principio "non arrecare un danno significativo" si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante del presente prodotto finanziario non tengono conto dei criteri dell'UE per le attività economiche ecosostenibili.

Nessun altro investimento sostenibile deve arrecare un danno significativo agli obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

I principali effetti avversi sui fattori di sostenibilità sono stati presi in considerazione e integrati nelle decisioni d'investimento attraverso una serie di strumenti, tra cui:

(i) Due Diligence: analisi dei principali effetti avversi per verificare se sono stati sostanziali e negativi.

(ii) Rating ESG: Fidelity fa riferimento ai rating ESG che tengono conto dei principali effetti avversi sostanziali come emissioni di carbonio, sicurezza dei dipendenti, tangenti e corruzione, gestione delle risorse idriche. Per quanto riguarda i titoli emessi da enti sovrani, i principali effetti avversi sono stati presi in considerazione e integrati nelle decisioni d'investimento attraverso rating che tengono conto dei principali effetti avversi sostanziali come emissioni di anidride carbonica, violazioni sociali e libertà di espressione.

(iii) Esclusioni: Abbiamo adottato un approccio agli aspetti ESG basato sui principi e, in quest'ottica, inseriamo le società che consideriamo investimenti non idonei in un Elenco di esclusioni, tra cui, senza intento limitativo, quanto segue; un elenco di esclusioni a livello aziendale, che includa armi biologiche, armi chimiche, l'uso di scorte, la produzione e il trasferimento di mine antiuomo, il trattato di non proliferazione delle armi nucleari e le linee guida delle Nazioni Unite, della Banca mondiale e di altre autorità globali che sostengono i principi ESG.

(iv) Impegno: Fidelity ha utilizzato l'impegno come strumento per comprendere meglio i principali effetti avversi sui fattori di sostenibilità e, in alcune circostanze, sostenere il miglioramento dei principali effetti avversi e dei parametri di sostenibilità. Fidelity ha partecipato a iniziative individuali e di collaborazione che tengono conto di tutta una serie di effetti avversi principali (es., Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(v) Voto: La politica di voto di Fidelity comprendeva standard minimi espliciti per quanto riguarda la diversità di genere all'interno dei consigli di amministrazione e per l'impegno nei confronti del cambiamento climatico. Fidelity può anche votare per migliorare la performance degli emittenti sulla base di altri indicatori.

(vi) Revisioni trimestrali: monitoraggio dei principali effetti avversi attraverso il processo di revisione trimestrale del comparto.

Fidelity tiene conto di indicatori specifici per i singoli fattori di sostenibilità quando si tratta di valutare i principali effetti avversi degli investimenti. Questi indicatori sono soggetti alla disponibilità dei dati e possono cambiare con il miglioramento della qualità e della disponibilità degli stessi.

Le esclusioni e gli screening di cui sopra (le "Esclusioni") possono essere aggiornati di volta in volta. Per ulteriori informazioni consultare questo sito: ["Criteri di investimento sostenibile"](#).

Quali sono stati i principali investimenti di questo prodotto finanziario?

L'elenco comprende gli investimenti che costituiscono la quota maggiore di investimenti del prodotto finanziario durante il periodo di riferimento, ossia: 2022-05-01 / 2023-04-30

Investimenti di maggiore entità	Settore	% di attivi	Paese
Berkshire Hathaway (B)	Finanziari	4.37%	Stati Uniti d'America
McKesson	Sanità	3.76%	Stati Uniti d'America
Elevance Health	Sanità	3.75%	Stati Uniti d'America
Cheniere Energy	Energia	3.59%	Stati Uniti d'America
Baker Hughes	Energia	3.52%	Stati Uniti d'America
Wells Fargo	Finanziari	3.43%	Stati Uniti d'America
AmerisourceBergen	Sanità	3.07%	Stati Uniti d'America
Exelon	Servizi di pubblica utilità	2.80%	Stati Uniti d'America
Sempra Energy	Servizi di pubblica utilità	2.75%	Stati Uniti d'America
Norfolk Southern	Industriali	2.72%	Stati Uniti d'America
Alphabet (A)	Informatica	2.59%	Stati Uniti d'America
FedEx	Industriali	2.58%	Stati Uniti d'America
Union Pacific	Industriali	2.55%	Stati Uniti d'America
Bunge	Beni di prima necessità	2.42%	Stati Uniti d'America
Johnson & Johnson	Sanità	2.38%	Stati Uniti d'America

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali e presentati sotto forma di media per il periodo di riferimento. La classificazione dei titoli, compresi il settore e il paese, è riferita all'ultimo giorno del periodo di riferimento. I dati comprendono tutti i titoli, esclusi i derivati.

Qual è stata la quota degli investimenti in materia di sostenibilità?

L'allocazione degli attivi descrive la quota di investimenti in attivi specifici.

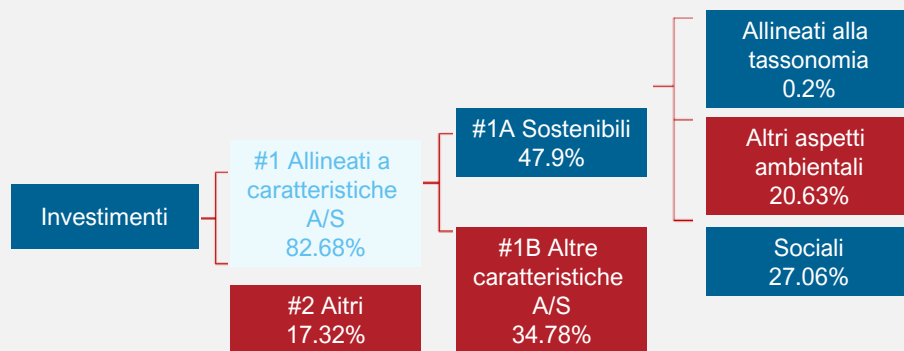

Il comparto ha effettuato il 47.9% di investimenti sostenibili.

Qual è stata l'allocazione degli attivi?

(#1 Allineato a caratteristiche E/S) Il comparto ha investito:

- 82.68% del suo patrimonio in titoli di emittenti con caratteristiche ESG favorevoli;
- 47.9% in investimenti sostenibili (#1A sostenibili)* di cui il 0.2% ha un obiettivo ambientale (allineato alla Tassonomia UE), il 20.63% ha un obiettivo ambientale (non allineato alla Tassonomia UE), il 27.06% ha un obiettivo sociale.

(#1B Altre caratteristiche E/S) Comprende titoli di emittenti con caratteristiche ESG favorevoli ma che non sono investimenti sostenibili.

#1 Allineati a caratteristiche A/S: comprende gli investimenti del prodotto finanziario utilizzati per rispettare le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

#2 Altri: comprende gli investimenti rimanenti del prodotto finanziario che non sono allineati alle caratteristiche ambientali o sociali, né sono considerati investimenti sostenibili.

La categoria **#1 Allineati a caratteristiche A/S** comprende:

- la sottocategoria **#1A Sostenibili**, che contempla gli investimenti sostenibili dal punto di vista ambientale e sociale;

-la sottocategoria **#1B Altre caratteristiche A/S**, che contempla gli investimenti allineati alle

In quali settori economici sono stati effettuati gli investimenti?

Settore	Sotto Settore	% di attivi
Beni di prima necessità	Vendita al dettaglio di alimenti e prodotti di base	3.98%
	Prodotti alimentari	2.42%
	Bevande	2.07%
Energia	Attrezzature e servizi energetici	5.10%
	Petrolio, gas e combustibili consumabili	4.33%
Finanziari	Banche commerciali	5.73%
	Servizi finanziari diversificati	4.37%
	Assicurazione	2.04%
Fondo di tipo aperto	Fondo monetario di tipo chiuso	0.60%
Immobiliare	Real Estate Investment Trust (REIT)	1.87%
	Azioni - Azioni ordinarie - Immobiliare - Prodotti specializzati	0.58%
Industriali	Strade e ferrovie	5.81%

	Servizi di pubblica utilità in ambito elettrico	3.00%

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali e presentati sotto forma di media per il periodo di riferimento. La classificazione dei titoli, compresi Settore e Sottosettore, è riferita all'ultimo giorno del periodo di riferimento. I dati comprendono tutti i titoli, esclusi i derivati. A causa della limitatezza dei dati,

non siamo in grado di dare informazioni sulla percentuale di investimenti in settori e sottosectori dell'economia che traggono entrate dall'esplorazione, dall'estrazione, dall'estrazione, dalla produzione, dalla lavorazione, dallo stoccaggio, dalla raffinazione o dalla distribuzione, compresi il trasporto, la conservazione e il commercio, di combustibili fossili.

Per conformarsi alla tassonomia dell'UE i criteri per il **gas fossile** comprendono limitazioni delle emissioni e il passaggio all'energia da fonti totalmente rinnovabili o ai combustibili a basse emissioni di carbonio entro la fine del 2035. Per l'**energia nucleare** i criteri comprendono norme complete in materia di sicurezza e gestione dei rifiuti. Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale. Le **attività di transizione** sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio che presentino, tra gli altri livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

Le attività allineate alla tassonomia sono espresse in percentuali di:

- **fatturato**: quota di entrate da attività verdi delle imprese beneficiarie degli investimenti
 - **spese in conto capitale**

(CapEx): investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, ad es. per la transizione verso un'economia verde
 - **spese operative**

(OpEx): attività operative verdi delle imprese beneficiarie degli investimenti

In che misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Il comparto ha effettuato almeno il 0.2% di investimenti sostenibili con un obiettivo ambientale allineato alla Tassonomia UE. Ciò ha contribuito all'obiettivo ambientale della Tassonomia UE in materia di mitigazione dei cambiamenti climatici (0.2%).

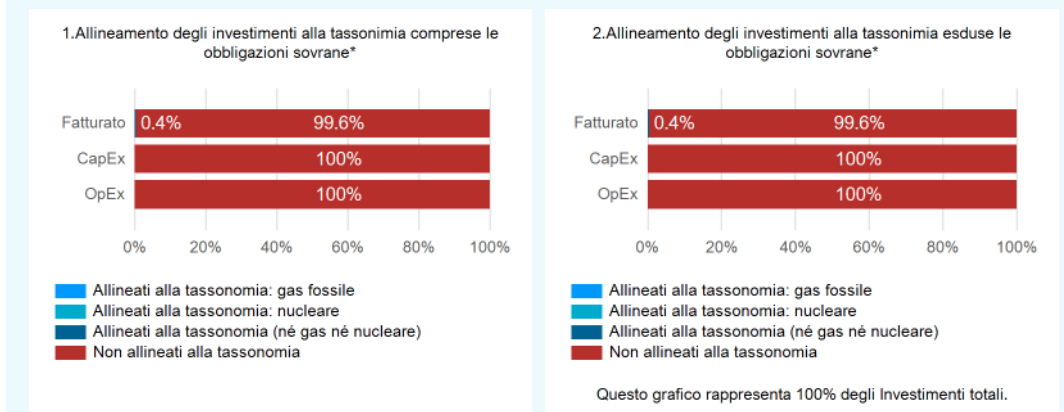

La conformità degli investimenti del comparto alla Tassonomia UE non era oggetto di garanzia da parte dei revisori o di revisione da parte di terzi.

L'allineamento tassonomico degli investimenti sottostanti del comparto è misurato dal fatturato.

Il prodotto finanziario ha investito in attività connesse al gas fossile e/o all'energia nucleare che erano conformi alla tassonomia dell'UE?

- Sì
- Gas fossile Energia nucleare
- No

I due grafici sottostanti mostrano in blu scuro la percentuale minima di investimenti allineati alla Tassonomia UE. Poiché non esiste una metodologia appropriata per determinare l'allineamento alla Tassonomia delle obbligazioni sovrane*, il primo grafico mostra l'allineamento alla Tassonomia in relazione a tutti gli investimenti del prodotto finanziario, comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla Tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

*Ai fini dei grafici di cui sopra, per «obbligazioni sovrane» si intendono tutte le esposizioni sovrane.

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali solari e presentati sotto forma di media per il periodo di riferimento. I dati sulla Tassonomia UE comunicati possono differire a causa delle differenze nella metodologia di calcolo utilizzata.

Qual era la quota degli investimenti effettuati in attività di transizione e abilitanti?

La quota del comparto realizzata in Attività abilitanti: 0%; Attività transizionali: 0.29%, misurato dal Fatturato.

Come si rapporta la percentuale di investimenti che erano allineati alla tassonomia dell'UE con i precedenti periodi di riferimento?

Non applicabile in quanto si tratta del primo periodo di riferimento.

*Le attività connesse al gas fossile e/o all'energia nucleare sono conformi alla tassonomia dell'UE solo se contribuiscono all'azione di contenimento dei cambiamenti climatici ("mitigazione dei cambiamenti climatici") e non arrecano un danno significativo a nessuno degli obiettivi della tassonomia dell'UE - cfr. nota esplicativa sul margine sinistro. I criteri completi riguardanti le attività economiche connesse al gas fossile e all'energia nucleare che sono conformi alla tassonomia dell'UE sono stabiliti nel regolamento delegato (UE) 2022/1214 della Commissione.

sono investimenti sostenibili con un obiettivo ambientale e che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

Qual era la quota di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?

Il comparto ha effettuato investimenti sostenibili nella misura del 20.63% con un obiettivo ambientale non allineato alla Tassonomia UE, per quanto consentito e coerentemente con la politica d'investimento e le percentuali minime dichiarate nelle informazioni precontrattuali.

Qual era la quota di investimenti socialmente sostenibili?

Il comparto ha effettuato almeno il 27.06% di investimenti sostenibili con un obiettivo sociale.

Quali investimenti erano compresi nella categoria «Altri» e qual era il loro scopo? Esistevano garanzie minime di salvaguardia ambientale o sociale?

I restanti investimenti del comparto sono stati effettuati in attivi coerenti con il suo obiettivo finanziario, contante ed equivalente del contante a fini di liquidità e derivati utilizzati per gli investimenti e la gestione efficace del portafoglio.

Come garanzia minima a livello ambientale e sociale, il comparto ha aderito alle Esclusioni.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Il comparto ha intrapreso le seguenti azioni per soddisfare le caratteristiche ambientali o sociali:

1. Il comparto ha investito in titoli di emittenti con caratteristiche ESG favorevoli.
2. Il comparto ha effettuato investimenti sostenibili.
3. Riesame trimestrale della sostenibilità per discutere e rivedere le caratteristiche socioambientali qualitative del comparto.
4. Il comparto ha applicato le Esclusioni.

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?

Un Indice non è stato designato come benchmark di riferimento per determinare se questo prodotto finanziario è allineato alle caratteristiche ambientali o sociali che promuove.

Gli **indici di riferimento** sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

di informativa periodica per i prodotti finanziari di cui all'articolo 8, paragrafi 1, 2 e 2 bis, del regolamento (UE) 2019/2088 e all'articolo 6, primo comma, del regolamento (UE) 2020/852

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, a condizione che tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e che l'Impresa beneficiaria degli investimenti rispetti prassi di buona governance

La **tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non comprende un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero non risultare allineati alla tassonomia.

Gli **indicatori di sostenibilità** misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

Nome del prodotto:
Fidelity Funds - Asian Special Situations Fund

Identificativo della persona giuridica:
5493001KQKB7F558TV86

Caratteristiche ambientali e/o sociali

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?	
<input checked="" type="radio"/> <input type="radio"/> <input type="checkbox"/> Si	<input type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> No
<input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo ambientale : __% <input type="checkbox"/> in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> In attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo sociale : __%	<input checked="" type="checkbox"/> Ha promosso caratteristiche ambientali/sociali (A/S) e, pur non avendo come obiettivo un investimento sostenibile, aveva una quota del(lo) 43.8% di investimenti sostenibili <input type="checkbox"/> con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE <input checked="" type="checkbox"/> con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE <input checked="" type="checkbox"/> con un obiettivo sociale <input type="checkbox"/> Ha promosso caratteristiche A/S, ma non ha effettuato alcun investimento sostenibile

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Il comparto ha soddisfatto le caratteristiche socioambientali promosse secondo la definizione fornita nell'informativa precontrattuale SFDR per il periodo. Il comparto ha promosso caratteristiche socioambientali investendo in titoli di emittenti con caratteristiche ESG favorevoli. Le caratteristiche ESG favorevoli sono state determinate in riferimento ai rating ESG, che hanno tenuto conto di caratteristiche ambientali quali l'intensità carbonica, le emissioni di anidride carbonica, il risparmio energetico, la gestione delle acque e dei rifiuti e la biodiversità, oltre che di caratteristiche sociali quali la sicurezza dei prodotti, la catena di fornitura, la salute e la sicurezza e i diritti umani.

Non sono stati designati benchmark di riferimento per poter conseguire le caratteristiche socioambientali promosse.

Quando il comparto ha effettuato investimenti sostenibili con obiettivi ambientali non ha contribuito all'obiettivo ambientale della Tassonomia UE in materia di mitigazione dei cambiamenti climatici

Quando il comparto ha effettuato investimenti sostenibili con obiettivi sociali ha contribuito al conseguimento degli obiettivi di sviluppo sostenibile incentrati sull'aspetto sociale, come spiegato nella seguente risposta sugli obiettivi d'investimento sostenibili.

I dati sugli investimenti sostenibili contenuti nella presente informativa periodica rappresentano una media dei dati al 31 dicembre 2022 e al 31 marzo 2023.

Qual è stata la prestazione degli indicatori di sostenibilità?

La performance degli indicatori di sostenibilità utilizzati dal comparto per misurare il raggiungimento delle caratteristiche socioambientali che ha promosso è stata:

- i) 91.48% del comparto è stato investito in titoli di emittenti con caratteristiche ESG favorevoli ai sensi dei criteri d'investimento sostenibile (Sustainable Investing Framework) di Fidelity;
- ii) per quanto riguarda i suoi investimenti diretti, lo 0% del comparto è stato investito in titoli di emittenti con esposizione alle Esclusioni;
- iii) 43.8% del comparto in investimenti sostenibili; e
- iv) 31.78% del comparto in investimenti sostenibili con un obiettivo sociale.

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

...e rispetto ai periodi precedenti?

Non applicabile in quanto si tratta del primo periodo di riferimento.

Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha in parte realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?

Pur non avendo come obiettivo un investimento sostenibile, aveva una percentuale del 43.8% degli investimenti sostenibili. Gli investimenti sostenibili hanno avuto un obiettivo ambientale e sociale. Il comparto ha definito investimenti sostenibili:

- a) emittenti che svolgono attività economiche che contribuiscono a uno o più degli obiettivi ambientali stabiliti nella Tassonomia UE e sono considerate ecosostenibili secondo la Tassonomia UE. Ciò non ha contribuito all'obiettivo ambientale della Tassonomia UE in materia di mitigazione dei cambiamenti climatici; o
- (b) emittenti dei quali la maggior parte delle attività commerciali (oltre il 50% dei ricavi) ha contribuito al conseguimento degli obiettivi socioambientali in linea con uno o più obiettivi di sviluppo sostenibile delle Nazioni Unite; o
- (c) emittenti che si danno un obiettivo di decarbonizzazione coerente con un'ipotesi di riscaldamento fino a 1,5 gradi (verificato dalla Science Based Target Initiative o da un Fidelity Proprietary Climate Rating) che si ritiene contribuisca agli obiettivi ambientali; a condizione che non arrechino danni significativi, soddisfino le garanzie minime e i criteri di buona governance.

Gli SDG sono una serie di obiettivi pubblicati dalle Nazioni Unite che riconoscono che porre fine alla povertà e ad altre privazioni deve andare di pari passo con il miglioramento della salute e dell'istruzione, la crescita economica e la riduzione delle disuguaglianze, il tutto affrontando i cambiamenti climatici e impegnandosi a preservare gli oceani e le foreste del pianeta. Per ulteriori informazioni vedere il [sito web](#) delle Nazioni Unite. Dal punto di vista ambientale gli SDG concentrano l'attenzione su acqua potabile e i servizi igienici, energia pulita e accessibile, consumo e produzione responsabili e azione per il clima. Dal punto di vista sociale gli SDG concentrano l'attenzione su assenza di povertà, sconfitta della fame, crescita economica e occupazione produttiva, industria, innovazione e infrastrutture, città e comunità sicure e sostenibili.

In che modo gli investimenti sostenibili che il prodotto finanziario ha in parte realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?

Gli investimenti sostenibili sono stati sottoposti a screening per il coinvolgimento in attività che arrecano danni e controversie significativi; la valutazione è avvenuta mediante controllo del soddisfacimento da parte dell'emittente delle garanzie minime e degli standard relativi ai principali effetti avversi (PAI) oltre che della performance in base ai parametri PAI, il che ha comportato: Screening basati sulle norme, vale a dire screening dei titoli individuati nell'ambito degli screening basati sulle norme esistenti di Fidelity (come di seguito indicato); screening basati sulle attività, cioè screening degli emittenti in base alla loro partecipazione ad attività con effetti negativi significativi sulla società o sull'ambiente, compresi gli emittenti che erano considerati avere controversie "molto gravi" sulla base di screening di controversie, che riguardano 1) questioni ambientali, 2) diritti umani e comunità, 3) diritti dei lavoratori e catena di fornitura, 4) clienti, 5) governance; e indicatori PAI, i dati quantitativi (se disponibili) sugli indicatori PAI vengono utilizzati per valutare se un emittente è coinvolto in attività che arrecano danni significativi a eventuali obiettivi ambientali o sociali.

In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?

Per quanto riguarda gli investimenti sostenibili, come sopra indicato, Fidelity ha effettuato una valutazione quantitativa per individuare gli emittenti con performance problematiche in materia di indicatori PAI e sono stati presi in considerazione tutti gli indicatori obbligatori e quelli eventualmente pertinenti per gli effetti avversi sui fattori di sostenibilità di cui all'Allegato 1 degli standard tecnici di regolamentazione SFDR dell'UE (in presenza di dati disponibili).

Gli emittenti con un punteggio basso non erano idonei a diventare "investimenti sostenibili", a meno che la ricerca dei fondamentali di Fidelity non determinasse che l'emittente non stava violando requisiti finalizzati a "non arrecare un danno significativo" o era sulla buona strada per mitigare gli effetti avversi grazie a una gestione o una transizione efficaci.

Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:

Sono stati applicati screening basati su norme: Emittenti individuati non in grado di comportarsi in modo da soddisfare le loro responsabilità fondamentali nei settori dei diritti umani, del lavoro, dell'ambiente e dell'anticorruzione, in linea con le norme internazionali, comprese quelle stabilite dalle Linee guida dell'OCSE per le imprese multinazionali e dai Principi guida delle Nazioni Unite su imprese e diritti umani, dal Global Compact delle Nazioni Unite (UNGC), dalle norme dell'Organizzazione internazionale del lavoro (OIL), dalle Convenzioni dell'OIL, non erano considerati investimenti sostenibili.

La tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'Unione.

Il principio "non arrecare un danno significativo" si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante del presente prodotto finanziario non tengono conto dei criteri dell'UE per le attività economiche ecosostenibili.

Nessun altro investimento sostenibile deve arrecare un danno significativo agli obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

I principali effetti avversi sui fattori di sostenibilità sono stati presi in considerazione e integrati nelle decisioni d'investimento attraverso una serie di strumenti, tra cui:

(i) Due Diligence: analisi dei principali effetti avversi per verificare se sono stati sostanziali e negativi.

(ii) Rating ESG: Fidelity fa riferimento ai rating ESG che tengono conto dei principali effetti avversi sostanziali come emissioni di carbonio, sicurezza dei dipendenti, tangenti e corruzione, gestione delle risorse idriche. Per quanto riguarda i titoli emessi da enti sovrani, i principali effetti avversi sono stati presi in considerazione e integrati nelle decisioni d'investimento attraverso rating che tengono conto dei principali effetti avversi sostanziali come emissioni di anidride carbonica, violazioni sociali e libertà di espressione.

(iii) Esclusioni: Abbiamo adottato un approccio agli aspetti ESG basato sui principi e, in quest'ottica, inseriamo le società che consideriamo investimenti non idonei in un Elenco di esclusioni, tra cui, senza intento limitativo, quanto segue; un elenco di esclusioni a livello aziendale, che includa armi biologiche, armi chimiche, l'uso di scorte, la produzione e il trasferimento di mine antiuomo, il trattato di non proliferazione delle armi nucleari e le linee guida delle Nazioni Unite, della Banca mondiale e di altre autorità globali che sostengono i principi ESG.

(iv) Impegno: Fidelity ha utilizzato l'impegno come strumento per comprendere meglio i principali effetti avversi sui fattori di sostenibilità e, in alcune circostanze, sostenere il miglioramento dei principali effetti avversi e dei parametri di sostenibilità. Fidelity ha partecipato a iniziative individuali e di collaborazione che tengono conto di tutta una serie di effetti avversi principali (es., Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(v) Voto: La politica di voto di Fidelity comprendeva standard minimi espliciti per quanto riguarda la diversità di genere all'interno dei consigli di amministrazione e per l'impegno nei confronti del cambiamento climatico. Fidelity può anche votare per migliorare la performance degli emittenti sulla base di altri indicatori.

(vi) Revisioni trimestrali: monitoraggio dei principali effetti avversi attraverso il processo di revisione trimestrale del comparto.

Fidelity tiene conto di indicatori specifici per i singoli fattori di sostenibilità quando si tratta di valutare i principali effetti avversi degli investimenti. Questi indicatori sono soggetti alla disponibilità dei dati e possono cambiare con il miglioramento della qualità e della disponibilità degli stessi.

Le esclusioni e gli screening di cui sopra (le "Esclusioni") possono essere aggiornati di volta in volta. Per ulteriori informazioni consultare questo sito: ["Criteri di investimento sostenibile"](#).

Quali sono stati i principali investimenti di questo prodotto finanziario?

L'elenco comprende gli investimenti che costituiscono la quota maggiore di investimenti del prodotto finanziario durante il periodo di riferimento, ossia: 2022-05-01 / 2023-04-30

Investimenti di maggiore entità	Settore	% di attivi	Paese
Taiwan Semiconductor Manufacturing	Informatica	9.07%	Area di Taiwan
Samsung Electronics	Informatica	7.31%	Corea
AIA Group	Finanziari	6.88%	Hong Kong SAR Cina
Tencent Holdings	Informatica	5.47%	Cina
HDFC Bank	Finanziari	4.66%	India
Alibaba Group Holding (CN)	Prodotti voluttuari	3.73%	Cina
Meituan (B)	Prodotti voluttuari	3.05%	Cina
Bank Central Asia	Finanziari	2.75%	Indonesia
Infosys	Informatica	2.53%	India
Axis Bank	Finanziari	2.43%	India
ICICI Bank	Finanziari	2.38%	India
United Overseas Bank (L)	Finanziari	2.12%	Singapore
Fidelity ILF - The US Dollar Fund - A-ACC-USD	Fondo di tipo aperto	2.12%	Irlanda
Hong Kong Exchanges and Clearing	Finanziari	2.05%	Hong Kong SAR Cina
JD.com (A)	Prodotti voluttuari	1.99%	Cina

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali e presentati sotto forma di media per il periodo di riferimento. La classificazione dei titoli, compresi il settore e il paese, è riferita all'ultimo giorno del periodo di riferimento. I dati comprendono tutti i titoli, esclusi i derivati.

Qual è stata la quota degli investimenti in materia di sostenibilità?

L'allocazione degli attivi descrive la quota di investimenti in attivi specifici.

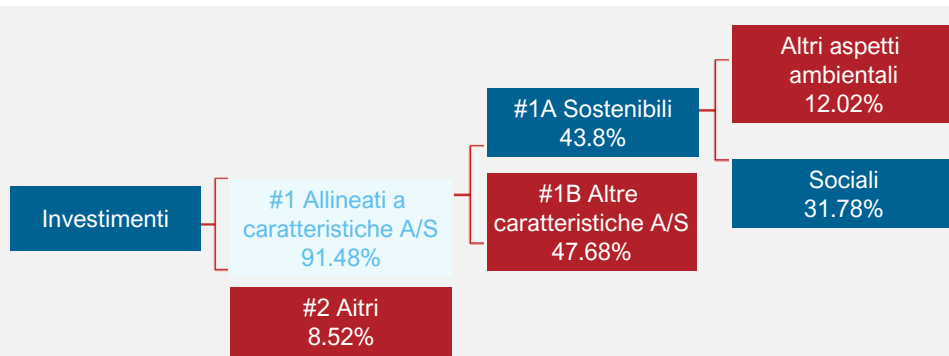

Il comparto ha effettuato il 43.8% di investimenti sostenibili.

Qual è stata l'allocazione degli attivi?

(#1 Allineato a caratteristiche E/S) Il comparto ha investito:

- 91.48% del suo patrimonio in titoli di emittenti con caratteristiche ESG favorevoli;
- 43.8% in investimenti sostenibili (#1A sostenibili)* di cui il 0% ha un obiettivo ambientale (allineato alla Tassonomia UE), il 12.02% ha un obiettivo ambientale (non allineato alla Tassonomia UE), il 31.78% ha un obiettivo sociale.

(#1B Altre caratteristiche E/S) Comprende titoli di emittenti con caratteristiche ESG favorevoli ma che non sono investimenti sostenibili.

#1 Allineati a caratteristiche A/S: comprende gli investimenti del prodotto finanziario utilizzati per rispettare le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

#2 Altri: comprende gli investimenti rimanenti del prodotto finanziario che non sono allineati alle caratteristiche ambientali o sociali, né sono considerati investimenti sostenibili.

La categoria **#1 Allineati a caratteristiche A/S** comprende:

- la sottocategoria **#1A Sostenibili**, che contempla gli investimenti sostenibili dal punto di vista ambientale e sociale;

- la sottocategoria **#1B Altre caratteristiche A/S**, che contempla gli investimenti allineati alle

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali e presentati sotto forma di media per il periodo di riferimento. La classificazione dei titoli, compresi Settore e Sottosettore, è riferita all'ultimo giorno del periodo di riferimento. I dati comprendono tutti i titoli, esclusi i derivati. A causa della limitatezza dei dati, non siamo in grado di dare informazioni sulla percentuale di investimenti in settori e sottosettori dell'economia che traggono entrate dall'esplorazione, dall'estrazione, dall'estrazione, dalla produzione, dalla lavorazione, dallo stoccaggio, dalla raffinazione o dalla distribuzione, compresi il trasporto, la conservazione e il commercio, di combustibili fossili.

Per conformarsi alla tassonomia dell'UE i criteri per il **gas fossile** comprendono limitazioni delle emissioni e il passaggio all'energia da fonti totalmente rinnovabili o ai combustibili a basse emissioni di carbonio entro la fine del 2035. Per l'**energia nucleare** i criteri comprendono norme complete in materia di sicurezza e gestione dei rifiuti. Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale. Le **attività di transizione** sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio che presentano, tra gli altri livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

Le attività allineate alla tassonomia sono espresse in percentuali di:

- **fatturato**: quota di entrate da attività verdi delle Imprese beneficiarie degli investimenti

- **spese in conto capitale** (CapEx): investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, ad es. per la transizione verso un'economia verde

- **spese operative** (OpEx): attività operative verdi delle imprese beneficiarie degli investimenti

In che misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Il comparto ha effettuato almeno il 0% di investimenti sostenibili con un obiettivo ambientale allineato alla Tassonomia UE.

La conformità degli investimenti del comparto alla Tassonomia UE non era oggetto di garanzia da parte dei revisori o di revisione da parte di terzi.

L'allineamento tassonomico degli investimenti sottostanti del comparto è misurato dal fatturato.

Il prodotto finanziario ha investito in attività connesse al gas fossile e/o all'energia nucleare che erano conformi alla tassonomia dell'UE?

- Sì
- Gas fossile Energia nucleare
- No

I due grafici sottostanti mostrano in blu scuro la percentuale minima di investimenti allineati alla Tassonomia UE. Poiché non esiste una metodologia appropriata per determinare l'allineamento alla Tassonomia delle obbligazioni sovrane*, il primo grafico mostra l'allineamento alla Tassonomia in relazione a tutti gli investimenti del prodotto finanziario, comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla Tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

*Ai fini dei grafici di cui sopra, per «obbligazioni sovrane» si intendono tutte le esposizioni sovrane.

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali solari e presentati sotto forma di media per il periodo di riferimento. I dati sulla Tassonomia UE comunicati possono differire a causa delle differenze nella metodologia di calcolo utilizzata.

Qual era la quota degli investimenti effettuati in attività di transizione e abilitanti?

La quota del comparto realizzata in Attività abilitanti: 0%; Attività transizionali: 0%, misurato dal Fatturato.

Come si rapporta la percentuale di investimenti che erano allineati alla tassonomia dell'UE con i precedenti periodi di riferimento?

Non applicabile in quanto si tratta del primo periodo di riferimento.

*Le attività connesse al gas fossile e/o all'energia nucleare sono conformi alla tassonomia dell'UE solo se contribuiscono all'azione di contenimento dei cambiamenti climatici ("mitigazione dei cambiamenti climatici") e non arrecano un danno significativo a nessuno degli obiettivi della tassonomia dell'UE - cfr. nota esplicativa sul margine sinistro. I criteri completi riguardanti le attività economiche connesse al gas fossile e all'energia nucleare che sono conformi alla tassonomia dell'UE sono stabiliti nel regolamento delegato (UE) 2022/1214 della Commissione.

sono investimenti sostenibili con un obiettivo ambientale e che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

Qual era la quota di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?

Il comparto ha effettuato investimenti sostenibili nella misura del 12.02% con un obiettivo ambientale non allineato alla Tassonomia UE, per quanto consentito e coerentemente con la politica d'investimento e le percentuali minime dichiarate nelle informazioni precontrattuali.

Qual era la quota di investimenti socialmente sostenibili?

Il comparto ha effettuato almeno il 31.78% di investimenti sostenibili con un obiettivo sociale .

Quali investimenti erano compresi nella categoria «Altri» e qual era il loro scopo? Esistevano garanzie minime di salvaguardia ambientale o sociale?

I restanti investimenti del comparto sono stati effettuati in attivi coerenti con il suo obiettivo finanziario, contante ed equivalente del contante a fini di liquidità e derivati utilizzati per gli investimenti e la gestione efficace del portafoglio. Come garanzia minima a livello ambientale e sociale, il comparto ha aderito alle Esclusioni.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Il comparto ha intrapreso le seguenti azioni per soddisfare le caratteristiche ambientali o sociali:

1. Il comparto ha investito in titoli di emittenti con caratteristiche ESG favorevoli.
2. Il comparto ha effettuato investimenti sostenibili.
3. Riesame trimestrale della sostenibilità per discutere e rivedere le caratteristiche socioambientali qualitative del comparto.
4. Il comparto ha applicato le Esclusioni.

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?

Un Indice non è stato designato come benchmark di riferimento per determinare se questo prodotto finanziario è allineato alle caratteristiche ambientali o sociali che promuove.

Gli **indici di riferimento** sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

di informativa periodica per i prodotti finanziari di cui all'articolo 8, paragrafi 1, 2 e 2 bis, del regolamento (UE) 2019/2088 e all'articolo 6, primo comma, del regolamento (UE) 2020/852

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, a condizione che tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e che l'Impresa beneficiaria degli investimenti rispetti prassi di buona governance

La **tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non comprende un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero non risultare allineati alla tassonomia.

Gli **indicatori di sostenibilità** misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

Nome del prodotto:
Fidelity Funds - China Consumer Fund

Identificativo della persona giuridica:
5493007PTUTOK6CJU119

Caratteristiche ambientali e/o sociali

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?	
<input checked="" type="radio"/> <input type="radio"/> <input type="checkbox"/> <input type="checkbox"/> Si	<input type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo ambientale : __% <input type="checkbox"/> in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> In attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo sociale : __%	<input checked="" type="checkbox"/> Ha promosso caratteristiche ambientali/sociali (A/S) e, pur non avendo come obiettivo un investimento sostenibile, aveva una quota del(lo) 21.26% di investimenti sostenibili <input type="checkbox"/> con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE <input checked="" type="checkbox"/> con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE <input checked="" type="checkbox"/> con un obiettivo sociale <input type="checkbox"/> Ha promosso caratteristiche A/S, ma non ha effettuato alcun investimento sostenibile

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Il comparto ha soddisfatto le caratteristiche socioambientali promosse secondo la definizione fornita nell'informativa precontrattuale SFDR per il periodo. Il comparto ha promosso caratteristiche socioambientali investendo in titoli di emittenti con caratteristiche ESG favorevoli. Le caratteristiche ESG favorevoli sono state determinate in riferimento ai rating ESG, che hanno tenuto conto di caratteristiche ambientali quali l'intensità carbonica, le emissioni di anidride carbonica, il risparmio energetico, la gestione delle acque e dei rifiuti e la biodiversità, oltre che di caratteristiche sociali quali la sicurezza dei prodotti, la catena di fornitura, la salute e la sicurezza e i diritti umani.

Non sono stati designati benchmark di riferimento per poter conseguire le caratteristiche socioambientali promosse.

Quando il comparto ha effettuato investimenti sostenibili con obiettivi ambientali non ha contribuito all'obiettivo ambientale della Tassonomia UE in materia di mitigazione dei cambiamenti climatici

Quando il comparto ha effettuato investimenti sostenibili con obiettivi sociali ha contribuito al conseguimento degli obiettivi di sviluppo sostenibile incentrati sull'aspetto sociale, come spiegato nella seguente risposta sugli obiettivi d'investimento sostenibili.

I dati sugli investimenti sostenibili contenuti nella presente informativa periodica rappresentano una media dei dati al 31 dicembre 2022 e al 31 marzo 2023.

Qual è stata la prestazione degli indicatori di sostenibilità?

La performance degli indicatori di sostenibilità utilizzati dal comparto per misurare il raggiungimento delle caratteristiche socioambientali che ha promosso è stata:

- i) 82.8% del comparto è stato investito in titoli di emittenti con caratteristiche ESG favorevoli ai sensi dei criteri d'investimento sostenibile (Sustainable Investing Framework) di Fidelity;
- ii) per quanto riguarda i suoi investimenti diretti, lo 0% del comparto è stato investito in titoli di emittenti con esposizione alle Esclusioni;
- iii) 21.26% del comparto in investimenti sostenibili; e
- iv) 18.11% del comparto in investimenti sostenibili con un obiettivo sociale.

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

...e rispetto ai periodi precedenti?

Non applicabile in quanto si tratta del primo periodo di riferimento.

Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha in parte realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?

Pur non avendo come obiettivo un investimento sostenibile, aveva una percentuale del 21.26% degli investimenti sostenibili. Gli investimenti sostenibili hanno avuto un obiettivo ambientale e sociale. Il comparto ha definito investimenti sostenibili:

- a) emittenti che svolgono attività economiche che contribuiscono a uno o più degli obiettivi ambientali stabiliti nella Tassonomia UE e sono considerate ecosostenibili secondo la Tassonomia UE. Ciò non ha contribuito all'obiettivo ambientale della Tassonomia UE in materia di mitigazione dei cambiamenti climatici; o
- (b) emittenti dei quali la maggior parte delle attività commerciali (oltre il 50% dei ricavi) ha contribuito al conseguimento degli obiettivi socioambientali in linea con uno o più obiettivi di sviluppo sostenibile delle Nazioni Unite; o
- (c) emittenti che si danno un obiettivo di decarbonizzazione coerente con un'ipotesi di riscaldamento fino a 1,5 gradi (verificato dalla Science Based Target Initiative o da un Fidelity Proprietary Climate Rating) che si ritiene contribuisca agli obiettivi ambientali; a condizione che non arrechino danni significativi, soddisfino le garanzie minime e i criteri di buona governance.

Gli SDG sono una serie di obiettivi pubblicati dalle Nazioni Unite che riconoscono che porre fine alla povertà e ad altre privazioni deve andare di pari passo con il miglioramento della salute e dell'istruzione, la crescita economica e la riduzione delle disuguaglianze, il tutto affrontando i cambiamenti climatici e impegnandosi a preservare gli oceani e le foreste del pianeta. Per ulteriori informazioni vedere il [sito web](#) delle Nazioni Unite. Dal punto di vista ambientale gli SDG concentrano l'attenzione su acqua potabile e i servizi igienici, energia pulita e accessibile, consumo e produzione responsabili e azione per il clima. Dal punto di vista sociale gli SDG concentrano l'attenzione su assenza di povertà, sconfitta della fame, crescita economica e occupazione produttiva, industria, innovazione e infrastrutture, città e comunità sicure e sostenibili.

In che modo gli investimenti sostenibili che il prodotto finanziario ha in parte realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?

Gli investimenti sostenibili sono stati sottoposti a screening per il coinvolgimento in attività che arrecano danni e controversie significativi; la valutazione è avvenuta mediante controllo del soddisfacimento da parte dell'emittente delle garanzie minime e degli standard relativi ai principali effetti avversi (PAI) oltre che della performance in base ai parametri PAI, il che ha comportato: Screening basati sulle norme, vale a dire screening dei titoli individuati nell'ambito degli screening basati sulle norme esistenti di Fidelity (come di seguito indicato); screening basati sulle attività, cioè screening degli emittenti in base alla loro partecipazione ad attività con effetti negativi significativi sulla società o sull'ambiente, compresi gli emittenti che erano considerati avere controversie "molto gravi" sulla base di screening di controversie, che riguardano 1) questioni ambientali, 2) diritti umani e comunità, 3) diritti dei lavoratori e catena di fornitura, 4) clienti, 5) governance; e indicatori PAI, i dati quantitativi (se disponibili) sugli indicatori PAI vengono utilizzati per valutare se un emittente è coinvolto in attività che arrecano danni significativi a eventuali obiettivi ambientali o sociali.

In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?

Per quanto riguarda gli investimenti sostenibili, come sopra indicato, Fidelity ha effettuato una valutazione quantitativa per individuare gli emittenti con performance problematiche in materia di indicatori PAI e sono stati presi in considerazione tutti gli indicatori obbligatori e quelli eventualmente pertinenti per gli effetti avversi sui fattori di sostenibilità di cui all'Allegato 1 degli standard tecnici di regolamentazione SFDR dell'UE (in presenza di dati disponibili).

Gli emittenti con un punteggio basso non erano idonei a diventare "investimenti sostenibili", a meno che la ricerca dei fondamentali di Fidelity non determinasse che l'emittente non stava violando requisiti finalizzati a "non arrecare un danno significativo" o era sulla buona strada per mitigare gli effetti avversi grazie a una gestione o una transizione efficaci.

Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:

Sono stati applicati screening basati su norme: Emittenti individuati non in grado di comportarsi in modo da soddisfare le loro responsabilità fondamentali nei settori dei diritti umani, del lavoro, dell'ambiente e dell'anticorruzione, in linea con le norme internazionali, comprese quelle stabilite dalle Linee guida dell'OCSE per le imprese multinazionali e dai Principi guida delle Nazioni Unite su imprese e diritti umani, dal Global Compact delle Nazioni Unite (UNGC), dalle norme dell'Organizzazione internazionale del lavoro (OIL), dalle Convenzioni dell'OIL, non erano considerati investimenti sostenibili.

La tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'Unione.

Il principio "non arrecare un danno significativo" si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante del presente prodotto finanziario non tengono conto dei criteri dell'UE per le attività economiche ecosostenibili.

Nessun altro investimento sostenibile deve arrecare un danno significativo agli obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

I principali effetti avversi sui fattori di sostenibilità sono stati presi in considerazione e integrati nelle decisioni d'investimento attraverso una serie di strumenti, tra cui:

(i) Due Diligence: analisi dei principali effetti avversi per verificare se sono stati sostanziali e negativi.

(ii) Rating ESG: Fidelity fa riferimento ai rating ESG che tengono conto dei principali effetti avversi sostanziali come emissioni di carbonio, sicurezza dei dipendenti, tangenti e corruzione, gestione delle risorse idriche. Per quanto riguarda i titoli emessi da enti sovrani, i principali effetti avversi sono stati presi in considerazione e integrati nelle decisioni d'investimento attraverso rating che tengono conto dei principali effetti avversi sostanziali come emissioni di anidride carbonica, violazioni sociali e libertà di espressione.

(iii) Esclusioni: Abbiamo adottato un approccio agli aspetti ESG basato sui principi e, in quest'ottica, inseriamo le società che consideriamo investimenti non idonei in un Elenco di esclusioni, tra cui, senza intento limitativo, quanto segue; un elenco di esclusioni a livello aziendale, che includa armi biologiche, armi chimiche, l'uso di scorte, la produzione e il trasferimento di mine antiuomo, il trattato di non proliferazione delle armi nucleari e le linee guida delle Nazioni Unite, della Banca mondiale e di altre autorità globali che sostengono i principi ESG.

(iv) Impegno: Fidelity ha utilizzato l'impegno come strumento per comprendere meglio i principali effetti avversi sui fattori di sostenibilità e, in alcune circostanze, sostenere il miglioramento dei principali effetti avversi e dei parametri di sostenibilità. Fidelity ha partecipato a iniziative individuali e di collaborazione che tengono conto di tutta una serie di effetti avversi principali (es., Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(v) Voto: La politica di voto di Fidelity comprendeva standard minimi espliciti per quanto riguarda la diversità di genere all'interno dei consigli di amministrazione e per l'impegno nei confronti del cambiamento climatico. Fidelity può anche votare per migliorare la performance degli emittenti sulla base di altri indicatori.

(vi) Revisioni trimestrali: monitoraggio dei principali effetti avversi attraverso il processo di revisione trimestrale del comparto.

Fidelity tiene conto di indicatori specifici per i singoli fattori di sostenibilità quando si tratta di valutare i principali effetti avversi degli investimenti. Questi indicatori sono soggetti alla disponibilità dei dati e possono cambiare con il miglioramento della qualità e della disponibilità degli stessi.

Le esclusioni e gli screening di cui sopra (le "Esclusioni") possono essere aggiornati di volta in volta. Per ulteriori informazioni consultare questo sito: ["Criteri di investimento sostenibile"](#).

Quali sono stati i principali investimenti di questo prodotto finanziario?

L'elenco comprende gli investimenti che costituiscono la quota maggiore di investimenti del prodotto finanziario durante il periodo di riferimento, ossia: 2022-05-01 / 2023-04-30

Investimenti di maggiore entità	Settore	% di attivi	Paese

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali e presentati sotto forma di media per il periodo di riferimento. La classificazione dei titoli, compresi Settore e Sottosettore, è riferita all'ultimo giorno del periodo di riferimento. I dati comprendono tutti i titoli, esclusi i derivati. A causa della limitatezza dei dati, non siamo in grado di dare informazioni sulla percentuale di investimenti in settori e sottosettori dell'economia che traggono entrate dall'esplorazione, dall'estrazione, dalla estrazione, dalla produzione, dalla lavorazione, dallo stoccaggio, dalla raffinazione o dalla distribuzione, compresi il trasporto, la conservazione e il commercio, di combustibili fossili.

In che misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Per conformarsi alla tassonomia dell'UE i criteri per il **gas fossile** comprendono limitazioni delle emissioni e il passaggio all'energia da fonti totalmente rinnovabili o ai combustibili a basse emissioni di carbonio entro la fine del 2035. Per l'**energia nucleare** i criteri comprendono norme complete in materia di sicurezza e gestione dei rifiuti. Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale. Le **attività di transizione** sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio che presentano, tra gli altri livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

Le attività allineate alla tassonomia sono espresse in percentuali di:

- **fatturato**: quota di entrate da attività verdi delle imprese beneficiarie degli investimenti

- **spese in conto capitale** (CapEx): investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, ad es. per la transizione verso un'economia verde

- **spese operative** (OpEx): attività operative verdi delle imprese beneficiarie degli investimenti

Il comparto ha effettuato almeno il 0% di investimenti sostenibili con un obiettivo ambientale allineato alla Tassonomia UE.

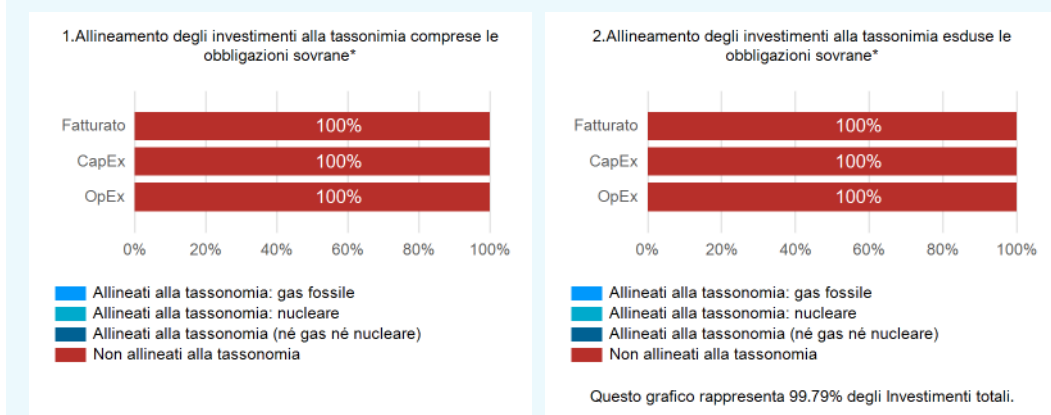

La conformità degli investimenti del comparto alla Tassonomia UE non era oggetto di garanzia da parte dei revisori o di revisione da parte di terzi.

L'allineamento tassonomico degli investimenti sottostanti del comparto è misurato dal fatturato.

Il prodotto finanziario ha investito in attività connesse al gas fossile e/o all'energia nucleare che erano conformi alla tassonomia dell'UE¹?

- Sì
- Gas fossile Energia nucleare
- No

I due grafici sottostanti mostrano in blu scuro la percentuale minima di investimenti allineati alla Tassonomia UE. Poiché non esiste una metodologia appropriata per determinare l'allineamento alla Tassonomia delle obbligazioni sovrane*, il primo grafico mostra l'allineamento alla Tassonomia in relazione a tutti gli investimenti del prodotto finanziario, comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla Tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

*Ai fini dei grafici di cui sopra, per «obbligazioni sovrane» si intendono tutte le esposizioni sovrane.

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali solari e presentati sotto forma di media per il periodo di riferimento. I dati sulla Tassonomia UE comunicati possono differire a causa delle differenze nella metodologia di calcolo utilizzata.

Qual era la quota degli investimenti effettuati in attività di transizione e abilitanti?

La quota del comparto realizzata in Attività abilitanti: 0%; Attività transizionali: 0%, misurato dal Fatturato.

Come si rapporta la percentuale di investimenti che erano allineati alla tassonomia dell'UE con i precedenti periodi di riferimento?

Non applicabile in quanto si tratta del primo periodo di riferimento.

¹Le attività connesse al gas fossile e/o all'energia nucleare sono conformi alla tassonomia dell'UE solo se contribuiscono all'azione di contenimento dei cambiamenti climatici ("mitigazione dei cambiamenti climatici") e non arrecano un danno significativo a nessuno degli obiettivi della tassonomia dell'UE - cfr. nota esplicativa sul margine sinistro. I criteri completi riguardanti le attività economiche connesse al gas fossile e all'energia nucleare che sono conformi alla tassonomia dell'UE sono stabiliti nel regolamento delegato (UE) 2022/1214 della Commissione.

sono investimenti sostenibili con un obiettivo ambientale e che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

Qual era la quota di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?

Il comparto ha effettuato investimenti sostenibili nella misura del 3.14% con un obiettivo ambientale non allineato alla Tassonomia UE, per quanto consentito e coerentemente con la politica d'investimento e le percentuali minime dichiarate nelle informazioni precontrattuali.

Qual era la quota di investimenti socialmente sostenibili?

Il comparto ha effettuato almeno il 18.11% di investimenti sostenibili con un obiettivo sociale .

Quali investimenti erano compresi nella categoria «Altri» e qual era il loro scopo? Esistevano garanzie minime di salvaguardia ambientale o sociale?

I restanti investimenti del comparto sono stati effettuati in attivi coerenti con il suo obiettivo finanziario, contante ed equivalente del contante a fini di liquidità e derivati utilizzati per gli investimenti e la gestione efficace del portafoglio.

Come garanzia minima a livello ambientale e sociale, il comparto ha aderito alle Esclusioni.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Il comparto ha intrapreso le seguenti azioni per soddisfare le caratteristiche ambientali o sociali:

1. Il comparto ha investito in titoli di emittenti con caratteristiche ESG favorevoli.
2. Il comparto ha effettuato investimenti sostenibili.
3. Riesame trimestrale della sostenibilità per discutere e rivedere le caratteristiche socioambientali qualitative del comparto.
4. Il comparto ha applicato le Esclusioni.

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?

Un Indice non è stato designato come benchmark di riferimento per determinare se questo prodotto finanziario è allineato alle caratteristiche ambientali o sociali che promuove.

Gli **indici di riferimento** sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

di informativa periodica per i prodotti finanziari di cui all'articolo 8, paragrafi 1, 2 e 2 bis, del regolamento (UE) 2019/2088 e all'articolo 6, primo comma, del regolamento (UE) 2020/852

Si intende per **investimento sostenibile** un investimento in

un'attività economica che contribuisce a un obiettivo ambientale o sociale, a condizione che tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e che l'Impresa beneficiaria degli investimenti rispetti prassi di buona governance

La **tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non comprende un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero non risultare allineati alla tassonomia.

Gli **indicatori di sostenibilità** misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

549300HVFD74DI2L1428

Caratteristiche ambientali e/o sociali

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?	
<input checked="" type="radio"/> <input type="radio"/> <input type="checkbox"/> Si	<input type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> No
<input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo ambientale: ___% <input type="checkbox"/> in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> In attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo sociale: ___%	<input checked="" type="checkbox"/> Ha promosso caratteristiche ambientali/sociali (A/S) e, pur non avendo come obiettivo un investimento sostenibile, aveva una quota del(lo) 22.56% di investimenti sostenibili <input checked="" type="checkbox"/> con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE <input checked="" type="checkbox"/> con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE <input checked="" type="checkbox"/> con un obiettivo sociale <input type="checkbox"/> Ha promosso caratteristiche A/S, ma non ha effettuato alcun investimento sostenibile

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Il comparto ha soddisfatto le caratteristiche socioambientali promosse secondo la definizione fornita nell'informativa precontrattuale SFDR per il periodo. Il comparto ha promosso caratteristiche socioambientali investendo in titoli di emittenti con caratteristiche ESG favorevoli. Le caratteristiche ESG favorevoli sono state determinate in riferimento ai rating ESG, che hanno tenuto conto di caratteristiche ambientali quali l'intensità carbonica, le emissioni di anidride carbonica, il risparmio energetico, la gestione delle acque e dei rifiuti e la biodiversità, oltre che di caratteristiche sociali quali la sicurezza dei prodotti, la catena di fornitura, la salute e la sicurezza e i diritti umani.

Non sono stati designati benchmark di riferimento per poter conseguire le caratteristiche socioambientali promosse.

Quando il comparto ha effettuato investimenti sostenibili con obiettivi ambientali ha contribuito all'obiettivo ambientale della Tassonomia UE in materia di mitigazione dei cambiamenti climatici

Quando il comparto ha effettuato investimenti sostenibili con obiettivi sociali ha contribuito al conseguimento degli obiettivi di sviluppo sostenibile incentrati sull'aspetto sociale, come spiegato nella seguente risposta sugli obiettivi d'investimento sostenibili.

I dati sugli investimenti sostenibili contenuti nella presente informativa periodica rappresentano una media dei dati al 31 dicembre 2022 e al 31 marzo 2023.

Qual è stata la prestazione degli indicatori di sostenibilità?

La performance degli indicatori di sostenibilità utilizzati dal comparto per misurare il raggiungimento delle caratteristiche socioambientali che ha promosso è stata:

- i) 81.58% del comparto è stato investito in titoli di emittenti con caratteristiche ESG favorevoli ai sensi dei criteri d'investimento sostenibile (Sustainable Investing Framework) di Fidelity;
- ii) per quanto riguarda i suoi investimenti diretti, lo 0% del comparto è stato investito in titoli di emittenti con esposizione alle Esclusioni;
- iii) 22.56% del comparto in investimenti sostenibili; e
- iv) 9.31% del comparto in investimenti sostenibili con un obiettivo sociale.

...e rispetto ai periodi precedenti?

Non applicabile in quanto si tratta del primo periodo di riferimento.

Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha in parte realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?

Pur non avendo come obiettivo un investimento sostenibile, aveva una percentuale del 22.56% degli investimenti sostenibili. Gli investimenti sostenibili hanno avuto un obiettivo ambientale e sociale. Il comparto ha definito investimenti sostenibili:

- a) emittenti che svolgono attività economiche che contribuiscono a uno o più degli obiettivi ambientali stabiliti nella Tassonomia UE e sono considerate ecosostenibili secondo la Tassonomia UE. Ciò ha contribuito all'obiettivo ambientale della Tassonomia UE in materia di mitigazione dei cambiamenti climatici; o
- (b) emittenti dei quali la maggior parte delle attività commerciali (oltre il 50% dei ricavi) ha contribuito al conseguimento degli obiettivi socioambientali in linea con uno o più obiettivi di sviluppo sostenibile delle Nazioni Unite; o
- (c) emittenti che si danno un obiettivo di decarbonizzazione coerente con un'ipotesi di riscaldamento fino a 1,5 gradi (verificato dalla Science Based Target Initiative o da un Fidelity Proprietary Climate Rating) che si ritiene contribuisca agli obiettivi ambientali; a condizione che non arrechino danni significativi, soddisfino le garanzie minime e i criteri di buona governance.

Gli SDG sono una serie di obiettivi pubblicati dalle Nazioni Unite che riconoscono che porre fine alla povertà e ad altre privazioni deve andare di pari passo con il miglioramento della salute e dell'istruzione, la crescita economica e la riduzione delle disuguaglianze, il tutto affrontando i cambiamenti climatici e impegnandosi a preservare gli oceani e le foreste del pianeta. Per ulteriori informazioni vedere il [sito web](#) delle Nazioni Unite. Dal punto di vista ambientale gli SDG concentrano l'attenzione su acqua potabile e i servizi igienici, energia pulita e accessibile, consumo e produzione responsabili e azione per il clima. Dal punto di vista sociale gli SDG concentrano l'attenzione su assenza di povertà, sconfitta della fame, crescita economica e occupazione produttiva, industria, innovazione e infrastrutture, città e comunità sicure e sostenibili.

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

In che modo gli investimenti sostenibili che il prodotto finanziario ha in parte realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?

Gli investimenti sostenibili sono stati sottoposti a screening per il coinvolgimento in attività che arrecano danni e controversie significativi; la valutazione è avvenuta mediante controllo del soddisfacimento da parte dell'emittente delle garanzie minime e degli standard relativi ai principali effetti avversi (PAI) oltre che della performance in base ai parametri PAI, il che ha comportato: Screening basati sulle norme, vale a dire screening dei titoli individuati nell'ambito degli screening basati sulle norme esistenti di Fidelity (come di seguito indicato); screening basati sulle attività, cioè screening degli emittenti in base alla loro partecipazione ad attività con effetti negativi significativi sulla società o sull'ambiente, compresi gli emittenti che erano considerati avere controversie "molto gravi" sulla base di screening di controversie, che riguardano 1) questioni ambientali, 2) diritti umani e comunità, 3) diritti dei lavoratori e catena di fornitura, 4) clienti, 5) governance; e indicatori PAI, i dati quantitativi (se disponibili) sugli indicatori PAI vengono utilizzati per valutare se un emittente è coinvolto in attività che arrecano danni significativi a eventuali obiettivi ambientali o sociali.

In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?

Per quanto riguarda gli investimenti sostenibili, come sopra indicato, Fidelity ha effettuato una valutazione quantitativa per individuare gli emittenti con performance problematiche in materia di indicatori PAI e sono stati presi in considerazione tutti gli indicatori obbligatori e quelli eventualmente pertinenti per gli effetti avversi sui fattori di sostenibilità di cui all'Allegato 1 degli standard tecnici di regolamentazione SFDR dell'UE (in presenza di dati disponibili).

Gli emittenti con un punteggio basso non erano idonei a diventare "investimenti sostenibili", a meno che la ricerca dei fondamentali di Fidelity non determinasse che l'emittente non stava violando requisiti finalizzati a "non arrecare un danno significativo" o era sulla buona strada per mitigare gli effetti avversi grazie a una gestione o una transizione efficaci.

Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:

Sono stati applicati screening basati su norme: Emittenti individuati non in grado di comportarsi in modo da soddisfare le loro responsabilità fondamentali nei settori dei diritti umani, del lavoro, dell'ambiente e dell'anticorruzione, in linea con le norme internazionali, comprese quelle stabilite dalle Linee guida dell'OCSE per le imprese multinazionali e dai Principi guida delle Nazioni Unite su imprese e diritti umani, dal Global Compact delle Nazioni Unite (UNGC), dalle norme dell'Organizzazione internazionale del lavoro (OIL), dalle Convenzioni dell'OIL, non erano considerati investimenti sostenibili.

La tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'Unione.

Il principio "non arrecare un danno significativo" si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante del presente prodotto finanziario non tengono conto dei criteri dell'UE per le attività economiche ecosostenibili.

Nessun altro investimento sostenibile deve arrecare un danno significativo agli obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

I principali effetti avversi sui fattori di sostenibilità sono stati presi in considerazione e integrati nelle decisioni d'investimento attraverso una serie di strumenti, tra cui:

(i) Due Diligence: analisi dei principali effetti avversi per verificare se sono stati sostanziali e negativi.

(ii) Rating ESG: Fidelity fa riferimento ai rating ESG che tengono conto dei principali effetti avversi sostanziali come emissioni di carbonio, sicurezza dei dipendenti, tangenti e corruzione, gestione delle risorse idriche. Per quanto riguarda i titoli emessi da enti sovrani, i principali effetti avversi sono stati presi in considerazione e integrati nelle decisioni d'investimento attraverso rating che tengono conto dei principali effetti avversi sostanziali come emissioni di anidride carbonica, violazioni sociali e libertà di espressione.

(iii) Esclusioni: Abbiamo adottato un approccio agli aspetti ESG basato sui principi e, in quest'ottica, inseriamo le società che consideriamo investimenti non idonei in un Elenco di esclusioni, tra cui, senza intento limitativo, quanto segue; un elenco di esclusioni a livello aziendale, che includa armi biologiche, armi chimiche, l'uso di scorte, la produzione e il trasferimento di mine antiuomo, il trattato di non proliferazione delle armi nucleari e le linee guida delle Nazioni Unite, della Banca mondiale e di altre autorità globali che sostengono i principi ESG.

(iv) Impegno: Fidelity ha utilizzato l'impegno come strumento per comprendere meglio i principali effetti avversi sui fattori di sostenibilità e, in alcune circostanze, sostenere il miglioramento dei principali effetti avversi e dei parametri di sostenibilità. Fidelity ha partecipato a iniziative individuali e di collaborazione che tengono conto di tutta una serie di effetti avversi principali (es., Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(v) Voto: La politica di voto di Fidelity comprendeva standard minimi espliciti per quanto riguarda la diversità di genere all'interno dei consigli di amministrazione e per l'impegno nei confronti del cambiamento climatico. Fidelity può anche votare per migliorare la performance degli emittenti sulla base di altri indicatori.

(vi) Revisioni trimestrali: monitoraggio dei principali effetti avversi attraverso il processo di revisione trimestrale del comparto.

Fidelity tiene conto di indicatori specifici per i singoli fattori di sostenibilità quando si tratta di valutare i principali effetti avversi degli investimenti. Questi indicatori sono soggetti alla disponibilità dei dati e possono cambiare con il miglioramento della qualità e della disponibilità degli stessi.

Le esclusioni e gli screening di cui sopra (le "Esclusioni") possono essere aggiornati di volta in volta. Per ulteriori informazioni consultare questo sito: ["Criteri di investimento sostenibile"](#).

Quali sono stati i principali investimenti di questo prodotto finanziario?

L'elenco comprende gli investimenti che costituiscono la quota maggiore di investimenti del prodotto finanziario durante il periodo di riferimento, ossia: 2022-05-01 / 2023-04-30

Investimenti di maggiore entità	Settore	% di attivi	Paese
Fidelity ILF - The Euro Fund - A-ACC-EUR	Fondo di tipo aperto	4.79%	Irlanda

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali e presentati sotto forma di media per il periodo di riferimento. La classificazione dei titoli, compresi il settore e il paese, è riferita all'ultimo giorno del periodo di riferimento. I dati comprendono tutti i titoli, esclusi i derivati.

Qual è stata la quota degli investimenti in materia di sostenibilità?

L'**allocazione degli attivi** descrive la quota di investimenti in attivi specifici.

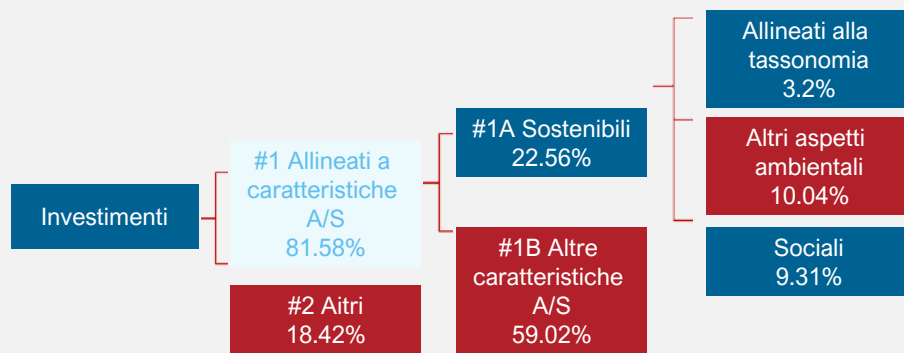

Il comparto ha effettuato il 22.56% di investimenti sostenibili.

Qual è stata l'allocazione degli attivi?

(#1 Allineato a caratteristiche E/S) Il comparto ha investito:

- 81.58% del suo patrimonio in titoli di emittenti con caratteristiche ESG favorevoli;
- 22.56% in investimenti sostenibili (#1A sostenibili)* di cui il 3.2% ha un obiettivo ambientale (allineato alla Tassonomia UE), il 10.04% ha un obiettivo ambientale (non allineato alla Tassonomia UE), il 9.31% ha un obiettivo sociale.

(#1B Altre caratteristiche E/S) Comprende titoli di emittenti con caratteristiche ESG favorevoli ma che non sono investimenti sostenibili.

#1 Allineati a caratteristiche A/S: comprende gli investimenti del prodotto finanziario utilizzati per rispettare le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

#2 Altri: comprende gli investimenti rimanenti del prodotto finanziario che non sono allineati alle caratteristiche ambientali o sociali, né sono considerati investimenti sostenibili.

La categoria **#1 Allineati a caratteristiche A/S** comprende:

- la sottocategoria **#1A Sostenibili**, che contempla gli investimenti sostenibili dal punto di vista ambientale e sociale;

-la sottocategoria **#1B Altre caratteristiche A/S**, che contempla gli investimenti allineati alle

In quali settori economici sono stati effettuati gli investimenti?

Settore	Sotto Settore	% di attivi
Beni di prima necessità	Bevande	0.90%

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali e presentati sotto forma di media per il periodo di riferimento. La classificazione dei titoli, compresi Settore e Sottosettore, è riferita all'ultimo giorno del periodo di riferimento. I dati comprendono tutti i titoli, esclusi i derivati. A causa della limitatezza dei dati, non siamo in grado di dare informazioni sulla percentuale di investimenti in settori e sottosettori dell'economia che traggono entrate dall'esplorazione, dall'estrazione, dall'estrazione, dalla produzione, dalla lavorazione, dallo stoccaggio, dalla raffinazione o dalla distribuzione, compresi il trasporto, la conservazione e il commercio, di combustibili fossili.

In che misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Per conformarsi alla tassonomia dell'UE i criteri per il **gas fossile** comprendono limitazioni delle emissioni e il passaggio all'energia da fonti totalmente rinnovabili o ai combustibili a basse emissioni di carbonio entro la fine del 2035.

Per l'**energia nucleare** i criteri comprendono norme complete in materia di sicurezza e gestione dei rifiuti.

Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale.

Le **attività di transizione** sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano, tra gli altri livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

Le attività allineate alla tassonomia sono espresse in percentuali di:

- **fatturato**: quota di entrate da attività verdi delle imprese beneficiarie degli investimenti

- **spese in conto capitale**

(CapEx): investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, ad es. per la transizione verso un'economia verde

- **spese operative**

(OpEx): attività operative verdi delle imprese beneficiarie degli investimenti

Il comparto ha effettuato almeno il 3.2% di investimenti sostenibili con un obiettivo ambientale allineato alla Tassonomia UE. Ciò ha contribuito all'obiettivo ambientale della Tassonomia UE in materia di mitigazione dei cambiamenti climatici (3.2%).

La conformità degli investimenti del comparto alla Tassonomia UE non era oggetto di garanzia da parte dei revisori o di revisione da parte di terzi.

L'allineamento tassonomico degli investimenti sottostanti del comparto è misurato dal fatturato.

Il prodotto finanziario ha investito in attività connesse al gas fossile e/o all'energia nucleare che erano conformi alla tassonomia dell'UE?

- Sì
- Gas fossile Energia nucleare
- No

I due grafici sottostanti mostrano in blu scuro la percentuale minima di investimenti allineati alla Tassonomia UE. Poiché non esiste una metodologia appropriata per determinare l'allineamento alla Tassonomia delle obbligazioni sovrane*, il primo grafico mostra l'allineamento alla Tassonomia in relazione a tutti gli investimenti del prodotto finanziario, comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla Tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

*Ai fini dei grafici di cui sopra, per «obbligazioni sovrane» si intendono tutte le esposizioni sovrane.

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali solari e presentati sotto forma di media per il periodo di riferimento. I dati sulla Tassonomia UE comunicati possono differire a causa delle differenze nella metodologia di calcolo utilizzata.

Qual era la quota degli investimenti effettuati in attività di transizione e abilitanti?

La quota del comparto realizzata in Attività abilitanti: 2.27%; Attività transizionali: 0.02%, misurato dal Fatturato.

Come si rapporta la percentuale di investimenti che erano allineati alla tassonomia dell'UE con i precedenti periodi di riferimento?

Non applicabile in quanto si tratta del primo periodo di riferimento.

¹Le attività connesse al gas fossile e/o all'energia nucleare sono conformi alla tassonomia dell'UE solo se contribuiscono all'azione di contenimento dei cambiamenti climatici ("mitigazione dei cambiamenti climatici") e non arrecano un danno significativo a nessuno degli obiettivi della tassonomia dell'UE - cfr. nota esplicativa sul margine sinistro. I criteri completi riguardanti le attività economiche connesse al gas fossile e all'energia nucleare che sono conformi alla tassonomia dell'UE sono stabiliti nel regolamento delegato (UE) 2022/1214 della Commissione.

sono investimenti sostenibili con un obiettivo ambientale e che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

Qual era la quota di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?

Il comparto ha effettuato investimenti sostenibili nella misura del 10.04% con un obiettivo ambientale non allineato alla Tassonomia UE, per quanto consentito e coerentemente con la politica d'investimento e le percentuali minime dichiarate nelle informazioni precontrattuali.

Qual era la quota di investimenti socialmente sostenibili?

Il comparto ha effettuato almeno il 9.31% di investimenti sostenibili con un obiettivo sociale.

Quali investimenti erano compresi nella categoria «Altri» e qual era il loro scopo? Esistevano garanzie minime di salvaguardia ambientale o sociale?

I restanti investimenti del comparto sono stati effettuati in attivi coerenti con il suo obiettivo finanziario, contante ed equivalente del contante a fini di liquidità e derivati utilizzati per gli investimenti e la gestione efficace del portafoglio. Come garanzia minima a livello ambientale e sociale, il comparto ha aderito alle Esclusioni.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Il comparto ha intrapreso le seguenti azioni per soddisfare le caratteristiche ambientali o sociali:

1. Il comparto ha investito in titoli di emittenti con caratteristiche ESG favorevoli.
2. Il comparto ha effettuato investimenti sostenibili.
3. Riesame trimestrale della sostenibilità per discutere e rivedere le caratteristiche socioambientali qualitative del comparto.
4. Il comparto ha applicato le Esclusioni.

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?

Un Indice non è stato designato come benchmark di riferimento per determinare se questo prodotto finanziario è allineato alle caratteristiche ambientali o sociali che promuove.

Gli **indici di riferimento** sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

di informativa periodica per i prodotti finanziari di cui all'articolo 8, paragrafi 1, 2 e 2 bis, del regolamento (UE) 2019/2088 e all'articolo 6, primo comma, del regolamento (UE) 2020/852

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, a condizione che tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e che l'Impresa beneficiaria degli investimenti rispetti prassi di buona governance

La **tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non comprende un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero non risultare allineati alla tassonomia.

Gli **indicatori di sostenibilità** misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?	
<input checked="" type="radio"/> <input type="radio"/> <input type="checkbox"/> <input type="checkbox"/> Si	<input type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <input type="checkbox"/> No
<input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo ambientale: ___% <input type="checkbox"/> in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> In attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo sociale: ___%	<input checked="" type="checkbox"/> Ha promosso caratteristiche ambientali/sociali (A/S) e, pur non avendo come obiettivo un investimento sostenibile, aveva una quota del(lo) 14.59% di investimenti sostenibili <input checked="" type="checkbox"/> con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE <input checked="" type="checkbox"/> con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE <input checked="" type="checkbox"/> con un obiettivo sociale <input type="checkbox"/> Ha promosso caratteristiche A/S, ma non ha effettuato alcun investimento sostenibile

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Il comparto ha soddisfatto le caratteristiche socioambientali promosse secondo la definizione fornita nell'informativa precontrattuale SFDR per il periodo. Il comparto ha promosso caratteristiche socioambientali investendo in titoli di emittenti con caratteristiche ESG favorevoli. Le caratteristiche ESG favorevoli sono state determinate in riferimento ai rating ESG, che hanno tenuto conto di caratteristiche ambientali quali l'intensità carbonica, le emissioni di anidride carbonica, il risparmio energetico, la gestione delle acque e dei rifiuti e la biodiversità, oltre che di caratteristiche sociali quali la sicurezza dei prodotti, la catena di fornitura, la salute e la sicurezza e i diritti umani.

Non sono stati designati benchmark di riferimento per poter conseguire le caratteristiche socioambientali promosse.

Quando il comparto ha effettuato investimenti sostenibili con obiettivi ambientali ha contribuito all'obiettivo ambientale della Tassonomia UE in materia di mitigazione dei cambiamenti climatici

Quando il comparto ha effettuato investimenti sostenibili con obiettivi sociali ha contribuito al conseguimento degli obiettivi di sviluppo sostenibile incentrati sull'aspetto sociale, come spiegato nella seguente risposta sugli obiettivi d'investimento sostenibili.

I dati sugli investimenti sostenibili contenuti nella presente informativa periodica rappresentano una media dei dati al 31 dicembre 2022 e al 31 marzo 2023.

Qual è stata la prestazione degli indicatori di sostenibilità?

La performance degli indicatori di sostenibilità utilizzati dal comparto per misurare il raggiungimento delle caratteristiche socioambientali che ha promosso è stata:

- i) 92.57% del comparto è stato investito in titoli di emittenti con caratteristiche ESG favorevoli ai sensi dei criteri d'investimento sostenibile (Sustainable Investing Framework) di Fidelity;
- ii) per quanto riguarda i suoi investimenti diretti, lo 0% del comparto è stato investito in titoli di emittenti con esposizione alle Esclusioni;
- iii) 14.59% del comparto in investimenti sostenibili; e
- iv) 4.37% del comparto in investimenti sostenibili con un obiettivo sociale.

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

...e rispetto ai periodi precedenti?

Non applicabile in quanto si tratta del primo periodo di riferimento.

Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha in parte realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?

Pur non avendo come obiettivo un investimento sostenibile, aveva una percentuale del 14.59% degli investimenti sostenibili. Gli investimenti sostenibili hanno avuto un obiettivo ambientale e sociale. Il comparto ha definito investimenti sostenibili:

- a) emittenti che svolgono attività economiche che contribuiscono a uno o più degli obiettivi ambientali stabiliti nella Tassonomia UE e sono considerate ecosostenibili secondo la Tassonomia UE. Ciò ha contribuito all'obiettivo ambientale della Tassonomia UE in materia di mitigazione dei cambiamenti climatici; o
- (b) emittenti dei quali la maggior parte delle attività commerciali (oltre il 50% dei ricavi) ha contribuito al conseguimento degli obiettivi socioambientali in linea con uno o più obiettivi di sviluppo sostenibile delle Nazioni Unite; o
- (c) emittenti che si danno un obiettivo di decarbonizzazione coerente con un'ipotesi di riscaldamento fino a 1,5 gradi (verificato dalla Science Based Target Initiative o da un Fidelity Proprietary Climate Rating) che si ritiene contribuisca agli obiettivi ambientali; a condizione che non arrechino danni significativi, soddisfino le garanzie minime e i criteri di buona governance.

Gli SDG sono una serie di obiettivi pubblicati dalle Nazioni Unite che riconoscono che porre fine alla povertà e ad altre privazioni deve andare di pari passo con il miglioramento della salute e dell'istruzione, la crescita economica e la riduzione delle disuguaglianze, il tutto affrontando i cambiamenti climatici e impegnandosi a preservare gli oceani e le foreste del pianeta. Per ulteriori informazioni vedere il [sito web](#) delle Nazioni Unite. Dal punto di vista ambientale gli SDG concentrano l'attenzione su acqua potabile e i servizi igienici, energia pulita e accessibile, consumo e produzione responsabili e azione per il clima. Dal punto di vista sociale gli SDG concentrano l'attenzione su assenza di povertà, sconfitta della fame, crescita economica e occupazione produttiva, industria, innovazione e infrastrutture, città e comunità sicure e sostenibili.

In che modo gli investimenti sostenibili che il prodotto finanziario ha in parte realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?

Gli investimenti sostenibili sono stati sottoposti a screening per il coinvolgimento in attività che arrecano danni e controversie significativi; la valutazione è avvenuta mediante controllo del soddisfacimento da parte dell'emittente delle garanzie minime e degli standard relativi ai principali effetti avversi (PAI) oltre che della performance in base ai parametri PAI, il che ha comportato: Screening basati sulle norme, vale a dire screening dei titoli individuati nell'ambito degli screening basati sulle norme esistenti di Fidelity (come di seguito indicato); screening basati sulle attività, cioè screening degli emittenti in base alla loro partecipazione ad attività con effetti negativi significativi sulla società o sull'ambiente, compresi gli emittenti che erano considerati avere controversie "molto gravi" sulla base di screening di controversie, che riguardano 1) questioni ambientali, 2) diritti umani e comunità, 3) diritti dei lavoratori e catena di fornitura, 4) clienti, 5) governance; e indicatori PAI, i dati quantitativi (se disponibili) sugli indicatori PAI vengono utilizzati per valutare se un emittente è coinvolto in attività che arrecano danni significativi a eventuali obiettivi ambientali o sociali.

In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?

Per quanto riguarda gli investimenti sostenibili, come sopra indicato, Fidelity ha effettuato una valutazione quantitativa per individuare gli emittenti con performance problematiche in materia di indicatori PAI e sono stati presi in considerazione tutti gli indicatori obbligatori e quelli eventualmente pertinenti per gli effetti avversi sui fattori di sostenibilità di cui all'Allegato 1 degli standard tecnici di regolamentazione SFDR dell'UE (in presenza di dati disponibili).

Gli emittenti con un punteggio basso non erano idonei a diventare "investimenti sostenibili", a meno che la ricerca dei fondamentali di Fidelity non determinasse che l'emittente non stava violando requisiti finalizzati a "non arrecare un danno significativo" o era sulla buona strada per mitigare gli effetti avversi grazie a una gestione o una transizione efficaci.

Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:

Sono stati applicati screening basati su norme: Emittenti individuati non in grado di comportarsi in modo da soddisfare le loro responsabilità fondamentali nei settori dei diritti umani, del lavoro, dell'ambiente e dell'anticorruzione, in linea con le norme internazionali, comprese quelle stabilite dalle Linee guida dell'OCSE per le imprese multinazionali e dai Principi guida delle Nazioni Unite su imprese e diritti umani, dal Global Compact delle Nazioni Unite (UNGC), dalle norme dell'Organizzazione internazionale del lavoro (OIL), dalle Convenzioni dell'OIL, non erano considerati investimenti sostenibili.

La tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'Unione.

Il principio "non arrecare un danno significativo" si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante del presente prodotto finanziario non tengono conto dei criteri dell'UE per le attività economiche ecosostenibili.

Nessun altro investimento sostenibile deve arrecare un danno significativo agli obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

I principali effetti avversi sui fattori di sostenibilità sono stati presi in considerazione e integrati nelle decisioni d'investimento attraverso una serie di strumenti, tra cui:

(i) Due Diligence: analisi dei principali effetti avversi per verificare se sono stati sostanziali e negativi.

(ii) Rating ESG: Fidelity fa riferimento ai rating ESG che tengono conto dei principali effetti avversi sostanziali come emissioni di carbonio, sicurezza dei dipendenti, tangenti e corruzione, gestione delle risorse idriche. Per quanto riguarda i titoli emessi da enti sovrani, i principali effetti avversi sono stati presi in considerazione e integrati nelle decisioni d'investimento attraverso rating che tengono conto dei principali effetti avversi sostanziali come emissioni di anidride carbonica, violazioni sociali e libertà di espressione.

(iii) Esclusioni: Abbiamo adottato un approccio agli aspetti ESG basato sui principi e, in quest'ottica, inseriamo le società che consideriamo investimenti non idonei in un Elenco di esclusioni, tra cui, senza intento limitativo, quanto segue; un elenco di esclusioni a livello aziendale, che includa armi biologiche, armi chimiche, l'uso di scorte, la produzione e il trasferimento di mine antiuomo, il trattato di non proliferazione delle armi nucleari e le linee guida delle Nazioni Unite, della Banca mondiale e di altre autorità globali che sostengono i principi ESG.

(iv) Impegno: Fidelity ha utilizzato l'impegno come strumento per comprendere meglio i principali effetti avversi sui fattori di sostenibilità e, in alcune circostanze, sostenere il miglioramento dei principali effetti avversi e dei parametri di sostenibilità. Fidelity ha partecipato a iniziative individuali e di collaborazione che tengono conto di tutta una serie di effetti avversi principali (es., Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(v) Voto: La politica di voto di Fidelity comprendeva standard minimi espliciti per quanto riguarda la diversità di genere all'interno dei consigli di amministrazione e per l'impegno nei confronti del cambiamento climatico. Fidelity può anche votare per migliorare la performance degli emittenti sulla base di altri indicatori.

(vi) Revisioni trimestrali: monitoraggio dei principali effetti avversi attraverso il processo di revisione trimestrale del comparto.

Fidelity tiene conto di indicatori specifici per i singoli fattori di sostenibilità quando si tratta di valutare i principali effetti avversi degli investimenti. Questi indicatori sono soggetti alla disponibilità dei dati e possono cambiare con il miglioramento della qualità e della disponibilità degli stessi.

Le esclusioni e gli screening di cui sopra (le "Esclusioni") possono essere aggiornati di volta in volta. Per ulteriori informazioni consultare questo sito: ["Criteri di investimento sostenibile"](#).

Quali sono stati i principali investimenti di questo prodotto finanziario?

L'elenco comprende gli investimenti che costituiscono la quota maggiore di investimenti del prodotto finanziario durante il periodo di riferimento, ossia: 2022-05-01 / 2023-04-30

Investimenti di maggiore entità	Settore	% di attivi	Paese

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali e presentati sotto forma di media per il periodo di riferimento. La classificazione dei titoli, compresi il settore e il paese, è riferita all'ultimo giorno del periodo di riferimento. I dati comprendono tutti i titoli, esclusi i derivati.

Qual è stata la quota degli investimenti in materia di sostenibilità?

L'**allocazione degli attivi** descrive la quota di investimenti in attivi specifici.

Il comparto ha effettuato il 14.59% di investimenti sostenibili.

Qual è stata l'allocazione degli attivi?

(#1 Allineato a caratteristiche E/S) Il comparto ha investito:

- 92.57% del suo patrimonio in titoli di emittenti con caratteristiche ESG favorevoli;
- 14.59% in investimenti sostenibili (#1A sostenibili)* di cui il 1.54% ha un obiettivo ambientale (allineato alla Tassonomia UE), il 8.68% ha un obiettivo ambientale (non allineato alla Tassonomia UE), il 4.37% ha un obiettivo sociale.

(#1B Altre caratteristiche E/S) Comprende titoli di emittenti con caratteristiche ESG favorevoli ma che non sono investimenti sostenibili.

#1 Allineati a caratteristiche A/S: comprende gli investimenti del prodotto finanziario utilizzati per rispettare le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

#2 Altri: comprende gli investimenti rimanenti del prodotto finanziario che non sono allineati alle caratteristiche ambientali o sociali, né sono considerati investimenti sostenibili.

La categoria **#1 Allineati a caratteristiche A/S** comprende:

- la sottocategoria **#1A Sostenibili**, che contempla gli investimenti sostenibili dal punto di vista ambientale e sociale;

- la sottocategoria **#1B Altre caratteristiche A/S**, che contempla gli investimenti allineati alle

In quali settori economici sono stati effettuati gli investimenti?

Settore	Sotto Settore	% di attivi
Beni di prima necessità	Prodotti alimentari	1.51%
	Vendita al dettaglio di alimenti e prodotti di base	0.83%
	Prodotti per la cura della persona	0.53%
Energia	Attrezzature e servizi energetici	1.79%
	Petrolio, gas e combustibili consumabili	1.21%
Finanziari	Mercati dei capitali	4.93%
	Servizi finanziari diversificati	4.48%

	Servizi di pubblica utilità vari	0.43%

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali e presentati sotto forma di media per il periodo di riferimento. La classificazione dei titoli, compresi Settore e Sottosettore, è riferita all'ultimo giorno del periodo di riferimento. I dati comprendono tutti i titoli, esclusi i derivati. A causa della limitatezza dei dati, non siamo in grado di dare informazioni sulla percentuale di investimenti in settori e sottosectori dell'economia che traggono entrate dall'esplorazione, dall'estrazione, dall'estrazione, dalla produzione, dalla lavorazione, dallo stoccaggio, dalla raffinazione o dalla distribuzione, compresi il trasporto, la conservazione e il commercio, di combustibili fossili.

In che misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Il comparto ha effettuato almeno il 1.54% di investimenti sostenibili con un obiettivo ambientale allineato alla Tassonomia UE. Ciò ha contribuito all'obiettivo ambientale della Tassonomia UE in materia di mitigazione dei cambiamenti climatici (1.54%).

La conformità degli investimenti del comparto alla Tassonomia UE non era oggetto di garanzia da parte dei revisori o di revisione da parte di terzi.

Per conformarsi alla tassonomia dell'UE i criteri per il **gas fossile** comprendono limitazioni delle emissioni e il passaggio all'energia da fonti totalmente rinnovabili o ai combustibili a basse emissioni di carbonio entro la fine del 2035. Per l'**energia nucleare** i criteri comprendono norme complete in materia di sicurezza e gestione dei rifiuti. Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale. Le **attività di transizione** sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano, tra gli altri livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

Le attività allineate alla tassonomia sono espresse in percentuali di:

- **fatturato**: quota di entrate da attività verdi delle imprese beneficiarie degli investimenti

- **spese in conto capitale** (CapEx): investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, ad es. per la transizione verso un'economia verde

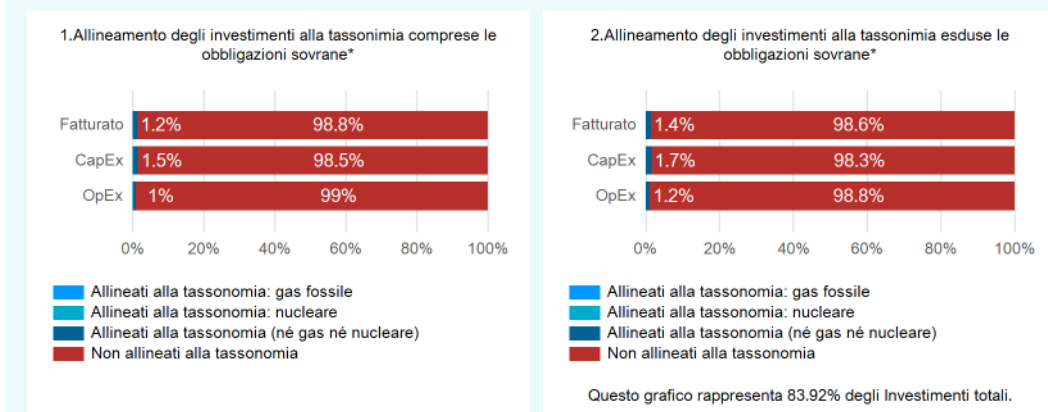

- **spese operative** (OpEx): attività operative verdi delle imprese beneficiarie degli investimenti

L'allineamento tassonomico degli investimenti sottostanti del comparto è misurato dal fatturato.

Il prodotto finanziario ha investito in attività connesse al gas fossile e/o all'energia nucleare che erano conformi alla tassonomia dell'UE¹?

- Sì
- Gas fossile Energia nucleare
- No

I due grafici sottostanti mostrano in blu scuro la percentuale minima di investimenti allineati alla Tassonomia UE. Poiché non esiste una metodologia appropriata per determinare l'allineamento alla Tassonomia delle obbligazioni sovrane*, il primo grafico mostra l'allineamento alla Tassonomia in relazione a tutti gli investimenti del prodotto finanziario, comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla Tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

*Ai fini dei grafici di cui sopra, per «obbligazioni sovrane» si intendono tutte le esposizioni sovrane.

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali solari e presentati sotto forma di media per il periodo di riferimento. I dati sulla Tassonomia UE comunicati possono differire a causa delle differenze nella metodologia di calcolo utilizzata.

Qual era la quota degli investimenti effettuati in attività di transizione e abilitanti?

La quota del comparto realizzata in Attività abilitanti: 0.51%; Attività transizionali: 0.02%, misurato dal Fatturato.

Come si rapporta la percentuale di investimenti che erano allineati alla tassonomia dell'UE con i precedenti periodi di riferimento?

Non applicabile in quanto si tratta del primo periodo di riferimento.

¹Le attività connesse al gas fossile e/o all'energia nucleare sono conformi alla tassonomia dell'UE solo se contribuiscono all'azione di contenimento dei cambiamenti climatici ("mitigazione dei cambiamenti climatici") e non arrecano un danno significativo a nessuno degli obiettivi della tassonomia dell'UE - cfr. nota esplicativa sul margine sinistro. I criteri completi riguardanti le attività economiche connesse al gas fossile e all'energia nucleare che sono conformi alla tassonomia dell'UE sono stabiliti nel regolamento delegato (UE) 2022/1214 della Commissione.

sono investimenti sostenibili con un obiettivo ambientale e che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

Qual era la quota di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?

Il comparto ha effettuato investimenti sostenibili nella misura del 8.68% con un obiettivo ambientale non allineato alla Tassonomia UE, per quanto consentito e coerentemente con la politica d'investimento e le percentuali minime dichiarate nelle informazioni precontrattuali.

Qual era la quota di investimenti socialmente sostenibili?

Il comparto ha effettuato almeno il 4.37% di investimenti sostenibili con un obiettivo sociale .

Quali investimenti erano compresi nella categoria «Altri» e qual era il loro scopo? Esistevano garanzie minime di salvaguardia ambientale o sociale?

I restanti investimenti del comparto sono stati effettuati in attivi coerenti con il suo obiettivo finanziario, contante ed equivalente del contante a fini di liquidità e derivati utilizzati per gli investimenti e la gestione efficace del portafoglio. Come garanzia minima a livello ambientale e sociale, il comparto ha aderito alle Esclusioni.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Il comparto ha intrapreso le seguenti azioni per soddisfare le caratteristiche ambientali o sociali:

1. Il comparto ha investito in titoli di emittenti con caratteristiche ESG favorevoli.
2. Il comparto ha effettuato investimenti sostenibili.
3. Riesame trimestrale della sostenibilità per discutere e rivedere le caratteristiche socioambientali qualitative del comparto.
4. Il comparto ha applicato le Esclusioni.

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?

Un Indice non è stato designato come benchmark di riferimento per determinare se questo prodotto finanziario è allineato alle caratteristiche ambientali o sociali che promuove.

Gli **indici di riferimento** sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

di informativa periodica per i prodotti finanziari di cui all'articolo 8, paragrafi 1, 2 e 2 bis, del regolamento (UE) 2019/2088 e all'articolo 6, primo comma, del regolamento (UE) 2020/852

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, a condizione che tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e che l'Impresa beneficiaria degli investimenti rispetti prassi di buona governance

La **tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non comprende un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero non risultare allineati alla tassonomia.

Gli **indicatori di sostenibilità** misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

Nome del prodotto:
Fidelity Funds - Flexible Bond Fund

Identificativo della persona giuridica:
Y5GJXJ4DKJON310L3I87

Caratteristiche ambientali e/o sociali

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?	
<input checked="" type="radio"/> <input type="radio"/> <input type="checkbox"/> Si	<input type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> No
<input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo ambientale : ___% <ul style="list-style-type: none"><input type="checkbox"/> in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE<input type="checkbox"/> In attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE	<input checked="" type="checkbox"/> Ha promosso caratteristiche ambientali/sociali (A/S) e, pur non avendo come obiettivo un investimento sostenibile, aveva una quota del(lo) 11.92% di investimenti sostenibili <ul style="list-style-type: none"><input checked="" type="checkbox"/> con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE<input checked="" type="checkbox"/> con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE<input checked="" type="checkbox"/> con un obiettivo sociale
<input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo sociale : ___%	<input type="checkbox"/> Ha promosso caratteristiche A/S, ma non ha effettuato alcun investimento sostenibile

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Il comparto ha soddisfatto le caratteristiche socioambientali promosse secondo la definizione fornita nell'informativa precontrattuale SFDR per il periodo. Il comparto ha promosso caratteristiche socioambientali investendo in titoli di emittenti con caratteristiche ESG favorevoli. Le caratteristiche ESG favorevoli sono state determinate in riferimento ai rating ESG, che hanno tenuto conto di caratteristiche ambientali quali l'intensità carbonica, le emissioni di anidride carbonica, il risparmio energetico, la gestione delle acque e dei rifiuti e la biodiversità, oltre che di caratteristiche sociali quali la sicurezza dei prodotti, la catena di fornitura, la salute e la sicurezza e i diritti umani.

Non sono stati designati benchmark di riferimento per poter conseguire le caratteristiche socioambientali promosse.

Quando il comparto ha effettuato investimenti sostenibili con obiettivi ambientali ha contribuito all'obiettivo ambientale della Tassonomia UE in materia di mitigazione dei cambiamenti climatici

Quando il comparto ha effettuato investimenti sostenibili con obiettivi sociali ha contribuito al conseguimento degli obiettivi di sviluppo sostenibile incentrati sull'aspetto sociale, come spiegato nella seguente risposta sugli obiettivi d'investimento sostenibili.

I dati sugli investimenti sostenibili contenuti nella presente informativa periodica rappresentano una media dei dati al 31 dicembre 2022 e al 31 marzo 2023.

Qual è stata la prestazione degli indicatori di sostenibilità?

La performance degli indicatori di sostenibilità utilizzati dal comparto per misurare il raggiungimento delle caratteristiche socioambientali che ha promosso è stata:

- i) 85.03% del comparto è stato investito in titoli di emittenti con caratteristiche ESG favorevoli ai sensi dei criteri d'investimento sostenibile (Sustainable Investing Framework) di Fidelity;
- ii) per quanto riguarda i suoi investimenti diretti, lo 0% del comparto è stato investito in titoli di emittenti con esposizione alle Esclusioni;
- iii) 11.92% del comparto in investimenti sostenibili; e
- iv) 4.56% del comparto in investimenti sostenibili con un obiettivo sociale.

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

...e rispetto ai periodi precedenti?

Non applicabile in quanto si tratta del primo periodo di riferimento.

Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha in parte realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?

Pur non avendo come obiettivo un investimento sostenibile, aveva una percentuale del 11.92% degli investimenti sostenibili. Gli investimenti sostenibili hanno avuto un obiettivo ambientale e sociale. Il comparto ha definito investimenti sostenibili:

- a) emittenti che svolgono attività economiche che contribuiscono a uno o più degli obiettivi ambientali stabiliti nella Tassonomia UE e sono considerate ecosostenibili secondo la Tassonomia UE. Ciò ha contribuito all'obiettivo ambientale della Tassonomia UE in materia di mitigazione dei cambiamenti climatici; o
- (b) emittenti dei quali la maggior parte delle attività commerciali (oltre il 50% dei ricavi) ha contribuito al conseguimento degli obiettivi socioambientali in linea con uno o più obiettivi di sviluppo sostenibile delle Nazioni Unite; o
- (c) emittenti che si danno un obiettivo di decarbonizzazione coerente con un'ipotesi di riscaldamento fino a 1,5 gradi (verificato dalla Science Based Target Initiative o da un Fidelity Proprietary Climate Rating) che si ritiene contribuisca agli obiettivi ambientali; a condizione che non arrechino danni significativi, soddisfino le garanzie minime e i criteri di buona governance.

Gli SDG sono una serie di obiettivi pubblicati dalle Nazioni Unite che riconoscono che porre fine alla povertà e ad altre privazioni deve andare di pari passo con il miglioramento della salute e dell'istruzione, la crescita economica e la riduzione delle disuguaglianze, il tutto affrontando i cambiamenti climatici e impegnandosi a preservare gli oceani e le foreste del pianeta. Per ulteriori informazioni vedere il [sito web](#) delle Nazioni Unite. Dal punto di vista ambientale gli SDG concentrano l'attenzione su acqua potabile e i servizi igienici, energia pulita e accessibile, consumo e produzione responsabili e azione per il clima. Dal punto di vista sociale gli SDG concentrano l'attenzione su assenza di povertà, sconfitta della fame, crescita economica e occupazione produttiva, industria, innovazione e infrastrutture, città e comunità sicure e sostenibili.

In che modo gli investimenti sostenibili che il prodotto finanziario ha in parte realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?

Gli investimenti sostenibili sono stati sottoposti a screening per il coinvolgimento in attività che arrecano danni e controversie significativi; la valutazione è avvenuta mediante controllo del soddisfacimento da parte dell'emittente delle garanzie minime e degli standard relativi ai principali effetti avversi (PAI) oltre che della performance in base ai parametri PAI, il che ha comportato: Screening basati sulle norme, vale a dire screening dei titoli individuati nell'ambito degli screening basati sulle norme esistenti di Fidelity (come di seguito indicato); screening basati sulle attività, cioè screening degli emittenti in base alla loro partecipazione ad attività con effetti negativi significativi sulla società o sull'ambiente, compresi gli emittenti che erano considerati avere controversie "molto gravi" sulla base di screening di controversie, che riguardano 1) questioni ambientali, 2) diritti umani e comunità, 3) diritti dei lavoratori e catena di fornitura, 4) clienti, 5) governance; e indicatori PAI, i dati quantitativi (se disponibili) sugli indicatori PAI vengono utilizzati per valutare se un emittente è coinvolto in attività che arrecano danni significativi a eventuali obiettivi ambientali o sociali.

In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?

Per quanto riguarda gli investimenti sostenibili, come sopra indicato, Fidelity ha effettuato una valutazione quantitativa per individuare gli emittenti con performance problematiche in materia di indicatori PAI e sono stati presi in considerazione tutti gli indicatori obbligatori e quelli eventualmente pertinenti per gli effetti avversi sui fattori di sostenibilità di cui all'Allegato 1 degli standard tecnici di regolamentazione SFDR dell'UE (in presenza di dati disponibili).

Gli emittenti con un punteggio basso non erano idonei a diventare "investimenti sostenibili", a meno che la ricerca dei fondamentali di Fidelity non determinasse che l'emittente non stava violando requisiti finalizzati a "non arrecare un danno significativo" o era sulla buona strada per mitigare gli effetti avversi grazie a una gestione o una transizione efficaci.

Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:

Sono stati applicati screening basati su norme: Emittenti individuati non in grado di comportarsi in modo da soddisfare le loro responsabilità fondamentali nei settori dei diritti umani, del lavoro, dell'ambiente e dell'anticorruzione, in linea con le norme internazionali, comprese quelle stabilite dalle Linee guida dell'OCSE per le imprese multinazionali e dai Principi guida delle Nazioni Unite su imprese e diritti umani, dal Global Compact delle Nazioni Unite (UNGC), dalle norme dell'Organizzazione internazionale del lavoro (OIL), dalle Convenzioni dell'OIL, non erano considerati investimenti sostenibili.

La tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'Unione.

Il principio "non arrecare un danno significativo" si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante del presente prodotto finanziario non tengono conto dei criteri dell'UE per le attività economiche ecosostenibili.

Nessun altro investimento sostenibile deve arrecare un danno significativo agli obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

I principali effetti avversi sui fattori di sostenibilità sono stati presi in considerazione e integrati nelle decisioni d'investimento attraverso una serie di strumenti, tra cui:

(i) Due Diligence: analisi dei principali effetti avversi per verificare se sono stati sostanziali e negativi.

(ii) Rating ESG: Fidelity fa riferimento ai rating ESG che tengono conto dei principali effetti avversi sostanziali come emissioni di carbonio, sicurezza dei dipendenti, tangenti e corruzione, gestione delle risorse idriche. Per quanto riguarda i titoli emessi da enti sovrani, i principali effetti avversi sono stati presi in considerazione e integrati nelle decisioni d'investimento attraverso rating che tengono conto dei principali effetti avversi sostanziali come emissioni di anidride carbonica, violazioni sociali e libertà di espressione.

(iii) Esclusioni: Abbiamo adottato un approccio agli aspetti ESG basato sui principi e, in quest'ottica, inseriamo le società che consideriamo investimenti non idonei in un Elenco di esclusioni, tra cui, senza intento limitativo, quanto segue; un elenco di esclusioni a livello aziendale, che includa armi biologiche, armi chimiche, l'uso di scorte, la produzione e il trasferimento di mine antiuomo, il trattato di non proliferazione delle armi nucleari e le linee guida delle Nazioni Unite, della Banca mondiale e di altre autorità globali che sostengono i principi ESG.

(iv) Impegno: Fidelity ha utilizzato l'impegno come strumento per comprendere meglio i principali effetti avversi sui fattori di sostenibilità e, in alcune circostanze, sostenere il miglioramento dei principali effetti avversi e dei parametri di sostenibilità. Fidelity ha partecipato a iniziative individuali e di collaborazione che tengono conto di tutta una serie di effetti avversi principali (es., Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(v) Voto: La politica di voto di Fidelity comprendeva standard minimi espliciti per quanto riguarda la diversità di genere all'interno dei consigli di amministrazione e per l'impegno nei confronti del cambiamento climatico. Fidelity può anche votare per migliorare la performance degli emittenti sulla base di altri indicatori.

(vi) Revisioni trimestrali: monitoraggio dei principali effetti avversi attraverso il processo di revisione trimestrale del comparto.

Fidelity tiene conto di indicatori specifici per i singoli fattori di sostenibilità quando si tratta di valutare i principali effetti avversi degli investimenti. Questi indicatori sono soggetti alla disponibilità dei dati e possono cambiare con il miglioramento della qualità e della disponibilità degli stessi.

Le esclusioni e gli screening di cui sopra (le "Esclusioni") possono essere aggiornati di volta in volta. Per ulteriori informazioni consultare questo sito: ["Criteri di investimento sostenibile"](#).

Quali sono stati i principali investimenti di questo prodotto finanziario?

L'elenco comprende gli investimenti che costituiscono la quota maggiore di investimenti del prodotto finanziario durante il periodo di riferimento, ossia: 2022-05-01 / 2023-04-30

Investimenti di maggiore entità	Settore	% di attivi	Paese
Japan -0.15% 25/11/2022	Governativi	2.97%	Giappone

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali e presentati sotto forma di media per il periodo di riferimento. La classificazione dei titoli, compresi il settore e il paese, è riferita all'ultimo giorno del periodo di riferimento. I dati comprendono tutti i titoli, esclusi i derivati.

Qual è stata la quota degli investimenti in materia di sostenibilità?

L'allocazione degli attivi descrive la quota di investimenti in attivi specifici.

Il comparto ha effettuato il 11.92% di investimenti sostenibili.

Qual è stata l'allocazione degli attivi?

(#1 Allineato a caratteristiche E/S) Il comparto ha investito:

- 85.03% del suo patrimonio in titoli di emittenti con caratteristiche ESG favorevoli;
- 11.92% in investimenti sostenibili (#1A sostenibili)* di cui il 1.23% ha un obiettivo ambientale (allineato alla Tassonomia UE), il 6.14% ha un obiettivo ambientale (non allineato alla Tassonomia UE), il 4.56% ha un obiettivo sociale.

(#1B Altre caratteristiche E/S) Comprende titoli di emittenti con caratteristiche ESG favorevoli ma che non sono investimenti sostenibili.

#1 Allineati a caratteristiche A/S: comprende gli investimenti del prodotto finanziario utilizzati per rispettare le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

#2 Altri: comprende gli investimenti rimanenti del prodotto finanziario che non sono allineati alle caratteristiche ambientali o sociali, né sono considerati investimenti sostenibili.

La categoria **#1 Allineati a caratteristiche A/S** comprende:

- la sottocategoria **#1A Sostenibili**, che contempla gli investimenti sostenibili dal punto di vista ambientale e sociale;

- la sottocategoria **#1B Altre caratteristiche A/S**, che contempla gli investimenti allineati alle

In quali settori economici sono stati effettuati gli investimenti?

Settore	Sotto Settore	% di attivi
Beni di prima necessità	Vendita al dettaglio di alimenti e prodotti di base	0.70%

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali e presentati sotto forma di media per il periodo di riferimento. La classificazione dei titoli, compresi Settore e Sottosectore, è riferita all'ultimo giorno del periodo di riferimento. I dati comprendono tutti i titoli, esclusi i derivati. A causa della limitatezza dei dati, non siamo in grado di dare informazioni sulla percentuale di investimenti in settori e sottosectori dell'economia che traggono entrate dall'esplorazione, dall'estrazione, dall'estrazione, dalla produzione, dalla lavorazione, dallo stoccaggio, dalla raffinazione o dalla distribuzione, compresi il trasporto, la conservazione e il commercio, di combustibili fossili.

Per conformarsi alla tassonomia dell'UE i criteri per il **gas fossile** comprendono limitazioni delle emissioni e il passaggio all'energia da fonti totalmente rinnovabili o ai combustibili a basse emissioni di carbonio entro la fine del 2035. Per l'**energia nucleare** i criteri comprendono norme complete in materia di sicurezza e gestione dei rifiuti. Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale. Le **attività di transizione** sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio che presentano, tra gli altri livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

In che misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Il comparto ha effettuato almeno il 1.23% di investimenti sostenibili con un obiettivo ambientale allineato alla Tassonomia UE. Ciò ha contribuito all'obiettivo ambientale della Tassonomia UE in materia di mitigazione dei cambiamenti climatici (1.23%). La conformità degli investimenti del comparto alla Tassonomia UE non era oggetto di garanzia da parte dei revisori o di revisione da parte di terzi. L'allineamento tassonomico degli investimenti sottostanti del comparto è misurato dal fatturato.

Il prodotto finanziario ha investito in attività connesse al gas fossile e/o all'energia nucleare che erano conformi alla tassonomia dell'UE?

- Sì
- Gas fossile Energia nucleare
- No

I due grafici sottostanti mostrano in blu scuro la percentuale minima di investimenti allineati alla Tassonomia UE. Poiché non esiste una metodologia appropriata per determinare l'allineamento alla Tassonomia delle obbligazioni sovrane*, il primo grafico mostra l'allineamento alla Tassonomia in relazione a tutti gli investimenti del prodotto finanziario, comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla Tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

*Ai fini dei grafici di cui sopra, per «obbligazioni sovrane» si intendono tutte le esposizioni sovrane.

¹Le attività connesse al gas fossile e/o all'energia nucleare sono conformi alla tassonomia dell'UE solo se contribuiscono all'azione di contenimento dei cambiamenti climatici ("mitigazione dei cambiamenti climatici") e non arrecano un danno significativo a nessuno degli obiettivi della tassonomia dell'UE - cfr. nota esplicativa sul margine sinistro. I criteri completi riguardanti le attività economiche connesse al gas fossile e all'energia nucleare che sono conformi alla tassonomia dell'UE sono stabiliti nel regolamento delegato (UE) 2022/1214 della Commissione.

Le attività allineate alla tassonomia sono espresse in percentuate di:

- **fatturato**: quota di entrate da attività verdi delle Imprese beneficiarie degli investimenti

- **spese in conto capitale** (CapEx): investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, ad es. per la transizione verso un'economia verde

- **spese operative** (OpEx): attività operative verdi delle imprese beneficiarie degli Investimenti

sono investimenti sostenibili con un obiettivo ambientale e che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali solari e presentati sotto forma di media per il periodo di riferimento. I dati sulla Tassonomia UE comunicati possono differire a causa delle differenze nella metodologia di calcolo utilizzata.

Qual era la quota degli investimenti effettuati in attività di transizione e abilitanti?

La quota del comparto realizzata in Attività abilitanti: 1.52%; Attività transizionali: 0.08%, misurato dal Fatturato.

Come si rapporta la percentuale di investimenti che erano allineati alla tassonomia dell'UE con i precedenti periodi di riferimento?

Non applicabile in quanto si tratta del primo periodo di riferimento.

Qual era la quota di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?

Il comparto ha effettuato investimenti sostenibili nella misura del 6.14% con un obiettivo ambientale non allineato alla Tassonomia UE, per quanto consentito e coerentemente con la politica d'investimento e le percentuali minime dichiarate nelle informazioni precontrattuali.

Qual era la quota di investimenti socialmente sostenibili?

Il comparto ha effettuato almeno il 4.56% di investimenti sostenibili con un obiettivo sociale .

Quali investimenti erano compresi nella categoria «Altri» e qual era il loro scopo? Esistevano garanzie minime di salvaguardia ambientale o sociale?

I restanti investimenti del comparto sono stati effettuati in attivi coerenti con il suo obiettivo finanziario, contante ed equivalente del contante a fini di liquidità e derivati utilizzati per gli investimenti e la gestione efficace del portafoglio.

Come garanzia minima a livello ambientale e sociale, il comparto ha aderito alle Esclusioni.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Il comparto ha intrapreso le seguenti azioni per soddisfare le caratteristiche ambientali o sociali:

1. Il comparto ha investito in titoli di emittenti con caratteristiche ESG favorevoli.
2. Il comparto ha effettuato investimenti sostenibili.
3. Riesame trimestrale della sostenibilità per discutere e rivedere le caratteristiche socioambientali qualitative del comparto.
4. Il comparto ha applicato le Esclusioni.

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?

Gli **indici di riferimento** sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

Un Indice non è stato designato come benchmark di riferimento per determinare se questo prodotto finanziario è allineato alle caratteristiche ambientali o sociali che promuove.

di informativa periodica per i prodotti finanziari di cui all'articolo 8, paragrafi 1, 2 e 2 bis, del regolamento (UE) 2019/2088 e all'articolo 6, primo comma, del regolamento (UE) 2020/852

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, a condizione che tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e che l'Impresa beneficiaria degli investimenti rispetti prassi di buona governance

La **tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non comprende un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero non risultare allineati alla tassonomia.

Gli **indicatori di sostenibilità** misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

Nome del prodotto:
Fidelity Funds - Sustainable Global Dividend Plus
Fund

Identificativo della persona giuridica:
549300OZL7XSDZJCL571

Caratteristiche ambientali e/o sociali

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Si	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo ambientale : __% <input type="checkbox"/> in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> In attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo sociale : __%	<input checked="" type="checkbox"/> Ha promosso caratteristiche ambientali/sociali (A/S) e, pur non avendo come obiettivo un investimento sostenibile, aveva una quota del(lo) 65.31% di investimenti sostenibili <input checked="" type="checkbox"/> con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE <input checked="" type="checkbox"/> con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE <input checked="" type="checkbox"/> con un obiettivo sociale <input type="checkbox"/> Ha promosso caratteristiche A/S, ma non ha effettuato alcun investimento sostenibile

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Il comparto ha soddisfatto le caratteristiche socioambientali promosse secondo la definizione fornita nell'informativa precontrattuale SFDR per il periodo. Il comparto ha promosso caratteristiche socioambientali investendo in titoli di emittenti con caratteristiche ESG favorevoli. Le caratteristiche ESG favorevoli sono state determinate in riferimento ai rating ESG, che hanno tenuto conto di caratteristiche ambientali quali l'intensità carbonica, le emissioni di anidride carbonica, il risparmio energetico, la gestione delle acque e dei rifiuti e la biodiversità, oltre che di caratteristiche sociali quali la sicurezza dei prodotti, la catena di fornitura, la salute e la sicurezza e i diritti umani.

Non sono stati designati benchmark di riferimento per poter conseguire le caratteristiche socioambientali promosse.

Quando il comparto ha effettuato investimenti sostenibili con obiettivi ambientali ha contribuito all'obiettivo ambientale della Tassonomia UE in materia di mitigazione dei cambiamenti climatici

Quando il comparto ha effettuato investimenti sostenibili con obiettivi sociali ha contribuito al conseguimento degli obiettivi di sviluppo sostenibile incentrati sull'aspetto sociale, come spiegato nella seguente risposta sugli obiettivi d'investimento sostenibili.

I dati sugli investimenti sostenibili contenuti nella presente informativa periodica rappresentano una media dei dati al 31 dicembre 2022 e al 31 marzo 2023.

Qual è stata la prestazione degli indicatori di sostenibilità?

La performance degli indicatori di sostenibilità utilizzati dal comparto per misurare il raggiungimento delle caratteristiche socioambientali che ha promosso è stata:

- i) 85.1% del comparto è stato investito in titoli di emittenti con caratteristiche ESG favorevoli ai sensi dei criteri d'investimento sostenibile (Sustainable Investing Framework) di Fidelity;
- ii) per quanto riguarda i suoi investimenti diretti, lo 0% del comparto è stato investito in titoli di emittenti con esposizione alle Esclusioni;
- iii) 65.31% del comparto in investimenti sostenibili; e
- iv) 35.91% del comparto in investimenti sostenibili con un obiettivo sociale.

...e rispetto ai periodi precedenti?

Non applicabile in quanto si tratta del primo periodo di riferimento.

Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha in parte realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?

Pur non avendo come obiettivo un investimento sostenibile, aveva una percentuale del 65.31% degli investimenti sostenibili. Gli investimenti sostenibili hanno avuto un obiettivo ambientale e sociale. Il comparto ha definito investimenti sostenibili:

- a) emittenti che svolgono attività economiche che contribuiscono a uno o più degli obiettivi ambientali stabiliti nella Tassonomia UE e sono considerate ecosostenibili secondo la Tassonomia UE. Ciò ha contribuito all'obiettivo ambientale della Tassonomia UE in materia di mitigazione dei cambiamenti climatici; o
- (b) emittenti dei quali la maggior parte delle attività commerciali (oltre il 50% dei ricavi) ha contribuito al conseguimento degli obiettivi socioambientali in linea con uno o più obiettivi di sviluppo sostenibile delle Nazioni Unite; o
- (c) emittenti che si danno un obiettivo di decarbonizzazione coerente con un'ipotesi di riscaldamento fino a 1,5 gradi (verificato dalla Science Based Target Initiative o da un Fidelity Proprietary Climate Rating) che si ritiene contribuisca agli obiettivi ambientali; a condizione che non arrechino danni significativi, soddisfino le garanzie minime e i criteri di buona governance.

Gli SDG sono una serie di obiettivi pubblicati dalle Nazioni Unite che riconoscono che porre fine alla povertà e ad altre privazioni deve andare di pari passo con il miglioramento della salute e dell'istruzione, la crescita economica e la riduzione delle disuguaglianze, il tutto affrontando i cambiamenti climatici e impegnandosi a preservare gli oceani e le foreste del pianeta. Per ulteriori informazioni vedere il [sito web](#) delle Nazioni Unite. Dal punto di vista ambientale gli SDG concentrano l'attenzione su acqua potabile e i servizi igienici, energia pulita e accessibile, consumo e produzione responsabili e azione per il clima. Dal punto di vista sociale gli SDG concentrano l'attenzione su assenza di povertà, sconfitta della fame, crescita economica e occupazione produttiva, industria, innovazione e infrastrutture, città e comunità sicure e sostenibili.

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

In che modo gli investimenti sostenibili che il prodotto finanziario ha in parte realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?

Gli investimenti sostenibili sono stati sottoposti a screening per il coinvolgimento in attività che arrecano danni e controversie significativi; la valutazione è avvenuta mediante controllo del soddisfacimento da parte dell'emittente delle garanzie minime e degli standard relativi ai principali effetti avversi (PAI) oltre che della performance in base ai parametri PAI, il che ha comportato: Screening basati sulle norme, vale a dire screening dei titoli individuati nell'ambito degli screening basati sulle norme esistenti di Fidelity (come di seguito indicato); screening basati sulle attività, cioè screening degli emittenti in base alla loro partecipazione ad attività con effetti negativi significativi sulla società o sull'ambiente, compresi gli emittenti che erano considerati avere controversie "molto gravi" sulla base di screening di controversie, che riguardano 1) questioni ambientali, 2) diritti umani e comunità, 3) diritti dei lavoratori e catena di fornitura, 4) clienti, 5) governance; e indicatori PAI, i dati quantitativi (se disponibili) sugli indicatori PAI vengono utilizzati per valutare se un emittente è coinvolto in attività che arrecano danni significativi a eventuali obiettivi ambientali o sociali.

In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?

Per quanto riguarda gli investimenti sostenibili, come sopra indicato, Fidelity ha effettuato una valutazione quantitativa per individuare gli emittenti con performance problematiche in materia di indicatori PAI e sono stati presi in considerazione tutti gli indicatori obbligatori e quelli eventualmente pertinenti per gli effetti avversi sui fattori di sostenibilità di cui all'Allegato 1 degli standard tecnici di regolamentazione SFDR dell'UE (in presenza di dati disponibili).

Gli emittenti con un punteggio basso non erano idonei a diventare "investimenti sostenibili", a meno che la ricerca dei fondamentali di Fidelity non determinasse che l'emittente non stava violando requisiti finalizzati a "non arrecare un danno significativo" o era sulla buona strada per mitigare gli effetti avversi grazie a una gestione o una transizione efficaci.

Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:

Sono stati applicati screening basati su norme: Emittenti individuati non in grado di comportarsi in modo da soddisfare le loro responsabilità fondamentali nei settori dei diritti umani, del lavoro, dell'ambiente e dell'anticorruzione, in linea con le norme internazionali, comprese quelle stabilite dalle Linee guida dell'OCSE per le imprese multinazionali e dai Principi guida delle Nazioni Unite su imprese e diritti umani, dal Global Compact delle Nazioni Unite (UNGC), dalle norme dell'Organizzazione internazionale del lavoro (OIL), dalle Convenzioni dell'OIL, non erano considerati investimenti sostenibili.

La tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'Unione.

Il principio "non arrecare un danno significativo" si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante del presente prodotto finanziario non tengono conto dei criteri dell'UE per le attività economiche ecosostenibili.

Nessun altro investimento sostenibile deve arrecare un danno significativo agli obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

I principali effetti avversi sui fattori di sostenibilità sono stati presi in considerazione e integrati nelle decisioni d'investimento attraverso una serie di strumenti, tra cui:

(i) Due Diligence: analisi dei principali effetti avversi per verificare se sono stati sostanziali e negativi.

(ii) Rating ESG: Fidelity fa riferimento ai rating ESG che tengono conto dei principali effetti avversi sostanziali come emissioni di carbonio, sicurezza dei dipendenti, tangenti e corruzione, gestione delle risorse idriche. Per quanto riguarda i titoli emessi da enti sovrani, i principali effetti avversi sono stati presi in considerazione e integrati nelle decisioni d'investimento attraverso rating che tengono conto dei principali effetti avversi sostanziali come emissioni di anidride carbonica, violazioni sociali e libertà di espressione.

(iii) Esclusioni: Abbiamo adottato un approccio agli aspetti ESG basato sui principi e, in quest'ottica, inseriamo le società che consideriamo investimenti non idonei in un Elenco di esclusioni, tra cui, senza intento limitativo, quanto segue; un elenco di esclusioni a livello aziendale, che includa armi biologiche, armi chimiche, l'uso di scorte, la produzione e il trasferimento di mine antiuomo, il trattato di non proliferazione delle armi nucleari e le linee guida delle Nazioni Unite, della Banca mondiale e di altre autorità globali che sostengono i principi ESG.

(iv) Impegno: Fidelity ha utilizzato l'impegno come strumento per comprendere meglio i principali effetti avversi sui fattori di sostenibilità e, in alcune circostanze, sostenere il miglioramento dei principali effetti avversi e dei parametri di sostenibilità. Fidelity ha partecipato a iniziative individuali e di collaborazione che tengono conto di tutta una serie di effetti avversi principali (es., Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(v) Voto: La politica di voto di Fidelity comprendeva standard minimi espliciti per quanto riguarda la diversità di genere all'interno dei consigli di amministrazione e per l'impegno nei confronti del cambiamento climatico. Fidelity può anche votare per migliorare la performance degli emittenti sulla base di altri indicatori.

(vi) Revisioni trimestrali: monitoraggio dei principali effetti avversi attraverso il processo di revisione trimestrale del comparto.

Fidelity tiene conto di indicatori specifici per i singoli fattori di sostenibilità quando si tratta di valutare i principali effetti avversi degli investimenti. Questi indicatori sono soggetti alla disponibilità dei dati e possono cambiare con il miglioramento della qualità e della disponibilità degli stessi.

Le esclusioni e gli screening di cui sopra (le "Esclusioni") possono essere aggiornati di volta in volta. Per ulteriori informazioni consultare questo sito: ["Criteri di investimento sostenibile"](#).

Quali sono stati i principali investimenti di questo prodotto finanziario?

L'elenco comprende gli investimenti che costituiscono la quota maggiore di investimenti del prodotto finanziario durante il periodo di riferimento, ossia: 2022-05-01 / 2023-04-30

Investimenti di maggiore entità	Settore	% di attivi	Paese
Sanofi	Sanità	4.12%	Francia
Roche Holding	Sanità	3.43%	Svizzera
Unilever	Beni di prima necessità	3.33%	Regno Unito
Deutsche Boerse	Finanziari	3.26%	Germania
3i Group	Finanziari	2.90%	Regno Unito
Allianz	Finanziari	2.80%	Germania
Fidelity ILF - The Euro Fund - A-ACC-EUR	Fondo di tipo aperto	2.80%	Irlanda
Iberdrola	Servizi di pubblica utilità	2.77%	Spagna
Samsung Electronics	Informatica	2.72%	Corea
Procter & Gamble	Beni di prima necessità	2.68%	Stati Uniti d'America
RELX (NL)	Industriali	2.49%	Regno Unito
Ferrovial	Industriali	2.45%	Spagna
UPM-Kymmene	Materiali	2.44%	Finlandia
Zurich Insurance Group	Finanziari	2.42%	Svizzera
Bristol-Myers Squibb	Sanità	2.40%	Stati Uniti d'America

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali e presentati sotto forma di media per il periodo di riferimento. La classificazione dei titoli, compresi il settore e il paese, è riferita all'ultimo giorno del periodo di riferimento. I dati comprendono tutti i titoli, esclusi i derivati.

Qual è stata la quota degli investimenti in materia di sostenibilità?

L'allocazione degli attivi descrive la quota di investimenti in attivi specifici.

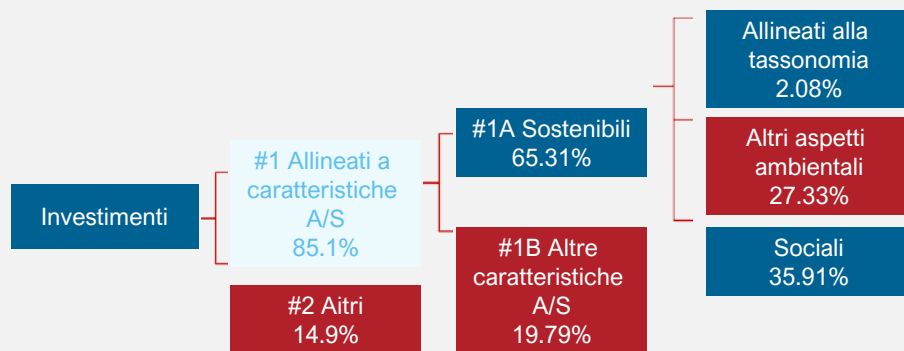

Il comparto ha effettuato il 65.31% di investimenti sostenibili.

Qual è stata l'allocazione degli attivi?

(#1 Allineato a caratteristiche E/S) Il comparto ha investito:

- 85.1% del suo patrimonio in titoli di emittenti con caratteristiche ESG favorevoli;
- 65.31% in investimenti sostenibili (#1A sostenibili)* di cui il 2.08% ha un obiettivo ambientale (allineato alla Tassonomia UE), il 27.33% ha un obiettivo ambientale (non allineato alla Tassonomia UE), il 35.91% ha un obiettivo sociale.

(#1B Altre caratteristiche E/S) Comprende titoli di emittenti con caratteristiche ESG favorevoli ma che non sono investimenti sostenibili.

#1 Allineati a caratteristiche A/S: comprende gli investimenti del prodotto finanziario utilizzati per rispettare le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

#2 Altri: comprende gli investimenti rimanenti del prodotto finanziario che non sono allineati alle caratteristiche ambientali o sociali, né sono considerati investimenti sostenibili.

La categoria **#1 Allineati a caratteristiche A/S** comprende:

- la sottocategoria **#1A Sostenibili**, che contempla gli investimenti sostenibili dal punto di vista ambientale e sociale;

- la sottocategoria **#1B Altre caratteristiche A/S**, che contempla gli investimenti allineati alle

In quali settori economici sono stati effettuati gli investimenti?

Settore	Sotto Settore	% di attivi
Beni di prima necessità	Prodotti per la casa	5.02%
	Prodotti per la cura della persona	4.84%
	Prodotti alimentari	2.33%
Finanziari	Assicurazione	13.53%
	Servizi finanziari diversificati	12.14%
	Banche commerciali	0.27%
Fondo di tipo aperto	Fondo monetario di tipo chiuso	2.80%
Immobiliare	Immobiliare	1.42%
	Azioni - Azioni ordinarie - Gestione e sviluppo immobiliare - Immobiliare	0.36%
Industriali	Apparecchiature elettriche	2.88%

Servizi di pubblica utilità	Servizi di pubblica utilità in ambito elettrico	6.01%

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali e presentati sotto forma di media per il periodo di riferimento. La classificazione dei titoli, compresi Settore e Sottosettore, è riferita all'ultimo giorno del periodo di riferimento. I dati comprendono tutti i titoli, esclusi i derivati. A causa della limitatezza dei dati, non siamo in grado di dare informazioni sulla percentuale di investimenti in settori e sottosectori dell'economia che traggono entrate dall'esplorazione, dall'estrazione, dall'estrazione, dalla produzione, dalla lavorazione, dallo stoccaggio, dalla raffinazione o dalla distribuzione, compresi il trasporto, la conservazione e il commercio, di combustibili fossili.

In che misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Il comparto ha effettuato almeno il 2.08% di investimenti sostenibili con un obiettivo ambientale allineato alla Tassonomia UE. Ciò ha contribuito all'obiettivo ambientale della Tassonomia UE in materia di mitigazione dei cambiamenti climatici (2.08%).

La conformità degli investimenti del comparto alla Tassonomia UE non era oggetto di garanzia da parte dei revisori o di revisione da parte di terzi.

L'allineamento tassonomico degli investimenti sottostanti del comparto è misurato dal fatturato.

Per conformarsi alla tassonomia dell'UE i criteri per il **gas fossile** comprendono limitazioni delle emissioni e il passaggio all'energia da fonti totalmente rinnovabili o ai combustibili a basse emissioni di carbonio entro la fine del 2035. Per l'**energia nucleare** i criteri comprendono norme complete in materia di sicurezza e gestione dei rifiuti. Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale. Le **attività di transizione** sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio che presentano, tra gli altri livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

Le attività allineate alla tassonomia sono espresse in percentuali di:

- **fatturato**: quota di entrate da attività verdi delle imprese beneficiarie degli investimenti

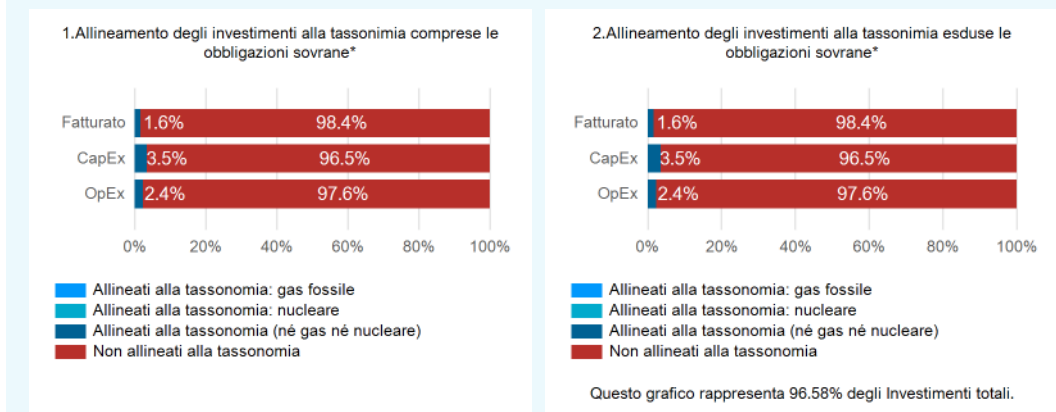

- **spese in conto capitale** (CapEx): investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, ad es. per la transizione verso un'economia verde

- **spese operative** (OpEx): attività operative verdi delle imprese beneficiarie degli investimenti

Il prodotto finanziario ha investito in attività connesse al gas fossile e/o all'energia nucleare che erano conformi alla tassonomia dell'UE¹?

- Sì
- Gas fossile Energia nucleare
- No

I due grafici sottostanti mostrano in blu scuro la percentuale minima di investimenti allineati alla Tassonomia UE. Poiché non esiste una metodologia appropriata per determinare l'allineamento alla Tassonomia delle obbligazioni sovrane*, il primo grafico mostra l'allineamento alla Tassonomia in relazione a tutti gli investimenti del prodotto finanziario, comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla Tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

*Ai fini dei grafici di cui sopra, per «obbligazioni sovrane» si intendono tutte le esposizioni sovrane.

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali solari e presentati sotto forma di media per il periodo di riferimento. I dati sulla Tassonomia UE comunicati possono differire a causa delle differenze nella metodologia di calcolo utilizzata.

Qual era la quota degli investimenti effettuati in attività di transizione e abilitanti?

La quota del comparto realizzata in Attività abilitanti: 1.25%; Attività transizionali: 0%, misurato dal Fatturato.

Come si rapporta la percentuale di investimenti che erano allineati alla tassonomia dell'UE con i precedenti periodi di riferimento?

Non applicabile in quanto si tratta del primo periodo di riferimento.

¹Le attività connesse al gas fossile e/o all'energia nucleare sono conformi alla tassonomia dell'UE solo se contribuiscono all'azione di contenimento dei cambiamenti climatici ("mitigazione dei cambiamenti climatici") e non arrecano un danno significativo a nessuno degli obiettivi della tassonomia dell'UE - cfr. nota esplicativa sul margine sinistro. I criteri completi riguardanti le attività economiche connesse al gas fossile e all'energia nucleare che sono conformi alla tassonomia dell'UE sono stabiliti nel regolamento delegato (UE) 2022/1214 della Commissione.

sono investimenti sostenibili con un obiettivo ambientale e che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

Qual era la quota di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?

Il comparto ha effettuato investimenti sostenibili nella misura del 27.33% con un obiettivo ambientale non allineato alla Tassonomia UE, per quanto consentito e coerentemente con la politica d'investimento e le percentuali minime dichiarate nelle informazioni precontrattuali.

Qual era la quota di investimenti socialmente sostenibili?

Il comparto ha effettuato almeno il 35.91% di investimenti sostenibili con un obiettivo sociale .

Quali investimenti erano compresi nella categoria «Altri» e qual era il loro scopo? Esistevano garanzie minime di salvaguardia ambientale o sociale?

I restanti investimenti del comparto sono stati effettuati in attivi coerenti con il suo obiettivo finanziario, contante ed equivalente del contante a fini di liquidità e derivati utilizzati per gli investimenti e la gestione efficace del portafoglio.

Come garanzia minima a livello ambientale e sociale, il comparto ha aderito alle Esclusioni.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Il comparto ha intrapreso le seguenti azioni per soddisfare le caratteristiche ambientali o sociali:

1. Il comparto ha investito in titoli di emittenti con caratteristiche ESG favorevoli.
2. Il comparto ha effettuato investimenti sostenibili.
3. Riesame trimestrale della sostenibilità per discutere e rivedere le caratteristiche socioambientali qualitative del comparto.
4. Il comparto ha applicato le Esclusioni.

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?

Un Indice non è stato designato come benchmark di riferimento per determinare se questo prodotto finanziario è allineato alle caratteristiche ambientali o sociali che promuove.

Gli **indici di riferimento** sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

di informativa periodica per i prodotti finanziari di cui all'articolo 8, paragrafi 1, 2 e 2 bis, del regolamento (UE) 2019/2088 e all'articolo 6, primo comma, del regolamento (UE) 2020/852

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, a condizione che tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e che l'Impresa beneficiaria degli investimenti rispetti prassi di buona governance

La **tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non comprende un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero non risultare allineati alla tassonomia.

Gli **indicatori di sostenibilità** misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

Nome del prodotto:
Fidelity Funds - Global Financial Services Fund

Identificativo della persona giuridica:
549300HO6N0F2KYZFY92

Caratteristiche ambientali e/o sociali

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?	
<input checked="" type="radio"/> <input type="radio"/> <input type="checkbox"/> <input type="checkbox"/> Si	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <input type="checkbox"/> No
<input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo ambientale : __% <input type="checkbox"/> in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> In attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo sociale : __%	<input checked="" type="checkbox"/> Ha promosso caratteristiche ambientali/sociali (A/S) e, pur non avendo come obiettivo un investimento sostenibile, aveva una quota del(lo) 29.94% di investimenti sostenibili <input checked="" type="checkbox"/> con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE <input checked="" type="checkbox"/> con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE <input checked="" type="checkbox"/> con un obiettivo sociale <input type="checkbox"/> Ha promosso caratteristiche A/S, ma non ha effettuato alcun investimento sostenibile

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Il comparto ha soddisfatto le caratteristiche socioambientali promosse secondo la definizione fornita nell'informativa precontrattuale SFDR per il periodo. Il comparto ha promosso caratteristiche socioambientali investendo in titoli di emittenti con caratteristiche ESG favorevoli. Le caratteristiche ESG favorevoli sono state determinate in riferimento ai rating ESG, che hanno tenuto conto di caratteristiche ambientali quali l'intensità carbonica, le emissioni di anidride carbonica, il risparmio energetico, la gestione delle acque e dei rifiuti e la biodiversità, oltre che di caratteristiche sociali quali la sicurezza dei prodotti, la catena di fornitura, la salute e la sicurezza e i diritti umani.

Non sono stati designati benchmark di riferimento per poter conseguire le caratteristiche socioambientali promosse.

Quando il comparto ha effettuato investimenti sostenibili con obiettivi ambientali ha contribuito all'obiettivo ambientale della Tassonomia UE in materia di mitigazione dei cambiamenti climatici. Quando il comparto ha effettuato investimenti sostenibili con obiettivi sociali ha contribuito al conseguimento degli obiettivi di sviluppo sostenibile incentrati sull'aspetto sociale, come spiegato nella seguente risposta sugli obiettivi d'investimento sostenibili.

I dati sugli investimenti sostenibili contenuti nella presente informativa periodica rappresentano una media dei dati al 31 dicembre 2022 e al 31 marzo 2023.

Qual è stata la prestazione degli indicatori di sostenibilità?

La performance degli indicatori di sostenibilità utilizzati dal comparto per misurare il raggiungimento delle caratteristiche socioambientali che ha promosso è stata:

- i) 77.83% del comparto è stato investito in titoli di emittenti con caratteristiche ESG favorevoli ai sensi dei criteri d'investimento sostenibile (Sustainable Investing Framework) di Fidelity;
- ii) per quanto riguarda i suoi investimenti diretti, lo 0% del comparto è stato investito in titoli di emittenti con esposizione alle Esclusioni;
- iii) 29.94% del comparto in investimenti sostenibili; e
- iv) 24.7% del comparto in investimenti sostenibili con un obiettivo sociale.

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

...e rispetto ai periodi precedenti?

Non applicabile in quanto si tratta del primo periodo di riferimento.

Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha in parte realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?

Pur non avendo come obiettivo un investimento sostenibile, aveva una percentuale del 29.94% degli investimenti sostenibili. Gli investimenti sostenibili hanno avuto un obiettivo ambientale e sociale. Il comparto ha definito investimenti sostenibili:

- a) emittenti che svolgono attività economiche che contribuiscono a uno o più degli obiettivi ambientali stabiliti nella Tassonomia UE e sono considerate ecosostenibili secondo la Tassonomia UE. Ciò ha contribuito all'obiettivo ambientale della Tassonomia UE in materia di mitigazione dei cambiamenti climatici; o
- (b) emittenti dei quali la maggior parte delle attività commerciali (oltre il 50% dei ricavi) ha contribuito al conseguimento degli obiettivi socioambientali in linea con uno o più obiettivi di sviluppo sostenibile delle Nazioni Unite; o
- (c) emittenti che si danno un obiettivo di decarbonizzazione coerente con un'ipotesi di riscaldamento fino a 1,5 gradi (verificato dalla Science Based Target Initiative o da un Fidelity Proprietary Climate Rating) che si ritiene contribuisca agli obiettivi ambientali; a condizione che non arrechino danni significativi, soddisfino le garanzie minime e i criteri di buona governance.

Gli SDG sono una serie di obiettivi pubblicati dalle Nazioni Unite che riconoscono che porre fine alla povertà e ad altre privazioni deve andare di pari passo con il miglioramento della salute e dell'istruzione, la crescita economica e la riduzione delle disuguaglianze, il tutto affrontando i cambiamenti climatici e impegnandosi a preservare gli oceani e le foreste del pianeta. Per ulteriori informazioni vedere il [sito web](#) delle Nazioni Unite. Dal punto di vista ambientale gli SDG concentrano l'attenzione su acqua potabile e i servizi igienici, energia pulita e accessibile, consumo e produzione responsabili e azione per il clima. Dal punto di vista sociale gli SDG concentrano l'attenzione su assenza di povertà, sconfitta della fame, crescita economica e occupazione produttiva, industria, innovazione e infrastrutture, città e comunità sicure e sostenibili.

In che modo gli investimenti sostenibili che il prodotto finanziario ha in parte realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?

Gli investimenti sostenibili sono stati sottoposti a screening per il coinvolgimento in attività che arrecano danni e controversie significativi; la valutazione è avvenuta mediante controllo del soddisfacimento da parte dell'emittente delle garanzie minime e degli standard relativi ai principali effetti avversi (PAI) oltre che della performance in base ai parametri PAI, il che ha comportato: Screening basati sulle norme, vale a dire screening dei titoli individuati nell'ambito degli screening basati sulle norme esistenti di Fidelity (come di seguito indicato); screening basati sulle attività, cioè screening degli emittenti in base alla loro partecipazione ad attività con effetti negativi significativi sulla società o sull'ambiente, compresi gli emittenti che erano considerati avere controversie "molto gravi" sulla base di screening di controversie, che riguardano 1) questioni ambientali, 2) diritti umani e comunità, 3) diritti dei lavoratori e catena di fornitura, 4) clienti, 5) governance; e indicatori PAI, i dati quantitativi (se disponibili) sugli indicatori PAI vengono utilizzati per valutare se un emittente è coinvolto in attività che arrecano danni significativi a eventuali obiettivi ambientali o sociali.

In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?

Per quanto riguarda gli investimenti sostenibili, come sopra indicato, Fidelity ha effettuato una valutazione quantitativa per individuare gli emittenti con performance problematiche in materia di indicatori PAI e sono stati presi in considerazione tutti gli indicatori obbligatori e quelli eventualmente pertinenti per gli effetti avversi sui fattori di sostenibilità di cui all'Allegato 1 degli standard tecnici di regolamentazione SFDR dell'UE (in presenza di dati disponibili).

Gli emittenti con un punteggio basso non erano idonei a diventare "investimenti sostenibili", a meno che la ricerca dei fondamentali di Fidelity non determinasse che l'emittente non stava violando requisiti finalizzati a "non arrecare un danno significativo" o era sulla buona strada per mitigare gli effetti avversi grazie a una gestione o una transizione efficaci.

Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:

Sono stati applicati screening basati su norme: Emittenti individuati non in grado di comportarsi in modo da soddisfare le loro responsabilità fondamentali nei settori dei diritti umani, del lavoro, dell'ambiente e dell'anticorruzione, in linea con le norme internazionali, comprese quelle stabilite dalle Linee guida dell'OCSE per le imprese multinazionali e dai Principi guida delle Nazioni Unite su imprese e diritti umani, dal Global Compact delle Nazioni Unite (UNGC), dalle norme dell'Organizzazione internazionale del lavoro (OIL), dalle Convenzioni dell'OIL, non erano considerati investimenti sostenibili.

La tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'Unione.

Il principio "non arrecare un danno significativo" si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante del presente prodotto finanziario non tengono conto dei criteri dell'UE per le attività economiche ecosostenibili.

Nessun altro investimento sostenibile deve arrecare un danno significativo agli obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

I principali effetti avversi sui fattori di sostenibilità sono stati presi in considerazione e integrati nelle decisioni d'investimento attraverso una serie di strumenti, tra cui:

(i) Due Diligence: analisi dei principali effetti avversi per verificare se sono stati sostanziali e negativi.

(ii) Rating ESG: Fidelity fa riferimento ai rating ESG che tengono conto dei principali effetti avversi sostanziali come emissioni di carbonio, sicurezza dei dipendenti, tangenti e corruzione, gestione delle risorse idriche. Per quanto riguarda i titoli emessi da enti sovrani, i principali effetti avversi sono stati presi in considerazione e integrati nelle decisioni d'investimento attraverso rating che tengono conto dei principali effetti avversi sostanziali come emissioni di anidride carbonica, violazioni sociali e libertà di espressione.

(iii) Esclusioni: Abbiamo adottato un approccio agli aspetti ESG basato sui principi e, in quest'ottica, inseriamo le società che consideriamo investimenti non idonei in un Elenco di esclusioni, tra cui, senza intento limitativo, quanto segue; un elenco di esclusioni a livello aziendale, che includa armi biologiche, armi chimiche, l'uso di scorte, la produzione e il trasferimento di mine antiuomo, il trattato di non proliferazione delle armi nucleari e le linee guida delle Nazioni Unite, della Banca mondiale e di altre autorità globali che sostengono i principi ESG.

(iv) Impegno: Fidelity ha utilizzato l'impegno come strumento per comprendere meglio i principali effetti avversi sui fattori di sostenibilità e, in alcune circostanze, sostenere il miglioramento dei principali effetti avversi e dei parametri di sostenibilità. Fidelity ha partecipato a iniziative individuali e di collaborazione che tengono conto di tutta una serie di effetti avversi principali (es., Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(v) Voto: La politica di voto di Fidelity comprendeva standard minimi espliciti per quanto riguarda la diversità di genere all'interno dei consigli di amministrazione e per l'impegno nei confronti del cambiamento climatico. Fidelity può anche votare per migliorare la performance degli emittenti sulla base di altri indicatori.

(vi) Revisioni trimestrali: monitoraggio dei principali effetti avversi attraverso il processo di revisione trimestrale del comparto.

Fidelity tiene conto di indicatori specifici per i singoli fattori di sostenibilità quando si tratta di valutare i principali effetti avversi degli investimenti. Questi indicatori sono soggetti alla disponibilità dei dati e possono cambiare con il miglioramento della qualità e della disponibilità degli stessi.

Le esclusioni e gli screening di cui sopra (le "Esclusioni") possono essere aggiornati di volta in volta. Per ulteriori informazioni consultare questo sito: ["Criteri di investimento sostenibile"](#).

Quali sono stati i principali investimenti di questo prodotto finanziario?

L'elenco comprende gli investimenti che costituiscono la quota maggiore di investimenti del prodotto finanziario durante il periodo di riferimento, ossia: 2022-05-01 / 2023-04-30

Investimenti di maggiore entità	Settore	% di attivi	Paese
JPMorgan Chase	Finanziari	5.61%	Stati Uniti d'America
Berkshire Hathaway (B)	Finanziari	4.88%	Stati Uniti d'America
Bank of America	Finanziari	4.08%	Stati Uniti d'America
Wells Fargo	Finanziari	3.94%	Stati Uniti d'America
Arthur J Gallagher	Finanziari	3.37%	Stati Uniti d'America
Charles Schwab	Finanziari	3.16%	Stati Uniti d'America
Morgan Stanley	Finanziari	3.14%	Stati Uniti d'America
LPL Financial Holdings	Finanziari	2.54%	Stati Uniti d'America

Everest Re Group	Finanziari	2.17%	Bermuda
Barclays	Finanziari	2.03%	Regno Unito
Julius Baer Group	Finanziari	2.00%	Svizzera
W R Berkley	Finanziari	1.84%	Stati Uniti d'America

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali e presentati sotto forma di media per il periodo di riferimento. La classificazione dei titoli, compresi il settore e il paese, è riferita all'ultimo giorno del periodo di riferimento. I dati comprendono tutti i titoli, esclusi i derivati.

Qual è stata la quota degli investimenti in materia di sostenibilità?

L'**allocazione degli attivi** descrive la quota di investimenti in attivi specifici.

Il comparto ha effettuato il 29.94% di investimenti sostenibili.

Qual è stata l'allocazione degli attivi?

(#1 Allineato a caratteristiche E/S) Il comparto ha investito:

- 77.83% del suo patrimonio in titoli di emittenti con caratteristiche ESG favorevoli;
- 29.94% in investimenti sostenibili (#1A sostenibili)* di cui il 0.06% ha un obiettivo ambientale (allineato alla Tassonomia UE), il 5.18% ha un obiettivo ambientale (non allineato alla Tassonomia UE), il 24.7% ha un obiettivo sociale.

(#1B Altre caratteristiche E/S) Comprende titoli di emittenti con caratteristiche ESG favorevoli ma che non sono investimenti sostenibili.

#1 Allineati a caratteristiche A/S: comprende gli investimenti del prodotto finanziario utilizzati per rispettare le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

#2 Altri: comprende gli investimenti rimanenti del prodotto finanziario che non sono allineati alle caratteristiche ambientali o sociali, né sono considerati investimenti sostenibili.

La categoria **#1 Allineati a caratteristiche A/S** comprende:

- la sottocategoria **#1A Sostenibili**, che contempla gli investimenti sostenibili dal punto di vista ambientale e sociale;

- la sottocategoria **#1B Altre caratteristiche A/S**, che contempla gli investimenti allineati alle

In quali settori economici sono stati effettuati gli investimenti?

Settore	Sotto Settore	% di attivi
Finanziari	Banche commerciali	36.96%
	Servizi finanziari diversificati	31.05%
	Assicurazione	20.85%
	Finanza al consumo	1.09%

	Banche e mutui ipotecari	0.23%
Fondo di tipo aperto	Fondo monetario di tipo chiuso	2.46%
Informatica	Servizi IT	4.75%
	Software	0.85%
Prodotti voluttuari	Internet e retail a catalogo	1.18%
	Vendita al dettaglio multilinea	0.47%

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali e presentati sotto forma di media per il periodo di riferimento. La classificazione dei titoli, compresi Settore e Sottosettore, è riferita all'ultimo giorno del periodo di riferimento. I dati comprendono tutti i titoli, esclusi i derivati. A causa della limitatezza dei dati, non siamo in grado di dare informazioni sulla percentuale di investimenti in settori e sottosettori dell'economia che traggono entrate dall'esplorazione, dall'estrazione, dalla produzione, dalla lavorazione, dallo stoccaggio, dalla raffinazione o dalla distribuzione, compresi il trasporto, la conservazione e il commercio, di combustibili fossili.

In che misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Il comparto ha effettuato almeno il 0.06% di investimenti sostenibili con un obiettivo ambientale allineato alla Tassonomia UE. Ciò ha contribuito alla mitigazione dei cambiamenti climatici (0.06%) obiettivo ambientale della Tassonomia UE.

Per conformarsi alla tassonomia dell'UE i criteri per il **gas fossile** comprendono limitazioni delle emissioni e il passaggio all'energia da fonti totalmente rinnovabili o ai combustibili a basse emissioni di carbonio entro la fine del 2035. Per l'**energia nucleare** i criteri comprendono norme complete in materia di sicurezza e gestione dei rifiuti. Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale. Le **attività di transizione** sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio che presentano, tra gli altri livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

Le attività allineate alla tassonomia sono espresse in percentuali di:

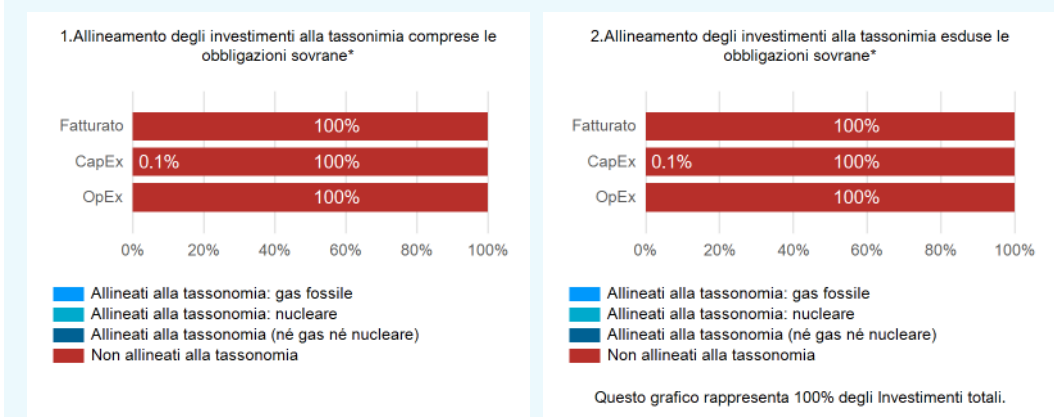

- **fatturato**: quota di entrate da attività verdi delle imprese beneficiarie degli investimenti
- **spese in conto capitale** (CapEx): investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, ad es. per la transizione verso un'economia verde
- **spese operative** (OpEx): attività operative verdi delle imprese beneficiarie degli investimenti

La conformità degli investimenti del comparto alla Tassonomia UE non era oggetto di garanzia da parte dei revisori o di revisione da parte di terzi. L'allineamento tassonomico degli investimenti sottostanti del comparto è misurato dal fatturato.

Il prodotto finanziario ha investito in attività connesse al gas fossile e/o all'energia nucleare che erano conformi alla tassonomia dell'UE?

- Sì
- Gas fossile Energia nucleare
- No

I due grafici sottostanti mostrano in blu scuro la percentuale minima di investimenti allineati alla Tassonomia UE. Poiché non esiste una metodologia appropriata per determinare l'allineamento alla Tassonomia delle obbligazioni sovrane*, il primo grafico mostra l'allineamento alla Tassonomia in relazione a tutti gli investimenti del prodotto finanziario, comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla Tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

*Ai fini dei grafici di cui sopra, per «obbligazioni sovrane» si intendono tutte le esposizioni sovrane.

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali solari e presentati sotto forma di media per il periodo di riferimento. I dati sulla Tassonomia UE comunicati possono differire a causa delle differenze nella metodologia di calcolo utilizzata.

Qual era la quota degli investimenti effettuati in attività di transizione e abilitanti?

La quota del comparto realizzata in Attività abilitanti: 0%; Attività transizionali: 0%, misurato dal Fatturato.

Come si rapporta la percentuale di investimenti che erano allineati alla tassonomia dell'UE con i precedenti periodi di riferimento?

Non applicabile in quanto si tratta del primo periodo di riferimento.

¹Le attività connesse al gas fossile e/o all'energia nucleare sono conformi alla tassonomia dell'UE solo se contribuiscono all'azione di contenimento dei cambiamenti climatici ("mitigazione dei cambiamenti climatici") e non arrecano un danno significativo a nessuno degli obiettivi della tassonomia dell'UE - cfr. nota esplicativa sul margine sinistro. I criteri completi riguardanti le attività economiche connesse al gas fossile e all'energia nucleare che sono conformi alla tassonomia dell'UE sono stabiliti nel regolamento delegato (UE) 2022/1214 della Commissione.

sono investimenti sostenibili con un obiettivo ambientale e che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

Qual era la quota di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?

Il comparto ha effettuato investimenti sostenibili nella misura del 5.18% con un obiettivo ambientale non allineato alla Tassonomia UE, per quanto consentito e coerentemente con la politica d'investimento e le percentuali minime dichiarate nelle informazioni precontrattuali.

Qual era la quota di investimenti socialmente sostenibili?

Il comparto ha effettuato almeno il 24.7% di investimenti sostenibili con un obiettivo sociale.

Quali investimenti erano compresi nella categoria «Altri» e qual era il loro scopo? Esistevano garanzie minime di salvaguardia ambientale o sociale?

I restanti investimenti del comparto sono stati effettuati in attivi coerenti con il suo obiettivo finanziario, contante ed equivalente del contante a fini di liquidità e derivati utilizzati per gli investimenti e la gestione efficace del portafoglio. Come garanzia minima a livello ambientale e sociale, il comparto ha aderito alle Esclusioni.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Il comparto ha intrapreso le seguenti azioni per soddisfare le caratteristiche ambientali o sociali:

1. Il comparto ha investito in titoli di emittenti con caratteristiche ESG favorevoli.
2. Il comparto ha effettuato investimenti sostenibili.
3. Riesame trimestrale della sostenibilità per discutere e rivedere le caratteristiche socioambientali qualitative del comparto.
4. Il comparto ha applicato le Esclusioni.

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?

Un Indice non è stato designato come benchmark di riferimento per determinare se questo prodotto finanziario è allineato alle caratteristiche ambientali o sociali che promuove.

Gli **indici di riferimento** sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

di informativa periodica per i prodotti finanziari di cui all'articolo 8, paragrafi 1, 2 e 2 bis, del regolamento (UE) 2019/2088 e all'articolo 6, primo comma, del regolamento (UE) 2020/852

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, a condizione che tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e che l'Impresa beneficiaria degli investimenti rispetti prassi di buona governance

La **tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non comprende un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero non risultare allineati alla tassonomia.

Gli **indicatori di sostenibilità** misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

Nome del prodotto:
Fidelity Funds - Global Inflation-linked Bond Fund

Identificativo della persona giuridica:
78VTRQN40UWE9NYCJW22

Caratteristiche ambientali e/o sociali

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?

Si

No

- Ha effettuato **investimenti sostenibili con un obiettivo ambientale**: ___%
- in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE
 - In attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE
- Ha effettuato **investimenti sostenibili con un obiettivo sociale**: ___%

- Ha **promosso caratteristiche ambientali/sociali (A/S)** e, pur non avendo come obiettivo un investimento sostenibile, aveva una quota del(lo) ___% di investimenti sostenibili
- con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE
 - con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE
 - con un obiettivo sociale
- Ha promosso caratteristiche A/S, ma **non ha effettuato alcun investimento sostenibile**

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Il comparto ha soddisfatto le caratteristiche socioambientali promosse secondo la definizione fornita nell'informativa precontrattuale SFDR per il periodo. Il comparto ha promosso caratteristiche socioambientali investendo in titoli di emittenti con caratteristiche ESG favorevoli. Le caratteristiche ESG favorevoli sono state determinate in riferimento ai rating ESG, che hanno tenuto conto di caratteristiche ambientali quali l'intensità carbonica, le emissioni di anidride carbonica, il risparmio energetico, la gestione delle acque e dei rifiuti e la biodiversità, oltre che di caratteristiche sociali quali la sicurezza dei prodotti, la catena di fornitura, la salute e la sicurezza e i diritti umani.

Non sono stati designati benchmark di riferimento per poter conseguire le caratteristiche socioambientali promosse.

I dati sugli investimenti sostenibili contenuti nella presente informativa periodica rappresentano una media dei dati al 31 dicembre 2022 e al 31 marzo 2023.

Qual è stata la prestazione degli indicatori di sostenibilità?

La performance degli indicatori di sostenibilità utilizzati dal comparto per misurare il raggiungimento delle caratteristiche socioambientali che ha promosso è stata:

- i) 99.05% del comparto è stato investito in titoli di emittenti con caratteristiche ESG favorevoli ai sensi dei criteri d'investimento sostenibile (Sustainable Investing Framework) di Fidelity;
- ii) per quanto riguarda i suoi investimenti diretti, lo 0% del comparto è stato investito in titoli di emittenti con esposizione alle Esclusioni;
- iii) 0% del comparto in investimenti sostenibili; e
- iv) 0% del comparto in investimenti sostenibili con un obiettivo sociale.

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

...e rispetto ai periodi precedenti?

Non applicabile in quanto si tratta del primo periodo di riferimento.

Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha in parte realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?

Pur non avendo come obiettivo un investimento sostenibile, aveva una percentuale del 0% degli investimenti sostenibili. Gli investimenti sostenibili hanno avuto un obiettivo ambientale e sociale. Il comparto ha definito investimenti sostenibili:

- a) emittenti che svolgono attività economiche che contribuiscono a uno o più degli obiettivi ambientali stabiliti nella Tassonomia UE e sono considerate ecosostenibili secondo la Tassonomia UE. Ciò non ha contribuito all'obiettivo ambientale della Tassonomia UE in materia di mitigazione dei cambiamenti climatici; o
- (b) emittenti dei quali la maggior parte delle attività commerciali (oltre il 50% dei ricavi) ha contribuito al conseguimento degli obiettivi socioambientali in linea con uno o più obiettivi di sviluppo sostenibile delle Nazioni Unite; o
- (c) emittenti che si danno un obiettivo di decarbonizzazione coerente con un'ipotesi di riscaldamento fino a 1,5 gradi (verificato dalla Science Based Target Initiative o da un Fidelity Proprietary Climate Rating) che si ritiene contribuisca agli obiettivi ambientali; a condizione che non arrechino danni significativi, soddisfino le garanzie minime e i criteri di buona governance.

Gli SDG sono una serie di obiettivi pubblicati dalle Nazioni Unite che riconoscono che porre fine alla povertà e ad altre privazioni deve andare di pari passo con il miglioramento della salute e dell'istruzione, la crescita economica e la riduzione delle disuguaglianze, il tutto affrontando i cambiamenti climatici e impegnandosi a preservare gli oceani e le foreste del pianeta. Per ulteriori informazioni vedere il [sito web](#) delle Nazioni Unite. Dal punto di vista ambientale gli SDG concentrano l'attenzione su acqua potabile e i servizi igienici, energia pulita e accessibile, consumo e produzione responsabili e azione per il clima. Dal punto di vista sociale gli SDG concentrano l'attenzione su assenza di povertà, sconfitta della fame, crescita economica e occupazione produttiva, industria, innovazione e infrastrutture, città e comunità sicure e sostenibili.

In che modo gli investimenti sostenibili che il prodotto finanziario ha in parte realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?

Gli investimenti sostenibili sono stati sottoposti a screening per il coinvolgimento in attività che arrecano danni e controversie significativi; la valutazione è avvenuta mediante controllo del soddisfacimento da parte dell'emittente delle garanzie minime e degli standard relativi ai principali effetti avversi (PAI) oltre che della performance in base ai parametri PAI, il che ha comportato: Screening basati sulle norme, vale a dire screening dei titoli individuati nell'ambito degli screening basati sulle norme esistenti di Fidelity (come di seguito indicato); screening basati sulle attività, cioè screening degli emittenti in base alla loro partecipazione ad attività con effetti negativi significativi sulla società o sull'ambiente, compresi gli emittenti che erano considerati avere controversie "molto gravi" sulla base di screening di controversie, che riguardano 1) questioni ambientali, 2) diritti umani e comunità, 3) diritti dei lavoratori e catena di fornitura, 4) clienti, 5) governance; e indicatori PAI, i dati quantitativi (se disponibili) sugli indicatori PAI vengono utilizzati per valutare se un emittente è coinvolto in attività che arrecano danni significativi a eventuali obiettivi ambientali o sociali.

In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?

Per quanto riguarda gli investimenti sostenibili, come sopra indicato, Fidelity ha effettuato una valutazione quantitativa per individuare gli emittenti con performance problematiche in materia di indicatori PAI e sono stati presi in considerazione tutti gli indicatori obbligatori e quelli eventualmente pertinenti per gli effetti avversi sui fattori di sostenibilità di cui all'Allegato 1 degli standard tecnici di regolamentazione SFDR dell'UE (in presenza di dati disponibili).

Gli emittenti con un punteggio basso non erano idonei a diventare "investimenti sostenibili", a meno che la ricerca dei fondamentali di Fidelity non determinasse che l'emittente non stava violando requisiti finalizzati a "non arrecare un danno significativo" o era sulla buona strada per mitigare gli effetti avversi grazie a una gestione o una transizione efficaci.

Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:

Sono stati applicati screening basati su norme: Emittenti individuati non in grado di comportarsi in modo da soddisfare le loro responsabilità fondamentali nei settori dei diritti umani, del lavoro, dell'ambiente e dell'anticorruzione, in linea con le norme internazionali, comprese quelle stabilite dalle Linee guida dell'OCSE per le imprese multinazionali e dai Principi guida delle Nazioni Unite su imprese e diritti umani, dal Global Compact delle Nazioni Unite (UNGC), dalle norme dell'Organizzazione internazionale del lavoro (OIL), dalle Convenzioni dell'OIL, non erano considerati investimenti sostenibili.

La tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'Unione.

Il principio "non arrecare un danno significativo" si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante del presente prodotto finanziario non tengono conto dei criteri dell'UE per le attività economiche ecosostenibili.

Nessun altro investimento sostenibile deve arrecare un danno significativo agli obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

I principali effetti avversi sui fattori di sostenibilità sono stati presi in considerazione e integrati nelle decisioni d'investimento attraverso una serie di strumenti, tra cui:

(i) Due Diligence: analisi dei principali effetti avversi per verificare se sono stati sostanziali e negativi.

(ii) Rating ESG: Fidelity fa riferimento ai rating ESG che tengono conto dei principali effetti avversi sostanziali come emissioni di carbonio, sicurezza dei dipendenti, tangenti e corruzione, gestione delle risorse idriche. Per quanto riguarda i titoli emessi da enti sovrani, i principali effetti avversi sono stati presi in considerazione e integrati nelle decisioni d'investimento attraverso rating che tengono conto dei principali effetti avversi sostanziali come emissioni di anidride carbonica, violazioni sociali e libertà di espressione.

(iii) Esclusioni: Abbiamo adottato un approccio agli aspetti ESG basato sui principi e, in quest'ottica, inseriamo le società che consideriamo investimenti non idonei in un Elenco di esclusioni, tra cui, senza intento limitativo, quanto segue; un elenco di esclusioni a livello aziendale, che includa armi biologiche, armi chimiche, l'uso di scorte, la produzione e il trasferimento di mine antiuomo, il trattato di non proliferazione delle armi nucleari e le linee guida delle Nazioni Unite, della Banca mondiale e di altre autorità globali che sostengono i principi ESG.

(iv) Impegno: Fidelity ha utilizzato l'impegno come strumento per comprendere meglio i principali effetti avversi sui fattori di sostenibilità e, in alcune circostanze, sostenere il miglioramento dei principali effetti avversi e dei parametri di sostenibilità. Fidelity ha partecipato a iniziative individuali e di collaborazione che tengono conto di tutta una serie di effetti avversi principali (es., Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(v) Voto: La politica di voto di Fidelity comprendeva standard minimi espliciti per quanto riguarda la diversità di genere all'interno dei consigli di amministrazione e per l'impegno nei confronti del cambiamento climatico. Fidelity può anche votare per migliorare la performance degli emittenti sulla base di altri indicatori.

(vi) Revisioni trimestrali: monitoraggio dei principali effetti avversi attraverso il processo di revisione trimestrale del comparto.

Fidelity tiene conto di indicatori specifici per i singoli fattori di sostenibilità quando si tratta di valutare i principali effetti avversi degli investimenti. Questi indicatori sono soggetti alla disponibilità dei dati e possono cambiare con il miglioramento della qualità e della disponibilità degli stessi.

Le esclusioni e gli screening di cui sopra (le "Esclusioni") possono essere aggiornati di volta in volta. Per ulteriori informazioni consultare questo sito: ["Criteri di investimento sostenibile"](#).

Quali sono stati i principali investimenti di questo prodotto finanziario?

L'elenco comprende gli investimenti che costituiscono la quota maggiore di investimenti del prodotto finanziario durante il periodo di riferimento, ossia: 2022-05-01 / 2023-04-30

Investimenti di maggiore entità	Settore	% di attivi	Paese
US Treasury Infl. Indexed Bonds 0.125% 15/10/2026	Governativi	7.17%	Stati Uniti d'America
US Treasury Infl. Indexed Bonds 0.75% 15/07/2028	Governativi	6.54%	Stati Uniti d'America
US Treasury Infl. Indexed Bonds 0.125% 15/04/2027	Governativi	4.94%	Stati Uniti d'America
UK Treasury Inflation Linked 0.125% 22/03/2024	Governativi	4.51%	Regno Unito
US Treasury Infl. Indexed Bonds 0.875% 15/01/2029	Governativi	4.11%	Stati Uniti d'America
US Treasury Infl. Indexed Bonds 0.375% 15/07/2027	Governativi	3.97%	Stati Uniti d'America
US Treasury Infl. Indexed Bonds 0.625% 15/07/2032	Governativi	3.89%	Stati Uniti d'America
US Treasury Infl. Indexed Bonds 0.125% 15/10/2025	Governativi	3.85%	Stati Uniti d'America
US Treasury Infl. Indexed Bonds 0.125% 15/07/2030	Governativi	3.78%	Stati Uniti d'America
US Treasury Infl. Indexed Bonds 0.125% 15/07/2031	Governativi	3.59%	Stati Uniti d'America

Italy 2.35% 15/09/2024	Governativi	3.23%	Italia
US Treasury Infl. Indexed Bonds 0.125% 15/07/2026	Governativi	3.14%	Stati Uniti d'America
Buoni Poliennali Del Tesoro 0.40% 15/05/2030	Governativi	2.51%	Italia
France 0.10% 01/03/2026	Governativi	2.39%	Francia

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali e presentati sotto forma di media per il periodo di riferimento. La classificazione dei titoli, compresi il settore e il paese, è riferita all'ultimo giorno del periodo di riferimento. I dati comprendono tutti i titoli, esclusi i derivati.

Qual è stata la quota degli investimenti in materia di sostenibilità?

L'allocazione degli attivi descrive la quota di investimenti in attivi specifici.

Il comparto ha effettuato il 0% di investimenti sostenibili.

Qual è stata l'allocazione degli attivi?

(#1 Allineato a caratteristiche E/S) Il comparto ha investito:

- 99.05% del suo patrimonio in titoli di emittenti con caratteristiche ESG favorevoli;
- 0% in investimenti sostenibili (#1A sostenibili)* di cui il 0% ha un obiettivo ambientale (allineato alla Tassonomia UE), il 0% ha un obiettivo ambientale (non allineato alla Tassonomia UE), il 0% ha un obiettivo sociale.

(#1B Altre caratteristiche E/S) Comprende titoli di emittenti con caratteristiche ESG favorevoli ma che non sono investimenti sostenibili.

#1 Allineati a caratteristiche A/S: comprende gli investimenti del prodotto finanziario utilizzati per rispettare le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

#2 Altri: comprende gli investimenti rimanenti del prodotto finanziario che non sono allineati alle caratteristiche ambientali o sociali, né sono considerati investimenti sostenibili.

In quali settori economici sono stati effettuati gli investimenti?

Settore	Sotto Settore	% di attivi
Fondo di tipo aperto	Fondo monetario di tipo chiuso	1.96%
Governativi	Governativi	97.61%

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali e presentati sotto forma di media per il periodo di riferimento. La classificazione dei titoli, compresi Settore e Sottosectore, è riferita all'ultimo giorno del periodo di riferimento. I dati comprendono tutti i titoli, esclusi i derivati. A causa della limitatezza dei dati, non siamo in grado di dare informazioni sulla percentuale di investimenti in settori e sottosettori dell'economia che traggono entrate dall'esplorazione, dall'estrazione, dalla produzione, dalla lavorazione, dallo stoccaggio, dalla raffinazione o dalla distribuzione, compresi il trasporto, la conservazione e il commercio, di combustibili fossili.

Per conformarsi alla tassonomia dell'UE i criteri per il **gas fossile** comprendono limitazioni delle emissioni e il passaggio all'energia da fonti totalmente rinnovabili o ai combustibili a basse emissioni di carbonio entro la fine del 2035. Per l'**energia nucleare** i criteri comprendono norme complete in materia di sicurezza e gestione dei rifiuti. Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale. Le **attività di transizione** sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio che presentano, tra gli altri livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

In che misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Il comparto ha effettuato almeno il 0% di investimenti sostenibili con un obiettivo ambientale allineato alla Tassonomia UE.

La conformità degli investimenti del comparto alla Tassonomia UE non era oggetto di garanzia da parte dei revisori o di revisione da parte di terzi.

L'allineamento tassonomico degli investimenti sottostanti del comparto è misurato dal fatturato.

Il prodotto finanziario ha investito in attività connesse al gas fossile e/o all'energia nucleare che erano conformi alla tassonomia dell'UE?

- Sì
- Gas fossile Energia nucleare
- No

¹Le attività connesse al gas fossile e/o all'energia nucleare sono conformi alla tassonomia dell'UE solo se contribuiscono all'azione di contenimento dei cambiamenti climatici ("mitigazione dei cambiamenti climatici") e non arrecano un danno significativo a nessuno degli obiettivi della tassonomia dell'UE - cfr. nota esplicativa sul margine sinistro. I criteri completi riguardanti le attività economiche connesse al gas fossile e all'energia nucleare che sono conformi alla tassonomia dell'UE sono stabiliti nel regolamento delegato (UE) 2022/1214 della Commissione.

Le attività allineate alla tassonomia sono espresse in percentuate di:

- **fatturato**: quota di entrate da attività verdi delle Imprese beneficiarie degli investimenti

- **spese in conto capitale**

(CapEx): investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, ad es. per la transizione verso un'economia verde

- **spese operative**

(OpEx): attività operative verdi delle imprese beneficiarie degli Investimenti

I due grafici sottostanti mostrano in blu scuro la percentuale minima di investimenti allineati alla Tassonomia UE. Poiché non esiste una metodologia appropriata per determinare l'allineamento alla Tassonomia delle obbligazioni sovrane*, il primo grafico mostra l'allineamento alla Tassonomia in relazione a tutti gli investimenti del prodotto finanziario, comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla Tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

*Ai fini dei grafici di cui sopra, per «obbligazioni sovrane» si intendono tutte le esposizioni sovrane.

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali solari e presentati sotto forma di media per il periodo di riferimento. I dati sulla Tassonomia UE comunicati possono differire a causa delle differenze nella metodologia di calcolo utilizzata.

Qual era la quota degli investimenti effettuati in attività di transizione e abilitanti?

La quota del comparto realizzata in Attività abilitanti: 0%; Attività transizionali: 0%, misurato dal Fatturato.

Come si rapporta la percentuale di investimenti che erano allineati alla tassonomia dell'UE con i precedenti periodi di riferimento?

Non applicabile in quanto si tratta del primo periodo di riferimento.

sono investimenti sostenibili con un obiettivo ambientale e che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

Qual era la quota di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?

Il comparto ha effettuato investimenti sostenibili nella misura del 0% con un obiettivo ambientale non allineato alla Tassonomia UE, per quanto consentito e coerentemente con la politica d'investimento e le percentuali minime dichiarate nelle informazioni precontrattuali.

Qual era la quota di investimenti socialmente sostenibili?

Il comparto ha effettuato almeno il 0% di investimenti sostenibili con un obiettivo sociale

Quali investimenti erano compresi nella categoria «Altri» e qual era il loro scopo? Esistevano garanzie minime di salvaguardia ambientale o sociale?

I restanti investimenti del comparto sono stati effettuati in attivi coerenti con il suo obiettivo finanziario, contante ed equivalente del contante a fini di liquidità e derivati utilizzati per gli investimenti e la gestione efficace del portafoglio.

Come garanzia minima a livello ambientale e sociale, il comparto ha aderito alle Esclusioni.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Il comparto ha intrapreso le seguenti azioni per soddisfare le caratteristiche ambientali o sociali:

1. Il comparto ha investito in titoli di emittenti con caratteristiche ESG favorevoli.
2. Riesame trimestrale della sostenibilità per discutere e rivedere le caratteristiche socioambientali qualitative del comparto.
3. Il comparto ha applicato le Esclusioni.

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?

Gli **indici di riferimento** sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

Un Indice non è stato designato come benchmark di riferimento per determinare se questo prodotto finanziario è allineato alle caratteristiche ambientali o sociali che promuove.

di informativa periodica per i prodotti finanziari di cui all'articolo 8, paragrafi 1, 2 e 2 bis, del regolamento (UE) 2019/2088 e all'articolo 6, primo comma, del regolamento (UE) 2020/852

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, a condizione che tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e che l'Impresa beneficiaria degli investimenti rispetti prassi di buona governance

La **tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non comprende un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero non risultare allineati alla tassonomia.

Gli **indicatori di sostenibilità** misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

Nome del prodotto:
Fidelity Funds - Iberia Fund

Identificativo della persona giuridica:
549300C6GMKNSN647A81

Caratteristiche ambientali e/o sociali

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?

Si

No

- Ha effettuato **investimenti sostenibili con un obiettivo ambientale**: __%
- in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE
- In attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE
- Ha effettuato **investimenti sostenibili con un obiettivo sociale**: __%

- Ha **promosso caratteristiche ambientali/sociali (A/S)** e, pur non avendo come obiettivo un investimento sostenibile, aveva una quota del(lo) 55.6% di investimenti sostenibili
 - con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE
 - con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE
 - con un obiettivo sociale
- Ha promosso caratteristiche A/S, ma **non ha effettuato alcun investimento sostenibile**

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Il comparto ha soddisfatto le caratteristiche socioambientali promosse secondo la definizione fornita nell'informativa precontrattuale SFDR per il periodo. Il comparto ha promosso caratteristiche socioambientali investendo in titoli di emittenti con caratteristiche ESG favorevoli. Le caratteristiche ESG favorevoli sono state determinate in riferimento ai rating ESG, che hanno tenuto conto di caratteristiche ambientali quali l'intensità carbonica, le emissioni di anidride carbonica, il risparmio energetico, la gestione delle acque e dei rifiuti e la biodiversità, oltre che di caratteristiche sociali quali la sicurezza dei prodotti, la catena di fornitura, la salute e la sicurezza e i diritti umani.

Non sono stati designati benchmark di riferimento per poter conseguire le caratteristiche socioambientali promosse.

Quando il comparto ha effettuato investimenti sostenibili con obiettivi ambientali ha contribuito agli obiettivi ambientali della Tassonomia UE in materia di mitigazione dei cambiamenti climatici e di adattamento ai cambiamenti climatici.

Quando il comparto ha effettuato investimenti sostenibili con obiettivi sociali ha contribuito al conseguimento degli obiettivi di sviluppo sostenibile incentrati sull'aspetto sociale, come spiegato nella seguente risposta sugli obiettivi d'investimento sostenibili.

I dati sugli investimenti sostenibili contenuti nella presente informativa periodica rappresentano una media dei dati al 31 dicembre 2022 e al 31 marzo 2023.

Qual è stata la prestazione degli indicatori di sostenibilità?

La performance degli indicatori di sostenibilità utilizzati dal comparto per misurare il raggiungimento delle caratteristiche socioambientali che ha promosso è stata:

- i) 88.83% del comparto è stato investito in titoli di emittenti con caratteristiche ESG favorevoli ai sensi dei criteri d'investimento sostenibile (Sustainable Investing Framework) di Fidelity;
- ii) per quanto riguarda i suoi investimenti diretti, lo 0% del comparto è stato investito in titoli di emittenti con esposizione alle Esclusioni;
- iii) 55.6% del comparto in investimenti sostenibili; e
- iv) 16.96% del comparto in investimenti sostenibili con un obiettivo sociale.

...e rispetto ai periodi precedenti?

Non applicabile in quanto si tratta del primo periodo di riferimento.

Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha in parte realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?

Pur non avendo come obiettivo un investimento sostenibile, aveva una percentuale del 55.6% degli investimenti sostenibili. Gli investimenti sostenibili hanno avuto un obiettivo ambientale e sociale. Il comparto ha definito investimenti sostenibili:

- a) emittenti che svolgono attività economiche che contribuiscono a uno o più degli obiettivi ambientali stabiliti nella Tassonomia UE e sono considerate ecosostenibili secondo la Tassonomia UE. Ciò ha contribuito all'obiettivo ambientale della Tassonomia UE in materia di mitigazione dei cambiamenti climatici; o
- (b) emittenti dei quali la maggior parte delle attività commerciali (oltre il 50% dei ricavi) ha contribuito al conseguimento degli obiettivi socioambientali in linea con uno o più obiettivi di sviluppo sostenibile delle Nazioni Unite; o
- (c) emittenti che si danno un obiettivo di decarbonizzazione coerente con un'ipotesi di riscaldamento fino a 1,5 gradi (verificato dalla Science Based Target Initiative o da un Fidelity Proprietary Climate Rating) che si ritiene contribuisca agli obiettivi ambientali; a condizione che non arrechino danni significativi, soddisfino le garanzie minime e i criteri di buona governance.

Gli SDG sono una serie di obiettivi pubblicati dalle Nazioni Unite che riconoscono che porre fine alla povertà e ad altre privazioni deve andare di pari passo con il miglioramento della salute e dell'istruzione, la crescita economica e la riduzione delle disuguaglianze, il tutto affrontando i cambiamenti climatici e impegnandosi a preservare gli oceani e le foreste del pianeta. Per ulteriori informazioni vedere il [sito web](#) delle Nazioni Unite. Dal punto di vista ambientale gli SDG concentrano l'attenzione su acqua potabile e i servizi igienici, energia pulita e accessibile, consumo e produzione responsabili e azione per il clima. Dal punto di vista sociale gli SDG concentrano l'attenzione su assenza di povertà, sconfitta della fame, crescita economica e occupazione produttiva, industria, innovazione e infrastrutture, città e comunità sicure e sostenibili.

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

In che modo gli investimenti sostenibili che il prodotto finanziario ha in parte realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?

Gli investimenti sostenibili sono stati sottoposti a screening per il coinvolgimento in attività che arrecano danni e controversie significativi; la valutazione è avvenuta mediante controllo del soddisfacimento da parte dell'emittente delle garanzie minime e degli standard relativi ai principali effetti avversi (PAI) oltre che della performance in base ai parametri PAI, il che ha comportato: Screening basati sulle norme, vale a dire screening dei titoli individuati nell'ambito degli screening basati sulle norme esistenti di Fidelity (come di seguito indicato); screening basati sulle attività, cioè screening degli emittenti in base alla loro partecipazione ad attività con effetti negativi significativi sulla società o sull'ambiente, compresi gli emittenti che erano considerati avere controversie "molto gravi" sulla base di screening di controversie, che riguardano 1) questioni ambientali, 2) diritti umani e comunità, 3) diritti dei lavoratori e catena di fornitura, 4) clienti, 5) governance; e indicatori PAI, i dati quantitativi (se disponibili) sugli indicatori PAI vengono utilizzati per valutare se un emittente è coinvolto in attività che arrecano danni significativi a eventuali obiettivi ambientali o sociali.

In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?

Per quanto riguarda gli investimenti sostenibili, come sopra indicato, Fidelity ha effettuato una valutazione quantitativa per individuare gli emittenti con performance problematiche in materia di indicatori PAI e sono stati presi in considerazione tutti gli indicatori obbligatori e quelli eventualmente pertinenti per gli effetti avversi sui fattori di sostenibilità di cui all'Allegato 1 degli standard tecnici di regolamentazione SFDR dell'UE (in presenza di dati disponibili).

Gli emittenti con un punteggio basso non erano idonei a diventare "investimenti sostenibili", a meno che la ricerca dei fondamentali di Fidelity non determinasse che l'emittente non stava violando requisiti finalizzati a "non arrecare un danno significativo" o era sulla buona strada per mitigare gli effetti avversi grazie a una gestione o una transizione efficaci.

Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:

Sono stati applicati screening basati su norme: Emittenti individuati non in grado di comportarsi in modo da soddisfare le loro responsabilità fondamentali nei settori dei diritti umani, del lavoro, dell'ambiente e dell'anticorruzione, in linea con le norme internazionali, comprese quelle stabilite dalle Linee guida dell'OCSE per le imprese multinazionali e dai Principi guida delle Nazioni Unite su imprese e diritti umani, dal Global Compact delle Nazioni Unite (UNGC), dalle norme dell'Organizzazione internazionale del lavoro (OIL), dalle Convenzioni dell'OIL, non erano considerati investimenti sostenibili.

La tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'Unione.

Il principio "non arrecare un danno significativo" si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante del presente prodotto finanziario non tengono conto dei criteri dell'UE per le attività economiche ecosostenibili.

Nessun altro investimento sostenibile deve arrecare un danno significativo agli obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

I principali effetti avversi sui fattori di sostenibilità sono stati presi in considerazione e integrati nelle decisioni d'investimento attraverso una serie di strumenti, tra cui:

(i) Due Diligence: analisi dei principali effetti avversi per verificare se sono stati sostanziali e negativi.

(ii) Rating ESG: Fidelity fa riferimento ai rating ESG che tengono conto dei principali effetti avversi sostanziali come emissioni di carbonio, sicurezza dei dipendenti, tangenti e corruzione, gestione delle risorse idriche. Per quanto riguarda i titoli emessi da enti sovrani, i principali effetti avversi sono stati presi in considerazione e integrati nelle decisioni d'investimento attraverso rating che tengono conto dei principali effetti avversi sostanziali come emissioni di anidride carbonica, violazioni sociali e libertà di espressione.

(iii) Esclusioni: Abbiamo adottato un approccio agli aspetti ESG basato sui principi e, in quest'ottica, inseriamo le società che consideriamo investimenti non idonei in un Elenco di esclusioni, tra cui, senza intento limitativo, quanto segue; un elenco di esclusioni a livello aziendale, che includa armi biologiche, armi chimiche, l'uso di scorte, la produzione e il trasferimento di mine antiuomo, il trattato di non proliferazione delle armi nucleari e le linee guida delle Nazioni Unite, della Banca mondiale e di altre autorità globali che sostengono i principi ESG.

(iv) Impegno: Fidelity ha utilizzato l'impegno come strumento per comprendere meglio i principali effetti avversi sui fattori di sostenibilità e, in alcune circostanze, sostenere il miglioramento dei principali effetti avversi e dei parametri di sostenibilità. Fidelity ha partecipato a iniziative individuali e di collaborazione che tengono conto di tutta una serie di effetti avversi principali (es., Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(v) Voto: La politica di voto di Fidelity comprendeva standard minimi espliciti per quanto riguarda la diversità di genere all'interno dei consigli di amministrazione e per l'impegno nei confronti del cambiamento climatico. Fidelity può anche votare per migliorare la performance degli emittenti sulla base di altri indicatori.

(vi) Revisioni trimestrali: monitoraggio dei principali effetti avversi attraverso il processo di revisione trimestrale del comparto.

Fidelity tiene conto di indicatori specifici per i singoli fattori di sostenibilità quando si tratta di valutare i principali effetti avversi degli investimenti. Questi indicatori sono soggetti alla disponibilità dei dati e possono cambiare con il miglioramento della qualità e della disponibilità degli stessi.

Le esclusioni e gli screening di cui sopra (le "Esclusioni") possono essere aggiornati di volta in volta. Per ulteriori informazioni consultare questo sito: ["Criteri di investimento sostenibile"](#).

Quali sono stati i principali investimenti di questo prodotto finanziario?

L'elenco comprende gli investimenti che costituiscono la quota maggiore di investimenti del prodotto finanziario durante il periodo di riferimento, ossia: 2022-05-01 / 2023-04-30

Investimenti di maggiore entità	Settore	% di attivi	Paese
Amadeus IT Group	Prodotti voluttuari	9.46%	Spagna
Industria de Diseno Textil	Prodotti voluttuari	9.42%	Spagna
Iberdrola	Servizi di pubblica utilità	9.24%	Spagna
Bankinter	Finanziari	5.33%	Spagna
Applus Services	Industriali	4.55%	Spagna
Jeronimo Martins	Beni di prima necessità	4.42%	Portogallo
Grupo Catalana Occidente	Finanziari	4.12%	Spagna
Indra Sistemas	Informatica	3.97%	Spagna
Ferrovial	Industriali	3.90%	Spagna
Cia de Distribucion Integral Logista Holdings	Industriali	3.75%	Spagna
Vidrala (BR)	Materiali	3.38%	Spagna
Acciona Energias Renovables	Servizi di pubblica utilità	3.38%	Spagna
CIE Automotive	Prodotti voluttuari	3.33%	Spagna
Cellnex Telecom	Servizi di comunicazione	3.24%	Spagna
Laboratorios Farmaceuticos Rovi	Sanità	3.20%	Spagna

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali e presentati sotto forma di media per il periodo di riferimento. La classificazione dei titoli, compresi il settore e il paese, è riferita all'ultimo giorno del periodo di riferimento. I dati comprendono tutti i titoli, esclusi i derivati.

Qual è stata la quota degli investimenti in materia di sostenibilità?

L'allocazione degli attivi descrive la quota di investimenti in attivi specifici.

Il comparto ha effettuato il 55.6% di investimenti sostenibili.

Qual è stata l'allocazione degli attivi?

(#1 Allineato a caratteristiche E/S) Il comparto ha investito:

- 88.83% del suo patrimonio in titoli di emittenti con caratteristiche ESG favorevoli;
- 55.6% in investimenti sostenibili (#1A sostenibili)* di cui il 6.37% ha un obiettivo ambientale (allineato alla Tassonomia UE), il 32.27% ha un obiettivo ambientale (non allineato alla Tassonomia UE), il 16.96% ha un obiettivo sociale.

(#1B Altre caratteristiche E/S) Comprende titoli di emittenti con caratteristiche ESG favorevoli ma che non sono investimenti sostenibili.

#1 Allineati a caratteristiche A/S: comprende gli investimenti del prodotto finanziario utilizzati per rispettare le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

#2 Altri: comprende gli investimenti rimanenti del prodotto finanziario che non sono allineati alle caratteristiche ambientali o sociali, né sono considerati investimenti sostenibili.

La categoria **#1 Allineati a caratteristiche A/S** comprende:

- la sottocategoria **#1A Sostenibili**, che contempla gli investimenti sostenibili dal punto di vista ambientale e sociale;

- la sottocategoria **#1B Altre caratteristiche A/S**, che contempla gli investimenti allineati alle

In quali settori economici sono stati effettuati gli investimenti?

Settore	Sotto Settore	% di attivi
Beni di prima necessità	Vendita al dettaglio di alimenti e prodotti di base	4.42%
	Prodotti alimentari	1.16%
	Prodotti per la cura della persona	0.52%
Finanziari	Banche commerciali	6.21%
	Assicurazione	5.54%
	Servizi finanziari diversificati	1.03%
Fondo di tipo aperto	Fondo monetario di tipo chiuso	1.05%
Immobiliare	Real Estate Investment Trust (REIT)	1.96%
	Azioni - Azioni ordinarie - Immobiliare - Reit uffici	0.58%
Industriali	Servizi professionali	6.61%
	Macchinari	3.92%
	Edilizia e ingegneria	3.90%
	Trasporto aereo e corrieri	3.75%
	Infrastrutture di trasporto	1.71%

Servizi di comunicazione	Servizi di telecomunicazione diversificati	3.24%
Servizi di pubblica utilità	Servizi di pubblica utilità in ambito elettrico	9.71%
	Produttori indipendenti di energia e commercianti di energia	3.38%

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali e presentati sotto forma di media per il periodo di riferimento. La classificazione dei titoli, compresi Settore e Sottosettore, è riferita all'ultimo giorno del periodo di riferimento. I dati comprendono tutti i titoli, esclusi i derivati. A causa della limitatezza dei dati, non siamo in grado di dare informazioni sulla percentuale di investimenti in settori e sottosettori dell'economia che traggono entrate dall'esplorazione, dall'estrazione, dall'estrazione, dalla produzione, dalla lavorazione, dallo stoccaggio, dalla raffinazione o dalla distribuzione, compresi il trasporto, la conservazione e il commercio, di combustibili fossili.

In che misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Il comparto ha effettuato almeno il 6.37% di investimenti sostenibili con un obiettivo ambientale allineato alla Tassonomia UE. Ciò ha contribuito all'obiettivo ambientale della Tassonomia UE in materia di mitigazione dei cambiamenti climatici (4.16%) e di adattamento ai cambiamenti climatici (2.21%).

La conformità degli investimenti del comparto alla Tassonomia UE non era oggetto di garanzia da parte dei revisori o di revisione da parte di terzi.

Per conformarsi alla tassonomia dell'UE i criteri per il **gas fossile** comprendono limitazioni delle emissioni e il passaggio all'energia da fonti totalmente rinnovabili o ai combustibili a basse emissioni di carbonio entro la fine del 2035. Per l'**energia nucleare** i criteri comprendono norme complete in materia di sicurezza e gestione dei rifiuti. Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale. Le **attività di transizione** sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano, tra gli altri livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

Le attività allineate alla tassonomia sono espresse in percentuali di:

- **fatturato**: quota di entrate da attività verdi delle imprese beneficiarie degli investimenti

- **spese in conto capitale** (CapEx): investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, ad es. per la transizione verso un'economia verde

- **spese operative** (OpEx): attività operative verdi delle imprese beneficiarie degli investimenti

L'allineamento tassonomico degli investimenti sottostanti del comparto è misurato dal fatturato.

Il prodotto finanziario ha investito in attività connesse al gas fossile e/o all'energia nucleare che erano conformi alla tassonomia dell'UE¹?

- Sì
- Gas fossile Energia nucleare
- No

I due grafici sottostanti mostrano in blu scuro la percentuale minima di investimenti allineati alla Tassonomia UE. Poiché non esiste una metodologia appropriata per determinare l'allineamento alla Tassonomia delle obbligazioni sovrane*, il primo grafico mostra l'allineamento alla Tassonomia in relazione a tutti gli investimenti del prodotto finanziario, comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla Tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

*Ai fini dei grafici di cui sopra, per «obbligazioni sovrane» si intendono tutte le esposizioni sovrane.

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali solari e presentati sotto forma di media per il periodo di riferimento. I dati sulla Tassonomia UE comunicati possono differire a causa delle differenze nella metodologia di calcolo utilizzata.

Qual era la quota degli investimenti effettuati in attività di transizione e abilitanti?

La quota del comparto realizzata in Attività abilitanti: 0.47%; Attività transizionali: 0.86%, misurato dal Fatturato.

Come si rapporta la percentuale di investimenti che erano allineati alla tassonomia dell'UE con i precedenti periodi di riferimento?

Non applicabile in quanto si tratta del primo periodo di riferimento.

¹Le attività connesse al gas fossile e/o all'energia nucleare sono conformi alla tassonomia dell'UE solo se contribuiscono all'azione di contenimento dei cambiamenti climatici ("mitigazione dei cambiamenti climatici") e non arrecano un danno significativo a nessuno degli obiettivi della tassonomia dell'UE - cfr. nota esplicativa sul margine sinistro. I criteri completi riguardanti le attività economiche connesse al gas fossile e all'energia nucleare che sono conformi alla tassonomia dell'UE sono stabiliti nel regolamento delegato (UE) 2022/1214 della Commissione.

sono investimenti sostenibili con un obiettivo ambientale e che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

Qual era la quota di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?

Il comparto ha effettuato investimenti sostenibili nella misura del 32.27% con un obiettivo ambientale non allineato alla Tassonomia UE, per quanto consentito e coerentemente con la politica d'investimento e le percentuali minime dichiarate nelle informazioni precontrattuali.

Qual era la quota di investimenti socialmente sostenibili?

Il comparto ha effettuato almeno il 16.96% di investimenti sostenibili con un obiettivo sociale.

Quali investimenti erano compresi nella categoria «Altri» e qual era il loro scopo? Esistevano garanzie minime di salvaguardia ambientale o sociale?

I restanti investimenti del comparto sono stati effettuati in attivi coerenti con il suo obiettivo finanziario, contante ed equivalente del contante a fini di liquidità e derivati utilizzati per gli investimenti e la gestione efficace del portafoglio.

Come garanzia minima a livello ambientale e sociale, il comparto ha aderito alle Esclusioni.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Il comparto ha intrapreso le seguenti azioni per soddisfare le caratteristiche ambientali o sociali:

1. Il comparto ha investito in titoli di emittenti con caratteristiche ESG favorevoli.
2. Il comparto ha effettuato investimenti sostenibili.
3. Riesame trimestrale della sostenibilità per discutere e rivedere le caratteristiche socioambientali qualitative del comparto.
4. Il comparto ha applicato le Esclusioni.

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?

Un Indice non è stato designato come benchmark di riferimento per determinare se questo prodotto finanziario è allineato alle caratteristiche ambientali o sociali che promuove.

Gli **indici di riferimento** sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

di informativa periodica per i prodotti finanziari di cui all'articolo 8, paragrafi 1, 2 e 2 bis, del regolamento (UE) 2019/2088 e all'articolo 6, primo comma, del regolamento (UE) 2020/852

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, a condizione che tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e che l'Impresa beneficiaria degli investimenti rispetti prassi di buona governance

La **tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non comprende un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero non risultare allineati alla tassonomia.

Gli **indicatori di sostenibilità** misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

Nome del prodotto:
Fidelity Funds - Italy Fund

Identificativo della persona giuridica:
549300KCMWWQDPOVF030

Caratteristiche ambientali e/o sociali

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?	
<input checked="" type="radio"/> <input type="radio"/> <input type="checkbox"/> <input type="checkbox"/> Si	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <input type="checkbox"/> No
<input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo ambientale: ___% <input type="checkbox"/> in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> In attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo sociale: ___%	<input checked="" type="checkbox"/> Ha promosso caratteristiche ambientali/sociali (A/S) e, pur non avendo come obiettivo un investimento sostenibile, aveva una quota del(lo) 28.74% di investimenti sostenibili <input checked="" type="checkbox"/> con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE <input checked="" type="checkbox"/> con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE <input checked="" type="checkbox"/> con un obiettivo sociale <input type="checkbox"/> Ha promosso caratteristiche A/S, ma non ha effettuato alcun investimento sostenibile

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Il comparto ha soddisfatto le caratteristiche socioambientali promosse secondo la definizione fornita nell'informativa precontrattuale SFDR per il periodo. Il comparto ha promosso caratteristiche socioambientali investendo in titoli di emittenti con caratteristiche ESG favorevoli. Le caratteristiche ESG favorevoli sono state determinate in riferimento ai rating ESG, che hanno tenuto conto di caratteristiche ambientali quali l'intensità carbonica, le emissioni di anidride carbonica, il risparmio energetico, la gestione delle acque e dei rifiuti e la biodiversità, oltre che di caratteristiche sociali quali la sicurezza dei prodotti, la catena di fornitura, la salute e la sicurezza e i diritti umani.

Non sono stati designati benchmark di riferimento per poter conseguire le caratteristiche socioambientali promosse.

Quando il comparto ha effettuato investimenti sostenibili con obiettivi ambientali ha contribuito all'obiettivo ambientale della Tassonomia UE in materia di mitigazione dei cambiamenti climatici

Quando il comparto ha effettuato investimenti sostenibili con obiettivi sociali ha contribuito al conseguimento degli obiettivi di sviluppo sostenibile incentrati sull'aspetto sociale, come spiegato nella seguente risposta sugli obiettivi d'investimento sostenibili.

I dati sugli investimenti sostenibili contenuti nella presente informativa periodica rappresentano una media dei dati al 31 dicembre 2022 e al 31 marzo 2023.

Qual è stata la prestazione degli indicatori di sostenibilità?

La performance degli indicatori di sostenibilità utilizzati dal comparto per misurare il raggiungimento delle caratteristiche socioambientali che ha promosso è stata:

- i) 78.26% del comparto è stato investito in titoli di emittenti con caratteristiche ESG favorevoli ai sensi dei criteri d'investimento sostenibile (Sustainable Investing Framework) di Fidelity;
- ii) per quanto riguarda i suoi investimenti diretti, lo 0% del comparto è stato investito in titoli di emittenti con esposizione alle Esclusioni;
- iii) 28.74% del comparto in investimenti sostenibili; e
- iv) 9.37% del comparto in investimenti sostenibili con un obiettivo sociale.

...e rispetto ai periodi precedenti?

Non applicabile in quanto si tratta del primo periodo di riferimento.

Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha in parte realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?

Pur non avendo come obiettivo un investimento sostenibile, aveva una percentuale del 28.74% degli investimenti sostenibili. Gli investimenti sostenibili hanno avuto un obiettivo ambientale e sociale. Il comparto ha definito investimenti sostenibili:

- a) emittenti che svolgono attività economiche che contribuiscono a uno o più degli obiettivi ambientali stabiliti nella Tassonomia UE e sono considerate ecosostenibili secondo la Tassonomia UE. Ciò ha contribuito all'obiettivo ambientale della Tassonomia UE in materia di mitigazione dei cambiamenti climatici; o
- (b) emittenti dei quali la maggior parte delle attività commerciali (oltre il 50% dei ricavi) ha contribuito al conseguimento degli obiettivi socioambientali in linea con uno o più obiettivi di sviluppo sostenibile delle Nazioni Unite; o
- (c) emittenti che si danno un obiettivo di decarbonizzazione coerente con un'ipotesi di riscaldamento fino a 1,5 gradi (verificato dalla Science Based Target Initiative o da un Fidelity Proprietary Climate Rating) che si ritiene contribuisca agli obiettivi ambientali; a condizione che non arrechino danni significativi, soddisfino le garanzie minime e i criteri di buona governance.

Gli SDG sono una serie di obiettivi pubblicati dalle Nazioni Unite che riconoscono che porre fine alla povertà e ad altre privazioni deve andare di pari passo con il miglioramento della salute e dell'istruzione, la crescita economica e la riduzione delle disuguaglianze, il tutto affrontando i cambiamenti climatici e impegnandosi a preservare gli oceani e le foreste del pianeta. Per ulteriori informazioni vedere il [sito web](#) delle Nazioni Unite. Dal punto di vista ambientale gli SDG concentrano l'attenzione su acqua potabile e i servizi igienici, energia pulita e accessibile, consumo e produzione responsabili e azione per il clima. Dal punto di vista sociale gli SDG concentrano l'attenzione su assenza di povertà, sconfitta della fame, crescita economica e occupazione produttiva, industria, innovazione e infrastrutture, città e comunità sicure e sostenibili.

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

In che modo gli investimenti sostenibili che il prodotto finanziario ha in parte realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?

Gli investimenti sostenibili sono stati sottoposti a screening per il coinvolgimento in attività che arrecano danni e controversie significativi; la valutazione è avvenuta mediante controllo del soddisfacimento da parte dell'emittente delle garanzie minime e degli standard relativi ai principali effetti avversi (PAI) oltre che della performance in base ai parametri PAI, il che ha comportato: Screening basati sulle norme, vale a dire screening dei titoli individuati nell'ambito degli screening basati sulle norme esistenti di Fidelity (come di seguito indicato); screening basati sulle attività, cioè screening degli emittenti in base alla loro partecipazione ad attività con effetti negativi significativi sulla società o sull'ambiente, compresi gli emittenti che erano considerati avere controversie "molto gravi" sulla base di screening di controversie, che riguardano 1) questioni ambientali, 2) diritti umani e comunità, 3) diritti dei lavoratori e catena di fornitura, 4) clienti, 5) governance; e indicatori PAI, i dati quantitativi (se disponibili) sugli indicatori PAI vengono utilizzati per valutare se un emittente è coinvolto in attività che arrecano danni significativi a eventuali obiettivi ambientali o sociali.

In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?

Per quanto riguarda gli investimenti sostenibili, come sopra indicato, Fidelity ha effettuato una valutazione quantitativa per individuare gli emittenti con performance problematiche in materia di indicatori PAI e sono stati presi in considerazione tutti gli indicatori obbligatori e quelli eventualmente pertinenti per gli effetti avversi sui fattori di sostenibilità di cui all'Allegato 1 degli standard tecnici di regolamentazione SFDR dell'UE (in presenza di dati disponibili).

Gli emittenti con un punteggio basso non erano idonei a diventare "investimenti sostenibili", a meno che la ricerca dei fondamentali di Fidelity non determinasse che l'emittente non stava violando requisiti finalizzati a "non arrecare un danno significativo" o era sulla buona strada per mitigare gli effetti avversi grazie a una gestione o una transizione efficaci.

Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:

Sono stati applicati screening basati su norme: Emittenti individuati non in grado di comportarsi in modo da soddisfare le loro responsabilità fondamentali nei settori dei diritti umani, del lavoro, dell'ambiente e dell'anticorruzione, in linea con le norme internazionali, comprese quelle stabilite dalle Linee guida dell'OCSE per le imprese multinazionali e dai Principi guida delle Nazioni Unite su imprese e diritti umani, dal Global Compact delle Nazioni Unite (UNGC), dalle norme dell'Organizzazione internazionale del lavoro (OIL), dalle Convenzioni dell'OIL, non erano considerati investimenti sostenibili.

La tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'Unione.

Il principio "non arrecare un danno significativo" si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante del presente prodotto finanziario non tengono conto dei criteri dell'UE per le attività economiche ecosostenibili.

Nessun altro investimento sostenibile deve arrecare un danno significativo agli obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

I principali effetti avversi sui fattori di sostenibilità sono stati presi in considerazione e integrati nelle decisioni d'investimento attraverso una serie di strumenti, tra cui:

(i) Due Diligence: analisi dei principali effetti avversi per verificare se sono stati sostanziali e negativi.

(ii) Rating ESG: Fidelity fa riferimento ai rating ESG che tengono conto dei principali effetti avversi sostanziali come emissioni di carbonio, sicurezza dei dipendenti, tangenti e corruzione, gestione delle risorse idriche. Per quanto riguarda i titoli emessi da enti sovrani, i principali effetti avversi sono stati presi in considerazione e integrati nelle decisioni d'investimento attraverso rating che tengono conto dei principali effetti avversi sostanziali come emissioni di anidride carbonica, violazioni sociali e libertà di espressione.

(iii) Esclusioni: Abbiamo adottato un approccio agli aspetti ESG basato sui principi e, in quest'ottica, inseriamo le società che consideriamo investimenti non idonei in un Elenco di esclusioni, tra cui, senza intento limitativo, quanto segue; un elenco di esclusioni a livello aziendale, che includa armi biologiche, armi chimiche, l'uso di scorte, la produzione e il trasferimento di mine antiuomo, il trattato di non proliferazione delle armi nucleari e le linee guida delle Nazioni Unite, della Banca mondiale e di altre autorità globali che sostengono i principi ESG.

(iv) Impegno: Fidelity ha utilizzato l'impegno come strumento per comprendere meglio i principali effetti avversi sui fattori di sostenibilità e, in alcune circostanze, sostenere il miglioramento dei principali effetti avversi e dei parametri di sostenibilità. Fidelity ha partecipato a iniziative individuali e di collaborazione che tengono conto di tutta una serie di effetti avversi principali (es., Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(v) Voto: La politica di voto di Fidelity comprendeva standard minimi espliciti per quanto riguarda la diversità di genere all'interno dei consigli di amministrazione e per l'impegno nei confronti del cambiamento climatico. Fidelity può anche votare per migliorare la performance degli emittenti sulla base di altri indicatori.

(vi) Revisioni trimestrali: monitoraggio dei principali effetti avversi attraverso il processo di revisione trimestrale del comparto.

Fidelity tiene conto di indicatori specifici per i singoli fattori di sostenibilità quando si tratta di valutare i principali effetti avversi degli investimenti. Questi indicatori sono soggetti alla disponibilità dei dati e possono cambiare con il miglioramento della qualità e della disponibilità degli stessi.

Le esclusioni e gli screening di cui sopra (le "Esclusioni") possono essere aggiornati di volta in volta. Per ulteriori informazioni consultare questo sito: ["Criteri di investimento sostenibile"](#).

Quali sono stati i principali investimenti di questo prodotto finanziario?

L'elenco comprende gli investimenti che costituiscono la quota maggiore di investimenti del prodotto finanziario durante il periodo di riferimento, ossia: 2022-05-01 / 2023-04-30

Investimenti di maggiore entità	Settore	% di attivi	Paese
UniCredit	Finanziari	8.47%	Italia

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali e presentati sotto forma di media per il periodo di riferimento. La classificazione dei titoli, compresi il settore e il paese, è riferita all'ultimo giorno del periodo di riferimento. I dati comprendono tutti i titoli, esclusi i derivati.

Qual è stata la quota degli investimenti in materia di sostenibilità?

L'allocazione degli attivi descrive la quota di investimenti in attivi specifici.

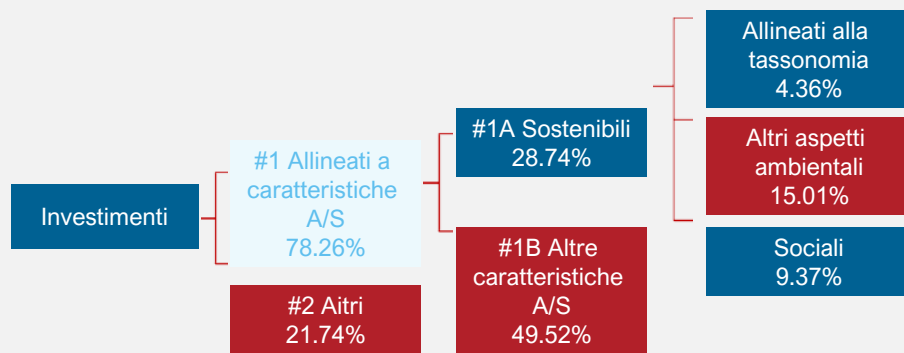

Il comparto ha effettuato il 28.74% di investimenti sostenibili.

Qual è stata l'allocazione degli attivi?

(#1 Allineato a caratteristiche E/S) Il comparto ha investito:

- 78.26% del suo patrimonio in titoli di emittenti con caratteristiche ESG favorevoli;
- 28.74% in investimenti sostenibili (#1A sostenibili)* di cui il 4.36% ha un obiettivo ambientale (allineato alla Tassonomia UE), il 15.01% ha un obiettivo ambientale (non allineato alla Tassonomia UE), il 9.37% ha un obiettivo sociale.

(#1B Altre caratteristiche E/S) Comprende titoli di emittenti con caratteristiche ESG favorevoli ma che non sono investimenti sostenibili.

#1 Allineati a caratteristiche A/S: comprende gli investimenti del prodotto finanziario utilizzati per rispettare le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

#2 Altri: comprende gli investimenti rimanenti del prodotto finanziario che non sono allineati alle caratteristiche ambientali o sociali, né sono considerati investimenti sostenibili.

La categoria **#1 Allineati a caratteristiche A/S** comprende:

- la sottocategoria **#1A Sostenibili**, che contempla gli investimenti sostenibili dal punto di vista ambientale e sociale;

-la sottocategoria **#1B Altre caratteristiche A/S**, che contempla gli investimenti allineati alle

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali e presentati sotto forma di media per il periodo di riferimento. La classificazione dei titoli, compresi Settore e Sottosettore, è riferita all'ultimo giorno del periodo di riferimento. I dati comprendono tutti i titoli, esclusi i derivati. A causa della limitatezza dei dati, non siamo in grado di dare informazioni sulla percentuale di investimenti in settori e sottosectori dell'economia che traggono entrate dall'esplorazione, dall'estrazione, dalla produzione, dalla lavorazione, dallo stoccaggio, dalla raffinazione o dalla distribuzione, compresi il trasporto, la conservazione e il commercio, di combustibili fossili.

In che misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Il comparto ha effettuato almeno il 4.36% di investimenti sostenibili con un obiettivo ambientale allineato alla Tassonomia UE. Ciò ha contribuito all'obiettivo ambientale della Tassonomia UE in materia di mitigazione dei cambiamenti climatici (4.36%).

Per conformarsi alla tassonomia dell'UE i criteri per il **gas fossile** comprendono limitazioni delle emissioni e il passaggio all'energia da fonti totalmente rinnovabili o ai combustibili a basse emissioni di carbonio entro la fine del 2035. Per l'**energia nucleare** i criteri comprendono norme complete in materia di sicurezza e gestione dei rifiuti. Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale. Le **attività di transizione** sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio che presentano, tra gli altri livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

Le attività allineate alla tassonomia sono espresse in percentuali di:

- **fatturato**: quota di entrate da attività verdi delle imprese beneficiarie degli investimenti

- **spese in conto capitale** (CapEx): investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, ad es. per la transizione verso un'economia verde

- **spese operative** (OpEx): attività operative verdi delle imprese beneficiarie degli investimenti

La conformità degli investimenti del comparto alla Tassonomia UE non era oggetto di garanzia da parte dei revisori o di revisione da parte di terzi. L'allineamento tassonomico degli investimenti sottostanti del comparto è misurato dal fatturato.

Il prodotto finanziario ha investito in attività connesse al gas fossile e/o all'energia nucleare che erano conformi alla tassonomia dell'UE?

- Sì
- Gas fossile Energia nucleare
- No

I due grafici sottostanti mostrano in blu scuro la percentuale minima di investimenti allineati alla Tassonomia UE. Poiché non esiste una metodologia appropriata per determinare l'allineamento alla Tassonomia delle obbligazioni sovrane*, il primo grafico mostra l'allineamento alla Tassonomia in relazione a tutti gli investimenti del prodotto finanziario, comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla Tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

*Ai fini dei grafici di cui sopra, per «obbligazioni sovrane» si intendono tutte le esposizioni sovrane.

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali solari e presentati sotto forma di media per il periodo di riferimento. I dati sulla Tassonomia UE comunicati possono differire a causa delle differenze nella metodologia di calcolo utilizzata.

Qual era la quota degli investimenti effettuati in attività di transizione e abilitanti?

La quota del comparto realizzata in Attività abilitanti: 3.43%; Attività transizionali: 0%, misurato dal Fatturato.

Come si rapporta la percentuale di investimenti che erano allineati alla tassonomia dell'UE con i precedenti periodi di riferimento?

Non applicabile in quanto si tratta del primo periodo di riferimento.

¹Le attività connesse al gas fossile e/o all'energia nucleare sono conformi alla tassonomia dell'UE solo se contribuiscono all'azione di contenimento dei cambiamenti climatici ("mitigazione dei cambiamenti climatici") e non arrecano un danno significativo a nessuno degli obiettivi della tassonomia dell'UE - cfr. nota esplicativa sul margine sinistro. I criteri completi riguardanti le attività economiche connesse al gas fossile e all'energia nucleare che sono conformi alla tassonomia dell'UE sono stabiliti nel regolamento delegato (UE) 2022/1214 della Commissione.

sono investimenti sostenibili con un obiettivo ambientale e che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

Qual era la quota di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?

Il comparto ha effettuato investimenti sostenibili nella misura del 15.01% con un obiettivo ambientale non allineato alla Tassonomia UE, per quanto consentito e coerentemente con la politica d'investimento e le percentuali minime dichiarate nelle informazioni precontrattuali.

Qual era la quota di investimenti socialmente sostenibili?

Il comparto ha effettuato almeno il 9.37% di investimenti sostenibili con un obiettivo sociale.

Quali investimenti erano compresi nella categoria «Altri» e qual era il loro scopo? Esistevano garanzie minime di salvaguardia ambientale o sociale?

I restanti investimenti del comparto sono stati effettuati in attivi coerenti con il suo obiettivo finanziario, contante ed equivalente del contante a fini di liquidità e derivati utilizzati per gli investimenti e la gestione efficace del portafoglio. Come garanzia minima a livello ambientale e sociale, il comparto ha aderito alle Esclusioni.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Il comparto ha intrapreso le seguenti azioni per soddisfare le caratteristiche ambientali o sociali:

1. Il comparto ha investito in titoli di emittenti con caratteristiche ESG favorevoli.
2. Il comparto ha effettuato investimenti sostenibili.
3. Riesame trimestrale della sostenibilità per discutere e rivedere le caratteristiche socioambientali qualitative del comparto.
4. Il comparto ha applicato le Esclusioni.

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?

Un Indice non è stato designato come benchmark di riferimento per determinare se questo prodotto finanziario è allineato alle caratteristiche ambientali o sociali che promuove.

Gli **indici di riferimento** sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

di informativa periodica per i prodotti finanziari di cui all'articolo 8, paragrafi 1, 2 e 2 bis, del regolamento (UE) 2019/2088 e all'articolo 6, primo comma, del regolamento (UE) 2020/852

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, a condizione che tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e che l'Impresa beneficiaria degli investimenti rispetti prassi di buona governance

La **tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non comprende un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero non risultare allineati alla tassonomia.

Gli **indicatori di sostenibilità** misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

Nome del prodotto:
Fidelity Funds - Global Short Duration Income Fund

Identificativo della persona giuridica:
549300DE58GK4SNQH841

Caratteristiche ambientali e/o sociali

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Si	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo ambientale : __% <input type="checkbox"/> in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> In attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo sociale : __%	<input checked="" type="checkbox"/> Ha promosso caratteristiche ambientali/sociali (A/S) e, pur non avendo come obiettivo un investimento sostenibile, aveva una quota del(lo) 13.3% di investimenti sostenibili <input checked="" type="checkbox"/> con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE <input checked="" type="checkbox"/> con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE <input checked="" type="checkbox"/> con un obiettivo sociale <input type="checkbox"/> Ha promosso caratteristiche A/S, ma non ha effettuato alcun investimento sostenibile

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Il comparto ha soddisfatto le caratteristiche socioambientali promosse secondo la definizione fornita nell'informativa precontrattuale SFDR per il periodo. Il comparto ha promosso caratteristiche socioambientali investendo in titoli di emittenti con caratteristiche ESG favorevoli. Le caratteristiche ESG favorevoli sono state determinate in riferimento ai rating ESG, che hanno tenuto conto di caratteristiche ambientali quali l'intensità carbonica, le emissioni di anidride carbonica, il risparmio energetico, la gestione delle acque e dei rifiuti e la biodiversità, oltre che di caratteristiche sociali quali la sicurezza dei prodotti, la catena di fornitura, la salute e la sicurezza e i diritti umani.

Non sono stati designati benchmark di riferimento per poter conseguire le caratteristiche socioambientali promosse.

Quando il comparto ha effettuato investimenti sostenibili con obiettivi ambientali ha contribuito all'obiettivo ambientale della Tassonomia UE in materia di mitigazione dei cambiamenti climatici

Quando il comparto ha effettuato investimenti sostenibili con obiettivi sociali ha contribuito al conseguimento degli obiettivi di sviluppo sostenibile incentrati sull'aspetto sociale, come spiegato nella seguente risposta sugli obiettivi d'investimento sostenibili.

I dati sugli investimenti sostenibili contenuti nella presente informativa periodica rappresentano una media dei dati al 31 dicembre 2022 e al 31 marzo 2023.

Qual è stata la prestazione degli indicatori di sostenibilità?

La performance degli indicatori di sostenibilità utilizzati dal comparto per misurare il raggiungimento delle caratteristiche socioambientali che ha promosso è stata:

- i) 71.83% del comparto è stato investito in titoli di emittenti con caratteristiche ESG favorevoli ai sensi dei criteri d'investimento sostenibile (Sustainable Investing Framework) di Fidelity;
- ii) per quanto riguarda i suoi investimenti diretti, lo 0% del comparto è stato investito in titoli di emittenti con esposizione alle Esclusioni;
- iii) 13.3% del comparto in investimenti sostenibili; e
- iv) 4.21% del comparto in investimenti sostenibili con un obiettivo sociale.

...e rispetto ai periodi precedenti?

Non applicabile in quanto si tratta del primo periodo di riferimento.

Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha in parte realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?

Pur non avendo come obiettivo un investimento sostenibile, aveva una percentuale del 13.3% degli investimenti sostenibili. Gli investimenti sostenibili hanno avuto un obiettivo ambientale e sociale. Il comparto ha definito investimenti sostenibili:

- a) emittenti che svolgono attività economiche che contribuiscono a uno o più degli obiettivi ambientali stabiliti nella Tassonomia UE e sono considerate ecosostenibili secondo la Tassonomia UE. Ciò ha contribuito all'obiettivo ambientale della Tassonomia UE in materia di mitigazione dei cambiamenti climatici; o
- (b) emittenti dei quali la maggior parte delle attività commerciali (oltre il 50% dei ricavi) ha contribuito al conseguimento degli obiettivi socioambientali in linea con uno o più obiettivi di sviluppo sostenibile delle Nazioni Unite; o
- (c) emittenti che si danno un obiettivo di decarbonizzazione coerente con un'ipotesi di riscaldamento fino a 1,5 gradi (verificato dalla Science Based Target Initiative o da un Fidelity Proprietary Climate Rating) che si ritiene contribuisca agli obiettivi ambientali; a condizione che non arrechino danni significativi, soddisfino le garanzie minime e i criteri di buona governance.

Gli SDG sono una serie di obiettivi pubblicati dalle Nazioni Unite che riconoscono che porre fine alla povertà e ad altre privazioni deve andare di pari passo con il miglioramento della salute e dell'istruzione, la crescita economica e la riduzione delle disuguaglianze, il tutto affrontando i cambiamenti climatici e impegnandosi a preservare gli oceani e le foreste del pianeta. Per ulteriori informazioni vedere il [sito web](#) delle Nazioni Unite. Dal punto di vista ambientale gli SDG concentrano l'attenzione su acqua potabile e i servizi igienici, energia pulita e accessibile, consumo e produzione responsabili e azione per il clima. Dal punto di vista sociale gli SDG concentrano l'attenzione su assenza di povertà, sconfitta della fame, crescita economica e occupazione produttiva, industria, innovazione e infrastrutture, città e comunità sicure e sostenibili.

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

In che modo gli investimenti sostenibili che il prodotto finanziario ha in parte realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?

Gli investimenti sostenibili sono stati sottoposti a screening per il coinvolgimento in attività che arrecano danni e controversie significativi; la valutazione è avvenuta mediante controllo del soddisfacimento da parte dell'emittente delle garanzie minime e degli standard relativi ai principali effetti avversi (PAI) oltre che della performance in base ai parametri PAI, il che ha comportato: Screening basati sulle norme, vale a dire screening dei titoli individuati nell'ambito degli screening basati sulle norme esistenti di Fidelity (come di seguito indicato); screening basati sulle attività, cioè screening degli emittenti in base alla loro partecipazione ad attività con effetti negativi significativi sulla società o sull'ambiente, compresi gli emittenti che erano considerati avere controversie "molto gravi" sulla base di screening di controversie, che riguardano 1) questioni ambientali, 2) diritti umani e comunità, 3) diritti dei lavoratori e catena di fornitura, 4) clienti, 5) governance; e indicatori PAI, i dati quantitativi (se disponibili) sugli indicatori PAI vengono utilizzati per valutare se un emittente è coinvolto in attività che arrecano danni significativi a eventuali obiettivi ambientali o sociali.

In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?

Per quanto riguarda gli investimenti sostenibili, come sopra indicato, Fidelity ha effettuato una valutazione quantitativa per individuare gli emittenti con performance problematiche in materia di indicatori PAI e sono stati presi in considerazione tutti gli indicatori obbligatori e quelli eventualmente pertinenti per gli effetti avversi sui fattori di sostenibilità di cui all'Allegato 1 degli standard tecnici di regolamentazione SFDR dell'UE (in presenza di dati disponibili).

Gli emittenti con un punteggio basso non erano idonei a diventare "investimenti sostenibili", a meno che la ricerca dei fondamentali di Fidelity non determinasse che l'emittente non stava violando requisiti finalizzati a "non arrecare un danno significativo" o era sulla buona strada per mitigare gli effetti avversi grazie a una gestione o una transizione efficaci.

Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:

Sono stati applicati screening basati su norme: Emittenti individuati non in grado di comportarsi in modo da soddisfare le loro responsabilità fondamentali nei settori dei diritti umani, del lavoro, dell'ambiente e dell'anticorruzione, in linea con le norme internazionali, comprese quelle stabilite dalle Linee guida dell'OCSE per le imprese multinazionali e dai Principi guida delle Nazioni Unite su imprese e diritti umani, dal Global Compact delle Nazioni Unite (UNGC), dalle norme dell'Organizzazione internazionale del lavoro (OIL), dalle Convenzioni dell'OIL, non erano considerati investimenti sostenibili.

La tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'Unione.

Il principio "non arrecare un danno significativo" si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante del presente prodotto finanziario non tengono conto dei criteri dell'UE per le attività economiche ecosostenibili.

Nessun altro investimento sostenibile deve arrecare un danno significativo agli obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

I principali effetti avversi sui fattori di sostenibilità sono stati presi in considerazione e integrati nelle decisioni d'investimento attraverso una serie di strumenti, tra cui:

(i) Due Diligence: analisi dei principali effetti avversi per verificare se sono stati sostanziali e negativi.

(ii) Rating ESG: Fidelity fa riferimento ai rating ESG che tengono conto dei principali effetti avversi sostanziali come emissioni di carbonio, sicurezza dei dipendenti, tangenti e corruzione, gestione delle risorse idriche. Per quanto riguarda i titoli emessi da enti sovrani, i principali effetti avversi sono stati presi in considerazione e integrati nelle decisioni d'investimento attraverso rating che tengono conto dei principali effetti avversi sostanziali come emissioni di anidride carbonica, violazioni sociali e libertà di espressione.

(iii) Esclusioni: Abbiamo adottato un approccio agli aspetti ESG basato sui principi e, in quest'ottica, inseriamo le società che consideriamo investimenti non idonei in un Elenco di esclusioni, tra cui, senza intento limitativo, quanto segue; un elenco di esclusioni a livello aziendale, che includa armi biologiche, armi chimiche, l'uso di scorte, la produzione e il trasferimento di mine antiuomo, il trattato di non proliferazione delle armi nucleari e le linee guida delle Nazioni Unite, della Banca mondiale e di altre autorità globali che sostengono i principi ESG.

(iv) Impegno: Fidelity ha utilizzato l'impegno come strumento per comprendere meglio i principali effetti avversi sui fattori di sostenibilità e, in alcune circostanze, sostenere il miglioramento dei principali effetti avversi e dei parametri di sostenibilità. Fidelity ha partecipato a iniziative individuali e di collaborazione che tengono conto di tutta una serie di effetti avversi principali (es., Climate Action 100+, Investors Against Slavery and Trafficking APAC).

(v) Voto: La politica di voto di Fidelity comprendeva standard minimi espliciti per quanto riguarda la diversità di genere all'interno dei consigli di amministrazione e per l'impegno nei confronti del cambiamento climatico. Fidelity può anche votare per migliorare la performance degli emittenti sulla base di altri indicatori.

(vi) Revisioni trimestrali: monitoraggio dei principali effetti avversi attraverso il processo di revisione trimestrale del comparto.

Fidelity tiene conto di indicatori specifici per i singoli fattori di sostenibilità quando si tratta di valutare i principali effetti avversi degli investimenti. Questi indicatori sono soggetti alla disponibilità dei dati e possono cambiare con il miglioramento della qualità e della disponibilità degli stessi.

Le esclusioni e gli screening di cui sopra (le "Esclusioni") possono essere aggiornati di volta in volta. Per ulteriori informazioni consultare questo sito: ["Criteri di investimento sostenibile"](#).

Quali sono stati i principali investimenti di questo prodotto finanziario?

L'elenco comprende gli investimenti che costituiscono la quota maggiore di investimenti del prodotto finanziario durante il periodo di riferimento, ossia: 2022-05-01 / 2023-04-30

Investimenti di maggiore entità	Settore	% di attivi	Paese

	Servizi di pubblica utilità vari	0.07%

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali e presentati sotto forma di media per il periodo di riferimento. La classificazione dei titoli, compresi Settore e Sottosettore, è riferita all'ultimo giorno del periodo di riferimento. I dati comprendono tutti i titoli, esclusi i derivati. A causa della limitatezza dei dati, non siamo in grado di dare informazioni sulla percentuale di investimenti in settori e sottosectori dell'economia che traggono entrate dall'esplorazione, dall'estrazione, dall'estrazione, dalla produzione, dalla lavorazione,

Per conformarsi alla tassonomia dell'UE i criteri per il **gas fossile** comprendono limitazioni delle emissioni e il passaggio all'energia da fonti totalmente rinnovabili o ai combustibili a basse emissioni di carbonio entro la fine del 2035. Per l'**energia nucleare** i criteri comprendono norme complete in materia di sicurezza e gestione dei rifiuti. Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale. Le **attività di transizione** sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio che presentano, tra gli altri livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

Le attività allineate alla tassonomia sono espresse in percentuali di:

- **fatturato**: quota di entrate da attività verdi delle imprese beneficiarie degli investimenti

- **spese in conto capitale** (CapEx): investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, ad es. per la transizione verso un'economia verde

- **spese operative** (OpEx): attività operative verdi delle imprese beneficiarie degli investimenti

In che misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Il comparto ha effettuato almeno il 0.34% di investimenti sostenibili con un obiettivo ambientale allineato alla Tassonomia UE. Ciò ha contribuito all'obiettivo ambientale della Tassonomia UE in materia di mitigazione dei cambiamenti climatici (0.34%).

La conformità degli investimenti del comparto alla Tassonomia UE non era oggetto di garanzia da parte dei revisori o di revisione da parte di terzi.

L'allineamento tassonomico degli investimenti sottostanti del comparto è misurato dal fatturato.

Il prodotto finanziario ha investito in attività connesse al gas fossile e/o all'energia nucleare che erano conformi alla tassonomia dell'UE?

- Sì
- Gas fossile Energia nucleare
- No

I due grafici sottostanti mostrano in blu scuro la percentuale minima di investimenti allineati alla Tassonomia UE. Poiché non esiste una metodologia appropriata per determinare l'allineamento alla Tassonomia delle obbligazioni sovrane*, il primo grafico mostra l'allineamento alla Tassonomia in relazione a tutti gli investimenti del prodotto finanziario, comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla Tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

*Ai fini dei grafici di cui sopra, per «obbligazioni sovrane» si intendono tutte le esposizioni sovrane.

I seguenti dati sono riferiti all'ultimo giorno di chiusura dei dati trimestrali solari e presentati sotto forma di media per il periodo di riferimento. I dati sulla Tassonomia UE comunicati possono differire a causa delle differenze nella metodologia di calcolo utilizzata.

Qual era la quota degli investimenti effettuati in attività di transizione e abilitanti?

La quota del comparto realizzata in Attività abilitanti: 0.22%; Attività transizionali: 0.01%, misurato dal Fatturato.

Come si rapporta la percentuale di investimenti che erano allineati alla tassonomia dell'UE con i precedenti periodi di riferimento?

Non applicabile in quanto si tratta del primo periodo di riferimento.

¹Le attività connesse al gas fossile e/o all'energia nucleare sono conformi alla tassonomia dell'UE solo se contribuiscono all'azione di contenimento dei cambiamenti climatici ("mitigazione dei cambiamenti climatici") e non arrecano un danno significativo a nessuno degli obiettivi della tassonomia dell'UE - cfr. nota esplicativa sul margine sinistro. I criteri completi riguardanti le attività economiche connesse al gas fossile e all'energia nucleare che sono conformi alla tassonomia dell'UE sono stabiliti nel regolamento delegato (UE) 2022/1214 della Commissione.

sono investimenti sostenibili con un obiettivo ambientale e che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

Qual era la quota di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?

Il comparto ha effettuato investimenti sostenibili nella misura del 8.75% con un obiettivo ambientale non allineato alla Tassonomia UE, per quanto consentito e coerentemente con la politica d'investimento e le percentuali minime dichiarate nelle informazioni precontrattuali.

Qual era la quota di investimenti socialmente sostenibili?

Il comparto ha effettuato almeno il 4.21% di investimenti sostenibili con un obiettivo sociale .

Quali investimenti erano compresi nella categoria «Altri» e qual era il loro scopo? Esistevano garanzie minime di salvaguardia ambientale o sociale?

I restanti investimenti del comparto sono stati effettuati in attivi coerenti con il suo obiettivo finanziario, contante ed equivalente del contante a fini di liquidità e derivati utilizzati per gli investimenti e la gestione efficace del portafoglio. Come garanzia minima a livello ambientale e sociale, il comparto ha aderito alle Esclusioni.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Il comparto ha intrapreso le seguenti azioni per soddisfare le caratteristiche ambientali o sociali:

1. Il comparto ha investito in titoli di emittenti con caratteristiche ESG favorevoli.
2. Il comparto ha effettuato investimenti sostenibili.
3. Riesame trimestrale della sostenibilità per discutere e rivedere le caratteristiche socioambientali qualitative del comparto.
4. Il comparto ha applicato le Esclusioni.

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?

Un Indice non è stato designato come benchmark di riferimento per determinare se questo prodotto finanziario è allineato alle caratteristiche ambientali o sociali che promuove.

Gli **indici di riferimento** sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

Franklin Technology Fund (il "Fondo")

Identificatore della persona giuridica:
549300P9XZCZFA3DI319

**FRANKLIN
TEMPLETON**

Caratteristiche ambientali e/o sociali

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, a condizione che tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e che l'impresa beneficiaria degli investimenti rispetti prassi di buona governance.

La **Tassonomia dell'UE** è un sistema di classificazione istituito dal Regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale Regolamento non comprende un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero non risultare allineati alla tassonomia

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?

SÌ

- Ha effettuato **investimenti sostenibili con un obiettivo ambientale: 0,00%**
- in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE
- in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE
- Ha effettuato **investimenti sostenibili con un obiettivo sociale: 0,00%**

NO

- Ha **promosso caratteristiche ambientali/sociali (A/S)** e, pur non avendo come obiettivo un investimento sostenibile, aveva una quota minima del(lo) 0,00% di investimenti sostenibili
- con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE
- con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE
- con un obiettivo sociale
- Ha promosso caratteristiche A/S, ma **non ha effettuato alcun investimento sostenibile**

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Le caratteristiche ambientali e/o sociali ("E/S") promosse dal Comparto erano specifiche per ogni società e per ogni settore in cui il Comparto opera. Tali caratteristiche consistevano, tra l'altro, nella sicurezza informatica e riservatezza dei dati, nella promozione del capitale umano e/o negli aspetti ambientali (ad es. emissioni di carbonio, utilizzo dell'acqua e rifiuti di apparecchiature elettriche ed elettroniche). Franklin Advisers, Inc. (il "Gestore del Portafoglio") ha cercato di raggiungere queste caratteristiche escludendo determinati emittenti e settori, considerati dal Gestore del Portafoglio dannosi per la società, e favorendo invece gli emittenti con un buon profilo ambientale, sociale e di governance ("ESG"), come rilevato dalla sua metodologia ESG proprietaria.

Inoltre, il Comparto ha promosso le caratteristiche ambientali e sociali selezionate analizzando le aziende possedute considerando le misurazioni delle caratteristiche identificate attraverso le matrici di materialità e informando le aziende sui punti di attenzione ESG e, se del caso, impegnandosi con le aziende se il Gestore del Portafoglio riteneva che fossero in ritardo.

A tale riguardo, al 30 giugno 2023, il Comparto aveva allocato il 98,56% del suo patrimonio a investimenti allineati con le caratteristiche E/S.

Gli **indicatori di sostenibilità** misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse del prodotto finanziario.

● **Qual è stata la prestazione degli indicatori di sostenibilità?**

Il Comparto ha soddisfatto positivamente le caratteristiche di E/S promosse non possedendo società con rating B secondo i criteri proprietari del Gestore del Portafoglio ed evitando le società escluse identificate dall'analisi del Gestore del Portafoglio.

Nome KPI sostenibilità	Valore
La quota di società con rating AAA secondo la metodologia ESG proprietaria	11,72%
La quota di società con rating AA secondo la metodologia ESG proprietaria	52,80%
La quota di società con rating A secondo la metodologia ESG proprietaria	34,05%
La quota di società senza rating secondo la metodologia ESG proprietaria	1,44%
La quota di società con un'esposizione o collegate a settori esclusi e altre esclusioni	0,00%

● **... e rispetto ai periodi precedenti?**

Non pertinente in quanto non vi erano periodi di riferimento precedenti.

● **Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha in parte realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?**

Non applicabile.

● **In che modo gli investimenti sostenibili che il prodotto finanziario ha in parte realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?**

Non applicabile.

----- **In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?**

Non applicabile.

----- **Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Dettagli:**

Non applicabile.

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

La tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'Unione.

Il principio «non arrecare un danno significativo» si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri dell'UE per le attività economiche ecosostenibili.

Neppure eventuali altri investimenti sostenibili devono arrecare un danno significativo ad obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

Il Comparto ha considerato specificamente i seguenti principali effetti negativi ("PAI"):

- **Emissioni di gas a effetto serra Scope 1 e Scope 2;**
- **Intensità delle emissioni di gas serra Scope 1+2 e significative emissioni Scope 3; e**
- **Diversità di genere nel consiglio di amministrazione.**

La considerazione dei PAI specificati è stata legata all'analisi fondamentale degli investimenti del Comparto e alla valutazione ESG delle società partecipate. Il Gestore del Portafoglio ritiene che questi PAI fossero validi per il più ampio spettro di investimenti del Comparto e che rappresentassero la più grande opportunità di impegno.

Per quanto riguarda le emissioni di gas a effetto serra, il Gestore del Portafoglio si è impegnato a collaborare con le società partecipate per accertarsi che esse stabilissero e si impegnassero a realizzare dei piani di riduzione delle emissioni di gas a effetto serra, coerenti con obiettivi scientificamente fondati di neutralità carbonica a lungo termine entro il 2050, in linea con gli impegni della Net Zero Asset Managers Initiative ("NZAMI"). Il Gestore del Portafoglio ha collaborato con le società affinché esse si impegnino ad allinearsi agli obiettivi di neutralità carbonica, allinearsi le proprie emissioni alla neutralità carbonica, essere allineate per raggiungere la neutralità carbonica e raggiungere la neutralità carbonica. Sebbene il Gestore del Portafoglio fosse consapevole del fatto che, nel breve termine, le emissioni assolute di alcune società possano anche aumentare durante l'elaborazione dei piani di transizione, tenere conto dell'intensità delle emissioni di gas a effetto serra ha aiutato il Gestore del Portafoglio a verificare che le emissioni complessive di gas serra delle società evolvessero in una direzione coerente con la riduzione delle emissioni nel tempo.

Per quanto riguarda la diversità di genere nei consigli di amministrazione, il Gestore del Portafoglio si è impegnato a collaborare con le società partecipate per assicurarsi che i loro consigli di amministrazione fossero rappresentativi della clientela a cui si rivolgono, perché è convinto che questo favorisca una migliore comprensione della loro base di consumatori, la creazione di prodotti migliori e, in definitiva, a una maggiore efficienza dell'impresa. Inizialmente, il Gestore del Portafoglio si è adoperato per individuare le società che non presentassero una diversità di genere nei consigli di amministrazione e stabilisce soglie temporali per la stesura di un piano di incremento della diversità di genere nel consiglio di amministrazione. Il Gestore del Portafoglio ha ritenuto ragionevole aumentare nel corso del tempo il livello accettabile di diversità di genere nei consigli di amministrazione e impegnarsi con le società in ritardo rispetto a società comparabili dello stesso settore.

Per i PAI sopra indicati, inizialmente il Gestore del Portafoglio ha determinato il livello di riferimento iniziale del portafoglio e delle società partecipate, cercando quindi di migliorare entrambi i fronti nel corso del tempo attraverso il proprio coinvolgimento. Nell'ambito dei suoi impegni NZAMI, il Comparto ha collaborato con le società partecipate per fissare e seguire obiettivi di riduzione delle emissioni basati su dati scientifici, e ha cercato di mantenere un approccio di copertura del portafoglio, aumentando il peso delle società che hanno raggiunto la neutralità carbonica, che sono allineate all'obiettivo di neutralità carbonica o che vi si stanno allineando. L'obiettivo del portafoglio è che queste categorie raggiungano il 100% entro il 2040. Per quanto riguarda la diversità di genere nei consigli di amministrazione, l'impegno iniziale del Comparto prevede un coinvolgimento con tutte le società che non presentano una diversità di genere, chiedendo che elaborino almeno un piano per migliorare la diversità di genere nel consiglio di amministrazione nell'arco di 18 mesi. Il Gestore del Portafoglio intende aumentare le aspettative di diversità di genere nei consigli di amministrazione nel corso del tempo. In caso di assenza di miglioramenti di queste misure per le società partecipate, il Gestore del Portafoglio può optare per il disinvestimento qualora non rilevi un percorso di miglioramento.

Infine, il Comparto ha escluso le società che producevano armi controverse o che non rispettavano i principi del Global Compact delle Nazioni Unite ("Principi UNGC"), e che non presentavano prospettive positive di rimedio.

Quali sono stati i principali investimenti di questo prodotto finanziario?

Gli investimenti più rilevanti di questo Comparto, esclusa la liquidità, sono stati:

L'elenco comprende gli investimenti che costituiscono la **quota maggiore di investimenti** del prodotto finanziario durante il periodo di riferimento, ossia: 2022-07-01 - 2023-06-30.

Investimenti più ampi	Settore	% del patrimonio	Paese
Microsoft Corp	Tecnologia dell'informazione	6,54%	Stati Uniti
Apple Inc	Tecnologia dell'informazione	5,66%	Stati Uniti
NVIDIA Corp	Tecnologia dell'informazione	5,42%	Stati Uniti
Amazon.com Inc	Beni di consumo voluttuari	5,01%	Stati Uniti
Mastercard Inc	Finanza	3,08%	Stati Uniti

Qual è stata la quota degli investimenti in materia di sostenibilità?

La percentuale di investimenti sostenibili era pari a 0%.

L'allocazione degli attivi descrive la quota di investimenti in attivi specifici.

Qual è stata l'allocazione degli attivi?

Il 98,56% del portafoglio del Comparto era allineato alle caratteristiche E/S promosse dal Comparto. La parte restante (1,44%) non era allineata alle caratteristiche promosse e consisteva principalmente in attività liquide, o emittenti per i quali non esisteva un rating ESG. Queste attività erano detenute a servizio delle esigenze quotidiane del Comparto.

#1 Allineati a caratteristiche A/S: comprende gli investimenti del prodotto finanziario utilizzati per rispettare le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

#2 Altri: comprende gli investimenti rimanenti del prodotto finanziario che non sono allineati alle caratteristiche ambientali o sociali, né sono considerati investimenti sostenibili.

La categoria **#1 Allineati a caratteristiche A/S** comprende:

- La sottocategoria **# 1A Sostenibili**, che contempla gli investimenti sostenibili dal punto di vista ambientale e sociale.
- La sottocategoria **# 1B Altre caratteristiche A/S**, che contempla gli investimenti allineati alle caratteristiche ambientali o sociali che non sono considerati investimenti sostenibili.

● **In quali settori economici sono stati effettuati gli investimenti?**

Al 30 giugno 2023, i principali settori e sottosettori del Comparto, esclusa la liquidità, erano:

Settore principale	% del patrimonio
Tecnologia dell'informazione	74,19%
Beni di consumo voluttuari	8,97%
Finanza	8,27%
Servizi di comunicazione	4,42%
Sanità	1,49%
Titoli di Stato	1,26%
Commerciale	0,93%
Industria	0,32%
Sottosettore principale	% del patrimonio
Software	34,85%
Semiconduttori e attrezzature per semiconduttori	24,86%
Servizi finanziari	7,91%
Servizi IT	7,31%
Apparecchiature, memorie e componenti tecnologici	5,87%
Grande distribuzione organizzata	5,75%
Media e servizi interattivi	3,24%
Tecnologia sanitaria	1,40%
Hotel, ristoranti e tempo libero	1,28%
Titoli di Stato	1,26%
Automobili	1,18%
REIT specializzati	0,93%
Apparecchiature di comunicazione	0,68%
Servizi di telecomunicazione wireless	0,65%
Apparecchiature, strumenti e componenti elettronici	0,62%

Per conformarsi alla tassonomia dell'UE, i criteri per il **gas fossile** comprendono limitazioni delle emissioni e il passaggio all'energia da fonti rinnovabili o ai combustibili a basse emissioni di carbonio entro la fine del 2035. Per l'**energia nucleare** i criteri comprendono norme complete in materia di sicurezza e gestione dei rifiuti.

Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale.

Le **attività di transizione** sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano, tra l'altro, livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

Le attività allineate alla tassonomia sono espresse in percentuale di:

- **fatturato**: quota di entrate da attività verdi delle imprese beneficiarie degli investimenti.

- **spese in conto capitale (CapEx)**: investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, ad es. per la transizione verso un'economia verde.

- **spese operative (OpEx)**: attività operative verdi delle imprese beneficiarie degli investimenti.

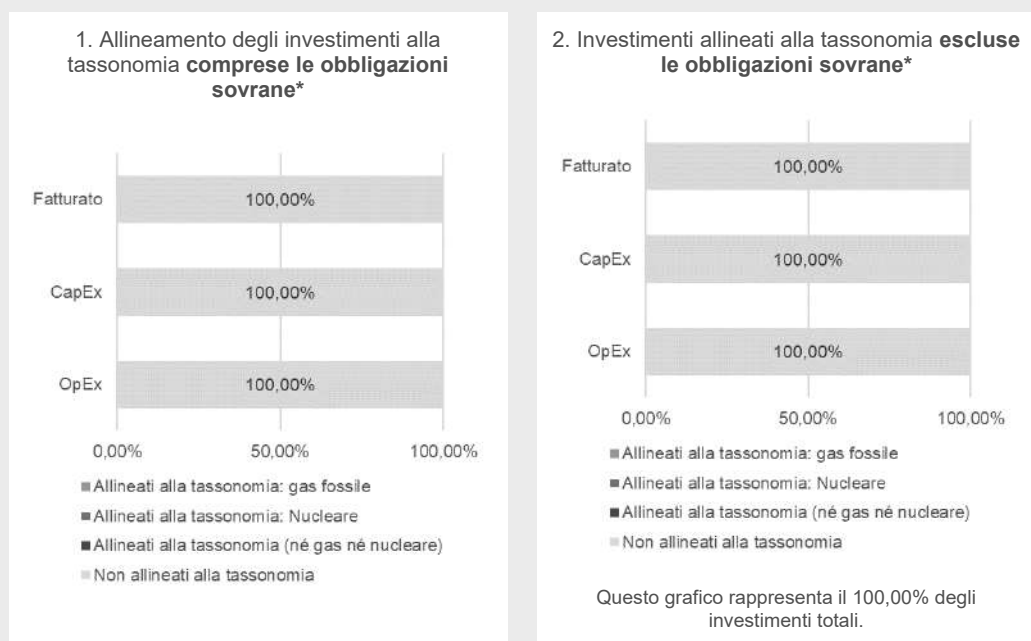

In che misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Il Comparto non ha effettuato investimenti sostenibili con un obiettivo ambientale allineato alla tassonomia dell'UE.

Il prodotto finanziario ha investito in attività connesse al gas fossile e/o all'energia nucleare che erano conformi alla tassonomia dell'UE?¹

- Sì
 In gas fossile In energia nucleare
 No

I due grafici che seguono mostrano in verde la percentuale di investimenti che erano allineati alla tassonomia dell'UE. Poiché non esiste una metodologia adeguata per determinare l'allineamento delle obbligazioni sovrane* alla tassonomia, il primo grafico mostra l'allineamento alla tassonomia in relazione a tutti gli investimenti del prodotto finanziario comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

* Ai fini dei grafici di cui sopra, per "obbligazioni sovrane" si intendono tutte le esposizioni sovrane

Qual era la quota degli investimenti effettuati in attività di transizione e abilitanti?

Il Comparto non ha investito in attività transitorie e abilitanti.

Come si rapporta la percentuale di investimenti allineati alla tassonomia dell'UE con i precedenti periodi di riferimento?

Non applicabile

¹ Le attività connesse al gas fossile e/o all'energia nucleare sono conformi alla tassonomia dell'UE solo se contribuiscono all'azione di contenimento dei cambiamenti climatici («mitigazione dei cambiamenti climatici») e non arrecano un danno significativo a nessuno degli obiettivi della tassonomia dell'UE - cfr. nota esplicativa sul margine sinistro. I criteri completi riguardanti le attività economiche connesse al gas fossile e all'energia nucleare che sono conformi alla tassonomia dell'UE sono stabiliti nel regolamento delegato (UE) 2022/1214 della Commissione.

 sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

Qual era la quota di investimenti sostenibili con un obiettivo ambientale non allineato alla tassonomia dell'UE?

Non applicabile

Qual era la quota di investimenti socialmente sostenibili?

Non applicabile

Quali investimenti erano compresi nella categoria «Altri» e qual era il loro scopo? Esistevano garanzie minime di salvaguardia ambientale o sociale?

La quota di investimenti alla voce "N. 2 Altro" era pari a 1,44% e comprendeva attività liquide detenute a servizio delle esigenze quotidiane del Comparto, per le quali non sono previste garanzie ambientali o sociali minime. In questa voce sono inclusi anche gli emittenti per i quali non era disponibile un rating ESG.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Con l'analisi ESG il Gestore del Portafoglio ha identificato le società che sarebbero escluse in base ai criteri vincolanti ed evita di investire in queste società. Il Comparto non ha investito in società che, in base all'analisi del Gestore del Portafoglio:

- Violano gravemente i Principi UNGC (senza una prospettiva positiva) – a tal fine, il Comparto non investe in società che il Gestore del Portafoglio valuta come fallimentari ai sensi dei Principi UNGC;
- Generano più del 10% dei ricavi dalla produzione e/o distribuzione di armamenti;
- Partecipano alla produzione, alla distribuzione o al commercio all'ingrosso di componenti dedicati e/o chiave di armi proibite (ossia mine antiuomo, armi biologiche e chimiche e munizioni a grappolo);
- Producono tabacco o prodotti del tabacco o generano oltre il 5% dei loro ricavi da tali prodotti;
- Generano oltre il 10% dei loro ricavi dall'estrazione di carbone termico o dalla generazione di energia dal carbone.

Per le società in cui l'impegno riguardava specifici PAI, il Gestore del Portafoglio ha avviato iniziative, incoraggiando, tra l'altro, le società a fissare obiettivi di riduzione delle emissioni in linea con l'Accordo di Parigi o a migliorare la diversità di genere nel consiglio di amministrazione. Il Gestore del Portafoglio ritiene che, alla luce del tempo trascorso dall'impegno, le società dovrebbero avere più tempo per iniziare ad realizzare i piani di miglioramento prima di intraprendere ulteriori iniziative, compreso il disinvestimento.

Infine, il Gestore del Portafoglio si è avvalso della propria metodologia di rating ESG. Il Gestore del Portafoglio può scegliere fra quattro rating da attribuire agli emittenti: AAA (best in class/molto buono), AA (buono), A (sufficiente) e B (necessità miglioramenti). Sulla base di questo schema proprietario, il Comparto non ha investito in società che avevano un rating B.

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?

Non applicabile

Gli **indici di riferimento** sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

Franklin K2 Alternative Strategies Fund (il "Fondo")

Identificatore della persona giuridica:
54930062LATFG8YHK918

**FRANKLIN
TEMPLETON**

Caratteristiche ambientali e/o sociali

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, a condizione che tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e che l'impresa beneficiaria degli investimenti rispetti prassi di buona governance.

La **Tassonomia dell'UE** è un sistema di classificazione istituito dal Regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale Regolamento non comprende un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero non risultare allineati alla tassonomia

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?

SÌ

- Ha effettuato **investimenti sostenibili con un obiettivo ambientale: 0,00%**
- in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE
- in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE
- Ha effettuato **investimenti sostenibili con un obiettivo sociale: 0,00%**

NO

- Ha **promosso caratteristiche ambientali/sociali (A/S)** e, pur non avendo come obiettivo un investimento sostenibile, aveva una quota minima del(lo) 0,00% di investimenti sostenibili
- con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE
- con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE
- con un obiettivo sociale
- Ha promosso caratteristiche A/S, ma **non ha effettuato alcun investimento sostenibile**

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

A livello di portafoglio, il Comparto ha promosso standard minimi di tipo ambientale, sociale e di governance ("ESG") puntando i) ad una media ponderata dei punteggi ESG maggiore del punteggio MSCI ESG medio dell'universo degli investimenti, oppure ii) ad un punteggio MSCI ESG di 5,25, a seconda di quale sia maggiore, sulla base dell'esposizione lunga nel portafoglio dei titoli interessati dal punteggio.

Pertanto, il Comparto ha promosso caratteristiche ambientali e sociali che comprendono, tra l'altro, azioni intese a lottare contro il cambiamento climatico, la riduzione dell'inquinamento e dei rifiuti e/o i diritti umani.

L'universo degli investimenti è stato definito come tutti gli emittenti con un punteggio ESG MSCI attuale. Le partecipazioni alle quali non è assegnato alcun punteggio MSCI ESG non hanno contribuito al punteggio ESG del Comparto o al suo universo di investimento.

Inoltre, il Comparto ha adottato dei filtri negativi come parte del processo di investimento.

A tale riguardo, al 30 giugno 2023, il Comparto aveva allocato il 53,90% del suo patrimonio a investimenti allineati con le caratteristiche E/S.

Gli **indicatori di sostenibilità** misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse del prodotto finanziario.

Qual è stata la prestazione degli indicatori di sostenibilità?

Gli indicatori di sostenibilità utilizzati per misurare il rispetto di ciascuna delle caratteristiche ambientali o sociali promosse sono:

- la media ponderata dei punteggi ESG del portafoglio; e
- la quota di società partecipate che hanno esposizioni o legami con i settori esclusi.

I valori indicati sotto si riferiscono al 30 giugno 2023:

Nome KPI sostenibilità	Valore
La media ponderata dei punteggi ESG del portafoglio	6,00
La quota di società partecipate che hanno esposizioni o legami con i settori esclusi.	0,00

... e rispetto ai periodi precedenti?

Non pertinente in quanto non vi erano periodi di riferimento precedenti.

Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha in parte realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?

Il Comparto non ha effettuato investimenti sostenibili con un obiettivo ambientale allineato alla tassonomia dell'UE.

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

In che modo gli investimenti sostenibili che il prodotto finanziario ha in parte realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?

Non applicabile.

In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?

Non applicabile.

Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Dettagli:

Non applicabile.

La tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'Unione.

Il principio «non arrecare un danno significativo» si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri dell'UE per le attività economiche ecosostenibili.

Neppure eventuali altri investimenti sostenibili devono arrecare un danno significativo ad obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

I principali effetti negativi ("PAI") sono integrati nell'ESG 360 Trasbordar, il modello di assegnazione del punteggio di proprietà di K2/D&S Management Co., In ("Gestore del Portafoglio"). Questo strumento per la creazione di modelli ESG prende in considerazione il punteggio a livello di posizione da MSCI ESG e produce punteggi di sleeve e portafoglio.

Riguardo al Comparto sono stati considerati principalmente i seguenti PAI:

- emissioni di gas serra;
- intensità di gas serra;
- esposizione a società attive nel settore dei combustibili fossili;
- violazioni dei principi del Global Compact delle Nazioni Unite ("Principi UNGC") e delle Linee Guida dell'Organizzazione per la Cooperazione e lo Sviluppo Economico ("OCSE") per le imprese multinazionali; e
- esposizione ad armi controverse.

Nella misura in cui non vi erano dati disponibili per le emissioni di gas serra, l'intensità dei gas serra e l'esposizione al settore dei combustibili fossili, e in relazione alle posizioni lunghe del Comparto, il Gestore del Portafoglio si è confrontato con i vari co-gestori del portafoglio al fine di stimolarli ad invitare i rispettivi emittenti a migliorare i loro resoconti.

Il Comparto si è impegnato ad avere nel portafoglio un'esposizione inferiore all'1% a titoli azionari e credito societario che violano i principi UNGC senza prospettive positive. Il Comparto ha limitato allo 0,07% l'esposizione ai titoli azionari e di debito societario che violano i principi UNGC senza prospettive positive. Inoltre, il Comparto ha considerato le violazioni del Global Compact delle Nazioni Unite e delle Linee guida dell'OCSE nel quadro della valutazione della buona governance delle società beneficiarie degli investimenti. Il Gestore del Portafoglio ha analizzato le posizioni lunghe per identificare i titoli che non soddisfacevano i Principi UNGC o le Linee guida dell'OCSE. Il Gestore del Portafoglio si è confrontato con i vari co-gestori del portafoglio al fine di comprendere la proposta di investimento del titolo segnalato come in violazione del Global Compact delle Nazioni Unite e delle Linee guida dell'OCSE e ha svolto una valutazione della governance societaria sottostante. Se risultava che il titolo aveva in effetti una governance insufficiente, il titolo veniva aggiunto all'elenco di restrizioni del Comparto con l'istruzione di disinvestire entro 90 giorni.

Il Comparto ha limitato l'esposizione ad armi controverse allo 0%.

Quali sono stati i principali investimenti di questo prodotto finanziario?

I principali investimenti di questo Comparto, esclusa la liquidità, sono stati:

L'elenco comprende gli investimenti che costituiscono la **quota maggiore di investimenti** del prodotto finanziario durante il periodo di riferimento, ossia: 2022-07-01 - 2023-06-30.

Qual è stata la quota degli investimenti in materia di sostenibilità?

Il Comparto non ha effettuato alcun investimento sostenibile nel periodo di riferimento.

L'allocazione degli attivi descrive la quota di investimenti in attivi specifici.

Qual è stata l'allocazione degli attivi?

Il 53,90% del portafoglio del Comparto era allineato alle caratteristiche E/S promosse dal Comparto. La parte restante (46,10%) non era allineata alle caratteristiche E/S e consisteva principalmente in tipi di attività e titoli non considerati attività ammissibili secondo la metodologia MSCI ESG Ratings.

#1 Allineati a caratteristiche A/S: comprende gli investimenti del prodotto finanziario utilizzati per rispettare le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

#2 Altri: comprende gli investimenti rimanenti del prodotto finanziario che non sono allineati alle caratteristiche ambientali o sociali, né sono considerati investimenti sostenibili.

La categoria **#1 Allineati a caratteristiche A/S** comprende:

- La sottocategoria **# 1A Sostenibili**, che contempla gli investimenti sostenibili dal punto di vista ambientale e sociale.
- La sottocategoria **# 1B Altre caratteristiche A/S**, che contempla gli investimenti allineati alle caratteristiche ambientali o sociali che non sono considerati investimenti sostenibili.

In quali settori economici sono stati effettuati gli investimenti?

Al 30 giugno 2023, i principali settori e sottosettori del Comparto, esclusa la liquidità, erano:

Settore principale	% del patrimonio
FX	22,73%
Derivati sui Tassi di Interesse	13,07%
Titoli di Stato	9,29%
Industria	7,79%
Beni di consumo voluttuari	6,73%

Metalli e miniere	1,41%
Servizi finanziari	1,33%
Chimica	1,26%

Per conformarsi alla tassonomia dell'UE, i criteri per il **gas fossile** comprendono limitazioni delle emissioni e il passaggio all'energia da fonti rinnovabili o ai combustibili a basse emissioni di carbonio entro la fine del 2035. Per l'**energia nucleare** i criteri comprendono norme complete in materia di sicurezza e gestione dei rifiuti.

Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale.

Le **attività di transizione** sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano, tra l'altro, livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

Le attività allineate alla tassonomia sono espresse in percentuale di:

- **fatturato**: quota di entrate da attività verdi delle imprese beneficiarie degli investimenti.

- **spese in conto capitale (CapEx)**: investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, ad es. per la transizione verso un'economia verde.

- **spese operative (OpEx)**: attività operative verdi delle imprese beneficiarie degli investimenti.

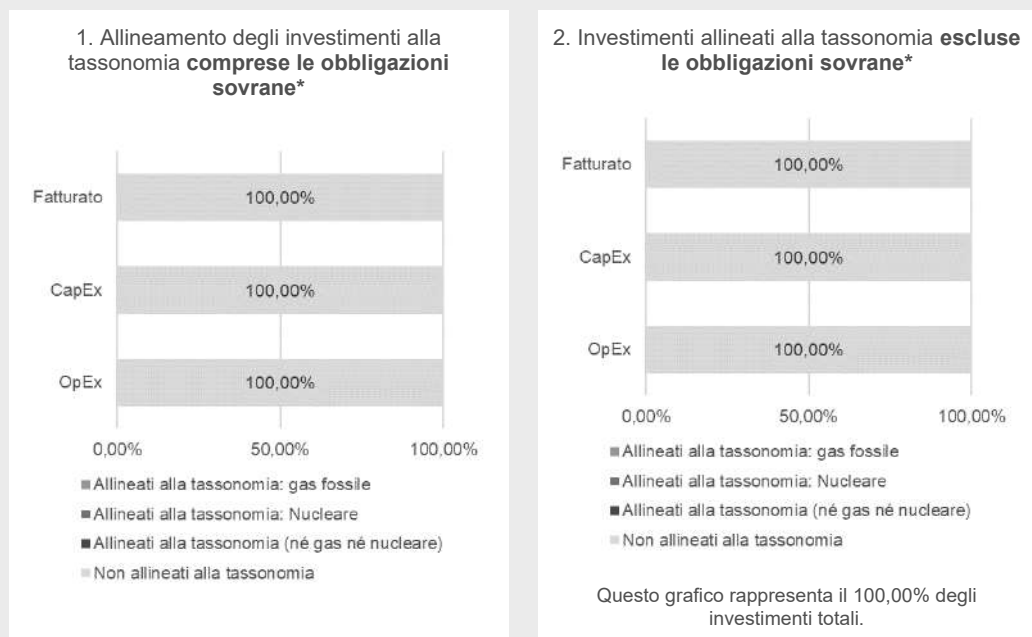

In che misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Il Comparto non ha effettuato investimenti sostenibili con un obiettivo ambientale allineato alla tassonomia dell'UE.

Il prodotto finanziario ha investito in attività connesse al gas fossile e/o all'energia nucleare che erano conformi alla tassonomia dell'UE?¹

- Sì
- In gas fossile In energia nucleare
- No

I due grafici che seguono mostrano in verde la percentuale di investimenti che erano allineati alla tassonomia dell'UE. Poiché non esiste una metodologia adeguata per determinare l'allineamento delle obbligazioni sovrane* alla tassonomia, il primo grafico mostra l'allineamento alla tassonomia in relazione a tutti gli investimenti del prodotto finanziario comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

* Ai fini dei grafici di cui sopra, per "obbligazioni sovrane" si intendono tutte le esposizioni sovrane

Qual era la quota degli investimenti effettuati in attività di transizione e abilitanti?

Il Comparto non ha investito in attività transitorie e abilitanti.

Come si rapporta la percentuale di investimenti allineati alla tassonomia dell'UE con i precedenti periodi di riferimento?

Non applicabile.

¹ Le attività connesse al gas fossile e/o all'energia nucleare sono conformi alla tassonomia dell'UE solo se contribuiscono all'azione di contenimento dei cambiamenti climatici («mitigazione dei cambiamenti climatici») e non arrecano un danno significativo a nessuno degli obiettivi della tassonomia dell'UE - cfr. nota esplicativa sul margine sinistro. I criteri completi riguardanti le attività economiche connesse al gas fossile e all'energia nucleare che sono conformi alla tassonomia dell'UE sono stabiliti nel regolamento delegato (UE) 2022/1214 della Commissione.

 sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

Qual era la quota di investimenti sostenibili con un obiettivo ambientale non allineato alla tassonomia dell'UE?

Non applicabile.

Qual era la quota di investimenti socialmente sostenibili?

Il prodotto finanziario ha avuto una quota di investimenti con un obiettivo sociale del(lo) 0,00%.

Quali investimenti erano compresi nella categoria «Altri» e qual era il loro scopo? Esistevano garanzie minime di salvaguardia ambientale o sociale?

La quota di investimenti alla voce "N. 2 Altro" era pari al 46,10% e comprendeva tipi di attività e titoli considerati attività non idonee nell'ambito della metodologia di rating ESG MSCI. Ciò comprende attività liquide (attività liquide accessorie, depositi bancari, strumenti del mercato monetario e fondi comuni monetari), operazioni in valuta e derivati su operazioni in valuta, swap su tassi d'interesse e materie prime ammissibili per gli OIC. Inoltre, il Comparto ha investito in attività idonee ai sensi della metodologia ESG MSCI ma che non sono coperte ai fini del calcolo del punteggio ESG complessivo del Comparto. Tali attività comprendono credito strutturato e posizioni corte in derivati. Infine, non sono state stabilite garanzie di salvaguardia ambientale e/o sociale.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Gli elementi vincolanti della strategia di investimento possono essere così sintetizzati:

1. il Comparto si è impegnato con successo a raggiungere un punteggio ESG complessivo di almeno 5,25 sulla base della media ponderata del punteggio ESG MSCI per tutte le posizioni lunghe dei titoli interessati dal punteggio detenuti nel portafoglio e coperti da MSCI. Se il punteggio del Comparto scendeva al di sotto di 5,25, il Gestore del Portafoglio riequilibrava tra gli sleeve dei co-gestori del portafoglio per ottenere un punteggio del Comparto pari o superiore a 5,25 entro 90 giorni.

La media ponderata del punteggio MSCI ESG del portafoglio è stata di 6,0 (mentre la mediana del punteggio MSCI ESG dell'universo di investimento è stata di 5,3); e

2. il Comparto ha escluso alcuni settori e società in base ai seguenti criteri:

- 0% di esposizione ad armi controverse;
- Meno dell'1% di esposizione lunga a titoli che non rispettano i Principi UNGC senza prospettive positive;
- Meno del 5% di esposizione lunga a titoli con rating MSCI CCC;
- 0% di esposizione lunga a società che generano più del 5% dei loro ricavi dalla produzione o distribuzione di tabacco; e
- 0% di esposizione lunga a società che generano più del 30% dei loro ricavi dalla produzione o distribuzione di carbone.

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?

Gli **indici di riferimento** sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

Non applicabile

Franklin U.S. Opportunities Fund (il "Fondo")

Identificatore della persona giuridica:
YWFJZZO29TGGRF43SH58

**FRANKLIN
TEMPLETON**

Caratteristiche ambientali e/o sociali

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, a condizione che tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e che l'impresa beneficiaria degli investimenti rispetti prassi di buona governance.

La **Tassonomia dell'UE** è un sistema di classificazione istituito dal Regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale Regolamento non comprende un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero non risultare allineati alla tassonomia

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?

SÌ

- Ha effettuato **investimenti sostenibili con un obiettivo ambientale: 0,00%**
- in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE
- in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE
- Ha effettuato **investimenti sostenibili con un obiettivo sociale: 0,00%**

NO

- Ha **promosso caratteristiche ambientali/sociali (A/S)** e, pur non avendo come obiettivo un investimento sostenibile, aveva una quota minima del(lo) 0,00% di investimenti sostenibili
- con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE
- con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE
- con un obiettivo sociale
- Ha promosso caratteristiche A/S, ma **non ha effettuato alcun investimento sostenibile**

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Le caratteristiche ambientali e/o sociali ("E/S") promosse dal Comparto erano specifiche per ogni società e per ogni settore in cui il Comparto opera. Queste caratteristiche consistevano, tra l'altro, nel supporto del capitale umano, della diversità e dell'inclusione, della soddisfazione dei dipendenti e/o degli aspetti ambientali (ad esempio, emissioni di carbonio, utilizzo di acqua e rifiuti elettronici). Franklin Advisers, Inc. (il "Gestore del Portafoglio") ha cercato di raggiungere queste caratteristiche escludendo determinati emittenti e settori, considerati dal Gestore del Portafoglio dannosi per la società, e favorendo invece gli emittenti con un buon profilo ambientale, sociale e di governance ("ESG"), come rilevato dalla sua metodologia ESG proprietaria.

Inoltre, il Comparto ha promosso le caratteristiche ambientali e sociali selezionate analizzando le aziende possedute considerando le misurazioni delle caratteristiche identificate attraverso le matrici di materialità e informando le aziende sui punti di attenzione ESG e, se del caso, impegnandosi con le aziende se il Gestore del Portafoglio riteneva che fossero in ritardo.

A tale riguardo, al 30 giugno 2023, il Comparto aveva allocato il 99,07% del suo patrimonio a investimenti allineati con le caratteristiche E/S.

Gli **indicatori di sostenibilità** misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse del prodotto finanziario.

● **Qual è stata la prestazione degli indicatori di sostenibilità?**

Il Comparto ha soddisfatto positivamente le caratteristiche di E/S promosse non possedendo società con rating B secondo i criteri proprietari del Gestore del Portafoglio ed evitando le società escluse identificate dall'analisi del Gestore del Portafoglio.

Nome KPI sostenibilità	Valore
La quota di società con rating AAA secondo la metodologia ESG proprietaria	12,74%
La quota di società con rating AA secondo la metodologia ESG proprietaria	56,20%
La quota di società con rating A secondo la metodologia ESG proprietaria	30,14%
La quota di società senza rating secondo la metodologia ESG proprietaria	0,93%
La quota di società con un'esposizione o collegate a settori esclusi e altre esclusioni	0,00%

● **... e rispetto ai periodi precedenti?**

Non pertinente in quanto non vi erano periodi di riferimento precedenti.

● **Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha in parte realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?**

Non applicabile.

● **In che modo gli investimenti sostenibili che il prodotto finanziario ha in parte realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?**

Non applicabile.

----- **In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?**

Non applicabile.

----- **Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Dettagli:**

Non applicabile.

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

La tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'Unione.

Il principio «non arrecare un danno significativo» si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri dell'UE per le attività economiche ecosostenibili.

Neppure eventuali altri investimenti sostenibili devono arrecare un danno significativo ad obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

Il Comparto ha considerato specificamente i seguenti principali effetti negativi ("PAI"):

- **Emissioni di gas a effetto serra Scope 1 e Scope 2;**
- **Intensità delle emissioni di gas serra Scope 1+2 e significative emissioni Scope 3; e**
- **Diversità di genere nel consiglio di amministrazione.**

La considerazione dei PAI specificati è stata legata all'analisi fondamentale degli investimenti del Comparto e alla valutazione ESG delle società partecipate. Il Gestore del Portafoglio ritiene che questi PAI fossero validi per il più ampio spettro di investimenti del Comparto e che rappresentassero la più grande opportunità di impegno.

Per quanto riguarda le emissioni di gas a effetto serra, il Gestore del Portafoglio si è impegnato a collaborare con le società partecipate per accertarsi che esse stabilissero e si impegnassero a realizzare dei piani di riduzione delle emissioni di gas a effetto serra, coerenti con obiettivi scientificamente fondati di neutralità carbonica a lungo termine entro il 2050, in linea con gli impegni della Net Zero Asset Managers Initiative ("NZAMI"). Il Gestore del Portafoglio ha collaborato con le società affinché esse si impegnino ad allinearsi agli obiettivi di neutralità carbonica, allinearsi le proprie emissioni alla neutralità carbonica, essere allineate per raggiungere la neutralità carbonica e raggiungere la neutralità carbonica. Sebbene il Gestore del Portafoglio fosse consapevole del fatto che, nel breve termine, le emissioni assolute di alcune società possano anche aumentare durante l'elaborazione dei piani di transizione, tenere conto dell'intensità delle emissioni di gas a effetto serra ha aiutato il Gestore del Portafoglio a verificare che le emissioni complessive di gas serra delle società evolvessero in una direzione coerente con la riduzione delle emissioni nel tempo.

Per quanto riguarda la diversità di genere nei consigli di amministrazione, il Gestore del Portafoglio si è impegnato a collaborare con le società partecipate per assicurarsi che i loro consigli di amministrazione fossero rappresentativi della clientela a cui si rivolgono, perché è convinto che questo favorisca una migliore comprensione della loro base di consumatori, la creazione di prodotti migliori e, in definitiva, a una maggiore efficienza dell'impresa. Inizialmente, il Gestore del Portafoglio si è adoperato per individuare le società che non presentassero una diversità di genere nei consigli di amministrazione e stabilisce soglie temporali per la stesura di un piano di incremento della diversità di genere nel consiglio di amministrazione. Il Gestore del Portafoglio ha ritenuto ragionevole aumentare nel corso del tempo il livello accettabile di diversità di genere nei consigli di amministrazione e impegnarsi con le società in ritardo rispetto a società comparabili dello stesso settore.

Per i PAI sopra indicati, inizialmente il Gestore del Portafoglio ha determinato il livello di riferimento iniziale del portafoglio e delle società partecipate, cercando quindi di migliorare entrambi i fronti nel corso del tempo attraverso il proprio coinvolgimento. Nell'ambito dei suoi impegni NZAMI, il Comparto ha collaborato con le società partecipate per fissare e seguire obiettivi di riduzione delle emissioni basati su dati scientifici, e ha cercato di mantenere un approccio di copertura del portafoglio, aumentando il peso delle società che hanno raggiunto la neutralità carbonica, che sono allineate all'obiettivo di neutralità carbonica o che vi si stanno allineando. L'obiettivo del portafoglio è che queste categorie raggiungano il 100% entro il 2040. Per quanto riguarda la diversità di genere nei consigli di amministrazione, l'impegno iniziale del Comparto prevede un coinvolgimento con tutte le società che non presentano una diversità di genere, chiedendo che elaborino almeno un piano per migliorare la diversità di genere nel consiglio di amministrazione nell'arco di 18 mesi. Il Gestore del Portafoglio intende aumentare le aspettative di diversità di genere nei consigli di amministrazione nel corso del tempo. In caso di assenza di miglioramenti di queste misure per le società partecipate, il Gestore del Portafoglio può optare per il disinvestimento qualora non rilevi un percorso di miglioramento.

Infine, il Comparto ha escluso le società che producevano armi controverse o che non rispettavano i principi del Global Compact delle Nazioni Unite ("Principi UNGC"), e che non presentavano prospettive positive di rimedio.

Quali sono stati i principali investimenti di questo prodotto finanziario?

Gli investimenti più rilevanti di questo Comparto, esclusa la liquidità, sono stati:

L'elenco comprende gli investimenti che costituiscono la **quota maggiore di investimenti** del prodotto finanziario durante il periodo di riferimento, ossia: 2022-07-01 - 2023-06-30.

Investimenti più ampi	Settore	% del patrimonio	Paese

Trasporti terrestri	2,09%
Hotel, ristoranti e tempo libero	1,96%

Per conformarsi alla tassonomia dell'UE, i criteri per il **gas fossile** comprendono limitazioni delle emissioni e il passaggio all'energia da fonti rinnovabili o ai combustibili a basse emissioni di carbonio entro la fine del 2035. Per l'**energia nucleare** i criteri comprendono norme complete in materia di sicurezza e gestione dei rifiuti.

Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale.

Le **attività di transizione** sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano, tra l'altro, livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

Le attività allineate alla tassonomia sono espresse in percentuale di:

- **fatturato**: quota di entrate da attività verdi delle imprese beneficiarie degli investimenti.

- **spese in conto capitale (CapEx)**: investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, ad es. per la transizione verso un'economia verde.

- **spese operative (OpEx)**: attività operative verdi delle imprese beneficiarie degli investimenti.

In che misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Il Comparto non ha effettuato investimenti sostenibili con un obiettivo ambientale allineato alla tassonomia dell'UE.

Il prodotto finanziario ha investito in attività connesse al gas fossile e/o all'energia nucleare che erano conformi alla tassonomia dell'UE?¹

- Sì
 In gas fossile In energia nucleare
 No

I due grafici che seguono mostrano in verde la percentuale di investimenti che erano allineati alla tassonomia dell'UE. Poiché non esiste una metodologia adeguata per determinare l'allineamento delle obbligazioni sovrane* alla tassonomia, il primo grafico mostra l'allineamento alla tassonomia in relazione a tutti gli investimenti del prodotto finanziario comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

* Ai fini dei grafici di cui sopra, per "obbligazioni sovrane" si intendono tutte le esposizioni sovrane

Qual era la quota degli investimenti effettuati in attività di transizione e abilitanti?

Il Comparto non ha investito in attività transitorie e abilitanti.

Come si rapporta la percentuale di investimenti allineati alla tassonomia dell'UE con i precedenti periodi di riferimento?

Non applicabile

¹ Le attività connesse al gas fossile e/o all'energia nucleare sono conformi alla tassonomia dell'UE solo se contribuiscono all'azione di contenimento dei cambiamenti climatici («mitigazione dei cambiamenti climatici») e non arrecano un danno significativo a nessuno degli obiettivi della tassonomia dell'UE - cfr. nota esplicativa sul margine sinistro. I criteri completi riguardanti le attività economiche connesse al gas fossile e all'energia nucleare che sono conformi alla tassonomia dell'UE sono stabiliti nel regolamento delegato (UE) 2022/1214 della Commissione.

 sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

Qual era la quota di investimenti sostenibili con un obiettivo ambientale non allineato alla tassonomia dell'UE?

Non applicabile

Qual era la quota di investimenti socialmente sostenibili?

Non applicabile

Quali investimenti erano compresi nella categoria «Altri» e qual era il loro scopo? Esistevano garanzie minime di salvaguardia ambientale o sociale?

La quota di investimenti alla voce "N. 2 Altro" era pari allo 0,93% e comprendeva attività liquide detenute a servizio delle esigenze quotidiane del Comparto, per le quali non sono previste garanzie ambientali o sociali minime. In questa voce sono inclusi anche gli emittenti per i quali non era disponibile un rating ESG.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Con l'analisi ESG il Gestore del Portafoglio ha identificato le società che sarebbero escluse in base ai criteri vincolanti ed evita di investire in queste società. Il Comparto non ha investito in società che, in base all'analisi del Gestore del Portafoglio:

- Violano gravemente i Principi UNGC (senza una prospettiva positiva) – a tal fine, il Comparto non investe in società che il Gestore del Portafoglio valuta come fallimentari ai sensi dei Principi UNGC;
- Generano più del 10% dei ricavi dalla produzione e/o distribuzione di armamenti;
- Partecipano alla produzione, alla distribuzione o al commercio all'ingrosso di componenti dedicati e/o chiave di armi proibite (ossia mine antiuomo, armi biologiche e chimiche e munizioni a grappolo);
- Producono tabacco o prodotti del tabacco o generano oltre il 5% dei loro ricavi da tali prodotti;
- Generano oltre il 10% dei loro ricavi dall'estrazione di carbone termico o dalla generazione di energia dal carbone.

Per le società in cui l'impegno riguardava specifici PAI, il Gestore del Portafoglio ha avviato iniziative, incoraggiando, tra l'altro, le società a fissare obiettivi di riduzione delle emissioni in linea con l'Accordo di Parigi o a migliorare la diversità di genere nel consiglio di amministrazione. Il Gestore del Portafoglio ritiene che, alla luce del tempo trascorso dall'impegno, le società dovrebbero avere più tempo per iniziare ad realizzare i piani di miglioramento prima di intraprendere ulteriori iniziative, compreso il disinvestimento.

Infine, il Gestore del Portafoglio si è avvalso della propria metodologia di rating ESG. Il Gestore del Portafoglio può scegliere fra quattro rating da attribuire agli emittenti: AAA (best in class/molto buono), AA (buono), A (sufficiente) e B (necessità miglioramenti). Sulla base di questo schema proprietario, il Comparto non ha investito in società che avevano un rating B.

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?

Gli **indici di riferimento** sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

Non applicabile

Templeton Global Bond Fund (il "Fondo")

Identificatore della persona giuridica:
5SLKA4UT9B55J80BUH41

**FRANKLIN
TEMPLETON**

Caratteristiche ambientali e/o sociali

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, a condizione che tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e che l'impresa beneficiaria degli investimenti rispetti prassi di buona governance.

La **Tassonomia dell'UE** è un sistema di classificazione istituito dal Regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale Regolamento non comprende un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero non risultare allineati alla tassonomia

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?

SÌ

- Ha effettuato **investimenti sostenibili con un obiettivo ambientale: 0,00%**
- in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE
- in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE
- Ha effettuato **investimenti sostenibili con un obiettivo sociale: 0,00%**

NO

- Ha **promosso caratteristiche ambientali/sociali (A/S)** e, pur non avendo come obiettivo un investimento sostenibile, aveva una quota minima del(lo) 0,00% di investimenti sostenibili
- con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE
- con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE
- con un obiettivo sociale
- Ha promosso caratteristiche A/S, ma **non ha effettuato alcun investimento sostenibile**

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Il Comparto ha promosso estese caratteristiche ambientali e/o sociali utilizzando una metodologia proprietaria di assegnazione di un rating ambientale, sociale e di governance ("ESG"), il Templeton Global Macro ESG Index ("TGM-ESGI") per:

- escludere i titoli di Stato dei Paesi con le performance peggiori in ciascuna categoria ESG, fino a che le esclusioni non abbiano raggiunto il 10% dell'universo d'investimento del Comparto dedicato alle obbligazioni sovrane; e
- impegnarsi affinché la media ponderata del punteggio ESG di base delle obbligazioni sovrane (comprese le obbligazioni sovranazionali e anche il valore nozionale delle posizioni nette lunghe nei relativi derivati) nel portafoglio del Comparto sia superiore al punteggio base ESG medio dell'universo di investimento dedicato alle obbligazioni sovrane.

La quota dell'universo di investimento dedicata ai titoli di Stato del portafoglio del Comparto è stata costruita basandosi sull'universo degli emittenti di titoli di Stato con dati storici relativi all'emissione dei titoli, ed escludendo gli emittenti di Paesi:

- senza debiti insoluti attuali;
- registrati come sanzionati dall'Office of Foreign Assets Control degli Stati Uniti ("US OFAC"), dall'Unione europea ("UE") o dalle Nazioni Unite ("ONU");
- che non avevano emesso debito denominato in Euro o in dollari USA e non avevano un'entità di custodia locale che soddisfi i requisiti legali e normativi applicabili al Comparto e ai suoi partner di custodia; e
- qualsiasi Paese in cui la proprietà estera di obbligazioni sovrane non fosse consentita o non fosse ragionevolmente praticabile a causa di restrizioni legali o normative.

La porzione dell'universo di investimento del portafoglio del Comparto dedicata ai titoli di Stato sovranazionali è costituita da emittenti che presentavano rating ESG assegnati da MSCI.

Il punteggio ESG medio ponderato del Comparto è stato di 64,33 mentre il punteggio ESG medio dell'universo di investimento è stato di 53,89.

Non è stato fissato alcun indice di riferimento per il rispetto delle caratteristiche ambientali e/o sociali promosse.

A tale riguardo, al 30 giugno 2023, il Comparto aveva allocato il 89,66% del suo patrimonio a investimenti allineati con le caratteristiche E/S.

Gli **indicatori di sostenibilità** misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse del prodotto finanziario.

Qual è stata la prestazione degli indicatori di sostenibilità?

Gli indicatori di sostenibilità hanno avuto l'andamento previsto. I valori indicati sotto si riferiscono al 30 giugno 2023.

Nome KPI sostenibilità	Valore
La quota di emittenti sovrani che hanno esposizioni o legami con i settori e le ulteriori esclusioni	0,00%
La differenza di punteggio ESG tra il portafoglio del Comparto e l'universo d'investimento.	10,44

● **... e rispetto ai periodi precedenti?**

Non pertinente in quanto non vi erano periodi di riferimento precedenti.

● **Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha in parte realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?**

Non applicabile.

● **In che modo gli investimenti sostenibili che il prodotto finanziario ha in parte realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?**

Non applicabile.

----- **In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?**

Non applicabile.

----- **Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Dettagli:**

Non applicabile.

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

La tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'Unione.

Il principio «non arrecare un danno significativo» si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri dell'UE per le attività economiche ecosostenibili.

Neppure eventuali altri investimenti sostenibili devono arrecare un danno significativo ad obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

Nel periodo in esame, per gli emittenti sovrani e sovranazionali sono stati presi in considerazione i principali effetti negativi di seguito indicati (i "PAI"):

- emissioni di gas serra; e
- violazioni sociali

Le emissioni di gas a effetto serra dei Paesi oggetto di investimenti sono state monitorate attraverso i dati relativi all'intensità dei gas a effetto serra Scope 1.

Le violazioni sociali da parte dei Paesi oggetto di investimenti sono state monitorate nell'ambito dell'indice proprietario di valutazione degli aspetti ambientali, sociali e di governance ("ESG") di Franklin Advisers, Inc. ("Gestore del Portafoglio"), il Templeton Global Macro ESG Index ("TGM-ESGI"), con un esame da parte del Gestore del Portafoglio della solidità istituzionale, coesione sociale e stabilità e uguaglianza reddituale. In tal modo si mira inoltre a escludere in maniera esplicita i Paesi soggetti a sanzioni internazionali, incluse quelle imposte dall'ONU, dall'UE, o dall'OFAC statunitense.

Quali sono stati i principali investimenti di questo prodotto finanziario?

I principali investimenti di questo Comparto, esclusi la liquidità e gli strumenti derivati, sono stati:

L'elenco comprende gli investimenti che costituiscono la **quota maggiore di investimenti** del prodotto finanziario durante il periodo di riferimento, ossia: 2022-07-01 - 2023-06-30.

Investimenti più ampi	Settore	% del patrimonio	Paese
Japan	Titoli di Stato	12,88%	Giappone
Pemerintah Republik Indonesia	Titoli di Stato	8,51%	Indonesia
Republica Federativa do Brasil	Titoli di Stato	8,28%	Brasile
Government of the Republic of Korea	Titoli di Stato	7,70%	Corea del Sud
Statsministerens Kontor	Titoli di Stato	6,15%	Norvegia
THE BANK OF KOREA	Titoli di Stato	6,09%	Corea del Sud
United States of America	Titoli di Stato	5,91%	Stati Uniti
Republic of India	Titoli di Stato	5,68%	India
Republica de Colombia	Titoli di Stato	5,29%	Colombia
Kerajaan Malaysia	Titoli di Stato	3,80%	Malesia
Republic of Singapore	Titoli di Stato	3,72%	Singapore
Bundesrepublik Deutschland	Titoli di Stato	2,34%	Germania
Kingdom of Thailand	Titoli di Stato	2,17%	Thailandia
Estados Unidos Mexicanos	Titoli di Stato	2,02%	Messico
Commonwealth of Australia	Titoli di Stato	1,85%	Australia

Qual è stata la quota degli investimenti in materia di sostenibilità?

La percentuale di investimenti sostenibili era pari a 0%.

L'**allocazione degli attivi** descrive la quota di investimenti in attivi specifici.

Qual è stata l'allocazione degli attivi?

L'89,66% del portafoglio del Comparto era allineato alle caratteristiche E/S promosse dal Comparto. La parte restante (10,34%) non era allineata alle caratteristiche promosse e consisteva principalmente in attività liquide detenute a servizio delle esigenze quotidiane del Comparto e/o come garanzia per strumenti derivati e organismi di investimento collettivo in valori mobiliari e organismi di investimento collettivo per scopi di gestione della liquidità.

#1 Allineati a caratteristiche A/S: comprende gli investimenti del prodotto finanziario utilizzati per rispettare le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

#2 Altri: comprende gli investimenti rimanenti del prodotto finanziario che non sono allineati alle caratteristiche ambientali o sociali, né sono considerati investimenti sostenibili.

La categoria **#1 Allineati a caratteristiche A/S** comprende:

- La sottocategoria **# 1A Sostenibili**, che contempla gli investimenti sostenibili dal punto di vista ambientale e sociale.
- La sottocategoria **# 1B Altre caratteristiche A/S**, che contempla gli investimenti allineati alle caratteristiche ambientali o sociali che non sono considerati investimenti sostenibili.

● ***In quali settori economici sono stati effettuati gli investimenti?***

Al 30 giugno 2023, i principali settori e sottosettori del Comparto erano:

Settore principale	% del patrimonio
Titoli di Stato	89,66%
Liquidità	10,98%
Derivato	-0,64%
Sottosettore principale	% del patrimonio
Titoli di Stato	89,66%
Liquidità	10,98%
Derivato	-0,64%

Per conformarsi alla tassonomia dell'UE, i criteri per il **gas fossile** comprendono limitazioni delle emissioni e il passaggio all'energia da fonti rinnovabili o ai combustibili a basse emissioni di carbonio entro la fine del 2035. Per l'**energia nucleare** i criteri comprendono norme complete in materia di sicurezza e gestione dei rifiuti.

Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale.

Le **attività di transizione** sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano, tra l'altro, livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

Le attività allineate alla tassonomia sono espresse in percentuale di:

- **fatturato**: quota di entrate da attività verdi delle imprese beneficiarie degli investimenti.

- **spese in conto capitale (CapEx)**: investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, ad es. per la transizione verso un'economia verde.

- **spese operative (OpEx)**: attività operative verdi delle imprese beneficiarie degli investimenti.

In che misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Il Comparto non ha effettuato investimenti sostenibili con un obiettivo ambientale allineato alla tassonomia dell'UE.

Il prodotto finanziario ha investito in attività connesse al gas fossile e/o all'energia nucleare che erano conformi alla tassonomia dell'UE?¹

- Sì
 In gas fossile In energia nucleare
 No

I due grafici che seguono mostrano in verde la percentuale di investimenti che erano allineati alla tassonomia dell'UE. Poiché non esiste una metodologia adeguata per determinare l'allineamento delle obbligazioni sovrane* alla tassonomia, il primo grafico mostra l'allineamento alla tassonomia in relazione a tutti gli investimenti del prodotto finanziario comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

* Ai fini dei grafici di cui sopra, per "obbligazioni sovrane" si intendono tutte le esposizioni sovrane

Qual era la quota degli investimenti effettuati in attività di transizione e abilitanti?

Il Comparto non ha investito in attività transitorie e abilitanti.

Come si rapporta la percentuale di investimenti allineati alla tassonomia dell'UE con i precedenti periodi di riferimento?

Non applicabile.

¹ Le attività connesse al gas fossile e/o all'energia nucleare sono conformi alla tassonomia dell'UE solo se contribuiscono all'azione di contenimento dei cambiamenti climatici («mitigazione dei cambiamenti climatici») e non arrecano un danno significativo a nessuno degli obiettivi della tassonomia dell'UE - cfr. nota esplicitiva sul margine sinistro. I criteri completi riguardanti le attività economiche connesse al gas fossile e all'energia nucleare che sono conformi alla tassonomia dell'UE sono stabiliti nel regolamento delegato (UE) 2022/1214 della Commissione.

 sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

Qual era la quota di investimenti sostenibili con un obiettivo ambientale non allineato alla tassonomia dell'UE?

Non applicabile.

Qual era la quota di investimenti socialmente sostenibili?

Non applicabile.

Quali investimenti erano compresi nella categoria «Altri» e qual era il loro scopo? Esistevano garanzie minime di salvaguardia ambientale o sociale?

La quota di investimenti alla voce "N. 2 Altro" era pari al 10,34% e comprendeva attività liquide detenute a servizio delle esigenze quotidiane del Comparto e/o come garanzia per derivati, per le quali non sono previste garanzie ambientali o sociali minime.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Gli elementi vincolanti della strategia di investimento, che esulano dalla discrezionalità del Gestore del Portafoglio, e che sono stati impiegati per soddisfare le caratteristiche ambientali e/o sociali, possono essere così sintetizzati:

- il Comparto ha escluso i Paesi e gli emittenti soggetti a sanzioni economiche internazionali, comprese quelle imposte dall'ONU, dall'UE o dall'OFAC statunitense;

- il Comparto ha escluso i titoli di Stato dei Paesi con le performance peggiori in ciascuna delle categorie ESG in base agli attuali punteggi proprietari dei Paesi, fino a quando le esclusioni non hanno raggiunto il 10% dell'universo d'investimento del Comparto dedicato alle obbligazioni sovrane; e

- il Comparto ha raggiunto una media ponderata del punteggio ESG di base delle obbligazioni sovrane (comprese le obbligazioni sovranazionali e anche il valore nozionale delle posizioni nette lunghe nei relativi derivati) nel portafoglio del Comparto superiore al punteggio base ESG medio dell'universo di investimento dedicato alle obbligazioni sovrane.

Ai fini della limitazione dell'universo di investimento si sono applicate innanzitutto le esclusioni basate sui Paesi soggetti a sanzioni internazionali. L'esclusione dei Paesi con i punteggi ESG peggiori si è applicata quindi al restante universo di investimento.

Le esclusioni dei Paesi con i punteggi più bassi sono state effettuate in maniera sequenziale, iniziando con l'eliminare il Paese con il valore peggiore secondo il punteggio ambientale del TGM-ESGI, per poi passare al Paese del restante universo di investimento con il punteggio sociale più basso, e infine eliminando il Paese con il punteggio di governance peggiore. Questo processo è stato ripetuto fino ad escludere il 10% dell'universo di investimento.

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?

Gli **indici di riferimento** sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

Non applicabile.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: GAM Star Credit Opportunities (EUR) (the "Fund" or "Financial Product")
Legal entity identifier: 549300Q7O671NUXGIL66

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input type="radio"/> Yes	<input type="radio"/> <input checked="" type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ____% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 0% of sustainable investments <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: ____%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

All data presented in the annex which follows has been calculated based on the portfolio holdings of the Fund as at 30 June 2023 and constitutes unaudited information which has not been subject to any assurance provided by the Auditors or any third party.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted the following environmental and social characteristics:

- 1) Exclusion of companies involved in specific activities considered to cause negative environmental and/or social impact, as described in the Sustainability Exclusion Criteria detailed in the Fund Prospectus (the "Prospectus").,
- 2) Assessed adherence to generally accepted international norms and standards set by the United Nations Global Compact (UNGC),
- 3) Consideration of Principal Adverse Impacts ("PAIs") on sustainability factors as detailed in Table 1 of Annex I of the Commission Delegated Regulation (EU) 2022/ 1288 (the "SFDR Delegated Act"),
- 4) Investments in companies assessed to follow good governance practices, and
- 5) Engagement with investee companies on environmental, social and governance issues as described in the Prospectus.

The environmental and social characteristics were promoted in line with the binding elements of the investment strategy of the Fund, as outlined in the Prospectus. There were no breaches of the exclusion criteria.

No reference benchmark was designated for the purpose of attaining the environmental and social characteristics promoted by the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

The following sustainability indicators are used to measure the environmental and/or social characteristics of the Fund.

1) **Indicators relating to Sustainability Exclusion Criteria**

Involvement in the following activities, beyond the revenue threshold specified, result in the investment being ineligible (other than where outlined in the GAM Sustainability Exclusions Policy). No exceptions were made during the reporting period.

Sustainability Indicator	Units	Data source	Date ¹	Data coverage ²	Data estimated ³	Output ⁴
Involvement in controversial weapons: share of investments in investee companies involved in the manufacture or selling of controversial weapons.	% of Fund	MSCI	30 June 2023	100%	0%	0%
Involvement in weapons manufacturing or weapons component manufacturing: share of investments in investee companies involved in the manufacture of military weapons systems, and/or tailor-made components of these weapons systems, and/or tailor-made products or services that support military weapons systems	% of Fund	Sustainalytics	30 June 2023	91.91%	0%	0%

¹ Data snapshot taken at the Fund's year end. Sustainalytics and MSCI data as at 18th August 2023.

² Calculated as the proportion of investments (by NAV) for which data is available. The calculation does not include non-equity assets defined under "#2 Other" in the Prospectus. Where there is less than 100% coverage, this would be due to the third party provider not covering the issuer. We engage with service providers and companies directly with the objective of increasing data coverage and disclosure. More information about MSCI's coverage can be found [here](#). More information about Sustainalytics coverage can be found [here](#).

³ Calculated as the proportion of investments (by NAV) for which data is estimated. The calculation does not include non-equity assets defined under "#2 Other" in the Prospectus. MSCI data methodology can be found [here](#). Information on Sustainalytics product involvement can be found [here](#).

⁴ Calculated as the proportion of investment (by NAV). The calculation does not include non-equity assets defined under "#2 Other" in the Prospectus.

(above 10% revenue threshold).						
Involvement in assault weapons for civilian customers: share of investments in investee companies involved in the manufacture and sale of assault weapons to civilian customers (above 10% revenue threshold).	% of Fund	Sustainalytics	30 June 2023	91.91%	0%	0%
Involvement in tobacco manufacturing: share of investments in investee companies involved in the manufacture of tobacco products (above 5% revenue threshold).	% of Fund	Sustainalytics	30 June 2023	91.91%	0%	0%
Involvement in tobacco retail and distribution: share of investments in investee companies involved in the distribution and/or retail sale of tobacco products (above 25% revenue threshold).	% of Fund	Sustainalytics	30 June 2023	91.91%	0%	0%
Involvement in oil sands extraction: share of investments in companies involved in oil sands extraction (above 25% revenue threshold).	% of Fund	Sustainalytics	30 June 2023	91.91%	0%	0%
Involvement in thermal coal: Share of investments in companies involved in mining thermal coal or from generating electricity from thermal coal (above 25% revenue threshold).	% of Fund	Sustainalytics	30 June 2023	91.91%	0%	0%

2) Indicators relating to international norms and standards

Investee companies are expected to adhere to minimum international norms and standards as defined by the UN Global Compact (as defined in the Prospectus). Investee companies assessed as having seriously breached the UN Global Compact are excluded, unless the issuer is considered to have taken substantial and adequate steps to have addressed the allegations.

No exceptions were made during the reporting period.

Sustainability Indicator	Units	Data source	Date	Data coverage	Data estimated	Output ⁵
Violations of UN Global Compact principles (also related to Principal Adverse Impacts): share of investments in investee companies that have been involved in violations of the UNGC principles.	% of Fund	MSCI	30 June 2023	100%	0%	0%

3) Indicators relating to Principal Adverse Impacts

The Investment Manager applied an internal framework to consider and, where considered appropriate, take action to mitigate principal adverse impacts on sustainability factors.

Sustainability Indicator	Units	Data source	Date	Data coverage	Data estimated	Output ⁶
Scope 1 & Scope 2 Greenhouse gas (GHG) emissions: Absolute greenhouse gas emissions associated with a portfolio, expressed in tons CO2 equivalent	tons CO2 equivalent	MSCI	30 June 2023	100%	0%	12,832.0
Investments in companies active in fossil fuel sector: share of investments in companies active in the fossil fuel sector.	% of Fund	MSCI	30 June 2023	100%	0%	3.29%

⁵ Calculated as the proportion of investment (by NAV). The calculation does not include non-equity assets defined under “#2 Other” in the Prospectus. We use MSCI data to determine adherence to the UN Global Compact. For this data point, we are specifically looking at whether a company is deemed to ‘Fail’ adhering to the underlying principles. More information on MSCI’s approach can be found [here](#).

⁶ Calculated as the proportion of investment (by NAV). The calculation does not include non-equity assets defined under “#2 Other” in the Prospectus. The was calculated using MSCI’s ‘SFDR Point-in-Time PASI Statement’. More information on MSCI’s approach to Principal Adverse Impacts can be found [here](#).

Gender diversity on the Board (also related to good governance): percentage of board members who are female. For companies with a two-tier board, the calculation is based on members of the Supervisory Board only.	Weighted average %	MSCI	30 June 2023	100%	0%	39.86%
---	--------------------	------	--------------	------	----	--------

4) Indicators relating to good governance

The investment strategy incorporates a principles-based approach when assessing good governance. The assessment informs investment decisions and is used by the Investment Manager to satisfy itself that good governance practices are in place when selecting investments for the Fund. In addition, the assessment is conducted on an ongoing basis to inform voting decisions and engagement activity.

Sustainability Indicator	Units	Data source	Date	Data coverage	Data estimated	Output ⁷
Board independence: the percentage of board members that meet GAM's criteria for independent management, as measured by a third-party data provider. For companies with a two-tier board, the calculation is based on members of the Supervisory Board only.	Weighted average %	MSCI	30 June 2023	88.44%	0%	82.76%

5) Indicators relating to engagement activities

The investment strategy includes engagement activities with investee companies on environmental, social and governance issues as part of interactions with management, including engagements following sustainability controversies, PAI review and/or thematic engagement.

⁷ Calculated as the proportion of investment (by NAV). The calculation does not include non-equity assets defined under "#2 Other" in the Prospectus.

Sustainability Indicator	Units	Data source	Date	Data coverage	Data estimated	Output ⁸
Engagement activity: Number of ESG-related engagement activities the Investment Manager was involved in as part of regular interactions with management, such as engagements following sustainability controversies and thematic engagement relating to the Fund*.	Number of engagements	Internal Log	1 st July 2022 – 30 th June 2023	100%	0%	31

● **...and compared to previous periods?**

N/A. The Fund is not required to report against previous periodic reports until 2024 onwards.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Not applicable

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Not applicable.

— **How were the indicators for adverse impacts on sustainability factors taken into account?**

Not applicable.

— **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?**

Not applicable.

⁸This output is the total number of companies that the Investment Team engaged with that were held in the portfolio as at 30th June 2023. The Investment Team may have engaged with companies i) on more than one occasion, ii) for pre-investment due diligence, iii) throughout the reporting period which were sold prior to the 30th June 2023 and therefore will not be reflected here. There could also be cases when companies within the portfolio were engaged with by other investments teams that are part of GAM Holding AG where there is a cross-holding, these are also not reflected in this output.

*GAM's definition of engagement can be found in our Engagement Policy on our website.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

In accordance with the provisions of the Prospectus, the Fund considered principal adverse impacts (PAIs) on sustainability factors, as detailed in Table 1 and selected indicators from Tables 2 and/or 3 of Annex I of the SFDR Delegated Act, in a qualitative and/or quantitative way dependent on the relevance of the specific indicator and the quality and availability of data.

The actions taken in relation to the PAI indicators considered are summarised in the table below:

Indicators applicable to investments in investee companies

Adverse sustainability indicator	Fund consideration	
Greenhouse gas emissions	A range of indicators in relation to company GHG emissions and carbon emission reduction initiatives (including Scope 1 & Scope 2 GHG emissions among others) were reviewed as part of the investment process, and were primarily addressed in a qualitative way, for example through engagement with selected investee companies on reduction targets and initiatives or voting on resolutions to support greater transparency on climate-related risks. Investee companies assessed to derive over 25% of revenue from thermal coal mining or electricity generation from thermal coal were excluded from the Fund.	
		1. GHG emissions
		2. Carbon footprint
		3. GHG Intensity of investee companies
		4. Exposure to companies active in the fossil fuel sector
		5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector		
Biodiversity	Indicators in relation to an investee company's impact on biodiversity, including deforestation, water and waste, were reviewed as part of the investment process and were primarily addressed in a qualitative way, for example through engagement with selected companies.	
Water		
Waste		
7. Activities negatively affecting biodiversity-sensitive areas	A range of PAI indicators were reviewed as part of the investment process. Investee companies assessed as severely violating UN Global Compact principles or assessed as having exposure to controversial weapons are excluded from the Fund. Board gender diversity was considered primarily within engagement and voting decisions.	
8. Emissions to water		
9. Hazardous waste and radioactive waste ratio		
Social and employee matters		
		10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises
		11. Lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises
		12. Unadjusted gender pay gap
13. Board gender diversity		
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)		

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country
ABN AMRO COC CASH COLLATERAL EUR	Cash	8.03%	Ireland
Banco Santander 4.375% Perp	Banks	4.97%	Spain
HSBC Holdings 4.75% Perp	Banks	4.75%	United Kingdom
Deutsche Bank 4% 2032-06-24	Financial Services	3.84%	Germany

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: [30 June 2023](#)

The table above provides a snapshot of the largest investments as at 30 June 2023. This snapshot is reflective of the general portfolio composition throughout the reporting period.

The Global Industry Classification Standard is used to determine economic sectors.

What was the proportion of sustainability-related investments?

N/A. Information on the proportion of the Fund which promoted environmental/social characteristics during the reference period is provided below.

Asset allocation describes the share of investments in specific assets.

● **What was the asset allocation?**

All assets excluding cash/cash equivalent instruments and/or certain derivatives are aligned with environmental/social characteristics of the Fund. As at 30 June 2023 (snapshot at year-end), 97.84% of the Fund attained the environmental and social characteristics promoted by the Fund, while 2.16% was in assets categorised as #2 Other in accordance with the Prospectus. Further details in relation to such assets is set out in the section entitled “What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?” below.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, , e.g. relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

● **In which economic sectors were the investments made?**

Sector	Allocation
Banks	50.80%
Fixed Interest	19.11%
Insurance	8.32%
Financial Services	5.30%
Real Estate	2.41%
Utilities	2.03%
Energy	1.31%
Telecommunication Services	0.43%
Transportation	0.13%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

While the Fund promotes environmental and social characteristics within the meaning of Article 8 of the SFDR, it does not currently commit to investing in a minimum level of “sustainable investments” within the meaning of the SFDR and it does not currently commit to a minimum level of investments taking into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation. As such, any investments that contribute to environmentally sustainable economic activities for the purposes of the Taxonomy Regulation, including investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy, are held on an incidental basis and is currently estimated to be <10% based on available data.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

⁹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

Not applicable.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable.

What was the share of socially sustainable investments?

Not applicable.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Other” investments of the Fund included [cash / cash equivalents and / or certain derivatives] for liquidity and efficient management of the Fund. An assessment of minimum environmental and social safeguards is deemed not to be relevant for cash and cash equivalents by nature of the asset class, nor derivatives where full look through is not possible.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

1. Actions relating to Sustainability Exclusion Criteria

The Sustainability Exclusion Criteria were assessed, on a best-efforts basis, as part of investment controlling, using Sustainalytics. There were no breaches of the Sustainability Exclusion Criteria during the reporting period

2. Actions relating to international norms and standards

UN Global Compact compliance was assessed, on a best-efforts basis, as part of investment controlling. The Investment Manager used third-party data providers’ frameworks and data to categorise serious breaches, which were intended to identify credible allegations of a violation of global norms, supplemented by internal research where third-party data coverage was unavailable. There were no breaches of the UN Global Compact compliance during the period.

3. Actions relating to Principal Adverse Impacts on sustainability factors

The Fund considered principal adverse impacts (PAIs) on sustainability factors, as detailed in Table 1 and selected indicators from Tables 2 and/or 3 of Annex I of the SFDR Delegated Act, in a qualitative and/or quantitative way dependent on the relevance of the specific indicator and the quality and availability of data.

Greenhouse gas emissions and involvement in fossil fuel sector – a range of indicators in relation to company GHG emissions and carbon emission reduction initiatives (including Scope 1 & Scope 2 GHG emissions among others) were reviewed as part of the investment process, and were primarily addressed in a qualitative way, for example through engagement with selected companies on reduction targets and initiatives or voting on resolutions to support greater transparency on climate-related risks. Companies assessed to derive over 25% of revenue from thermal coal mining or electricity generation from thermal coal were excluded from the Fund.

Biodiversity, water & waste – indicators in relation to a company’s impact on biodiversity, including deforestation, water and waste, were reviewed as part of the investment process and were primarily addressed in a qualitative way, for example through engagement with selected companies

Social and employee matters – a range of PAI indicators were reviewed as part of the investment process. Companies assessed as severely violating UN Global Compact principles or assessed as having exposure to controversial weapons are excluded from the Fund. Board gender diversity was considered primarily within engagement and voting decisions.

4. Actions relating to good governance

The investment Manager incorporated a principles-based approach when assessing good governance. The assessment informed investment decisions and was used by the Investment Manager to satisfy itself that good governance practices were in place when selecting investments for the Fund. In addition, the assessment was conducted on an ongoing basis to inform voting decisions and engagement activity. This included consideration of board structure and independence, alignment of remuneration, transparency of ownership and control, audit and accounting. Good governance was assessed in a qualitative and/or quantitative way dependent on the relevance of the specific indicator. This included:

- Sound management structures - including Board independence, Board diversity and audit committee independence
- Employee relations - in particular any serious breaches of UN Global Compact principles are excluded
- Remuneration of staff
- Tax compliance – in particular any companies flagged for significant tax violations

In addition, good governance was supported by ensuring companies adhere to minimum standards as defined by the ten principles of the United Nations Global Compact, which cover anti-corruption (Principle 10) and labour rights (Principles 3-6) and well as environmental governance (Principles 7-9).

5. Actions relating to engagement

Engagement was made on behalf of the Fund with investee companies on environmental, social and governance issues in line with their investment and due diligence process. Throughout the 12 month period, from 01/07/2022 to 30/06/2023, the investment team engaged with 31 companies relating to ESG and sustainability concerns or opportunities.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental and social characteristics promoted by the Fund.

- **How does the reference benchmark differ from a broad market index?**

Not applicable.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

Not applicable.

- **How did this financial product perform compared with the reference benchmark?**

Not applicable.

- **How did this financial product perform compared with the broad market index?**

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: GAM Star European Equity (the "Fund" or "Financial Product")
Legal entity identifier: 549300TME4JJDDOP4H631

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input type="checkbox"/> Yes	<input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ____% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 0% of sustainable investments <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: ____%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

All data presented in the annex which follows has been calculated based on the portfolio holdings of the Fund as at 30 June 2023 and constitutes unaudited information which has not been subject to any assurance provided by the Auditors or any third party.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted the following environmental and social characteristics:

- 1) Exclusion of companies involved in specific activities considered to cause negative environmental and/or social impact, as described in the Sustainability Exclusion Criteria detailed in the Fund Prospectus (the "Prospectus").
- 2) Assessed adherence to generally accepted international norms and standards set by the United Nations Global Compact (UNGC),
- 3) Consideration of Principal Adverse Impacts ("PAIs") on sustainability factors as detailed in Table 1 of Annex I of the Commission Delegated Regulation (EU) 2022/ 1288 (the "SFDR Delegated Act"),
- 4) Investments in companies assessed to follow good governance practices, and
- 5) Engagement with investee companies on environmental, social and governance issues as described in the Prospectus.

The environmental and social characteristics were promoted in line with the binding elements of the investment strategy of the Fund, as outlined in the Prospectus. There were no breaches of the exclusion criteria.

No reference benchmark was designated for the purpose of attaining the environmental and social characteristics promoted by the Fund.

● **How did the sustainability indicators perform?**

The following sustainability indicators are used to measure the environmental and/or social characteristics of the Fund.

1) **Indicators relating to Sustainability Exclusion Criteria**

Involvement in the following activities, beyond the revenue threshold specified, result in the investment being ineligible (other than where outlined in the GAM Sustainability Exclusions Policy). No exceptions were made during the reporting period.

Sustainability Indicator	Units	Data source	Date ¹	Data coverage ²	Data estimated ³	Output ⁴
Involvement in controversial weapons: share of investments in investee companies involved in the manufacture or selling of controversial weapons.	% of Fund	MSCI	30 June 2023	100%	0%	0%
Involvement in weapons manufacturing or weapons component manufacturing: share of investments in investee companies involved in the manufacture of military weapons systems, and/or tailor-made components of these weapons systems, and/or tailor-made products or services that support military weapons systems (above 10% revenue threshold).	% of Fund	Sustainalytics	30 June 2023	100%	0%	0%

¹ Data snapshot taken at the Fund's year end. Sustainalytics and MSCI data as at 18th August 2023.

² Calculated as the proportion of investments (by NAV) for which data is available. The calculation does not include non-equity assets defined under "#2 Other" in the Prospectus. Where there is less than 100% coverage, this would be due to the third party provider not covering the issuer. We engage with service providers and companies directly with the objective of increasing data coverage and disclosure. More information about MSCI's coverage can be found [here](#). More information about Sustainalytics coverage can be found [here](#).

³ Calculated as the proportion of investments (by NAV) for which data is estimated. The calculation does not include non-equity assets defined under "#2 Other" in the Prospectus. MSCI data methodology can be found [here](#). Information on Sustainalytics product involvement can be found [here](#).

⁴ Calculated as the proportion of investment (by NAV). The calculation does not include non-equity assets defined under "#2 Other" in the Prospectus.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Involvement in assault weapons for civilian customers: share of investments in investee companies involved in the manufacture and sale of assault weapons to civilian customers (above 10% revenue threshold).	% of Fund	Sustainalytics	30 June 2023	100%	0%	0%
Involvement in tobacco manufacturing: share of investments in investee companies involved in the manufacture of tobacco products (above 5% revenue threshold).	% of Fund	Sustainalytics	30 June 2023	100%	0%	0%
Involvement in tobacco retail and distribution: share of investments in investee companies involved in the distribution and/or retail sale of tobacco products (above 25% revenue threshold).	% of Fund	Sustainalytics	30 June 2023	100%	0%	0%
Involvement in oil sands extraction: share of investments in companies involved in oil sands extraction (above 25% revenue threshold).	% of Fund	Sustainalytics	30 June 2023	100%	0%	0%
Involvement in thermal coal: Share of investments in companies involved in mining thermal coal or from generating electricity from thermal coal (above 25% revenue threshold).	% of Fund	Sustainalytics	30 June 2023	100%	0%	0%

2) Indicators relating to international norms and standards

Investee companies are expected to adhere to minimum international norms and standards as defined by the UN Global Compact (as defined in the Prospectus). Investee companies assessed as having seriously breached the UN Global Compact are excluded, unless the issuer is considered to have taken substantial and adequate steps to have addressed the allegations.

No exceptions were made during the reporting period.

Sustainability Indicator	Units	Data source	Date	Data coverage	Data estimated	Output ⁵
Violations of UN Global Compact principles (also related to Principal Adverse Impacts): share of investments in investee companies that have been involved in violations of the UNGC principles.	% of Fund	MSCI	30 June 2023	100%	0%	0%

3) Indicators relating to Principal Adverse Impacts

The Investment Manager applied an internal framework to consider and, where considered appropriate, take action to mitigate principal adverse impacts on sustainability factors.

Sustainability Indicator	Units	Data source	Date	Data coverage	Data estimated	Output ⁶
Scope 1 & Scope 2 Greenhouse gas (GHG) emissions: Absolute greenhouse gas emissions associated with a portfolio, expressed in tons CO2 equivalent	tons CO2 equiv alent	MSCI	30 June 2023	100%	0%	22,619.4
Investments in companies active in fossil fuel sector: share of investments in companies active in the fossil fuel sector.	% of Fund	MSCI	30 June 2023	100%	0%	14.67%
Gender diversity on the Board (also related to good	Weighted	MSCI	30 June 2023	100%	0%	42.14%

⁵ Calculated as the proportion of investment (by NAV). The calculation does not include non-equity assets defined under “#2 Other” in the Prospectus. We use MSCI data to determine adherence to the UN Global Compact. For this data point, we are specifically looking at whether a company is deemed to ‘Fail’ adhering to the underlying principles. More information on MSCI’s approach can be found [here](#).

⁶ Calculated as the proportion of investment (by NAV). The calculation does not include non-equity assets defined under “#2 Other” in the Prospectus. The was calculated using MSCI’s ‘SFDR Point-in-Time PASI Statement’. More information on MSCI’s approach to Principal Adverse Impacts can be found [here](#).

governance): percentage of board members who are female. For companies with a two-tier board, the calculation is based on members of the Supervisory Board only.	average %					
--	-----------	--	--	--	--	--

4) Indicators relating to good governance

The investment strategy incorporates a principles-based approach when assessing good governance. The assessment informs investment decisions and is used by the Investment Manager to satisfy itself that good governance practices are in place when selecting investments for the Fund. In addition, the assessment is conducted on an ongoing basis to inform voting decisions and engagement activity.

Sustainability Indicator	Units	Data source	Date	Data coverage	Data estimated	Output ⁷
Board independence : the percentage of board members that meet GAM's criteria for independent management, as measured by a third-party data provider. For companies with a two-tier board, the calculation is based on members of the Supervisory Board only.	Weighted average %	MSCI	30 June 2023	100%	0%	82.27%

5) Indicators relating to engagement activities

The investment strategy includes engagement activities with investee companies on environmental, social and governance issues as part of interactions with management, including engagements following sustainability controversies, PAI review and/or thematic engagement.

⁷ Calculated as the proportion of investment (by NAV). The calculation does not include non-equity assets defined under "#2 Other" in the Prospectus.

Sustainability Indicator	Units	Data source	Date	Data coverage	Data estimated	Output ⁸
Engagement activity: Number of ESG-related engagement activities the Investment Manager was involved in as part of regular interactions with management, such as engagements following sustainability controversies and thematic engagement relating to the Fund*.	Number of engagements	Internal Log	1 st July 2022 – 30 th June 2023	100%	0%	27

● **...and compared to previous periods?**

N/A. The Fund is not required to report against previous periodic reports until 2024 onwards.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Not applicable

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Not applicable.

— **How were the indicators for adverse impacts on sustainability factors taken into account?**

Not applicable.

— **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?**

Not applicable.

⁸This output is the total number of companies that the Investment Team engaged with that were held in the portfolio as at 30th June 2023. The Investment Team may have engaged with companies i) on more than one occasion, ii) for pre-investment due diligence, iii) throughout the reporting period which were sold prior to the 30th June 2023 and therefore will not be reflected here. There could also be cases when companies within the portfolio were engaged with by other investments teams that are part of GAM Holding AG where there is a cross-holding, these are also not reflected in this output.

*GAM's definition of engagement can be found in our Engagement Policy on our website.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

In accordance with the provisions of the Prospectus, the Fund considered principal adverse impacts (PAIs) on sustainability factors, as detailed in Table 1 and selected indicators from Tables 2 and/or 3 of Annex I of the SFDR Delegated Act, in a qualitative and/or quantitative way dependent on the relevance of the specific indicator and the quality and availability of data.

The actions taken in relation to the PAI indicators considered are summarised in the table below:

Indicators applicable to investments in investee companies

Adverse sustainability indicator	Fund consideration	
Greenhouse gas emissions	A range of indicators in relation to company GHG emissions and carbon emission reduction initiatives (including Scope 1 & Scope 2 GHG emissions among others) were reviewed as part of the investment process, and were primarily addressed in a qualitative way, for example through engagement with selected investee companies on reduction targets and initiatives or voting on resolutions to support greater transparency on climate-related risks. Investee companies assessed to derive over 25% of revenue from thermal coal mining or electricity generation from thermal coal were excluded from the Fund.	
		1. GHG emissions
		2. Carbon footprint
		3. GHG Intensity of investee companies
		4. Exposure to companies active in the fossil fuel sector
		5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector		
Biodiversity	Indicators in relation to an investee company's impact on biodiversity, including deforestation, water and waste, were reviewed as part of the investment process and were primarily addressed in a qualitative way, for example through engagement with selected companies.	
Water		
Waste		
7. Activities negatively affecting biodiversity-sensitive areas	A range of PAI indicators were reviewed as part of the investment process. Investee companies assessed as severely violating UN Global Compact principles or assessed as having exposure to controversial weapons are excluded from the Fund. Board gender diversity was considered primarily within engagement and voting decisions.	
8. Emissions to water		
9. Hazardous waste and radioactive waste ratio		
Social and employee matters		
10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises		
11. Lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises		
12. Unadjusted gender pay gap		
13. Board gender diversity		
14. Exposure to controversial weapons (anti-personnel mines,		

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

	cluster munitions, weapons and weapons)	chemical biological

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **30 June 2023**

Largest Investments	Sector	% Assets	Country
LVMH Moet Hennessy Louis Vuitton SE	Consumer Durables & Apparel	5.85%	France
Nestle	Food Beverage & Tobacco	5.65%	Switzerland
Novo Nordisk	Pharmaceuticals & Biotechnology	5.05%	Denmark
CaixaBank	Banks	4.07%	Spain
London Stock Exchange Group	Financial Services	3.98%	United Kingdom
National Grid	Utilities	3.76%	United Kingdom
Industria de Diseno Textil	Retailing	3.68%	Spain
Atlas Copco	Capital Goods	3.49%	Sweden
Ashtead Group	Capital Goods	3.39%	United Kingdom
Pernod Ricard	Food Beverage & Tobacco	3.28%	France
FinecoBank Banca Fineco	Banks	3.21%	Italy
ASM International	Semiconductors & Semiconductor Equipment	3.18%	Netherlands
New Linde	Materials	3.15%	United States

The table above provides a snapshot of the largest investments as at 30 June 2023. This snapshot is reflective of the general portfolio composition throughout the reporting period.

The Global Industry Classification Standard is used to determine economic sectors.

What was the proportion of sustainability-related investments?

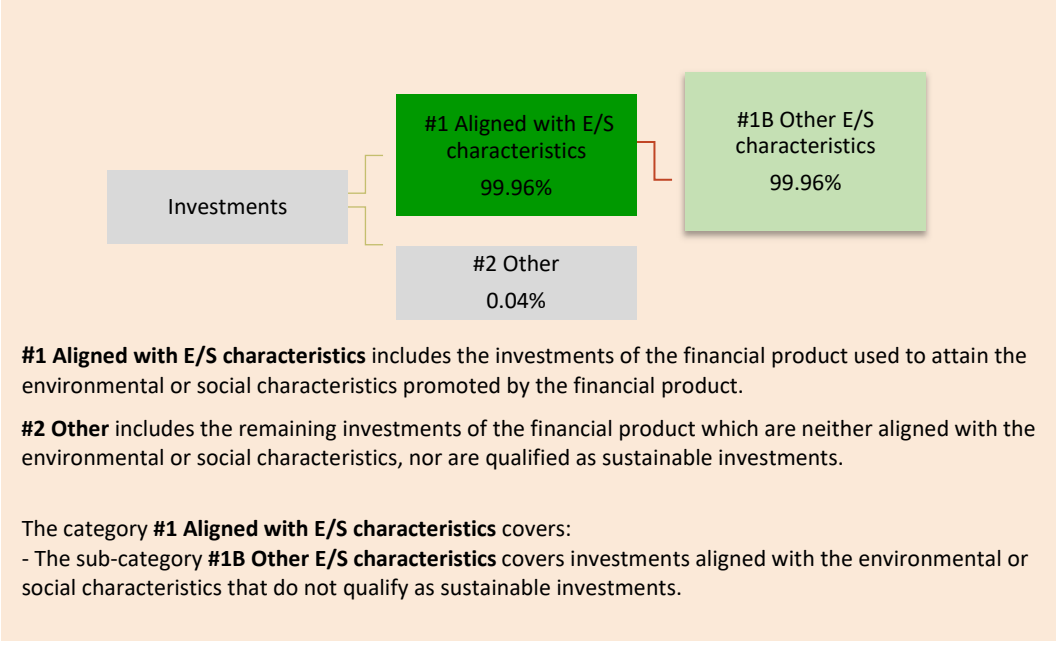

N/A. Information on the proportion of the Fund which promoted environmental/social characteristics during the reference period is provided below.

Asset allocation

describes the share of investments in specific assets.

● **What was the asset allocation?**

All assets excluding cash/cash equivalent instruments and/or certain derivatives are aligned with environmental/social characteristics of the Fund. As at 30 June 2023 (snapshot at year-end), 99.96% of the Fund attained the environmental and social characteristics promoted by the Fund, while 0.04% was in assets categorised as #2 Other in accordance with the Prospectus. Further details in relation to such assets is set out in the section entitled “What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?” below.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, , e.g. relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

● **In which economic sectors were the investments made?**

Sector	Allocation
Capital Goods	15.20%
Banks	14.38%
Food Beverage & Tobacco	11.20%
Energy	10.93%
Semiconductors & Semiconductor Equipment	8.85%
Pharmaceuticals & Biotechnology	8.24%
Financial Services	6.28%
Consumer Durables & Apparel	5.85%
Retailing	5.14%
Utilities	3.76%
Materials	3.15%
Transportation	3.05%
Insurance	1.99%
Commercial & Professional Services	0.94%
Health Care Equipment & Services	0.81%
Media & Entertainment	0.30%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

While the Fund promotes environmental and social characteristics within the meaning of Article 8 of the SFDR, it does not currently commit to investing in a minimum level of “sustainable investments” within the meaning of the SFDR and it does not currently commit to a minimum level of investments taking into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation. As such, any investments that contribute to environmentally sustainable economic activities for the purposes of the Taxonomy Regulation, including investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy, are held on an incidental basis and is currently estimated to be <10% based on available data.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

⁹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

Not applicable.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable.

What was the share of socially sustainable investments?

Not applicable.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Other” investments of the Fund included [cash / cash equivalents and / or certain derivatives] for liquidity and efficient management of the Fund. An assessment of minimum environmental and social safeguards is deemed not to be relevant for cash and cash equivalents by nature of the asset class, nor derivatives where full look through is not possible.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

1. Actions relating to Sustainability Exclusion Criteria

The Sustainability Exclusion Criteria were assessed, on a best-efforts basis, as part of investment controlling, using Sustainalytics. There were no breaches of the Sustainability Exclusion Criteria during the reporting period

2. Actions relating to international norms and standards

UN Global Compact compliance was assessed, on a best-efforts basis, as part of investment controlling. The Investment Manager used third-party data providers’ frameworks and data to categorise serious breaches, which were intended to identify credible allegations of a violation of global norms, supplemented by internal research where third-party data coverage was unavailable. There were no breaches of the UN Global Compact compliance during the period.

3. Actions relating to Principal Adverse Impacts on sustainability factors

The Fund considered principal adverse impacts (PAIs) on sustainability factors, as detailed in Table 1 and selected indicators from Tables 2 and/or 3 of Annex I of the SFDR Delegated Act, in a qualitative and/or quantitative way dependent on the relevance of the specific indicator and the quality and availability of data.

Greenhouse gas emissions and involvement in fossil fuel sector – a range of indicators in relation to company GHG emissions and carbon emission reduction initiatives (including Scope 1 & Scope 2 GHG emissions among others) were reviewed as part of the investment process, and were primarily addressed in a qualitative way, for example through engagement with selected companies on reduction targets and initiatives or voting on resolutions to support greater transparency on climate-related risks. Companies assessed to derive over 25% of revenue from thermal coal mining or electricity generation from thermal coal were excluded from the Fund.

Biodiversity, water & waste – indicators in relation to a company’s impact on biodiversity, including deforestation, water and waste, were reviewed as part of the investment process and were primarily addressed in a qualitative way, for example through engagement with selected companies

Social and employee matters – a range of PAI indicators were reviewed as part of the investment process. Companies assessed as severely violating UN Global Compact principles or assessed as having exposure to controversial weapons are excluded from the Fund. Board gender diversity was considered primarily within engagement and voting decisions.

4. Actions relating to good governance

The investment Manager incorporated a principles-based approach when assessing good governance. The assessment informed investment decisions and was used by the Investment Manager to satisfy itself that good governance practices were in place when selecting investments for the Fund. In addition, the assessment was conducted on an ongoing basis to inform voting decisions and engagement activity. This included consideration of board structure and independence, alignment of remuneration, transparency of ownership and control, audit and accounting. Good governance was assessed in a qualitative and/or quantitative way dependent on the relevance of the specific indicator. This included:

- Sound management structures - including Board independence, Board diversity and audit committee independence
- Employee relations - in particular any serious breaches of UN Global Compact principles are excluded
- Remuneration of staff
- Tax compliance – in particular any companies flagged for significant tax violations

In addition, good governance was supported by ensuring companies adhere to minimum standards as defined by the ten principles of the United Nations Global Compact, which cover anti-corruption (Principle 10) and labour rights (Principles 3-6) and well as environmental governance (Principles 7-9).

5. Actions relating to engagement

Engagement was made on behalf of the Fund with investee companies on environmental, social and governance issues in line with their investment and due diligence process. Throughout the 12 month period, from 01/07/2022 to 30/06/2023, the investment team engaged with 27 companies relating to ESG and sustainability concerns or opportunities.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental and social characteristics promoted by the Fund.

- **How does the reference benchmark differ from a broad market index?**

Not applicable.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

Not applicable.

- **How did this financial product perform compared with the reference benchmark?**

Not applicable.

- **How did this financial product perform compared with the broad market index?**

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: [GAM Star Global Rates \(the "Fund"\)](#) Legal entity identifier: [ZVIMWIFXTC2J79D70175](#)

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input type="radio"/> Yes	<input type="radio"/> <input checked="" type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 0% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

All data presented in the annex which follows has been calculated based on the portfolio holdings of the Fund as at 30 June 2023 and constitutes unaudited information which has not been subject to any assurance provided by the Auditors or any third party.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

1) Environmental characteristics – a minimum threshold as measured by the Yale Environmental Performance Index (EPI) which assesses factors, including:

- Climate change (relating to mitigation efforts);
- Environmental health (including waste management; heavy metals; sanitation and drinking water; air quality);
- Ecosystem vitality (biodiversity and habitat; ecosystem services; fisheries; acid rain; agriculture; water resources).

More information on the Yale Environmental Performance Index (EPI) can be found on <https://epi.yale.edu/>

2) Social characteristics – a minimum threshold as measured by the Freedom House Global Freedom Score, which assesses factors including:

- Political rights (including electoral process; political pluralism and participation; functioning of government);
- civil liberties (including freedom of expression and belief; associational and organisational rights; rule of law; personal autonomy and individual rights).

More information on the Freedom House Global Freedom Score can be found on <https://freedomhouse.org/>

Informativa periodica per i prodotti finanziari di cui all'articolo 8, paragrafi 1, 2 e 2a, del regolamento (UE) 2019/2088 e all'articolo 6, primo comma, del regolamento (UE) 2020/852

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, purché tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e l'impresa che beneficia degli investimenti segua prassi di buona governance.

La **tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non stabilisce un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere o non essere allineati alla tassonomia.

Nome del prodotto:
Comparto Goldman Sachs Global CORE® Equity

Identificativo della persona giuridica:
CBSHN70011P7IWHG6F03

Caratteristiche ambientali e/o sociali

Questo prodotto finanziario ha un obiettivo di investimento sostenibile?	
<input checked="" type="radio"/> <input type="radio"/> <input type="checkbox"/> Sì	<input type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> No
<input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo ambientale: __% <ul style="list-style-type: none"> <input type="checkbox"/> in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo sociale: __%	<input type="checkbox"/> Ha promosso caratteristiche ambientali/sociali (A/S) e pur non avendo come obiettivo un investimento sostenibile, aveva una quota del(lo) __% di investimenti sostenibili <ul style="list-style-type: none"> <input type="checkbox"/> con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> con un obiettivo sociale <input checked="" type="checkbox"/> Ha promosso caratteristiche A/S, ma non ha effettuato alcun investimento sostenibile

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Gli **indicatori di sostenibilità** misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse del prodotto finanziario.

Il Consulente dell'investimento ha implementato nel periodo di riferimento un approccio alle considerazioni ambientali, sociali e di governance (ESG) nel suo processo di investimento quantitativo come indicato di seguito (i "Criteri ESG"). Detto approccio si componeva di: (i) filtri di esclusione; (ii) uso di metriche climatiche per affrontare il rischio di transizione climatica come indicato di seguito.

Il Comparto ha promosso una transizione verso un'economia a basse emissioni di carbonio gestendo il rischio di transizione climatica rispetto al Comparto/Indice di riferimento tramite metriche climatiche proprietarie.

Dall'8 agosto 2022, nell'ambito del processo di investimento ESG, il Consulente dell'investimento evita di investire in società che, a suo giudizio, siano direttamente coinvolte e/o ricevano ricavi significativi dalle seguenti attività:

- produzione e/o coinvolgimento in armi controverse;
- estrazione, produzione o generazione di alcuni combustibili fossili (inclusi carbone termico e sabbie bituminose);
- produzione e/o coinvolgimento nel settore del tabacco

Dall'8 agosto 2022, il Comparto ha inoltre escluso dal relativo universo d'investimento tutte le società che secondo il Consulente dell'investimento violavano i dieci principi del Global Compact delle Nazioni Unite (principi di sostenibilità aziendale ampiamente riconosciuti che soddisfano le responsabilità fondamentali nei settori dei diritti umani, del lavoro, dell'ambiente e della lotta alla corruzione).

Qual è stata la prestazione degli indicatori di sostenibilità?

Il Comparto ha utilizzato indicatori di sostenibilità per misurare il raggiungimento delle caratteristiche ambientali e/o sociali promosse dal Comparto. Questi indicatori di sostenibilità hanno avuto le seguenti prestazioni:

All'ultima data di ribilanciamento del novembre 2022, il rischio di transizione climatica del Comparto, basato sulle emissioni miste (c.d. "blended"), equivaleva a 52 tonnellate CO2e per milione di dollari di capitalizzazione di mercato e a 1.060 tonnellate CO2e per miliardo di dollari di capitalizzazione di mercato sulle emissioni interne (c.d. "embedded"). Il rischio di transizione climatica del Comparto/Indice di riferimento, basato sulle emissioni miste (c.d. "blended"), equivaleva a 69 tonnellate CO2e per milione di dollari di capitalizzazione di mercato e a 1.400 tonnellate CO2e per miliardo di dollari di capitalizzazione di mercato sulle emissioni interne (c.d. "embedded").

Inoltre, nel periodo in esame, le emissioni blended ed embedded erano sempre inferiori al Comparto/Indice di riferimento al momento dell'operazione.

Dall'8 agosto 2022, lo 0% delle società del Comparto è stato direttamente impegnato in e/o ha ottenuto ricavi significativi da:

- produzione e/o coinvolgimento in armi controverse;
- estrazione, produzione o generazione di alcuni combustibili fossili (inclusi carbone termico e sabbie bituminose);
- produzione e/o coinvolgimento nel settore del tabacco

Dall'8 agosto 2022, il Consulente dell'investimento ha ritenuto che lo 0% delle società nel Comparto violassero i dieci principi del Global Compact delle Nazioni Unite.

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

...e rispetto ai periodi precedenti?

Non applicabile; il Comparto non ha fornito informazioni in merito all'uso degli indicatori di sostenibilità sopra menzionati durante i periodi di riferimento precedenti.

Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario in parte ha realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?

Durante il periodo di riferimento, il Comparto non si è impegnato a rispettare una percentuale minima di investimenti sostenibili.

La tassonomia dell'UE stabilisce il principio «non arrecare un danno significativo», in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'UE.

Il principio «non arrecare un danno significativo» si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri dell'UE per le attività economiche ecosostenibili.

Nessun altro investimento sostenibile deve arrecare un danno significativo agli obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

Durante il periodo di riferimento questo Comparto ha considerato i principali impatti negativi sui fattori di sostenibilità (PAI) attraverso i pilastri ambientali e/o sociali. I PAI sono presi in considerazione qualitativamente applicando i criteri ESG vincolanti descritti nel Prospetto. Su una base non vincolante e di rilevanza, i PAI vengono considerati anche attraverso un impegno specifico a livello aziendale e di team di investimento. I PAI considerati da questo Comparto includevano:

PAI CATEGORIA	PAI
PAI obbligatorio	<ul style="list-style-type: none"> • Emissioni di gas a effetto serra • Impronta di carbonio • Intensità di gas a effetto serra delle imprese beneficiarie degli investimenti • Esposizione a società attive nel settore dei combustibili fossili • Attività che incidono negativamente sulle aree sensibili alla biodiversità

	<ul style="list-style-type: none"> • Violazioni dei principi del Global Compact delle Nazioni Unite e delle linee guida dell'Organizzazione per la cooperazione e lo sviluppo economico (OCSE) per le imprese multinazionali • Mancanza di processi e meccanismi di compliance per monitorare la conformità ai principi del Global Compact delle Nazioni Unite e alle linee guida OCSE per le imprese multinazionali • Divario retributivo di genere non rettificato • Diversità di genere nel consiglio di amministrazione • Esposizione ad armi controverse (mine antiuomo, munizioni a grappolo, armi chimiche e armi biologiche)
PAI climatici non obbligatori	<ul style="list-style-type: none"> • Investimenti in aziende senza iniziative di riduzione delle emissioni di carbonio • Degrado del suolo, desertificazione, impermeabilizzazione dei suoli • Investimenti in imprese prive di pratiche o politiche agricole o di utilizzo dei suoli sostenibili • Specie naturali e aree protette • Deforestazione • Quota di rifiuti non riciclati
PAI sociali non obbligatori	<ul style="list-style-type: none"> • Tasso di incidenti • Numero di giorni persi a causa di lesioni, incidenti, decessi o malattia • Numero di casi di discriminazione • Numero di casi di discriminazione che hanno portato a sanzioni • Eccessiva percentuale di utili distribuiti al CEO • Investimenti in imprese senza politiche di prevenzione degli infortuni sul lavoro

Quali sono stati i principali investimenti di questo prodotto finanziario?

L'elenco comprende gli investimenti che hanno costituito la **quota maggiore di investimenti** del prodotto finanziario durante il periodo di riferimento, ossia: 01/12/2021 - 30/11/2022

Investimenti di maggiore entità	Settore	% di attivi	Paese
APPLE INC	Produzione manifatturiera	3,33%	Stati Uniti
MICROSOFT CORP	Informazione e comunicazione	2,23%	Stati Uniti
AMAZON.COM INC	Commercio all'ingrosso e al dettaglio; riparazione di veicoli a motore e motocicli	1,61%	Stati Uniti
ALPHABET INC - CL C	Informazione e comunicazione	1,30%	Stati Uniti
BROADCOM INC	Produzione manifatturiera	1,22%	Stati Uniti
ROCHE HOLDING AG GENUSSSCHEIN	Produzione manifatturiera	1,21%	Svizzera
AUTOZONE INC	Commercio all'ingrosso e al dettaglio; riparazione di veicoli a motore e motocicli	1,18%	Stati Uniti
ELEVANCE HEALTH INC	Attività finanziarie e assicurative	1,17%	Stati Uniti
BERKSHIRE HATHAWAY INC - CL B	Attività finanziarie e assicurative	1,12%	Stati Uniti
ADOBE INC	Informazione e comunicazione	1,07%	Stati Uniti
VERISIGN INC	Informazione e comunicazione	1,05%	Stati Uniti
CIE FINANCIERE RICHEMO A REG	Produzione manifatturiera	1,05%	Svizzera
BAYER AG REG	Produzione manifatturiera	1,03%	Germania
VERTEX PHARMACEUTICALS INC	Produzione manifatturiera	1,02%	Stati Uniti
MONDELEZ INTERNATIONAL INC A	Produzione manifatturiera	1,00%	Stati Uniti

Qual è stata la quota degli investimenti in materia di sostenibilità?

L'**allocazione degli attivi** descrive la quota di investimenti in attivi specifici.

Al 30 novembre 2022, almeno il 98% degli investimenti era allineato alle caratteristiche ambientali e/o sociali promosse da questo Comparto.

Nel periodo di riferimento, il Comparto è stato esposto a una serie di settori economici, come indicato più avanti.

Qual è stata l'allocazione degli attivi?

Al 30 novembre 2022, almeno il 98% degli investimenti era allineato alle caratteristiche ambientali e/o sociali promosse da questo Comparto. Il 2% era detenuto in liquidità e mezzi equivalenti.

Nel periodo di riferimento, almeno il 90% degli investimenti del Comparto è stato costantemente allineato con le caratteristiche ambientali e/o sociali sopra descritte.

In quali settori economici sono stati effettuati gli investimenti?

Settore	Sottosettore	% del NAV al 30 novembre 2022
Attività ricettive e ristorazione	Alberghi e alloggi simili	0,42%
	Ristoranti e attività di ristorazione mobile	0,29%
Attività amministrative e servizi di supporto	Noleggio e leasing di altri macchinari, attrezzature e beni materiali	0,78%
	Leasing di proprietà intellettuale e prodotti simili, ad eccezione delle opere protette da copyright	0,44%
	Altri servizi di prenotazione e attività correlate	0,03%
Arte, intrattenimento e ricreazione	Tempo libero e attività ricreative	0,44%
Costruzione	Costruzione di edifici residenziali e non residenziali	0,07%
Fornitura di elettricità, gas, vapore e aria condizionata	Generazione, trasmissione e distribuzione di energia elettrica	1,27%
	Produzione di gas; distribuzione di combustibili gassosi attraverso la rete	0,39%
Attività finanziarie e assicurative	Fondi fiduciari, fondi ed entità finanziarie analoghe	3,89%
	Intermediazione monetaria	3,5%
Attività finanziarie e assicurative	Assicurazioni	3,48%
	Altre attività inerenti i servizi finanziari, ad eccezione di assicurazioni e fondi pensione	2,69%

	Attività ausiliarie ai servizi finanziari, ad eccezione di assicurazioni e fondi pensione	2,55%
	Attività di gestione fondi	1,83%
	Attività ausiliarie ad assicurazioni e fondi pensione	0,18%
	Fondi pensione	0,09%
	Riassicurazioni	0,02%
Attività legate alla salute umana e al lavoro sociale	Attività di pratica medica e dentale	2,41%
	Attività ospedaliere	0,57%
	Altre attività legate alla salute umana	0,04%
Informazione e comunicazione	Pubblicazione di software	4,46%
	Programmazione informatica, consulenza e attività correlate	4,45%
	Elaborazione dati, hosting e attività correlate; portali web	2,61%
	Attività di telecomunicazioni cablate	0,7%
	Pubblicazione di libri, periodici e altre attività editoriali	0,7%
	Attività di telecomunicazioni wireless	0,44%
Produzione manifatturiera	Produzione di preparati farmaceutici	9,98%
	Fabbricazione di apparecchiature di comunicazione	4,5%
	Fabbricazione di veicoli a motore	2,58%
	Fabbricazione di componenti e schede elettroniche	2,06%
	Produzione di bevande	2%
	Produzione di prodotti chimici di base, fertilizzanti e composti azotati, materie plastiche e gomma sintetica in forme primarie	1,97%
	Fabbricazione di strumenti ed apparecchi di misura, prova e navigazione; orologi e orologi a polso	1,76%
	Fabbricazione di gioielli, bigiotteria e articoli correlati	1,05%
	Fabbricazione di abbigliamento, ad eccezione dell'abbigliamento in pelliccia	1,03%
	Produzione di prodotti da forno e farinacei	1,03%
	Fabbricazione di apparecchiature per irradiazione, elettromedicali ed elettroterapiche	1,01%
	Fabbricazione di altre macchine per usi generici	0,88%
	Fabbricazione di articoli di carta e cartone	0,69%
	Fabbricazione di veicoli aerei e navicelle spaziali e macchinari connessi	0,67%
	Fabbricazione di carrozzerie per autoveicoli, rimorchi e semirimorchi	0,65%
Produzione manifatturiera	Concia e ravvivatura del cuoio; fabbricazione di bagagli, borse, selleria e briglie; ravvivatura e tintura di pellicce	0,6%
	Fabbricazione di altre macchine speciali	0,57%
	Riproduzione di supporti registrati	0,54%
	Fabbricazione di computer e di apparecchiature periferiche	0,5%

	Fabbricazione di macchine per la formatura di metalli e macchine utensili	0,48%
	Produzione di saponi e detergenti, di prodotti per la pulizia e la lucidatura, di profumi e di prodotti per la toletta	0,37%
	Produzione di prodotti petroliferi raffinati	0,35%
	Fabbricazione di altri prodotti di prima trasformazione dell'acciaio	0,23%
	Fabbricazione di altre apparecchiature elettriche	0,12%
	Produzione di altri prodotti chimici	0,12%
	Produzione di pitture, vernici e rivestimenti simili, inchiostri da stampa e mastici	0,11%
	Produzione di ferro e acciaio di base e di ferroleghie	0,11%
	Fabbricazione di parti ed accessori per veicoli a motore	0,09%
	Fabbricazione di macchinari per uso generale	0,09%
	Produzione di prodotti di grano, amidi e prodotti di amido	0,07%
	Produzione di altri prodotti alimentari	0,07%
	Fabbricazione di strumenti e forniture mediche e odontoiatriche	0,06%
	Fabbricazione di prodotti in gomma	0,05%
	Lavorazione e conservazione di carne e produzione di prodotti a base di carne	0,04%
	Fabbricazione di prodotti abrasivi e di prodotti minerali non metallici non classificati altrove	0,03%
	Fabbricazione di cablaggi e dispositivi di cablaggio	0,03%
	Produzione di metalli preziosi di base e di altri metalli non ferrosi	0,03%
	Produzione di pesticidi e altri prodotti agrochimici	0,03%
	Produzione di oli e grassi vegetali e animali	0,03%
	Fabbricazione di elettrodomestici	0,02%
	Fabbricazione di tubi, condutture, profilati cavi e relativi accessori in acciaio	0,02%
	Fabbricazione di motori elettrici, generatori, trasformatori e apparecchiature di distribuzione e controllo dell'elettricità	0,01%
Attività estrattive e di cavatura	Estrazione di petrolio greggio	4,08%
	Attività di sostegno all'estrazione di petrolio e gas naturale	0,47%
	Attività estrattive e di cavatura non classificate altrove	0,33%
	Estrazione di minerali di ferro	0,24%
Attività estrattive e di cavatura	Estrazione di minerali metallici non ferrosi	0,1%
	Cave di pietra, sabbia e argilla	0,09%
Non classificato	Non classificato	1,59%
Altre attività di assistenza	Altre attività di assistenza personale	0,08%
Attività professionali, scientifiche e tecniche	Ricerca e sviluppo sperimentale nel campo delle scienze naturali e dell'ingegneria	0,99%

	Pubblicità	0,54%
Attività immobiliari	Locazione e gestione di immobili propri o affittati	0,49%
Trasporto e stoccaggio	Trasporto ferroviario di merci	1,54%
	Trasporto marittimo e costiero di merci	1,01%
	Trasporto di merci su gomma e servizi di trasloco	0,55%
	Trasporto ferroviario di passeggeri, interurbano	0,48%
	Trasporto tramite pipeline	0,22%
Approvvigionamento idrico; sistemi fognari, gestione dei rifiuti e bonifica	Raccolta dei rifiuti	0,24%
Commercio all'ingrosso e al dettaglio; riparazione di veicoli a motore e motocicli	Vendita di ricambi e accessori per veicoli a motore	2,19%
	Vendita al dettaglio di altri beni in esercizi specializzati	2%
	Vendita al dettaglio in esercizi non specializzati	1,04%
	Commercio all'ingrosso di materie prime agricole e di animali vivi	0,96%
	Commercio all'ingrosso di generi alimentari, bevande e tabacco	0,96%
	Altre attività di commercio all'ingrosso specializzato	0,89%
	Vendita di veicoli a motore	0,6%
	Commercio al dettaglio non in negozi, bancarelle o mercati	0,56%
	Commercio all'ingrosso di beni per la casa	0,07%
	Commercio all'ingrosso di altri macchinari, attrezzature e forniture	0,07%

Le attività allineate alla tassonomia sono espresse in percentuale di:

- **fatturato**: quota di entrate da attività verdi delle imprese beneficiarie degli investimenti
- **spese in conto capitale (CapEx)**: investimenti verdi effettuati dalle imprese che beneficiano degli investimenti, ad es. per la transizione verso un'economia verde
- **spese operative (OpEx)**: attività operative verdi delle imprese che beneficiano degli investimenti

Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale. Le **attività di transizione** sono attività economiche per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

sono investimenti sostenibili con un obiettivo ambientale **che non tengono conto dei criteri** per le attività economiche ecosostenibili conformemente alla tassonomia dell'UE.

In quale misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Nel periodo di riferimento, il Comparto non ha investito in "investimenti sostenibili" ai sensi della tassonomia dell'UE e pertanto il suo allineamento con la tassonomia era pari allo 0%.

I due grafici che seguono mostrano in azzurro la percentuale minima di investimenti allineati alla tassonomia dell'UE. Poiché non esiste una metodologia adeguata per determinare l'allineamento delle obbligazioni sovrane* alla tassonomia, il primo grafico mostra l'allineamento alla tassonomia in relazione a tutti gli investimenti del prodotto finanziario comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

* Ai fini dei grafici di cui sopra, per «obbligazioni sovrane» si intendono tutte le esposizioni sovrane.

Qual era la quota degli investimenti effettuati in attività di transizione e abilitanti?

Poiché il Comparto non ha effettuato "investimenti sostenibili" ai sensi della tassonomia dell'UE, anche la quota minima degli investimenti in attività transitorie e abilitanti ai sensi della tassonomia dell'UE era pari allo 0%.

Qual è l'esito del raffronto della percentuale di investimenti che erano allineati alla tassonomia dell'UE rispetto ai precedenti periodi di riferimento?

Non applicabile

Qual era la quota di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?

Nel periodo di riferimento, il Comparto ha promosso caratteristiche ambientali e sociali, ma non ha effettuato investimenti sostenibili. Di conseguenza, il Comparto non ha effettuato una quota minima di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE.

Qual era la quota di investimenti socialmente sostenibili?

Questa domanda non è applicabile in quanto il Comparto non ha effettuato investimenti socialmente sostenibili.

Quali investimenti erano compresi nella categoria «Altri», qual era il loro scopo ed esistevano garanzie minime di salvaguardia ambientale o sociale?

Gli investimenti compresi nella categoria "Altri" includono disponibilità liquide e mezzi equivalenti per scopi di liquidità. Questi investimenti sono stati utilizzati per raggiungere l'obiettivo di investimento del Comparto, ma non promuovono le caratteristiche ambientali o sociali del Comparto, né possono essere considerati investimenti sostenibili.

Questi strumenti finanziari non sono stati soggetti ad alcuna garanzia minima di salvaguardia ambientale o sociale.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Il Consulente dell'investimento ha intrapreso azioni per garantire che le caratteristiche ambientali e/o sociali del Comparto fossero raggiunte durante il periodo di riferimento. Gli indicatori di sostenibilità del Comparto sono stati misurati e valutati su base continuativa.

GSAM si è avvalsa di società proprietarie e di sistemi di terzi per monitorare la conformità alle caratteristiche ambientali o sociali vincolanti del Comparto contenute nelle linee guida d'investimento, in linea con la Politica sulle linee guida d'investimento di GSAM.

Eventuali violazioni o errori relativi alle linee guida d'investimento (incluse violazioni o errori relativi alle caratteristiche ambientali o sociali vincolanti e agli impegni minimi di investimento sostenibile del Comparto) sono stati gestiti in conformità con la Policy sulle violazioni e gli errori di Goldman Sachs Asset Management Fund Services Limited ("GSAMFSL") e la Policy sulla gestione degli errori di GSAM, conformemente alla quale i dipendenti sono altresì tenuti a segnalare tempestivamente eventuali incidenti (derivanti da azioni o inazioni) ai propri supervisor in GSAM e alla divisione Compliance di GSAM. Le informazioni raccolte nel processo di segnalazione degli incidenti servono a garantire che i clienti siano adeguatamente compensati, a migliorare le pratiche aziendali e a prevenire altri eventi simili.

Inoltre, il Consulente dell'investimento si avvale delle iniziative di impegno del team Global Stewardship di Goldman Sachs Asset Management con riferimento al Comparto. Il team Global Stewardship di Goldman Sachs Asset Management si è concentrato su un impegno proattivo e basato sui risultati, nel tentativo di promuovere le Best practice. Le iniziative di impegno vengono continuamente riviste, migliorate e monitorate per garantire che incorporino le problematiche attuali e l'evoluzione dei pareri su argomenti chiave relativi a ambiente, società e governance. Per guidare le iniziative di impegno, il team Global Stewardship di Goldman Sachs Asset Management crea una Focus List annuale, che rifletterà le priorità tematiche del team Global Stewardship di Goldman Sachs Asset Management e guiderà le iniziative di voto e impegno.

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?

Non è stato designato alcun indice di riferimento allo scopo di ottenere le caratteristiche ambientali o sociali promosse dal Comparto.

Gli **indici di riferimento** sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

Informativa periodica per i prodotti finanziari di cui all'articolo 8, paragrafi 1, 2 e 2a, del regolamento (UE) 2019/2088 e all'articolo 6, primo comma, del regolamento (UE) 2020/852

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, purché tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e l'impresa che beneficia degli investimenti segua prassi di buona governance.

La **tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non stabilisce un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere o non essere allineati alla tassonomia.

Nome del prodotto:
 Comparto Goldman Sachs Global Environmental Impact Equity

Identificativo della persona giuridica:
 549300K2E2ZKUPXPFF25

Caratteristiche ambientali e/o sociali

Questo prodotto finanziario ha un obiettivo di investimento sostenibile?	
<input checked="" type="radio"/> <input type="radio"/> <input type="checkbox"/> Sì	<input type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> No
<input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo ambientale: ___% <ul style="list-style-type: none"> <input type="checkbox"/> in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo sociale: ___%	<input type="checkbox"/> Ha promosso caratteristiche ambientali/sociali (A/S) e pur non avendo come obiettivo un investimento sostenibile, aveva una quota del(Io) ___% di investimenti sostenibili <ul style="list-style-type: none"> <input type="checkbox"/> con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> con un obiettivo sociale <input checked="" type="checkbox"/> Ha promosso caratteristiche A/S, ma non ha effettuato alcun investimento sostenibile

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Gli **indicatori di sostenibilità** misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse del prodotto finanziario.

Il Consulente dell'investimento implementa un approccio alle considerazioni ambientali, sociali e di governance (ESG) nel suo processo di investimento fondamentale, che consiste in filtri di esclusione come esposto di seguito (i "Criteri ESG").

Nell'ambito del processo di investimento ESG, il Consulente dell'investimento ha evitato di investire in società che, a suo parere, erano direttamente coinvolte e/o che ricevevano ricavi significativi dalle seguenti attività che, alla data di stesura del Prospetto informativo, comprendevano:

- armi controverse (comprese le armi nucleari);
- estrazione e/o produzione di alcuni combustibili fossili (compresi il carbone termico, le sabbie bituminose, il petrolio e il gas dell'Artico);
- tabacco;
- intrattenimento per adulti;
- carceri a scopo di lucro;
- armi da fuoco civili.

A decorrere dal 1° gennaio 2023, il Comparto si è impegnato a promuovere ulteriori caratteristiche ambientali e/o sociali su base vincolante. Per ulteriori dettagli, consultare l'attuale Prospetto informativo del Comparto.

Qual è stata la prestazione degli indicatori di sostenibilità?

Il Comparto ha utilizzato indicatori di sostenibilità per misurare il raggiungimento delle caratteristiche ambientali e/o sociali promosse dal Comparto. Questi indicatori di sostenibilità hanno avuto le seguenti prestazioni:

Lo 0% delle società del Comparto è stato direttamente impegnato in e/o ha ottenuto ricavi significativi da:

- armi controverse (comprese le armi nucleari);
- estrazione e/o produzione di alcuni combustibili fossili (compresi il carbone termico, le sabbie bituminose, il petrolio e il gas dell'Artico);
- tabacco;
- intrattenimento per adulti;
- carceri a scopo di lucro;
- armi da fuoco civili

...e rispetto ai periodi precedenti?

Non applicabile; il Comparto non ha fornito informazioni in merito all'uso degli indicatori di sostenibilità sopra menzionati durante i periodi di riferimento precedenti.

Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario in parte ha realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?

Durante il Periodo di riferimento, il Comparto non si è impegnato a rispettare una percentuale minima di investimenti sostenibili. Tuttavia, a decorrere dal 1° gennaio 2023, il Comparto ha assunto un impegno minimo pari al 80% di investimenti sostenibili determinato in riferimento al Sustainable Investment Framework del Consulente dell'investimento. Per ulteriori informazioni, consultare il prospetto informativo del Comparto.

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

La tassonomia dell'UE stabilisce il principio «non arrecare un danno significativo», in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'UE.

Il principio «non arrecare un danno significativo» si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri dell'UE per le attività economiche ecosostenibili.

Nessun altro investimento sostenibile deve arrecare un danno significativo agli obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

Durante il periodo di riferimento questo Comparto ha considerato i principali impatti negativi sui fattori di sostenibilità (PAI) attraverso i pilastri ambientali e/o sociali. I PAI sono presi in considerazione qualitativamente applicando i criteri ESG vincolanti descritti nel Prospetto. Su una base non vincolante e di rilevanza, i PAI vengono considerati anche attraverso un impegno specifico a livello aziendale e di team di investimento. I PAI considerati da questo Comparto includevano:

PAI CATEGORIA	PAI
PAI obbligatorio	<ul style="list-style-type: none"> • Emissioni di gas a effetto serra • Impronta di carbonio • Intensità di gas a effetto serra delle imprese beneficiarie degli investimenti • Esposizione a società attive nel settore dei combustibili fossili • Consumo di energia da fonti non rinnovabili • Produzione di energia da fonti non rinnovabili • Intensità del consumo energetico per settore climatico ad alto impatto • Attività che incidono negativamente sulle aree sensibili alla biodiversità • Emissioni in acqua • Rifiuti pericolosi • Violazioni dei principi del Global Compact delle Nazioni Unite e delle linee guida

	<p>dell'Organizzazione per la cooperazione e lo sviluppo economico (OCSE) per le imprese multinazionali</p> <ul style="list-style-type: none"> • Mancanza di processi e meccanismi di compliance per monitorare la conformità ai principi del Global Compact delle Nazioni Unite e alle linee guida OCSE per le imprese multinazionali • Divario retributivo di genere non rettificato • Diversità di genere nel consiglio di amministrazione • Esposizione ad armi controverse (mine antiuomo, munizioni a grappolo, armi chimiche e armi biologiche)
PAI climatici non obbligatori	<ul style="list-style-type: none"> • Investimenti in aziende senza iniziative di riduzione delle emissioni di carbonio • Degrado del suolo, desertificazione, impermeabilizzazione dei suoli • Investimenti in imprese prive di pratiche o politiche agricole o di utilizzo dei suoli sostenibili • Specie naturali e aree protette • Deforestazione • Quota di rifiuti non riciclati
PAI sociali non obbligatori	<ul style="list-style-type: none"> • Tasso di incidenti • Numero di giorni persi a causa di lesioni, incidenti, decessi o malattia • Numero di casi di discriminazione • Numero di casi di discriminazione che hanno portato a sanzioni • Eccessiva percentuale di utili distribuiti al CEO • Investimenti in imprese senza politiche di prevenzione degli infortuni sul lavoro

Quali sono stati i principali investimenti di questo prodotto finanziario?

L'elenco comprende gli investimenti che hanno costituito la **quota maggiore di investimenti** del prodotto finanziario durante il periodo di riferimento, ossia: 01/12/2021 - 30/11/2022

Investimenti di maggiore entità	Settore	% di attivi	Paese
IBERDROLA SA	Fornitura di elettricità, gas, vapore e aria condizionata	4,15%	Spagna
NEXTERA ENERGY INC	Fornitura di elettricità, gas, vapore e aria condizionata	4,07%	Stati Uniti
DANAHER CORP	Produzione manifatturiera	3,81%	Stati Uniti
ENEL SPA	Fornitura di elettricità, gas, vapore e aria condizionata	3,56%	Italia
SCHNEIDER ELECTRIC SE	Produzione manifatturiera	3,47%	Francia
NESTE OYJ	Produzione manifatturiera	3,36%	Finlandia
ECOLAB INC	Costruzione	3,29%	Stati Uniti
INFINEON TECHNOLOGIES AG	Produzione manifatturiera	3,23%	Germania
KONINKLIJKE DSM NV	Produzione manifatturiera	3,08%	Paesi Bassi
XYLEM INC	Produzione manifatturiera	2,88%	Stati Uniti
WESTROCK CO	Produzione manifatturiera	2,83%	Stati Uniti
BALL CORP	Produzione manifatturiera	2,81%	Stati Uniti
DAIKIN INDUSTRIES LTD	Produzione manifatturiera	2,76%	Giappone
TRANE TECHNOLOGIES PLC	Produzione manifatturiera	2,48%	Irlanda
APTIV PLC	Produzione manifatturiera	2,40%	Irlanda

Qual è stata la quota degli investimenti in materia di sostenibilità?

L'allocazione degli attivi descrive la quota di investimenti in attivi specifici.

Al 30 novembre 2022, almeno il 99% degli investimenti era allineato alle caratteristiche ambientali e/o sociali promosse da questo Comparto.

Nel periodo di riferimento, il Comparto è stato esposto a una serie di settori economici, come indicato più avanti.

Qual è stata l'allocazione degli attivi?

Al 30 novembre 2022, almeno il 99% degli investimenti era allineato alle caratteristiche ambientali e/o sociali promosse da questo Comparto. L'1% era detenuto in liquidità e in strumenti derivati.

Nel periodo di riferimento, almeno il 90% degli investimenti del Comparto è stato costantemente allineato con le caratteristiche ambientali e/o sociali sopra descritte.

In quali settori economici sono stati effettuati gli investimenti?

Settore	Sottosettore	% del NAV al 30 novembre 2022
Costruzione	Realizzazione di progetti di pubblica utilità	3,29%
Fornitura di elettricità, gas, vapore e aria condizionata	Generazione, trasmissione e distribuzione di energia elettrica	13,37%
Informazione e comunicazione	Pubblicazione di software	0,91%
Produzione manifatturiera	Fabbricazione di strumenti ed apparecchi di misura, prova e navigazione; orologi e orologi a polso	9,1%
	Produzione di prodotti chimici di base, fertilizzanti e composti azotati, materie plastiche e gomma sintetica in forme primarie	7,6%
Produzione manifatturiera	Fabbricazione di componenti e schede elettroniche	6,72%
	Fabbricazione di altre macchine per usi generici	5,24%
	Fabbricazione di articoli di carta e cartone	5,08%
	Fabbricazione di motori elettrici, generatori, trasformatori e apparecchiature di distribuzione e controllo dell'elettricità	5,08%
	Fabbricazione di altre apparecchiature elettriche	4,61%
	Fabbricazione di macchinari per uso generale	3,94%
	Fabbricazione di cablaggi e dispositivi di cablaggio	3,47%

	Produzione di prodotti petroliferi raffinati	3,36%
	Produzione di altri prodotti alimentari	3,16%
	Realizzazione di altri prodotti metallici fabbricati	2,81%
	Fabbricazione di parti ed accessori per veicoli a motore	2,4%
	Produzione di altri prodotti chimici	2,24%
	Fabbricazione di tubi, condutture, profilati cavi e relativi accessori in acciaio	2,2%
	Fabbricazione di batterie e accumulatori	1,71%
	Produzione di vetro e prodotti in vetro	1,55%
	Lavorazione e conservazione di carne e produzione di prodotti a base di carne	1,43%
	Fabbricazione di prodotti metallici strutturali	0,98%
	Fabbricazione di altre macchine speciali	0,81%
	Produzione di prodotti lattiero-caseari	0,43%
	Finitura tessile	0,26%
	Fabbricazione di prodotti in plastica	0,1%
Attività estrattive e di cavatura	Attività estrattive e di cavatura non classificate altrove	1,14%
Non classificato	Non classificato	0,23%
Approvvigionamento idrico; sistemi fognari, gestione dei rifiuti e bonifica	Raccolta dei rifiuti	3,87%
	Fognature	2,4%

Le attività allineate alla tassonomia sono espresse in percentuale di:

- **fatturato**: quota di entrate da attività verdi delle imprese beneficiarie degli investimenti

- **spese in conto capitale (CapEx)**: investimenti verdi effettuati dalle imprese che beneficiano degli investimenti, ad es. per la transizione verso un'economia verde

- **spese operative (OpEx)**: attività operative verdi delle imprese che beneficiano degli investimenti

Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale. Le **attività di transizione** sono

attività economiche per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

In quale misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Nel periodo di riferimento, il Comparto non ha investito in "investimenti sostenibili" ai sensi della tassonomia dell'UE e pertanto il suo allineamento con la tassonomia era pari allo 0%.

I due grafici che seguono mostrano in azzurro la percentuale minima di investimenti allineati alla tassonomia dell'UE. Poiché non esiste una metodologia adeguata per determinare l'allineamento delle obbligazioni sovrane* alla tassonomia, il primo grafico mostra l'allineamento alla tassonomia in relazione a tutti gli investimenti del prodotto finanziario comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

* Ai fini dei grafici di cui sopra, per «obbligazioni sovrane» si intendono tutte le esposizioni sovrane.

Qual era la quota degli investimenti effettuati in attività di transizione e abilitanti?

Poiché il Comparto non ha effettuato "investimenti sostenibili" ai sensi della tassonomia dell'UE, anche la quota minima degli investimenti in attività transitorie e abilitanti ai sensi della tassonomia dell'UE era pari allo 0%.

Qual è l'esito del raffronto della percentuale di investimenti che erano allineati alla tassonomia dell'UE rispetto ai precedenti periodi di riferimento?

Non applicabile

sono investimenti sostenibili con un obiettivo ambientale **che non tengono conto dei criteri** per le attività economiche ecosostenibili conformemente alla tassonomia dell'UE.

Qual era la quota di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?

Nel periodo di riferimento, il Comparto ha promosso caratteristiche ambientali e sociali, ma non ha effettuato investimenti sostenibili. Di conseguenza, il Comparto non ha effettuato una quota minima di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE.

Qual era la quota di investimenti socialmente sostenibili?

Questa domanda non è applicabile in quanto il Comparto non ha effettuato investimenti socialmente sostenibili.

Quali investimenti erano compresi nella categoria «Altri», qual era il loro scopo ed esistevano garanzie minime di salvaguardia ambientale o sociale?

Gli investimenti compresi nella categoria "Altri" includono disponibilità liquide e mezzi equivalenti per scopi di liquidità e derivati (compresi, a titolo esemplificativo, futures su indici) per una gestione efficiente del portafoglio. Questi investimenti sono stati utilizzati per raggiungere l'obiettivo di investimento del Comparto, ma non promuovono le caratteristiche ambientali o sociali del Comparto, né possono essere considerati investimenti sostenibili.

Questi strumenti finanziari non sono stati soggetti ad alcuna garanzia minima di salvaguardia ambientale o sociale.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Il Consulente dell'investimento ha intrapreso azioni per garantire che le caratteristiche ambientali e/o sociali del Comparto fossero raggiunte durante il periodo di riferimento. Gli indicatori di sostenibilità del Comparto sono stati misurati e valutati su base continuativa.

GSAM si è avvalsa di società proprietarie e di sistemi di terzi per monitorare la conformità alle caratteristiche ambientali o sociali vincolanti del Comparto contenute nelle linee guida d'investimento, in linea con la Politica sulle linee guida d'investimento di GSAM.

Eventuali violazioni o errori relativi alle linee guida d'investimento (incluse violazioni o errori relativi alle caratteristiche ambientali o sociali vincolanti e agli impegni minimi di investimento sostenibile del Comparto) sono stati gestiti in conformità con la Policy sulle violazioni e gli errori di Goldman Sachs Asset Management Fund Services Limited ("GSAMFSL") e la Policy sulla gestione degli errori di GSAM, conformemente alla quale i dipendenti sono altresì tenuti a segnalare tempestivamente eventuali incidenti (derivanti da azioni o inazioni) ai propri supervisor in GSAM e alla divisione Compliance di GSAM. Le informazioni raccolte nel processo di segnalazione degli incidenti servono a garantire che i clienti siano adeguatamente compensati, a migliorare le pratiche aziendali e a prevenire altri eventi simili.

Inoltre, il Consulente dell'investimento si avvale delle iniziative di impegno del team Global Stewardship di Goldman Sachs Asset Management con riferimento al Comparto. Il team Global Stewardship di Goldman Sachs Asset Management si concentra su un impegno proattivo e basato sui risultati, nel tentativo di promuovere le Best practice. Le iniziative di impegno vengono continuamente riviste, migliorate e monitorate per garantire che incorporino le problematiche attuali e l'evoluzione dei pareri su argomenti chiave relativi a ambiente, società e governance. Per guidare le iniziative di impegno, il team Global Stewardship di Goldman Sachs Asset Management crea una Focus List annuale, che rifletterà le priorità tematiche del team Global Stewardship di Goldman Sachs Asset Management e guiderà le iniziative di voto e impegno.

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?

Non è stato designato alcun indice di riferimento allo scopo di ottenere le caratteristiche ambientali o sociali promosse dal Comparto.

Gli indici di riferimento sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

- It made sustainable investments with an environmental objective: ___%**
 - in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

- It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments**
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective

- It made sustainable investments with a social objective: ___%**

- It promoted E/S characteristics, but did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Invesco Asia Asset Allocation Fund (the "Fund") aimed to promote environmental characteristics related to natural resource utilization and pollution (by excluding companies involved in coal extraction and production, and unconventional oil and gas such as Arctic oil and gas exploration/extraction, oil sands extraction and Shale Energy extraction). The Fund also promoted social characteristics related to human rights (by excluding companies in violation of any UN Global Compact's principles, based on third-party data and the Investment Manager's proprietary analysis and research) and by excluding issuers involved in tobacco production and tobacco related products and services, recreational cannabis, controversial weapons and manufacture of nuclear warheads or whole nuclear or whole nuclear missiles outside of the Non-Proliferation Treaty.

The environmental and social characteristics of the Fund were achieved by applying the exclusions criteria described above.

● How did the sustainability indicators perform?

The Fund used a variety of indicators to measure the attainment of the environmental and social characteristics. This included:

Sustainability Indicator	Indicator Performance
UN Global Compact, excluded if non-compliant	During the reference period, there were no active breaches of the Fund's exclusion criteria.
International sanctions, sanctioned investments are prohibited	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Controversial weapons, excluded if 0%, including companies involved in the manufacture of nuclear warheads or whole nuclear missiles outside of the NPT.	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Coal, excluded if Thermal Coal extraction >=5% of revenue, Thermal Coal Power generation >=10% of revenue	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Unconventional oil & gas, excluded if >=5% of revenue on each of the following: - Artic oil & gas exploration; - Oil sands extraction; - Shale energy extraction;	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Tobacco excluded if Tobacco Products production >=5% of revenue, Tobacco-related products and services >=5% of revenue	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Recreational cannabis, excluded if >=5% of revenue	During the reference period, there were no active breaches of the Fund's exclusion criteria.

● **...and compared to previous periods?**

Not applicable.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Not applicable.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Not applicable.

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund considered principal adverse impacts on sustainability factors (PAIs) by carrying out a qualitative and quantitative review of key metrics (primarily the 14 indicators as defined in Table 1 of the Annex I of the regulatory technical standards for Regulation 2019/2088). The quantitative review included a review of Invesco's Article 8 and 9 product holdings and the relevant PAI data. Through this initial review an absolute threshold was set that flagged issuers that failed to meet minimum standards, as well as companies that flagged on a binary output (such as controversial weapons or UN Global Compact violations). Once issuers were flagged for the quantitative review, an assessment was

completed to understand if there is publicly available information from the issuer that we are aware of that can be shown to be addressing the poor performance on the flagged PAI. The ESG research team assigned the issuer a qualitative score as to how well they were addressing the poor performance. Those issuers that received the lowest qualitative scores were then identified as engagement targets and were primarily engaged through methods such as letters, meetings, proxy voting. If no improvement was established through such corporate engagement, then the Fund could consider divesting and/or excluding investments.

The below table shows the PAI data for the Fund:

Adverse sustainability indicator	PAI	Data	Metric	
Greenhouse gas emissions	1. GHG Emissions	4,146.66	Scope 1 fund financed emissions (Tonnes of CO2 equivalent)	
		1,770.90	Scope 2 fund financed emissions (Tonnes of CO2 equivalent)	
		32,231.42	Scope 3 fund financed emissions (Tonnes of CO2 equivalent)	
		38,148.98	Total Financed emissions (Scope 1 + Scope 2 + Scope 3) (Tonnes of CO2 equivalent)	
	2. Carbon footprint	255.65	Fund level Carbon footprint (Scope 1 + Scope 2 + Scope 3) (Per Million EUR Invested)	
	3. GHG Intensity of investee companies	944.88	Fund level Total Emission Intensity- Scope 1+2+3 (Per Million EUR Revenue)	
	4. Exposure to companies active in the fossil fuel sector	0	% of the fund exposed to any fossil fuels revenue	
	5. Share of non-renewable energy consumption	91.36	Adjusted Weighted Average of all issuers in the fund's share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)	
	5. Share of non-renewable energy production	4.54		
	6. Energy consumption intensity per high impact climate sector			
	Agriculture, Forestry & Fishing	0		
	Construction	0.07		
	Electricity, Gas, Steam & Air Conditioning Supply	0.37		
	Manufacturing	1.16		
Mining & Quarrying	2.03			
Real Estate Activities	0.43			
Transportation & Storage	3.93			
Water Supply, Sewerage, Waste Management & Remediation Activities	0			
Wholesale & Retail Trade & Repair of Motor Vehicles & Motorcycles	0.06			
Biodiversity	7. Activities negatively affecting biodiversity-sensitive areas	0.28		Share of investments in the fund of investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those
Water	8. Emissions to water	0.24		Adjusted weighted average per issuer in the fund's emissions to water generated by investee companies per million EUR invested (Tonnes)
Waste	9. Hazardous waste and radioactive waste ratio	0.67	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average	
Social and employee matters	10. Violations to UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	6.22	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	14.08	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance/ complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	
	12. Unadjusted gender pay gap	0.00	Weighted Average of all issuers' in the portfolio unadjusted gender pay gap of investee companies	
	13. Board gender diversity	14.83	Weighted Average of all issuers in the portfolio ratio of female to male board members in investee companies, expressed as a percentage of all board members	
	14. Exposure to controversial weap- ons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	

Notes:

Although Scope 3 emissions are included in the above table showing the PAI scores for the Fund, they were not included in the quantitative review process to consider PAIs during the reporting period.

The data presented in the above table is calculated using information provided by a third-party data vendor. The accuracy, completeness, and relevance of the calculated data are contingent upon the accuracy and completeness of the data provided by this third-party vendor. The numbers reported represent our best effort to provide the most accurate calculations in light of the data available. However, there are no warranties or representations, express or implied, regarding the completeness, accuracy, or suitability of this data for any particular purpose.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 28 February 2023

Large Investments	Sector	% Assets	Country
Taiwan Semiconductor Manufacturing Co Ltd	Information Technology	4.35%	Taiwan
Tencent Holdings Ltd	Communication Services	3.24%	Cayman Islands
Invesco Liquidity Funds plc - Invesco US Dollar Liquidity Portfolio	Cash	3.20%	Ireland
Samsung Electronics Co Ltd	Information Technology	2.56%	Korea (Democratic People's Republic of Korea)
United States Treasury Bill 0% USD 07/03/2023	Sovereign	2.53%	United States
Alibaba Group Holding Ltd	Consumer Discretionary	2.22%	Cayman Islands
AIA Group Ltd	Financials	1.73%	Hong Kong
Hong Kong Exchanges & Clearing Ltd	Financials	1.15%	Hong Kong
Meituan 144A	Consumer Discretionary	1.13%	Cayman Islands
JD.com Inc	Consumer Discretionary	1.05%	Cayman Islands
NetEase Inc	Communication Services	1.03%	Cayman Islands
CICC Hong Kong Finance 2016 MTN Ltd 2% USD 26/01/2026	Financials	0.92%	United Kingdom
Yunda Holding Investment Ltd 2.25% USD 19/08/2025	Industrials	0.92%	United Kingdom
Hutama Karya Persero PT 3.75% USD 11/05/2030	Industrials	0.91%	Indonesia
Baidu Inc	Communication Services	0.90%	Cayman Islands

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

The exclusions were screened to the full investment universe, representing at least 90% of the portfolio (#1 Aligned with E/S characteristics) by virtue of the binding elements of the Fund's investment strategy. Ancillary liquid assets and money market instruments which were held for cash management/liquidity purposes may not have been assessed for compliance with the above exclusion framework (#2 Other).

● What was the asset allocation?

100.00% of the Fund's NAV was selected according to the binding elements of the investment strategy, on the basis that they aligned with the environmental and social characteristics of the Fund.

0.00% of the Fund's NAV was invested in financial derivative instruments for hedging and/or efficient portfolio management purposes; and investment in funds that are not subject to the same restrictions.

All the above data is provided as of 28 February 2023.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives
- The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

The below table shows the GICS sector breakdown as at 28 February 2023

Sector (GICS)	Weight %
Financials	29.27
Information Technology	13.32
Consumer Discretionary	10.70
Communication Services	9.50
Industrials	9.47
Real Estate	4.17
Consumer Staples	3.26
Energy	2.98
Materials	2.70
Utilities	2.45
Health Care	2.26
Sovereign	6.32
Cash	3.60
Total	100.00

GICS Level 4 breakdown for Energy Sector

Sub-Industry Code	Sub-Industry Name	Weight
10101010	Oil & Gas Drilling	0.00
10101020	Oil & Gas Equipment & Services	0.00
10102010	Integrated Oil & Gas	0.44
10102020	Oil & Gas Exploration & Production	0.73
10102030	Oil & Gas Refining & Marketing	1.81
10102040	Oil & Gas Storage & Transportation	0.00
10102050	Coal & Consumable Fuels	0.00
	Total	2.98

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure (OpEx)** reflects the green operational activities of investee companies.

Whilst the Fund did not commit to a minimum of sustainable investments with an environmental objective aligned with EU Taxonomy, **0.52%** (Turnover) of the Fund's portfolio was aligned with the EU Taxonomy.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

- Yes
 - In fossil gas
 - In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The below table shows the share of investments in transitional and enabling activities as at 28th February 2023.

	Aligned
Enabling	0.52%
Transition	0.00%

'Aligned' means % of revenues of the investments of the Fund that are aligned to the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable.

What was the share of socially sustainable investments?

Not applicable.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

0.00% of the Fund's asset allocation was included under "Other". As described above, the Fund could hold ancillary liquid assets or money market instruments for cash management/liquidity purposes. The Fund held ancillary liquid assets or money market instruments for cash management/liquidity purposes which were not assessed for compliance with the above exclusion framework. Due to the neutral nature of the assets, no minimum safeguards were in place.

Index derivatives were not assessed on a look-through basis, unless such an index had a significant allocation to prohibited activities.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund achieved the environmental and social characteristics by complying with the exclusion framework, which was consistent with attaining the environmental and social characteristics promoted by the Fund.

Please refer to the section "How did the sustainability indicators perform" above for further information.

In addition, as part of the Fund's consideration of principal adverse impacts on sustainability factors, the ESG team monitored the investments against PAI indicators. Invesco conducted research into certain issuers in the Fund's portfolio that were deemed to flag against PAI indicators. Please see below examples of researched issuers during the reference period:

Holding	Principal Adverse Impact	Action Taken
An APAC Consumer Discretionary Issuer	PAI 6: Energy consumption intensity	<p>Research conducted. The issuer initially flagged on PAI 6 (Energy consumption intensity). Through additional research, Invesco has determined that the issuer has committed to address the issue and is developing a strategy.</p> <p>The issuer has set targets to improve energy consumption. By the end of 2026, total per employee energy consumption in headquarter offices will be reduced by 8% compared with 2021 baseline year. The company also promotes renewable energy usage. In its data centres, the issuer has optimized the cooling effect through the use of high-efficiency direct natural cooling and indirect evaporative cooling. The issuer has reported on further measures to improve energy efficiency in the Annual Report, such as installing photovoltaic energy storage systems on roofs and walls to establish green energy supply and effectively reduce power usage effectiveness (PUE) levels. Additionally, the issuer has set a target to improve the energy efficiency in the headquarter offices, however the largest energy usage is in the warehouses and service centres. There are measures in place in the data centres to improve the energy efficiency and the use of renewable energy is mentioned.</p>
An APAC Materials Issuer	PAI 1,2,3: GHG Emissions	<p>Research conducted. The issuer initially flagged on PAI 1/2 (GHG Emissions). Invesco conducted additional research on the issuer, and determined that the entity has committed to address the issue and is developing a strategy.</p> <p>The issuer is a signatory to the Task Force on Climate-related Financial Disclosures (TCFD) for climate change and has identified transition risks and opportunities to decarbonize operations over a period. The issuer has a decarbonization strategy that is set out in three-time horizons (short, medium, and long-term). Some of its short-term strategies include adoption of best available technologies and improvement in existing processes to maximize waste heat recovery, increase share of renewable energy generation, and an increase in internal carbon pricing to boost carbon abatement projects appraisal. For the medium and long-term strategies the issuer is shifting from metallurgical coal to cleaner fuel like natural gas, upscaling pilots of CCUS and hydrogen based steelmaking, and conducting research on advanced materials.</p> <p>The issuer is actively engaging with technology companies, academia, companies from other sectors having similar challenges on development and scale-up of deep decarbonization technologies such as CCUS, hydrogen generation and its use in steelmaking and has also signed an MoU with the Council of Scientific & Industrial Research (CSIR) to collaborate on CCUS. During the year under review, the issuer commissioned a CCU pilot plant, the first of its kind in the nation that extracts CO2 directly from the blast furnace gas.</p>
An APAC Materials Issuer	PAI 1,2,3: GHG Emissions	<p>Research conducted. The issuer initially flagged on PAI 1/2 (GHG Emissions). Invesco conducted additional research on the issuer, and determined that the entity has committed to address the issue and is developing a strategy.</p> <p>The issuer has committed to net zero by 2050. It has committed to Science Based Targets initiatives (SBTI) and its targets of reducing scope 1 GHG emissions intensity by 27% and scope 2 GHG emissions intensity by 69% by 2032, taking 2017 as baseline have been validated by SBTi. In 2021, its scope 1 CO2 intensity decreased by 9.1% keeping it on course for achieving its 2032 target.</p> <p>The issuer plans to deliver its ambitions of net zero by 2050 through three key steps. The first step is to reduce operational GHG footprint with energy efficiency, renewable energy, waste heat energy etc. The second step is to reduce GHG emissions with its products by focusing on life cycle assessment, R&D of new low-carbon footprint products, recycling of concrete etc. The third step is to expand its key external partnerships for decarbonization such as implementing carbon offset projects for the community and evaluating carbon capture through industry partnerships. As part of its 2050 commitment, the issuer targets to meet 100% of its electricity requirement through renewables. It is investing in increasing the share of green energy at its plants through an optimal power mix which includes waste heat recovery systems (WHRS), and renewable energy such as windmill and solar power. In the last two years alone, it has scaled up its contracted renewable energy capacity by 2.5 times.</p>

How did this financial product perform compared to the reference benchmark?

Not applicable.

● How does the reference benchmark differ from a broad market index?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

Not applicable.

- ***How did this financial product perform compared with the reference benchmark?***

Not applicable.

- ***How did this financial product perform compared with the broad market index?***

Not applicable.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

- It made sustainable investments with an environmental objective: ___%**
 - in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

- It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments**
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective

- It made sustainable investments with a social objective: ___%**

- It promoted E/S characteristics, but did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Invesco Asia Consumer Demand Fund (the "Fund") aimed to promote environmental characteristics related to natural resource utilization and pollution (by excluding companies involved in coal extraction and production, and unconventional oil and gas such as Arctic oil and gas exploration/extraction, oil sands extraction and Shale Energy extraction). The Fund also promoted social characteristics related to human rights (by excluding companies in violation of any UN Global Compact's principles, based on third-party data and the Investment Manager's proprietary analysis and research) and by excluding issuers involved in tobacco production and tobacco related products and services, recreational cannabis, controversial weapons and manufacture of nuclear warheads or whole nuclear or whole nuclear missiles outside of the Non-Proliferation Treaty.

The environmental and social characteristics of the Fund were achieved by applying the exclusions criteria described above.

● How did the sustainability indicators perform?

The Fund used a variety of indicators to measure the attainment of the environmental and social characteristics. This included:

Sustainability Indicator	Indicator Performance
UN Global Compact, excluded if non-compliant	During the reference period, there were no active breaches of the Fund's exclusion criteria.
International sanctions, sanctioned investments are prohibited	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Controversial weapons, excluded if 0%, including companies involved in the manufacture of nuclear warheads or whole nuclear missiles outside of the NPT.	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Coal, excluded if Thermal Coal extraction >=5% of revenue, Thermal Coal Power generation >=10% of revenue	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Unconventional oil & gas, excluded if >=5% of revenue on each of the following: - Arctic oil & gas exploration; - Oil sands extraction; - Shale energy extraction;	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Tobacco excluded if Tobacco Products production >=5% of revenue, Tobacco-related products and services >=5% of revenue	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Recreational cannabis, excluded if >=5% of revenue	During the reference period, there were no active breaches of the Fund's exclusion criteria.

● **...and compared to previous periods?**

Not applicable.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Not applicable.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Not applicable.

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund considered principal adverse impacts on sustainability factors (PAIs) by carrying out a qualitative and quantitative review of key metrics (primarily the 14 indicators as defined in Table 1 of the Annex I of the regulatory technical standards for Regulation 2019/2088). The quantitative review included a review of Invesco's Article 8 and 9 product holdings and the relevant PAI data. Through this initial review an absolute threshold was set that flagged issuers that failed to meet minimum standards, as well as companies that flagged on a binary output (such as controversial weapons or UN Global Compact violations). Once issuers were flagged for the quantitative review, an assessment was

completed to understand if there is publicly available information from the issuer that we are aware of that can be shown to be addressing the poor performance on the flagged PAI. The ESG research team assigned the issuer a qualitative score as to how well they were addressing the poor performance. Those issuers that received the lowest qualitative scores were then identified as engagement targets and were primarily engaged through methods such as letters, meetings, proxy voting. If no improvement was established through such corporate engagement, then the Fund could consider divesting and/or excluding investments.

The below table shows the PAI data for the Fund:

Adverse sustainability indicator	PAI	Data	Metric
Greenhouse gas emissions	1. GHG Emissions	5,123.34	Scope 1 fund financed emissions (Tonnes of CO2 equivalent)
		13,290.61	Scope 2 fund financed emissions (Tonnes of CO2 equivalent)
		169,230.17	Scope 3 fund financed emissions (Tonnes of CO2 equivalent)
		187,644.11	Total Financed emissions (Scope 1 + Scope 2 + Scope 3) (Tonnes of CO2 equivalent)
	2. Carbon footprint	350.92	Fund level Carbon footprint (Scope 1 + Scope 2 + Scope 3) (Per Million EUR Invested)
	3. GHG Intensity of investee companies	678.54	Fund level Total Emission Intensity- Scope 1+2+3 (Per Million EUR Revenue)
	4. Exposure to companies active in the fossil fuel sector	0	% of the fund exposed to any fossil fuels revenue
	5. Share of non-renewable energy consumption	94.52	Adjusted Weighted Average of all issuers in the fund's share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)
	5. Share of non-renewable energy production	0	
	6. Energy consumption intensity per high impact climate sector		Adjusted weighted average energy consumption of issuers in the fund in GWh per million EUR of revenue of investee companies, per high impact climate sector
	Agriculture, Forestry & Fishing	0	
	Construction	0	
	Electricity, Gas, Steam & Air Conditioning Supply	0	
	Manufacturing	0.32	
Mining & Quarrying	0		
Real Estate Activities	0.59		
Transportation & Storage	0.59		
Water Supply, Sewerage, Waste Management & Remediation Activities	0		
Wholesale & Retail Trade & Repair of Motor Vehicles & Motorcycles	0.22		
Biodiversity	7. Activities negatively affecting biodiversity-sensitive areas	0	Share of investments in the fund of investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those areas
Water	8. Emissions to water	0.45	Adjusted weighted average per issuer in the fund's emissions to water generated by investee companies per million EUR invested (Tonnes)
Waste	9. Hazardous waste and radioactive waste ratio	0.42	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average
Social and employee matters	10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	9.13	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	18.37	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance/ complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises
	12. Unadjusted gender pay gap	0.00	Weighted Average of all issuers' in the portfolio unadjusted gender pay gap of investee companies
	13. Board gender diversity	13.42	Weighted Average of all issuers in the portfolio ratio of female to male board members in investee companies, expressed as a percentage of all board members
	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0	Share of investments in investee companies involved in the manufacture or selling of controversial weapons

Notes:

Although Scope 3 emissions are included in the above table showing the PAI scores for the Fund, they were not included in the quantitative review process to consider PAIs during the reporting period.

The data presented in the above table is calculated using information provided by a third-party data vendor. The accuracy, completeness, and relevance of the calculated data are contingent upon the accuracy and completeness of the data provided by this third-party vendor. The numbers reported represent our best effort to provide the most accurate calculations in light of the data available. However, there are no warranties or representations, express or implied, regarding the completeness, accuracy, or suitability of this data for any particular purpose.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 28 February 2023

Large Investments	Sector	% Assets	Country
Tencent Holdings Ltd	Communication Services	6.38%	Cayman Islands
Taiwan Semiconductor Manufacturing Co Ltd	Information Technology	5.96%	Taiwan
Alibaba Group Holding Ltd	Consumer Discretionary	5.36%	Cayman Islands
ICICI Bank Ltd	Financials	4.11%	India
Invesco Liquidity Funds plc - Invesco US Dollar Liquidity Portfolio	Cash	3.73%	Ireland
DBS Group Holdings Ltd	Financials	3.52%	Singapore
Meituan 144A	Consumer Discretionary	3.45%	Cayman Islands
Gourmet Master Co Ltd	Consumer Discretionary	3.32%	Cayman Islands
AIA Group Ltd	Financials	3.10%	Hong Kong
China Merchants Bank Co Ltd - H Shares	Financials	2.95%	China
NAVER Corp	Communication Services	2.79%	Korea (Democratic People's Republic of Korea)
Baidu Inc	Communication Services	2.74%	Cayman Islands
Samsung Electronics Co Ltd	Information Technology	2.69%	Korea (Democratic People's Republic of Korea)
HDFC Bank Ltd	Financials	2.65%	India
Infosys Ltd	Information Technology	2.14%	India

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

The exclusions were screened to the full investment universe, representing at least 90% of the portfolio (#1 Aligned with E/S characteristics) by virtue of the binding elements of the Fund's investment strategy. Ancillary liquid assets and money market instruments which were held for cash management/liquidity purposes may not have been assessed for compliance with the above exclusion framework (#2 Other).

● What was the asset allocation?

100.00% of the Fund's NAV was selected according to the binding elements of the investment strategy, on the basis that they aligned with the environmental and social characteristics of the Fund.

0.00% of the Fund's NAV was invested in financial derivative instruments for hedging and/or efficient portfolio management purposes; and investment in funds not subject to the same restrictions.

All the above data is provided as of 28 February 2023.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives
- The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

The below table shows the GICS sector breakdown as at 28 February 2023

Sector (GICS)	Weight %
Financials	31.54
Consumer Discretionary	20.98
Information Technology	15.11
Communication Services	12.61
Consumer Staples	11.77
Health Care	3.43
Industrials	2.48
Real Estate	0.24
Materials	0.00
Utilities	0.00
Energy	0.00
Sovereign	0.00
Cash	1.84
Total	100.00

GICS Level 4 breakdown for Energy Sector

Sub-Industry Code	Sub-Industry Name	Weight
10101010	Oil & Gas Drilling	0.00
10101020	Oil & Gas Equipment & Services	0.00
10102010	Integrated Oil & Gas	0.00
10102020	Oil & Gas Exploration & Production	0.00
10102030	Oil & Gas Refining & Marketing	0.00
10102040	Oil & Gas Storage & Transportation	0.00
10102050	Coal & Consumable Fuels	0.00
Total		0.00

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

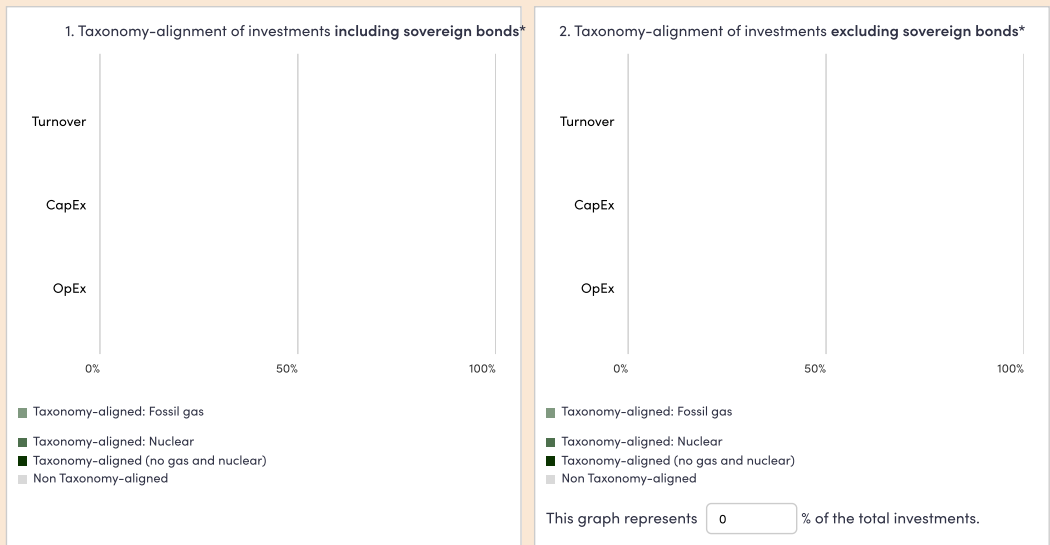

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure (OpEx)** reflects the green operational activities of investee companies.

Whilst the Fund did not commit to a minimum of sustainable investments with an environmental objective aligned with EU Taxonomy, **0%** (Turnover) of the Fund's portfolio was aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- Yes
 - In fossil gas
 - In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The below table shows the share of investments in transitional and enabling activities as at 28th February 2023.

	Aligned
Enabling	0.00%
Transition	0.00%

'Aligned' means % of revenues of the investments of the Fund that are aligned to the EU Taxonomy.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Not applicable.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable.

What was the share of socially sustainable investments?

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Not applicable.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

0.00% of the Fund's asset allocation was included under "Other". As described above, the Fund could hold ancillary liquid assets or money market instruments for cash management/liquidity purposes. The Fund held ancillary liquid assets or money market instruments for cash management/liquidity purposes which were not assessed for compliance with the above exclusion framework. Due to the neutral nature of the assets, no minimum safeguards were in place.

Index derivatives were not assessed on a look-through basis, unless such an index had a significant allocation to prohibited activities.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund achieved the environmental and social characteristics by complying with the exclusion framework, which was consistent with attaining the environmental and social characteristics promoted by the Fund.

Please refer to the section "How did the sustainability indicators perform" above for further information.

In addition, as part of the Fund's consideration of principal adverse impacts on sustainability factors, the ESG team monitored the investments against PAI indicators. Invesco conducted research into certain issuers in the Fund's portfolio that were deemed to flag against PAI indicators. Please see below examples of researched issuers during the reference period:

Holding	Principal Adverse Impact	Action Taken
An APAC Consumer Discretionary Issuer	PAI 6: Energy consumption intensity	Research conducted. The issuer initially flagged on PAI 6 (Energy consumption intensity). Through additional research, Invesco has determined that the issuer has committed to address the issue and is developing a strategy. The issuer has set targets to improve energy consumption. By the end of 2026, total per employee energy consumption in headquarter offices will reduce by 8% compared with 2021 as a baseline year. The company also promotes renewable energy usage. In its data centres, the issuer has optimized the cooling effect through the use of high-efficiency direct natural cooling and indirect evaporative cooling. The issuer has reported on further measures to improve energy efficiency in their Annual Report, such as installing photovoltaic energy storage systems on roofs and walls to establish green energy supply and effectively reduce power usage effectiveness (PUE) levels. Additionally, the issuer has set a target to improve the energy efficiency in the headquarter offices, however the largest energy usage is in the warehouses and service centres. There are measures in place in the data centres to improve the energy efficiency and the use of renewable energy is mentioned.

How did this financial product perform compared to the reference benchmark?

Not applicable.

● **How does the reference benchmark differ from a broad market index?**

Not applicable.

● **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

Not applicable.

● **How did this financial product perform compared with the reference benchmark?**

Not applicable.

● **How did this financial product perform compared with the broad market index?**

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

- It made sustainable investments with an environmental objective: ___%**
 - in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

- It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments**
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective

- It made sustainable investments with a social objective: ___%**

- It promoted E/S characteristics, but did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Invesco Belt and Road Debt Fund (the "Fund") aimed to promote environmental characteristics related to natural resource utilization and pollution (by excluding companies involved in coal extraction and production, and unconventional oil and gas such as Arctic oil and gas exploration/extraction, oil sands extraction and Shale Energy extraction). The Fund also promoted social characteristics related to human rights (by excluding companies in violation of any UN Global Compact's principles, based on third-party data and the Investment Manager's proprietary analysis and research) and by excluding issuers involved in tobacco production and tobacco related products and services, recreational cannabis, controversial weapons and manufacture of nuclear warheads or whole nuclear or whole nuclear missiles outside of the Non-Proliferation Treaty.

The environmental and social characteristics of the Fund were achieved by applying the exclusions criteria described above.

● How did the sustainability indicators perform?

The Fund used a variety of indicators to measure the attainment of the environmental and social characteristics. This included:

Sustainability Indicator	Indicator Performance
UN Global Compact, excluded if non-compliant	During the reference period, there were no active breaches of the Fund's exclusion criteria.
International sanctions, sanctioned investments are prohibited	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Controversial weapons, excluded if 0%, including companies involved in the manufacture of nuclear warheads or whole nuclear missiles outside of the NPT.	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Coal, excluded if Thermal Coal extraction >=5% of revenue, Thermal Coal Power generation >=10% of revenue	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Unconventional oil & gas, excluded if >=5% of revenue on each of the following: - Artic oil & gas exploration; - Oil sands extraction; - Shale energy extraction;	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Tobacco excluded if Tobacco Products production >=5% of revenue, Tobacco-related products and services >=5% of revenue	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Recreational cannabis, excluded if >=5% of revenue	During the reference period, there were no active breaches of the Fund's exclusion criteria.

● **...and compared to previous periods?**

Not applicable.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Not applicable.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Not applicable.

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund considered principal adverse impacts on sustainability factors (PAIs) by carrying out a qualitative and quantitative review of key metrics (primarily the 14 indicators as defined in Table 1 of the Annex I of the regulatory technical standards for Regulation 2019/2088). The quantitative review included a review of Invesco's Article 8 and 9 product holdings and the relevant PAI data. Through this initial review an absolute threshold was set that flagged issuers that failed to meet minimum standards, as well as companies that flagged on a binary output (such as controversial weapons or UN Global

Compact violations). Once issuers were flagged for the quantitative review, an assessment was completed to understand if there is publicly available information from the issuer that we are aware of that can be shown to be addressing the poor performance on the flagged PAI. The ESG research team assigned the issuer a qualitative score as to how well they were addressing the poor performance. Those issuers that received the lowest qualitative scores were then identified as engagement targets and were primarily engaged through methods such as letters, meetings, proxy voting. If no improvement was established through such corporate engagement, then the Fund could consider divesting and/or excluding investments.

The below table shows the PAI data for the Fund:

Adverse sustainability indicator	PAI	Data	Metric
Greenhouse gas emissions	1. GHG Emissions	13,923.36	Scope 1 fund financed emissions (Tonnes of CO2 equivalent)
		3,804.89	Scope 2 fund financed emissions (Tonnes of CO2 equivalent)
		96,210.14	Scope 3 fund financed emissions (Tonnes of CO2 equivalent)
		113,938.39	Total Financed emissions (Scope 1 + Scope 2 + Scope 3) (Tonnes of CO2 equivalent)
	2. Carbon footprint	591.28	Fund level Carbon footprint (Scope 1 + Scope 2 + Scope 3) (Per Million EUR Invested)
	3. GHG Intensity of investee companies	873.05	Fund level Total Emission Intensity- Scope 1+2+3 (Per Million EUR Revenue)
	4. Exposure to companies active in the fossil fuel sector	0	% of the fund exposed to any fossil fuels revenue
	5. Share of non-renewable energy consumption	86.98	Adjusted Weighted Average of all issuers in the fund's share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)
	5. Share of non-renewable energy production	7.38	
	6. Energy consumption intensity per high impact climate sector		
	Agriculture, Forestry & Fishing	0	
	Construction	0.11	
	Electricity, Gas, Steam & Air Conditioning Supply	0.6	
	Manufacturing	0.22	
Mining & Quarrying	4.15		
Real Estate Activities	0.09		
Transportation & Storage	0.95		
Water Supply, Sewerage, Waste Management & Remediation Activities	0		
Wholesale & Retail Trade & Repair of Motor Vehicles & Motorcycles	0		
Biodiversity	7. Activities negatively affecting biodiversity-sensitive areas	0.75	Share of investments in the fund of investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those areas
Water	8. Emissions to water	0	Adjusted weighted average per issuer in the fund's emissions to water generated by investee companies per million EUR invested (Tonnes)
Waste	9. Hazardous waste and radioactive waste ratio	0.14	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average
Social and employee matters	10. Violations to UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	6.2	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance/ complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises
	12. Unadjusted gender pay gap	0.00	Weighted Average of all issuers' in the portfolio unadjusted gender pay gap of investee companies
	13. Board gender diversity	14.96	Weighted Average of all issuers in the portfolio ratio of female to male board members in investee companies, expressed as a percentage of all board members
	14. Exposure to controversial weap- ons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0	Share of investments in investee companies involved in the manufacture or selling of controversial weapons

Notes:

Although Scope 3 emissions are included in the above table showing the PAI scores for the Fund, they were not included in the quantitative review process to consider PAIs during the reporting period.

The data presented in the above table is calculated using information provided by a third-party data vendor. The accuracy, completeness, and relevance of the calculated data are contingent upon the accuracy and completeness of the data provided by this third-party vendor. The numbers reported represent our best effort to provide the most accurate calculations in light of the data available. However, there are no warranties or representations, express or implied, regarding the completeness, accuracy, or suitability of this data for any particular purpose.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 28 February 2023

Large Investments	Sector	% Assets	Country
Invesco Liquidity Funds plc – Invesco US Dollar Liquidity Portfolio	Cash	4.17%	Ireland
Chindata Group Holdings Ltd 10.5% USD 23/02/2026	Information Technology	1.75%	China
Hutama Karya Persero PT 3.75% USD 11/05/2030	Industrials	1.70%	Indonesia
CSSC Capital 2015 Ltd 3% USD 13/02/2030	Industrials	1.67%	United Kingdom

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

The exclusions were screened to the full investment universe, representing at least 90% of the portfolio (#1 Aligned with E/S characteristics) by virtue of the binding elements of the Fund's investment strategy. Ancillary liquid assets and money market instruments which were held for cash management/liquidity purposes may not have been assessed for compliance with the above exclusion framework (#2 Other).

● What was the asset allocation?

100.00% of the Fund's NAV was selected according to the binding elements of the investment strategy, on the basis that they aligned with the environmental and social characteristics of the Fund.

0.00% of the Fund's NAV was invested in financial derivative instruments for hedging and/or efficient portfolio management purposes; and investments in funds not subject to the same restrictions.

All the above data is provided as of 28 February 2023.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives
- The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

The below table shows the GICS sector breakdown as at 28 February 2023

Sector (GICS)	Weight %
Financials	27.50
Real Estate	13.54
Industrials	12.12
Energy	6.10
Consumer Discretionary	5.61
Materials	5.53

Consumer Staples	0.87
Health Care	0.00
Sovereign	15.51
Cash	4.53
Unclassified	1.74
Total	100.00

GICS Level 4 breakdown for Energy Sector

Sub-Industry Code	Sub-Industry Name	Weight
10101010	Oil & Gas Drilling	0.38
10101020	Oil & Gas Equipment & Services	0.00
10102010	Integrated Oil & Gas	1.15
10102020	Oil & Gas Exploration & Production	2.01
10102030	Oil & Gas Refining & Marketing	0.98
10102040	Oil & Gas Storage & Transportation	1.58
10102050	Coal & Consumable Fuels	0.00
Total		6.10

To comply with the EU Taxonomy, the criteria for fossil gas include

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure (OpEx)** reflects the green operational activities of investee companies.

Whilst the Fund did not commit to a minimum of sustainable investments with an environmental objective aligned with EU Taxonomy, **0%** (Turnover) of the Fund's portfolio was aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

Yes

In fossil gas In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The below table shows the share of investments in transitional and enabling activities as at 28th February 2023.

	Aligned
Enabling	0.00%
Transition	0.00%

'Aligned' means % of revenues of the investments of the Fund that are aligned to the EU Taxonomy.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Not applicable.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable.

What was the share of socially sustainable investments?

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Not applicable.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

0.00% of the Fund's asset allocation was included under "Other". As described above, the Fund could hold ancillary liquid assets or money market instruments for cash management/liquidity purposes. The Fund held ancillary liquid assets or money market instruments for cash management/liquidity purposes which were not assessed for compliance with the above exclusion framework. Due to the neutral nature of the assets, no minimum safeguards were in place.

Index derivatives were not assessed on a look-through basis, unless such an index had a significant allocation to prohibited activities.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund achieved the environmental and social characteristics by complying with the exclusion framework, which was consistent with attaining the environmental and social characteristics promoted by the Fund.

Please refer to the section "How did the sustainability indicators perform" above for further information.

In addition, as part of the Fund's consideration of principal adverse impacts on sustainability factors, the ESG team monitored the investments against PAI indicators. Invesco conducted research into certain issuers in the Fund's portfolio that were deemed to flag against PAI indicators. Please see below examples of researched issuers during the reference period:

Holding	Principal Adverse Impact	Action Taken
An APAC Consumer Discretionary Issuer	PAI 6: Energy consumption intensity	<p>Research conducted. The issuer initially flagged on PAI 6 (Energy consumption intensity). Through additional research, Invesco has determined that the issuer has committed to address the issue and is developing a strategy.</p> <p>The issuer has set targets to improve energy consumption. By the end of 2026, total per employee energy consumption in headquarter offices will reduce by 8% compared with 2021 as a baseline year. The company also promotes renewable energy usage. In its data centres, the issuer has optimized the cooling effect through the use of high-efficiency direct natural cooling and indirect evaporative cooling. The issuer has reported on further measures to improve energy efficiency in their Annual Report, such as installing photovoltaic energy storage systems on roofs and walls to establish green energy supply and effectively reduce power usage effectiveness (PUE) levels. Additionally, the issuer has set a target to improve the energy efficiency in the headquarter offices, however the largest energy usage is in the warehouses and service centres. There are measures in place in the data centres to improve the energy efficiency and the use of renewable energy is mentioned.</p>

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

Not applicable.

● **How does the reference benchmark differ from a broad market index?**

Not applicable.

● **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

Not applicable.

● **How did this financial product perform compared with the reference benchmark?**

Not applicable.

● **How did this financial product perform compared with the broad market index?**

Not applicable.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

- It made sustainable investments with an environmental objective: ___%**
 - in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

- It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments**
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective

- It made sustainable investments with a social objective: ___%**

- It promoted E/S characteristics, but did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Invesco Emerging Market Corporate Bond Fund (the "Fund") aimed to promote environmental characteristics related to natural resource utilization and pollution (by excluding companies involved in coal extraction and production, and unconventional oil and gas such as Arctic oil and gas exploration/extraction, oil sands extraction and Shale Energy extraction). The Fund also promoted social characteristics related to human rights (by excluding companies in violation of any UN Global Compact's principles, based on third-party data and the Investment Manager's proprietary analysis and research) and by excluding issuers involved in tobacco production and tobacco related products and services, recreational cannabis, controversial weapons and manufacture of nuclear warheads or whole nuclear or whole nuclear missiles outside of the Non-Proliferation Treaty.

The environmental and social characteristics of the Fund were achieved by applying the exclusions criteria described above.

● How did the sustainability indicators perform?

The Fund used a variety of indicators to measure the attainment of the environmental and social characteristics. This included:

Sustainability Indicator	Indicator Performance
UN Global Compact, excluded if non-compliant	During the reference period, there were no active breaches of the Fund's exclusion criteria.
International sanctions, sanctioned investments are prohibited	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Controversial weapons, excluded if 0%, including companies involved in the manufacture of nuclear warheads or whole nuclear missiles outside of the NPT.	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Coal, excluded if Thermal Coal extraction >=5% of revenue, Thermal Coal Power generation >=10% of revenue	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Unconventional oil & gas, excluded if >=5% of revenue on each of the following: - Artic oil & gas exploration; - Oil sands extraction; - Shale energy extraction;	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Tobacco excluded if Tobacco Products production >=5% of revenue, Tobacco-related products and services >=5% of revenue	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Recreational cannabis, excluded if >=5% of revenue	During the reference period, there were no active breaches of the Fund's exclusion criteria.

● **...and compared to previous periods?**

Not applicable.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Not applicable.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Not applicable.

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund considered principal adverse impacts on sustainability factors (PAIs) by carrying out a qualitative and quantitative review of key metrics (primarily the 14 indicators as defined in Table 1 of the Annex I of the regulatory technical standards for Regulation 2019/2088). The quantitative review included a review of Invesco's Article 8 and 9 product holdings and the relevant PAI data. Through this initial review an absolute threshold was set that flagged issuers that failed to meet minimum standards, as well as companies that flagged on a binary output (such as controversial weapons or UN Global

Compact violations). Once issuers were flagged for the quantitative review, an assessment was completed to understand if there is publicly available information from the issuer that we are aware of that can be shown to be addressing the poor performance on the flagged PAI. The ESG research team assigned the issuer a qualitative score as to how well they were addressing the poor performance. Those issuers that received the lowest qualitative scores were then identified as engagement targets and were primarily engaged through methods such as letters, meetings, proxy voting. If no improvement was established through such corporate engagement, then the Fund could consider divesting and/or excluding investments.

The below table shows the PAI data for the Fund:

Adverse sustainability indicator	PAI	Data	Metric
Greenhouse gas emissions	1. GHG Emissions	4,616.38	Scope 1 fund financed emissions (Tonnes of CO2 equivalent)
		1,169.55	Scope 2 fund financed emissions (Tonnes of CO2 equivalent)
		19,559.87	Scope 3 fund financed emissions (Tonnes of CO2 equivalent)
		25,345.80	Total Financed emissions (Scope 1 + Scope 2 + Scope 3) (Tonnes of CO2 equivalent)
		1,120.78	Fund level Carbon footprint (Scope 1 + Scope 2 + Scope 3) (Per Million EUR Invested)
	3. GHG intensity of investee companies	2293.67	Fund level Total Emission Intensity- Scope 1+2+3 (Per Million EUR Revenue)
	4. Exposure to companies active in the fossil fuel sector	0.01	% of the fund exposed to any fossil fuels revenue
	5. Share of non-renewable energy consumption	86.34	Adjusted Weighted Average of all issuers in the fund's share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)
	6. Energy consumption intensity per high impact climate sector		
	Agriculture, Forestry & Fishing	0	
	Construction	0	
	Electricity, Gas, Steam & Air Conditioning Supply	1.74	
	Manufacturing	1.85	
	Mining & Quarrying	15.03	
Real Estate Activities	0.3		
Transportation & Storage	1.62		
Water Supply, Sewerage, Waste Management & Remediation Activities	0		
Wholesale & Retail Trade & Repair of Motor Vehicles & Motorcycles	0.08		
Biodiversity	7. Activities negatively affecting biodiversity-sensitive areas	3.68	Share of investments in the fund of investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those
Water	8. Emissions to water	0	Adjusted weighted average per issuer in the fund's emissions to water generated by investee companies per million EUR invested (Tonnes)
Waste	9. Hazardous waste and radioactive waste ratio	217.33	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average
Social and employee matters	10. Violations to UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	2.09	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	4.94	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance/ complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises
	12. Unadjusted gender pay gap	0.00	Weighted Average of all issuers' in the portfolio unadjusted gender pay gap of investee companies
	13. Board gender diversity	15.19	Weighted Average of all issuers in the portfolio ratio of female to male board members in investee companies, expressed as a percentage of all board members
	14. Exposure to controversial weap- ons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0	Share of investments in investee companies involved in the manufacture or selling of controversial weapons

Notes:

Although Scope 3 emissions are included in the above table showing the PAI scores for the Fund, they were not included in the quantitative review process to consider PAIs during the reporting period.

The data presented in the above table is calculated using information provided by a third-party data vendor. The accuracy, completeness, and relevance of the calculated data are contingent upon the accuracy and completeness of the data provided by this third-party vendor. The numbers reported represent our best effort to provide the most accurate calculations in light of the data available. However, there are no warranties or representations, express or implied, regarding the completeness, accuracy, or suitability of this data for any particular purpose.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 28 February 2023

Large Investments	Sector	% Assets	Country
Invesco Liquidity Funds plc – Invesco US Dollar Liquidity Portfolio	Cash	6.22%	Ireland
Ecopetrol SA 4.625% USD 02/11/2031	Energy	1.18%	Colombia
Grupo Idesa SA de CV 9.875% USD 22/05/2026	Materials	1.08%	Mexico
China Great Wall International Holdings V Ltd 2.375% USD 18/08/2030	Financials	1.08%	United Kingdom
Huarong Finance 2019 Co Ltd 3.375% USD 24/02/2030	Financials	1.05%	United Kingdom

Adani Green Energy Ltd 4.375% USD 08/09/2024	Utilities	0.90%	India

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

The exclusions were screened to the full investment universe, representing at least 90% of the portfolio (#1 Aligned with E/S characteristics) by virtue of the binding elements of the Fund's investment strategy. Ancillary liquid assets and money market instruments which were held for cash management/liquidity purposes may not have been assessed for compliance with the above exclusion framework (#2 Other).

● What was the asset allocation?

99.99% of the Fund's NAV was selected according to the binding elements of the investment strategy, on the basis that they aligned with the environmental and social characteristics of the Fund.

0.01% of the Fund's NAV was invested in financial derivative instruments for hedging and/or efficient portfolio management purposes; and investment in funds not subject to the same restrictions.

All the above data is provided as of 28 February 2023.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives

- The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

The below table shows the GICS sector breakdown as at 28 February 2023

Sector (GICS)	Weight %
Financials	18.71
Energy	15.92
Consumer Discretionary	10.33
Materials	9.33
Utilities	8.51
Communication Services	7.71

Information Technology	0.59
Health Care	0.30
Sovereign	4.62
Cash	7.93
Others/Derivatives	0.01
Total	100.00

GICS Level 4 breakdown for Energy Sector

Sub-Industry Code	Sub-Industry Name	Weight
10101010	Oil & Gas Drilling	0.00
10101020	Oil & Gas Equipment & Services	0.67
10102010	Integrated Oil & Gas	2.19
10102020	Oil & Gas Exploration & Production	7.37
10102030	Oil & Gas Refining & Marketing	1.69
10102040	Oil & Gas Storage & Transportation	4.00
10102050	Coal & Consumable Fuels	0.00
Total		15.92

To comply with the EU Taxonomy, the criteria for fossil gas include

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

Whilst the Fund did not commit to a minimum of sustainable investments with an environmental objective aligned with EU Taxonomy, **0.81%** (Turnover) of the Fund's portfolio was aligned with the EU Taxonomy.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

- Yes
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The below table shows the share of investments in transitional and enabling activities as at 28th February 2023.

	Aligned
Enabling	0.09%
Transition	0.00%

'Aligned' means % of revenues of the investments of the Fund that are aligned to the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable.

What was the share of socially sustainable investments?

Not applicable.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

0.01% of the Fund’s asset allocation was included under "Other". As described above, the Fund could hold ancillary liquid assets or money market instruments for cash management/liquidity purposes. The Fund held ancillary liquid assets or money market instruments for cash management/liquidity purposes which were not assessed for compliance with the above exclusion framework. Due to the neutral nature of the assets, no minimum safeguards were in place.

Index derivatives were not assessed on a look-through basis, unless such an index had a significant allocation to prohibited activities.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund achieved the environmental and social characteristics by complying with the exclusion framework, which was consistent with attaining the environmental and social characteristics promoted by the Fund.

Please refer to the section “How did the sustainability indicators perform” above for further information.

In addition, as part of the Fund's consideration of principal adverse impacts on sustainability factors, the ESG team monitored the investments against PAI indicators. Invesco conducted research into certain issuers in the Fund’s portfolio that were deemed to flag against PAI indicators. Please see below examples of researched issuers during the reference period:

Holding	Principal Adverse Impact	Action Taken
An APAC Consumer Discretionary Issuer	PAI 6: Energy consumption intensity	Research conducted. The issuer initially flagged on PAI 6 (Energy consumption intensity). Through additional research, Invesco has determined that the issuer has committed to address the issue and is developing a strategy. The issuer has set targets to improve energy consumption. By the end of 2026, total per employee energy consumption in headquarter offices will reduce by 8% compared with 2021 as a baseline year. The company also promotes renewable energy usage. In its data centres, the issuer has optimized the cooling effect through the use of high-efficiency direct natural cooling and indirect evaporative cooling. The issuer has reported on further measures to improve energy efficiency in their Annual Report, such as installing photovoltaic energy storage systems on roofs and walls to establish green energy supply and effectively reduce power usage effectiveness (PUE) levels. Additionally, the issuer has set a target to improve the energy efficiency in the headquarter offices, however the largest energy usage is in the warehouses and service centres. There are measures in place in the data centres to improve the energy efficiency and the use of renewable energy is mentioned.
An EMEA Consumer Discretionary Issuer	PAI 6: Energy consumption intensity	Research conducted. The issuer initially flagged on PAI 6 (Energy consumption intensity). Invesco conducted additional research on the issuer. Invesco has determined that the issuer has acknowledged the issue as a serious matter for a worthy response, but has not yet committed to resolving the issue. Although the issuer reported in its TCFD report that it is implementing carbon reduction initiatives (such as the use of energy-efficient offices and data centres, and reduction of emissions from transportation and business travel), no specific target for energy consumption is disclosed. The company does report that energy intensity reduction is a strategy priority and that teams are responsible for finding ways to reduce energy consumption and carbon emissions in the workplace. However, from Invesco's research, it appears that these initiatives are mainly related to the issuer's corporate emissions rather while the largest source of energy consumption is related to its e-commerce subsidiary. The issuer has also disclosed a target to reduce its GHG emissions, but this not its energy intensity.

How did this financial product perform compared to the reference benchmark?

Not applicable.

● How does the reference benchmark differ from a broad market index?

Not applicable.

● How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

● How did this financial product perform compared with the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

● ***How did this financial product perform compared with the broad market index?***

Not applicable.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

- It made sustainable investments with an environmental objective: ___%**
 - in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

- It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments**
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective

- It made sustainable investments with a social objective: ___%**

- It promoted E/S characteristics, but did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Invesco Euro Bond Fund (the "Fund") aimed to promote environmental characteristics related to natural resource utilization and pollution (by excluding companies involved in coal extraction and production, and unconventional oil and gas such as Arctic oil and gas exploration/extraction, oil sands extraction and Shale Energy extraction). The Fund also promoted social characteristics related to human rights (by excluding companies in violation of any UN Global Compact's principles, based on third-party data and the Investment Manager's proprietary analysis and research) and by excluding issuers involved in tobacco production and tobacco related products and services, recreational cannabis, controversial weapons and manufacture of nuclear warheads or whole nuclear or whole nuclear missiles outside of the Non-Proliferation Treaty.

The environmental and social characteristics of the Fund were achieved by applying the exclusions criteria described above.

● How did the sustainability indicators perform?

The Fund used a variety of indicators to measure the attainment of the environmental and social characteristics. This included:

Sustainability Indicator	Indicator Performance
UN Global Compact, excluded if non-compliant	During the reference period, there were no active breaches of the Fund's exclusion criteria.
International sanctions, sanctioned investments are prohibited	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Controversial weapons, excluded if 0%, including companies involved in the manufacture of nuclear warheads or whole nuclear missiles outside of the NPT.	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Coal, excluded if Thermal Coal extraction >=5% of revenue, Thermal Coal Power generation >=10% of revenue	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Unconventional oil & gas, excluded if >=5% of revenue on each of the following: - Artic oil & gas exploration; - Oil sands extraction; - Shale energy extraction;	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Tobacco excluded if Tobacco Products production >=5% of revenue, Tobacco-related products and services >=5% of revenue	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Recreational cannabis, excluded if >=5% of revenue	During the reference period, there were no active breaches of the Fund's exclusion criteria.

● **...and compared to previous periods?**

Not applicable.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Not applicable.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Not applicable.

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund considered principal adverse impacts on sustainability factors (PAIs) by carrying out a qualitative and quantitative review of key metrics (primarily the 14 indicators as defined in Table 1 of the Annex I of the regulatory technical standards for Regulation 2019/2088). The quantitative review included a review of Invesco's Article 8 and 9 product holdings and the relevant PAI data. Through this initial review an absolute threshold was set that flagged issuers that failed to meet minimum standards, as well as companies that flagged on a binary output (such as controversial weapons or UN Global Compact violations). Once issuers were flagged for the quantitative review, an assessment was

completed to understand if there is publicly available information from the issuer that we are aware of that can be shown to be addressing the poor performance on the flagged PAI. The ESG research team assigned the issuer a qualitative score as to how well they were addressing the poor performance. Those issuers that received the lowest qualitative scores were then identified as engagement targets and were primarily engaged through methods such as letters, meetings, proxy voting. If no improvement was established through such corporate engagement, then the Fund could consider divesting and/or excluding investments.

The below table shows the PAI data for the Fund:

Adverse sustainability indicator	PAI	Data	Metric
Greenhouse gas emissions	1. GHG Emissions	15,454.05	Scope 1 fund financed emissions (Tonnes of CO2 equivalent)
		1,875.76	Scope 2 fund financed emissions (Tonnes of CO2 equivalent)
		99,619.56	Scope 3 fund financed emissions (Tonnes of CO2 equivalent)
		116,949.36	Total Financed emissions (Scope 1 + Scope 2 + Scope 3) (Tonnes of CO2 equivalent)
	2. Carbon footprint	600.11	Fund level Carbon footprint (Scope 1 + Scope 2 + Scope 3) (Per Million EUR Invested)
	3. GHG Intensity of investee companies	1048.76	Fund level Total Emission Intensity- Scope 1+2+3 (Per Million EUR Revenue)
	4. Exposure to companies active in the fossil fuel sector	0	% of the fund exposed to any fossil fuels revenue
	5. Share of non-renewable energy consumption	63.71	Adjusted Weighted Average of all issuers in the fund's share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)
	5. Share of non-renewable energy production	33.35	
	6. Energy consumption intensity per high impact climate sector		
	Agriculture, Forestry & Fishing	0	
	Construction	0.18	
	Electricity, Gas, Steam & Air Conditioning Supply	2.76	
	Manufacturing	0.92	
Mining & Quarrying	4.76		
Real Estate Activities	0.29	Adjusted weighted average energy consumption of issuers in the fund in GWh per million EUR of revenue of investee companies, per high impact climate sector	
Transportation & Storage	3.12		
Water Supply, Sewerage, Waste Management & Remediation Activities	0		
Wholesale & Retail Trade & Repair of Motor Vehicles & Motorcycles	0.25		
Biodiversity	7. Activities negatively affecting biodiversity-sensitive areas	8.26	Share of investments in the fund of investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those
Water	8. Emissions to water	0.36	Adjusted weighted average per issuer in the fund's emissions to water generated by investee companies per million EUR invested (Tonnes)
Waste	9. Hazardous waste and radioactive waste ratio	1.71	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average
Social and employee matters	10. Violations to UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0.36	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	2.74	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance/ complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises
	12. Unadjusted gender pay gap	21.62	Weighted Average of all issuers' in the portfolio unadjusted gender pay gap of investee companies
	13. Board gender diversity	38.18	Weighted Average of all issuers in the portfolio ratio of female to male board members in investee companies, expressed as a percentage of all board members
	14. Exposure to controversial weap- ons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0	Share of investments in investee companies involved in the manufacture or selling of controversial weapons

Notes:

Although Scope 3 emissions are included in the above table showing the PAI scores for the Fund, they were not included in the quantitative review process to consider PAIs during the reporting period.

The data presented in the above table is calculated using information provided by a third-party data vendor. The accuracy, completeness, and relevance of the calculated data are contingent upon the accuracy and completeness of the data provided by this third-party vendor. The numbers reported represent our best effort to provide the most accurate calculations in light of the data available. However, there are no warranties or representations, express or implied, regarding the completeness, accuracy, or suitability of this data for any particular purpose.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 28 February 2023

Large Investments	Sector	% Assets	Country
Bundesobligation 2.2% EUR 13/04/2028	Sovereign	2.46%	Germany
Italy Buoni Poliennali Del Tesoro 144A 2.25% EUR 01/09/2036	Sovereign	2.43%	Italy
Deutsche Bundesrepublik Inflation Linked Bond 0.5% EUR 15/04/2030	Sovereign	2.04%	Germany
Invesco Liquidity Funds plc - Invesco Euro Liquidity Portfolio	Cash	1.49%	Ireland
French Republic Government Inflation Linked Bond OAT 144A 0.7% EUR 30/11/2033	Sovereign	1.35%	Spain
Bundesrepublik Deutschland Bundesanleihe 2.3% EUR 15/02/2033	Sovereign	1.27%	Germany
Bundesobligation 1.3% EUR 15/10/2027	Sovereign	1.18%	Germany
European Investment Bank 1.125% EUR 15/09/2036	Financials	1.14%	Luxembourg
Italy Buoni Poliennali Del Tesoro 0.9% EUR 01/04/2031	Sovereign	1.08%	Italy

Spain Government Bond 144A 2.9% EUR 31/10/2046	Sovereign	0.85%	Spain
Kingdom of Belgium Government Bond 144A 0.4% EUR 22/06/2040	Sovereign	0.83%	Belgium

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

The exclusions were screened to the full investment universe, representing at least 90% of the portfolio (#1 Aligned with E/S characteristics) by virtue of the binding elements of the Fund's investment strategy. Ancillary liquid assets and money market instruments which were held for cash management/liquidity purposes may not have been assessed for compliance with the above exclusion framework (#2 Other).

● What was the asset allocation?

99.82% of the Fund's NAV was selected according to the binding elements of the investment strategy, on the basis that they aligned with the environmental and social characteristics of the Fund.

0.18% of the Fund's NAV was invested in financial derivative instruments for hedging and/or efficient portfolio management purposes; and investments in funds not subject to the same restrictions.

All the above data is provided as of 28 February 2023.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives
- The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

The below table shows the GICS sector breakdown as at 28 February 2023

Sector (GICS)	Weight %
Financials	38.20
Utilities	7.16
Communication Services	5.20
Energy	4.19
Consumer Discretionary	3.37
Health Care	2.72
Industrials	2.53
Materials	1.96
Real Estate	1.82
Consumer Staples	1.43
Information Technology	0.20
Sovereign	27.07
Cash	3.96
Others/Derivatives	0.01
Unclassified	0.18
Total	100.00

GICS Level 4 breakdown for Energy Sector

Sub-Industry Code	Sub-Industry Name	Weight
10101010	Oil & Gas Drilling	0.00
10101020	Oil & Gas Equipment & Services	0.00
10102010	Integrated Oil & Gas	3.98
10102020	Oil & Gas Exploration & Production	0.00
10102030	Oil & Gas Refining & Marketing	0.20
10102040	Oil & Gas Storage & Transportation	0.00
10102050	Coal & Consumable Fuels	0.00
	Total	4.18

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the Fund did not commit to a minimum of sustainable investments with an environmental objective aligned with EU Taxonomy, **1.45%** (Turnover) of the Fund's portfolio was aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- Yes
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The below table shows the share of investments in transitional and enabling activities as at 28th February 2023.

	Aligned
Enabling	0.77%
Transition	0.00%

'Aligned' means % of revenues of the investments of the Fund that are aligned to the EU Taxonomy.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Not applicable.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What was the share of socially sustainable investments?

Not applicable.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

0.18% of the Fund’s asset allocation was included under "Other". As described above, the Fund could hold ancillary liquid assets or money market instruments for cash management/liquidity purposes. The Fund held ancillary liquid assets or money market instruments for cash management/liquidity purposes which were not assessed for compliance with the above exclusion framework. Due to the neutral nature of the assets, no minimum safeguards were in place.

Index derivatives were not assessed on a look-through basis, unless such an index had a significant allocation to prohibited activities.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund achieved the environmental and social characteristics by complying with the exclusion framework, which was consistent with attaining the environmental and social characteristics promoted by the Fund.

Please refer to the section “How did the sustainability indicators perform” above for further information.

In addition, as part of the Fund's consideration of principal adverse impacts on sustainability factors, the ESG team monitored the investments against PAI indicators. Invesco conducted research into certain issuers in the Fund’s portfolio that were deemed to flag against PAI indicators. Please see below examples of researched issuers during the reference period:

Holding	Principal Adverse Impact	Action Taken
An EMEA Materials Issuer	PAI 1,2,3: GHG Emissions	<p>Research conducted. The issuer initially flagged for PAI 1,2 and 3 (GHG emissions). The issuer has acknowledged the issue and set targets to address it.</p> <p>They commit to reduce scope 1 GHG emissions 17.5% and scope 2 GHG emissions 65% per ton of cementitious materials, alongside a target to reduce scope 3 emissions per metric ton of clinker and cement purchased by 25.1%. All targets are set for 2030, with a 2020 base year.</p> <p>Invesco's ESG team engaged with the company to discuss their carbon emissions. The company was the first in their sector to sign the "Business Ambition for 1.5°C" pledge and have their targets approved by the Science-Based Targets initiative (SBTi).</p>
An EMEA Consumer Discretionary Issuer	PAI 6: Energy consumption intensity	<p>Research conducted. The issuer initially flagged on PAI 6 (Energy consumption intensity). Invesco conducted additional research on the issuer. Invesco has determined that the issuer has acknowledged the issue as a serious matter for a worthy response, but has not yet committed to resolving the issue.</p> <p>Although the issuer reported in its TCFD report that it is implementing carbon reduction initiatives (such as the use of energy-efficient offices and data centres, and reduction of emissions from transportation and business travel), no specific target for energy consumption is disclosed. The company does report that energy intensity reduction is strategy priority and that teams are responsible for finding ways to reduce energy consumption and carbon emissions in the workplace. However, from Invesco's research, it appears that these initiatives are mainly related to the issuer's corporate emissions rather than the largest source of energy consumption is related to its e-commerce subsidiary. The issuer has also disclosed a target to reduce its GHG emissions, but this not its energy intensity.</p>
An EMEA Energy Issuer	PAI 7: Activities negatively affecting biodiversity sensitive areas	<p>Research conducted. The issuer initially flagged on PAI 7 (Activities negatively affecting biodiversity sensitive areas). Invesco conducted research on the issuer and has determined that the entity has committed to address the issue and is developing a strategy.</p> <p>The issuer has outlined its commitment to protect biodiversity through a four pillar plan: 1) respecting voluntary exclusion zones; 2) managing biodiversity in new projects; 3) managing biodiversity in existing sites, and 4) promoting biodiversity.</p>

How did this financial product perform compared to the reference benchmark?

Not applicable.

● **How does the reference benchmark differ from a broad market index?**

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

Not applicable.

- ***How did this financial product perform compared with the reference benchmark?***

Not applicable.

- ***How did this financial product perform compared with the broad market index?***

Not applicable.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

- It made sustainable investments with an environmental objective: ___%**
 - in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

- It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments**
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective

- It made sustainable investments with a social objective: ___%**

- It promoted E/S characteristics, but did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Invesco Euro Corporate Bond Fund (the "Fund") aimed to promote environmental characteristics related to natural resource utilization and pollution (by excluding companies involved in coal extraction and production, and unconventional oil and gas such as Arctic oil and gas exploration/extraction, oil sands extraction and Shale Energy extraction). The Fund also promoted social characteristics related to human rights (by excluding companies in violation of any UN Global Compact's principles, based on third-party data and the Investment Manager's proprietary analysis and research) and by excluding issuers involved in tobacco production and tobacco related products and services, recreational cannabis, controversial weapons and manufacture of nuclear warheads or whole nuclear or whole nuclear missiles outside of the Non-Proliferation Treaty.

The environmental and social characteristics of the Fund were achieved by applying the exclusions criteria described above.

● How did the sustainability indicators perform?

The Fund used a variety of indicators to measure the attainment of the environmental and social characteristics. This included:

Sustainability Indicator	Indicator Performance
UN Global Compact, excluded if non-compliant	During the reference period, there were no active breaches of the Fund's exclusion criteria.
International sanctions, sanctioned investments are prohibited	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Controversial weapons, excluded if 0%, including companies involved in the manufacture of nuclear warheads or whole nuclear missiles outside of the NPT.	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Coal, excluded if Thermal Coal extraction >=5% of revenue, Thermal Coal Power generation >=10% of revenue	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Unconventional oil & gas, excluded if >=5% of revenue on each of the following: - Artic oil & gas exploration; - Oil sands extraction; - Shale energy extraction;	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Tobacco excluded if Tobacco Products production >=5% of revenue, Tobacco-related products and services >=5% of revenue	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Recreational cannabis, excluded if >=5% of revenue	During the reference period, there were no active breaches of the Fund's exclusion criteria.

● **...and compared to previous periods?**

Not applicable.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Not applicable.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Not applicable.

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund considered principal adverse impacts on sustainability factors (PAIs) by carrying out a qualitative and quantitative review of key metrics (primarily the 14 indicators as defined in Table 1 of the Annex I of the regulatory technical standards for Regulation 2019/2088). The quantitative review included a review of Invesco's Article 8 and 9 product holdings and the relevant PAI data. Through this initial review an absolute threshold was set that flagged issuers that failed to meet minimum standards, as well as companies that flagged on a binary output (such as controversial weapons or UN Global Compact violations). Once issuers were flagged for the quantitative review, an assessment was

completed to understand if there is publicly available information from the issuer that we are aware of that can be shown to be addressing the poor performance on the flagged PAI. The ESG research team assigned the issuer a qualitative score as to how well they were addressing the poor performance. Those issuers that received the lowest qualitative scores were then identified as engagement targets and were primarily engaged through methods such as letters, meetings, proxy voting. If no improvement was established through such corporate engagement, then the Fund could consider divesting and/or excluding investments.

The below table shows the PAI data for the Fund:

Adverse sustainability indicator	PAI	Data	Metric
Greenhouse gas emissions	1. GHG Emissions	108,649.80	Scope 1 fund financed emissions (Tonnes of CO2 equivalent)
		21,980.20	Scope 2 fund financed emissions (Tonnes of CO2 equivalent)
		1,065,241.80	Scope 3 fund financed emissions (Tonnes of CO2 equivalent)
		1,195,871.80	Total Financed emissions (Scope 1 + Scope 2 + Scope 3) (Tonnes of CO2 equivalent)
	2. Carbon footprint	573.30	Fund level Carbon footprint (Scope 1 + Scope 2 + Scope 3) (Per Million EUR Invested)
	3. GHG Intensity of investee companies	1121.14	Fund level Total Emission Intensity- Scope 1+2+3 (Per Million EUR Revenue)
	4. Exposure to companies active in the fossil fuel sector	0	% of the fund exposed to any fossil fuels revenue
	5. Share of non-renewable energy consumption	60.74	Adjusted Weighted Average of all issuers in the fund's share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)
	5. Share of non-renewable energy production	31.81	
	6. Energy consumption intensity per high impact climate sector		
	Agriculture, Forestry & Fishing	7.38	
	Construction	0	
	Electricity, Gas, Steam & Air Conditioning Supply	2.16	
	Manufacturing	0.39	
Mining & Quarrying	2.61		
Real Estate Activities	0.31		
Transportation & Storage	0.06		
Water Supply, Sewerage, Waste Management & Remediation Activities	0		
Wholesale & Retail Trade & Repair of Motor Vehicles & Motorcycles	0.07		
Biodiversity	7. Activities negatively affecting biodiversity-sensitive areas	11.12	Share of investments in the fund of investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those
Water	8. Emissions to water	5.18	Adjusted weighted average per issuer in the fund's emissions to water generated by investee companies per million EUR invested (Tonnes)
Waste	9. Hazardous waste and radioactive waste ratio	1.24	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average
Social and employee matters	10. Violations to UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	6.93	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance/ complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises
	12. Unadjusted gender pay gap	22.12	Weighted Average of all issuers' in the portfolio unadjusted gender pay gap of investee companies
	13. Board gender diversity	39.45	Weighted Average of all issuers in the portfolio ratio of female to male board members in investee companies, expressed as a percentage of all board members
	14. Exposure to controversial weap- ons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0	Share of investments in investee companies involved in the manufacture or selling of controversial weapons

Notes:

Although Scope 3 emissions are included in the above table showing the PAI scores for the Fund, they were not included in the quantitative review process to consider PAIs during the reporting period.

The data presented in the above table is calculated using information provided by a third-party data vendor. The accuracy, completeness, and relevance of the calculated data are contingent upon the accuracy and completeness of the data provided by this third-party vendor. The numbers reported represent our best effort to provide the most accurate calculations in light of the data available. However, there are no warranties or representations, express or implied, regarding the completeness, accuracy, or suitability of this data for any particular purpose.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 28 February 2023

Large Investments	Sector	% Assets	Country
Bundesrepublik Deutschland Bundesanleihe 1.7% EUR 15/08/2032	Sovereign	2.58%	Germany
Invesco Liquidity Funds plc - Invesco Euro Liquidity Portfolio	Cash	2.53%	Ireland
United States Treasury Note/Bond 2.875% USD 15/05/2032	Sovereign	1.45%	United States
Bundesschatzanweisungen 0% EUR 15/09/2023	Sovereign	1.10%	Germany
Apple Inc 1.625% EUR 10/11/2026	Information Technology	1.02%	United States
AT&T Inc 2.45% EUR 15/03/2035	Communication Services	0.92%	United States
Walmart Inc 2.55% EUR 08/04/2026	Consumer Staples	0.84%	United States

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

The exclusions were screened to the full investment universe, representing at least 90% of the portfolio (#1 Aligned with E/S characteristics) by virtue of the binding elements of the Fund's investment strategy. Ancillary liquid assets and money market instruments which were held for cash management/liquidity purposes may not have been assessed for compliance with the above exclusion framework (#2 Other).

● What was the asset allocation?

100.00% of the Fund's NAV was selected according to the binding elements of the investment strategy, on the basis that they aligned with the environmental and social characteristics of the Fund.

-0.14% of the Fund's NAV was invested in financial derivative instruments for hedging and/or efficient portfolio management purposes; and 1.85% cash was held for ancillary liquidity purposes.

All the above data is provided as of 28 February 2023.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives
- The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

The below table shows the GICS sector breakdown as at 28 February 2023

Sector (GICS)	Weight %
Financials	35.39
Utilities	9.58
Consumer Staples	9.11
Communication Services	8.76
Health Care	6.10
Energy	6.02
Consumer Discretionary	6.01
Industrials	4.74
Information Technology	3.84
Materials	1.96
Real Estate	0.32
Sovereign	6.46
Cash	1.85
Others/Derivatives	-0.14
Total	100.00

GICS Level 4 breakdown for Energy Sector

Sub-Industry Code	Sub-Industry Name	Weight
10101010	Oil & Gas Drilling	0.00
10101020	Oil & Gas Equipment & Services	0.24
10102010	Integrated Oil & Gas	5.59
10102020	Oil & Gas Exploration & Production	0.00
10102030	Oil & Gas Refining & Marketing	0.19
10102040	Oil & Gas Storage & Transportation	0.00
10102050	Coal & Consumable Fuels	0.00
Total		6.02

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure (OpEx)** reflects the green operational activities of investee companies.

Whilst the Fund did not commit to a minimum of sustainable investments with an environmental objective aligned with EU Taxonomy, **1.92%** (Turnover) of the Fund's portfolio was aligned with the EU Taxonomy.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

- Yes
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The below table shows the share of investments in transitional and enabling activities as at 28th February 2023.

	Aligned
Enabling	0.61%
Transition	0.00%

'Aligned' means % of revenues of the investments of the Fund that are aligned to the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable.

What was the share of socially sustainable investments?

Not applicable.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

0.00% of the Fund’s asset allocation was included under "Other". As described above, the Fund could hold ancillary liquid assets or money market instruments for cash management/liquidity purposes. The Fund held ancillary liquid assets or money market instruments for cash management/liquidity purposes which were not assessed for compliance with the above exclusion framework. Due to the neutral nature of the assets, no minimum safeguards were in place.

Index derivatives were not assessed on a look-through basis, unless such an index had a significant allocation to prohibited activities.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund achieved the environmental and social characteristics by complying with the exclusion framework, which was consistent with attaining the environmental and social characteristics promoted by the Fund.

Please refer to the section “How did the sustainability indicators perform” above for further information.

In addition, as part of the Fund's consideration of principal adverse impacts on sustainability factors, the ESG team monitored the investments against PAI indicators. Invesco conducted research into certain issuers in the Fund’s portfolio that were deemed to flag against PAI indicators. Please see below examples of researched issuers during the reference period:

Holding	Principal Adverse Impact	Action Taken
An EMEA Materials Issuer	PAI 1,2,3: GHG Emissions	<p>Research conducted. The issuer initially flagged for PAI 1,2 and 3 (GHG emissions). The issuer has acknowledged the issue and set targets to address it.</p> <p>They commit to reduce scope 1 GHG emissions 17.5% and scope 2 GHG emissions 65% per ton of cementitious materials, alongside a target to reduce scope 3 emissions per metric ton of clinker and cement purchased by 25.1%. All targets are set for 2030, with a 2020 base year.</p> <p>Invesco’s ESG team engaged with the company to discuss their carbon emissions. The company was the first in their sector to sign the “Business Ambition for 1.5°C” pledge and have their targets approved by the Science-Based Targets initiative (SBTi).</p>
A North American Consumer Staples Issuer	PAI 7: Activities negatively affecting biodiversity sensitive areas	<p>Research conducted. The issuer initially flagged for PAI 7 (Activities negatively affecting biodiversity sensitive areas), for two reasons: land use and biodiversity and human rights. The issuer has acknowledged both issues and has strategies and associated goals in place to deal with them.</p> <p>Land use and biodiversity predominantly relates to its involvement in deforestation due to its use of palm oil and procurement of cocoa. The issuer has a palm oil action plan and a ‘Cocoa Life’ plan which also focuses on human rights in the cocoa supply chain.</p> <p>They acknowledge the issue of deforestation and require their suppliers to adopt forest protection and sustainability policies for their entire supply base, not just for palm oil supplied to the company. They’re working with global suppliers to ensure all oil used is sustainably sourced and fully traceable.</p>
A North American Health Care Issuer	PAI 7: Activities negatively affecting biodiversity sensitive areas	<p>Research conducted. The issuer initially flagged on PAI 7 (Activities negatively affecting biodiversity sensitive areas). Through additional research, Invesco determined the issuer has committed to address the issue and is developing a strategy.</p> <p>Pharmaceutical companies are exposed to emission, effluents and waste through waste and water discharge from the production of antibiotics and antifungals. Improper environmental practices are a leading cause of antimicrobial resistance (AMR), which has been declared a life-threatening challenge by the World Health Organization (WHO). Through Invesco’s research, the issuer has a well-articulated strategy to manage this risk. The issuer has published a statement where it reports that limiting the presence of pharmaceuticals in the environment is a priority for the issuer. The issuer has a program dedicated to assessing and mitigating the risks associated with manufacturing discharges (one of the lesser ways that pharmaceuticals can enter the environment). The issuer is also actively involved with the AMR Industry Alliance (AMRIA), which has a roadmap to understand and mitigate potential impacts of AMR, including demonstrating responsible manufacturing of products and providing greater transparency of their actions.</p>

How did this financial product perform compared to the reference benchmark?

Not applicable.

● How does the reference benchmark differ from a broad market index?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

Not applicable.

- ***How did this financial product perform compared with the reference benchmark?***

Not applicable.

- ***How did this financial product perform compared with the broad market index?***

Not applicable.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

- It made sustainable investments with an environmental objective: ___%**
 - in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

- It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments**
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective

- It made sustainable investments with a social objective: ___%**

- It promoted E/S characteristics, but did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Invesco Global Consumer Trends Fund (the "Fund") aimed to promote environmental characteristics related to natural resource utilization and pollution (by excluding companies involved in coal extraction and production, and unconventional oil and gas such as Arctic oil and gas exploration/extraction, oil sands extraction and Shale Energy extraction). The Fund also promoted social characteristics related to human rights (by excluding companies in violation of any UN Global Compact's principles, based on third-party data and the Investment Manager's proprietary analysis and research) and by excluding issuers involved in tobacco production and tobacco related products and services, recreational cannabis, controversial weapons and manufacture of nuclear warheads or whole nuclear or whole nuclear missiles outside of the Non-Proliferation Treaty.

The environmental and social characteristics of the Fund were achieved by applying the exclusions criteria described above.

● How did the sustainability indicators perform?

The Fund used a variety of indicators to measure the attainment of the environmental and social characteristics. This included:

Sustainability Indicator	Indicator Performance
UN Global Compact, excluded if non-compliant	During the reference period, there were no active breaches of the Fund's exclusion criteria.
International sanctions, sanctioned investments are prohibited	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Controversial weapons, excluded if 0%, including companies involved in the manufacture of nuclear warheads or whole nuclear missiles outside of the NPT.	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Coal, excluded if Thermal Coal extraction >=5% of revenue, Thermal Coal Power generation >=10% of revenue	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Unconventional oil & gas, excluded if >=5% of revenue on each of the following: - Artic oil & gas exploration; - Oil sands extraction; - Shale energy extraction;	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Tobacco excluded if Tobacco Products production >=5% of revenue, Tobacco-related products and services >=5% of revenue	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Recreational cannabis, excluded if >=5% of revenue	During the reference period, there were no active breaches of the Fund's exclusion criteria.

● **...and compared to previous periods?**

Not applicable.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Not applicable.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Not applicable.

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund considered principal adverse impacts on sustainability factors (PAIs) by carrying out a qualitative and quantitative review of key metrics (primarily the 14 indicators as defined in Table 1 of the Annex I of the regulatory technical standards for Regulation 2019/2088). The quantitative review included a review of Invesco's Article 8 and 9 product holdings and the relevant PAI data. Through this initial review an absolute threshold was set that flagged issuers that failed to meet minimum standards, as well as companies that flagged on a binary output (such as controversial weapons or UN Global

Compact violations). Once issuers were flagged for the quantitative review, an assessment was completed to understand if there is publicly available information from the issuer that we are aware of that can be shown to be addressing the poor performance on the flagged PAI. The ESG research team assigned the issuer a qualitative score as to how well they were addressing the poor performance. Those issuers that received the lowest qualitative scores were then identified as engagement targets and were primarily engaged through methods such as letters, meetings, proxy voting. If no improvement was established through such corporate engagement, then the Fund could consider divesting and/or excluding investments.

The below table shows the PAI data for the Fund:

Adverse sustainability indicator	PAI	Data	Metric
Greenhouse gas emissions	1. GHG Emissions	7,781.65	Scope 1 fund financed emissions (Tonnes of CO2 equivalent)
		14,920.74	Scope 2 fund financed emissions (Tonnes of CO2 equivalent)
		440,883.92	Scope 3 fund financed emissions (Tonnes of CO2 equivalent)
		463,586.31	Total Financed emissions (Scope 1 + Scope 2 + Scope 3) (Tonnes of CO2 equivalent)
		198.68	Fund level Carbon footprint (Scope 1 + Scope 2 + Scope 3) (Per Million EUR Invested)
	3. GHG Intensity of investee companies	395.75	Fund level Total Emission Intensity- Scope 1+2+3 (Per Million EUR Revenue)
	4. Exposure to companies active in the fossil fuel sector	0	% of the fund exposed to any fossil fuels revenue
	5. Share of non-renewable energy consumption	76.81	Adjusted Weighted Average of all issuers in the fund's share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)
	6. Share of non-renewable energy production	0	
	6. Energy consumption intensity per high impact climate sector		
	Agriculture, Forestry & Fishing	0	
	Construction	0	
	Electricity, Gas, Steam & Air Conditioning Supply	0	
	Manufacturing	0.1	
Mining & Quarrying	0		
Real Estate Activities	0		
Transportation & Storage	0		
Water Supply, Sewerage, Waste Management & Remediation Activities	0		
Wholesale & Retail Trade & Repair of Motor Vehicles & Motorcycles	4.61		
7. Activities negatively affecting biodiversity-sensitive areas	8.05	Share of investments in the fund of investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those	
8. Emissions to water	0	Adjusted weighted average per issuer in the fund's emissions to water generated by investee companies per million EUR invested (Tonnes)	
9. Hazardous waste and radioactive waste ratio	0.06	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average	
Social and employee matters	10. Violations to UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0.74	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	16.64	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance/ complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises
	12. Unadjusted gender pay gap	11.89	Weighted Average of all issuers' in the portfolio unadjusted gender pay gap of investee companies
	13. Board gender diversity	29.52	Weighted Average of all issuers in the portfolio ratio of female to male board members in investee companies, expressed as a percentage of all board members
14. Exposure to controversial weap- ons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	

Notes:

Although Scope 3 emissions are included in the above table showing the PAI scores for the Fund, they were not included in the quantitative review process to consider PAIs during the reporting period.

The data presented in the above table is calculated using information provided by a third-party data vendor. The accuracy, completeness, and relevance of the calculated data are contingent upon the accuracy and completeness of the data provided by this third-party vendor. The numbers reported represent our best effort to provide the most accurate calculations in light of the data available. However, there are no warranties or representations, express or implied, regarding the completeness, accuracy, or suitability of this data for any particular purpose.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 28 February 2023

Large Investments	Sector	% Assets	Country
Amazon.com Inc	Consumer Discretionary	9.63%	United States
Tesla Inc	Consumer Discretionary	8.20%	United States
EPR Properties	Real Estate	6.20%	United States
Lowe's Cos Inc	Consumer Discretionary	4.99%	United States
Sony Group Corp	Consumer Discretionary	3.20%	Japan
Hello Group Inc ADR	Communication Services	3.08%	Cayman Islands
Netflix Inc	Communication Services	2.89%	United States
MercadoLibre Inc	Consumer Discretionary	2.79%	United States
Booking Holdings Inc	Consumer Discretionary	2.66%	United States
Penn Entertainment Inc	Consumer Discretionary	2.65%	United States
Take-Two Interactive Software Inc	Communication Services	2.43%	United States
Nintendo Co Ltd	Communication Services	2.32%	Japan
Farfetch Ltd	Consumer Discretionary	2.31%	Cayman Islands
Playa Hotels & Resorts NV	Consumer Discretionary	2.27%	Netherlands
General Motors Co	Consumer Discretionary	2.26%	United States

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

The exclusions were screened to the full investment universe, representing at least 90% of the portfolio (#1 Aligned with E/S characteristics) by virtue of the binding elements of the Fund's investment strategy. Ancillary liquid assets and money market instruments which were held for cash management/liquidity purposes may not have been assessed for compliance with the above exclusion framework (#2 Other).

● What was the asset allocation?

100.00% of the Fund's NAV was selected according to the binding elements of the investment strategy, on the basis that they aligned with the environmental and social characteristics of the Fund.

0.00% of the Fund's NAV was invested in financial derivative instruments for hedging and/or efficient portfolio management purposes; and investment in funds not subject to the same restrictions.

All the above data is provided as of 28 February 2023.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives
- The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

The below table shows the GICS sector breakdown as at 28 February 2023

Sector (GICS)	Weight %

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure (OpEx)** reflects the green operational activities of investee companies.

Whilst the Fund did not commit to a minimum of sustainable investments with an environmental objective aligned with EU Taxonomy, **7.98%** (Turnover) of the Fund's portfolio was aligned with the EU Taxonomy.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

- Yes
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures**

● **What was the share of investments made in transitional and enabling activities?**

The below table shows the share of investments in transitional and enabling activities as at 28th February 2023.

	Aligned
Enabling	7.73%
Transition	0.25%

'Aligned' means % of revenues of the investments of the Fund that are aligned to the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable.

What was the share of socially sustainable investments?

Not applicable.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

0.00% of the Fund’s asset allocation was included under "Other". As described above, the Fund could hold ancillary liquid assets or money market instruments for cash management/liquidity purposes. The Fund held ancillary liquid assets or money market instruments for cash management/liquidity purposes which were not assessed for compliance with the above exclusion framework. Due to the neutral nature of the assets, no minimum safeguards were in place.

Index derivatives were not assessed on a look-through basis, unless such an index had a significant allocation to prohibited activities.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund achieved the environmental and social characteristics by complying with the exclusion framework, which was consistent with attaining the environmental and social characteristics promoted by the Fund.

Please refer to the section “How did the sustainability indicators perform” above for further information.

In addition, as part of the Fund's consideration of principal adverse impacts on sustainability factors, the ESG team monitored the investments against PAI indicators. Invesco conducted research into certain issuers in the Fund’s portfolio that were deemed to flag against PAI indicators. Please see below examples of researched issuers during the reference period:

Holding	Principal Adverse Impact	Action Taken
A South American Consumer Discretionary Issuer	PAI 6: Energy consumption intensity	Research conducted. The issuer initially flagged on PAI 6 (Energy consumption intensity). Through additional research, Invesco has determined that the issuer has acknowledged the issue as a serious matter for a worthy response but has not yet committed to resolving the issue. The issuer does report on the topic of climate change and energy efficiency. The issuer states that it aims to reduce its environmental footprint by using more renewable energy sources and developing energy-efficiency projects: energy efficiency and migration of operations to renewable energies (transport). There are measures such as a smart metering strategy that allow the issuer to remotely monitor energy consumption in seven buildings. The issuer aims for 100% of operations to migrate to renewable energy sources (self-produced and externally bought renewable energy). It discloses its GHG emissions (scope 1,2 and 3), but no targets have been set yet.

How did this financial product perform compared to the reference benchmark?

Not applicable.

● **How does the reference benchmark differ from a broad market index?**

Not applicable.

● **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

Not applicable.

● **How did this financial product perform compared with the reference benchmark?**

Not applicable.

● **How did this financial product perform compared with the broad market index?**

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

- It made sustainable investments with an environmental objective: ___%**
 - in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

- It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 77 % of sustainable investments**
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective

- It made sustainable investments with a social objective: ___%**

- It promoted E/S characteristics, but did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Invesco Sustainable Global Structured Equity Fund (the "Fund") aimed to promote environmental characteristics related to climate change mitigation (such as carbon emissions) as well as natural resource utilization and pollution (for example by exclusion of companies involved in fossil fuel, coal, nuclear power or activities generating pollution).

The Fund also promoted social characteristics related to human rights by excluding companies in violation of any UN Global Compact's principles (based on third-party data and the Investment Manager's proprietary analysis and research) and by excluding controversial activities issuers involved in (but not limited to) manufacturing or sale of conventional weapons or production and distribution of tobacco. The Fund aimed to select companies and issuers that display superior sustainable management and sustainable products or processes, fulfilling ecological and social requirements particularly well, ranging from climate efficiency and low water consumption to labour safety and satisfaction. Ecological characteristics were assessed using an energy transition score. Social features were considered by excluding companies with controversial business behaviours.

The Fund achieved its environmental and social characteristics by applying its exclusion and best-in class approach on an on-going basis.

The Fund is managed systematically. In every rebalancing, it is ensured that the Fund meets the environmental and social characteristics.

● How did the sustainability indicators perform?

The Fund used a variety of indicators to measure the attainment of the environmental and social characteristics. This included:

Sustainability Indicator	Indicator Performance
Turnover derived from thermal coal mining, excluded if >=5% Turnover derived from burning coal for power generation, excluded if >=5% Proportion in electricity generation fuel mix from coal, excluded if >=5% Structural increase of thermal coal activities over 3 years, excluded if Yes	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Revenues that comes from projects or the extraction of tar sands, excluded if 0% and oil shale, as well as the proportion of reserves in tar sands or oil shale Involvement in fracking activities, excluded if Yes Involvement in arctic drilling activities, excluded if Yes	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Revenues are derived from fossil fuel industries, excluded if >=5% Structural increase of fossil activities over 3 year, excluded if Yes	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Company's commitment to define clear objectives and appropriate measures to ensure management of the environmental impacts of products and services, excluded if insufficient environmental strategy	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Production of restricted chemicals, excluded if 0%	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Controversies in the field of endangering biodiversity, excluded if yes	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Controversies in the field of preventing and managing of accidental pollution or soil pollution, excluded if yes	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Controversies in the field of community involvement (including e.g. impact of operations on the local economy, responsible tax strategy, transfer of technology and skills), excluded if yes	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Turnover from nuclear power, excluded if >=5% Proportion in electricity generation fuel mix from nuclear power, excluded if >=5%	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Manufacture or sale of civilian firearms or related products, excluded if >=5% Manufacture of civilian firearms or related products, excluded if >=5%	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Sales that are related to military sales including key parts or services, for conventional weapons, excluded if >=5%	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Controversial Weapons, excluded if >0%	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Turnover from production and distribution of tobacco, excluded if >=5%	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Turnover from production of tobacco, excluded if >=5%	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Fail to pass the global compact screening, excluded if Yes	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Controversies in labour rights including the supply chain, forced or child labour and discrimination, excluded if yes	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Controversies in pollution or lack of protection of water resources, excluded if yes	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Involvement in recreational cannabis, excluded if yes	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Controversies in corruption, excluded if yes	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Energy Transition Score	43
% of issuers that are in the Top 75% of universe based on the energy transition score	100%
The Fund's Scope 1 and 2 GHG emission intensity vs the market cap weighted (MSCI World Index) GHG Scope 1 and 2 GHG emission intensity	79.4 vs 124.6

● **...and compared to previous periods?**

Not applicable.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The Fund made sustainable investments by contributing to environmental objectives (such as climate change, water management, pollution prevention) and to social objectives (such as good health, well-being and gender equality).

The Fund sought to achieve those objectives by investing in (i) issuers which contribute positively to selected UN Sustainable Development Goals (SDGs) (generating at least 25% of the issuer's revenue) that relate to the above objectives, or (ii) companies which generate a material part of the revenue from environmental impact themes such as energy transition (by selecting companies in the top 25% based on the energy transition score within its region and sector), healthcare (by selecting companies part of the GICS Sector 35) and food (by selecting companies part of the GICS Industry 302020). The Fund also used a best-in-class approach, utilizing the investment manager's proprietary scoring methodology and selecting companies in the top 75% within the respective peer group for either score eligible. It should be noted that the full weight in the portfolio counted as sustainable investments when meeting the above criteria.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

The Fund primarily used the mandatory principal adverse impacts (PAI) indicators defined in Table 1 of Annex I of the regulatory technical standards for Regulation 2019/2088, combined with qualitative research and/or engagement, to assess whether the sustainable investments of the Fund cause significant harm (DNSH) to a relevant environmental or social investment objective. Where a company

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

was determined to cause such significant harm, it could still be held within the Fund but did not count toward the “sustainable investments” within the Fund. For the avoidance of doubt, the assessment was done prior to investment and on the full holding.

How were the indicators for adverse impacts on sustainability factors taken into account?

Please see above on how the indicators for adverse impacts on sustainability factors were taken into account.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Fund excluded companies, sectors or countries from the investment universe when such companies violate international norms and standards according to the definitions of the International Labour Organisation (ILO), the OECD or the United Nations. All issuers considered for investment were screened for compliance with, and excluded if they did not meet UN Global Compact principles, based on third-party data and the Investment Manager’s proprietary analysis and research.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund considered principal adverse impacts on sustainability factors (PAIs) by carrying out a qualitative and quantitative review of key metrics (primarily the 14 indicators as defined in Table 1 of the Annex I of the regulatory technical standards for Regulation 2019/2088). The quantitative review included a review of Invesco's Article 8 and 9 product holdings and the relevant PAI data. Through this initial review an absolute threshold was set that flagged issuers that failed to meet minimum standards, as well as companies that flagged on a binary output (such as controversial weapons or UN Global Compact violations). Once issuers were flagged for the quantitative review, an assessment was completed to understand if there is publicly available information from the issuer that we are aware of that can be shown to be addressing the poor performance on the flagged PAI. The ESG research team assigned the issuer a qualitative score as to how well they were addressing the poor performance. Those issuers that received the lowest qualitative scores were then identified as engagement targets and were primarily engaged through methods such as letters, meetings, proxy voting. If no improvement was established through such corporate engagement, then the Fund could consider divesting and/or excluding investments.

The below table shows the PAI data for the Fund:

Adverse sustainability indicator	PAI	Data	Metric	
Greenhouse gas emissions	1. GHG Emissions	8,541.97	Scope 1 fund financed emissions (Tonnes of CO2 equivalent)	
		2,774.29	Scope 2 fund financed emissions (Tonnes of CO2 equivalent)	
		77,507.10	Scope 3 fund financed emissions (Tonnes of CO2 equivalent)	
		88,823.36	Total Financed emissions (Scope 1 + Scope 2 + Scope 3) (Tonnes of CO2 equivalent)	
	2. Carbon footprint	356.14	Fund level Carbon footprint (Scope 1 + Scope 2 + Scope 3) (Per Million EUR Invested)	
	3. GHG Intensity of investee companies	700.68	Fund level Total Emission Intensity- Scope 1+2+3 (Per Million EUR Revenue)	
	4. Exposure to companies active in the fossil fuel sector	0.59	% of the fund exposed to any fossil fuels revenue	
	5. Share of non-renewable energy consumption	74.41	Adjusted Weighted Average of all issuers in the fund's share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)	
	5. Share of non-renewable energy production	6.81		
	6. Energy consumption intensity per high impact climate sector	Agriculture, Forestry & Fishing		Adjusted weighted average energy consumption of issuers in the fund in GWh per million EUR of revenue of investee companies, per high impact climate sector
		Construction	0.02	
		Electricity, Gas, Steam & Air Conditioning Supply	0.2	
		Manufacturing	0.89	
		Mining & Quarrying	1.46	
Real Estate Activities		1.66		
Transportation & Storage		4.07		
Water Supply, Sewerage, Waste Management & Remediation Activities		0.87		
Wholesale & Retail Trade & Repair of Motor Vehicles & Motorcycles		0.76		
Biodiversity	7. Activities negatively affecting biodiversity-sensitive areas	3.93	Share of investments in the fund of investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those	
Water	8. Emissions to water	0.4	Adjusted weighted average per issuer in the fund's emissions to water generated by investee companies per million EUR invested (Tonnes)	
Waste	9. Hazardous waste and radioactive waste ratio	16.77	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average	
Social and employee matters	10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises		Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	9.32	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance/ complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	
	12. Unadjusted gender pay gap	10.28	Weighted Average of all issuers' in the portfolio unadjusted gender pay gap of investee companies	
	13. Board gender diversity	32.97	Weighted Average of all issuers in the portfolio ratio of female to male board members in investee companies, expressed as a percentage of all board members	
Optional Indicators	Optional Indicator: 4. Investments in companies without carbon emission reduction initiative	43.57	Share of investments in investee companies without carbon emission reduction initiatives aimed at aligning with the Paris Agreement	
	Optional Indicator: 9. Lack of a human rights policy	4.41	Share of investments in entities without a human rights policy	

Notes:

Although Scope 3 emissions are included in the above table showing the PAI scores for the Fund, they were not included in the quantitative review process to consider PAIs during the reporting period.

The data presented in the above table is calculated using information provided by a third-party data vendor. The accuracy, completeness, and relevance of the calculated data are contingent upon the accuracy and completeness of the data provided by this third-party vendor. The numbers reported represent our best effort to provide the most accurate calculations in light of the data available. However, there are no warranties or representations, express or implied, regarding the completeness, accuracy, or suitability of this data for any particular purpose.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 28 February 2023

Large Investments	Sector	% Assets	Country
Apple Inc	Information Technology	1.81%	United States
Japan Post Holdings Co Ltd	Financials	1.34%	Japan
Takeda Pharmaceutical Co Ltd	Health Care	1.25%	Japan
Merck & Co Inc	Health Care	1.25%	United States
General Mills Inc	Consumer Staples	1.19%	United States
Nippon Telegraph & Telephone Corp	Communication Services	1.16%	Japan
Hershey Co/The	Consumer Staples	1.10%	United States
Consolidated Edison Inc	Utilities	1.04%	United States
KDDI Corp	Communication Services	1.02%	Japan
Novartis AG	Health Care	1.01%	Switzerland
Bristol-Myers Squibb Co	Health Care	1.01%	United States
UnitedHealth Group Inc	Health Care	0.94%	United States
Hydro One Ltd 144A	Utilities	0.93%	Canada
Expeditors International of Washington Inc	Industrials	0.93%	United States
Banco Bilbao Vizcaya Argentaria SA	Financials	0.86%	Spain

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

The Fund made investments aligned with the E/S characteristics for a minimum of 90% of its portfolio (#1 Aligned with E/S characteristics) by virtue of binding elements of the Fund's investment strategy. A maximum of 10% was invested in money market instruments or ancillary liquid assets for liquidity management purposes (#2 Other).

● What was the asset allocation?

93.4% of the Fund's NAV was selected according to the binding elements of the investment strategy, on the basis that they aligned with the environmental and social characteristics of the Fund.

6.6% of the Fund's NAV was invested in financial derivative instruments for investment and/or hedging and/or efficient portfolio management purposes, cash that was held for ancillary liquidity purposes, and investments in other funds that were not subject to the same restrictions.

76.7% of the Fund's NAV was invested in sustainable investments.

All the above data is provided as of 28 February 2023.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

The below table shows the GICS sector breakdown as at 28 February 2023

Sector (GICS)	Weight %
Health Care	17.04
Information Technology	14.86
Financials	14.58
Consumer Staples	12.20
Communication Services	10.68
Industrials	7.87
Consumer Discretionary	5.87
Materials	4.70
Utilities	2.19
Real Estate	1.79
Energy	1.60
Sovereign	0.00
Cash	6.63
Others/Derivatives	-0.01
Total	100.00

GICS Level 4 breakdown for Energy Sector

Sub-Industry Code	Sub-Industry Name	Weight
10101010	Oil & Gas Drilling	0.00
10101020	Oil & Gas Equipment & Services	1.25
10102010	Integrated Oil & Gas	0.00
10102020	Oil & Gas Exploration & Production	0.00
10102030	Oil & Gas Refining & Marketing	0.35
10102040	Oil & Gas Storage & Transportation	0.00
10102050	Coal & Consumable Fuels	0.00
Total		1.60

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

Whilst the Fund did not commit to a minimum of sustainable investments with an environmental objective aligned with EU Taxonomy, 0.4% (Turnover) of the Fund's portfolio was aligned with the EU Taxonomy.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

Yes

In fossil gas In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The below table shows the share of investments in transitional and enabling activities as at 28th February 2023.

	Aligned
Enabling	0.32%
Transition	0.00%

'Aligned' means % of revenues of the investments of the Fund that are aligned to the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

47.0% of the Fund's NAV was invested in sustainable investments with an environmental objective not aligned with the EU Taxonomy. The Investment Manager monitored closely the evolution of the dataset and their reliance and increased the portion of sustainable investments aligned with EU Taxonomy as the case may be, which decreased the exposure to sustainable investments not aligned with EU Taxonomy

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

in the Fund.

What was the share of socially sustainable investments?

29.3% of the Fund's NAV was invested in socially sustainable investments. The Fund had a minimum investment of 1% in socially sustainable investments. It should be noted that the Fund aimed to allocate 10% in sustainable investments with a social objective and/or an environmental objective.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

As described above, the Fund could hold ancillary liquid assets or money market instruments for cash management/liquidity purposes which was not assessed for compliance with the above ESG framework. Due to the neutral nature of the assets, no minimum safeguards were put in place.

Index derivatives were not assessed on a look-through basis, unless such an index had a significant allocation to prohibited activities.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund achieved the environmental and social characteristics by complying with the exclusions and the best-in-class approach, which was consistent with attaining the environmental and social characteristics promoted by the Fund.

Please refer to the section "How did the sustainability indicators perform" above for further information.

In addition, as part of the Fund's consideration of principal adverse impacts on sustainability factors, the ESG team monitored the investments against PAI indicators. Invesco conducted research into certain issuers in the Fund's portfolio that were deemed to flag against PAI indicators. Please see below examples of researched issuers during the reference period:

Holding	Principal Adverse Impact	Action Taken
An EMEA Materials Issuer	PAI 1,2,3: GHG Emissions	<p>Research conducted. The issuer initially flagged for PAI 1,2 and 3 (GHG emissions). The issuer has acknowledged the issue and set targets to address it.</p> <p>They commit to reduce scope 1 GHG emissions 17.5% and scope 2 GHG emissions 65% per ton of cementitious materials, alongside a target to reduce scope 3 emissions per metric ton of clinker and cement purchased by 25.1%. All targets are set for 2030, with a 2020 base year.</p> <p>Invesco's ESG team engaged with the company to discuss their carbon emissions. The company was the first in their sector to sign the "Business Ambition for 1.5°C" pledge and have their targets approved by the Science-Based Targets initiative (SBTi).</p>
An APAC Materials Issuer	PAI 1,2,3: GHG Emissions and PAI 7: Activities negatively affecting biodiversity	<p>Research conducted. The issuer initially flagged on PAI 1,2,3 (GHG Emissions) and PAI 7 (Activities negatively affecting biodiversity). Through additional research, Invesco determined the issuer has committed to address both issues and is developing a strategy.</p> <p>The issuer's carbon intensity in 2020 was 84.2 tonne CO₂e / tonne copper equivalent (vs. 54.47 sector mean). Increasing from 75.28 in 2016 (\$3.80). On GHG Emissions, the issuer has disclosed the following commitments: net zero by 2050 across Scope 1 and 2, 15% reduction by 2025, and 50% by 2030 across Scope 1 and 2 (aligned with the stretch goal of the Paris Agreement), net zero emissions from shipping by 2050 and 40% reduction in intensity by 2025, addressing a part of scope 3. The issuer also has a commitment to engage with iron ore and bauxite customers to share decarbonisation plans and seek collaboration.</p> <p>The issuer has established policies and commitments regarding biodiversity protection. In its disclosure, the issuer has set the following standard across all its business units and managed operations: 1) to mitigate impacts on important biodiversity features, priority ecosystems services and related natural resource availability to reduce residual impacts to the extent practicable by applying the mitigation hierarchy principles of avoid, minimize, and rehabilitate; 2) to actively seek and implement collaborative opportunities for enhancing biodiversity and long-term stewardship of natural resources within avoidance and restored zones and non-operational lands through an inclusive stakeholder approach; 3) when residual impacts are, or are predicted to be, significant following application of the earlier stages of the mitigation hierarchy, implement offsets as necessary to meet regulatory or lender requirements, or to otherwise manage associated risk. Commitments to voluntary offsets due to significant biodiversity impacts require the approval of the Managing Director.</p> <p>In addition, it commits to conducting appropriate hazard identification and risk management, management of change and monitoring, measuring and reporting. On its website, the issuer discloses that it has implemented a "risk and impact assessment on important biodiversity features", an "action plan" and a "monitoring programme" across 100% of high-priority biodiversity sites. Notwithstanding these policies, the issuer still faces challenges in mitigating biodiversity-related risks. In practice, the issuer has faced allegations of numerous biodiversity-related controversies (for example, a water discharge controversy in a mine in Madagascar). Sustainalytics flags QMM for its involvement in including a notable water discharge in its QIT Madagascar Minerals' (QMM) ilmenite mine in Madagascar. To respond to this specific incident, Rio Tinto commissioned an independent study on radiation and water quality around the mine, to be cross-examined by the Malagasy regulator, and have constructed a process water treatment unit to improve water management and mitigate water release and environmental impacts. As the outcomes of this study emerge, we will monitor the situation closely and assess whether Rio Tinto upholds its aforementioned commitments.</p>
An EMEA Health Care Issuer	PAI 7: Activities negatively affecting biodiversity sensitive areas	<p>Research conducted. The issuer initially flagged on PAI 7 (Activities negatively affecting biodiversity sensitive areas). Invesco conducted additional research on the issuer and has determined that the entity has committed to address the issue and is developing a strategy.</p> <p>The issuer has committed to close its operations in Puerto Rico (the biodiversity sensitive area in which it operates).</p>

How did this financial product perform compared to the reference benchmark?

The Fund was not compared to a reference benchmark.

- **How does the reference benchmark differ from a broad market index?**

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social

characteristics that they promote.

Not applicable.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

Not applicable.

Not applicable.

- ***How did this financial product perform compared with the broad market index?***

Not applicable.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

- It made sustainable investments with an environmental objective: ___%
 - in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

- It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective

- It made sustainable investments with a social objective: ___%

- It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Invesco Global Total Return (EUR) Bond Fund (the "Fund") aimed to promote environmental characteristics related to natural resource utilization and pollution (by excluding companies involved in coal extraction and production, and unconventional oil and gas such as Arctic oil and gas exploration/extraction, oil sands extraction and Shale Energy extraction). The Fund also promoted social characteristics related to human rights (by excluding companies in violation of any UN Global Compact's principles, based on third-party data and the Investment Manager's proprietary analysis and research) and by excluding issuers involved in tobacco production and tobacco related products and services, recreational cannabis, controversial weapons and manufacture of nuclear warheads or whole nuclear or whole nuclear missiles outside of the Non-Proliferation Treaty.

The environmental and social characteristics of the Fund were achieved by applying the exclusions criteria described above.

● How did the sustainability indicators perform?

The Fund used a variety of indicators to measure the attainment of the environmental and social characteristics. This included:

Sustainability Indicator	Indicator Performance
UN Global Compact, excluded if non-compliant	During the reference period, there were no active breaches of the Fund's exclusion criteria.
International sanctions, sanctioned investments are prohibited	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Controversial weapons, excluded if 0%, including companies involved in the manufacture of nuclear warheads or whole nuclear missiles outside of the NPT.	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Coal, excluded if Thermal Coal extraction >=5% of revenue, Thermal Coal Power generation >=10% of revenue	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Unconventional oil & gas, excluded if >=5% of revenue on each of the following: - Artic oil & gas exploration; - Oil sands extraction; - Shale energy extraction;	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Tobacco excluded if Tobacco Products production >=5% of revenue, Tobacco-related products and services >=5% of revenue	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Recreational cannabis, excluded if >=5% of revenue	During the reference period, there were no active breaches of the Fund's exclusion criteria.

● **...and compared to previous periods?**

Not applicable.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Not applicable.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Not applicable.

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund considered principal adverse impacts on sustainability factors (PAIs) by carrying out a qualitative and quantitative review of key metrics (primarily the 14 indicators as defined in Table 1 of the Annex I of the regulatory technical standards for Regulation 2019/2088). The quantitative review included a review of Invesco's Article 8 and 9 product holdings and the relevant PAI data. Through this initial review an absolute threshold was set that flagged issuers that failed to meet minimum standards, as well as companies that flagged on a binary output (such as controversial weapons or UN Global Compact violations). Once issuers were flagged for the quantitative review, an assessment was

completed to understand if there is publicly available information from the issuer that we are aware of that can be shown to be addressing the poor performance on the flagged PAI. The ESG research team assigned the issuer a qualitative score as to how well they were addressing the poor performance. Those issuers that received the lowest qualitative scores were then identified as engagement targets and were primarily engaged through methods such as letters, meetings, proxy voting. If no improvement was established through such corporate engagement, then the Fund could consider divesting and/or excluding investments.

The below table shows the PAI data for the Fund:

Adverse sustainability indicator	PAI	Data	Metric
Greenhouse gas emissions	1. GHG Emissions	47,817.49	Scope 1 fund financed emissions (Tonnes of CO2 equivalent)
		5,316.97	Scope 2 fund financed emissions (Tonnes of CO2 equivalent)
		233,196.22	Scope 3 fund financed emissions (Tonnes of CO2 equivalent)
		286,330.68	Total Financed emissions (Scope 1 + Scope 2 + Scope 3) (Tonnes of CO2 equivalent)
	2. Carbon footprint	326.49	Fund level Carbon footprint (Scope 1 + Scope 2 + Scope 3) (Per Million EUR Invested)
	3. GHG Intensity of investee companies	835.79	Fund level Total Emission Intensity- Scope 1+2+3 (Per Million EUR Revenue)
	4. Exposure to companies active in the fossil fuel sector	0	% of the fund exposed to any fossil fuels revenue
	5. Share of non-renewable energy consumption	55.12	Adjusted Weighted Average of all issuers in the fund's share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)
	5. Share of non-renewable energy production	32.69	
	6. Energy consumption intensity per high impact climate sector		
	Agriculture, Forestry & Fishing	0	
	Construction	0	
	Electricity, Gas, Steam & Air Conditioning Supply	3.36	
	Manufacturing	0.32	
Mining & Quarrying	6.7		
Real Estate Activities	0.42		
Transportation & Storage	3.77		
Water Supply, Sewerage, Waste Management & Remediation Activities	0		
Wholesale & Retail Trade & Repair of Motor Vehicles & Motorcycles	0.07		
7. Activities negatively affecting biodiversity-sensitive areas	2.58	Share of investments in the fund of investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those	
Water	8. Emissions to water	59.98	
Waste	9. Hazardous waste and radioactive waste ratio	1.02	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average
Social and employee matters	10. Violations to UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0.41	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	3.13	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance/ complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises
	12. Unadjusted gender pay gap	29.28	Weighted Average of all issuers' in the portfolio unadjusted gender pay gap of investee companies
	13. Board gender diversity	37.58	Weighted Average of all issuers in the portfolio ratio of female to male board members in investee companies, expressed as a percentage of all board members
	14. Exposure to controversial weap- ons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0	Share of investments in investee companies involved in the manufacture or selling of controversial weapons

Notes:

Although Scope 3 emissions are included in the above table showing the PAI scores for the Fund, they were not included in the quantitative review process to consider PAIs during the reporting period.

The data presented in the above table is calculated using information provided by a third-party data vendor. The accuracy, completeness, and relevance of the calculated data are contingent upon the accuracy and completeness of the data provided by this third-party vendor. The numbers reported represent our best effort to provide the most accurate calculations in light of the data available. However, there are no warranties or representations, express or implied, regarding the completeness, accuracy, or suitability of this data for any particular purpose.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 28 February 2023

Large Investments	Sector	% Assets	Country
United States Treasury Note/Bond 1.875% USD 15/02/2032	Sovereign	4.98%	United States
United States Treasury Inflation Indexed Bonds 0.125% USD 15/10/2025	Sovereign	4.91%	United States

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

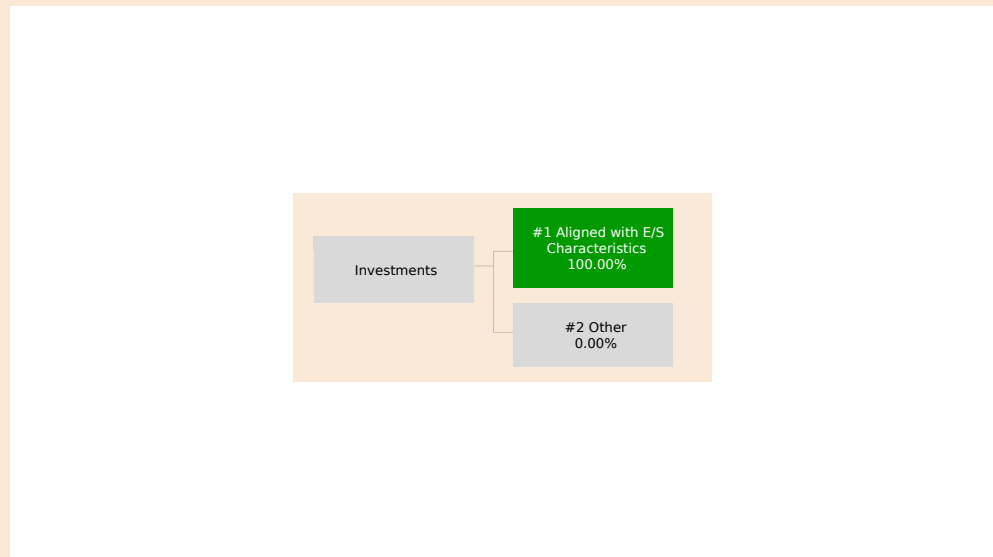

The exclusions were screened to the full investment universe, representing at least 90% of the portfolio (#1 Aligned with E/S characteristics) by virtue of the binding elements of the Fund's investment strategy. Ancillary liquid assets and money market instruments which were held for cash management/liquidity purposes may not have been assessed for compliance with the above exclusion framework (#2 Other).

● What was the asset allocation?

100.00% of the Fund's NAV was selected according to the binding elements of the investment strategy, on the basis that they aligned with the environmental and social characteristics of the Fund.

0.00% of the Fund's NAV was invested in financial derivative instruments for hedging and/or efficient portfolio management purposes; and investment in funds that are not subject to the same restrictions.

All the above data is provided as of 28 February 2023.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives

- The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

The below table shows the GICS sector breakdown as at 28 February 2023

Sector (GICS)	Weight %
Financials	33.26
Communication Services	5.84
Consumer Discretionary	3.19
Utilities	2.94
Consumer Staples	2.56
Health Care	1.90
Industrials	1.80
Information Technology	1.76
Energy	1.27
Materials	0.91
Real Estate	0.53
Sovereign	43.64
Cash	0.93
Others/Derivatives	-0.53
Total	100.00

GICS Level 4 breakdown for Energy Sector

Sub-Industry Code	Sub-Industry Name	Weight
10101010	Oil & Gas Drilling	0.00
10101020	Oil & Gas Equipment & Services	0.00
10102010	Integrated Oil & Gas	0.68
10102020	Oil & Gas Exploration & Production	0.26
10102030	Oil & Gas Refining & Marketing	0.33
10102040	Oil & Gas Storage & Transportation	0.00
10102050	Coal & Consumable Fuels	0.00
Total		1.27

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies.
- capital expenditure (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the Fund did not commit to a minimum of sustainable investments with an environmental objective aligned with EU Taxonomy, **0.60%** (Turnover) of the Fund's portfolio was aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

Yes

In fossil gas

In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The below table shows the share of investments in transitional and enabling activities as at 28th February 2023.

	Aligned
Enabling	0.32%
Transition	0.00%

'Aligned' means % of revenues of the investments of the Fund that are aligned to the EU Taxonomy.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Not applicable.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable.

What was the share of socially sustainable investments?

Not applicable.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

0.00% of the Fund's asset allocation was included under "Other". As described above, the Fund could hold ancillary liquid assets or money market instruments for cash management/liquidity purposes. The Fund held ancillary liquid assets or money market instruments for cash management/liquidity purposes which were not assessed for compliance with the above exclusion framework. Due to the neutral nature of the assets, no minimum safeguards were in place.

Index derivatives were not assessed on a look-through basis, unless such an index had a significant allocation to prohibited activities.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund achieved the environmental and social characteristics by complying with the exclusion framework, which was consistent with attaining the environmental and social characteristics promoted by the Fund.

Please refer to the section "How did the sustainability indicators perform" above for further information.

In addition, as part of the Fund's consideration of principal adverse impacts on sustainability factors, the ESG team monitored the investments against PAI indicators. Invesco conducted research into certain issuers in the Fund's portfolio that were deemed to flag against PAI indicators. Please see below examples of researched issuers during the reference period:

Holding	Principal Adverse Impact	Action Taken
A North American Consumer Staples Issuer	PAI 7: Activities negatively affecting biodiversity sensitive areas	<p>Research conducted. The issuer initially flagged for PAI 7 (Activities negatively affecting biodiversity sensitive areas), for two reasons: land use and biodiversity and human rights. The issuer has acknowledged both issues and has strategies and associated goals in place to deal with them.</p> <p>Land use and biodiversity predominantly relates to its involvement in deforestation due to its use of palm oil and procurement of cocoa. The issuer has a palm oil action plan and a 'Cocoa Life' plan which also focuses on human rights in the cocoa supply chain.</p> <p>They acknowledge the issue of deforestation and require their suppliers to adopt forest protection and sustainability policies for their entire supply base, not just for palm oil supplied to the company. They're working with global suppliers to ensure all oil used is sustainably sourced and fully traceable</p>
A North American Health Care Issuer	PAI 7: Activities negatively affecting biodiversity sensitive areas	<p>Research conducted. The issuer initially flagged on PAI 7 (Activities negatively affecting biodiversity sensitive areas). Through additional research, Invesco determined the issuer has committed to address the issue and is developing a strategy.</p> <p>Pharmaceutical companies are exposed to emission, effluents and waste through waste and water discharge from the production of antibiotics and antifungals. Improper environmental practices are a leading cause of antimicrobial resistance (AMR), which has been declared a life-threatening challenge by the World Health Organization (WHO). Through Invesco's research, the issuer has a well-articulated strategy to manage this risk. The issuer has published a statement where it reports that limiting the presence of pharmaceuticals in the environment is a priority for the issuer. The issuer has a program dedicated to assessing and mitigating the risks associated with manufacturing discharges (one of the lesser ways that pharmaceuticals can enter the environment). The issuer is also actively involved with the AMR Industry Alliance (AMRIA), which has a roadmap to understand and mitigate potential impacts of AMR, including demonstrating responsible manufacturing of products and providing greater transparency of their actions.</p>
An EMEA Energy Issuer	PAI 6: Energy consumption intensity	<p>Research conducted. The issuer initially flagged on PAI 6 (Energy Consumption Intensity) and PAI 7 (Activities negatively affecting biodiversity sensitive areas). Through additional research, Invesco determined that the entity acknowledged the issue as a serious matter for a worthy response but has not yet committed to resolving the issue.</p> <p>The issuer has strong management of both routine and accidental release of emissions, effluents and waste. The majority of its environmental management systems have been certified by ISO 14001. The issuer aims to minimize waste production by focusing on the circular economy as a tool to use resources efficiently. Its management of effluents generated during operations is generally adequate, although limited disclosure is available on the company's objectives or targets on this issue. Concerning spills, the volume of hydrocarbons spilled by the company was 6 metric tons in FY2021, which is a decrease of 92% compared to the average of the previous four years. However, an oil spill of over 10,000 barrels occurred at one of its refineries in early 2022 in Peru, impacting the company's performance and reputation in managing environmental issues. The issuer has above average preparedness measures to address emissions, effluents and waste issues and has been implicated in major controversies related to the issue.</p>

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

Not applicable.

● **How does the reference benchmark differ from a broad market index?**

Not applicable.

● **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

- It made sustainable investments with an environmental objective: ___%**
 - in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

- It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments**
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective

- It made sustainable investments with a social objective: ___%**

- It promoted E/S characteristics, but did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Invesco Pan European High Income Fund (the "Fund") aimed to promote environmental characteristics related to natural resource utilization and pollution (by excluding companies involved in coal extraction and production, and unconventional oil and gas such as Arctic oil and gas exploration/extraction, oil sands extraction and Shale Energy extraction). The Fund also promoted social characteristics related to human rights (by excluding companies in violation of any UN Global Compact's principles, based on third-party data and the Investment Manager's proprietary analysis and research) and by excluding issuers involved in tobacco production and tobacco related products and services, recreational cannabis, controversial weapons and manufacture of nuclear warheads or whole nuclear or whole nuclear missiles outside of the Non-Proliferation Treaty.

The environmental and social characteristics of the Fund were achieved by applying the exclusions criteria described above.

● How did the sustainability indicators perform?

The Fund used a variety of indicators to measure the attainment of the environmental and social characteristics. This included:

Sustainability Indicator	Indicator Performance
UN Global Compact, excluded if non-compliant	During the reference period, there were no active breaches of the Fund's exclusion criteria.
International sanctions, sanctioned investments are prohibited	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Controversial weapons, excluded if 0%, including companies involved in the manufacture of nuclear warheads or whole nuclear missiles outside of the NPT.	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Coal, excluded if Thermal Coal extraction >=5% of revenue, Thermal Coal Power generation >=10% of revenue	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Unconventional oil & gas, excluded if >=5% of revenue on each of the following: - Artic oil & gas exploration; - Oil sands extraction; - Shale energy extraction;	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Tobacco excluded if Tobacco Products production >=5% of revenue, Tobacco-related products and services >=5% of revenue	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Recreational cannabis, excluded if >=5% of revenue	During the reference period, there were no active breaches of the Fund's exclusion criteria.

● **...and compared to previous periods?**

Not applicable.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Not applicable.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund considered principal adverse impacts on sustainability factors (PAIs) by carrying out a qualitative and quantitative review of key metrics (primarily the 14 indicators as defined in Table 1 of the Annex I of the regulatory technical standards for Regulation 2019/2088). The quantitative review included a review of Invesco's Article 8 and 9 product holdings and the relevant PAI data. Through this initial review an absolute threshold was set that flagged issuers that failed to meet minimum standards, as well as companies that flagged on a binary output (such as controversial weapons or UN Global Compact violations). Once issuers were flagged for the quantitative review, an assessment was

completed to understand if there is publicly available information from the issuer that we are aware of that can be shown to be addressing the poor performance on the flagged PAI. The ESG research team assigned the issuer a qualitative score as to how well they were addressing the poor performance. Those issuers that received the lowest qualitative scores were then identified as engagement targets and were primarily engaged through methods such as letters, meetings, proxy voting. If no improvement was established through such corporate engagement, then the Fund could consider divesting and/or excluding investments.

The below table shows the PAI data for the Fund:

Adverse sustainability indicator	PAI	Data	Metric
Greenhouse gas emissions	1. GHG Emissions	370,251.84	Scope 1 fund financed emissions (Tonnes of CO2 equivalent)
		64,115.12	Scope 2 fund financed emissions (Tonnes of CO2 equivalent)
		2,771,726.13	Scope 3 fund financed emissions (Tonnes of CO2 equivalent)
		3,206,093.10	Total Financed emissions (Scope 1 + Scope 2 + Scope 3) (Tonnes of CO2 equivalent)
	2. Carbon footprint	712.68	Fund level Carbon footprint (Scope 1 + Scope 2 + Scope 3) (Per Million EUR Invested)
	3. GHG Intensity of investee companies	1093.48	Fund level Total Emission Intensity- Scope 1+2+3 (Per Million EUR Revenue)
	4. Exposure to companies active in the fossil fuel sector	0	% of the fund exposed to any fossil fuels revenue
	5. Share of non-renewable energy consumption	63.19	Adjusted Weighted Average of all issuers in the fund's share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)
	5. Share of non-renewable energy production	34.2	
	6. Energy consumption intensity per high impact climate sector		
	Agriculture, Forestry & Fishing	5.16	
	Construction	0	
	Electricity, Gas, Steam & Air Conditioning Supply	2.97	
	Manufacturing	0.5	
Mining & Quarrying	2.77		
Real Estate Activities	0.8		
Transportation & Storage	2.62		
Water Supply, Sewerage, Waste Management & Remediation Activities	0		
Wholesale & Retail Trade & Repair of Motor Vehicles & Motorcycles	0.08		
Biodiversity	7. Activities negatively affecting biodiversity-sensitive areas	6.36	Share of investments in the fund of investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those
Water	8. Emissions to water	24.45	Adjusted weighted average per issuer in the fund's emissions to water generated by investee companies per million EUR invested (Tonnes)
Waste	9. Hazardous waste and radioactive waste ratio	1.44	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average
Social and employee matters	10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0.56	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	5.81	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance/ complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises
	12. Unadjusted gender pay gap	22.70	Weighted Average of all issuers' in the portfolio unadjusted gender pay gap of investee companies
	13. Board gender diversity	37.30	Weighted Average of all issuers in the portfolio ratio of female to male board members in investee companies, expressed as a percentage of all board members
	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0	Share of investments in investee companies involved in the manufacture or selling of controversial weapons

Notes:

Although Scope 3 emissions are included in the above table showing the PAI scores for the Fund, they were not included in the quantitative review process to consider PAIs during the reporting period.

The data presented in the above table is calculated using information provided by a third-party data vendor. The accuracy, completeness, and relevance of the calculated data are contingent upon the accuracy and completeness of the data provided by this third-party vendor. The numbers reported represent our best effort to provide the most accurate calculations in light of the data available. However, there are no warranties or representations, express or implied, regarding the completeness, accuracy, or suitability of this data for any particular purpose.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 28 February 2023

Large Investments	Sector	% Assets	Country
Invesco Liquidity Funds plc - Invesco Euro Liquidity Portfolio	Cash	2.27%	Ireland

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

The exclusions were screened to the full investment universe, representing at least 90% of the portfolio (#1 Aligned with E/S characteristics) by virtue of the binding elements of the Fund's investment strategy. Ancillary liquid assets and money market instruments which were held for cash management/liquidity purposes may not have been assessed for compliance with the above exclusion framework (#2 Other).

● What was the asset allocation?

100.00% of the Fund's NAV was selected according to the binding elements of the investment strategy, on the basis that they aligned with the environmental and social characteristics of the Fund.

0.00% of the Fund's NAV was invested in financial derivative instruments for hedging and/or efficient portfolio management purposes; and investment in funds that are not subject to the same restrictions.

All the above data is provided as of 28 February 2023.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

The below table shows the GICS sector breakdown as at 28 February 2023

Sector (GICS)	Weight %
Financials	34.40
Consumer Discretionary	11.39
Communication Services	9.33
Industrials	7.87
Consumer Staples	7.55
Materials	5.97
Utilities	5.06
Health Care	4.50
Energy	4.07
Information Technology	3.81
Real Estate	1.83
Sovereign	1.67
Cash	2.83
Others/Derivatives	-0.28
Total	100.00

GICS Level 4 breakdown for Energy Sector

Sub-Industry Code	Sub-Industry Name	Weight
10101010	Oil & Gas Drilling	0.00
10101020	Oil & Gas Equipment & Services	0.38
10102010	Integrated Oil & Gas	2.55
10102020	Oil & Gas Exploration & Production	0.19
10102030	Oil & Gas Refining & Marketing	0.94
10102040	Oil & Gas Storage & Transportation	0.01
10102050	Coal & Consumable Fuels	0.00
Total		4.07

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure (OpEx)** reflects the green operational activities of investee companies.

Whilst the Fund did not commit to a minimum of sustainable investments with an environmental objective aligned with EU Taxonomy, **1.21%** (Turnover) of the Fund's portfolio was aligned with the EU Taxonomy.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

- Yes
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The below table shows the share of investments in transitional and enabling activities as at 28th February 2023.

	Aligned
Enabling	0.65%
Transition	0.00%

'Aligned' means % of revenues of the investments of the Fund that are aligned to the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable.

What was the share of socially sustainable investments?

Not applicable.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

0.00% of the Fund's asset allocation was included under "Other". As described above, the Fund could hold ancillary liquid assets or money market instruments for cash management/liquidity purposes. The Fund held ancillary liquid assets or money market instruments for cash management/liquidity purposes which were not assessed for compliance with the above exclusion framework. Due to the neutral nature of the assets, no minimum safeguards were in place.

Index derivatives were not assessed on a look-through basis, unless such an index had a significant allocation to prohibited activities.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund achieved the environmental and social characteristics by complying with the exclusion framework, which was consistent with attaining the environmental and social characteristics promoted by the Fund.

Please refer to the section "How did the sustainability indicators perform" above for further information.

In addition, as part of the Fund's consideration of principal adverse impacts on sustainability factors, the ESG team monitored the investments against PAI indicators. Invesco conducted research into certain issuers in the Fund's portfolio that were deemed to flag against PAI indicators. Please see below examples of researched issuers during the reference period:

Holding	Principal Adverse Impact	Action Taken
An EMEA Energy Issuer	PAI 6: Energy consumption intensity	Research conducted. The issuer initially flagged on PAI 6 (Energy Consumption Intensity) and PAI 7 (Activities negatively affecting biodiversity sensitive areas). Through additional research, Invesco determined that the entity acknowledged the issue as a serious matter for a worthy response but has not yet committed to resolving the issue. The issuer has strong management of both routine and accidental release of emissions, effluents and waste. The majority of its environmental management systems have been certified by ISO 14001. The issuer aims to minimize waste production by focusing on the circular economy as a tool to use resources efficiently. Its management of effluents generated during operations is generally adequate, although limited disclosure is available on the company's objectives or targets on this issue. Concerning spills, the volume of hydrocarbons spilled by the company was 6 metric tons in FY2021, which is a decrease of 92% compared to the average of the previous four years. However, an oil spill of over 10,000 barrels occurred at one of its refineries in early 2022 in Peru, impacting the company's performance and reputation in managing environmental issues. The issuer has above average preparedness measures to address emissions, effluents and waste issues and has been implicated in major controversies related to the issue.
An EMEA Energy Issuer	PAI 1,2,3 (GHG Emissions); PAI 5 (Share of non-renewable energy); PAI 7 (Activities negatively affecting biodiversity sensitive areas)	Research and engagement conducted. The issuer initially flagged on several PAIs including PAI 1 (Scope 1 GHG Emissions), PAI 5 (Share of non-renewable energy), and PAI 7 (Activities negatively affecting biodiversity sensitive areas). Through additional research, Invesco has determined that the issuer has committed to address the PAI 1 and 5 issues and is developing a strategy. On PAI 7, Invesco has found that the issuer has acknowledged the issue as a serious matter for a worthy response but has not yet committed to resolving the issue. On PAI 1, the issuer has set emissions reduction targets, specifically a 50% reduction in Scope 1 and 2 emissions targets by 2030. On PAI 5, the issuer has made some acquisitions to expand its renewable energy business in power generation and hydrogen projects. On PAI 7, the issuer has acknowledged the issue of pollution in biodiversity sensitive areas, such as in Nigeria. However, its plans to divest are on hold until the Supreme Court reaches a decision on a previous oil spill controversy. Furthermore, following written correspondence with the issuer, Invesco has confirmed that the issuer's net-positive policy only applies to new projects only, not those existing projects adversely impacting biodiversity. For these reasons, Invesco has determined that the issuer still flags on PAI 7.
An EMEA Energy Issuer	PAI 7: Activities negatively affecting biodiversity sensitive areas	Research conducted. The issuer initially flagged on PAI 7 (Activities negatively affecting biodiversity sensitive areas). Invesco conducted research on the issuer and has determined that the entity has committed to address the issue and is developing a strategy. The issuer has outlined its commitment to protect biodiversity through a four pillar plan: 1) respecting voluntary exclusion zones; 2) managing biodiversity in new projects; 3) managing biodiversity in existing sites, and 4) promoting biodiversity.

How did this financial product perform compared to the reference benchmark?

Not applicable.

● How does the reference benchmark differ from a broad market index?

Not applicable.

● How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How did this financial product perform compared with the reference benchmark?***

Not applicable.

- ***How did this financial product perform compared with the broad market index?***

Not applicable.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made sustainable investments with an environmental objective: ___%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made sustainable investments with a social objective: ___%

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 82 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Invesco Sustainable Pan European Fund (the "Fund") aimed to promote environmental characteristics related to climate change mitigation (such as carbon emissions) as well as natural resource utilization and pollution (for example by exclusion of companies involved in fossil fuel, coal, nuclear power or activities generating pollution).

The Fund also promoted social characteristics related to human rights by excluding companies in violation of any UN Global Compact's principles (based on third-party data and the Investment Manager's proprietary analysis and research) and by excluding controversial activities issuers involved in (but not limited to) manufacturing or sale of conventional weapons or production and distribution of tobacco. The Fund aimed to select companies and issuers that display superior sustainable management and sustainable products or processes, fulfilling ecological and social requirements particularly well, ranging from climate efficiency and low water consumption to labour safety and satisfaction. Ecological characteristics were assessed using an energy transition score. Social features were considered by excluding companies with controversial business behaviours.

The Fund achieved its environmental and social characteristics by applying its exclusion and best-in class approach on an on-going basis.

The Fund is managed systematically. In every rebalancing, it is ensured that the Fund meets the environmental and social characteristics.

● How did the sustainability indicators perform?

The Fund used a variety of indicators to measure the attainment of the environmental and social characteristics. This included:

Sustainability Indicator	Indicator Performance
Turnover derived from thermal coal mining, excluded if >=5%	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Turnover derived from burning coal for power generation, excluded if >=5%	
Proportion in electricity generation fuel mix from coal, excluded if >=5%	
Structural increase of thermal coal activities over 3 years, excluded if yes	
Revenues that comes from projects or the extraction of tar sands, excluded if 0%	During the reference period, there were no active breaches of the Fund's exclusion criteria.
and oil shale, as well as the proportion of reserves in tar sands or oil shale	
Involvement in fracking activities, excluded if yes	
Involvement in arctic drilling activities, excluded if yes	
Revenues are derived from fossil fuel industries, excluded if >=5%	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Structural increase of fossil activities over 3 year, excluded if yes	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Company's commitment to define clear objectives and appropriate measures to ensure management of the environmental impacts of products and services, excluded if insufficient environmental strategy	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Production of restricted chemicals, excluded if 0%	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Controversies in the field of endangering biodiversity, excluded if yes	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Controversies in the field of preventing and managing of accidental pollution or soil pollution, excluded if yes	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Controversies in the field of community involvement (including e.g. impact of operations on the local economy, responsible tax strategy, transfer of technology and skills), excluded if yes	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Turnover from nuclear power, excluded if >=5%	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Proportion in electricity generation fuel mix from nuclear power, excluded if >=5%	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Manufacture or sale of civilian firearms or related products, excluded if >=5%	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Manufacture of civilian firearms or related products, excluded if >=5%	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Sales that are related to military sales including key parts or services, for conventional weapons, excluded if >=5%	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Controversial Weapons, excluded if >0%	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Turnover from production and distribution of tobacco, excluded if >=5%	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Turnover from production of tobacco, excluded if >=5%	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Fail to pass the global compact screening, excluded if yes	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Controversies in labour rights including the supply chain, forced or child labour and discrimination, excluded if yes	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Controversies in pollution or lack of protection of water resources, excluded if yes	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Involvement in recreational cannabis, excluded if yes	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Controversies in corruption, excluded if yes	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Energy Transition Score	55
% of issuers that are in the Top 75% of universe based on the energy transition score	100%
The Fund's Scope 1 and 2 GHG emission intensity vs the market cap weighted (MSCI Europe Index) GHG Scope 1 and 2 GHG emission intensity	73.4 vs 111.8

● **...and compared to previous periods?**

Not applicable.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The Fund made sustainable investments by contributing to environmental objectives (such as climate change, water management, pollution prevention) and to social objectives (such as good health, well-being and gender equality).

The Fund sought to achieve those objectives by investing in (i) issuers which contribute positively to selected UN Sustainable Development Goals (SDGs) (generating at least 25% of the issuer's revenue) that relate to the above objectives, or (ii) companies which generate a material part of the revenue from environmental impact themes such as energy transition (by selecting companies in the top 25% based on the energy transition score within its region and sector), healthcare (by selecting companies part of the GICS Sector 35) and food (by selecting companies part of the GICS Industry 302020). The Fund also used a best-in-class approach, utilizing the investment manager's proprietary scoring methodology and selecting companies in the top 75% within the respective peer group for either score eligible. It should be noted that the full weight in the portfolio counted as sustainable investments when meeting the above criteria.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

The Fund primarily used the mandatory principal adverse impacts (PAI) indicators defined in Table 1 of Annex I of the regulatory technical standards for Regulation 2019/2088, combined with qualitative research and/or engagement, to assess whether the sustainable investments of the Fund cause significant harm (DNSH) to a relevant environmental or social investment objective. Where a company was determined to cause such significant harm, it could still be held within the Fund but did not count toward the "sustainable investments" within the Fund. For the avoidance of doubt, the assessment was done prior to investment and on the full holding.

How were the indicators for adverse impacts on sustainability factors taken into account?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Please see above on how the indicators for adverse impacts on sustainability factors were taken into account.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Fund excluded companies, sectors or countries from the investment universe when such companies violate international norms and standards according to the definitions of the International Labour Organisation (ILO), the OECD or the United Nations. All issuers considered for investment were screened for compliance with, and excluded if they did not meet UN Global Compact principles, based on third-party data and the Investment Manager's proprietary analysis and research.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund considered principal adverse impacts on sustainability factors (PAIs) by carrying out a qualitative and quantitative review of key metrics (primarily the 14 indicators as defined in Table 1 of the Annex I of the regulatory technical standards for Regulation 2019/2088). The quantitative review included a review of Invesco's Article 8 and 9 product holdings and the relevant PAI data. Through this initial review an absolute threshold was set that flagged issuers that failed to meet minimum standards, as well as companies that flagged on a binary output (such as controversial weapons or UN Global Compact violations). Once issuers were flagged for the quantitative review, an assessment was completed to understand if there is publicly available information from the issuer that we are aware of that can be shown to be addressing the poor performance on the flagged PAI. The ESG research team assigned the issuer a qualitative score as to how well they were addressing the poor performance. Those issuers that received the lowest qualitative scores were then identified as engagement targets and were primarily engaged through methods such as letters, meetings, proxy voting. If no improvement was established through such corporate engagement, then the Fund could consider divesting and/or excluding investments.

The below table shows the PAI data for the Fund:

Adverse sustainability indicator	PAI	Data	Metric
Greenhouse gas emissions	1. GHG Emissions	50,112.27	Scope 1 fund financed emissions (Tonnes of CO2 equivalent)
		11,857.65	Scope 2 fund financed emissions (Tonnes of CO2 equivalent)
		699,442.00	Scope 3 fund financed emissions (Tonnes of CO2 equivalent)
		761,411.93	Total Financed emissions (Scope 1 + Scope 2 + Scope 3) (Tonnes of CO2 equivalent)
	2. Carbon footprint	622.9	Fund level Carbon footprint (Scope 1 + Scope 2 + Scope 3) (Per Million EUR Invested)
	3. GHG Intensity of investee companies	997.43	Fund level Total Emission Intensity-Scope 1+2+3 (Per Million EUR Revenue)
	4. Exposure to companies active in the fossil fuel sector		% of the fund exposed to any fossil fuels revenue
	5. Share of non-renewable energy consumption	59.45	Adjusted Weighted Average of all issuers in the fund's share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)
	5. Share of non-renewable energy production	23.04	
	6. Energy consumption intensity per high impact climate sector		Adjusted weighted average energy consumption of issuers in the fund in GWh per million EUR of revenue of investee companies, per high impact climate sector
	Agriculture, Forestry & Fishing	5.92	
	Construction	0.03	
	Electricity, Gas, Steam & Air Conditioning Supply	2.47	
	Manufacturing	0.68	
Mining & Quarrying	1.79		
Real Estate Activities			
Transportation & Storage	0.99		
Water Supply, Sewerage, Waste Management & Remediation Activities	0.45		
Wholesale & Retail Trade & Repair of Motor Vehicles & Motorcycles	0.07		
Biodiversity	7. Activities negatively affecting biodiversity-sensitive areas	6.45	Share of investments in the fund of investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those
Water	8. Emissions to water	0.67	Adjusted weighted average per issuer in the fund's emissions to water generated by investee companies per million EUR invested (Tonnes)
Waste	9. Hazardous waste and radioactive waste ratio	3.73	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average
Social and employee matters	10. Violations to UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises		Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	4.81	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance/complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises
	12. Unadjusted gender pay gap	14.9	Weighted Average of all issuers' in the portfolio unadjusted gender pay gap of investee companies
	13. Board gender diversity	37.66	Weighted Average of all issuers in the portfolio ratio of female to male board members in investee companies, expressed as a percentage of all board members
Optional Indicators	Optional Indicator: 4. Investments in companies without carbon emission reduction initiative	27.44	Share of investments in investee companies without carbon emission reduction initiatives aimed at aligning with the Paris Agreement
	Optional Indicator: 9. Lack of a human rights policy	0.54	Share of investments in entities without a human rights policy

Notes:

Although Scope 3 emissions are included in the above table showing the PAI scores for the Fund, they were not included in the quantitative review process to consider PAIs during the reporting period.

The data presented in the above table is calculated using information provided by a third-party data vendor. The accuracy, completeness, and relevance of the calculated data are contingent upon the accuracy and completeness of the data provided by this third-party vendor. The numbers reported represent our best effort to provide the most accurate calculations in light of the data available. However, there are no warranties or representations, express or implied, regarding the completeness, accuracy, or suitability of this data for any particular purpose.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 28 February 2023

Large Investments	Sector	% Assets	Country
Novartis AG	Health Care	2.28%	Switzerland
Banco Bilbao Vizcaya Argentaria SA	Financials	1.94%	Spain
Rio Tinto Plc	Materials	1.88%	United Kingdom
Danone SA	Consumer Staples	1.85%	France
Sanofi	Health Care	1.85%	France
Nestle SA	Consumer Staples	1.84%	Switzerland
Kuehne + Nagel International AG	Industrials	1.82%	Switzerland
Novo Nordisk A/S	Health Care	1.62%	Denmark
AXA SA	Financials	1.59%	France
Svenska Handelsbanken AB	Financials	1.58%	Sweden
Wolters Kluwer NV	Industrials	1.53%	Netherlands
Essity AB	Consumer Staples	1.51%	Sweden
Muenchener Rueckversicherungs-Gesellschaft AG in Muenchen	Financials	1.44%	Germany
AstraZeneca Plc	Health Care	1.44%	United Kingdom
Henkel AG & Co KGaA (Preferred)	Consumer Staples	1.43%	Germany

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

The Fund made investments aligned with the E/S characteristics for a minimum of 90% of its portfolio (#1 Aligned with E/S characteristics) by virtue of binding elements of the Fund's investment strategy. A maximum of 10% was invested in money market instruments or ancillary liquid assets for liquidity management purposes (#2 Other).

● What was the asset allocation?

96.4% of the Fund's NAV was selected according to the binding elements of the investment strategy, on the basis that they aligned with the environmental and social characteristics of the Fund.

3.7% of the Fund's NAV was invested in financial derivative instruments for investment and/or hedging and/or efficient portfolio management purposes, cash that was held for ancillary liquidity purposes, and investments in other funds that were not subject to the same restrictions.

81.7% of the Fund's NAV was invested in sustainable investments.

All the above data is provided as of 28 February 2023.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives

- The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

The below table shows the GICS sector breakdown as at 28 February 2023

Sector (GICS)	Weight %
Financials	18.50
Consumer Staples	17.12
Industrials	16.31
Health Care	15.04
Materials	8.42
Communication Services	7.87

Total		0.72

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

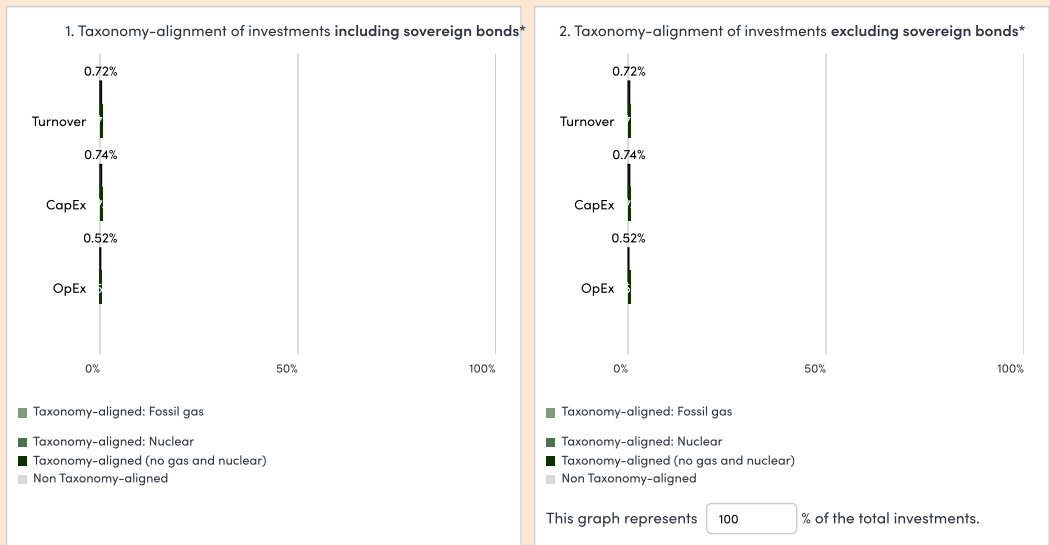

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure (OpEx)** reflects the green operational activities of investee companies.

Whilst the Fund did not commit to a minimum of sustainable investments with an environmental objective aligned with EU Taxonomy, 0.7% (Turnover) of the Fund's portfolio was aligned with the EU Taxonomy.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

- Yes
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The below table shows the share of investments in transitional and enabling activities as at 28th February 2023.

	Aligned
Enabling	0.19%
Transition	0.00%

'Aligned' means % of revenues of the investments of the Fund that are aligned to the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

48.0% of the Fund's NAV was invested in sustainable investments with an environmental objective not aligned with the EU Taxonomy. The Investment Manager monitored closely the evolution of the dataset and their reliance and increased the portion of sustainable investments aligned with EU Taxonomy as the case may be, which decreased the exposure to sustainable investments not aligned with EU Taxonomy

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

in the Fund.

What was the share of socially sustainable investments?

33.0% of the Fund's NAV was invested in socially sustainable investments. The Fund had a minimum investment of 1% in socially sustainable investments. It should be noted that the Fund aimed to allocate 10% in sustainable investments with a social objective and/or an environmental objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

As described above, the Fund could hold ancillary liquid assets or money market instruments for cash management/liquidity purposes which was not assessed for compliance with the above ESG framework. Due to the neutral nature of the assets, no minimum safeguards were put in place.

Index derivatives were not assessed on a look-through basis, unless such an index had a significant allocation to prohibited activities.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund achieved the environmental and social characteristics by complying with the exclusions and the best-in-class approach, which was consistent with attaining the environmental and social characteristics promoted by the Fund.

Please refer to the section “How did the sustainability indicators perform” above for further information.

In addition, as part of the Fund's consideration of principal adverse impacts on sustainability factors, the ESG team monitored the investments against PAI indicators. Invesco conducted research into certain issuers in the Fund’s portfolio that were deemed to flag against PAI indicators. Please see below examples of researched issuers during the reference period:

Holding	Principal Adverse Impact	Action Taken
An EMEA Materials Issuer	PAI 1,2,3: GHG Emissions	<p>Research conducted. The issuer initially flagged for PAI 1,2 and 3 (GHG emissions). The issuer has acknowledged the issue and set targets to address it.</p> <p>They commit to reduce scope 1 GHG emissions 17.5% and scope 2 GHG emissions 65% per ton of cementitious materials, alongside a target to reduce scope 3 emissions per metric ton of clinker and cement purchased by 25.1%. All targets are set for 2030, with a 2020 base year.</p> <p>Invesco's ESG team engaged with the company to discuss their carbon emissions. The company was the first in their sector to sign the "Business Ambition for 1.5°C" pledge and have their targets approved by the Science-Based Targets initiative (SBTi).</p>
An EMEA Health Care Issuer	PAI 7: Activities negatively affecting biodiversity sensitive areas	<p>Research conducted. The issuer initially flagged on PAI 7 (Activities negatively affecting biodiversity sensitive areas). Invesco conducted additional research on the issuer and has determined that the entity has committed to address the issue and is developing a strategy.</p> <p>The issuer has committed to close its operations in Puerto Rico (the biodiversity sensitive area in which it operates).</p>

How did this financial product perform compared to the reference benchmark?

The Fund was not compared to a reference benchmark.

● **How does the reference benchmark differ from a broad market index?**

Not applicable.

● **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

Not applicable.

● **How did this financial product perform compared with the reference benchmark?**

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

● ***How did this financial product perform compared with the broad market index?***

Not applicable.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

- It made sustainable investments with an environmental objective: ___%**
 - in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

- It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments**
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective

- It made sustainable investments with a social objective: ___%**

- It promoted E/S characteristics, but did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Invesco UK Equity Fund (the "Fund") aimed to promote environmental characteristics related to natural resource utilization and pollution (by excluding companies involved in coal extraction and production, and unconventional oil and gas such as Arctic oil and gas exploration/extraction, oil sands extraction and Shale Energy extraction). The Fund also promoted social characteristics related to human rights (by excluding companies in violation of any UN Global Compact's principles, based on third-party data and the Investment Manager's proprietary analysis and research) and by excluding issuers involved in tobacco production and tobacco related products and services, recreational cannabis, controversial weapons and manufacture of nuclear warheads or whole nuclear or whole nuclear missiles outside of the Non-Proliferation Treaty.

The environmental and social characteristics of the Fund were achieved by applying the exclusions criteria described above.

● How did the sustainability indicators perform?

The Fund used a variety of indicators to measure the attainment of the environmental and social characteristics. This included:

Sustainability Indicator	Indicator Performance
UN Global Compact, excluded if non-compliant	During the reference period, there were no active breaches of the Fund's exclusion criteria.
International sanctions, sanctioned investments are prohibited	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Controversial weapons, excluded if 0%, including companies involved in the manufacture of nuclear warheads or whole nuclear missiles outside of the NPT.	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Coal, excluded if Thermal Coal extraction >=5% of revenue, Thermal Coal Power generation >=10% of revenue	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Unconventional oil & gas, excluded if >=5% of revenue on each of the following: - Arctic oil & gas exploration; - Oil sands extraction; - Shale energy extraction;	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Tobacco excluded if Tobacco Products production >=5% of revenue, Tobacco-related products and services >=5% of revenue	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Recreational cannabis, excluded if >=5% of revenue	During the reference period, there were no active breaches of the Fund's exclusion criteria.

● **...and compared to previous periods?**

Not applicable.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Not applicable.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Not applicable.

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund considered principal adverse impacts on sustainability factors (PAIs) by carrying out a qualitative and quantitative review of key metrics (primarily the 14 indicators as defined in Table 1 of the Annex I of the regulatory technical standards for Regulation 2019/2088). The quantitative review included a review of Invesco's Article 8 and 9 product holdings and the relevant PAI data. Through this initial review an absolute threshold was set that flagged issuers that failed to meet minimum standards, as well as companies that flagged on a binary output (such as controversial weapons or UN Global Compact violations). Once issuers were flagged for the quantitative review, an assessment was

completed to understand if there is publicly available information from the issuer that we are aware of that can be shown to be addressing the poor performance on the flagged PAI. The ESG research team assigned the issuer a qualitative score as to how well they were addressing the poor performance. Those issuers that received the lowest qualitative scores were then identified as engagement targets and were primarily engaged through methods such as letters, meetings, proxy voting. If no improvement was established through such corporate engagement, then the Fund could consider divesting and/or excluding investments.

The below table shows the PAI data for the Fund:

Adverse sustainability indicator	PAI	Data	Metric
Greenhouse gas emissions	1. GHG Emissions	6,863.35	Scope 1 fund financed emissions (Tonnes of CO2 equivalent)
		1,323.54	Scope 2 fund financed emissions (Tonnes of CO2 equivalent)
		85,366.03	Scope 3 fund financed emissions (Tonnes of CO2 equivalent)
		93,552.92	Total Financed emissions (Scope 1 + Scope 2 + Scope 3) (Tonnes of CO2 equivalent)
	2. Carbon footprint	1,139.56	Fund level Carbon footprint (Scope 1 + Scope 2 + Scope 3) (Per Million EUR Invested)
	3. GHG Intensity of investee companies	1742.50	Fund level Total Emission Intensity- Scope 1+2+3 (Per Million EUR Revenue)
	4. Exposure to companies active in the fossil fuel sector	0	% of the fund exposed to any fossil fuels revenue
	5. Share of non-renewable energy consumption	69.84	Adjusted Weighted Average of all issuers in the fund's share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)
	5. Share of non-renewable energy production	45.79	
	6. Energy consumption intensity per high impact climate sector		
	Agriculture, Forestry & Fishing	0	
	Construction	0.12	
	Electricity, Gas, Steam & Air Conditioning Supply	1.97	
	Manufacturing	0.29	
Mining & Quarrying	1.1		
Real Estate Activities	0		
Transportation & Storage	0		
Water Supply, Sewerage, Waste Management & Remediation Activities	0		
Wholesale & Retail Trade & Repair of Motor Vehicles & Motorcycles	0.08		
Biodiversity	7. Activities negatively affecting biodiversity-sensitive areas	26.78	Share of investments in the fund of investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those
Water	8. Emissions to water	0.04	Adjusted weighted average per issuer in the fund's emissions to water generated by investee companies per million EUR invested (Tonnes)
Waste	9. Hazardous waste and radioactive waste ratio	0.95	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average
Social and employee matters	10. Violations to UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	7.16	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance/ complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises
	12. Unadjusted gender pay gap	20.26	Weighted Average of all issuers' in the portfolio unadjusted gender pay gap of investee companies
	13. Board gender diversity	40.69	Weighted Average of all issuers in the portfolio ratio of female to male board members in investee companies, expressed as a percentage of all board members
	14. Exposure to controversial weap- ons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0	Share of investments in investee companies involved in the manufacture or selling of controversial weapons

Notes:

Although Scope 3 emissions are included in the above table showing the PAI scores for the Fund, they were not included in the quantitative review process to consider PAIs during the reporting period.

The data presented in the above table is calculated using information provided by a third-party data vendor. The accuracy, completeness, and relevance of the calculated data are contingent upon the accuracy and completeness of the data provided by this third-party vendor. The numbers reported represent our best effort to provide the most accurate calculations in light of the data available. However, there are no warranties or representations, express or implied, regarding the completeness, accuracy, or suitability of this data for any particular purpose.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 28 February 2023

Large Investments	Sector	% Assets	Country
BP Plc	Energy	7.72%	United Kingdom
Shell Plc	Energy	6.74%	United Kingdom
Unilever Plc	Consumer Staples	4.64%	United Kingdom
Glencore Plc	Materials	4.44%	United Kingdom
SSE Plc	Utilities	4.38%	United Kingdom
AstraZeneca Plc	Health Care	4.04%	United Kingdom
National Grid Plc	Utilities	3.63%	United Kingdom
BAE Systems Plc	Industrials	3.60%	United Kingdom
Whitbread Plc	Consumer Discretionary	3.51%	United Kingdom
Prudential Plc	Financials	3.51%	United Kingdom
Centrica Plc	Utilities	3.38%	United Kingdom
Sanofi	Health Care	3.05%	France
NatWest Group Plc	Financials	2.99%	United Kingdom
Hiscox Ltd	Financials	2.84%	Bermuda
Aviva Plc	Financials	2.74%	United Kingdom

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

The exclusions were screened to the full investment universe, representing at least 90% of the portfolio (#1 Aligned with E/S characteristics) by virtue of the binding elements of the Fund's investment strategy. Ancillary liquid assets and money market instruments which were held for cash management/liquidity purposes may not have been assessed for compliance with the above exclusion framework (#2 Other).

● What was the asset allocation?

100.00% of the Fund's NAV was selected according to the binding elements of the investment strategy, on the basis that they aligned with the environmental and social characteristics of the Fund.

0.00% of the Fund's NAV was invested in financial derivative instruments for hedging and/or efficient portfolio management purposes; and investments in funds not subject to the same restrictions.

All the above data is provided as of 28 February 2023.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives
- The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

The below table shows the GICS sector breakdown as at 28 February 2023

Sector (GICS)	Weight %
Financials	18.43
Energy	16.54
Utilities	13.79
Health Care	11.67
Consumer Staples	10.96
Consumer Discretionary	9.87
Industrials	9.23
Materials	6.52
Communication Services	1.79
Real Estate	0.80
Information Technology	0.00
Sovereign	0.00
Cash	0.40
Total	100.00

GICS Level 4 breakdown for Energy Sector

Sub-Industry Code	Sub-Industry Name	Weight
10101010	Oil & Gas Drilling	0.00
10101020	Oil & Gas Equipment & Services	0.00
10102010	Integrated Oil & Gas	16.54
10102020	Oil & Gas Exploration & Production	0.00
10102030	Oil & Gas Refining & Marketing	0.00
10102040	Oil & Gas Storage & Transportation	0.00
10102050	Coal & Consumable Fuels	0.00
Total		16.54

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure (OpEx)** reflects the green operational activities of investee companies.

Whilst the Fund did not commit to a minimum of sustainable investments with an environmental objective aligned with EU Taxonomy, **3.22%** (Turnover) of the Fund's portfolio was aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- Yes
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The below table shows the share of investments in transitional and enabling activities as at 28th February 2023.

	Aligned
Enabling	0.81%
Transition	0.00%

'Aligned' means % of revenues of the investments of the Fund that are aligned to the EU Taxonomy.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Not applicable.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable.

What was the share of socially sustainable investments?

Not applicable.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

0.00% of the Fund’s asset allocation was included under "Other". As described above, the Fund could hold ancillary liquid assets or money market instruments for cash management/liquidity purposes The Fund held ancillary liquid assets or money market instruments for cash management/liquidity purposes which were not assessed for compliance with the above exclusion framework. Due to the neutral nature of the assets, no minimum safeguards were in place.

Index derivatives were not assessed on a look-through basis, unless such an index had a significant allocation to prohibited activities.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund achieved the environmental and social characteristics by complying with the exclusion framework, which was consistent with attaining the environmental and social characteristics promoted by the Fund.

Please refer to the section “How did the sustainability indicators perform” above for further information.

In addition, as part of the Fund's consideration of principal adverse impacts on sustainability factors, the ESG team monitored the investments against PAI indicators. Invesco conducted research into certain issuers in the Fund’s portfolio that were deemed to flag against PAI indicators. Please see below examples of researched issuers during the reference period:

Holding	Principal Adverse Impact	Action Taken
An EMEA Energy Issuer	PAI 7: Activities negatively affecting biodiversity sensitive areas	Research conducted. The issuer initially flagged on PAI 7 (Activities negatively affecting biodiversity sensitive areas). Invesco conducted additional research on the issuer, and determined that the entity has committed to address the issue and is developing a strategy. When researching the issuer, Invesco found that the issuer has put in place a biodiversity position that from 2022 includes existing operating sites and makes a commitment to enhance biodiversity and support restoration. The issuer has also specifically addressed the controversies, such as in Senegal and Louisiana, flagged by the third-party data provider through statements and press releases.
An EMEA Energy Issuer	PAI 7: Activities negatively affecting biodiversity sensitive areas	Research conducted. The issuer initially flagged on PAI 7 (Activities negatively affecting biodiversity sensitive areas). Invesco conducted research on the issuer and has determined that the entity has committed to address the issue and is developing a strategy. The issuer has outlined its commitment to protect biodiversity through a four pillar plan: 1) respecting voluntary exclusion zones; 2) managing biodiversity in new projects; 3) managing biodiversity in existing sites; and 4) promoting biodiversity.

How did this financial product perform compared to the reference benchmark?

Not applicable.

● **How does the reference benchmark differ from a broad market index?**

Not applicable.

● **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

Not applicable.

● **How did this financial product perform compared with the reference benchmark?**

Not applicable.

● **How did this financial product perform compared with the broad market index?**

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

ANNEX 1 – ARTICLE 8 (continued)

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

▶ **Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

This section is not applicable, the fund does not align with the EU Taxonomy or hold sustainable investments.

What was the share of socially sustainable investments?

This section is not applicable, the fund does not hold sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Other assets included cash or cash equivalents, securitised assets, derivatives for the purposes of efficient portfolio management, or derivatives for investment purposes other than those used to gain exposure to direct issuers. No minimum environmental or social safeguards are applied to such investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

No exclusionary screens or other binding commitments were actively breached by the fund and compliance pre-trade controls have been applied to ensure adherence to the ESG exclusionary screens.

How did this financial product perform compared to the reference benchmark?

This section is not applicable, the fund does not use a reference benchmark to attain its environmental or social characteristics.

How does the reference benchmark differ from a broad market index?

This section is not applicable, the fund does not use a reference benchmark to attain its environmental or social characteristics.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

This section is not applicable, the fund does not use a reference benchmark to attain its environmental or social characteristics.

Sustainability-related disclosure

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Euro Corporate Bond Fund	Legal entity identifier: 213800RZ5F4VTAKJZO20
---	--

► **Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

► The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

► **Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes
 No

<input type="checkbox"/> It made sustainable investments with an environmental objective : % <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of % of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective : %	<input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

From 1 July 2022 until the end of the reference period (herein referred to as the 'reference period'), the fund promotes climate change mitigation and support for the UNGC Principles (which cover matters including human rights, labour, corruption, and environmental pollution). Additionally, the fund also seeks to avoid investments in certain activities with the potential to cause harm to human health and wellbeing by applying binding exclusions. The fund does not use a reference benchmark to attain its environmental or social characteristics.

Appendix - additional information (unaudited) (continued)

As at 30 June 2023

Sustainable Finance Disclosure Regulation (SFDR) and EU Taxonomy Regulation (continued)

ANNEX 2 – ARTICLE 8 (continued)

How did the sustainability indicators perform?

The sustainability indicators performed in line with expectations with the core long book adhering to the overall Global Compact principles as well as the ESG exclusionary screens. Additionally, the fund promoted the application of GHG intensity related criteria. Specifically, issuers were excluded if they derived any revenue from the manufacturing of controversial weapons, or more than 10% of their revenue from oil sands extraction, arctic oil and gas exploration extraction, thermal coal extraction, tobacco, fur or adult entertainment.

Issuers were also excluded if they are deemed to have failed to comply with the UNGC Principles (which cover matters including human rights, labour, corruption and environmental pollution). The fund also adhered to the Firmwide Exclusions Policy as it did not make any direct investments in the companies involved in the current manufacture of, or minority shareholding of 20% or more in a manufacturer of controversial weapons.

According to 3rd party data, no breaches to the exclusions were conducted during the reference period.

Carbon Footprint (t/million USD) – Scope 1&2:

Total Carbon emissions for a portfolio normalized by the market value of the portfolio, expressed in tons CO₂e / \$M invested.

Weighted Average Carbon Intensity (WACI) (t/million USD) - Scope 1&2:

Portfolios Exposure to carbon-intensive companies, expressed in tons CO₂e / \$M invested.

For Euro Corporate Bond Fund:

- The Carbon Footprint value of the portfolio was 49.46 (t/million USD) vs benchmark 77.02(t/million USD)
- The WACI value of the portfolio was 86.16 (t/million USD) vs benchmark 126.08 (t/million USD)

...and compared to previous periods?

Not applicable. This is the first reference period disclosing under this format.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

This section is not applicable, the fund does not invest in Sustainable Investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

This section is not applicable, the fund does not invest in Sustainable Investments.

► **Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Appendix - additional information (unaudited) (continued)

As at 30 June 2023

Sustainable Finance Disclosure Regulation (SFDR) and EU Taxonomy Regulation (continued)

ANNEX 2 – ARTICLE 8 (continued)

How were the indicators for adverse impacts on sustainability factors taken into account?

This section is not applicable, the fund does not invest in Sustainable Investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

This section is not applicable, the fund does not invest in Sustainable Investments.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

As at the date of this disclosure, the Investment Manager considers the following principal adverse impacts on sustainability factors ('PAIs'):

Principal Adverse Impact	How is PAI considered?
GHG Emissions	Exclusionary screen
Carbon Footprint	Exclusionary screen
GHG Intensity of investee companies	Exclusionary screen
Exposure to companies active in fossil fuel sector	Exclusionary screen
Violations of UNGC and OECD	Exclusionary screen
Exposure to controversial weapons	Exclusionary screen

For further information please refer to the Pre-Contractual Agreement found in the Prospectus or the SFDR Website Disclosure found on the Product Page Website. Note the Principal Adverse Impacts were effective as of 19 December 2022.

Sustainable Finance Disclosure Regulation (SFDR) and EU Taxonomy Regulation (continued)

ANNEX 11 – ARTICLE 8 (continued)

Economic Sector	% of portfolio avg over reporting period
Other Specialty REITs	3.38
Real Estate Holding & Development	14.69
Real Estate Services	2.21
Residential REITs	12.09
Retail REITs	17.66
Storage REITs	5.43
Telecommunications Services	0.99

- ▶ To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

- ▶ **Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- ▶ **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- ▶ Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

This section is not applicable, the fund does not align with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes:

In fossil gas In nuclear energy

No

The graphs below show the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds¹, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

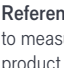

Appendix - additional information (unaudited) (continued)

As at 30 June 2023

Sustainable Finance Disclosure Regulation (SFDR) and EU Taxonomy Regulation (continued)

ANNEX 11 – ARTICLE 8 (continued)

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 **Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

What was the share of investments made in transitional and enabling activities?

This section is not applicable, the fund does not align with the EU Taxonomy.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

This section is not applicable, the fund does not align with the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

This section is not applicable, the fund does not align with the EU Taxonomy or hold sustainable investments.

What was the share of socially sustainable investments?

This section is not applicable, the fund does not hold sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Other assets may include cash or cash equivalents in addition to instruments held for the purposes of efficient portfolio management e.g. temporary holdings of index derivatives. No minimum environmental or social safeguards are applied to such investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

No exclusionary screens were actively breached for the portfolio and compliance pre-trade controls have been applied to ensure adherence to the ESG exclusionary screens.

In addition, the team committed to a minimum of 10% of companies within the portfolio having approved or committed targets and monitored the progress of those companies against those targets.

How did this financial product perform compared to the reference benchmark?

This section is not applicable, the fund does not use a reference benchmark to attain its environmental or social characteristics.

Appendix - additional information (unaudited) (continued)

As at 30 June 2023

Sustainable Finance Disclosure Regulation (SFDR) and EU Taxonomy Regulation (continued)

ANNEX 11 - ARTICLE 8 (continued)

How does the reference benchmark differ from a broad market index?

This section is not applicable, the fund does not use a reference benchmark to attain its environmental or social characteristics.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

This section is not applicable, the fund does not use a reference benchmark to attain its environmental or social characteristics.

How did this financial product perform compared with the reference benchmark?

This section is not applicable, the fund does not use a reference benchmark to attain its environmental or social characteristics.

How did this financial product perform compared with the broad market index?

This section is not applicable, the fund does not use a reference benchmark to attain its environmental or social characteristics.

Appendix - additional information (unaudited) (continued)

As at 30 June 2023

Sustainable Finance Disclosure Regulation (SFDR) and EU Taxonomy Regulation (continued)

ANNEX 12 – ARTICLE 8

Sustainability-related disclosure

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Global Technology Leaders Fund	Legal entity identifier: 213800QJ1370X4A6K181
---	--

- ▶ **Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.
- ▶ The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

- ▶ **Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

 No

<input type="checkbox"/> It made sustainable investments with an environmental objective : % <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of % of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective : %	<input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

From 1 July 2022 until the end of the reference period 30 June 2023 (herein referred to as the 'reference period'), the fund promoted climate change mitigation and support for the UNGC Principles (which cover matters including human rights, labour, corruption, and environmental pollution). Additionally, the fund also sought to avoid investments in certain activities with the potential to cause harm to human health and wellbeing by applying binding exclusions. The fund applied proxy voting and engagement in line with the Investment Manager's policy. The fund does not use a reference benchmark to attain its environmental or social characteristics. This fund underwent a change in SFDR classification on 23 December 2022.

Appendix - additional information (unaudited) (continued)

As at 30 June 2023

Sustainable Finance Disclosure Regulation (SFDR) and EU Taxonomy Regulation (continued)

ANNEX 12 – ARTICLE 8 (continued)

How did the sustainability indicators perform?

The sustainability indicators performed in line with expectations, providing a low carbon portfolio, promoting (by investing in and engaging/voting on) climate change mitigation, adhering to the UN Global Compact and OECD MNE principles, as well as the ESG exclusionary screens.

At the end of the period, the portfolio's Scope 1&2 carbon footprint was 6.96 tCO₂e per \$1mn invested (EVIC). This was below the MSCI ACWI Information Technology + Communication Services Index which had a value of 7.17 tCO₂e per \$1mn invested (EVIC). The portfolio's carbon footprint was also below that of the MSCI ACWI index, which had a value of 51.90 tCO₂e per \$1mn invested (EVIC).

At the end of the period, the portfolio's Scope 1&2 weighted-average carbon intensity (WACI) was 23.89 tCO₂e per \$1mn of revenues which was below both the MSCI ACWI Information Technology + Communication Services Index and the MSCI ACWI Index which had values of 26.98 and 132.62 tCO₂e, respectively.

The Global Technology Leaders fund had lower carbon than the MSCI ACWI on all carbon metrics, during the reference period. This is due to a combination of 1) Technology being a lower carbon emitter than other higher impact sectors, 2) Technology often providing low carbon solutions, helping others to de-carbonise, 3) Exclusions and 4) Voting and engagement to promote decarbonisation. GTL also outperformed the MSCI ACWI IT + CS in the period, as we selected lower carbon and more efficient names, despite our wider definition of a Technology stock (which can lead to inclusion of higher carbon emitters), and bias towards higher growth names.

According to 3rd party data, no breaches to the exclusions were conducted during the reference period.

Issuers are excluded if they have any involvement with chemicals of concern or derive more than 5% of their revenue from the production of fossil fuels, nuclear weapons, tobacco, fur, alcohol, civilian armaments, intensive farming, nuclear power, gambling, pornography and animal testing (excluding medical testing). Issuers are also excluded if they are deemed to have failed to comply with the UNGC Principles (which cover matters including human rights, labour, corruption, and environmental pollution). The fund also applies the Firmwide Exclusions Policy (the "Firmwide Exclusions Policy"), which includes controversial weapons. The fund did not make any direct investments in the companies involved in the current manufacture of, or minority shareholding of 20% or more in a manufacturer of controversial weapons.

The fund applied proxy voting and engagement in line with the Investment Manager's policy, resulting in 114 engagements on the following topics during the reference period, as well as 732 votes.

...and compared to previous periods?

Not applicable. This is the first reference period disclosing under this format.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

This section is not applicable, the fund does not invest in Sustainable Investments.

Appendix - additional information (unaudited) (continued)

As at 30 June 2023

Sustainable Finance Disclosure Regulation (SFDR) and EU Taxonomy Regulation (continued)

ANNEX 12 – ARTICLE 8 (continued)

► **Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

This section is not applicable, the fund does not invest in Sustainable Investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

This section is not applicable, the fund does not invest in Sustainable Investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

This section is not applicable, the fund does not invest in Sustainable Investments.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

PAIs are considered at the product level. The table below sets out where PAI is considered using exclusionary screens.

Principal Adverse Impact	How is PAI considered?
GHG Emissions	Exclusionary screens
Carbon Footprint	Exclusionary screens
GHG Intensity of Investee Companies	Exclusionary screens
Exposure to companies active in fossil fuel	Exclusionary screens
Violations of UNGC and OECD	Exclusionary screens
Exposure to controversial weapons	Exclusionary screens

The above, as well as alternative, PAIs are also considered through the fund applying proxy voting and engagement in line with the Investment Manager’s policy, as well as promoting climate change mitigation and UN GC / OECD MNE principles.

For further information please refer to the Pre-Contractual Agreement found in the Prospectus or the SFDR Website Disclosure found on the Product Page Website. Note the Principal Adverse Impacts were effective as of 19 December 2022.

Software	24.14
Technology Hardware, Storage & Peripherals	6.49
Wireless Telecommunication Services	1.60

The list above represents the economic sectors of the fund's holdings during the reference period.

- ▶ To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.
- ▶ **Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.
- ▶ **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

This section is not applicable, the fund does not align with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

Yes:

In fossil gas In nuclear energy

No

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Appendix - additional information (unaudited) (continued)

As at 30 June 2023

Sustainable Finance Disclosure Regulation (SFDR) and EU Taxonomy Regulation (continued)

ANNEX 12 – ARTICLE 8 (continued)

- ▶ Taxonomy-aligned activities are expressed as a share of:
 - **turnover** reflecting the share of revenue from green activities of investee companies.
 - **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
 - **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

▶  are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of investments made in transitional and enabling activities?

This section is not applicable, the fund does not align with the EU Taxonomy.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

This section is not applicable, the fund does not align with the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

This section is not applicable, the fund does not align with the EU Taxonomy or hold sustainable investments.

What was the share of socially sustainable investments?

This section is not applicable, the fund does not hold sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Other assets may include cash or cash equivalents in addition to instruments held for the purposes of efficient portfolio management, e.g. temporary holdings of index derivatives. No minimum environmental or social safeguards are applied to such investments.

Appendix - additional information (unaudited) (continued)

As at 30 June 2023

Sustainable Finance Disclosure Regulation (SFDR) and EU Taxonomy Regulation (continued)

ANNEX 12 – ARTICLE 8 (continued)

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Every investment considered for inclusion in the fund is evaluated as per the considerations listed below.

- No exclusionary screens or other binding commitments were actively breached by the fund and compliance pre-trade controls have been applied to ensure adherence to the ESG exclusionary screens.
- The fund applied proxy voting and engagement in line with the Investment Manager's policy, for example through systematic engagement letters and action plans.
- Fundamental company analysis enhanced the Investment Manager's promotion of climate change mitigation and support for the UN GC and OECD MNE Principles (which cover matters including human rights, labour, corruption, and environmental pollution). ESG ranking, data, controversy monitoring, and materiality assessments, amongst others, enhance our processes.
- The Investment Manager also integrates ESG analysis into valuation. This is documented in the published Whitepaper focusing on the relationship between ESG performance and valuation. Measured action plans are instated for ESG laggards to encourage tangible improvement and progress.

► **Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

This section is not applicable, the fund does not use a reference benchmark to attain its environmental or social characteristics.

How does the reference benchmark differ from a broad market index?

This section is not applicable, the fund does not use a reference benchmark to attain its environmental or social characteristics.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

This section is not applicable, the fund does not use a reference benchmark to attain its environmental or social characteristics.

As at 30 June 2023

Sustainable Finance Disclosure Regulation (SFDR) and EU Taxonomy Regulation (continued)

ANNEX 13 – ARTICLE 8 (continued)

How did the sustainability indicators perform?

The sustainability indicators performed in line with expectations with the portfolio applying the ESG exclusionary screens and UNGC compliance to the long book.

Specifically, issuers were excluded from the long book if they derive more than 10% of their revenue from thermal coal extraction, shale energy extraction, oil sands extraction, or arctic oil and gas drilling and exploration. Issuers were also excluded if they are deemed to have failed to comply with the UNGC Principles (which cover matters including human rights, labour, corruption and environmental pollution).

The fund also adhered to the Firmwide Exclusions Policy as it did not make any direct investments in the companies involved in the current manufacture of, or minority shareholding of 20% or more in a manufacturer of controversial weapons.

...and compared to previous periods?

Not applicable. This is the first reference period disclosing under this format.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

This section is not applicable, the fund does not invest in Sustainable Investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

This section is not applicable, the fund does not invest in Sustainable Investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

This section is not applicable, the fund does not invest in Sustainable Investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

This section is not applicable, the fund does not invest in Sustainable Investments.

► **Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Appendix - additional information (unaudited) (continued)

As at 30 June 2023

Sustainable Finance Disclosure Regulation (SFDR) and EU Taxonomy Regulation (continued)

ANNEX 13 – ARTICLE 8 (continued)

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The portfolio does not consider PAIs.

What were the top investments of this financial product?

► The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 July 2022 to 30 June 2023

Largest investments	Sector	% Assets	Country
LVMH Moët Hennessy Louis Vuitton	Consumer Discretionary	2.50	France
Compass Group	Consumer Discretionary	2.33	United Kingdom
Shell	Energy	2.09	United Kingdom
RWE	Utilities	2.01	Germany
Novo Nordisk	Health Care	1.97	Denmark
Unilever	Consumer Staples	1.92	United Kingdom
HUGO BOSS	Consumer Discretionary	1.85	Germany
Kuehne + Nagel International	Industrials	1.52	Switzerland
Danone	Consumer Staples	1.48	France
Safran	Industrials	1.27	France
UPM-Kymmene	Materials	1.25	Finland
Cie de Saint-Gobain	Industrials	1.19	France
BP	Energy	1.01	United Kingdom
Nestlé	Consumer Staples	0.88	Switzerland
Rio Tinto	Materials	0.88	UK

The list above represents the average of the fund's holdings at each quarter end during the reference period.

Appendix - additional information (unaudited) (continued)

As at 30 June 2023

Sustainable Finance Disclosure Regulation (SFDR) and EU Taxonomy Regulation (continued)

ANNEX 13 – ARTICLE 8 (continued)

► **Asset allocation** describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?
What was the asset allocation?

In which economic sectors were the investments made?

The fund made investments in the following economic sectors during the reference period, and the values shown are an average of monthly figures.

Economic Sector	% of portfolio avg over reporting period
Cash	6.31
Cash and Bond	51.96
Communication Services	-0.80
Consumer Discretionary	7.25
Consumer Staples	3.66
Energy	5.52
Financials	4.68
Health Care	0.70
Index Derivatives	1.08
Industrials	10.31
Information Technology	7.10
Materials	5.60
Real Estate	-0.46
Utilities	0.92

Appendix - additional information (unaudited) (continued)

As at 30 June 2023

Sustainable Finance Disclosure Regulation (SFDR) and EU Taxonomy Regulation (continued)

ANNEX 8 – ARTICLE 8 (continued)

- ▶ **Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.
- ▶ **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.
- ▶ Taxonomy-aligned activities are expressed as a share of:
 - **turnover** reflecting the share of revenue from green activities of investee companies.
 - **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
 - **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy'?

Yes:

In fossil gas In nuclear energy

No

The graphs below show the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

This section is not applicable, the fund does not align with the EU Taxonomy.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

This section is not applicable, the fund does not align with the EU Taxonomy.

- ▶  are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

This section is not applicable, the fund does not align with the EU Taxonomy or hold sustainable investments.

*Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Appendix - additional information (unaudited) (continued)

As at 30 June 2023

Sustainable Finance Disclosure Regulation (SFDR) and EU Taxonomy Regulation (continued)

ANNEX 8 – ARTICLE 8 (continued)

What was the share of socially sustainable investments?

This section is not applicable, the fund does not hold sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Other assets may include cash or cash equivalents in addition to instruments held for the purposes of efficient portfolio management e.g. temporary holdings of index derivatives. No minimum environmental or social safeguards are applied to such investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

No exclusionary screens were actively breached for the portfolio and compliance pre-trade controls have been applied to ensure adherence to the ESG exclusionary screens.

How did this financial product perform compared to the reference benchmark?

This section is not applicable, the fund does not use a reference benchmark to attain its environmental or social characteristics.

How does the reference benchmark differ from a broad market index?

This section is not applicable, the fund does not use a reference benchmark to attain its environmental or social characteristics.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

This section is not applicable, the fund does not use a reference benchmark to attain its environmental or social characteristics.

How did this financial product perform compared with the reference benchmark?

This section is not applicable, the fund does not use a reference benchmark to attain its environmental or social characteristics.

► **Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Appendix - additional information (unaudited) (continued)

As at 30 June 2023

Sustainable Finance Disclosure Regulation (SFDR) and EU Taxonomy Regulation (continued)

ANNEX 8 - ARTICLE 8 (continued)

How did this financial product perform compared with the broad market index?

This section is not applicable, the fund does not use a reference benchmark to attain its environmental or social characteristics.

Appendix - additional information (unaudited) (continued)

As at 30 June 2023

Sustainable Finance Disclosure Regulation (SFDR) and EU Taxonomy Regulation (continued)

ANNEX 9 – ARTICLE 8

Sustainability-related disclosure

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Pan European Equity Fund	Legal entity identifier: 549300ZOKHDUQ9DX4187
---	--

► **Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

► The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

► **Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes
 No

<input type="checkbox"/> It made sustainable investments with an environmental objective : % <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of % of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective : %	<input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

From 1 July 2022 until the end of the reference period (herein referred to as the 'reference period') the fund promoted climate change mitigation and support for the UNGC principles (which cover matters including human rights, labour, corruption and environmental pollution). The fund also promoted good health and well-being by seeking to avoid investments in certain activities with the potential to cause harm to human health and wellbeing via use of binding exclusions, and also by investing a minimum proportion of the fund in investments deemed to align with UN Sustainable Development Goal '3' ('Good Health and Well-being'). The fund does not use a reference benchmark to attain its environmental or social characteristics.

Appendix - additional information (unaudited) (continued)

As at 30 June 2023

Sustainable Finance Disclosure Regulation (SFDR) and EU Taxonomy Regulation (continued)

ANNEX 9 – ARTICLE 8 (continued)

How did the sustainability indicators perform?

The sustainability indicators performed in line with expectations with the portfolio applying the ESG exclusionary screens and good health and well being assessments.

Specifically, issuers were excluded if they derive more than 5% of their revenue from at least the following activities: shale energy extraction, palm oil, arctic oil and gas drilling or exploration; fur; tobacco; or the adult entertainment sector.

Issuers were also excluded if they are deemed to have failed to comply with the UNGC Principles (which cover matters including human rights, labour, corruption, and environmental pollution). The Fund did not invest more than 5% of the Fund's assets in companies which have a 'High' or 'Severe' ESG risk rating and excluded the bottom 5% of companies of FTSE World Europe Index when ranked by carbon intensity.

Carbon Footprint (t/million USD) – Scope 1&2:

Total Carbon emissions for a portfolio normalized by the market value of the portfolio, expressed in tons CO₂e / \$M invested.

Weighted Average Carbon Intensity (WACI) (t/million USD) - Scope 1&2:

Portfolios Exposure to carbon-intensive companies, expressed in tons CO₂e / \$M invested.

For Pan European Equity Fund:

- The Carbon Footprint value of the portfolio was 29.2 (t/million USD) vs benchmark 78.89 (t/million USD)
- The WACI value of the portfolio was 45.30 (t/million USD) vs benchmark 108.05 (t/million USD)
- Fund alignment to UN Sustainable Development Goal '3' ('Good Health and Well-being') was 10.62% at the end of the period

The fund has scope 1 & 2 emissions below its benchmark index.

We do not actively avoid high emissions stocks or sectors in the portfolio, currently we own stocks in the Materials and Industrials sectors which we believe represent attractive risk-reward. These industries and companies tend to meet a critical need of society and have emissions that are not easy to abate. For these stocks we prefer to look at the rate of change in the years ahead and the actions the management teams are taking to reduce their carbon intensity. We will look for ambitious, often 'Science Based Targets Initiative' (SBTI) committed/approved targets. We will cross-check these targets with the operating and/or capital expenditure that will be committed to fund the required initiatives. Identifying and backing best in class companies in carbon intensive industries whose investments are often the actual backbone of decarbonising critical industrial processes is fundamental to our investment philosophy.

...and compared to previous periods?

Not applicable. This is the first reference period disclosing under this format.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

This section is not applicable, the fund does not invest in Sustainable Investments.

Appendix - additional information (unaudited) (continued)

As at 30 June 2023

Sustainable Finance Disclosure Regulation (SFDR) and EU Taxonomy Regulation (continued)

ANNEX 9 – ARTICLE 8 (continued)

- ▶ **Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

This section is not applicable, the fund does not invest in Sustainable Investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

This section is not applicable, the fund does not invest in Sustainable Investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

This section is not applicable, the fund does not invest in Sustainable Investments.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

As at the date of this disclosure, the Investment Manager considers the following principal adverse impacts on sustainability factors ('PAIs'):

Principal Adverse Impact	How is PAI considered?
GHG Emissions	Exclusionary Screens
Carbon Footprint	Exclusionary Screens
GHG Intensity of Investee Companies	Exclusionary Screens
Exposure to Companies active in fossil fuel	Exclusionary Screens
Activities negatively affecting biodiversity sensitive areas	Exclusionary Screens
Violations of UNGC and OECD	Exclusionary Screens
Exposure to controversial weapons	Exclusionary Screens

For further information please refer to the Pre-Contractual Agreement found in the Prospectus or the SFDR Website Disclosure found on the Product Page Website. Note the Principal Adverse Impacts were effective as of 19 December 2022.

Yes

 No

<input type="checkbox"/> It made sustainable investments with an environmental objective : % <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of % of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective : %	<input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

From 31 October 2022 until the end of the reference period (herein referred to as the 'reference period'), the fund promotes climate change mitigation through the adoption of GHG emission reductions targets and support for the UN Global Compact Principles (which cover matters including human rights, labour, corruption, and environmental pollution). The fund does not use a reference benchmark to attain its environmental or social characteristics.

Appendix - additional information (unaudited) (continued)

As at 30 June 2023

Sustainable Finance Disclosure Regulation (SFDR) and EU Taxonomy Regulation (continued)

ANNEX 14 – ARTICLE 8 (continued)

How did the sustainability indicators perform?

The sustainability indicators performed in line with expectations with the portfolio adhering to the overall UN Global Compact principles as well as the ESG exclusionary screens and screens to avoid investment in certain high carbon activities.

Issuers were excluded if they were deemed to have failed to comply with the UNGC Principles (which cover matters including human rights, labour, corruption and environmental pollution).

In addition, the Investment Manager actively engaged with companies to encourage the adoption of science-based emission targets, or a verified commitment to adopt science-based emissions targets, as defined by the Science Based Target Initiative.

The Investment Manager committed a minimum of 10% of companies within the portfolio having approved or committed targets and monitored the progress of those companies against those targets.

The fund also adhered to the Firmwide Exclusions Policy as it did not make any direct investments in the companies involved in the current manufacture of, or minority shareholding of 20% or more in a manufacturer of controversial weapons.

As at 30 June 2023, around 53% of portfolio companies had either committed or approved science-based emissions targets.

...and compared to previous periods?

Not applicable. This is the first reference period disclosing under this format.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

This section is not applicable, the fund does not invest in Sustainable Investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

This section is not applicable, the fund does not invest in Sustainable Investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

This section is not applicable, the fund does not invest in Sustainable Investments.

► **Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Legal entity identifier:213800KHR3DA4ELZN939

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

- **What environmental and/or social characteristics are promoted by this financial product?**

The Fund promotes support for the UNGC principles (which cover matters including human rights, labour, corruption, and environmental pollution).

The Fund also seeks to avoid investments in certain activities with the potential to cause harm to human health and wellbeing by applying binding exclusions.

The Fund does not use a reference benchmark to attain its environmental or social characteristics.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

- Overall Global Compact Compliance Status of the core long book

- ESG exclusionary screens applied to the core long book – see "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?" below for details on the exclusions.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

<ul style="list-style-type: none"> ● <i>What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?</i> 	<p>Not applicable</p>
<ul style="list-style-type: none"> ● <i>How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?</i> 	<p>Not applicable</p>
<p style="text-align: center;">- - - <i>How have the indicators for adverse impacts on sustainability factors been taken into account?</i></p>	<p>Not applicable</p>
<p style="text-align: center;">- - - <i>How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:</i></p>	<p>Not applicable</p>
	<p><i>The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.</i></p> <p>The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.</p> <p><i>Any other sustainable investments must also not significantly harm any environmental or social objectives.</i></p>

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

 **Does this financial product consider principal adverse impacts on sustainability factors?**

- Yes
- No

■ **What investment strategy does this financial product follow?**

This Fund seeks a positive absolute return through global equity markets and specifically through a majority investment in the UK.

The binding elements of the investment strategy described below are implemented as exclusionary screens on core long positions which are coded into the compliance module of the Investment Managers order management system utilising third-party data provider(s) on an ongoing basis. The exclusionary screens are implemented on both a pre and post trade basis enabling the sub investment advisor to block any proposed transactions in an excluded security and identify any changes to the status of holdings when third-party data is periodically updated.

■ ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The Investment Manager uses specific screens to its core long positions to help achieve some of the promoted characteristics. For example- to promote climate change mitigation, screens are applied to avoid investment in certain high carbon activities, and it is expected that this will result in the fund having a lower carbon profile. Another example is that to promote support for the UNGC Principles, screens are applied so that the Fund does not invest in issuers that are in breach of the UNGC Principles based on third party data and/or internal research.

The Investment Manager applies screens to its core long positions to exclude direct investment in issuers based on their involvement in certain activities. Specifically, issuers are excluded if they derive more than 10% of their revenue from thermal coal extraction, shale energy extraction, oil sands extraction, or arctic oil and gas drilling or exploration. Issuers are also excluded if they are deemed to have failed to comply with the UN Global Compact Principles (which cover matters including human rights, labour, corruption, and environmental pollution).

The Fund also applies the Firmwide Exclusions Policy(the “Firmwide Exclusions Policy”), which includes controversial weapons:

This applies to all the investment decisions made by the Management Company or Investment Manager. The Firmwide Exclusions Policy may be updated from time to time.

Presently, investment is not permitted in entities involved in the current manufacture of, or minority shareholding of 20% or greater in a manufacturer of controversial weapons, namely:

- Cluster munitions;

- Anti-Personnel mines;
- Chemical weapons;
- Biological weapons.

Classification of issuers is primarily based on activity identification fields supplied by our third-party ESG data providers. This classification is subject to an investment research override in cases where sufficient evidence exists that the third-party data field is not accurate or appropriate. In any scenario where a portfolio position is identified as not meeting this exclusion criteria for any reason (legacy holding, transition holding, etc.) the Investment Manager shall be granted 90 days to review or challenge the classification of the issuer if appropriate. After this period, in the event an investment research override is not granted divestment is required immediately under normal market trading circumstances.

The Investment Manager also applies screens to its core long positions to exclude ESG laggards.

The Investment Manager carries out its review from an ESG perspective (i.e. 'extra-financial analysis') on at least 90% of the core long positions.

The Investment Manager may only invest in companies that would be excluded by the screens described above if the Investment Manager believes, based on its own research and as approved by its ESG Oversight Committee, that the third-party data used to apply the exclusions is insufficient or inaccurate.

The Investment Manager may consider that the data is insufficient or inaccurate if, for example, the third-party data provider research is historic, vague, based on out of date sources, or the investment manager has other information to make them doubt the accuracy of the research.

If the Investment Manager wishes to challenge the third-party data, then the challenge is presented to a cross-functional ESG Oversight Committee who must sign off on the "override" of the third-party data.

If a third party data provider does not provide research on a specific issuer or excluded activity, the Investment Manager may invest if, through its own research, it is satisfied that the issuer is not involved in the excluded activity.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy***

There is no committed minimum rate.

● ***What is the policy to assess good governance practices of the investee companies?***

The companies in which investments are assessed by the Investment Manager to follow good governance practices.

The good governance practices of investee companies are assessed prior to making an investment and periodically thereafter in accordance with the Sustainability Risk Policy ("Policy").

The Policy sets minimum standards against which investee companies will be assessed and monitored by the Investment Manager prior to making an investment and on an ongoing basis. Such standards may include, but are not limited to: sound management structures, employee relations, remuneration of staff and tax compliance.

The Policy can be found incorporated within Janus Henderson's "ESG Investment Policy" in the "About Us – Environmental, Social and Governance (ESG)" section of the website at www.janushenderson.com.

In addition, the Investment Manager is a signatory to the UN Principles for Responsible Investment (UNPRI). As a signatory, the good governance practices of investee companies are also assessed by having regard to the UNPRI principles prior to making an investment and periodically thereafter.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

A minimum of 10% of the deployed capital of the financial product (i.e., gross exposure) is used to meet the environmental or social characteristics promoted by the financial product. Generally, the expected range would be between 10 – 50% of the deployed capital, as the core long investment allocation that promotes sustainable characteristics will vary across economic and stock market cycles. Other assets, which are not used to meet the environmental or social characteristics, may include cash or cash equivalents, instruments held for the purposes of efficient portfolio management, short term tactical positions, short equity positions or holdings of index derivatives.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Fund will usually use derivatives to gain synthetic exposure to attain the environmental and social characteristics described above.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable.
 The proportion of investments in the Fund which are aligned with the EU Taxonomy is 0%. Although the EU Taxonomy provides an ambitious framework to determine the environmental sustainability of economic activities, the EU Taxonomy does not comprehensively cover all industries and sectors, or all environmental objectives. The Investment Manager uses its own methodology to determine whether investments selected for the Fund are promoting environmental characteristics in accordance with the SFDR rules.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

Not applicable

What is the Minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Not applicable

What is the minimum share of socially sustainable investments?

Not applicable

What investments are included under “# Other”, what is their purpose and are there any minimum environmental or social safeguards?

Other assets may include cash or cash equivalents in addition to instruments held for the purposes of efficient portfolio management, short term tactical positions, short equity positions or temporary holdings of index derivatives. No minimum environmental or social safeguards are applied to such investments.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

Not applicable.

- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

Not applicable.

- **How does the designated index differ from a relevant broad market index?**

Not applicable.

- **Where can the methodology used for the calculation of the designated index be found?**

Not applicable.

Where can I find more product specific information online?

More product-specific information can be found at <https://www.janushenderson.com/en-lu/investor/eu-sfdr-absolute-return-fund/>.

Further information as to how Janus Henderson approach ESG, including Janus Henderson’s “ESG Investment Policy”, can be found in the “About Us –Environmental, Social and Governance (ESG)” section of the website at www.janushenderson.com

Appendix - additional information (unaudited) (continued)

As at 30 June 2023

Sustainable Finance Disclosure Regulation (SFDR) and EU Taxonomy Regulation (continued)

ANNEX 10 – ARTICLE 8 (continued)

- ▶ To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.
- ▶ **Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.
- ▶ **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.
- ▶ Taxonomy-aligned activities are expressed as a share of:
 - **turnover** reflecting the share of revenue from green activities of investee companies.
 - **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
 - **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

This section is not applicable, the fund does not align with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

Yes:

In fossil gas In nuclear energy

No

The graphs below show the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

What was the share of investments made in transitional and enabling activities?

This section is not applicable, the fund does not align with the EU Taxonomy.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

This section is not applicable, the fund does not align with the EU Taxonomy.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainable Finance Disclosure Regulation (SFDR) and EU Taxonomy Regulation (continued)

ANNEX 10 – ARTICLE 8 (continued)

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 **Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

This section is not applicable, the fund does not align with the EU Taxonomy or hold sustainable investments.

What was the share of socially sustainable investments?

This section is not applicable, the fund does not hold sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Other assets included cash or cash equivalents in addition to instruments held for the purposes of efficient portfolio management e.g. temporary holdings of index derivatives. No minimum environmental or social safeguards were applied to such investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

No exclusionary screens were actively breached for the portfolio and compliance pre-trade controls have been applied to ensure adherence to the ESG exclusionary screens.

In addition, the team committed to a minimum of 10% of companies within the portfolio having approved or committed targets and monitored the progress of those companies against those targets.

How did this financial product perform compared to the reference benchmark?

This section is not applicable, the fund does not use a reference benchmark to attain its environmental or social characteristics.

How does the reference benchmark differ from a broad market index?

This section is not applicable, the fund does not use a reference benchmark to attain its environmental or social characteristics.

Sustainable Finance Disclosure Regulation (SFDR) and EU Taxonomy Regulation (continued)

ANNEX 11 – ARTICLE 8

Sustainability-related disclosure

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Global Property Equities Fund	Legal entity identifier: 213800JU08N42HYG8F65
--	--

► **Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

► The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

► **Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes
 No

<input type="checkbox"/> It made sustainable investments with an environmental objective : % <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of % of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective : %	<input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

From 31 October 2022 until the end of the reference period (herein referred to as the 'reference period'), the fund promotes climate change mitigation through the adoption of GHG emission reductions targets and support for the UN Global Compact Principles (which cover matters including human rights, labour, corruption, and environmental pollution). The fund also seeks to avoid investments in certain activities with the potential to cause harm to human health and wellbeing by applying binding exclusions.

Accordingly, the team applies screens to exclude companies deemed to have failed to comply with the UNGC Principles. The team also excludes direct investment in Prison Real Estate Investment Trusts (REITS) and applies the Firmwide Exclusions Policy.

The fund does not use a reference benchmark to attain its environmental or social characteristics.

Appendix - additional information (unaudited) (continued)

As at 30 June 2023

Sustainable Finance Disclosure Regulation (SFDR) and EU Taxonomy Regulation (continued)

ANNEX 11 – ARTICLE 8 (continued)

How did the sustainability indicators perform?

The sustainability indicators performed in line with expectations with the portfolio adhering to the overall UN Global Compact principles and science-based-emission targets.

More specifically, issuers were excluded if they were deemed to have failed to comply with the UNGC Principles (which cover matters including human rights, labour, corruption and environmental pollution). In addition, the Investment Manager actively engaged with companies to encourage the adoption of science-based emission targets, or a verified commitment to adopt science-based emissions targets, as defined by the Science Based Target Initiative. The Investment Manager committed a minimum of 10% of companies within the portfolio having approved or committed targets and monitored the progress of those companies against those targets. As at 30 June 2023, around 48% of portfolio companies had either committed or approved science-based emissions targets.

The fund also adhered to the Firmwide Exclusions Policy as it did not make any direct investments in the companies involved in the current manufacture of, or minority shareholding of 20% or more in a manufacturer of controversial weapons.

...and compared to previous periods?

Not applicable. This is the first reference period disclosing under this format.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

This section is not applicable, the fund does not invest in Sustainable Investments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

This section is not applicable, the fund does not invest in Sustainable Investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

This section is not applicable, the fund does not invest in Sustainable Investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

This section is not applicable, the fund does not invest in Sustainable Investments.

- ▶ **Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Appendix - additional information (unaudited) (continued)

As at 30 June 2023

Sustainable Finance Disclosure Regulation (SFDR) and EU Taxonomy Regulation (continued)

ANNEX 11 – ARTICLE 8 (continued)

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

As at the date of this disclosure, the Investment Manager considers the following principal adverse impacts on sustainability factors (‘PAIs’):

Principal Adverse Impact	How is PAI considered?
GHG emissions	Through engagement with companies
Carbon footprint	Through engagement with companies
GHG Intensity of investee companies	Through engagement with companies
Share of investments in investee companies involved in the manufacture or selling of controversial weapons	Exclusionary screen
Violations of UNGC and OECD	Exclusionary screen

For further information please refer to the Pre-Contractual Agreement found in the Prospectus or the SFDR Website Disclosure found on the Product Page Website. Note the Principal Adverse Impacts were effective as of 19 December 2022.

What were the top investments of this financial product?

- The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31 October 2022 to 30 June 2023

Largest investments	Sector	% Assets	Country
Prologis	Real Estate	8.74	United States
VICI Properties	Real Estate	4.92	United States
Welltower	Real Estate	4.19	United States
NNN REIT	Real Estate	3.22	United States

Healthpeak Properties	Real Estate	2.24	United States
SITE Centers	Real Estate	2.03	United States
Digital Realty Trust	Real Estate	1.88	United States
Camden Property Trust	Real Estate	1.79	United States

The list above represents the average of the fund's holdings at each quarter end during the reference period.

► **Asset allocation** describes the share of investments in specific assets.

**What was the proportion of sustainability-related investments?
What was the asset allocation?**

In which economic sectors were the investments made?

The fund made investments in the following economic sectors during the reference period, and the values shown are an average of monthly figures.

Economic Sector	% of portfolio avg over reporting period
Cash	2.36
Diversified REITs	4.53
Health Care REITs	6.27
Home Construction	1.37
Hotel & Lodging REITs	5.91
Industrial REITs	17.17
Infrastructure REITs	1.55
Office REITs	7.62

Nome del prodotto: **JPMorgan Funds - China A-Share Opportunities Fund**

Identificativo della persona giuridica: **5493005GW3195MJJOZ40**

Caratteristiche ambientali e/o sociali

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?

Sì

No

Ha effettuato investimenti sostenibili con un obiettivo ambientale: %

Ha promosso caratteristiche ambientali/sociali (A/S) e pur non avendo come obiettivo un investimento sostenibile, aveva una quota del 57,68% di investimenti sostenibili

in attività economiche considerate ecosostenibili conformemente alla Tassonomia dell'UE

con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla Tassonomia dell'UE

in attività economiche che non sono considerate ecosostenibili conformemente alla Tassonomia dell'UE

con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla Tassonomia dell'UE

Ha effettuato investimenti sostenibili con un obiettivo sociale: %

con un obiettivo sociale

Ha promosso caratteristiche A/S ma non ha effettuato alcun investimento sostenibile

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, purché tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e l'impresa beneficiaria degli investimenti segua prassi di buona governance.

La **Tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852 che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non stabilisce un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere allineati o meno alla Tassonomia.

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Il Comparto si propone di promuovere un'ampia gamma di caratteristiche ambientali, sociali e di governance attraverso i suoi criteri di inclusione degli investimenti, in particolare con una ripartizione minima del patrimonio del 51% in investimenti con caratteristiche ambientali e/o sociali positive e un minimo di 10% di investimenti costituiti da investimenti sostenibili. Questi impegni sono stati rispettati per tutto il periodo di riferimento (1 luglio 2022 - 30 giugno 2023). Alla fine del periodo di riferimento, il Comparto deteneva il 92,64% di investimenti con caratteristiche ambientali e/o sociali positive e il 57,68% di investimenti sostenibili.

Questi investimenti sono stati determinati mediante l'applicazione di criteri di inclusione ed esclusione che sono stati applicati sia a livello di asset che di prodotto. I criteri di inclusione sono basati su un punteggio ESG assegnato a tutti gli investimenti nell'ambito della strategia, per identificare quelli che possono essere considerati come aventi caratteristiche ambientali e/o sociali e quelli che soddisfano le soglie per essere considerati investimenti sostenibili.

Il punteggio ESG prende in considerazione i seguenti indicatori: la gestione efficace delle emissioni tossiche, dei rifiuti, il buon record ambientale e le caratteristiche sociali, come efficaci dichiarazioni di sostenibilità, valutazioni favorevoli in materia di relazioni con il personale dipendente e di gestione dei problemi di sicurezza.

Attraverso i suoi criteri di esclusione (che prevedevano esclusioni sia totali che parziali), il Comparto ha promosso determinate norme e valori, tra cui il sostegno alla salvaguardia dei diritti umani proclamati a livello internazionale. Il Comparto ha escluso completamente le società impegnate nella fabbricazione di armi controverse e ha applicato soglie massime di reddito o di produzione ad altre, come quelle che operano nel settore del carbone termico e del tabacco.

In relazione alla considerazione di buona governance, tutti gli investimenti (esclusi i contanti e i derivati) sono stati vagliati per escludere i noti trasgressori delle pratiche di buona governance. Inoltre, per gli investimenti che si ritiene abbiano caratteristiche ambientali e/o sociali o che si qualificano come investimenti sostenibili, sono state applicate ulteriori considerazioni. Per questi investimenti, il Comparto ha incorporato un confronto con un gruppo di pari e ha escluso le società che non hanno ottenuto un punteggio superiore all'80% rispetto ai pari in base agli indicatori di buona governance.

Il Comparto non prevedeva specifici obiettivi di allocazione a favore di caratteristiche ambientali o sociali. La misura in cui le caratteristiche ambientali o sociali promosse sono state soddisfatte può essere intesa considerando la % effettiva del patrimonio allocata per il periodo di riferimento alle imprese che presentavano tali caratteristiche.

In sintesi: il Comparto ha rispettato i minimi contrattuali garantiti in relazione alle caratteristiche ambientali e/o sociali e alla politica di investimenti sostenibili per tutto il periodo di riferimento. Il Comparto ha applicato dei filtri con l'obiettivo di escludere tutti i potenziali investimenti vietati dalla sua politica di esclusione durante tutto questo periodo. La misura in cui le norme e i valori promossi dal Comparto sono stati soddisfatti si basa sull'eventualità che il Comparto abbia detenuto durante il Periodo di riferimento imprese che sarebbero state vietate ai sensi della politica di esclusione. Il Gestore degli Investimenti non ha riscontrato alcuna indicazione siano stati effettuati investimenti in imprese di tale genere. Il Gestore degli Investimenti informa che la continuità dei valori percentuali e delle informazioni divulgate non può essere garantita in futuro ed è soggetta alla costante evoluzione del panorama legale e normativo. La durata del periodo di riferimento può essere inferiore a 12 mesi se nel corso di tale periodo il fondo era stato lanciato, chiuso o il suo status ai sensi dell'articolo 8/9 era stato modificato.

Gli indicatori di sostenibilità misurano in che modo sono realizzate le caratteristiche ambientali o sociali promosse da questo prodotto finanziario

● ***Qual è stata la prestazione degli indicatori di sostenibilità?***

Una combinazione della metodologia di valutazione ESG propria del Gestore degli Investimenti, che consiste nella valutazione ESG propria del Gestore degli Investimenti, e/o di dati di terzi è stata utilizzata nell'ambito dei criteri di inclusione per misurare il conseguimento delle caratteristiche ambientali e/o sociali che il Comparto promuove.

La metodologia era basata sulla gestione da parte di un'impresa dei relativi aspetti ambientali o sociali come le sue emissioni tossiche, la gestione dei rifiuti, le relazioni con il personale dipendente e gli aspetti della sicurezza, la diversità di genere/indipendenza del consiglio di amministrazione e la tutela della riservatezza dei dati. Per essere inclusa nel 51% degli asset considerati come promotori di caratteristiche ambientali e/o sociali, un'impresa deve conseguire un punteggio ambientale o sociale compreso nell'80% di quelli maggiormente elevati in relazione alle imprese di pari grado e attuare le buone prassi di governance sopra indicate.

Alla fine del periodo di riferimento, il Comparto deteneva il 92,64% di investimenti con caratteristiche ambientali e/o sociali positive e il 57,68% di investimenti sostenibili.

Per quanto riguarda le norme applicate e le esclusioni basate sui valori, il Gestore degli Investimenti ha utilizzato i dati per quantificare la partecipazione di una società alle relative attività. Lo screening condotto su tali dati ha consentito di pervenire a esclusioni totali di certi potenziali investimenti e a esclusioni parziali in base a soglie percentuali massime di ricavi o produzione, conformemente ai criteri di esclusione. Durante tutto il periodo di riferimento, e in nessun caso, sono state trasgredite le regole di esclusione. Inoltre, è stato incorporato nello screening un sottoinsieme di "Indicatori di Sostenibilità Avversi" come enunciato nelle Norme tecniche di regolamentazione SFDR dell'UE".

Il Comparto non prevedeva specifici obiettivi di allocazione a favore di caratteristiche ambientali o sociali e pertanto la prestazione degli indicatori in relazione a specifiche caratteristiche ambientali o sociali non è illustrata in questa sede.

Per ulteriori informazioni, consultare l'Informativa sulle Caratteristiche Ambientali e Sociali del Comparto sul sito www.jpmorganassetmanagement.lu, cercando il proprio Comparto specifico e accedendo alla sezione Informazioni ESG.

● ***...e rispetto ai periodi precedenti?***

● ***Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha parzialmente effettuato e in che misura gli investimenti sostenibili hanno contribuito al conseguimento di tali obiettivi?***

Gli obiettivi degli investimenti sostenibili che il Comparto ha parzialmente effettuato sono stati costituiti da qualsiasi singolo o combinazione dei seguenti obiettivi durante il periodo di riferimento:

Obiettivi ambientali: (i) mitigazione del rischio climatico, (ii) transizione verso un'economia circolare

Obiettivi sociali: (i) comunità inclusive e sostenibili - aumento della rappresentanza femminile a livello dirigenziale, (ii) comunità inclusive e sostenibili - aumento della rappresentanza femminile nei consigli di amministrazione e (iii) realizzazione di un ambiente di lavoro e di una cultura dignitosi.

Il contributo a tali obiettivi è stato determinato mediante: (i) indicatori di sostenibilità di prodotti e servizi, che possono aver incluso la percentuale di entrate derivanti dalla fornitura di prodotti e/o servizi che contribuiscono al pertinente obiettivo sostenibile, come un'impresa che produca pannelli solari o tecnologie per l'energia pulita che soddisfano le soglie proprietarie del Gestore degli Investimenti di contributo alla mitigazione del rischio climatico. L'attuale percentuale di ricavi è fissata ad un minimo del 20% e l'intera partecipazione nella società è considerata un investimento sostenibile; o (ii) essere un leader operativo del gruppo di pari che contribuisce all'obiettivo pertinente. La qualifica di leader di un gruppo di pari è definita come un punteggio entro il top 20% rispetto ai pari, in base a determinati indicatori di sostenibilità operativa. Ad esempio, il raggiungimento di un punteggio entro il top 20% rispetto ai pari sull'impatto totale dei rifiuti contribuisce alla transizione verso un'economia circolare.

Il contributo effettivo a tali obiettivi può essere compreso considerando l'effettiva % di asset allocata agli investimenti sostenibili per il periodo di riferimento. Il Comparto era tenuto a investire l' 10% del patrimonio in investimenti sostenibili. Durante il periodo, il Comparto non ha mai detenuto investimenti sostenibili al di sotto del suo minimo garantito. Alla fine del periodo di riferimento, il 57,68% del suo patrimonio era costituito da investimenti sostenibili.

● ***In che modo gli investimenti sostenibili che il prodotto finanziario ha parzialmente realizzato non hanno causato danni significativi ad alcun obiettivo di investimento sostenibile ambientale o sociale?***

Gli investimenti sostenibili che il Comparto intendeva in parte realizzare sono stati sottoposti a un processo di screening che ha mirato a identificare ed escludere dalla qualifica di investimento sostenibile, le imprese che il Gestore degli Investimenti considerava come aventi realizzato le performance peggiori, in base a una soglia determinata dal Gestore degli Investimenti, in relazione a determinate considerazioni ambientali. Di conseguenza, sono stati considerati investimenti sostenibili solo le imprese che hanno dimostrato di possedere i migliori indicatori in relazione alle misure assolute e relative.

Tali considerazioni includono il cambiamento climatico, la protezione delle risorse idriche e marine, la transizione verso un'economia circolare, l'inquinamento e la protezione della biodiversità e degli ecosistemi. Il Gestore degli Investimenti ha inoltre applicato un filtro volto a identificare ed escludere le imprese che il Gestore degli Investimenti ha ritenuto non conformi alle Linee guida dell'OCSE per le imprese multinazionali e i Principi guida delle Nazioni Unite su imprese e diritti umani, sulla base dei dati comunicati da fornitori di servizi terzi.

— ***Come sono stati presi in considerazione gli indicatori degli impatti negativi sui fattori di sostenibilità?***

Gli indicatori degli impatti negativi sui fattori di sostenibilità di cui alla Tabella 1 dell'Allegato 1 e alcuni indicatori, determinati dal Gestore degli Investimenti, di cui alle Tabelle 2 e 3 dell'Allegato 1 delle Norme tecniche di regolamentazione SFDR dell'UE sono stati presi in considerazione come ulteriormente descritto di seguito. Il Gestore degli Investimenti ha utilizzato le metriche contenute negli Standard tecnici regolamentari SFDR dell'UE oppure, laddove ciò non fosse possibile a causa di limitazioni dei dati o di altri problemi tecnici, un proxy rappresentativo. Il Gestore degli Investimenti ha consolidato la considerazione di alcuni indicatori in un indicatore "primario", come descritto ulteriormente di seguito, e potrebbe aver utilizzato un'ulteriore serie di indicatori più ampia di quella indicata di seguito.

Gli indicatori pertinenti nella Tabella 1 dell'Allegato 1 delle Norme tecniche di regolamentazione SFDR dell'UE consistono in 9 indicatori ambientali e 5 indicatori sociali e occupazionali. Gli indicatori ambientali sono elencati da 1 a 9 e riguardano le emissioni di gas serra (1-3), l'esposizione ai combustibili fossili, la

I principali impatti negativi sono gli impatti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a questioni ambientali, sociali e occupazionali, al rispetto dei diritti umani, alla lotta alla corruzione e alla concussione.

quota di consumo e produzione di energia non rinnovabile, l'intensità del consumo energetico, le attività che influiscono negativamente sulle aree sensibili di biodiversità, le emissioni nell'acqua e i rifiuti pericolosi (4-9 rispettivamente). Gli indicatori da 10 a 14 riguardano le questioni sociali e occupazionali di un'impresa e coprono rispettivamente le violazioni dei principi del Global Compact delle Nazioni Unite e delle Linee guida dell'OCSE per le imprese multinazionali, la mancanza di processi e meccanismi di conformità per monitorare la conformità ai principi del Global Compact delle Nazioni Unite, il divario retributivo di genere non corretto, la diversità di genere del Consiglio di amministrazione e l'esposizione ad armi controverse (mine antiuomo, munizioni a grappolo, armi chimiche e armi biologiche).

L'approccio del Gestore degli Investimenti comprendeva aspetti sia quantitativi che qualitativi per tenere conto degli indicatori suddetti. Ha utilizzato particolari indicatori per lo screening, cercando di escludere le imprese che potrebbero causare danni significativi. Ha utilizzato un sottoinsieme per l'impegno con determinate imprese, cercando di influenzare le migliori prassi e ha utilizzato alcuni di essi come indicatori di performance positiva di sostenibilità, applicando una soglia minima rispetto all'indicatore per ottenere la qualifica di investimento sostenibile. I dati necessari per prendere in considerazione gli indicatori, ove disponibili, possono essere stati ottenuti dalle stesse imprese partecipate e/o comunicati da fornitori di servizi terzi (compresi i dati proxy). Gli input di dati autodichiarati dalle imprese o comunicati da fornitori terzi possono basarsi su serie di dati e ipotesi che possono essere insufficienti, di scarsa qualità o contenere informazioni distorte. Poiché dipendono da soggetti terzi, il Gestore degli Investimenti non può garantire l'accuratezza o la completezza di tali dati.

Screening

Alcuni indicatori sono stati presi in considerazione attraverso lo screening basato su valori e norme per implementare le esclusioni. Queste esclusioni hanno preso in considerazione gli indicatori 10 e 14 in relazione ai principi del Global Compact delle Nazioni Unite e alle Linee guida dell'OCSE per le imprese multinazionali e le armi controverse. Il Gestore degli Investimenti ha anche applicato un filtro appositamente realizzato. A causa di alcune considerazioni tecniche, come la copertura dei dati in relazione a specifici indicatori, il Gestore degli Investimenti ha applicato l'indicatore specifico di cui alla Tabella 1 o un proxy rappresentativo, come determinato dal Gestore degli Investimenti per vagliare le imprese partecipate in relazione alle questioni ambientali o sociali e occupazionali. Per esempio, le emissioni di gas a effetto serra sono associate a diversi indicatori e metriche corrispondenti nella Tabella 1, come le emissioni di gas a effetto serra, l'impronta di carbonio e l'intensità di gas a effetto serra (indicatori 1-3). Il Gestore degli Investimenti ha utilizzato i dati sull'intensità dei gas a effetto serra (indicatore 3), i dati relativi al consumo e alla produzione di energia non rinnovabile (indicatore 5) e i dati sull'intensità del consumo di energia (indicatore 6) per effettuare lo screening relativo alle emissioni di gas a effetto serra.

In relazione allo screening realizzato ad hoc e per quanto riguarda le attività che influenzano negativamente le aree sensibili per la biodiversità e le emissioni nell'acqua (indicatori 7 e 8), a causa delle limitazioni dei dati, sono stati utilizzati dati proxy rappresentativi di terze parti, piuttosto che gli indicatori specifici di cui alla Tabella 1. Il Gestore degli Investimenti ha preso in considerazione anche l'indicatore 9 in relazione ai rifiuti pericolosi per quanto riguarda il filtro appositamente costruito.

Impegno

Oltre a selezionare alcune imprese come descritto sopra, il Gestore degli investimenti si è impegnato in maniera continuativa con alcune imprese partecipate sottostanti. È stato utilizzato un sottoinsieme degli indicatori, in base ad alcune considerazioni tecniche come la copertura dei dati, come base per impegnarsi con alcune imprese partecipate sottostanti, in conformità con l'approccio adottato dal Gestore degli Investimenti in materia di stewardship e impegno. Gli indicatori utilizzati in relazione a tale impegno includono gli indicatori 3, 5 e 13 relativi all'intensità dei gas a effetto serra, alla quota di energia non rinnovabile e alla diversità di genere nei consigli d'amministrazione della Tabella 1. Ha utilizzato anche gli indicatori 2 della Tabella 2 e 3 della Tabella 3 in relazione alle emissioni o agli inquinanti atmosferici e al numero di giorni persi per infortuni, incidenti, decessi o malattie.

Indicatori di sostenibilità

Il Gestore degli investimenti ha utilizzato gli indicatori 3 e 13 in relazione all'intensità di gas serra e alla diversità di genere nei consigli di amministrazione come indicatori di sostenibilità per contribuire a qualificare un investimento come investimento sostenibile. Uno dei percorsi richiedeva che un'impresa fosse considerata come un'impresa operativa leader di un gruppo di pari per poter essere qualificata come investimento sostenibile. Ciò richiedeva un punteggio relativo all'indicatore incluso nel 20% superiore rispetto ai pari.

I principali impatti negativi sono gli impatti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a questioni ambientali, sociali e occupazionali, al rispetto dei diritti umani, alla lotta alla corruzione e alla concussione.

— *Gli investimenti sostenibili sono stati allineati alle Linee guida dell'OCSE per le imprese multinazionali e ai Principi guida delle Nazioni Unite su imprese e diritti umani? Dettagli:*

Le esclusioni dal portafoglio basate su norme come descritto sopra al punto "In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario? sono state applicate per perseguire l'allineamento con queste linee guida e principi. Al fine di individuare potenziali trasgressori sono stati utilizzati dati di soggetti terzi. A meno che non sia stata concessa un'eccezione, il Comparto ha vietato investimenti rilevanti in questi emittenti.

La Tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla Tassonomia non devono arrecare danno significativo agli obiettivi della Tassonomia dell'UE, ed è accompagnata da criteri specifici dell'Unione.

Il principio "non arrecare un danno significativo" si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'Unione per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri dell'Unione per le attività economiche ecosostenibili.

Qualsiasi altro investimento sostenibile non deve inoltre arrecare un danno significativo agli obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha considerato i principali impatti negativi sui fattori di sostenibilità?

Il Comparto ha considerato i principali impatti negativi selezionati sui fattori di sostenibilità attraverso uno screening basato su valori e norme per implementare le esclusioni. In relazione a tale screening sono stati utilizzati gli indicatori 10 e 14 in relazione alle violazioni del Global Compact delle Nazioni Unite e alle armi controverse degli Standard Tecnici Regolamentari SFDR dell'UE. Il Comparto ha anche utilizzato alcuni degli indicatori nell'ambito del filtro "Non arrecare danno significativo", come dettagliato nella risposta alla domanda immediatamente precedente, per dimostrare che un investimento si qualifica come investimento sostenibile.

Un sottoinsieme dei suddetti Indicatori di Sostenibilità Avversi è stato utilizzato per determinare l'impegno con le imprese partecipate in base alla loro rispettiva performance PAI (principali impatti avversi).

Quali sono stati i principali investimenti di questo prodotto finanziario?

L'elenco comprende gli investimenti che costituiscono la **maggior parte degli investimenti** del prodotto finanziario sulla base di un'istantanea alla fine del periodo di riferimento:

01/07/2022 - 30/06/2023

Maggiori investimenti	Settore	% del patrimonio	Paese
KWEICHOW MOUTAI CO LTD-A	Beni di consumo	6,95	Cina
PING AN INSURANCE GROUP CO-H	Settore finanziario	3,48	Cina
CHINA MERCHANTS BANK-H	Settore finanziario	2,97	Cina

Qual è stata la percentuale di investimenti legati alla sostenibilità?

La ripartizione degli investimenti descrive la quota di investimenti in attività specifiche.

● Qual è stata la ripartizione degli investimenti?

Alla fine del periodo di riferimento, il Comparto ha allocato il 92,64% del suo patrimonio a imprese che presentavano caratteristiche ambientali e/o sociali positive e il 57,68% del patrimonio a investimenti sostenibili. Il Comparto non si è impegnato a investire una percentuale del patrimonio specificamente in valori mobiliari che presentano caratteristiche ambientali positive o caratteristiche sociali positive, né si è impegnato a perseguire obiettivi ambientali o sociali specifici o in combinazione tra loro.

Gli asset liquidi accessori, i depositi presso gli istituti di credito, gli strumenti/fondi del mercato monetario (per la gestione delle sottoscrizioni e dei rimborsi in contanti, nonché dei pagamenti correnti ed eccezionali) e i derivati per l'EPM non sono inclusi nella % di asset riportata nella tabella sottostante. Queste partecipazioni fluttuano a seconda dei flussi di investimento e sono accessorie alla politica di investimento con un impatto minimo o nullo sulle operazioni di investimento.

Nb: L'allineamento alla Tassonomia UE per gli strumenti considerati investimenti sostenibili da JP Morgan sarà inserito nel grafico sottostante una volta disponibile e se pertinente. L'allineamento completo del fondo alla Tassonomia UE è riportato di seguito (in risposta alla domanda: In che misura gli investimenti sostenibili con un obiettivo ambientale sono stati allineati alla Tassonomia UE?)

N. 1 Allineati alle caratteristiche A/S include gli investimenti del prodotto finanziario utilizzati per realizzare le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

N. 2 Altri comprende gli investimenti rimanenti del prodotto finanziario che non sono allineati con le caratteristiche ambientali o sociali, né sono qualificati come investimenti sostenibili.

La categoria **N. 1 Allineati con le caratteristiche A/S** comprende:

- La sottocategoria **N. 1A Sostenibili** comprende gli investimenti sostenibili dal punto di vista ambientale e sociale.
- La sotto-categoria **N. 1B Altre caratteristiche A/S** comprende gli investimenti allineati con le caratteristiche ambientali o sociali che non si qualificano come investimenti sostenibili.

● **In quali settori economici sono stati effettuati gli investimenti?**

Sebbene il Comparto abbia promosso determinate caratteristiche ambientali e sociali attraverso i suoi criteri di inclusione ed esclusione, può aver investito in un'ampia gamma di settori - si prega di fare riferimento all'elenco seguente per una ripartizione settoriale alla fine del periodo di riferimento. Inoltre, il Gestore degli investimenti si è impegnato in maniera continuativa con alcune società partecipate sottostanti. Gli investimenti in settori e sotto-settori dell'economia che traggono ricavi dall'esplorazione, dall'estrazione mineraria, dall'estrazione, dalla produzione, dalla lavorazione, dallo stoccaggio, dalla raffinazione o dalla distribuzione, compresi il trasporto, lo stoccaggio e il commercio, di combustibili fossili, se detenuti, saranno inclusi nella tabella sottostante. Le attività liquide accessorie, i depositi presso istituti di credito, gli strumenti del mercato monetario/fondi (per la gestione delle sottoscrizioni e dei rimborsi in contanti e dei pagamenti correnti e straordinari) e i derivati per l'EPM sono esclusi dai risultati, ma sono inclusi nel denominatore per la percentuale di attività indicata sia nella tabella seguente, sia nella tabella dei principali investimenti.

Settore	Sotto-settore	% del patrimonio
Servizi di comunicazione	Mass media e intrattenimento	2,02
Beni di consumo discrezionali	Automobili e componenti	3,84
Beni di consumo discrezionali	Beni di consumo durevoli e abbigliamento	1,79
Beni di consumo	Distribuzione e vendita al dettaglio di beni di prima necessità	0,46
Beni di consumo	Alimenti, bevande e tabacco	16,61
Beni di consumo	Prodotti per la casa e la persona	0,59
Settore finanziario	Banche	6,64
Settore finanziario	Assicurazione	4,48
Settore sanitario	Servizi e attrezzature sanitarie	4,53
Settore sanitario	Prodotti farmaceutici biotecnologie e scienze della vita	4,28
Settore industriale	Beni strumentali	14,51
Settore industriale	Servizi commerciali e professionali	0,89
Settore industriale	Trasporti	1,59
Informatica	Semiconduttori e attrezzature per semiconduttori	13,36

Informatica	Software e servizi	7,32
Informatica	Attrezzature e hardware tecnologici	6,81
Materiali	Materiali	6,49
Servizi di pubblica utilità	Servizi di pubblica utilità	3,45

Le attività abilitanti consentono direttamente ad altre attività di dare un contributo sostanziale a un obiettivo ambientale. Le attività di transizione sono attività economiche per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano livelli di emissioni di gas serra corrispondenti alle migliori prestazioni.

In quale misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla Tassonomia dell'UE?¹

I dati disponibili in relazione all'allineamento alla Tassonomia dell'UE sono, attualmente, molto limitati, in particolare per quanto concerne il gas fossile e l'energia nucleare. Prevediamo che questo dato migliorerà nel tempo, man mano che un maggior numero di imprese renderà noto il proprio allineamento e i dati saranno sempre più disponibili.

Il Comparto non ha assunto alcun impegno minimo in materia di investimenti sostenibili con obiettivi ambientali allineati alla Tassonomia dell'UE.

Pertanto, il documento informativo precontrattuale del Comparto indica come 0% l'entità degli investimenti sostenibili mirati con un obiettivo ambientale allineato alla Tassonomia dell'UE. Qualsiasi allineamento delineato di seguito è un sottoprodotto del quadro del Comparto che considera gli investimenti che hanno caratteristiche ambientali e/o sociali e gli investimenti sostenibili (come definiti dall'SFDR).

I grafici seguenti illustrano l'effettiva entità degli investimenti sostenibili con un obiettivo ambientale allineato alla Tassonomia dell'UE, come misurata alla fine del periodo di riferimento.

- **Il prodotto finanziario ha investito in attività legate al gas fossile e/o all'energia nucleare conformemente alla Tassonomia dell'UE?**

Sì

In gas fossile

In energia nucleare

No

Le attività allineate alla Tassonomia sono espresse come una quota di:

- il **volume d'affari** riflette la "ecologicità" dell'impresa partecipata oggi.
- le **spese in conto capitale** (capex) mostrano gli investimenti verdi effettuati dalle imprese partecipate, rilevanti per la transizione verso un'economia verde.
- le **spese operative** (opex) riflettono le attività operative verdi delle imprese partecipate.

I grafici che seguono mostrano in verde la percentuale di investimenti che erano allineati alla Tassonomia dell'UE. Poiché non esiste una metodologia adeguata per determinare l'allineamento delle obbligazioni sovrane* alla Tassonomia, il primo grafico mostra l'allineamento alla Tassonomia in relazione a tutti gli investimenti del prodotto finanziario comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla Tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

Questo grafico rappresenta 13% dell'investimento totale.

*Ai fini di questi grafici, le 'obbligazioni sovrane' comprendono tutte le esposizioni sovrane.

¹ Le attività legate al gas fossile e/o al nucleare saranno conformi alla Tassonomia dell'UE solo se contribuiranno a limitare i cambiamenti climatici ("mitigazione dei cambiamenti climatici") e non danneggeranno in modo significativo alcun obiettivo della Tassonomia dell'UE - si veda la nota esplicativa sul margine sinistro. I criteri completi per le attività economiche relative al gas fossile e all'energia nucleare conformi alla Tassonomia UE sono stabiliti nel Regolamento Delegato (UE) 2022/1214 della Commissione.

● **Qual era la quota degli investimenti effettuati in attività transitorie e abilitanti?**

A seguito di quanto suddetto, il Comparto non ha assunto alcun impegno minimo di effettuare investimenti allineati alla Tassonomia UE - comprese le attività di Transizione e Abilitazione. Qualsiasi allineamento delineato di seguito è un sottoprodotto del quadro del Comparto che considera gli investimenti che hanno caratteristiche ambientali e/o sociali positive e gli investimenti sostenibili.

La quota calcolata delle attività di transizione rappresenta il 0,00% e la quota calcolata delle attività abilitanti rappresenta il 5,58%, alla fine del periodo di riferimento.

● **Qual è l'esito del raffronto della percentuale di investimenti allineati alla tassonomia dell'UE rispetto ai precedenti periodi di riferimento?**

Non pertinente

● **Qual era la quota di investimenti sostenibili con un obiettivo ambientale che non erano allineati alla Tassonomia dell'UE?**

La quota di investimenti sostenibili con un obiettivo ambientale non allineati alla Tassonomia dell'UE era del 30,25% del patrimonio alla fine del periodo di riferimento.

● **Qual era la quota di investimenti socialmente sostenibili?**

La quota di investimenti socialmente sostenibili era pari al 27,43% del patrimonio alla fine del periodo di riferimento.

● **Quali investimenti erano compresi nella categoria "altri", qual era il loro scopo ed esistevano garanzie minime di salvaguardia ambientale o sociale?**

Il 7,36% degli attivi in investimenti "altri" è costituito da società che non soddisfano i criteri descritti in risposta alla domanda precedente, intitolata "Qual è stata la prestazione degli indicatori di sostenibilità?" per essere qualificate come imprese che presentano caratteristiche ambientali o sociali positive. Sono investimenti a fini di diversificazione. Gli asset liquidi accessori, i depositi presso gli istituti di credito, gli strumenti/fondi del mercato monetario (per la gestione delle sottoscrizioni e dei rimborsi in contanti, nonché dei pagamenti correnti ed eccezionali) e i derivati per l'EPM non sono inclusi nella % di asset riportata nel diagramma di ripartizione degli asset di cui sopra, incluso sotto la voce "altri". Queste partecipazioni fluttuano a seconda dei flussi di investimento e sono accessorie alla politica di investimento con un impatto minimo o nullo sulle operazioni di investimento.

Tutti gli investimenti, compresi quelli "altri", sono stati soggetti alle seguenti salvaguardie/principi minimi ESG:

- Le salvaguardie minime come delineate dall'Articolo 18 del Regolamento sulla Tassonomia dell'UE (compreso l'allineamento con le Linee guida dell'OCSE per le imprese multinazionali e i Principi guida delle Nazioni Unite su imprese e diritti umani), come implementate dal Gestore degli Investimenti.

 sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili conformemente al regolamento (UE) 2020/852.

- Applicazione di prassi di buona governance (queste includono buone strutture di gestione, relazioni con il personale dipendente, remunerazione del personale e conformità fiscale), come implementate dal Gestore degli Investimenti.
- Conformità al principio “Non arrecare danno significativo”, come prescritto dalla definizione di investimento sostenibile nell'SFDR dell'UE.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

I seguenti elementi vincolanti della strategia d'investimento sono stati applicati durante il periodo di riferimento per selezionare gli investimenti al fine di conseguire ciascuna delle caratteristiche ambientali o sociali:

- L'obbligo di investire almeno il 51% del patrimonio in imprese con caratteristiche ambientali e/o sociali positive.
- Lo screening basato su valori e norme per implementare le esclusioni complete in relazione agli emittenti che sono impegnati in determinate attività, come la produzione di armi controverse, e l'applicazione di soglie percentuali massime di ricavi, produzione o distribuzione ad altri emittenti, come quelli che operano nei settori del carbone termico e del tabacco. Per ulteriori informazioni, fare riferimento alla politica di esclusione del Comparto su www.jpmorganassetmanagement.lu, cercando il proprio Comparto specifico e accedendo alla sezione informazioni ESG.
- L'obbligo per tutte le imprese in portafoglio di seguire le prassi di buona governance.

Il Comparto si è inoltre impegnato a investire almeno l' 10% del patrimonio in investimenti sostenibili.

Ulteriori informazioni sull'impegno sono disponibili nella risposta alla domanda “Come sono stati presi in considerazione gli indicatori degli impatti negativi sui fattori di sostenibilità?”

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento sostenibile?

Non pertinente

I benchmark di riferimento sono indici per misurare se il prodotto finanziario raggiunge le caratteristiche ambientali o sociali che promuove.

- ***In quale modo l'indice di riferimento differiva da un indice generale di mercato?***

Non pertinente

- ***Qual è stata la prestazione di questo prodotto finanziario in relazione agli indicatori di sostenibilità per determinare l'allineamento dell'indice di riferimento con le caratteristiche ambientali o sociali promosse?***

Non pertinente

- ***Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?***

Non pertinente

Nome del prodotto: **JPMorgan Investment Funds - Europe Strategic Dividend Fund**

Identificativo della persona giuridica: **549300LJVLXHDN1S7Q15**

Caratteristiche ambientali e/o sociali

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?

Sì

No

Ha effettuato investimenti sostenibili con un obiettivo ambientale: %

Ha promosso caratteristiche ambientali/sociali (A/S) e pur non avendo come obiettivo un investimento sostenibile, aveva una quota del 61,16% di investimenti sostenibili

in attività economiche considerate ecosostenibili conformemente alla Tassonomia dell'UE

con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla Tassonomia dell'UE

in attività economiche che non sono considerate ecosostenibili conformemente alla Tassonomia dell'UE

con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla Tassonomia dell'UE

Ha effettuato investimenti sostenibili con un obiettivo sociale: %

con un obiettivo sociale

Ha promosso caratteristiche A/S ma non ha effettuato alcun investimento sostenibile

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, purché tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e l'impresa beneficiaria degli investimenti segua prassi di buona governance.

La **Tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852 che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non stabilisce un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere allineati o meno alla Tassonomia.

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Il Comparto si propone di promuovere un'ampia gamma di caratteristiche ambientali, sociali e di governance attraverso i suoi criteri di inclusione degli investimenti, in particolare con una ripartizione minima del patrimonio del 51% in investimenti con caratteristiche ambientali e/o sociali e un minimo di 10% in investimenti sostenibili. Questo impegno è stato rispettato per tutto il periodo di riferimento (1 gennaio 2022 - 31 dicembre 2022). Alla fine del periodo di riferimento, il Comparto deteneva il 85,18% di investimenti con caratteristiche ambientali e/o sociali e il 61,16% di investimenti sostenibili.

Questi investimenti sono stati determinati mediante l'applicazione di criteri di inclusione ed esclusione che sono stati applicati sia a livello di asset che di prodotto. I criteri di inclusione sono basati su un punteggio ESG assegnato a tutti gli investimenti nell'ambito della strategia, per identificare quelli che possono essere considerati come aventi caratteristiche ambientali e/o sociali e quelli che soddisfano le soglie per essere considerati investimenti sostenibili.

Il punteggio ESG prende in considerazione i seguenti indicatori: la gestione efficace delle emissioni tossiche, dei rifiuti,

il buon record ambientale e le caratteristiche sociali, come efficaci dichiarazioni di sostenibilità, valutazioni favorevoli in materia di relazioni con il personale dipendente e di gestione dei problemi di sicurezza.

Attraverso i suoi criteri di esclusione (che prevedevano esclusioni sia totali che parziali), il Comparto ha promosso determinate norme e valori, tra cui il sostegno alla salvaguardia dei diritti umani proclamati a livello internazionale. Il Comparto ha escluso completamente le società impegnate nella fabbricazione di armi controverse e ha applicato soglie massime di reddito o di produzione ad altre, come quelle che operano nel settore del carbone termico e del tabacco.

In relazione alla considerazione di buona governance, tutti gli investimenti (esclusi i contanti e i derivati) sono stati vagliati per escludere i noti trasgressori delle pratiche di buona governance. Inoltre, per gli investimenti che si ritiene abbiano caratteristiche ambientali e/o sociali o che si qualificano come investimenti sostenibili, sono state applicate ulteriori considerazioni. Per questi investimenti, il Comparto ha incorporato un confronto con un gruppo di pari e ha escluso le società che non hanno ottenuto un punteggio superiore all'80% rispetto ai pari in base agli indicatori di buona governance.

Il Comparto non prevedeva specifici obiettivi di allocazione a favore di caratteristiche ambientali o sociali. La misura in cui le caratteristiche ambientali o sociali promosse sono state soddisfatte può essere intesa considerando la % effettiva del patrimonio allocata per il Periodo di Riferimento alle imprese che presentavano tali caratteristiche.

In sintesi: il Comparto ha rispettato i minimi contrattuali garantiti in relazione alle caratteristiche ambientali e/o sociali e alla politica di investimenti sostenibili per tutto il periodo di riferimento. Il Comparto ha applicato dei filtri con l'obiettivo di escludere tutti i potenziali investimenti vietati dalla sua politica di esclusione durante tutto questo periodo. La misura in cui le norme e i valori promossi dal Comparto sono stati soddisfatti si basa sull'eventualità che il Comparto abbia detenuto durante il Periodo di riferimento imprese che sarebbero state vietate ai sensi della politica di esclusione. Il Gestore degli Investimenti non ha riscontrato alcuna indicazione siano stati effettuati investimenti in imprese di tale genere. Il Gestore degli Investimenti informa che la continuità dei valori percentuali e delle informazioni divulgate non può essere garantita in futuro ed è soggetta alla costante evoluzione del panorama legale e normativo. La durata del periodo di riferimento può essere inferiore a 12 mesi se nel corso di tale periodo il fondo era stato lanciato, chiuso o il suo status ai sensi dell'articolo 8/9 era stato modificato.

Gli indicatori di sostenibilità misurano in che modo sono realizzate le caratteristiche ambientali o sociali promosse da questo prodotto finanziario

● ***Qual è stata la prestazione degli indicatori di sostenibilità?***

Una combinazione della metodologia di valutazione ESG propria del Gestore degli Investimenti, che consiste nella valutazione ESG propria del Gestore degli Investimenti, e/o di dati di terzi è stata utilizzata nell'ambito dei criteri di inclusione per misurare il conseguimento delle caratteristiche ambientali e/o sociali che il Comparto promuove..

La metodologia era basata sulla gestione da parte di un'impresa dei relativi aspetti ambientali o sociali come le emissioni tossiche, la gestione dei rifiuti, le relazioni con il personale dipendente e gli aspetti della sicurezza, la diversità/indipendenza del consiglio di amministrazione e la tutela della riservatezza dei dati. Per essere inclusa nel 51% degli asset considerati come promotori di caratteristiche ambientali e/o sociali, un'impresa deve conseguire un punteggio ambientale o sociale compreso nell'80% di quelli maggiormente elevati in relazione alle imprese di pari grado e attuare le buone prassi di governance sopra indicate.

Alla fine del periodo di riferimento, il Comparto deteneva il 85,18% di investimenti con caratteristiche ambientali e/o sociali e il 61,16% di investimenti sostenibili.

Per quanto riguarda le norme applicate e le esclusioni basate sui valori, il Gestore degli Investimenti ha utilizzato i dati per quantificare la partecipazione di una società alle relative attività. Lo screening condotto su tali dati ha consentito di pervenire a esclusioni totali di certi potenziali investimenti e a esclusioni parziali in base a soglie percentuali massime di ricavi o produzione, conformemente ai criteri di esclusione. Durante tutto il periodo di riferimento, e in nessun caso, sono state trasgredite le regole di esclusione. Inoltre, è stato incorporato nello screening un sottoinsieme di "Indicatori di Sostenibilità Avversi" come enunciato nelle Norme tecniche di regolamentazione SFDR dell'UE".

Il Comparto non prevedeva specifici obiettivi di allocazione a favore di caratteristiche ambientali o sociali e pertanto la prestazione degli indicatori in relazione a specifiche caratteristiche ambientali o sociali non è illustrata in questa sede.

● ***...e rispetto ai periodi precedenti?***

Non pertinente per il 2022

● ***Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha parzialmente effettuato e in che misura gli investimenti sostenibili hanno contribuito al conseguimento di tali obiettivi?***

Gli obiettivi degli investimenti sostenibili che il Comparto ha parzialmente effettuato sono stati costituiti da qualsiasi singolo o combinazione dei seguenti obiettivi durante il Periodo di riferimento:

Obiettivi ambientali: (i) mitigazione del rischio climatico, (ii) transizione verso un'economia circolare

Obiettivi sociali: (i) comunità inclusive e sostenibili - aumento della rappresentanza femminile a livello dirigenziale, (ii) comunità inclusive e sostenibili - aumento della rappresentanza femminile nei consigli di amministrazione e (iii) realizzazione di un ambiente di lavoro e di una cultura dignitosi

Il contributo a tali obiettivi può essere compreso considerando l'effettiva % del patrimonio allocato agli investimenti sostenibili per il periodo di riferimento. Il Comparto era tenuto a investire il 10% del patrimonio in investimenti sostenibili. Durante il periodo, il Comparto non ha mai detenuto investimenti sostenibili al di sotto del suo minimo garantito. Alla fine del periodo di riferimento, il 61,16% del suo patrimonio era costituito da investimenti sostenibili.

I principali impatti negativi sono gli impatti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a questioni ambientali, sociali e occupazionali, al rispetto dei diritti umani, alla lotta alla corruzione e alla concussione.

● ***In che modo gli investimenti sostenibili che il prodotto finanziario ha parzialmente realizzato non hanno causato danni significativi ad alcun obiettivo di investimento sostenibile ambientale o sociale?***

Gli investimenti sostenibili che il Comparto intendeva in parte realizzare sono stati sottoposti a un processo di screening che ha mirato a identificare ed escludere dalla qualifica di investimento sostenibile, le imprese che il Gestore degli Investimenti considerava come aventi realizzato le performance peggiori, in base a una soglia determinata dal Gestore degli Investimenti, in relazione a determinate considerazioni ambientali. Di conseguenza, sono stati considerati investimenti sostenibili solo le imprese che hanno dimostrato di possedere i migliori indicatori in relazione alle misure assolute e relative.

Tali considerazioni includono il cambiamento climatico, la protezione delle risorse idriche e marine, la transizione verso un'economia circolare, l'inquinamento e la protezione della biodiversità e degli ecosistemi. Il Gestore degli Investimenti ha inoltre applicato un filtro volto a identificare ed escludere le imprese che il Gestore degli Investimenti ha ritenuto non conformi alle Linee guida dell'OCSE per le imprese multinazionali e i Principi guida delle Nazioni Unite su imprese e diritti umani, sulla base dei dati comunicati da fornitori di servizi terzi.

— ***Come sono stati presi in considerazione gli indicatori degli impatti negativi sui fattori di sostenibilità?***

Gli indicatori degli impatti negativi sui fattori di sostenibilità di cui alla Tabella 1 dell'Allegato 1 e alcuni indicatori, determinati dal Gestore degli Investimenti, di cui alle Tabelle 2 e 3 dell'Allegato 1 delle Norme tecniche di regolamentazione SFDR dell'UE sono stati presi in considerazione come ulteriormente descritto di seguito. Il Gestore degli Investimenti ha utilizzato le metriche contenute negli Standard tecnici regolamentari SFDR dell'UE oppure, laddove ciò non fosse possibile a causa di limitazioni dei dati o di altri problemi tecnici, un proxy rappresentativo. Il Gestore degli Investimenti ha consolidato la considerazione di alcuni indicatori in un indicatore "primario", come descritto ulteriormente di seguito, e potrebbe aver utilizzato un'ulteriore serie di indicatori più ampia di quella indicata di seguito.

Gli indicatori pertinenti nella Tabella 1 dell'Allegato 1 degli Standard tecnici regolamentari SFDR dell'UE consistono in 9 indicatori ambientali e 5 indicatori sociali e occupazionali. Gli indicatori ambientali sono elencati da 1 a 9 e riguardano le emissioni di gas serra (1-3), l'esposizione ai combustibili fossili, la quota di consumo e produzione di energia non rinnovabile, l'intensità del consumo energetico, le attività che influiscono negativamente sulle aree sensibili di biodiversità, le emissioni nell'acqua e i rifiuti pericolosi (4-9 rispettivamente). Gli indicatori da 10 a 14 riguardano le questioni sociali e occupazionali di un'impresa e coprono rispettivamente le violazioni dei principi del Global Compact delle Nazioni Unite e delle Linee guida dell'OCSE per le imprese multinazionali, la mancanza di processi e meccanismi di conformità per monitorare la conformità ai principi del Global Compact delle Nazioni Unite, il divario retributivo di genere non corretto, la diversità di genere del Consiglio di amministrazione e l'esposizione ad armi controverse (mine antiuomo, munizioni a grappolo, armi chimiche e armi biologiche).

L'approccio del Gestore degli Investimenti comprendeva aspetti sia quantitativi che qualitativi per tenere conto degli indicatori suddetti. Ha utilizzato particolari indicatori per lo screening, cercando di escludere le imprese che potrebbero causare danni significativi. Ha utilizzato un sottoinsieme per l'impegno con determinate imprese, cercando di influenzare le migliori prassi e ha utilizzato alcuni di essi come indicatori di performance positiva di sostenibilità, applicando una soglia minima rispetto all'indicatore per ottenere la qualifica di investimento sostenibile. I dati necessari per prendere in considerazione gli indicatori, ove disponibili, possono essere stati ottenuti dalle stesse imprese partecipate e/o comunicati da fornitori di servizi terzi (compresi i dati proxy). Gli input di dati autodichiarati dalle imprese o comunicati da fornitori terzi possono basarsi su serie di dati e ipotesi che possono essere insufficienti, di scarsa qualità o contenere informazioni distorte. Poiché dipendono da soggetti terzi, il Gestore degli Investimenti non può garantire l'accuratezza o la completezza di tali dati.

Screening

Alcuni indicatori sono stati presi in considerazione attraverso lo screening basato su valori e norme per implementare le esclusioni. Queste esclusioni hanno preso in considerazione gli indicatori 10 e 14 in relazione ai principi del Global Compact delle Nazioni Unite e alle Linee guida dell'OCSE per le imprese multinazionali e le armi controverse. Il Gestore degli Investimenti ha anche applicato un filtro appositamente realizzato. A causa di alcune considerazioni tecniche, come la copertura dei dati in relazione a specifici indicatori, il Gestore degli Investimenti ha applicato l'indicatore specifico di cui alla Tabella 1 o un proxy rappresentativo, come determinato dal Gestore degli Investimenti per vagliare le imprese partecipate in relazione alle questioni ambientali o sociali e occupazionali. Per esempio, le emissioni di gas a effetto serra sono associate a diversi indicatori e metriche corrispondenti nella Tabella 1, come le emissioni di gas a effetto serra, l'impronta di carbonio e l'intensità di gas a effetto serra (indicatori 1-3). Il Gestore degli Investimenti ha utilizzato i dati sull'intensità dei gas a effetto serra (indicatore 3), i dati relativi al consumo e alla produzione di energia non rinnovabile (indicatore 5) e i dati sull'intensità del consumo di energia (indicatore 6) per effettuare lo screening relativo alle emissioni di gas a effetto serra.

In relazione allo screening realizzato ad hoc e per quanto riguarda le attività che influenzano negativamente le aree sensibili per la biodiversità e le emissioni nell'acqua (indicatori 7 e 8), a causa delle limitazioni dei dati, sono stati utilizzati dati proxy rappresentativi di terze parti, piuttosto che gli indicatori specifici di cui alla Tabella 1. Il Gestore degli Investimenti ha preso in considerazione anche l'indicatore 9 in relazione ai rifiuti pericolosi per quanto riguarda il filtro appositamente costruito.

Impegno

Oltre a selezionare alcune imprese come descritto sopra, il Gestore degli investimenti si è impegnato in maniera continuativa con alcune imprese partecipate sottostanti. È stato utilizzato un sottoinsieme degli indicatori, in base ad alcune considerazioni tecniche come la copertura dei dati, come base per impegnarsi con alcune imprese partecipate sottostanti, in conformità con l'approccio adottato dal Gestore degli Investimenti in materia di stewardship e impegno. Gli indicatori utilizzati in relazione a tale impegno includono gli indicatori 3, 5 e 13 relativi all'intensità dei gas a effetto serra, alla quota di energia non rinnovabile e alla diversità di genere nei consigli d'amministrazione della Tabella 1. Ha utilizzato anche gli indicatori 2 della Tabella 2 e 3 della Tabella 3 in relazione alle emissioni o agli inquinanti atmosferici e al numero di giorni persi per infortuni, incidenti, decessi o malattie.

Indicatori di sostenibilità

Il Gestore degli investimenti ha utilizzato gli indicatori 3 e 13 in relazione all'intensità di gas serra e alla diversità di genere nei consigli di amministrazione come indicatori di sostenibilità per contribuire a qualificare un investimento come investimento sostenibile. Uno dei percorsi richiedeva che un'impresa fosse considerata come un'impresa operativa leader di un gruppo di pari per poter essere qualificata come investimento sostenibile. Ciò richiedeva un punteggio relativo all'indicatore incluso nel 20% superiore rispetto ai pari.

— Gli investimenti sostenibili sono stati allineati alle Linee guida dell'OCSE per le imprese multinazionali e ai Principi guida delle Nazioni Unite su imprese e diritti umani? Dettagli:

Le esclusioni dal portafoglio basate su norme come descritto sopra al punto "In quale misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario? sono state applicate per perseguire l'allineamento con queste linee guida e principi. Al fine di individuare potenziali trasgressori sono stati utilizzati dati di soggetti terzi. A meno che non sia stata concessa un'eccezione, il Comparto ha vietato investimenti rilevanti in questi emittenti.

La Tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla Tassonomia non devono arrecare danno significativo agli obiettivi della Tassonomia dell'UE, ed è accompagnata da criteri specifici dell'Unione.

Il principio "non arrecare un danno significativo" si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'Unione per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri dell'Unione per le attività economiche ecosostenibili.

Qualsiasi altro investimento sostenibile non deve inoltre arrecare un danno significativo agli obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha considerato i principali impatti negativi sui fattori di sostenibilità?

Il Comparto ha considerato i principali impatti negativi selezionati sui fattori di sostenibilità attraverso uno screening basato su valori e norme per implementare le esclusioni. In relazione a tale screening sono stati utilizzati gli indicatori 10 e 14 in relazione alle violazioni del Global Compact delle Nazioni Unite e alle armi controverse degli Standard Tecnici Regolamentari SFDR dell'UE. Il Comparto ha anche utilizzato alcuni degli indicatori nell'ambito del filtro "Non arrecare danno significativo", come dettagliato nella risposta alla domanda immediatamente precedente, per dimostrare che un investimento si qualifica come investimento sostenibile.

Un sottoinsieme dei suddetti Indicatori di sostenibilità avversi è stato utilizzato per determinare l'impegno con le imprese partecipate in base alla loro rispettiva performance PAI (principali impatti avversi).

Quali sono stati i principali investimenti di questo prodotto finanziario?

L'elenco comprende gli investimenti che costituiscono la **maggior parte degli investimenti** del prodotto finanziario durante il periodo di riferimento, ossia:
01/01/2022 - 31/12/2022

Maggiori investimenti	Settore	% del patrimonio	Paese
NESTLE SA	BENI DI CONSUMO	3,69	Svizzera

Qual è stata la percentuale di investimenti legati alla sostenibilità?

La ripartizione degli investimenti descrive la quota di investimenti in attività specifiche.

● Qual è stata la ripartizione degli investimenti?

Alla fine del periodo di riferimento, il Comparto ha allocato il 85,18% del suo patrimonio a imprese che presentano caratteristiche ambientali e/o sociali positive e il 61,16% del patrimonio a investimenti sostenibili. Il Comparto non si è impegnato a investire una percentuale del patrimonio specificamente in valori mobiliari che presentano caratteristiche ambientali positive o caratteristiche sociali positive, né si è impegnato a perseguire obiettivi ambientali o sociali specifici o in combinazione tra loro.

Gli asset liquidi accessori, i depositi presso gli istituti di credito, gli strumenti del mercato monetario/fondi (per la gestione delle sottoscrizioni e dei rimborsi in contanti, nonché dei pagamenti correnti ed eccezionali) e i derivati per l'EPM non sono inclusi nella % di asset riportata nella tabella sottostante. Queste partecipazioni fluttuano a seconda dei flussi di investimento e sono accessorie alla politica di investimento con un impatto minimo o nullo sulle operazioni di investimento.

● In quali settori economici sono stati effettuati gli investimenti?

Sebbene il Comparto abbia promosso determinate caratteristiche ambientali e sociali attraverso i suoi criteri di inclusione ed esclusione, può avere investito in un'ampia gamma di settori - si prega di fare riferimento all'elenco riportato di seguito. Inoltre, il Gestore degli investimenti si è impegnato in maniera continuativa con alcune società partecipate sottostanti. Gli investimenti in settori e sotto-settori dell'economia che traggono ricavi dall'esplorazione, dall'estrazione mineraria, dall'estrazione, dalla produzione, dalla lavorazione, dallo stoccaggio, dalla raffinazione o dalla distribuzione, compresi il trasporto, lo stoccaggio e il commercio, di combustibili fossili, se detenuti, saranno inclusi nella tabella sottostante. Gli asset liquidi accessori, i depositi presso gli istituti di credito, gli strumenti del mercato monetario/fondi (per la gestione delle sottoscrizioni e dei rimborsi in contanti, nonché dei pagamenti correnti ed eccezionali) e i derivati per l'EPM sono inclusi nel denominatore per la % di asset riportata nella tabella sottostante.

Settore	Sotto-settore	% del patrimonio
SERVIZI DI COMUNICAZIONE	MASS MEDIA E INTRATTENIMENTO	0,91

Per conformarsi alla Tassonomia dell'UE, i criteri per il **gas fossile** includono limitazioni alle emissioni e il passaggio a energia completamente rinnovabile o a combustibili a basso contenuto di carbonio entro la fine del 2035. Per quanto riguarda **l'energia nucleare**, i criteri includono norme esaustive sulla sicurezza e sulla gestione delle scorie. Le **attività abilitanti** consentono direttamente ad altre attività di dare un contributo sostanziale a un obiettivo ambientale. Le **attività di transizione** sono **attività economiche** per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano livelli di emissioni di gas serra corrispondenti alle migliori prestazioni.

In quale misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla Tassonomia dell'UE?

I dati disponibili in relazione all'allineamento alla Tassonomia dell'UE sono, attualmente, molto limitati, in particolare per quanto concerne il gas fossile e l'energia nucleare. Prevediamo che questo dato migliorerà nel tempo, man mano che un maggior numero di imprese renderà noto il proprio allineamento e i dati saranno sempre più disponibili.

Il Comparto non ha assunto alcun impegno minimo in materia di investimenti sostenibili con obiettivi ambientali allineati alla Tassonomia dell'UE.

Pertanto, il documento informativo precontrattuale del Comparto indica come 0,00% l'entità degli investimenti sostenibili mirati con un obiettivo ambientale allineato alla Tassonomia dell'UE. Qualsiasi allineamento delineato di seguito è un sottoprodotto del quadro del Comparto che considera gli investimenti che hanno caratteristiche ambientali e/o sociali e gli investimenti sostenibili (come definiti dall'SFDR).

I grafici seguenti illustrano l'effettiva entità degli investimenti sostenibili con un obiettivo ambientale allineato alla Tassonomia dell'UE, come misurata alla fine del periodo di riferimento.

- ***Il prodotto finanziario ha investito in attività legate al gas fossile e/o all'energia nucleare conformemente alla Tassonomia dell'UE?***

Sì

In gas fossile

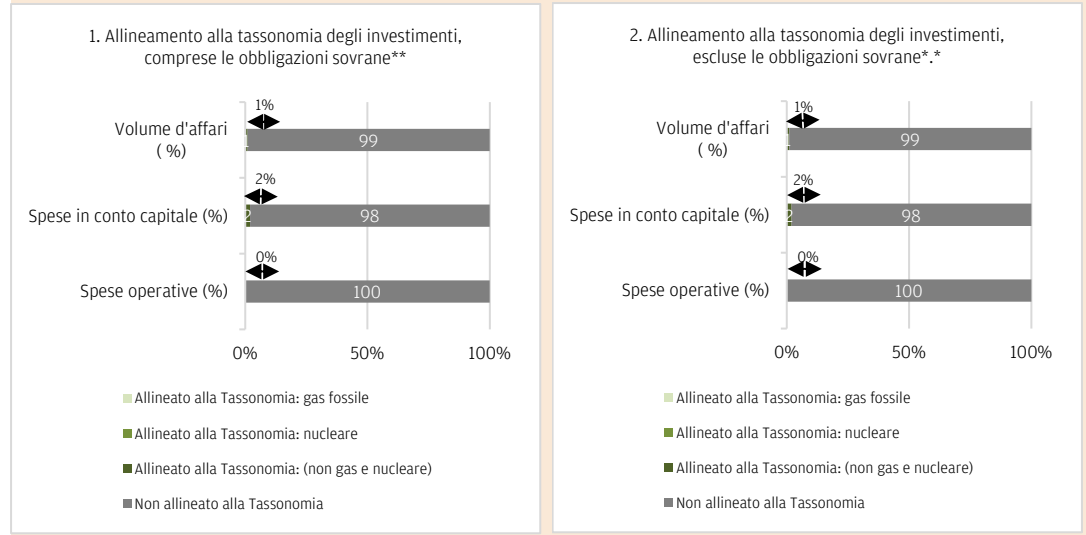

In energia nucleare

No

Le attività allineate alla Tassonomia sono espresse come una quota di:

- il **volume d'affari** riflette la "ecologicità" dell'impresa partecipata oggi.
- le **spese in conto capitale** (capex) mostrano gli investimenti verdi effettuati dalle imprese partecipate, rilevanti per la transizione verso un'economia verde.
- le **spese operative** (opex) riflettono le attività operative verdi delle imprese partecipate.

I grafici che seguono mostrano in verde la percentuale di investimenti che erano allineati alla Tassonomia dell'UE. Poiché non esiste una metodologia adeguata per determinare l'allineamento delle obbligazioni sovrane* alla Tassonomia, il primo grafico mostra l'allineamento alla Tassonomia in relazione a tutti gli investimenti del prodotto finanziario comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla Tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

Questo grafico rappresenta 3% dell'investimento totale

*Ai fini di questi grafici, le 'obbligazioni sovrane' comprendono tutte le esposizioni sovrane.

¹ Le attività legate al gas fossile e/o al nucleare saranno conformi alla Tassonomia dell'UE solo se contribuiranno a limitare i cambiamenti climatici ("mitigazione dei cambiamenti climatici") e non danneggeranno in modo significativo alcun obiettivo della Tassonomia dell'UE - si veda la nota esplicativa sul margine sinistro. I criteri completi per le attività economiche relative al gas fossile e all'energia nucleare conformi alla Tassonomia UE sono stabiliti nel Regolamento Delegato (UE) 2022/1214 della Commissione.

● Qual era la quota degli investimenti effettuati in attività transitorie e abilitanti?

A seguito di quanto suddetto, il Comparto non ha assunto alcun impegno minimo di effettuare investimenti allineati alla Tassonomia UE - comprese le attività di Transizione e Abilitazione. Qualsiasi allineamento delineato di seguito è un sottoprodotto del quadro del Comparto che considera gli investimenti che hanno caratteristiche ambientali e/o sociali e gli investimenti sostenibili.

La quota calcolata delle attività di transizione rappresenta lo 0,00% e la quota calcolata delle attività abilitanti rappresenta lo 0,22%, alla fine del periodo di riferimento.

● Qual è l'esito del raffronto della percentuale di investimenti allineati alla Tassonomia dell'UE rispetto ai precedenti periodi di riferimento?

Non pertinente

Qual era la quota di investimenti sostenibili con un obiettivo ambientale che non erano allineati alla Tassonomia dell'UE?

La quota di investimenti sostenibili con un obiettivo ambientale non allineati alla Tassonomia dell'UE era del 48,13% del patrimonio alla fine del periodo di riferimento.

Qual era la quota di investimenti socialmente sostenibili?

La quota di investimenti socialmente sostenibili era pari al 13,03% del patrimonio alla fine del periodo di riferimento.

sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili conformemente al regolamento (UE) 2020/852.

Quali investimenti erano compresi nella categoria “altri”, qual era il loro scopo ed esistevano garanzie minime di salvaguardia ambientale o sociale?

Il 14,82% degli attivi in investimenti "altri" è costituito da società che non soddisfano i criteri descritti in risposta alla domanda precedente, intitolata "Qual è stata la prestazione degli indicatori di sostenibilità?" per essere qualificate come imprese che presentano caratteristiche ambientali o sociali positive. Sono investimenti a fini di diversificazione. Gli asset liquidi accessori, i depositi presso gli istituti di credito, gli strumenti del mercato monetario/fondi (per la gestione delle sottoscrizioni e dei rimborsi in contanti, nonché dei pagamenti correnti ed eccezionali) e i derivati per l'EPM non sono inclusi nella % di asset riportata nel diagramma di ripartizione degli asset di cui sopra, incluso sotto la voce "altri". Queste partecipazioni fluttuano a seconda dei flussi di investimento e sono accessorie alla politica di investimento con un impatto minimo o nullo sulle operazioni di investimento.

Tutti gli investimenti, compresi quelli "altri", sono stati soggetti alle seguenti salvaguardie/principi minimi ESG:

- Le salvaguardie minime come delineate dall'Articolo 18 del Regolamento sulla Tassonomia dell'UE (compreso l'allineamento con le Linee guida dell'OCSE per le imprese multinazionali e i Principi guida delle Nazioni Unite su imprese e diritti umani), come implementate dal Gestore degli Investimenti.
- Applicazione di prassi di buona governance (queste includono buone strutture di gestione, relazioni con il personale dipendente, remunerazione del personale e conformità fiscale), come implementate dal Gestore degli Investimenti.
- Conformità al principio "Non arrecare danno significativo", come prescritto dalla definizione di investimento sostenibile nell'SFDR dell'UE.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

I seguenti elementi vincolanti della strategia d'investimento sono stati applicati durante il periodo di riferimento per selezionare gli investimenti al fine di conseguire ciascuna delle caratteristiche ambientali o sociali:

- L'obbligo di investire almeno il 51% del patrimonio in imprese con caratteristiche ambientali e/o sociali positive.
- Lo screening basato su valori e norme per implementare le esclusioni complete in relazione alle imprese che sono coinvolte in determinate attività, come la produzione di armi controverse, e l'applicazione di soglie percentuali massime di ricavi, produzione o distribuzione ad altre, come quelle che operano nei settori del carbone termico e del tabacco.
- L'obbligo per tutte le imprese in portafoglio di seguire le prassi di buona governance.

Il Comparto si è inoltre impegnato a investire almeno il 10% del patrimonio in investimenti sostenibili.

Ulteriori informazioni sull'impegno sono disponibili nella risposta alla domanda "Come sono stati presi in considerazione gli indicatori degli impatti negativi sui fattori di sostenibilità?".

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento sostenibile?

Non pertinente

- ***In quale modo l'indice di riferimento differiva da un indice generale di mercato?***

Non pertinente

- ***Qual è stata la prestazione di questo prodotto finanziario in relazione agli indicatori di sostenibilità per determinare l'allineamento dell'indice di riferimento con le caratteristiche ambientali o sociali promosse?***

Non pertinente

I benchmark di riferimento sono indici per misurare se il prodotto finanziario raggiunge le caratteristiche ambientali o sociali che promuove.

- ***Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?***

Non pertinente

- ***Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice generale di mercato?***

Non pertinente

Nome del prodotto: **JPMorgan Funds - Global Corporate Bond Fund**

Identificativo della persona giuridica: **EO1ZF4VK19CZVPQNRJ56**

Caratteristiche ambientali e/o sociali

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?

Sì

No

Ha effettuato investimenti sostenibili con un obiettivo ambientale: %

Ha promosso caratteristiche ambientali/sociali (A/S) e pur non avendo come obiettivo un investimento sostenibile, aveva una quota del 44,65% di investimenti sostenibili

in attività economiche considerate ecosostenibili conformemente alla Tassonomia dell'UE

con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla Tassonomia dell'UE

in attività economiche che non sono considerate ecosostenibili conformemente alla Tassonomia dell'UE

con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla Tassonomia dell'UE

con un obiettivo sociale

Ha effettuato investimenti sostenibili con un obiettivo sociale: %

Ha promosso caratteristiche A/S ma non ha effettuato alcun investimento sostenibile

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, purché tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e l'impresa beneficiaria degli investimenti segua prassi di buona governance.

La **Tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852 che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non stabilisce un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere allineati o meno alla Tassonomia.

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Il Comparto si propone di promuovere un'ampia gamma di caratteristiche ambientali, sociali e di governance attraverso i suoi criteri di inclusione degli investimenti, in particolare con una ripartizione minima del patrimonio del 51% in investimenti con caratteristiche ambientali e/o sociali positive e un minimo di 10% di investimenti costituiti da investimenti sostenibili. Questi impegni sono stati rispettati per tutto il periodo di riferimento (1 luglio 2022 - 30 giugno 2023). Alla fine del periodo di riferimento, il Comparto deteneva il 76,25% di investimenti con caratteristiche ambientali e/o sociali positive e il 44,65% di investimenti sostenibili.

Questi investimenti sono stati determinati mediante l'applicazione di criteri di inclusione ed esclusione che sono stati applicati sia a livello di asset che di prodotto. I criteri di inclusione sono basati su un punteggio ESG assegnato a tutti gli investimenti nell'ambito della strategia, per identificare quelli che possono essere considerati come aventi caratteristiche ambientali e/o sociali e quelli che soddisfano le soglie per essere considerati investimenti sostenibili.

Il punteggio ESG prende in considerazione i seguenti indicatori: la gestione efficace delle emissioni tossiche, dei rifiuti, il buon record ambientale e le caratteristiche sociali, come efficaci dichiarazioni di sostenibilità, valutazioni favorevoli in materia di relazioni con il personale dipendente e di gestione dei problemi di sicurezza.

Attraverso i suoi criteri di esclusione (che prevedevano esclusioni sia totali che parziali), il Comparto ha promosso determinate norme e valori, tra cui il sostegno alla salvaguardia dei diritti umani proclamati a livello internazionale. Il Comparto ha escluso completamente gli emittenti impegnati nella fabbricazione di armi controverse e ha applicato soglie massime di reddito o di produzione ad altri, come quelli che operano nel settore del carbone termico e del tabacco.

In relazione alla considerazione di buona governance, tutti gli investimenti (esclusi i contanti e i derivati) sono stati vagliati per escludere i noti trasgressori delle pratiche di buona governance. Inoltre, per gli investimenti che si ritiene abbiano caratteristiche ambientali e/o sociali o che si qualificano come investimenti sostenibili, sono state applicate ulteriori considerazioni. Per questi investimenti, il Comparto ha incorporato un confronto con un gruppo di pari e ha escluso gli emittenti che non hanno ottenuto un punteggio superiore all'80% rispetto ai pari in base agli indicatori di buona governance.

Il Comparto non prevedeva specifici obiettivi di allocazione a favore di caratteristiche ambientali o sociali. La misura in cui le caratteristiche ambientali o sociali promosse sono state soddisfatte può essere intesa considerando la % effettiva del patrimonio allocata per il periodo di riferimento ai relativi emittenti che presentavano tali caratteristiche.

In sintesi: il Comparto ha rispettato i minimi contrattuali garantiti in relazione alle caratteristiche ambientali e/o sociali e alla politica di investimenti sostenibili per tutto il periodo di riferimento. Il Comparto ha applicato dei filtri con l'obiettivo di escludere tutti i potenziali investimenti vietati dalla sua politica di esclusione durante tutto questo periodo. La misura in cui le norme e i valori promossi dal Comparto sono stati soddisfatti si basa sull'eventualità che il Comparto abbia detenuto durante il periodo di riferimento emittenti che sarebbero stati vietati ai sensi della politica di esclusione. Il Gestore degli Investimenti non ha riscontrato alcuna indicazione siano stati effettuati investimenti in emittenti di tale genere. Il Gestore degli Investimenti informa che la continuità dei valori percentuali e delle informazioni divulgate non può essere garantita in futuro ed è soggetta alla costante evoluzione del panorama legale e normativo. La durata del periodo di riferimento può essere inferiore a 12 mesi se nel corso di tale periodo il fondo era stato lanciato, chiuso o il suo status ai sensi dell'articolo 8/9 era stato modificato.

Gli indicatori di sostenibilità misurano in che modo sono realizzate le caratteristiche ambientali o sociali promosse da questo prodotto finanziario

● ***Qual è stata la prestazione degli indicatori di sostenibilità?***

Una combinazione della metodologia di valutazione ESG propria del Gestore degli Investimenti, che consiste nella valutazione ESG propria del Gestore degli Investimenti, e/o di dati di terzi è stata utilizzata nell'ambito dei criteri di inclusione per misurare il conseguimento delle caratteristiche ambientali e/o sociali che il Comparto promuove.

La metodologia era basata sulla gestione da parte di un emittente dei relativi aspetti ambientali o sociali come le emissioni tossiche, la gestione dei rifiuti, le relazioni con il personale dipendente e gli aspetti della sicurezza, la diversità/indipendenza del consiglio di amministrazione e la tutela della riservatezza dei dati. Per essere incluso nel 51% degli asset considerati come promotori di caratteristiche ambientali e/o sociali, un emittente deve conseguire un punteggio ambientale o sociale compreso entro il top 80% rispetto al benchmark del Comparto e soddisfare le condizioni di buona governance sopra indicate.

Alla fine del periodo di riferimento, il Comparto deteneva il 76,25% di investimenti con caratteristiche ambientali e/o sociali positive e il 44,65% di investimenti sostenibili.

Per quanto riguarda le norme applicate e le esclusioni basate sui valori, il Gestore degli Investimenti ha utilizzato i dati per quantificare la partecipazione di un emittente alle relative attività. Lo screening condotto su tali dati ha consentito di pervenire a esclusioni totali di certi potenziali investimenti e a esclusioni parziali in base a soglie percentuali massime di ricavi o produzione, conformemente ai criteri di esclusione. Durante tutto il periodo di riferimento, e in nessun caso, sono state trasgredite le regole di esclusione. Inoltre, è stato incorporato nello screening un sottoinsieme di "Indicatori di Sostenibilità Avversi" come enunciato nelle Norme tecniche di regolamentazione SFDR dell'UE".

Il Comparto non prevedeva specifici obiettivi di allocazione a favore di caratteristiche ambientali o sociali e pertanto la prestazione degli indicatori in relazione a specifiche caratteristiche ambientali o sociali non è illustrata in questa sede.

Per ulteriori informazioni, consultare l'Informativa sulle Caratteristiche Ambientali e Sociali del Comparto sul sito www.jpmorganassetmanagement.lu, cercando il proprio Comparto specifico e accedendo alla sezione Informazioni ESG.

● ***...e rispetto ai periodi precedenti?***

● ***Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha parzialmente effettuato e in che misura gli investimenti sostenibili hanno contribuito al conseguimento di tali obiettivi?***

Gli obiettivi degli investimenti sostenibili che il Comparto ha parzialmente effettuato erano costituiti da qualunque singolo o combinazione dei seguenti o erano correlati a un obiettivo ambientale o sociale attraverso l'uso dei proventi dell'emissione:

Obiettivi ambientali: (i) mitigazione del rischio climatico, (ii) transizione verso un'economia circolare; Obiettivi sociali: (i) comunità inclusive e sostenibili - aumento della rappresentanza femminile a livello dirigenziale (ii) comunità inclusive e sostenibili - aumento della rappresentanza femminile nei consigli di amministrazione e (iii) offrire un ambiente di lavoro e una cultura dignitosi.

Il contributo a tali obiettivi è stato determinato da: i) indicatori di sostenibilità di prodotti e servizi, che possono aver incluso la percentuale di entrate derivanti dalla fornitura di prodotti e/o servizi che contribuiscono al pertinente obiettivo sostenibile, come un emittente che produce pannelli solari o tecnologie per l'energia pulita che soddisfano le soglie proprietarie del Gestore degli Investimenti che contribuiscono alla mitigazione del rischio climatico. L'attuale percentuale di entrate è fissata a un minimo del 20% e l'intera partecipazione nell'impresa è considerata un investimento sostenibile; (ii) l'utilizzo dei proventi dell'emissione, se tale utilizzo era stato designato come collegato a uno specifico obiettivo ambientale o sociale, o (iii) era stato un leader operativo di un gruppo di pari che contribuisce all'obiettivo pertinente. La qualifica di leader di un gruppo di pari è definita come un punteggio nel 20% superiore rispetto al benchmark del Comparto, in base a determinati indicatori di sostenibilità operativa. Ad esempio, il raggiungimento di un punteggio del 20% rispetto al benchmark sull'impatto totale dei rifiuti contribuisce alla transizione verso un'economia circolare. Il test per gli emittenti sovranazionali e sovrani può considerare la missione o i contributi dell'emittente, in qualità di leader o innovatore di un gruppo di pari, a obiettivi ambientali e sociali positivi, in base a determinati criteri.

Il Comparto era tenuto a investire l' 10% del patrimonio in investimenti sostenibili. Durante il periodo, il Comparto non ha mai detenuto investimenti sostenibili al di sotto del suo minimo garantito. Alla fine del periodo di riferimento, il 44,65% del suo patrimonio era costituito da investimenti sostenibili.

I principali impatti negativi sono gli impatti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a questioni ambientali, sociali e occupazionali, al rispetto dei diritti umani, alla lotta alla corruzione e alla concussione.

● ***In che modo gli investimenti sostenibili che il prodotto finanziario ha parzialmente realizzato non hanno causato danni significativi ad alcun obiettivo di investimento sostenibile ambientale o sociale?***

Gli Investimenti Sostenibili che il Comparto intendeva realizzare sono stati sottoposti a un processo di screening che ha mirato a identificare ed escludere, dalla qualifica di Investimento Sostenibile, gli emittenti che il Gestore degli Investimenti considerava come quelli che avevano conseguito le prestazioni peggiori, in base a una soglia determinata dal Gestore degli Investimenti, in relazione a determinate considerazioni ambientali. Di conseguenza, sono stati considerati investimenti sostenibili solo gli emittenti che hanno dimostrato di possedere i migliori indicatori in relazione alle misure assolute e relative.

Tali considerazioni includono il cambiamento climatico, la protezione delle risorse idriche e marine, la transizione verso un'economia circolare, l'inquinamento e la protezione della biodiversità e degli ecosistemi. Il Gestore degli Investimenti ha inoltre applicato un filtro volto a identificare ed escludere gli emittenti che il Gestore degli Investimenti ha ritenuto non conformi alle Linee guida dell'OCSE per le imprese multinazionali e i Principi guida delle Nazioni Unite su imprese e diritti umani, sulla base dei dati comunicati da fornitori di servizi terzi.

— ***Come sono stati presi in considerazione gli indicatori degli impatti negativi sui fattori di sostenibilità?***

Gli indicatori degli impatti negativi sui fattori di sostenibilità di cui alla Tabella 1 dell'Allegato 1 e alcuni indicatori, determinati dal Gestore degli Investimenti, di cui alle Tabelle 2 e 3 dell'Allegato 1 delle Norme tecniche di regolamentazione SFDR dell'UE sono stati presi in considerazione come ulteriormente descritto di seguito. Il Gestore degli Investimenti ha utilizzato le metriche contenute negli Standard tecnici regolamentari SFDR dell'UE oppure, laddove ciò non fosse possibile a causa di limitazioni dei dati o di altri problemi tecnici, un proxy rappresentativo. Il Gestore degli Investimenti ha consolidato la considerazione di alcuni indicatori in un indicatore "primario", come descritto ulteriormente di seguito, e potrebbe aver utilizzato un'ulteriore serie di indicatori più ampia di quella indicata di seguito.

Gli indicatori pertinenti nella Tabella 1 dell'Allegato 1 delle Norme tecniche di regolamentazione SFDR dell'UE consistono in 9 indicatori ambientali e 5 indicatori sociali e occupazionali. Gli indicatori ambientali sono elencati da 1 a 9 e riguardano le emissioni di gas serra (1-3), l'esposizione ai combustibili fossili, la quota di consumo e produzione di energia non rinnovabile, l'intensità del consumo energetico, le attività che influiscono negativamente sulle aree sensibili di biodiversità, le emissioni nell'acqua e i rifiuti pericolosi (4-9 rispettivamente).

Gli indicatori da 10 a 14 riguardano le questioni 'sociali e occupazionali' di un emittente e coprono rispettivamente le violazioni dei principi del Global Compact delle Nazioni Unite e delle Linee guida dell'OCSE per le imprese multinazionali, la mancanza di processi e meccanismi di conformità per monitorare la conformità ai principi del Global Compact delle Nazioni Unite, il divario retributivo di genere non corretto, la diversità di genere del Consiglio di amministrazione e l'esposizione ad armi controverse (mine antiuomo, munizioni a grappolo, armi chimiche e armi biologiche).

Il Gestore degli Investimenti ha anche preso in considerazione il PAI 16 in relazione ai Paesi oggetto di investimento soggetti a violazioni sociali.

L'approccio del Gestore degli Investimenti comprendeva aspetti sia quantitativi che qualitativi per tenere conto degli indicatori suddetti. Ha utilizzato particolari indicatori per lo screening, cercando di escludere gli emittenti che potrebbero causare danni significativi. Ha utilizzato un sottoinsieme per l'impegno con determinati emittenti, cercando di influenzare le migliori prassi e ha utilizzato alcuni di essi come indicatori di performance positiva di sostenibilità, applicando una soglia minima rispetto all'indicatore per ottenere la qualifica di investimento sostenibile. I dati necessari per prendere in considerazione gli indicatori, ove disponibili, possono essere stati ottenuti dagli stessi emittenti partecipati e/o comunicati da fornitori di servizi terzi (compresi i dati proxy). Gli input di dati autodichiarati dagli emittenti o comunicati da fornitori terzi possono basarsi su serie di dati e ipotesi che possono essere insufficienti, di scarsa qualità o contenere informazioni distorte. Poiché dipendono da soggetti terzi, il Gestore degli Investimenti non può garantire l'accuratezza o la completezza di tali dati.

Screening

Alcuni indicatori sono stati presi in considerazione attraverso lo screening basato su valori e norme per implementare le esclusioni. Queste esclusioni hanno preso in considerazione gli indicatori 10, 14 e 16 in relazione ai principi del Global Compact delle Nazioni Unite e alle Linee guida dell'OCSE per le imprese multinazionali, le armi controverse e i paesi partecipati soggetti a violazioni sociali. Il Gestore degli Investimenti ha anche applicato un filtro appositamente realizzato. A causa di alcune considerazioni tecniche, come la copertura dei dati in relazione a specifici indicatori, il Gestore degli Investimenti ha applicato l'indicatore specifico di cui alla Tabella 1 o un proxy rappresentativo, come determinato dal Gestore degli Investimenti per vagliare gli emittenti partecipati in relazione alle questioni ambientali o sociali e occupazionali. Per esempio, le emissioni di gas a effetto serra sono associate a diversi indicatori e metriche corrispondenti nella Tabella 1, come le emissioni di gas a effetto serra, l'impronta di carbonio e l'intensità di gas a effetto serra (indicatori 1-3). Il Gestore degli Investimenti attualmente utilizza i dati sull'intensità dei gas a effetto serra (indicatore 3), i dati relativi al consumo e alla produzione di energia non rinnovabile (indicatore 5) e i dati sull'intensità del consumo di energia (indicatore 6) per effettuare lo screening relativo alle emissioni di gas a effetto serra. In relazione allo screening realizzato ad hoc e per quanto riguarda le attività che influenzano negativamente le aree sensibili per la biodiversità e le emissioni nell'acqua (indicatori 7 e 8), a causa delle limitazioni dei dati, il Gestore degli Investimenti ha utilizzato dati proxy rappresentativi di terze parti, piuttosto che gli indicatori specifici di cui alla Tabella 1. Il Gestore degli Investimenti ha preso in considerazione anche l'indicatore 9 in relazione ai rifiuti pericolosi per quanto riguarda il filtro appositamente costruito.

Impegno

Oltre a selezionare alcuni emittenti come descritto sopra, il Gestore degli investimenti si è impegnato in maniera continuativa con alcuni emittenti partecipati sottostanti. È stato utilizzato un sottoinsieme degli indicatori, in base ad alcune considerazioni tecniche come la copertura dei dati, come base per impegnarsi con alcuni emittenti partecipati, in conformità con l'approccio adottato dal Gestore degli Investimenti in materia di stewardship e impegno. Gli indicatori utilizzati in relazione a tale impegno includono gli indicatori 3, 5 e 13 relativi all'intensità dei gas a effetto serra, alla quota di energia non rinnovabile e alla diversità di genere nei consigli d'amministrazione della Tabella 1. Ha utilizzato anche gli indicatori 2 della Tabella 2 e 3 della Tabella 3 in relazione all'emissione o agli inquinanti atmosferici e al numero di giorni persi per infortuni, incidenti, decessi o malattie.

Indicatori di sostenibilità

Il Gestore degli investimenti ha utilizzato gli indicatori 3 e 13 in relazione all'intensità di gas serra e alla diversità di genere nei consigli di amministrazione come indicatori di sostenibilità per contribuire a

qualificare un investimento come investimento sostenibile. Uno dei percorsi richiede che un emittente sia considerato leader operativo di un gruppo di pari per poter essere qualificato come investimento sostenibile. Ciò richiede un punteggio relativo all'indicatore incluso nel 20% superiore rispetto all'indice di riferimento.

I principali impatti negativi sono gli impatti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a questioni ambientali, sociali e occupazionali, al rispetto dei diritti umani, alla lotta alla corruzione e alla concussione.

— *Gli investimenti sostenibili sono stati allineati alle Linee guida dell'OCSE per le imprese multinazionali e ai Principi guida delle Nazioni Unite su imprese e diritti umani? Dettagli:*

Le esclusioni dal portafoglio basate su norme come descritto sopra al punto "In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario? sono state applicate per perseguire l'allineamento con queste linee guida e principi. Al fine di individuare potenziali trasgressori sono stati utilizzati dati di soggetti terzi. A meno che non sia stata concessa un'eccezione, il Comparto ha vietato investimenti rilevanti in questi emittenti.

La Tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla Tassonomia non devono arrecare danno significativo agli obiettivi della Tassonomia dell'UE, ed è accompagnata da criteri specifici dell'Unione.

Il principio "non arrecare un danno significativo" si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'Unione per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri dell'Unione per le attività economiche ecosostenibili.

Qualsiasi altro investimento sostenibile non deve inoltre arrecare un danno significativo agli obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha considerato i principali impatti negativi sui fattori di sostenibilità?

Il Comparto ha considerato i principali impatti negativi selezionati sui fattori di sostenibilità attraverso uno screening basato su valori e norme per implementare le esclusioni. Per tale screening sono stati utilizzati gli indicatori 10, 14 e 16 in relazione alle violazioni del Global Compact delle Nazioni Unite e alle violazioni sociali a livello nazionale e delle armi controverse delle Norme tecniche di regolamentazione SFDR dell'UE. Il Comparto ha anche utilizzato alcuni degli indicatori nell'ambito del filtro "Non arrecare danno significativo", come dettagliato nella risposta alla domanda immediatamente precedente, per dimostrare che un investimento si qualifica come investimento sostenibile.

Un sottoinsieme dei suddetti Indicatori di Sostenibilità Avversi è stato utilizzato per determinare l'impegno con gli emittenti partecipati in base alla loro rispettiva performance PAI (principali impatti avversi).

Quali sono stati i principali investimenti di questo prodotto finanziario?

L'elenco comprende gli investimenti che costituiscono la **maggior parte degli investimenti** del prodotto finanziario sulla base di un'istantanea alla fine del periodo di riferimento:
01/07/2022 - 30/06/2023

Maggiori investimenti	Settore	% del patrimonio	Paese
BANK OF AMERICA CORPORATION	Settore bancario	2,60	Stati Uniti
US DEPARTMENT OF THE TREASURY	Obbligazioni/Buoni del Tesoro USA	1,79	Stati Uniti

Qual è stata la percentuale di investimenti legati alla sostenibilità?

La ripartizione degli investimenti descrive la quota di investimenti in attività specifiche.

Qual è stata la ripartizione degli investimenti?

Alla fine del periodo di riferimento il Comparto ha allocato il 76,25% del suo patrimonio a emittenti che presentano caratteristiche ambientali e/o sociali positive e il 44,65% del patrimonio a investimenti sostenibili. Il Comparto non si è impegnato a investire una percentuale del patrimonio specificamente in valori mobiliari che presentano caratteristiche ambientali positive o caratteristiche sociali positive, né si è impegnato a perseguire obiettivi ambientali o sociali specifici o in combinazione tra loro.

Gli asset liquidi accessori, i depositi presso gli istituti di credito, gli strumenti/fondi del mercato monetario (per la gestione delle sottoscrizioni e dei rimborsi in contanti, nonché dei pagamenti correnti ed eccezionali) e i derivati per l'EPM non sono inclusi nella % di asset riportata nella tabella sottostante. Queste partecipazioni fluttuano a seconda dei flussi di investimento e sono accessorie alla politica di investimento con un impatto minimo o nullo sulle operazioni di investimento.

Nb: L'allineamento alla Tassonomia UE per gli strumenti considerati investimenti sostenibili da JP Morgan sarà inserito nel grafico sottostante una volta disponibile e se pertinente. L'allineamento completo del fondo alla Tassonomia UE è riportato di seguito (in risposta alla domanda: In che misura gli investimenti sostenibili con un obiettivo ambientale sono stati allineati alla Tassonomia UE?)

N. 1 Allineati alle caratteristiche A/S include gli investimenti del prodotto finanziario utilizzati per realizzare le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

N. 2 Altri comprende gli investimenti rimanenti del prodotto finanziario che non sono allineati con le caratteristiche ambientali o sociali, né sono qualificati come investimenti sostenibili.

La categoria **N. 1 Allineati con le caratteristiche A/S** comprende:

- La sottocategoria **N. 1A Sostenibili** comprende gli investimenti sostenibili dal punto di vista ambientale e sociale.
- La sotto-categoria **N. 1B Altre caratteristiche A/S** comprende gli investimenti allineati con le caratteristiche ambientali o sociali che non si qualificano come investimenti sostenibili.

● **In quali settori economici sono stati effettuati gli investimenti?**

Sebbene il Comparto abbia promosso determinate caratteristiche ambientali e sociali attraverso i suoi criteri di inclusione ed esclusione, può aver investito in un'ampia gamma di settori - si prega di fare riferimento all'elenco seguente per una ripartizione settoriale alla fine del periodo di riferimento. Inoltre, il Gestore degli investimenti si è impegnato in maniera continuativa con alcuni emittenti partecipati sottostanti. Gli investimenti in settori e sotto-settori dell'economia che traggono ricavi dall'esplorazione, dall'estrazione mineraria, dall'estrazione, dalla produzione, dalla lavorazione, dallo stoccaggio, dalla raffinazione o dalla distribuzione, compresi il trasporto, lo stoccaggio e il commercio, di combustibili fossili, se detenuti, saranno inclusi nella tabella sottostante. Le attività liquide accessorie, i depositi presso istituti di credito, gli strumenti del mercato monetario/fondi (per la gestione delle sottoscrizioni e dei rimborsi in contanti e dei pagamenti correnti e straordinari) e i derivati per l'EPM sono esclusi dai risultati, ma sono inclusi nel denominatore per la percentuale di attività indicata sia nella tabella seguente, sia nella tabella dei principali investimenti.

Le **attività abilitanti** consentono direttamente ad altre attività di dare un contributo sostanziale a un obiettivo ambientale.

Le **attività di transizione** sono **attività economiche** per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano livelli di emissioni di gas serra corrispondenti alle migliori prestazioni.

In quale misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla Tassonomia dell'UE?¹

I dati disponibili in relazione all'allineamento alla Tassonomia dell'UE sono, attualmente, molto limitati, in particolare per quanto concerne il gas fossile e l'energia nucleare. Prevediamo che questo dato migliorerà nel tempo, man mano che un maggior numero di emittenti renderà noto il proprio allineamento e i dati saranno sempre più disponibili.

Il Comparto non ha assunto alcun impegno minimo in materia di investimenti sostenibili con obiettivi ambientali allineati alla Tassonomia dell'UE.

Pertanto, il documento informativo precontrattuale del Comparto indica come 0% l'entità degli investimenti sostenibili mirati con un obiettivo ambientale allineato alla Tassonomia dell'UE. Qualsiasi allineamento delineato di seguito è un sottoprodotto del quadro del Comparto che considera gli investimenti che hanno caratteristiche ambientali e/o sociali e gli investimenti sostenibili (come definiti dall'SFDR).

I grafici seguenti illustrano l'effettiva entità degli investimenti sostenibili con un obiettivo ambientale allineato alla Tassonomia dell'UE, come misurata alla fine del periodo di riferimento.

- ***Il prodotto finanziario ha investito in attività legate al gas fossile e/o all'energia nucleare conformemente alla Tassonomia dell'UE?***

Sì

In gas fossile

In energia nucleare

No

Le attività allineate alla Tassonomia sono espresse come una quota di:

- il **volume d'affari** riflette la "ecologicità" dell'impresa partecipata oggi.

- le **spese in conto capitale** (capex) mostrano gli investimenti verdi effettuati dalle imprese partecipate, rilevanti per la transizione verso un'economia verde.

- le **spese operative** (opex) riflettono le attività operative verdi

I grafici che seguono mostrano in verde la percentuale di investimenti che erano allineati alla Tassonomia dell'UE. Poiché non esiste una metodologia adeguata per determinare l'allineamento delle obbligazioni sovrane* alla Tassonomia, il primo grafico mostra l'allineamento alla Tassonomia in relazione a tutti gli investimenti del prodotto finanziario comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla Tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

delle imprese partecipate.

Questo grafico rappresenta 2% dell'investimento totale.

*Ai fini di questi grafici, le 'obbligazioni sovrane' comprendono tutte le esposizioni sovrane.

¹ Le attività legate al gas fossile e/o al nucleare saranno conformi alla Tassonomia dell'UE solo se contribuiranno a limitare i cambiamenti climatici ("mitigazione dei cambiamenti climatici") e non danneggeranno in modo significativo alcun obiettivo della Tassonomia dell'UE - si veda la nota esplicativa sul margine sinistro. I criteri completi per le attività economiche relative al gas fossile e all'energia nucleare conformi alla Tassonomia UE sono stabiliti nel Regolamento Delegato (UE) 2022/1214 della Commissione.

● Qual era la quota degli investimenti effettuati in attività transitorie e abilitanti?

A seguito di quanto suddetto, il Comparto non ha assunto alcun impegno minimo di effettuare investimenti allineati alla Tassonomia UE - comprese le attività di Transizione e Abilitazione. Qualsiasi allineamento delineato di seguito è un sottoprodotto del quadro del Comparto che considera gli investimenti che hanno caratteristiche ambientali e/o sociali positive e gli investimenti sostenibili.

La quota calcolata delle attività di transizione rappresenta il 0,00% e la quota calcolata delle attività abilitanti rappresenta il 0,15%, alla fine del periodo di riferimento.

● Qual è l'esito del raffronto della percentuale di investimenti allineati alla tassonomia dell'UE rispetto ai precedenti periodi di riferimento?

Non pertinente

 sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili conformemente al regolamento (UE) 2020/852.

Qual era la quota di investimenti sostenibili con un obiettivo ambientale che non erano allineati alla Tassonomia dell'UE?

La quota di investimenti sostenibili con un obiettivo ambientale non allineati alla Tassonomia dell'UE era del 30,35% del patrimonio alla fine del periodo di riferimento.

Qual era la quota di investimenti socialmente sostenibili?

La quota di investimenti socialmente sostenibili era pari al 14,31% del patrimonio alla fine del periodo di riferimento.

Quali investimenti erano compresi nella categoria “altri”, qual era il loro scopo ed esistevano garanzie minime di salvaguardia ambientale o sociale?

Il 23,75% degli attivi in investimenti “altri” è costituito da emittenti che non hanno soddisfatto i criteri descritti in risposta alla domanda precedente, intitolata “Qual è stata la prestazione degli indicatori di sostenibilità?” per essere qualificati come emittenti che presentano caratteristiche ambientali o sociali positive. Sono investimenti a fini di diversificazione. Gli asset liquidi accessori, i depositi presso gli istituti di credito, gli strumenti/fondi del mercato monetario (per la gestione delle sottoscrizioni e dei rimborsi in contanti, nonché dei pagamenti correnti ed eccezionali) e i derivati per l'EPM non sono inclusi nella % di asset riportata nel diagramma di ripartizione degli asset di cui sopra, incluso sotto la voce “altri”. Queste partecipazioni fluttuano a seconda dei flussi di investimento e sono accessorie alla politica di investimento con un impatto minimo o nullo sulle operazioni di investimento.

Tutti gli investimenti, compresi quelli "altri", sono stati soggetti alle seguenti salvaguardie/principi minimi ESG:

- Le salvaguardie minime come delineate dall'Articolo 18 del Regolamento sulla Tassonomia dell'UE (compreso l'allineamento con le Linee guida dell'OCSE per le imprese multinazionali e i Principi guida delle Nazioni Unite su imprese e diritti umani), come implementate dal Gestore degli Investimenti.
- Applicazione di prassi di buona governance (queste includono buone strutture di gestione, relazioni con il personale dipendente, remunerazione del personale e conformità fiscale), come implementate dal Gestore degli Investimenti.
- Conformità al principio “Non arrecare danno significativo”, come prescritto dalla definizione di investimento sostenibile nell'SFDR dell'UE.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

I seguenti elementi vincolanti della strategia d'investimento sono stati applicati durante il periodo di riferimento per selezionare gli investimenti al fine di conseguire ciascuna delle caratteristiche ambientali o sociali:

- L'obbligo di investire almeno il 51% del patrimonio in emittenti con caratteristiche ambientali e/o sociali positive.
- Lo screening basato su valori e norme per implementare le esclusioni complete in relazione a emittenti che sono impegnati in determinate attività, come la produzione di armi controverse, e l'applicazione di soglie percentuali massime di ricavi, produzione o distribuzione ad altri emittenti, come quelli che operano nei settori del carbone termico e del tabacco. Per ulteriori informazioni, fare riferimento alla politica di esclusione del Comparto su www.jpmorganassetmanagement.lu, cercando il proprio Comparto specifico e accedendo alla sezione informazioni ESG.
- L'obbligo per tutti gli emittenti in portafoglio di seguire le prassi di buona governance.

Il Comparto si è inoltre impegnato a investire almeno l' 10% del patrimonio in investimenti sostenibili.

Ulteriori informazioni sull'impegno sono disponibili nella risposta alla domanda “Come sono stati presi in considerazione gli indicatori degli impatti negativi sui fattori di sostenibilità?”

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento sostenibile?

Non pertinente

- ***In quale modo l'indice di riferimento differiva da un indice generale di mercato?***

Non pertinente

I benchmark di riferimento sono indici per misurare se il prodotto finanziario raggiunge le caratteristiche ambientali o sociali che promuove.

- ***Qual è stata la prestazione di questo prodotto finanziario in relazione agli indicatori di sostenibilità per determinare l'allineamento dell'indice di riferimento con le caratteristiche ambientali o sociali promosse?***

Non pertinente

- ***Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?***

Non pertinente

- ***Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice generale di mercato?***

Non pertinente

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, purché tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e l'impresa beneficiaria degli investimenti segua prassi di buona governance.

La **Tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852 che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non stabilisce un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere allineati o meno alla Tassonomia.

Nome del prodotto: **JPMorgan Funds - Global Focus Fund**

Identificativo della persona giuridica: **549300G40HDN6XFG8M37**

Caratteristiche ambientali e/o sociali

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?	
●● <input type="checkbox"/> Sì	●● <input checked="" type="checkbox"/> No
<input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo ambientale: % <ul style="list-style-type: none"> <input type="checkbox"/> in attività economiche considerate ecosostenibili conformemente alla Tassonomia dell'UE <input type="checkbox"/> in attività economiche che non sono considerate ecosostenibili conformemente alla Tassonomia dell'UE 	<input checked="" type="checkbox"/> Ha promosso caratteristiche ambientali/sociali (A/S) e pur non avendo come obiettivo un investimento sostenibile, aveva una quota del 75,77% di investimenti sostenibili <ul style="list-style-type: none"> <input type="checkbox"/> con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla Tassonomia dell'UE <input checked="" type="checkbox"/> con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla Tassonomia dell'UE <input checked="" type="checkbox"/> con un obiettivo sociale
<input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo sociale: %	<input type="checkbox"/> Ha promosso caratteristiche A/S ma non ha effettuato alcun investimento sostenibile

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Il Comparto si propone di promuovere un'ampia gamma di caratteristiche ambientali, sociali e di governance attraverso i suoi criteri di inclusione degli investimenti, in particolare con una ripartizione minima del patrimonio del 51% in investimenti con caratteristiche ambientali e/o sociali positive e un minimo di 10% di investimenti costituiti da investimenti sostenibili. Questi impegni sono stati rispettati per tutto il periodo di riferimento (1 luglio 2022 - 30 giugno 2023). Alla fine del periodo di riferimento, il Comparto deteneva l' 88,50% di investimenti con caratteristiche ambientali e/o sociali positive e il 75,77% di investimenti sostenibili.

Questi investimenti sono stati determinati mediante l'applicazione di criteri di inclusione ed esclusione che sono stati applicati sia a livello di asset che di prodotto. I criteri di inclusione sono basati su un punteggio ESG assegnato a tutti gli investimenti nell'ambito della strategia, per identificare quelli che possono essere considerati come aventi caratteristiche ambientali e/o sociali e quelli che soddisfano le soglie per essere considerati investimenti sostenibili.

Il punteggio ESG prende in considerazione i seguenti indicatori: la gestione efficace delle emissioni tossiche, dei rifiuti, il buon record ambientale e le caratteristiche sociali, come efficaci dichiarazioni di sostenibilità, valutazioni favorevoli in materia di relazioni con il personale dipendente e di gestione dei problemi di sicurezza.

Attraverso i suoi criteri di esclusione (che prevedevano esclusioni sia totali che parziali), il Comparto ha promosso determinate norme e valori, tra cui il sostegno alla salvaguardia dei diritti umani proclamati a livello internazionale. Il Comparto ha escluso completamente le società impegnate nella fabbricazione di armi controverse e ha applicato soglie massime di reddito o di produzione ad altre, come quelle che operano nel settore del carbone termico e del tabacco.

In relazione alla considerazione di buona governance, tutti gli investimenti (esclusi i contanti e i derivati) sono stati vagliati per escludere i noti trasgressori delle pratiche di buona governance. Inoltre, per gli investimenti che si ritiene abbiano caratteristiche ambientali e/o sociali o che si qualificano come investimenti sostenibili, sono state applicate ulteriori considerazioni. Per questi investimenti, il Comparto ha incorporato un confronto con un gruppo di pari e ha escluso le società che non hanno ottenuto un punteggio superiore all'80% rispetto ai pari in base agli indicatori di buona governance.

Il Comparto non prevedeva specifici obiettivi di allocazione a favore di caratteristiche ambientali o sociali. La misura in cui le caratteristiche ambientali o sociali promosse sono state soddisfatte può essere intesa considerando la % effettiva del patrimonio allocata per il periodo di riferimento alle imprese che presentavano tali caratteristiche.

In sintesi: il Comparto ha rispettato i minimi contrattuali garantiti in relazione alle caratteristiche ambientali e/o sociali e alla politica di investimenti sostenibili per tutto il periodo di riferimento. Il Comparto ha applicato dei filtri con l'obiettivo di escludere tutti i potenziali investimenti vietati dalla sua politica di esclusione durante tutto questo periodo. La misura in cui le norme e i valori promossi dal Comparto sono stati soddisfatti si basa sull'eventualità che il Comparto abbia detenuto durante il Periodo di riferimento imprese che sarebbero state vietate ai sensi della politica di esclusione. Il Gestore degli Investimenti non ha riscontrato alcuna indicazione siano stati effettuati investimenti in imprese di tale genere. Il Gestore degli Investimenti informa che la continuità dei valori percentuali e delle informazioni divulgate non può essere garantita in futuro ed è soggetta alla costante evoluzione del panorama legale e normativo. La durata del periodo di riferimento può essere inferiore a 12 mesi se nel corso di tale periodo il fondo era stato lanciato, chiuso o il suo status ai sensi dell'articolo 8/9 era stato modificato.

Gli indicatori di sostenibilità misurano in che modo sono realizzate le caratteristiche ambientali o sociali promosse da questo prodotto finanziario

● **Qual è stata la prestazione degli indicatori di sostenibilità?**

Una combinazione della metodologia di valutazione ESG propria del Gestore degli Investimenti, che consiste nella valutazione ESG propria del Gestore degli Investimenti, e/o di dati di terzi è stata utilizzata nell'ambito dei criteri di inclusione per misurare il conseguimento delle caratteristiche ambientali e/o sociali che il Comparto promuove.

La metodologia era basata sulla gestione da parte di un'impresa dei relativi aspetti ambientali o sociali come le sue emissioni tossiche, la gestione dei rifiuti, le relazioni con il personale dipendente e gli aspetti della sicurezza, la diversità di genere/indipendenza del consiglio di amministrazione e la tutela della riservatezza dei dati. Per essere inclusa nel 51% degli asset considerati come promotori di caratteristiche ambientali e/o sociali, un'impresa deve conseguire un punteggio ambientale o sociale compreso nell'80% di quelli maggiormente elevati in relazione alle imprese di pari grado e attuare le buone prassi di governance sopra indicate.

Alla fine del periodo di riferimento, il Comparto deteneva l' 88,50% di investimenti con caratteristiche ambientali e/o sociali positive e il 75,77% di investimenti sostenibili.

Per quanto riguarda le norme applicate e le esclusioni basate sui valori, il Gestore degli Investimenti ha utilizzato i dati per quantificare la partecipazione di una società alle relative attività. Lo screening condotto su tali dati ha consentito di pervenire a esclusioni totali di certi potenziali investimenti e a esclusioni parziali in base a soglie percentuali massime di ricavi o produzione, conformemente ai criteri di esclusione. Durante tutto il periodo di riferimento, e in nessun caso, sono state trasgredite le regole di esclusione. Inoltre, è stato incorporato nello screening un sottoinsieme di "Indicatori di Sostenibilità Avversi" come enunciato nelle Norme tecniche di regolamentazione SFDR dell'UE".

Il Comparto non prevedeva specifici obiettivi di allocazione a favore di caratteristiche ambientali o sociali e pertanto la prestazione degli indicatori in relazione a specifiche caratteristiche ambientali o sociali non è illustrata in questa sede.

Per ulteriori informazioni, consultare l'Informativa sulle Caratteristiche Ambientali e Sociali del Comparto sul sito www.jpmorganassetmanagement.lu, cercando il proprio Comparto specifico e accedendo alla sezione Informazioni ESG.

● **...e rispetto ai periodi precedenti?**

● ***Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha parzialmente effettuato e in che misura gli investimenti sostenibili hanno contribuito al conseguimento di tali obiettivi?***

Gli obiettivi degli investimenti sostenibili che il Comparto ha parzialmente effettuato sono stati costituiti da qualsiasi singolo o combinazione dei seguenti obiettivi durante il periodo di riferimento:

Obiettivi ambientali: (i) mitigazione del rischio climatico, (ii) transizione verso un'economia circolare

Obiettivi sociali: (i) comunità inclusive e sostenibili - aumento della rappresentanza femminile a livello dirigenziale, (ii) comunità inclusive e sostenibili - aumento della rappresentanza femminile nei consigli di amministrazione e (iii) realizzazione di un ambiente di lavoro e di una cultura dignitosi.

Il contributo a tali obiettivi è stato determinato mediante: (i) indicatori di sostenibilità di prodotti e servizi, che possono aver incluso la percentuale di entrate derivanti dalla fornitura di prodotti e/o servizi che contribuiscono al pertinente obiettivo sostenibile, come un'impresa che produca pannelli solari o tecnologie per l'energia pulita che soddisfano le soglie proprietarie del Gestore degli Investimenti di contributo alla mitigazione del rischio climatico. L'attuale percentuale di ricavi è fissata ad un minimo del 20% e l'intera partecipazione nella società è considerata un investimento sostenibile; o (ii) essere un leader operativo del gruppo di pari che contribuisce all'obiettivo pertinente. La qualifica di leader di un gruppo di pari è definita come un punteggio entro il top 20% rispetto ai pari, in base a determinati indicatori di sostenibilità operativa. Ad esempio, il raggiungimento di un punteggio entro il top 20% rispetto ai pari sull'impatto totale dei rifiuti contribuisce alla transizione verso un'economia circolare.

Il contributo effettivo a tali obiettivi può essere compreso considerando l'effettiva % di asset allocata agli investimenti sostenibili per il periodo di riferimento. Il Comparto era tenuto a investire l' 10% del patrimonio in investimenti sostenibili. Durante il periodo, il Comparto non ha mai detenuto investimenti sostenibili al di sotto del suo minimo garantito. Alla fine del periodo di riferimento, il 75,77% del suo patrimonio era costituito da investimenti sostenibili.

● ***In che modo gli investimenti sostenibili che il prodotto finanziario ha parzialmente realizzato non hanno causato danni significativi ad alcun obiettivo di investimento sostenibile ambientale o sociale?***

Gli investimenti sostenibili che il Comparto intendeva in parte realizzare sono stati sottoposti a un processo di screening che ha mirato a identificare ed escludere dalla qualifica di investimento sostenibile, le imprese che il Gestore degli Investimenti considerava come aventi realizzato le performance peggiori, in base a una soglia determinata dal Gestore degli Investimenti, in relazione a determinate considerazioni ambientali. Di conseguenza, sono stati considerati investimenti sostenibili solo le imprese che hanno dimostrato di possedere i migliori indicatori in relazione alle misure assolute e relative.

Tali considerazioni includono il cambiamento climatico, la protezione delle risorse idriche e marine, la transizione verso un'economia circolare, l'inquinamento e la protezione della biodiversità e degli ecosistemi. Il Gestore degli Investimenti ha inoltre applicato un filtro volto a identificare ed escludere le imprese che il Gestore degli Investimenti ha ritenuto non conformi alle Linee guida dell'OCSE per le imprese multinazionali e i Principi guida delle Nazioni Unite su imprese e diritti umani, sulla base dei dati comunicati da fornitori di servizi terzi.

— ***Come sono stati presi in considerazione gli indicatori degli impatti negativi sui fattori di sostenibilità?***

Gli indicatori degli impatti negativi sui fattori di sostenibilità di cui alla Tabella 1 dell'Allegato 1 e alcuni indicatori, determinati dal Gestore degli Investimenti, di cui alle Tabelle 2 e 3 dell'Allegato 1 delle Norme tecniche di regolamentazione SFDR dell'UE sono stati presi in considerazione come ulteriormente descritto di seguito. Il Gestore degli Investimenti ha utilizzato le metriche contenute negli Standard tecnici regolamentari SFDR dell'UE oppure, laddove ciò non fosse possibile a causa di limitazioni dei dati o di altri problemi tecnici, un proxy rappresentativo. Il Gestore degli Investimenti ha consolidato la considerazione di alcuni indicatori in un indicatore "primario", come descritto ulteriormente di seguito, e potrebbe aver utilizzato un'ulteriore serie di indicatori più ampia di quella indicata di seguito.

Gli indicatori pertinenti nella Tabella 1 dell'Allegato 1 delle Norme tecniche di regolamentazione SFDR dell'UE consistono in 9 indicatori ambientali e 5 indicatori sociali e occupazionali. Gli indicatori ambientali sono elencati da 1 a 9 e riguardano le emissioni di gas serra (1-3), l'esposizione ai combustibili fossili, la

I principali impatti negativi sono gli impatti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a questioni ambientali, sociali e occupazionali, al rispetto dei diritti umani, alla lotta alla corruzione e alla concussione.

quota di consumo e produzione di energia non rinnovabile, l'intensità del consumo energetico, le attività che influiscono negativamente sulle aree sensibili di biodiversità, le emissioni nell'acqua e i rifiuti pericolosi (4-9 rispettivamente). Gli indicatori da 10 a 14 riguardano le questioni sociali e occupazionali di un'impresa e coprono rispettivamente le violazioni dei principi del Global Compact delle Nazioni Unite e delle Linee guida dell'OCSE per le imprese multinazionali, la mancanza di processi e meccanismi di conformità per monitorare la conformità ai principi del Global Compact delle Nazioni Unite, il divario retributivo di genere non corretto, la diversità di genere del Consiglio di amministrazione e l'esposizione ad armi controverse (mine antiuomo, munizioni a grappolo, armi chimiche e armi biologiche).

L'approccio del Gestore degli Investimenti comprendeva aspetti sia quantitativi che qualitativi per tenere conto degli indicatori suddetti. Ha utilizzato particolari indicatori per lo screening, cercando di escludere le imprese che potrebbero causare danni significativi. Ha utilizzato un sottoinsieme per l'impegno con determinate imprese, cercando di influenzare le migliori prassi e ha utilizzato alcuni di essi come indicatori di performance positiva di sostenibilità, applicando una soglia minima rispetto all'indicatore per ottenere la qualifica di investimento sostenibile. I dati necessari per prendere in considerazione gli indicatori, ove disponibili, possono essere stati ottenuti dalle stesse imprese partecipate e/o comunicati da fornitori di servizi terzi (compresi i dati proxy). Gli input di dati autodichiarati dalle imprese o comunicati da fornitori terzi possono basarsi su serie di dati e ipotesi che possono essere insufficienti, di scarsa qualità o contenere informazioni distorte. Poiché dipendono da soggetti terzi, il Gestore degli Investimenti non può garantire l'accuratezza o la completezza di tali dati.

Screening

Alcuni indicatori sono stati presi in considerazione attraverso lo screening basato su valori e norme per implementare le esclusioni. Queste esclusioni hanno preso in considerazione gli indicatori 10 e 14 in relazione ai principi del Global Compact delle Nazioni Unite e alle Linee guida dell'OCSE per le imprese multinazionali e le armi controverse. Il Gestore degli Investimenti ha anche applicato un filtro appositamente realizzato. A causa di alcune considerazioni tecniche, come la copertura dei dati in relazione a specifici indicatori, il Gestore degli Investimenti ha applicato l'indicatore specifico di cui alla Tabella 1 o un proxy rappresentativo, come determinato dal Gestore degli Investimenti per vagliare le imprese partecipate in relazione alle questioni ambientali o sociali e occupazionali. Per esempio, le emissioni di gas a effetto serra sono associate a diversi indicatori e metriche corrispondenti nella Tabella 1, come le emissioni di gas a effetto serra, l'impronta di carbonio e l'intensità di gas a effetto serra (indicatori 1-3). Il Gestore degli Investimenti ha utilizzato i dati sull'intensità dei gas a effetto serra (indicatore 3), i dati relativi al consumo e alla produzione di energia non rinnovabile (indicatore 5) e i dati sull'intensità del consumo di energia (indicatore 6) per effettuare lo screening relativo alle emissioni di gas a effetto serra.

In relazione allo screening realizzato ad hoc e per quanto riguarda le attività che influenzano negativamente le aree sensibili per la biodiversità e le emissioni nell'acqua (indicatori 7 e 8), a causa delle limitazioni dei dati, sono stati utilizzati dati proxy rappresentativi di terze parti, piuttosto che gli indicatori specifici di cui alla Tabella 1. Il Gestore degli Investimenti ha preso in considerazione anche l'indicatore 9 in relazione ai rifiuti pericolosi per quanto riguarda il filtro appositamente costruito.

Impegno

Oltre a selezionare alcune imprese come descritto sopra, il Gestore degli investimenti si è impegnato in maniera continuativa con alcune imprese partecipate sottostanti. È stato utilizzato un sottoinsieme degli indicatori, in base ad alcune considerazioni tecniche come la copertura dei dati, come base per impegnarsi con alcune imprese partecipate sottostanti, in conformità con l'approccio adottato dal Gestore degli Investimenti in materia di stewardship e impegno. Gli indicatori utilizzati in relazione a tale impegno includono gli indicatori 3, 5 e 13 relativi all'intensità dei gas a effetto serra, alla quota di energia non rinnovabile e alla diversità di genere nei consigli d'amministrazione della Tabella 1. Ha utilizzato anche gli indicatori 2 della Tabella 2 e 3 della Tabella 3 in relazione alle emissioni o agli inquinanti atmosferici e al numero di giorni persi per infortuni, incidenti, decessi o malattie.

Indicatori di sostenibilità

Il Gestore degli investimenti ha utilizzato gli indicatori 3 e 13 in relazione all'intensità di gas serra e alla diversità di genere nei consigli di amministrazione come indicatori di sostenibilità per contribuire a qualificare un investimento come investimento sostenibile. Uno dei percorsi richiedeva che un'impresa fosse considerata come un'impresa operativa leader di un gruppo di pari per poter essere qualificata come investimento sostenibile. Ciò richiedeva un punteggio relativo all'indicatore incluso nel 20% superiore rispetto ai pari.

I principali impatti negativi sono gli impatti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a questioni ambientali, sociali e occupazionali, al rispetto dei diritti umani, alla lotta alla corruzione e alla concussione.

— *Gli investimenti sostenibili sono stati allineati alle Linee guida dell'OCSE per le imprese multinazionali e ai Principi guida delle Nazioni Unite su imprese e diritti umani? Dettagli:*

Le esclusioni dal portafoglio basate su norme come descritto sopra al punto "In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario? sono state applicate per perseguire l'allineamento con queste linee guida e principi. Al fine di individuare potenziali trasgressori sono stati utilizzati dati di soggetti terzi. A meno che non sia stata concessa un'eccezione, il Comparto ha vietato investimenti rilevanti in questi emittenti.

La Tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla Tassonomia non devono arrecare danno significativo gli obiettivi della Tassonomia dell'UE, ed è accompagnata da criteri specifici dell'Unione.

Il principio "non arrecare un danno significativo" si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'Unione per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri dell'Unione per le attività economiche ecosostenibili.

Qualsiasi altro investimento sostenibile non deve inoltre arrecare un danno significativo agli obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha considerato i principali impatti negativi sui fattori di sostenibilità?

Il Comparto ha considerato i principali impatti negativi selezionati sui fattori di sostenibilità attraverso uno screening basato su valori e norme per implementare le esclusioni. In relazione a tale screening sono stati utilizzati gli indicatori 10 e 14 in relazione alle violazioni del Global Compact delle Nazioni Unite e alle armi controverse degli Standard Tecnici Regolamentari SFDR dell'UE. Il Comparto ha anche utilizzato alcuni degli indicatori nell'ambito del filtro "Non arrecare danno significativo", come dettagliato nella risposta alla domanda immediatamente precedente, per dimostrare che un investimento si qualifica come investimento sostenibile.

Un sottoinsieme dei suddetti Indicatori di Sostenibilità Avversi è stato utilizzato per determinare l'impegno con le imprese partecipate in base alla loro rispettiva performance PAI (principali impatti avversi).

Quali sono stati i principali investimenti di questo prodotto finanziario?

L'elenco comprende gli investimenti che costituiscono la **maggior parte degli investimenti** del prodotto finanziario sulla base di un'istantanea alla fine del periodo di riferimento:
01/07/2022 - 30/06/2023

Maggiori investimenti	Settore	% del patrimonio	Paese
MICROSOFT CORP	Tecnologia - Software	8,01	Stati Uniti
AMAZON.COM INC	Mass media	5,89	Stati Uniti
UNITEDHEALTH GROUP INC	Sistemi e servizi sanitari	3,37	Stati Uniti
TAIWAN SEMICONDUCTOR-SP ADR	Tecnologia - Semiconduttori & Hardware	3,11	Taiwan
NVIDIA CORP	Tecnologia - Semiconduttori & Hardware	2,99	Stati Uniti
COCA-COLA CO/THE	Beni di consumo	2,85	Stati Uniti
VINCI SA	Ciclico industriale	2,80	Francia
MASTERCARD INC - A	Servizi finanziari	2,74	Stati Uniti
META PLATFORMS INC-CLASS A	Mass media	2,72	Stati Uniti

Qual è stata la percentuale di investimenti legati alla sostenibilità?

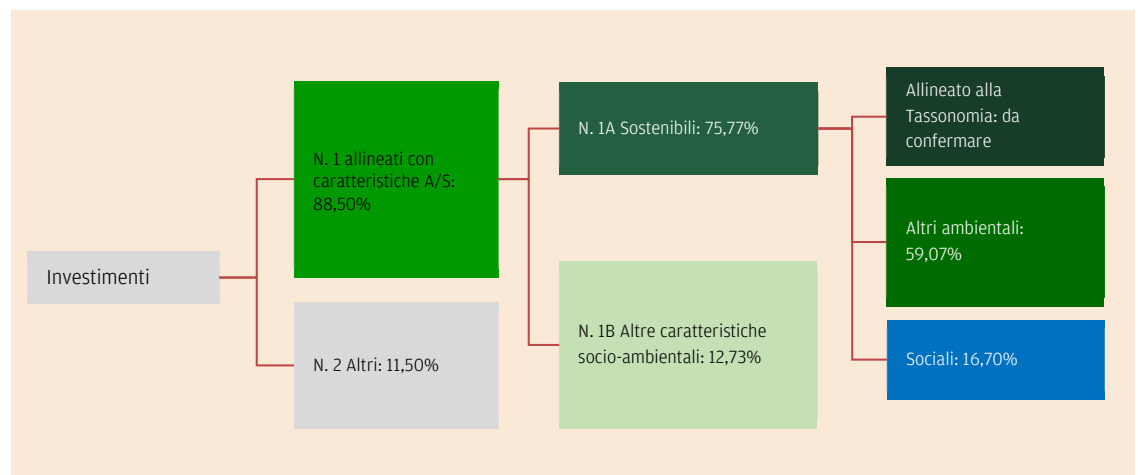

La ripartizione degli investimenti descrive la quota di investimenti in attività specifiche.

Qual è stata la ripartizione degli investimenti?

Alla fine del periodo di riferimento, il Comparto ha allocato l' 88,50% del suo patrimonio a imprese che presentavano caratteristiche ambientali e/o sociali positive e il 75,77% del patrimonio a investimenti sostenibili. Il Comparto non si è impegnato a investire una percentuale del patrimonio specificamente in valori mobiliari che presentano caratteristiche ambientali positive o caratteristiche sociali positive, né si è impegnato a perseguire obiettivi ambientali o sociali specifici o in combinazione tra loro.

Gli asset liquidi accessori, i depositi presso gli istituti di credito, gli strumenti/fondi del mercato monetario (per la gestione delle sottoscrizioni e dei rimborsi in contanti, nonché dei pagamenti correnti ed eccezionali) e i derivati per l'EPM non sono inclusi nella % di asset riportata nella tabella sottostante. Queste partecipazioni fluttuano a seconda dei flussi di investimento e sono accessorie alla politica di investimento con un impatto minimo o nullo sulle operazioni di investimento.

Nb: L'allineamento alla Tassonomia UE per gli strumenti considerati investimenti sostenibili da JP Morgan sarà inserito nel grafico sottostante una volta disponibile e se pertinente. L'allineamento completo del fondo alla Tassonomia UE è riportato di seguito (in risposta alla domanda: In che misura gli investimenti sostenibili con un obiettivo ambientale sono stati allineati alla Tassonomia UE?)

N. 1 Allineati alle caratteristiche A/S include gli investimenti del prodotto finanziario utilizzati per realizzare le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

N. 2 Altri comprende gli investimenti rimanenti del prodotto finanziario che non sono allineati con le caratteristiche ambientali o sociali, né sono qualificati come investimenti sostenibili.

La categoria **N. 1 Allineati con le caratteristiche A/S** comprende:

- La sottocategoria **N. 1A Sostenibili** comprende gli investimenti sostenibili dal punto di vista ambientale e sociale.
- La sotto-categoria **N. 1B Altre caratteristiche A/S** comprende gli investimenti allineati con le caratteristiche ambientali o sociali che non si qualificano come investimenti sostenibili.

● **In quali settori economici sono stati effettuati gli investimenti?**

Sebbene il Comparto abbia promosso determinate caratteristiche ambientali e sociali attraverso i suoi criteri di inclusione ed esclusione, può aver investito in un'ampia gamma di settori - si prega di fare riferimento all'elenco seguente per una ripartizione settoriale alla fine del periodo di riferimento. Inoltre, il Gestore degli investimenti si è impegnato in maniera continuativa con alcune società partecipate sottostanti. Gli investimenti in settori e sotto-settori dell'economia che traggono ricavi dall'esplorazione, dall'estrazione mineraria, dall'estrazione, dalla produzione, dalla lavorazione, dallo stoccaggio, dalla raffinazione o dalla distribuzione, compresi il trasporto, lo stoccaggio e il commercio, di combustibili fossili, se detenuti, saranno inclusi nella tabella sottostante. Le attività liquide accessorie, i depositi presso istituti di credito, gli strumenti del mercato monetario/fondi (per la gestione delle sottoscrizioni e dei rimborsi in contanti e dei pagamenti correnti e straordinari) e i derivati per l'EPM sono esclusi dai risultati, ma sono inclusi nel denominatore per la percentuale di attività indicata sia nella tabella seguente, sia nella tabella dei principali investimenti.

Settore	Sotto-settore	% del patrimonio
Automobili e autoricambi	Prodotti automobilistici OEM	1,00
Banche	Banche - Asia/Pacifico escluso Giappone	1,76
Banche	Banche - Europa	0,49
Banche	Banche - Nord America	4,64

Servizi di pubblica utilità	Servizi di pubblica utilità regolamentati	1,07
Servizi di pubblica utilità	Servizi di pubblica utilità non regolamentati	1,94

Le **attività abilitanti** consentono direttamente ad altre attività di dare un contributo sostanziale a un obiettivo ambientale.

Le **attività di transizione** sono **attività economiche** per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano livelli di emissioni di gas serra corrispondenti alle migliori prestazioni.

In quale misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla Tassonomia dell'UE?¹

I dati disponibili in relazione all'allineamento alla Tassonomia dell'UE sono, attualmente, molto limitati, in particolare per quanto concerne il gas fossile e l'energia nucleare. Prevediamo che questo dato migliorerà nel tempo, man mano che un maggior numero di imprese renderà noto il proprio allineamento e i dati saranno sempre più disponibili.

Il Comparto non ha assunto alcun impegno minimo in materia di investimenti sostenibili con obiettivi ambientali allineati alla Tassonomia dell'UE.

Pertanto, il documento informativo precontrattuale del Comparto indica come 0% l'entità degli investimenti sostenibili mirati con un obiettivo ambientale allineato alla Tassonomia dell'UE. Qualsiasi allineamento delineato di seguito è un sottoprodotto del quadro del Comparto che considera gli investimenti che hanno caratteristiche ambientali e/o sociali e gli investimenti sostenibili (come definiti dall'SFDR).

I grafici seguenti illustrano l'effettiva entità degli investimenti sostenibili con un obiettivo ambientale allineato alla Tassonomia dell'UE, come misurata alla fine del periodo di riferimento.

- ***Il prodotto finanziario ha investito in attività legate al gas fossile e/o all'energia nucleare conformemente alla Tassonomia dell'UE?***

Sì

In gas fossile

In energia nucleare

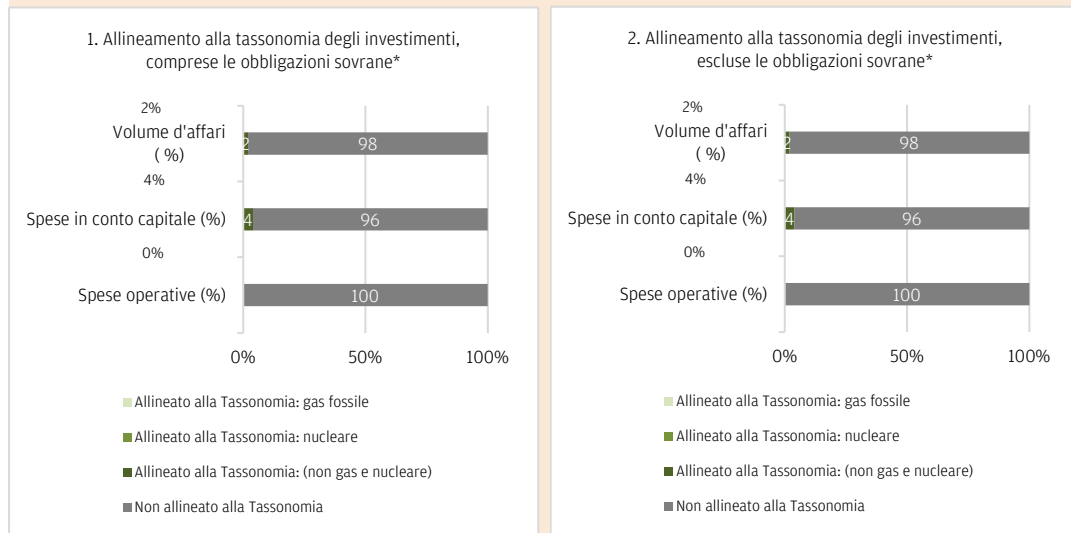

No

Le attività allineate alla Tassonomia sono espresse come una quota di:

- il **volume d'affari** riflette la "ecologicità" dell'impresa partecipata oggi.
- le **spese in conto capitale** (capex) mostrano gli investimenti verdi effettuati dalle imprese partecipate, rilevanti per la transizione verso un'economia verde.

I grafici che seguono mostrano in verde la percentuale di investimenti che erano allineati alla Tassonomia dell'UE. Poiché non esiste una metodologia adeguata per determinare l'allineamento delle obbligazioni sovrane* alla Tassonomia, il primo grafico mostra l'allineamento alla Tassonomia in relazione a tutti gli investimenti del prodotto finanziario comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla Tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

- le **spese operative** (opex) riflettono le attività operative verdi delle imprese partecipate.

Questo grafico rappresenta 6% dell'investimento totale.

*Ai fini di questi grafici, le 'obbligazioni sovrane' comprendono tutte le esposizioni sovrane.

¹ Le attività legate al gas fossile e/o al nucleare saranno conformi alla Tassonomia dell'UE solo se contribuiranno a limitare i cambiamenti climatici ("mitigazione dei cambiamenti climatici") e non danneggeranno in modo significativo alcun obiettivo della Tassonomia dell'UE - si veda la nota esplicativa sul margine sinistro. I criteri completi per le attività economiche relative al gas fossile e all'energia nucleare conformi alla Tassonomia UE sono stabiliti nel Regolamento Delegato (UE) 2022/1214 della Commissione.

Qual era la quota degli investimenti effettuati in attività transitorie e abilitanti?

A seguito di quanto suddetto, il Comparto non ha assunto alcun impegno minimo di effettuare investimenti allineati alla Tassonomia UE - comprese le attività di Transizione e Abilitazione. Qualsiasi allineamento delineato di seguito è un sottoprodotto del quadro del Comparto che considera gli investimenti che hanno caratteristiche ambientali e/o sociali positive e gli investimenti sostenibili.

La quota calcolata delle attività di transizione rappresenta il 0,00% e la quota calcolata delle attività abilitanti rappresenta il 0,10%, alla fine del periodo di riferimento.

Qual è l'esito del raffronto della percentuale di investimenti allineati alla tassonomia dell'UE rispetto ai precedenti periodi di riferimento?

Non pertinente

 sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili conformemente al regolamento (UE) 2020/852.

Qual era la quota di investimenti sostenibili con un obiettivo ambientale che non erano allineati alla Tassonomia dell'UE?

La quota di investimenti sostenibili con un obiettivo ambientale non allineati alla Tassonomia dell'UE era del 59,07% del patrimonio alla fine del periodo di riferimento.

Qual era la quota di investimenti socialmente sostenibili?

La quota di investimenti socialmente sostenibili era pari al 16,70% del patrimonio alla fine del periodo di riferimento.

Quali investimenti erano compresi nella categoria “altri”, qual era il loro scopo ed esistevano garanzie minime di salvaguardia ambientale o sociale?

Il 11,50% degli attivi in investimenti “altri” è costituito da società che non soddisfano i criteri descritti in risposta alla domanda precedente, intitolata “Qual è stata la prestazione degli indicatori di sostenibilità?” per essere qualificate come imprese che presentano caratteristiche ambientali o sociali positive. Sono investimenti a fini di diversificazione. Gli asset liquidi accessori, i depositi presso gli istituti di credito, gli strumenti/fondi del mercato monetario (per la gestione delle sottoscrizioni e dei rimborsi in contanti, nonché dei pagamenti correnti ed eccezionali) e i derivati per l'EPM non sono inclusi nella % di asset riportata nel diagramma di ripartizione degli asset di cui sopra, incluso sotto la voce “altri”. Queste partecipazioni fluttuano a seconda dei flussi di investimento e sono accessorie alla politica di investimento con un impatto minimo o nullo sulle operazioni di investimento.

Tutti gli investimenti, compresi quelli "altri", sono stati soggetti alle seguenti salvaguardie/principi minimi ESG:

- Le salvaguardie minime come delineate dall'Articolo 18 del Regolamento sulla Tassonomia dell'UE (compreso l'allineamento con le Linee guida dell'OCSE per le imprese multinazionali e i Principi guida delle Nazioni Unite su imprese e diritti umani), come implementate dal Gestore degli Investimenti.
- Applicazione di prassi di buona governance (queste includono buone strutture di gestione, relazioni con il personale dipendente, remunerazione del personale e conformità fiscale), come implementate dal Gestore degli Investimenti.
- Conformità al principio “Non arrecare danno significativo”, come prescritto dalla definizione di investimento sostenibile nell'SFDR dell'UE.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

I seguenti elementi vincolanti della strategia d'investimento sono stati applicati durante il periodo di riferimento per selezionare gli investimenti al fine di conseguire ciascuna delle caratteristiche ambientali o sociali:

- L'obbligo di investire almeno il 51% del patrimonio in imprese con caratteristiche ambientali e/o sociali positive.
- Lo screening basato su valori e norme per implementare le esclusioni complete in relazione agli emittenti che sono impegnati in determinate attività, come la produzione di armi controverse, e l'applicazione di soglie percentuali massime di ricavi, produzione o distribuzione ad altri emittenti, come quelli che operano nei settori del carbone termico e del tabacco. Per ulteriori informazioni, fare riferimento alla politica di esclusione del Comparto su www.jpmorganassetmanagement.lu, cercando il proprio Comparto specifico e accedendo alla sezione informazioni ESG.
- L'obbligo per tutte le imprese in portafoglio di seguire le prassi di buona governance.

Il Comparto si è inoltre impegnato a investire almeno l' 10% del patrimonio in investimenti sostenibili.

Ulteriori informazioni sull'impegno sono disponibili nella risposta alla domanda “Come sono stati presi in considerazione gli indicatori degli impatti negativi sui fattori di sostenibilità?”

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento sostenibile?

Non pertinente

- ***In quale modo l'indice di riferimento differiva da un indice generale di mercato?***

Non pertinente

I benchmark di riferimento sono indici per misurare se il prodotto finanziario raggiunge le caratteristiche ambientali o sociali che promuove.

- ***Qual è stata la prestazione di questo prodotto finanziario in relazione agli indicatori di sostenibilità per determinare l'allineamento dell'indice di riferimento con le caratteristiche ambientali o sociali promosse?***

Non pertinente

- ***Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?***

Non pertinente

- ***Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice generale di mercato?***

Non pertinente

Nome del prodotto: **JPMorgan Funds - Global Strategic Bond Fund**

Identificativo della persona giuridica: **OPRXP6HO2GP26R2IK085**

Caratteristiche ambientali e/o sociali

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?

Sì

No

Ha effettuato investimenti sostenibili con un obiettivo ambientale: %

Ha promosso caratteristiche ambientali/sociali (A/S) e pur non avendo come obiettivo un investimento sostenibile, aveva una quota del 25,20% di investimenti sostenibili

in attività economiche considerate ecosostenibili conformemente alla Tassonomia dell'UE

con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla Tassonomia dell'UE

in attività economiche che non sono considerate ecosostenibili conformemente alla Tassonomia dell'UE

con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla Tassonomia dell'UE

Ha effettuato investimenti sostenibili con un obiettivo sociale: %

con un obiettivo sociale

Ha promosso caratteristiche A/S ma non ha effettuato alcun investimento sostenibile

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, purché tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e l'impresa beneficiaria degli investimenti segua prassi di buona governance.

La **Tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852 che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non stabilisce un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere allineati o meno alla Tassonomia.

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Il Comparto si propone di promuovere un'ampia gamma di caratteristiche ambientali, sociali e di governance attraverso i suoi criteri di inclusione degli investimenti, in particolare con una ripartizione minima del patrimonio del 51% in investimenti con caratteristiche ambientali e/o sociali positive e un minimo di 10% di investimenti costituiti da investimenti sostenibili. Questi impegni sono stati rispettati per tutto il periodo di riferimento (1 luglio 2022 - 30 giugno 2023). Alla fine del periodo di riferimento, il Comparto deteneva l' 83,92% di investimenti con caratteristiche ambientali e/o sociali positive e il 25,20% di investimenti sostenibili.

Questi investimenti sono stati determinati mediante l'applicazione di criteri di inclusione ed esclusione che sono stati applicati sia a livello di asset che di prodotto. I criteri di inclusione sono basati su un punteggio ESG assegnato a tutti gli investimenti nell'ambito della strategia, per identificare quelli che possono essere considerati come aventi caratteristiche ambientali e/o sociali e quelli che soddisfano le soglie per essere considerati investimenti sostenibili.

Il punteggio ESG prende in considerazione i seguenti indicatori: la gestione efficace delle emissioni tossiche, dei rifiuti, il buon record ambientale e le caratteristiche sociali, come efficaci dichiarazioni di sostenibilità, valutazioni favorevoli in materia di relazioni con il personale dipendente e di gestione dei problemi di sicurezza.

Attraverso i suoi criteri di esclusione (che prevedevano esclusioni sia totali che parziali), il Comparto ha promosso determinate norme e valori, tra cui il sostegno alla salvaguardia dei diritti umani proclamati a livello internazionale. Il Comparto ha escluso completamente gli emittenti impegnati nella fabbricazione di armi controverse e ha applicato soglie massime di reddito o di produzione ad altri, come quelli che operano nel settore del carbone termico e del tabacco.

In relazione alla considerazione di buona governance, tutti gli investimenti (esclusi i contanti e i derivati) sono stati vagliati per escludere i noti trasgressori delle pratiche di buona governance. Inoltre, per gli investimenti che si ritiene abbiano caratteristiche ambientali e/o sociali o che si qualificano come investimenti sostenibili, sono state applicate ulteriori considerazioni. Per questi investimenti, il Comparto ha incorporato un confronto con un gruppo di pari e ha escluso gli emittenti che non hanno ottenuto un punteggio entro il top 80% rispetto all'universo specifico del Comparto in base agli indicatori di buona governance.

Il Comparto non prevedeva specifici obiettivi di allocazione a favore di caratteristiche ambientali o sociali. La misura in cui le caratteristiche ambientali o sociali promosse sono state soddisfatte può essere intesa considerando la % effettiva del patrimonio allocata per il periodo di riferimento ai relativi emittenti che presentavano tali caratteristiche.

In sintesi: il Comparto ha rispettato i minimi contrattuali garantiti in relazione alle caratteristiche ambientali e/o sociali e alla politica di investimenti sostenibili per tutto il periodo di riferimento. Il Comparto ha applicato dei filtri con l'obiettivo di escludere tutti i potenziali investimenti vietati dalla sua politica di esclusione durante tutto questo periodo. La misura in cui le norme e i valori promossi dal Comparto sono stati soddisfatti si basa sull'eventualità che il Comparto abbia detenuto durante il periodo di riferimento emittenti che sarebbero stati vietati ai sensi della politica di esclusione. Il Gestore degli Investimenti non ha riscontrato alcuna indicazione siano stati effettuati investimenti in emittenti di tale genere. Il Gestore degli Investimenti informa che la continuità dei valori percentuali e delle informazioni divulgate non può essere garantita in futuro ed è soggetta alla costante evoluzione del panorama legale e normativo. La durata del periodo di riferimento può essere inferiore a 12 mesi se nel corso di tale periodo il fondo era stato lanciato, chiuso o il suo status ai sensi dell'articolo 8/9 era stato modificato.

Gli indicatori di sostenibilità misurano in che modo sono realizzate le caratteristiche ambientali o sociali promosse da questo prodotto finanziario

● ***Qual è stata la prestazione degli indicatori di sostenibilità?***

Una combinazione della metodologia di valutazione ESG propria del Gestore degli Investimenti, che consiste nella valutazione ESG propria del Gestore degli Investimenti, e/o di dati di terzi è stata utilizzata nell'ambito dei criteri di inclusione per misurare il conseguimento delle caratteristiche ambientali e/o sociali che il Comparto promuove.

La metodologia era basata sulla gestione da parte di un emittente dei relativi aspetti ambientali o sociali come le emissioni tossiche, la gestione dei rifiuti, le relazioni con il personale dipendente e gli aspetti della sicurezza, la diversità/indipendenza del consiglio di amministrazione e la tutela della riservatezza dei dati. Per essere incluso nel 51% degli asset considerati come promotori di caratteristiche ambientali e/o sociali, un emittente deve conseguire un punteggio ambientale o sociale compreso entro il top 80% rispetto al suo universo specifico e soddisfare le condizioni di buona governance sopra indicate.

Alla fine del periodo di riferimento, il Comparto deteneva l' 83,92% di investimenti con caratteristiche ambientali e/o sociali positive e il 25,20% di investimenti sostenibili.

Per quanto riguarda le norme applicate e le esclusioni basate sui valori, il Gestore degli Investimenti ha utilizzato i dati per quantificare la partecipazione di un emittente alle relative attività. Lo screening condotto su tali dati ha consentito di pervenire a esclusioni totali di certi potenziali investimenti e a esclusioni parziali in base a soglie percentuali massime di ricavi o produzione, conformemente ai criteri di esclusione. Durante tutto il periodo di riferimento, e in nessun caso, sono state trasgredite le regole di esclusione. Inoltre, è stato incorporato nello screening un sottoinsieme di "Indicatori di Sostenibilità Avversi" come enunciato nelle Norme tecniche di regolamentazione SFDR dell'UE".

Il Comparto non prevedeva specifici obiettivi di allocazione a favore di caratteristiche ambientali o sociali e pertanto la prestazione degli indicatori in relazione a specifiche caratteristiche ambientali o sociali non è illustrata in questa sede.

Per ulteriori informazioni, consultare l'Informativa sulle Caratteristiche Ambientali e Sociali del Comparto sul sito www.jpmorganassetmanagement.lu, cercando il proprio Comparto specifico e accedendo alla sezione Informazioni ESG.

● ***...e rispetto ai periodi precedenti?***

● ***Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha parzialmente effettuato e in che misura gli investimenti sostenibili hanno contribuito al conseguimento di tali obiettivi?***

Gli obiettivi degli investimenti sostenibili che il Comparto ha parzialmente effettuato erano costituiti da qualunque singolo o combinazione dei seguenti o erano correlati a un obiettivo ambientale o sociale attraverso l'uso dei proventi dell'emissione:

Obiettivi ambientali: (i) mitigazione del rischio climatico, (ii) transizione verso un'economia circolare; Obiettivi sociali: (i) comunità inclusive e sostenibili - aumento della rappresentanza femminile a livello dirigenziale (ii) comunità inclusive e sostenibili - aumento della rappresentanza femminile nei consigli di amministrazione e (iii) offrire un ambiente di lavoro e una cultura dignitosi.

Il contributo a tali obiettivi è stato determinato da: i) indicatori di sostenibilità di prodotti e servizi, che possono aver incluso la percentuale di entrate derivanti dalla fornitura di prodotti e/o servizi che contribuiscono al pertinente obiettivo sostenibile, come un emittente che produce pannelli solari o tecnologie per l'energia pulita che soddisfano le soglie proprietarie del Gestore degli Investimenti che contribuiscono alla mitigazione del rischio climatico. L'attuale percentuale di entrate è fissata a un minimo del 20% e l'intera partecipazione nell'impresa è considerata un investimento sostenibile; (ii) l'utilizzo dei proventi dell'emissione, se tale utilizzo era stato designato come collegato a uno specifico obiettivo ambientale o sociale, o (iii) era stato un leader operativo di un gruppo di pari che contribuisce all'obiettivo pertinente. La qualifica di leader di un gruppo di pari è definita come un punteggio entro il top 20% rispetto a un universo specifico, in base a determinati indicatori di sostenibilità operativa. Ad esempio, il raggiungimento di un punteggio entro il top 20% rispetto all'universo specifico sull'impatto totale dei rifiuti contribuisce alla transizione verso un'economia circolare. Il test per gli emittenti sovranazionali e sovrani può considerare la missione o i contributi dell'emittente, in qualità di leader o innovatore di un gruppo di pari, a obiettivi ambientali e sociali positivi, in base a determinati criteri.

Il Comparto era tenuto a investire l' 10% del patrimonio in investimenti sostenibili. Durante il periodo, il Comparto non ha mai detenuto investimenti sostenibili al di sotto del suo minimo garantito. Alla fine del periodo di riferimento, il 25,20% del suo patrimonio era costituito da investimenti sostenibili.

● ***In che modo gli investimenti sostenibili che il prodotto finanziario ha parzialmente realizzato non hanno causato danni significativi ad alcun obiettivo di investimento sostenibile ambientale o sociale?***

Gli Investimenti Sostenibili che il Comparto intendeva realizzare sono stati sottoposti a un processo di screening che ha mirato a identificare ed escludere, dalla qualifica di Investimento Sostenibile, gli emittenti che il Gestore degli Investimenti considerava come quelli che avevano conseguito le prestazioni peggiori, in base a una soglia determinata dal Gestore degli Investimenti, in relazione a determinate considerazioni ambientali. Di conseguenza, sono stati considerati investimenti sostenibili solo gli emittenti che hanno dimostrato di possedere i migliori indicatori in relazione alle misure assolute e relative.

Tali considerazioni includono il cambiamento climatico, la protezione delle risorse idriche e marine, la transizione verso un'economia circolare, l'inquinamento e la protezione della biodiversità e degli ecosistemi. Il Gestore degli Investimenti ha inoltre applicato un filtro volto a identificare ed escludere gli emittenti che il Gestore degli Investimenti ha ritenuto non conformi alle Linee guida dell'OCSE per le imprese multinazionali e i Principi guida delle Nazioni Unite su imprese e diritti umani, sulla base dei dati comunicati da fornitori di servizi terzi.

— ***Come sono stati presi in considerazione gli indicatori degli impatti negativi sui fattori di sostenibilità?***

Gli indicatori degli impatti negativi sui fattori di sostenibilità di cui alla Tabella 1 dell'Allegato 1 e alcuni indicatori, determinati dal Gestore degli Investimenti, di cui alle Tabelle 2 e 3 dell'Allegato 1 delle Norme tecniche di regolamentazione SFDR dell'UE sono stati presi in considerazione come ulteriormente descritto di seguito. Il Gestore degli Investimenti ha utilizzato le metriche contenute negli Standard tecnici regolamentari SFDR dell'UE oppure, laddove ciò non fosse possibile a causa di limitazioni dei dati o di altri problemi tecnici, un proxy rappresentativo. Il Gestore degli Investimenti ha consolidato la considerazione di alcuni indicatori in un indicatore "primario", come descritto ulteriormente di seguito, e potrebbe aver utilizzato un'ulteriore serie di indicatori più ampia di quella indicata di seguito.

I principali impatti negativi sono gli impatti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a questioni ambientali, sociali e occupazionali, al rispetto dei diritti umani, alla lotta alla corruzione e alla concussione.

Gli indicatori pertinenti nella Tabella 1 dell'Allegato 1 delle Norme tecniche di regolamentazione SFDR dell'UE consistono in 9 indicatori ambientali e 5 indicatori sociali e occupazionali. Gli indicatori ambientali sono elencati da 1 a 9 e riguardano le emissioni di gas serra (1-3), l'esposizione ai combustibili fossili, la quota di consumo e produzione di energia non rinnovabile, l'intensità del consumo energetico, le attività che influiscono negativamente sulle aree sensibili di biodiversità, le emissioni nell'acqua e i rifiuti pericolosi (4-9 rispettivamente).

Gli indicatori da 10 a 14 riguardano le questioni 'sociali e occupazionali di un emittente e coprono rispettivamente le violazioni dei principi del Global Compact delle Nazioni Unite e delle Linee guida dell'OCSE per le imprese multinazionali, la mancanza di processi e meccanismi di conformità per monitorare la conformità ai principi del Global Compact delle Nazioni Unite, il divario retributivo di genere non corretto, la diversità di genere del Consiglio di amministrazione e l'esposizione ad armi controverse (mine antiuomo, munizioni a grappolo, armi chimiche e armi biologiche).

L'approccio del Gestore degli Investimenti comprendeva aspetti sia quantitativi che qualitativi per tenere conto degli indicatori suddetti. Ha utilizzato particolari indicatori per lo screening, cercando di escludere gli emittenti che potrebbero causare danni significativi. Ha utilizzato un sottoinsieme per l'impegno con determinati emittenti, cercando di influenzare le migliori prassi e ha utilizzato alcuni di essi come indicatori di performance positiva di sostenibilità, applicando una soglia minima rispetto all'indicatore per ottenere la qualifica di investimento sostenibile. I dati necessari per prendere in considerazione gli indicatori, ove disponibili, possono essere stati ottenuti dagli stessi emittenti partecipati e/o comunicati da fornitori di servizi terzi (compresi i dati proxy). Gli input di dati autodichiarati dagli emittenti o comunicati da fornitori terzi possono basarsi su serie di dati e ipotesi che possono essere insufficienti, di scarsa qualità o contenere informazioni distorte. Poiché dipendono da soggetti terzi, il Gestore degli Investimenti non può garantire l'accuratezza o la completezza di tali dati.

Screening

Alcuni indicatori sono stati presi in considerazione attraverso lo screening basato su valori e norme per implementare le esclusioni. Queste esclusioni hanno preso in considerazione gli indicatori 10 e 14 in relazione ai principi del Global Compact delle Nazioni Unite e alle Linee guida dell'OCSE per le imprese multinazionali, le armi controverse e i paesi partecipati soggetti a violazioni sociali. Il Gestore degli Investimenti ha anche applicato un filtro appositamente realizzato. A causa di alcune considerazioni tecniche, come la copertura dei dati in relazione a specifici indicatori, il Gestore degli Investimenti ha applicato l'indicatore specifico di cui alla Tabella 1 o un proxy rappresentativo, come determinato dal Gestore degli Investimenti per vagliare gli emittenti partecipati in relazione alle questioni ambientali o sociali e occupazionali. Per esempio, le emissioni di gas a effetto serra sono associate a diversi indicatori e metriche corrispondenti nella Tabella 1, come le emissioni di gas a effetto serra, l'impronta di carbonio e l'intensità di gas a effetto serra (indicatori 1-3). Il Gestore degli Investimenti attualmente utilizza i dati sull'intensità dei gas a effetto serra (indicatore 3), i dati relativi al consumo e alla produzione di energia non rinnovabile (indicatore 5) e i dati sull'intensità del consumo di energia (indicatore 6) per effettuare lo screening relativo alle emissioni di gas a effetto serra. In relazione allo screening realizzato ad hoc e per quanto riguarda le attività che influenzano negativamente le aree sensibili per la biodiversità e le emissioni nell'acqua (indicatori 7 e 8), a causa delle limitazioni dei dati, il Gestore degli Investimenti ha utilizzato dati proxy rappresentativi di terze parti, piuttosto che gli indicatori specifici di cui alla Tabella 1. Il Gestore degli Investimenti ha preso in considerazione anche l'indicatore 9 in relazione ai rifiuti pericolosi per quanto riguarda il filtro appositamente costruito.

Impegno

Oltre a selezionare alcuni emittenti come descritto sopra, il Gestore degli investimenti si è impegnato in maniera continuativa con alcuni emittenti partecipati sottostanti. È stato utilizzato un sottoinsieme degli indicatori, in base ad alcune considerazioni tecniche come la copertura dei dati, come base per impegnarsi con alcuni emittenti partecipati, in conformità con l'approccio adottato dal Gestore degli Investimenti in materia di stewardship e impegno. Gli indicatori utilizzati in relazione a tale impegno includono gli indicatori 3, 5 e 13 relativi all'intensità dei gas a effetto serra, alla quota di energia non rinnovabile e alla diversità di genere nei consigli d'amministrazione della Tabella 1. Ha utilizzato anche gli indicatori 2 della Tabella 2 e 3 della Tabella 3 in relazione all'emissione o agli inquinanti atmosferici e al numero di giorni persi per infortuni, incidenti, decessi o malattie.

Indicatori di sostenibilità

Il Gestore degli investimenti ha utilizzato gli indicatori 3 e 13 in relazione all'intensità di gas serra e alla diversità di genere nei consigli di amministrazione come indicatori di sostenibilità per contribuire a qualificare un investimento come investimento sostenibile. Uno dei percorsi richiede che un emittente sia considerato leader operativo di un gruppo di pari per poter essere qualificato come investimento

sostenibile. Ciò richiede un punteggio relativo all'indicatore incluso entro il top 20% rispetto all'universo specifico.

I principali impatti negativi sono gli impatti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a questioni ambientali, sociali e occupazionali, al rispetto dei diritti umani, alla lotta alla corruzione e alla concussione.

— *Gli investimenti sostenibili sono stati allineati alle Linee guida dell'OCSE per le imprese multinazionali e ai Principi guida delle Nazioni Unite su imprese e diritti umani? Dettagli:*

Le esclusioni dal portafoglio basate su norme come descritto sopra al punto "In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario? sono state applicate per perseguire l'allineamento con queste linee guida e principi. Al fine di individuare potenziali trasgressori sono stati utilizzati dati di soggetti terzi. A meno che non sia stata concessa un'eccezione, il Comparto ha vietato investimenti rilevanti in questi emittenti.

La Tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla Tassonomia non devono arrecare danno significativo agli obiettivi della Tassonomia dell'UE, ed è accompagnata da criteri specifici dell'Unione.

Il principio "non arrecare un danno significativo" si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'Unione per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri dell'Unione per le attività economiche ecosostenibili.

Qualsiasi altro investimento sostenibile non deve inoltre arrecare un danno significativo agli obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha considerato i principali impatti negativi sui fattori di sostenibilità?

Il Comparto ha considerato i principali impatti negativi selezionati sui fattori di sostenibilità attraverso uno screening basato su valori e norme per implementare le esclusioni. In relazione a tale screening sono stati utilizzati gli indicatori 10 e 14 in relazione alle violazioni del Global Compact delle Nazioni Unite e alle armi controverse degli Standard Tecnici Regolamentari SFDR dell'UE. Il Comparto ha anche utilizzato alcuni degli indicatori nell'ambito del filtro "Non arrecare danno significativo", come dettagliato nella risposta alla domanda immediatamente precedente, per dimostrare che un investimento si qualifica come investimento sostenibile.

Un sottoinsieme dei suddetti Indicatori di Sostenibilità Avversi è stato utilizzato per determinare l'impegno con gli emittenti partecipati in base alla loro rispettiva performance PAI (principali impatti avversi).

Quali sono stati i principali investimenti di questo prodotto finanziario?

L'elenco comprende gli investimenti che costituiscono la **maggior parte degli investimenti** del prodotto finanziario sulla base di un'istantanea alla fine del periodo di riferimento:
01/07/2022 - 30/06/2023

Maggiori investimenti	Settore	% del patrimonio	Paese

Qual è stata la percentuale di investimenti legati alla sostenibilità?

La ripartizione degli investimenti descrive la quota di investimenti in attività specifiche.

● Qual è stata la ripartizione degli investimenti?

Alla fine del periodo di riferimento il Comparto ha allocato l' 83,92% del suo patrimonio a emittenti che presentano caratteristiche ambientali e/o sociali positive e il 25,20% del patrimonio a investimenti sostenibili. Il Comparto non si è impegnato a investire una percentuale del patrimonio specificamente in valori mobiliari che presentano caratteristiche ambientali positive o caratteristiche sociali positive, né si è impegnato a perseguire obiettivi ambientali o sociali specifici o in combinazione tra loro.

Gli asset liquidi accessori, i depositi presso gli istituti di credito, gli strumenti/fondi del mercato monetario (per la gestione delle sottoscrizioni e dei rimborsi in contanti, nonché dei pagamenti correnti ed eccezionali) e i derivati per l'EPM non sono inclusi nella % di asset riportata nella tabella sottostante. Queste partecipazioni fluttuano a seconda dei flussi di investimento e sono accessorie alla politica di investimento con un impatto minimo o nullo sulle operazioni di investimento.

Nb: L'allineamento alla Tassonomia UE per gli strumenti considerati investimenti sostenibili da JP Morgan sarà inserito nel grafico sottostante una volta disponibile e se pertinente. L'allineamento completo del fondo alla Tassonomia UE è riportato di seguito (in risposta alla domanda: In che misura gli investimenti sostenibili con un obiettivo ambientale sono stati allineati alla Tassonomia UE?)

N. 1 Allineati alle caratteristiche A/S include gli investimenti del prodotto finanziario utilizzati per realizzare le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

N. 2 Altri comprende gli investimenti rimanenti del prodotto finanziario che non sono allineati con le caratteristiche ambientali o sociali, né sono qualificati come investimenti sostenibili.

La categoria **N. 1 Allineati con le caratteristiche A/S** comprende:

- La sottocategoria **N. 1A Sostenibili** comprende gli investimenti sostenibili dal punto di vista ambientale e sociale.
- La sotto-categoria **N. 1B Altre caratteristiche A/S** comprende gli investimenti allineati con le caratteristiche ambientali o sociali che non si qualificano come investimenti sostenibili.

● **In quali settori economici sono stati effettuati gli investimenti?**

Sebbene il Comparto abbia promosso determinate caratteristiche ambientali e sociali attraverso i suoi criteri di inclusione ed esclusione, può aver investito in un'ampia gamma di settori - si prega di fare riferimento all'elenco seguente per una ripartizione settoriale alla fine del periodo di riferimento. Inoltre, il Gestore degli investimenti si è impegnato in maniera continuativa con alcuni emittenti partecipati sottostanti. Gli investimenti in settori e sotto-settori dell'economia che traggono ricavi dall'esplorazione, dall'estrazione mineraria, dall'estrazione, dalla produzione, dalla lavorazione, dallo stoccaggio, dalla raffinazione o dalla distribuzione, compresi il trasporto, lo stoccaggio e il commercio, di combustibili fossili, se detenuti, saranno inclusi nella tabella sottostante. Le attività liquide accessorie, i depositi presso istituti di credito, gli strumenti del mercato monetario/fondi (per la gestione delle sottoscrizioni e dei rimborsi in contanti e dei pagamenti correnti e straordinari) e i derivati per l'EPM sono esclusi dai risultati, ma sono inclusi nel denominatore per la percentuale di attività indicata sia nella tabella seguente, sia nella tabella dei principali investimenti.

Le **attività abilitanti** consentono direttamente ad altre attività di dare un contributo sostanziale a un obiettivo ambientale.

Le **attività di transizione** sono **attività economiche** per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano livelli di emissioni di gas serra corrispondenti alle migliori prestazioni.

In quale misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla Tassonomia dell'UE?¹

I dati disponibili in relazione all'allineamento alla Tassonomia dell'UE sono, attualmente, molto limitati, in particolare per quanto concerne il gas fossile e l'energia nucleare. Prevediamo che questo dato migliorerà nel tempo, man mano che un maggior numero di emittenti renderà noto il proprio allineamento e i dati saranno sempre più disponibili.

Il Comparto non ha assunto alcun impegno minimo in materia di investimenti sostenibili con obiettivi ambientali allineati alla Tassonomia dell'UE.

Pertanto, il documento informativo precontrattuale del Comparto indica come 0% l'entità degli investimenti sostenibili mirati con un obiettivo ambientale allineato alla Tassonomia dell'UE. Qualsiasi allineamento delineato di seguito è un sottoprodotto del quadro del Comparto che considera gli investimenti che hanno caratteristiche ambientali e/o sociali e gli investimenti sostenibili (come definiti dall'SFDR).

I grafici seguenti illustrano l'effettiva entità degli investimenti sostenibili con un obiettivo ambientale allineato alla Tassonomia dell'UE, come misurata alla fine del periodo di riferimento.

- ***Il prodotto finanziario ha investito in attività legate al gas fossile e/o all'energia nucleare conformemente alla Tassonomia dell'UE?***

Sì

In gas fossile

In energia nucleare

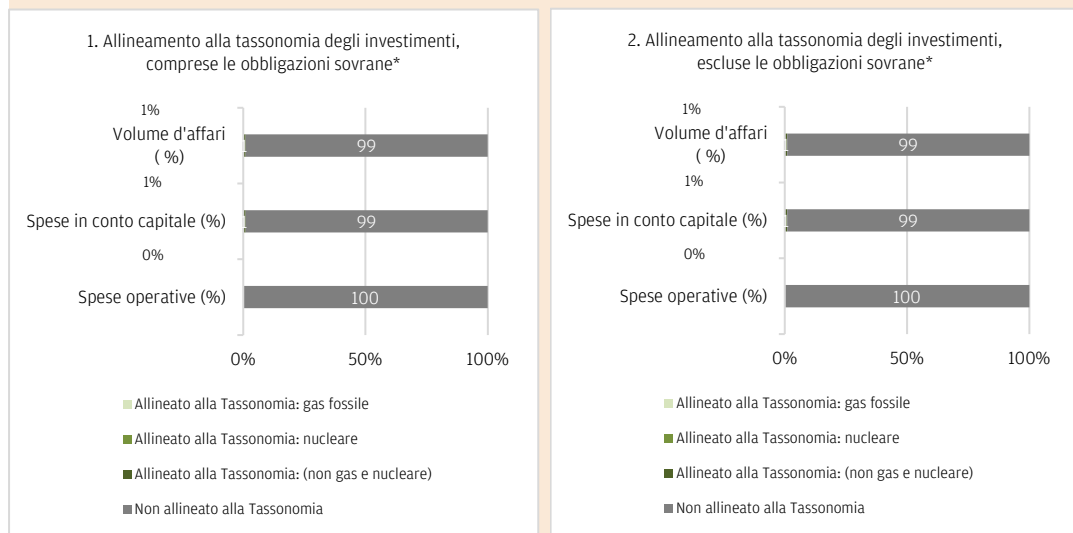

No

Le attività allineate alla Tassonomia sono espresse come una quota di:

- il **volume d'affari** riflette la "ecologicità" dell'impresa partecipata oggi.
- le **spese in conto capitale** (capex) mostrano gli investimenti verdi effettuati dalle imprese partecipate, rilevanti per la transizione verso un'economia verde.

I grafici che seguono mostrano in verde la percentuale di investimenti che erano allineati alla Tassonomia dell'UE. Poiché non esiste una metodologia adeguata per determinare l'allineamento delle obbligazioni sovrane* alla Tassonomia, il primo grafico mostra l'allineamento alla Tassonomia in relazione a tutti gli investimenti del prodotto finanziario comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla Tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

- le **spese operative** (opex) riflettono le attività operative verdi delle imprese partecipate.

Questo grafico rappresenta 2% dell'investimento totale.

*Ai fini di questi grafici, le 'obbligazioni sovrane' comprendono tutte le esposizioni sovrane.

¹ Le attività legate al gas fossile e/o al nucleare saranno conformi alla Tassonomia dell'UE solo se contribuiranno a limitare i cambiamenti climatici ("mitigazione dei cambiamenti climatici") e non danneggeranno in modo significativo alcun obiettivo della Tassonomia dell'UE - si veda la nota esplicativa sul margine sinistro. I criteri completi per le attività economiche relative al gas fossile e all'energia nucleare conformi alla Tassonomia UE sono stabiliti nel Regolamento Delegato (UE) 2022/1214 della Commissione.

● Qual era la quota degli investimenti effettuati in attività transitorie e abilitanti?

A seguito di quanto suddetto, il Comparto non ha assunto alcun impegno minimo di effettuare investimenti allineati alla Tassonomia UE - comprese le attività di Transizione e Abilitazione. Qualsiasi allineamento delineato di seguito è un sottoprodotto del quadro del Comparto che considera gli investimenti che hanno caratteristiche ambientali e/o sociali positive e gli investimenti sostenibili.

La quota calcolata delle attività di transizione rappresenta il 0,00% e la quota calcolata delle attività abilitanti rappresenta il 0,12%, alla fine del periodo di riferimento.

● Qual è l'esito del raffronto della percentuale di investimenti allineati alla tassonomia dell'UE rispetto ai precedenti periodi di riferimento?

Non pertinente

Qual era la quota di investimenti sostenibili con un obiettivo ambientale che non erano allineati alla Tassonomia dell'UE?

La quota di investimenti sostenibili con un obiettivo ambientale non allineati alla Tassonomia dell'UE era dell'16,11% del patrimonio alla fine del periodo di riferimento.

Qual era la quota di investimenti socialmente sostenibili?

La quota di investimenti socialmente sostenibili era pari al 9,08% del patrimonio alla fine del periodo di riferimento.

sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili conformemente al regolamento (UE) 2020/852.

Quali investimenti erano compresi nella categoria “altri”, qual era il loro scopo ed esistevano garanzie minime di salvaguardia ambientale o sociale?

Il 16,08% degli attivi in investimenti “altri” è costituito da emittenti che non hanno soddisfatto i criteri descritti in risposta alla domanda precedente, intitolata “Qual è stata la prestazione degli indicatori di sostenibilità?” per essere qualificati come emittenti che presentano caratteristiche ambientali o sociali positive. Sono investimenti a fini di diversificazione. Gli asset liquidi accessori, i depositi presso gli istituti di credito, gli strumenti/fondi del mercato monetario (per la gestione delle sottoscrizioni e dei rimborsi in contanti, nonché dei pagamenti correnti ed eccezionali) e i derivati per l'EPM non sono inclusi nella % di asset riportata nel diagramma di ripartizione degli asset di cui sopra, incluso sotto la voce “altri”. Queste partecipazioni fluttuano a seconda dei flussi di investimento e sono accessorie alla politica di investimento con un impatto minimo o nullo sulle operazioni di investimento.

Tutti gli investimenti, compresi quelli "altri", sono stati soggetti alle seguenti salvaguardie/principi minimi ESG:

- Le salvaguardie minime come delineate dall'Articolo 18 del Regolamento sulla Tassonomia dell'UE (compreso l'allineamento con le Linee guida dell'OCSE per le imprese multinazionali e i Principi guida delle Nazioni Unite su imprese e diritti umani), come implementate dal Gestore degli Investimenti.
- Applicazione di prassi di buona governance (queste includono buone strutture di gestione, relazioni con il personale dipendente, remunerazione del personale e conformità fiscale), come implementate dal Gestore degli Investimenti.
- Conformità al principio “Non arrecare danno significativo”, come prescritto dalla definizione di investimento sostenibile nell'SFDR dell'UE.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

I seguenti elementi vincolanti della strategia d'investimento sono stati applicati durante il periodo di riferimento per selezionare gli investimenti al fine di conseguire ciascuna delle caratteristiche ambientali o sociali:

- L'obbligo di investire almeno il 51% del patrimonio in emittenti con caratteristiche ambientali e/o sociali positive.
- Lo screening basato su valori e norme per implementare le esclusioni complete in relazione a emittenti che sono impegnati in determinate attività, come la produzione di armi controverse, e l'applicazione di soglie percentuali massime di ricavi, produzione o distribuzione ad altri emittenti, come quelli che operano nei settori del carbone termico e del tabacco. Per ulteriori informazioni, fare riferimento alla politica di esclusione del Comparto su www.jpmorganassetmanagement.lu, cercando il proprio Comparto specifico e accedendo alla sezione informazioni ESG.
- L'obbligo per tutti gli emittenti in portafoglio di seguire le prassi di buona governance.

Il Comparto si è inoltre impegnato a investire almeno l'10% del patrimonio in investimenti sostenibili.

Ulteriori informazioni sull'impegno sono disponibili nella risposta alla domanda “Come sono stati presi in considerazione gli indicatori degli impatti negativi sui fattori di sostenibilità?”

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento sostenibile?

Non pertinente

- ***In quale modo l'indice di riferimento differiva da un indice generale di mercato?***

Non pertinente

I benchmark di riferimento sono indici per misurare se il prodotto finanziario raggiunge le caratteristiche ambientali o sociali che promuove.

- ***Qual è stata la prestazione di questo prodotto finanziario in relazione agli indicatori di sostenibilità per determinare l'allineamento dell'indice di riferimento con le caratteristiche ambientali o sociali promosse?***

Non pertinente

- ***Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?***

Non pertinente

- ***Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice generale di mercato?***

Non pertinente

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, purché tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e l'impresa beneficiaria degli investimenti segua prassi di buona governance.

La **Tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852 che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non stabilisce un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere allineati o meno alla Tassonomia.

Nome del prodotto: **JPMorgan Funds - US Aggregate Bond Fund**

Identificativo della persona giuridica: **821Q18AJUQEF2EHHKB05**

Caratteristiche ambientali e/o sociali

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?	
●● <input type="checkbox"/> Sì	●● <input checked="" type="checkbox"/> No
<input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo ambientale: % <ul style="list-style-type: none"> <input type="checkbox"/> in attività economiche considerate ecosostenibili conformemente alla Tassonomia dell'UE <input type="checkbox"/> in attività economiche che non sono considerate ecosostenibili conformemente alla Tassonomia dell'UE 	<input checked="" type="checkbox"/> Ha promosso caratteristiche ambientali/sociali (A/S) e pur non avendo come obiettivo un investimento sostenibile, aveva una quota del 9,40% di investimenti sostenibili <ul style="list-style-type: none"> <input type="checkbox"/> con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla Tassonomia dell'UE <input checked="" type="checkbox"/> con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla Tassonomia dell'UE <input checked="" type="checkbox"/> con un obiettivo sociale
<input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo sociale: % <ul style="list-style-type: none"> <input type="checkbox"/> Ha promosso caratteristiche A/S ma non ha effettuato alcun investimento sostenibile 	

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Il Comparto si propone di promuovere un'ampia gamma di caratteristiche ambientali, sociali e di governance attraverso i suoi criteri di inclusione degli investimenti, in particolare con una ripartizione minima del patrimonio del 51% in investimenti con caratteristiche ambientali e/o sociali positive e un minimo di 5% di investimenti costituiti da investimenti sostenibili. Questi impegni sono stati rispettati per tutto il periodo di riferimento (1 luglio 2022 - 30 giugno 2023). Alla fine del periodo di riferimento, il Comparto deteneva l' 84,92% di investimenti con caratteristiche ambientali e/o sociali positive e il 9,40% di investimenti sostenibili.

Questi investimenti sono stati determinati mediante l'applicazione di criteri di inclusione ed esclusione che sono stati applicati sia a livello di asset che di prodotto. I criteri di inclusione sono basati su un punteggio ESG assegnato a tutti gli investimenti nell'ambito della strategia, per identificare quelli che possono essere considerati come aventi caratteristiche ambientali e/o sociali e quelli che soddisfano le soglie per essere considerati investimenti sostenibili.

Il punteggio ESG prende in considerazione i seguenti indicatori: la gestione efficace delle emissioni tossiche, dei rifiuti, il buon record ambientale e le caratteristiche sociali, come efficaci dichiarazioni di sostenibilità, valutazioni favorevoli in materia di relazioni con il personale dipendente e di gestione dei problemi di sicurezza.

Attraverso i suoi criteri di esclusione (che prevedevano esclusioni sia totali che parziali), il Comparto ha promosso determinate norme e valori, tra cui il sostegno alla salvaguardia dei diritti umani proclamati a livello internazionale. Il Comparto ha escluso completamente gli emittenti impegnati nella fabbricazione di armi controverse e ha applicato soglie massime di reddito o di produzione ad altri, come quelli che operano nel settore del carbone termico e del tabacco.

In relazione alla considerazione di buona governance, tutti gli investimenti (esclusi i contanti e i derivati) sono stati vagliati per escludere i noti trasgressori delle pratiche di buona governance. Inoltre, per gli investimenti che si ritiene abbiano caratteristiche ambientali e/o sociali o che si qualificano come investimenti sostenibili, sono state applicate ulteriori considerazioni. Per questi investimenti, il Comparto ha incorporato un confronto con un gruppo di pari e ha escluso gli emittenti che non hanno ottenuto un punteggio superiore all'80% rispetto ai pari in base agli indicatori di buona governance.

Il Comparto non prevedeva specifici obiettivi di allocazione a favore di caratteristiche ambientali o sociali. La misura in cui le caratteristiche ambientali o sociali promosse sono state soddisfatte può essere intesa considerando la % effettiva del patrimonio allocata per il periodo di riferimento ai relativi emittenti che presentavano tali caratteristiche.

In sintesi: il Comparto ha rispettato i minimi contrattuali garantiti in relazione alle caratteristiche ambientali e/o sociali e alla politica di investimenti sostenibili per tutto il periodo di riferimento. Il Comparto ha applicato dei filtri con l'obiettivo di escludere tutti i potenziali investimenti vietati dalla sua politica di esclusione durante tutto questo periodo. La misura in cui le norme e i valori promossi dal Comparto sono stati soddisfatti si basa sull'eventualità che il Comparto abbia detenuto durante il periodo di riferimento emittenti che sarebbero stati vietati ai sensi della politica di esclusione. Il Gestore degli Investimenti non ha riscontrato alcuna indicazione siano stati effettuati investimenti in emittenti di tale genere. Il Gestore degli Investimenti informa che la continuità dei valori percentuali e delle informazioni divulgate non può essere garantita in futuro ed è soggetta alla costante evoluzione del panorama legale e normativo. La durata del periodo di riferimento può essere inferiore a 12 mesi se nel corso di tale periodo il fondo era stato lanciato, chiuso o il suo status ai sensi dell'articolo 8/9 era stato modificato.

Gli indicatori di sostenibilità misurano in che modo sono realizzate le caratteristiche ambientali o sociali promosse da questo prodotto finanziario

● **Qual è stata la prestazione degli indicatori di sostenibilità?**

Una combinazione della metodologia di valutazione ESG propria del Gestore degli Investimenti, che consiste nella valutazione ESG propria del Gestore degli Investimenti, e/o di dati di terzi è stata utilizzata nell'ambito dei criteri di inclusione per misurare il conseguimento delle caratteristiche ambientali e/o sociali che il Comparto promuove.

La metodologia era basata sulla gestione da parte di un emittente dei relativi aspetti ambientali o sociali come le emissioni tossiche, la gestione dei rifiuti, le relazioni con il personale dipendente e gli aspetti della sicurezza, la diversità/indipendenza del consiglio di amministrazione e la tutela della riservatezza dei dati. Per essere incluso nel 51% degli asset considerati come promotori di caratteristiche ambientali e/o sociali, un emittente deve conseguire un punteggio ambientale o sociale compreso entro il top 80% rispetto al benchmark del Comparto e soddisfare le condizioni di buona governance sopra indicate.

Alla fine del periodo di riferimento, il Comparto deteneva l' 84,92% di investimenti con caratteristiche ambientali e/o sociali positive e il 9,40% di investimenti sostenibili.

Per quanto riguarda le norme applicate e le esclusioni basate sui valori, il Gestore degli Investimenti ha utilizzato i dati per quantificare la partecipazione di un emittente alle relative attività. Lo screening condotto su tali dati ha consentito di pervenire a esclusioni totali di certi potenziali investimenti e a esclusioni parziali in base a soglie percentuali massime di ricavi o produzione, conformemente ai criteri di esclusione. Durante tutto il periodo di riferimento, e in nessun caso, sono state trasgredite le regole di esclusione. Inoltre, è stato incorporato nello screening un sottoinsieme di "Indicatori di Sostenibilità Avversi" come enunciato nelle Norme tecniche di regolamentazione SFDR dell'UE".

Il Comparto non prevedeva specifici obiettivi di allocazione a favore di caratteristiche ambientali o sociali e pertanto la prestazione degli indicatori in relazione a specifiche caratteristiche ambientali o sociali non è illustrata in questa sede.

Per ulteriori informazioni, consultare l'Informativa sulle Caratteristiche Ambientali e Sociali del Comparto sul sito www.jpmorganassetmanagement.lu, cercando il proprio Comparto specifico e accedendo alla sezione Informazioni ESG.

● **...e rispetto ai periodi precedenti?**

● ***Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha parzialmente effettuato e in che misura gli investimenti sostenibili hanno contribuito al conseguimento di tali obiettivi?***

Gli obiettivi degli investimenti sostenibili che il Comparto ha parzialmente effettuato erano costituiti da qualunque singolo o combinazione dei seguenti o erano correlati a un obiettivo ambientale o sociale attraverso l'uso dei proventi dell'emissione:

Obiettivi ambientali: (i) mitigazione del rischio climatico, (ii) transizione verso un'economia circolare; Obiettivi sociali: (i) comunità inclusive e sostenibili - aumento della rappresentanza femminile a livello dirigenziale (ii) comunità inclusive e sostenibili - aumento della rappresentanza femminile nei consigli di amministrazione e (iii) offrire un ambiente di lavoro e una cultura dignitosi.

Il contributo a tali obiettivi è stato determinato da: i) indicatori di sostenibilità di prodotti e servizi, che possono aver incluso la percentuale di entrate derivanti dalla fornitura di prodotti e/o servizi che contribuiscono al pertinente obiettivo sostenibile, come un emittente che produce pannelli solari o tecnologie per l'energia pulita che soddisfano le soglie proprietarie del Gestore degli Investimenti che contribuiscono alla mitigazione del rischio climatico. L'attuale percentuale di entrate è fissata a un minimo del 20% e l'intera partecipazione nell'impresa è considerata un investimento sostenibile; (ii) l'utilizzo dei proventi dell'emissione, se tale utilizzo era stato designato come collegato a uno specifico obiettivo ambientale o sociale, o (iii) era stato un leader operativo di un gruppo di pari che contribuisce all'obiettivo pertinente. La qualifica di leader di un gruppo di pari è definita come un punteggio nel 20% superiore rispetto al benchmark del Comparto, in base a determinati indicatori di sostenibilità operativa. Ad esempio, il raggiungimento di un punteggio del 20% rispetto al benchmark sull'impatto totale dei rifiuti contribuisce alla transizione verso un'economia circolare. Il test per gli emittenti sovranazionali e sovrani può considerare la missione o i contributi dell'emittente, in qualità di leader o innovatore di un gruppo di pari, a obiettivi ambientali e sociali positivi, in base a determinati criteri.

Il Comparto era tenuto a investire il 5% del patrimonio in investimenti sostenibili. Durante il periodo, il Comparto non ha mai detenuto investimenti sostenibili al di sotto del suo minimo garantito. Alla fine del periodo di riferimento, il 9,40% del suo patrimonio era costituito da investimenti sostenibili.

I principali impatti negativi sono gli impatti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a questioni ambientali, sociali e occupazionali, al rispetto dei diritti umani, alla lotta alla corruzione e alla concussione.

● ***In che modo gli investimenti sostenibili che il prodotto finanziario ha parzialmente realizzato non hanno causato danni significativi ad alcun obiettivo di investimento sostenibile ambientale o sociale?***

Gli Investimenti Sostenibili che il Comparto intendeva realizzare sono stati sottoposti a un processo di screening che ha mirato a identificare ed escludere, dalla qualifica di Investimento Sostenibile, gli emittenti che il Gestore degli Investimenti considerava come quelli che avevano conseguito le prestazioni peggiori, in base a una soglia determinata dal Gestore degli Investimenti, in relazione a determinate considerazioni ambientali. Di conseguenza, sono stati considerati investimenti sostenibili solo gli emittenti che hanno dimostrato di possedere i migliori indicatori in relazione alle misure assolute e relative.

Tali considerazioni includono il cambiamento climatico, la protezione delle risorse idriche e marine, la transizione verso un'economia circolare, l'inquinamento e la protezione della biodiversità e degli ecosistemi. Il Gestore degli Investimenti ha inoltre applicato un filtro volto a identificare ed escludere gli emittenti che il Gestore degli Investimenti ha ritenuto non conformi alle Linee guida dell'OCSE per le imprese multinazionali e i Principi guida delle Nazioni Unite su imprese e diritti umani, sulla base dei dati comunicati da fornitori di servizi terzi.

— ***Come sono stati presi in considerazione gli indicatori degli impatti negativi sui fattori di sostenibilità?***

Gli indicatori degli impatti negativi sui fattori di sostenibilità di cui alla Tabella 1 dell'Allegato 1 e alcuni indicatori, determinati dal Gestore degli Investimenti, di cui alle Tabelle 2 e 3 dell'Allegato 1 delle Norme tecniche di regolamentazione SFDR dell'UE sono stati presi in considerazione come ulteriormente descritto di seguito. Il Gestore degli Investimenti ha utilizzato le metriche contenute negli Standard tecnici regolamentari SFDR dell'UE oppure, laddove ciò non fosse possibile a causa di limitazioni dei dati o di altri problemi tecnici, un proxy rappresentativo. Il Gestore degli Investimenti ha consolidato la considerazione di alcuni indicatori in un indicatore "primario", come descritto ulteriormente di seguito, e potrebbe aver utilizzato un'ulteriore serie di indicatori più ampia di quella indicata di seguito.

Gli indicatori pertinenti nella Tabella 1 dell'Allegato 1 delle Norme tecniche di regolamentazione SFDR dell'UE consistono in 9 indicatori ambientali e 5 indicatori sociali e occupazionali. Gli indicatori ambientali sono elencati da 1 a 9 e riguardano le emissioni di gas serra (1-3), l'esposizione ai combustibili fossili, la quota di consumo e produzione di energia non rinnovabile, l'intensità del consumo energetico, le attività che influiscono negativamente sulle aree sensibili di biodiversità, le emissioni nell'acqua e i rifiuti pericolosi (4-9 rispettivamente).

Gli indicatori da 10 a 14 riguardano le questioni 'sociali e occupazionali di un emittente e coprono rispettivamente le violazioni dei principi del Global Compact delle Nazioni Unite e delle Linee guida dell'OCSE per le imprese multinazionali, la mancanza di processi e meccanismi di conformità per monitorare la conformità ai principi del Global Compact delle Nazioni Unite, il divario retributivo di genere non corretto, la diversità di genere del Consiglio di amministrazione e l'esposizione ad armi controverse (mine antiuomo, munizioni a grappolo, armi chimiche e armi biologiche).

Il Gestore degli Investimenti ha anche preso in considerazione il PAI 16 in relazione ai Paesi oggetto di investimento soggetti a violazioni sociali.

L'approccio del Gestore degli Investimenti comprendeva aspetti sia quantitativi che qualitativi per tenere conto degli indicatori suddetti. Ha utilizzato particolari indicatori per lo screening, cercando di escludere gli emittenti che potrebbero causare danni significativi. Ha utilizzato un sottoinsieme per l'impegno con determinati emittenti, cercando di influenzare le migliori prassi e ha utilizzato alcuni di essi come indicatori di performance positiva di sostenibilità, applicando una soglia minima rispetto all'indicatore per ottenere la qualifica di investimento sostenibile. I dati necessari per prendere in considerazione gli indicatori, ove disponibili, possono essere stati ottenuti dagli stessi emittenti partecipati e/o comunicati da fornitori di servizi terzi (compresi i dati proxy). Gli input di dati autodichiarati dagli emittenti o comunicati da fornitori terzi possono basarsi su serie di dati e ipotesi che possono essere insufficienti, di scarsa qualità o contenere informazioni distorte. Poiché dipendono da soggetti terzi, il Gestore degli Investimenti non può garantire l'accuratezza o la completezza di tali dati.

Screening

Alcuni indicatori sono stati presi in considerazione attraverso lo screening basato su valori e norme per implementare le esclusioni. Queste esclusioni hanno preso in considerazione gli indicatori 10, 14 e 16 in relazione ai principi del Global Compact delle Nazioni Unite e alle Linee guida dell'OCSE per le imprese multinazionali, le armi controverse e i paesi partecipati soggetti a violazioni sociali. Il Gestore degli Investimenti ha anche applicato un filtro appositamente realizzato. A causa di alcune considerazioni tecniche, come la copertura dei dati in relazione a specifici indicatori, il Gestore degli Investimenti ha applicato l'indicatore specifico di cui alla Tabella 1 o un proxy rappresentativo, come determinato dal Gestore degli Investimenti per vagliare gli emittenti partecipati in relazione alle questioni ambientali o sociali e occupazionali. Per esempio, le emissioni di gas a effetto serra sono associate a diversi indicatori e metriche corrispondenti nella Tabella 1, come le emissioni di gas a effetto serra, l'impronta di carbonio e l'intensità di gas a effetto serra (indicatori 1-3). Il Gestore degli Investimenti attualmente utilizza i dati sull'intensità dei gas a effetto serra (indicatore 3), i dati relativi al consumo e alla produzione di energia non rinnovabile (indicatore 5) e i dati sull'intensità del consumo di energia (indicatore 6) per effettuare lo screening relativo alle emissioni di gas a effetto serra. In relazione allo screening realizzato ad hoc e per quanto riguarda le attività che influenzano negativamente le aree sensibili per la biodiversità e le emissioni nell'acqua (indicatori 7 e 8), a causa delle limitazioni dei dati, il Gestore degli Investimenti ha utilizzato dati proxy rappresentativi di terze parti, piuttosto che gli indicatori specifici di cui alla Tabella 1. Il Gestore degli Investimenti ha preso in considerazione anche l'indicatore 9 in relazione ai rifiuti pericolosi per quanto riguarda il filtro appositamente costruito.

Impegno

Oltre a selezionare alcuni emittenti come descritto sopra, il Gestore degli investimenti si è impegnato in maniera continuativa con alcuni emittenti partecipati sottostanti. È stato utilizzato un sottoinsieme degli indicatori, in base ad alcune considerazioni tecniche come la copertura dei dati, come base per impegnarsi con alcuni emittenti partecipati, in conformità con l'approccio adottato dal Gestore degli Investimenti in materia di stewardship e impegno. Gli indicatori utilizzati in relazione a tale impegno includono gli indicatori 3, 5 e 13 relativi all'intensità dei gas a effetto serra, alla quota di energia non rinnovabile e alla diversità di genere nei consigli d'amministrazione della Tabella 1. Ha utilizzato anche gli indicatori 2 della Tabella 2 e 3 della Tabella 3 in relazione all'emissione o agli inquinanti atmosferici e al numero di giorni persi per infortuni, incidenti, decessi o malattie.

Indicatori di sostenibilità

Il Gestore degli investimenti ha utilizzato gli indicatori 3 e 13 in relazione all'intensità di gas serra e alla diversità di genere nei consigli di amministrazione come indicatori di sostenibilità per contribuire a

qualificare un investimento come investimento sostenibile. Uno dei percorsi richiede che un emittente sia considerato leader operativo di un gruppo di pari per poter essere qualificato come investimento sostenibile. Ciò richiede un punteggio relativo all'indicatore incluso nel 20% superiore rispetto all'indice di riferimento.

I principali impatti negativi sono gli impatti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a questioni ambientali, sociali e occupazionali, al rispetto dei diritti umani, alla lotta alla corruzione e alla concussioni.

— *Gli investimenti sostenibili sono stati allineati alle Linee guida dell'OCSE per le imprese multinazionali e ai Principi guida delle Nazioni Unite su imprese e diritti umani? Dettagli:*

Le esclusioni dal portafoglio basate su norme come descritto sopra al punto "In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario? sono state applicate per perseguire l'allineamento con queste linee guida e principi. Al fine di individuare potenziali trasgressori sono stati utilizzati dati di soggetti terzi. A meno che non sia stata concessa un'eccezione, il Comparto ha vietato investimenti rilevanti in questi emittenti.

La Tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla Tassonomia non devono arrecare danno significativo gli obiettivi della Tassonomia dell'UE, ed è accompagnata da criteri specifici dell'Unione.

Il principio "non arrecare un danno significativo" si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'Unione per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri dell'Unione per le attività economiche ecosostenibili.

Qualsiasi altro investimento sostenibile non deve inoltre arrecare un danno significativo agli obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha considerato i principali impatti negativi sui fattori di sostenibilità?

Il Comparto ha considerato i principali impatti negativi selezionati sui fattori di sostenibilità attraverso uno screening basato su valori e norme per implementare le esclusioni. Per tale screening sono stati utilizzati gli indicatori 10, 14 e 16 in relazione alle violazioni del Global Compact delle Nazioni Unite e alle violazioni sociali a livello nazionale e delle armi controverse delle Norme tecniche di regolamentazione SFDR dell'UE. Il Comparto ha anche utilizzato alcuni degli indicatori nell'ambito del filtro "Non arrecare danno significativo", come dettagliato nella risposta alla domanda immediatamente precedente, per dimostrare che un investimento si qualifica come investimento sostenibile.

Un sottoinsieme dei suddetti Indicatori di Sostenibilità Avversi è stato utilizzato per determinare l'impegno con gli emittenti partecipati in base alla loro rispettiva performance PAI (principali impatti avversi).

Quali sono stati i principali investimenti di questo prodotto finanziario?

L'elenco comprende gli investimenti che costituiscono la **maggior parte degli investimenti** del prodotto finanziario sulla base di un'istantanea alla fine del periodo di riferimento:
01/07/2022 - 30/06/2023

Maggiori investimenti	Settore	% del patrimonio	Paese
US DEPARTMENT OF THE TREASURY	Buoni del Tesoro USA	30,13	Stati Uniti
FEDERAL NATIONAL MORTGAGE ASSOCIATION	ABS di ente	17,25	Stati Uniti
GOVERNMENT NATIONAL MORTGAGE ASSOCIATION	CMBS (Titoli garantiti da mutui commerciali) di enti pubblici	7,18	Stati Uniti

Qual è stata la percentuale di investimenti legati alla sostenibilità?

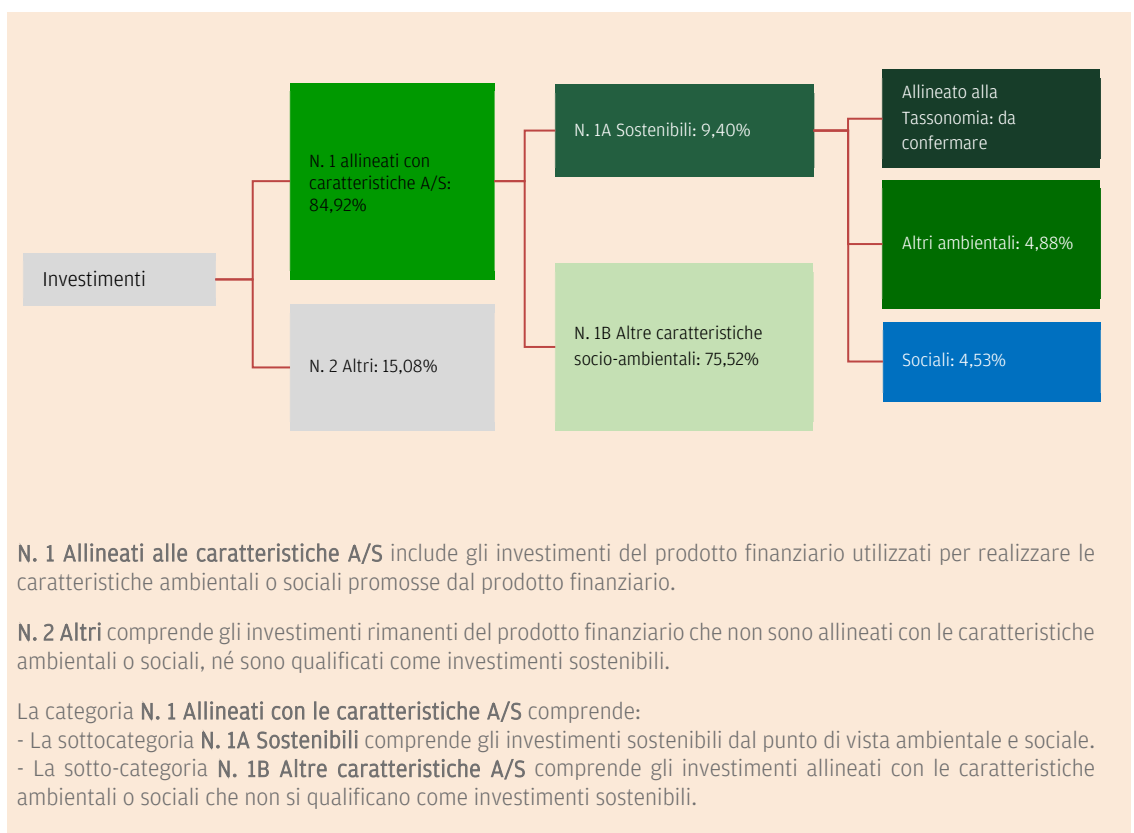

La ripartizione degli investimenti descrive la quota di investimenti in attività specifiche.

Qual è stata la ripartizione degli investimenti?

Alla fine del periodo di riferimento il Comparto ha allocato l' 84,92% del suo patrimonio a emittenti che presentano caratteristiche ambientali e/o sociali positive e il 9,40% del patrimonio a investimenti sostenibili. Il Comparto non si è impegnato a investire una percentuale del patrimonio specificamente in valori mobiliari che presentano caratteristiche ambientali positive o caratteristiche sociali positive, né si è impegnato a perseguire obiettivi ambientali o sociali specifici o in combinazione tra loro.

Gli asset liquidi accessori, i depositi presso gli istituti di credito, gli strumenti/fondi del mercato monetario (per la gestione delle sottoscrizioni e dei rimborsi in contanti, nonché dei pagamenti correnti ed eccezionali) e i derivati per l'EPM non sono inclusi nella % di asset riportata nella tabella sottostante. Queste partecipazioni fluttuano a seconda dei flussi di investimento e sono accessorie alla politica di investimento con un impatto minimo o nullo sulle operazioni di investimento.

Nb: L'allineamento alla Tassonomia UE per gli strumenti considerati investimenti sostenibili da JP Morgan sarà inserito nel grafico sottostante una volta disponibile e se pertinente. L'allineamento completo del fondo alla Tassonomia UE è riportato di seguito (in risposta alla domanda: In che misura gli investimenti sostenibili con un obiettivo ambientale sono stati allineati alla Tassonomia UE?)

In quali settori economici sono stati effettuati gli investimenti?

zzz. Inoltre, il Gestore degli investimenti si è impegnato in maniera continuativa con alcuni emittenti partecipati sottostanti. Gli investimenti in settori e sotto-settori dell'economia che traggono ricavi dall'esplorazione, dall'estrazione mineraria, dall'estrazione, dalla produzione, dalla lavorazione, dallo stoccaggio, dalla raffinazione o dalla distribuzione, compresi il trasporto, lo stoccaggio e il commercio, di combustibili fossili, se detenuti, saranno inclusi nella tabella sottostante. Le attività liquide accessorie, i depositi presso istituti di credito, gli strumenti del mercato monetario/fondi (per la gestione delle sottoscrizioni e dei rimborsi in contanti e dei pagamenti correnti e straordinari) e i derivati per l'EPM sono esclusi dai risultati, ma sono inclusi nel denominatore per la percentuale di attività indicata sia nella tabella seguente, sia nella tabella dei principali investimenti.

Le attività abilitanti consentono direttamente ad altre attività di dare un contributo sostanziale a un obiettivo ambientale. Le attività di transizione sono attività economiche per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano livelli di emissioni di gas serra corrispondenti alle migliori prestazioni.

In quale misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla Tassonomia dell'UE?¹

I dati disponibili in relazione all'allineamento alla Tassonomia dell'UE sono, attualmente, molto limitati, in particolare per quanto concerne il gas fossile e l'energia nucleare. Prevediamo che questo dato migliorerà nel tempo, man mano che un maggior numero di emittenti renderà noto il proprio allineamento e i dati saranno sempre più disponibili.

Il Comparto non ha assunto alcun impegno minimo in materia di investimenti sostenibili con obiettivi ambientali allineati alla Tassonomia dell'UE.

Pertanto, il documento informativo precontrattuale del Comparto indica come 0% l'entità degli investimenti sostenibili mirati con un obiettivo ambientale allineato alla Tassonomia dell'UE. Qualsiasi allineamento delineato di seguito è un sottoprodotto del quadro del Comparto che considera gli investimenti che hanno caratteristiche ambientali e/o sociali e gli investimenti sostenibili (come definiti dall'SFDR).

I grafici seguenti illustrano l'effettiva entità degli investimenti sostenibili con un obiettivo ambientale allineato alla Tassonomia dell'UE, come misurata alla fine del periodo di riferimento.

- **Il prodotto finanziario ha investito in attività legate al gas fossile e/o all'energia nucleare conformemente alla Tassonomia dell'UE?**

Sì

In gas fossile

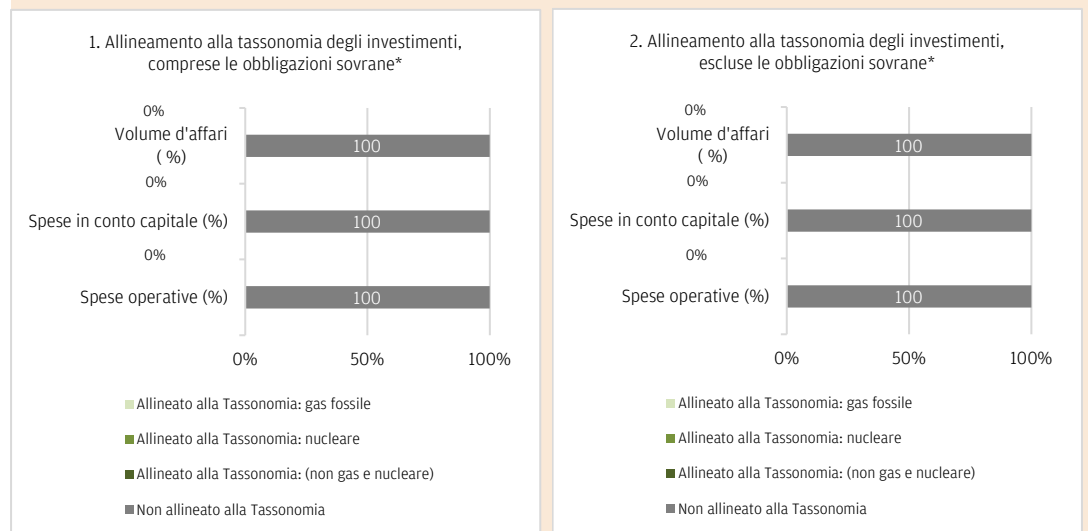

In energia nucleare

No

Le attività allineate alla Tassonomia sono espresse come una quota di:

- il **volume d'affari** riflette la "ecologicità" dell'impresa partecipata oggi.
- le **spese in conto capitale** (capex) mostrano gli investimenti verdi effettuati dalle imprese partecipate, rilevanti per la transizione verso un'economia verde.
- le **spese operative** (opex) riflettono le attività operative verdi delle imprese partecipate.

I grafici che seguono mostrano in verde la percentuale di investimenti che erano allineati alla Tassonomia dell'UE. Poiché non esiste una metodologia adeguata per determinare l'allineamento delle obbligazioni sovrane* alla Tassonomia, il primo grafico mostra l'allineamento alla Tassonomia in relazione a tutti gli investimenti del prodotto finanziario comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla Tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

Questo grafico rappresenta 0% dell'investimento totale.

*Ai fini di questi grafici, le 'obbligazioni sovrane' comprendono tutte le esposizioni sovrane.

¹ Le attività legate al gas fossile e/o al nucleare saranno conformi alla Tassonomia dell'UE solo se contribuiranno a limitare i cambiamenti climatici ("mitigazione dei cambiamenti climatici") e non danneggeranno in modo significativo alcun obiettivo della Tassonomia dell'UE - si veda la nota esplicativa sul margine sinistro. I criteri completi per le attività economiche relative al gas fossile e all'energia nucleare conformi alla Tassonomia UE sono stabiliti nel Regolamento Delegato (UE) 2022/1214 della Commissione.

● **Qual era la quota degli investimenti effettuati in attività transitorie e abilitanti?**

A seguito di quanto suddetto, il Comparto non ha assunto alcun impegno minimo di effettuare investimenti allineati alla Tassonomia UE - comprese le attività di Transizione e Abilitazione. Qualsiasi allineamento delineato di seguito è un sottoprodotto del quadro del Comparto che considera gli investimenti che hanno caratteristiche ambientali e/o sociali positive e gli investimenti sostenibili.

La quota calcolata delle attività di transizione rappresenta il 0,00% e la quota calcolata delle attività abilitanti rappresenta il 0,01%, alla fine del periodo di riferimento.

● **Qual è l'esito del raffronto della percentuale di investimenti allineati alla tassonomia dell'UE rispetto ai precedenti periodi di riferimento?**

Non pertinente

● **Qual era la quota di investimenti sostenibili con un obiettivo ambientale che non erano allineati alla Tassonomia dell'UE?**

La quota di investimenti sostenibili con un obiettivo ambientale non allineati alla Tassonomia dell'UE era del 4,88% del patrimonio alla fine del periodo di riferimento.

● **Qual era la quota di investimenti socialmente sostenibili?**

La quota di investimenti socialmente sostenibili era pari al 4,53% del patrimonio alla fine del periodo di riferimento.

● **Quali investimenti erano compresi nella categoria "altri", qual era il loro scopo ed esistevano garanzie minime di salvaguardia ambientale o sociale?**

Il 15,08% degli attivi in investimenti "altri" è costituito da emittenti che non hanno soddisfatto i criteri descritti in risposta alla domanda precedente, intitolata "Qual è stata la prestazione degli indicatori di sostenibilità?" per essere qualificati come emittenti che presentano caratteristiche ambientali o sociali positive. Sono investimenti a fini di diversificazione. Gli asset liquidi accessori, i depositi presso gli istituti di credito, gli strumenti/fondi del mercato monetario (per la gestione delle sottoscrizioni e dei rimborsi in contanti, nonché dei pagamenti correnti ed eccezionali) e i derivati per l'EPM non sono inclusi nella % di asset riportata nel diagramma di ripartizione degli asset di cui sopra, incluso sotto la voce "altri". Queste partecipazioni fluttuano a seconda dei flussi di investimento e sono accessorie alla politica di investimento con un impatto minimo o nullo sulle operazioni di investimento.

Tutti gli investimenti, compresi quelli "altri", sono stati soggetti alle seguenti salvaguardie/principi minimi ESG:

- Le salvaguardie minime come delineate dall'Articolo 18 del Regolamento sulla Tassonomia dell'UE (compreso l'allineamento con le Linee guida dell'OCSE per le imprese multinazionali e i Principi guida delle Nazioni Unite su imprese e diritti umani), come implementate dal Gestore degli Investimenti.
- Applicazione di prassi di buona governance (queste includono buone strutture di gestione, relazioni con il personale dipendente, remunerazione del personale e conformità fiscale), come implementate dal Gestore degli Investimenti.
- Conformità al principio "Non arrecare danno significativo", come prescritto dalla definizione di investimento sostenibile nell'SFDR dell'UE.

 sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili conformemente al regolamento (UE) 2020/852.

● **Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?**

I seguenti elementi vincolanti della strategia d'investimento sono stati applicati durante il periodo di riferimento per selezionare gli investimenti al fine di conseguire ciascuna delle caratteristiche ambientali o sociali:

- L'obbligo di investire almeno il 51% del patrimonio in emittenti con caratteristiche ambientali e/o sociali positive.
- Lo screening basato su valori e norme per implementare le esclusioni complete in relazione a emittenti che sono impegnati in determinate attività, come la produzione di armi controverse, e l'applicazione di soglie percentuali massime di ricavi, produzione o distribuzione ad altri emittenti, come quelli che operano nei settori del carbone termico e del tabacco. Per ulteriori informazioni, fare riferimento alla politica di esclusione del Comparto su www.jpmorganassetmanagement.lu, cercando il proprio Comparto specifico e accedendo alla sezione informazioni ESG.
- L'obbligo per tutti gli emittenti in portafoglio di seguire le prassi di buona governance.

Il Comparto si è inoltre impegnato a investire almeno il 5% del patrimonio in investimenti sostenibili.

Ulteriori informazioni sull'impegno sono disponibili nella risposta alla domanda "Come sono stati presi in considerazione gli indicatori degli impatti negativi sui fattori di sostenibilità?"

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento sostenibile?

Non pertinente

I benchmark di riferimento sono indici per misurare se il prodotto finanziario raggiunge le caratteristiche ambientali o sociali che promuove.

- ***In quale modo l'indice di riferimento differiva da un indice generale di mercato?***

Non pertinente

- ***Qual è stata la prestazione di questo prodotto finanziario in relazione agli indicatori di sostenibilità per determinare l'allineamento dell'indice di riferimento con le caratteristiche ambientali o sociali promosse?***

Non pertinente

- ***Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?***

Non pertinente

- ***Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice generale di mercato?***

Non pertinente

Nome del prodotto: **JPMorgan Funds - Europe Dynamic Technologies Fund**

Identificativo della persona giuridica: **549300GE40GSOXZN2G20**

Caratteristiche ambientali e/o sociali

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?

Sì

No

Ha effettuato investimenti sostenibili con un obiettivo ambientale: %

Ha promosso caratteristiche ambientali/sociali (A/S) e pur non avendo come obiettivo un investimento sostenibile, aveva una quota del 71,70% di investimenti sostenibili

in attività economiche considerate ecosostenibili conformemente alla Tassonomia dell'UE

con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla Tassonomia dell'UE

in attività economiche che non sono considerate ecosostenibili conformemente alla Tassonomia dell'UE

con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla Tassonomia dell'UE

Ha effettuato investimenti sostenibili con un obiettivo sociale: %

con un obiettivo sociale

Ha promosso caratteristiche A/S ma non ha effettuato alcun investimento sostenibile

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, purché tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e l'impresa beneficiaria degli investimenti segua prassi di buona governance.

La **Tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852 che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non stabilisce un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere allineati o meno alla Tassonomia.

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Il Comparto si propone di promuovere un'ampia gamma di caratteristiche ambientali, sociali e di governance attraverso i suoi criteri di inclusione degli investimenti, in particolare con una ripartizione minima del patrimonio del 51% in investimenti con caratteristiche ambientali e/o sociali positive e un minimo di 10% di investimenti costituiti da investimenti sostenibili. Questi impegni sono stati rispettati per tutto il periodo di riferimento (1 luglio 2022 - 30 giugno 2023). Alla fine del periodo di riferimento, il Comparto deteneva l' 86,20% di investimenti con caratteristiche ambientali e/o sociali positive e il 71,70% di investimenti sostenibili.

Questi investimenti sono stati determinati mediante l'applicazione di criteri di inclusione ed esclusione che sono stati applicati sia a livello di asset che di prodotto. I criteri di inclusione sono basati su un punteggio ESG assegnato a tutti gli investimenti nell'ambito della strategia, per identificare quelli che possono essere considerati come aventi caratteristiche ambientali e/o sociali e quelli che soddisfano le soglie per essere considerati investimenti sostenibili.

Il punteggio ESG prende in considerazione i seguenti indicatori: la gestione efficace delle emissioni tossiche, dei rifiuti, il buon record ambientale e le caratteristiche sociali, come efficaci dichiarazioni di sostenibilità, valutazioni favorevoli in materia di relazioni con il personale dipendente e di gestione dei problemi di sicurezza.

Attraverso i suoi criteri di esclusione (che prevedevano esclusioni sia totali che parziali), il Comparto ha promosso determinate norme e valori, tra cui il sostegno alla salvaguardia dei diritti umani proclamati a livello internazionale. Il Comparto ha escluso completamente le società impegnate nella fabbricazione di armi controverse e ha applicato soglie massime di reddito o di produzione ad altre, come quelle che operano nel settore del carbone termico e del tabacco.

In relazione alla considerazione di buona governance, tutti gli investimenti (esclusi i contanti e i derivati) sono stati vagliati per escludere i noti trasgressori delle pratiche di buona governance. Inoltre, per gli investimenti che si ritiene abbiano caratteristiche ambientali e/o sociali o che si qualificano come investimenti sostenibili, sono state applicate ulteriori considerazioni. Per questi investimenti, il Comparto ha incorporato un confronto con un gruppo di pari e ha escluso le società che non hanno ottenuto un punteggio superiore all'80% rispetto ai pari in base agli indicatori di buona governance.

Il Comparto non prevedeva specifici obiettivi di allocazione a favore di caratteristiche ambientali o sociali. La misura in cui le caratteristiche ambientali o sociali promosse sono state soddisfatte può essere intesa considerando la % effettiva del patrimonio allocata per il periodo di riferimento alle imprese che presentavano tali caratteristiche.

In sintesi: il Comparto ha rispettato i minimi contrattuali garantiti in relazione alle caratteristiche ambientali e/o sociali e alla politica di investimenti sostenibili per tutto il periodo di riferimento. Il Comparto ha applicato dei filtri con l'obiettivo di escludere tutti i potenziali investimenti vietati dalla sua politica di esclusione durante tutto questo periodo. La misura in cui le norme e i valori promossi dal Comparto sono stati soddisfatti si basa sull'eventualità che il Comparto abbia detenuto durante il Periodo di riferimento imprese che sarebbero state vietate ai sensi della politica di esclusione. Il Gestore degli Investimenti non ha riscontrato alcuna indicazione siano stati effettuati investimenti in imprese di tale genere. Il Gestore degli Investimenti informa che la continuità dei valori percentuali e delle informazioni divulgate non può essere garantita in futuro ed è soggetta alla costante evoluzione del panorama legale e normativo. La durata del periodo di riferimento può essere inferiore a 12 mesi se nel corso di tale periodo il fondo era stato lanciato, chiuso o il suo status ai sensi dell'articolo 8/9 era stato modificato.

Gli indicatori di sostenibilità misurano in che modo sono realizzate le caratteristiche ambientali o sociali promosse da questo prodotto finanziario

● **Qual è stata la prestazione degli indicatori di sostenibilità?**

Una combinazione della metodologia di valutazione ESG propria del Gestore degli Investimenti, che consiste nella valutazione ESG propria del Gestore degli Investimenti, e/o di dati di terzi è stata utilizzata nell'ambito dei criteri di inclusione per misurare il conseguimento delle caratteristiche ambientali e/o sociali che il Comparto promuove.

La metodologia era basata sulla gestione da parte di un'impresa dei relativi aspetti ambientali o sociali come le sue emissioni tossiche, la gestione dei rifiuti, le relazioni con il personale dipendente e gli aspetti della sicurezza, la diversità di genere/indipendenza del consiglio di amministrazione e la tutela della riservatezza dei dati. Per essere inclusa nel 51% degli asset considerati come promotori di caratteristiche ambientali e/o sociali, un'impresa deve conseguire un punteggio ambientale o sociale compreso nell'80% di quelli maggiormente elevati in relazione alle imprese di pari grado e attuare le buone prassi di governance sopra indicate.

Alla fine del periodo di riferimento, il Comparto deteneva l' 86,20% di investimenti con caratteristiche ambientali e/o sociali positive e il 71,70% di investimenti sostenibili.

Per quanto riguarda le norme applicate e le esclusioni basate sui valori, il Gestore degli Investimenti ha utilizzato i dati per quantificare la partecipazione di una società alle relative attività. Lo screening condotto su tali dati ha consentito di pervenire a esclusioni totali di certi potenziali investimenti e a esclusioni parziali in base a soglie percentuali massime di ricavi o produzione, conformemente ai criteri di esclusione. Durante tutto il periodo di riferimento, e in nessun caso, sono state trasgredite le regole di esclusione. Inoltre, è stato incorporato nello screening un sottoinsieme di "Indicatori di Sostenibilità Avversi" come enunciato nelle Norme tecniche di regolamentazione SFDR dell'UE".

Il Comparto non prevedeva specifici obiettivi di allocazione a favore di caratteristiche ambientali o sociali e pertanto la prestazione degli indicatori in relazione a specifiche caratteristiche ambientali o sociali non è illustrata in questa sede.

Per ulteriori informazioni, consultare l'Informativa sulle Caratteristiche Ambientali e Sociali del Comparto sul sito www.jpmorganassetmanagement.lu, cercando il proprio Comparto specifico e accedendo alla sezione Informazioni ESG.

● **...e rispetto ai periodi precedenti?**

● **Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha parzialmente effettuato e in che misura gli investimenti sostenibili hanno contribuito al conseguimento di tali obiettivi?**

Gli obiettivi degli investimenti sostenibili che il Comparto ha parzialmente effettuato sono stati costituiti da qualsiasi singolo o combinazione dei seguenti obiettivi durante il periodo di riferimento:

Obiettivi ambientali: (i) mitigazione del rischio climatico, (ii) transizione verso un'economia circolare

Obiettivi sociali: (i) comunità inclusive e sostenibili - aumento della rappresentanza femminile a livello dirigenziale, (ii) comunità inclusive e sostenibili - aumento della rappresentanza femminile nei consigli di amministrazione e (iii) realizzazione di un ambiente di lavoro e di una cultura dignitosi.

Il contributo a tali obiettivi è stato determinato mediante: (i) indicatori di sostenibilità di prodotti e servizi, che possono aver incluso la percentuale di entrate derivanti dalla fornitura di prodotti e/o servizi che contribuiscono al pertinente obiettivo sostenibile, come un'impresa che produca pannelli solari o tecnologie per l'energia pulita che soddisfano le soglie proprietarie del Gestore degli Investimenti di contributo alla mitigazione del rischio climatico. L'attuale percentuale di ricavi è fissata ad un minimo del 20% e l'intera partecipazione nella società è considerata un investimento sostenibile; o (ii) essere un leader operativo del gruppo di pari che contribuisce all'obiettivo pertinente. La qualifica di leader di un gruppo di pari è definita come un punteggio entro il top 20% rispetto ai pari, in base a determinati indicatori di sostenibilità operativa. Ad esempio, il raggiungimento di un punteggio entro il top 20% rispetto ai pari sull'impatto totale dei rifiuti contribuisce alla transizione verso un'economia circolare.

Il contributo effettivo a tali obiettivi può essere compreso considerando l'effettiva % di asset allocata agli investimenti sostenibili per il periodo di riferimento. Il Comparto era tenuto a investire l' 10% del patrimonio in investimenti sostenibili. Durante il periodo, il Comparto non ha mai detenuto investimenti sostenibili al di sotto del suo minimo garantito. Alla fine del periodo di riferimento, il 71,70% del suo patrimonio era costituito da investimenti sostenibili.

● **In che modo gli investimenti sostenibili che il prodotto finanziario ha parzialmente realizzato non hanno causato danni significativi ad alcun obiettivo di investimento sostenibile ambientale o sociale?**

Gli investimenti sostenibili che il Comparto intendeva in parte realizzare sono stati sottoposti a un processo di screening che ha mirato a identificare ed escludere dalla qualifica di investimento sostenibile, le imprese che il Gestore degli Investimenti considerava come aventi realizzato le performance peggiori, in base a una soglia determinata dal Gestore degli Investimenti, in relazione a determinate considerazioni ambientali. Di conseguenza, sono stati considerati investimenti sostenibili solo le imprese che hanno dimostrato di possedere i migliori indicatori in relazione alle misure assolute e relative.

Tali considerazioni includono il cambiamento climatico, la protezione delle risorse idriche e marine, la transizione verso un'economia circolare, l'inquinamento e la protezione della biodiversità e degli ecosistemi. Il Gestore degli Investimenti ha inoltre applicato un filtro volto a identificare ed escludere le imprese che il Gestore degli Investimenti ha ritenuto non conformi alle Linee guida dell'OCSE per le imprese multinazionali e i Principi guida delle Nazioni Unite su imprese e diritti umani, sulla base dei dati comunicati da fornitori di servizi terzi.

— **Come sono stati presi in considerazione gli indicatori degli impatti negativi sui fattori di sostenibilità?**

Gli indicatori degli impatti negativi sui fattori di sostenibilità di cui alla Tabella 1 dell'Allegato 1 e alcuni indicatori, determinati dal Gestore degli Investimenti, di cui alle Tabelle 2 e 3 dell'Allegato 1 delle Norme tecniche di regolamentazione SFDR dell'UE sono stati presi in considerazione come ulteriormente descritto di seguito. Il Gestore degli Investimenti ha utilizzato le metriche contenute negli Standard tecnici regolamentari SFDR dell'UE oppure, laddove ciò non fosse possibile a causa di limitazioni dei dati o di altri problemi tecnici, un proxy rappresentativo. Il Gestore degli Investimenti ha consolidato la considerazione di alcuni indicatori in un indicatore "primario", come descritto ulteriormente di seguito, e potrebbe aver utilizzato un'ulteriore serie di indicatori più ampia di quella indicata di seguito.

Gli indicatori pertinenti nella Tabella 1 dell'Allegato 1 delle Norme tecniche di regolamentazione SFDR dell'UE consistono in 9 indicatori ambientali e 5 indicatori sociali e occupazionali. Gli indicatori ambientali sono elencati da 1 a 9 e riguardano le emissioni di gas serra (1-3), l'esposizione ai combustibili fossili, la

I principali impatti negativi sono gli impatti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a questioni ambientali, sociali e occupazionali, al rispetto dei diritti umani, alla lotta alla corruzione e alla concussione.

quota di consumo e produzione di energia non rinnovabile, l'intensità del consumo energetico, le attività che influiscono negativamente sulle aree sensibili di biodiversità, le emissioni nell'acqua e i rifiuti pericolosi (4-9 rispettivamente). Gli indicatori da 10 a 14 riguardano le questioni sociali e occupazionali di un'impresa e coprono rispettivamente le violazioni dei principi del Global Compact delle Nazioni Unite e delle Linee guida dell'OCSE per le imprese multinazionali, la mancanza di processi e meccanismi di conformità per monitorare la conformità ai principi del Global Compact delle Nazioni Unite, il divario retributivo di genere non corretto, la diversità di genere del Consiglio di amministrazione e l'esposizione ad armi controverse (mine antiuomo, munizioni a grappolo, armi chimiche e armi biologiche).

L'approccio del Gestore degli Investimenti comprendeva aspetti sia quantitativi che qualitativi per tenere conto degli indicatori suddetti. Ha utilizzato particolari indicatori per lo screening, cercando di escludere le imprese che potrebbero causare danni significativi. Ha utilizzato un sottoinsieme per l'impegno con determinate imprese, cercando di influenzare le migliori prassi e ha utilizzato alcuni di essi come indicatori di performance positiva di sostenibilità, applicando una soglia minima rispetto all'indicatore per ottenere la qualifica di investimento sostenibile. I dati necessari per prendere in considerazione gli indicatori, ove disponibili, possono essere stati ottenuti dalle stesse imprese partecipate e/o comunicati da fornitori di servizi terzi (compresi i dati proxy). Gli input di dati autodichiarati dalle imprese o comunicati da fornitori terzi possono basarsi su serie di dati e ipotesi che possono essere insufficienti, di scarsa qualità o contenere informazioni distorte. Poiché dipendono da soggetti terzi, il Gestore degli Investimenti non può garantire l'accuratezza o la completezza di tali dati.

Screening

Alcuni indicatori sono stati presi in considerazione attraverso lo screening basato su valori e norme per implementare le esclusioni. Queste esclusioni hanno preso in considerazione gli indicatori 10 e 14 in relazione ai principi del Global Compact delle Nazioni Unite e alle Linee guida dell'OCSE per le imprese multinazionali e le armi controverse. Il Gestore degli Investimenti ha anche applicato un filtro appositamente realizzato. A causa di alcune considerazioni tecniche, come la copertura dei dati in relazione a specifici indicatori, il Gestore degli Investimenti ha applicato l'indicatore specifico di cui alla Tabella 1 o un proxy rappresentativo, come determinato dal Gestore degli Investimenti per vagliare le imprese partecipate in relazione alle questioni ambientali o sociali e occupazionali. Per esempio, le emissioni di gas a effetto serra sono associate a diversi indicatori e metriche corrispondenti nella Tabella 1, come le emissioni di gas a effetto serra, l'impronta di carbonio e l'intensità di gas a effetto serra (indicatori 1-3). Il Gestore degli Investimenti ha utilizzato i dati sull'intensità dei gas a effetto serra (indicatore 3), i dati relativi al consumo e alla produzione di energia non rinnovabile (indicatore 5) e i dati sull'intensità del consumo di energia (indicatore 6) per effettuare lo screening relativo alle emissioni di gas a effetto serra.

In relazione allo screening realizzato ad hoc e per quanto riguarda le attività che influenzano negativamente le aree sensibili per la biodiversità e le emissioni nell'acqua (indicatori 7 e 8), a causa delle limitazioni dei dati, sono stati utilizzati dati proxy rappresentativi di terze parti, piuttosto che gli indicatori specifici di cui alla Tabella 1. Il Gestore degli Investimenti ha preso in considerazione anche l'indicatore 9 in relazione ai rifiuti pericolosi per quanto riguarda il filtro appositamente costruito.

Impegno

Oltre a selezionare alcune imprese come descritto sopra, il Gestore degli investimenti si è impegnato in maniera continuativa con alcune imprese partecipate sottostanti. È stato utilizzato un sottoinsieme degli indicatori, in base ad alcune considerazioni tecniche come la copertura dei dati, come base per impegnarsi con alcune imprese partecipate sottostanti, in conformità con l'approccio adottato dal Gestore degli Investimenti in materia di stewardship e impegno. Gli indicatori utilizzati in relazione a tale impegno includono gli indicatori 3, 5 e 13 relativi all'intensità dei gas a effetto serra, alla quota di energia non rinnovabile e alla diversità di genere nei consigli d'amministrazione della Tabella 1. Ha utilizzato anche gli indicatori 2 della Tabella 2 e 3 della Tabella 3 in relazione alle emissioni o agli inquinanti atmosferici e al numero di giorni persi per infortuni, incidenti, decessi o malattie.

Indicatori di sostenibilità

Il Gestore degli investimenti ha utilizzato gli indicatori 3 e 13 in relazione all'intensità di gas serra e alla diversità di genere nei consigli di amministrazione come indicatori di sostenibilità per contribuire a qualificare un investimento come investimento sostenibile. Uno dei percorsi richiedeva che un'impresa fosse considerata come un'impresa operativa leader di un gruppo di pari per poter essere qualificata come investimento sostenibile. Ciò richiedeva un punteggio relativo all'indicatore incluso nel 20% superiore rispetto ai pari.

I principali impatti negativi sono gli impatti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a questioni ambientali, sociali e occupazionali, al rispetto dei diritti umani, alla lotta alla corruzione e alla concussione.

— *Gli investimenti sostenibili sono stati allineati alle Linee guida dell'OCSE per le imprese multinazionali e ai Principi guida delle Nazioni Unite su imprese e diritti umani? Dettagli:*

Le esclusioni dal portafoglio basate su norme come descritto sopra al punto "In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario? sono state applicate per perseguire l'allineamento con queste linee guida e principi. Al fine di individuare potenziali trasgressori sono stati utilizzati dati di soggetti terzi. A meno che non sia stata concessa un'eccezione, il Comparto ha vietato investimenti rilevanti in questi emittenti.

La Tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla Tassonomia non devono arrecare danno significativo agli obiettivi della Tassonomia dell'UE, ed è accompagnata da criteri specifici dell'Unione.

Il principio "non arrecare un danno significativo" si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'Unione per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri dell'Unione per le attività economiche ecosostenibili.

Qualsiasi altro investimento sostenibile non deve inoltre arrecare un danno significativo agli obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha considerato i principali impatti negativi sui fattori di sostenibilità?

Il Comparto ha considerato i principali impatti negativi selezionati sui fattori di sostenibilità attraverso uno screening basato su valori e norme per implementare le esclusioni. In relazione a tale screening sono stati utilizzati gli indicatori 10 e 14 in relazione alle violazioni del Global Compact delle Nazioni Unite e alle armi controverse degli Standard Tecnici Regolamentari SFDR dell'UE. Il Comparto ha anche utilizzato alcuni degli indicatori nell'ambito del filtro "Non arrecare danno significativo", come dettagliato nella risposta alla domanda immediatamente precedente, per dimostrare che un investimento si qualifica come investimento sostenibile.

Un sottoinsieme dei suddetti Indicatori di Sostenibilità Avversi è stato utilizzato per determinare l'impegno con le imprese partecipate in base alla loro rispettiva performance PAI (principali impatti avversi).

Quali sono stati i principali investimenti di questo prodotto finanziario?

L'elenco comprende gli investimenti che costituiscono **la maggior parte degli investimenti** del prodotto finanziario sulla base di un'istantanea alla fine del periodo di riferimento:

01/07/2022 - 30/06/2023

Maggiori investimenti	Settore	% del patrimonio	Paese
INFINEON TECHNOLOGIES AG	INFORMATICA	9,58	Germania
ASML HOLDING NV	INFORMATICA	8,58	Paesi Bassi
SAP SE	INFORMATICA	8,13	Germania
CAPGEMINI SE	INFORMATICA	6,22	Francia
STMICROELECTRONICS NV	INFORMATICA	5,42	Paesi Bassi
SAGE GROUP PLC/THE	INFORMATICA	3,98	Regno Unito
ASM INTERNATIONAL NV	INFORMATICA	3,70	Paesi Bassi
NOKIA OYJ	INFORMATICA	3,27	Finlandia
DASSAULT SYSTEMES SE	INFORMATICA	2,42	Francia

Qual è stata la percentuale di investimenti legati alla sostenibilità?

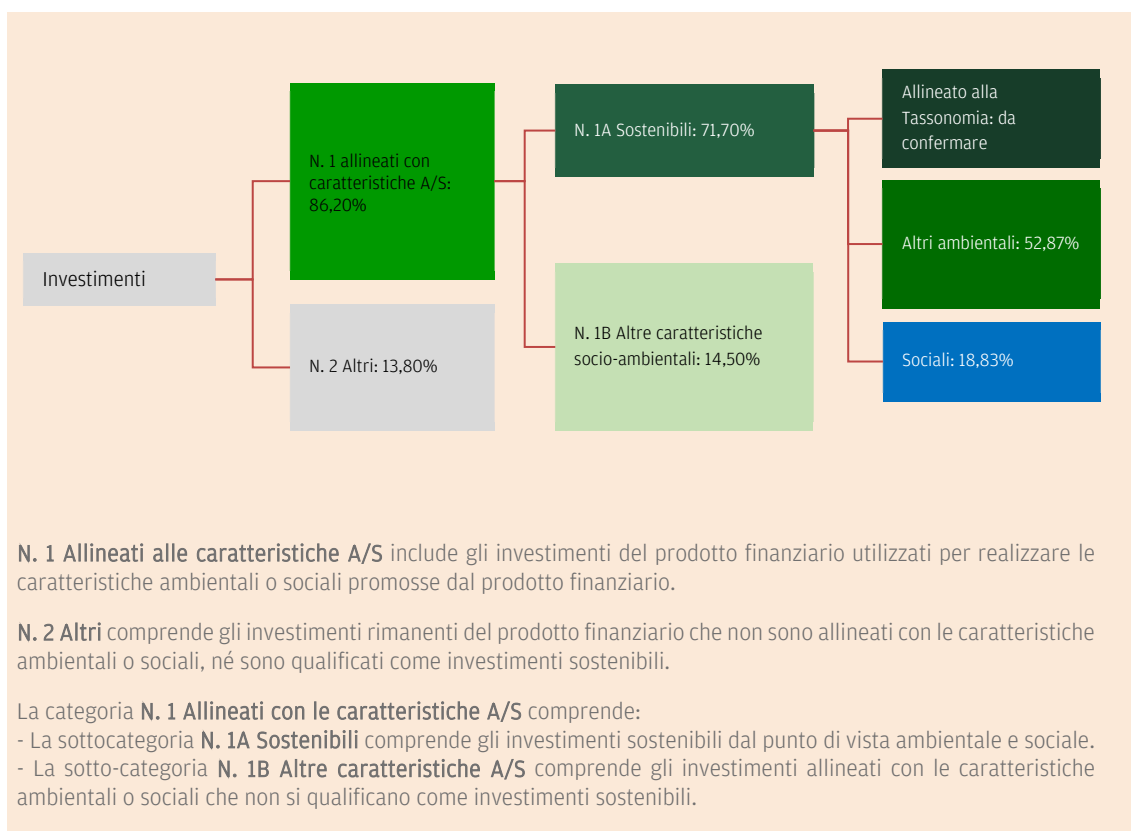

La ripartizione degli investimenti descrive la quota di investimenti in attività specifiche.

Qual è stata la ripartizione degli investimenti?

Alla fine del periodo di riferimento, il Comparto ha allocato l' 86,20% del suo patrimonio a imprese che presentavano caratteristiche ambientali e/o sociali positive e il 71,70% del patrimonio a investimenti sostenibili. Il Comparto non si è impegnato a investire una percentuale del patrimonio specificamente in valori mobiliari che presentano caratteristiche ambientali positive o caratteristiche sociali positive, né si è impegnato a perseguire obiettivi ambientali o sociali specifici o in combinazione tra loro.

Gli asset liquidi accessori, i depositi presso gli istituti di credito, gli strumenti/fondi del mercato monetario (per la gestione delle sottoscrizioni e dei rimborsi in contanti, nonché dei pagamenti correnti ed eccezionali) e i derivati per l'EPM non sono inclusi nella % di asset riportata nella tabella sottostante. Queste partecipazioni fluttuano a seconda dei flussi di investimento e sono accessorie alla politica di investimento con un impatto minimo o nullo sulle operazioni di investimento.

Nb: L'allineamento alla Tassonomia UE per gli strumenti considerati investimenti sostenibili da JP Morgan sarà inserito nel grafico sottostante una volta disponibile e se pertinente. L'allineamento completo del fondo alla Tassonomia UE è riportato di seguito (in risposta alla domanda: In che misura gli investimenti sostenibili con un obiettivo ambientale sono stati allineati alla Tassonomia UE?)

In quali settori economici sono stati effettuati gli investimenti?

Sebbene il Comparto abbia promosso determinate caratteristiche ambientali e sociali attraverso i suoi criteri di inclusione ed esclusione, può aver investito in un'ampia gamma di settori - si prega di fare riferimento all'elenco seguente per una ripartizione settoriale alla fine del periodo di riferimento. Inoltre, il Gestore degli investimenti si è impegnato in maniera continuativa con alcune società partecipate sottostanti. Gli investimenti in settori e sotto-settori dell'economia che traggono ricavi dall'esplorazione, dall'estrazione mineraria, dall'estrazione, dalla produzione, dalla lavorazione, dallo stoccaggio, dalla raffinazione o dalla distribuzione, compresi il trasporto, lo stoccaggio e il commercio, di combustibili fossili, se detenuti, saranno inclusi nella tabella sottostante. Le attività liquide accessorie, i depositi presso istituti di credito, gli strumenti del mercato monetario/fondi (per la gestione delle sottoscrizioni e dei rimborsi in contanti e dei pagamenti correnti e straordinari) e i derivati per l'EPM sono esclusi dai risultati, ma sono inclusi nel denominatore per la percentuale di attività indicata sia nella tabella seguente, sia nella tabella dei principali investimenti.

Settore	Sotto-settore	% del patrimonio
---------	---------------	------------------

SERVIZI DI COMUNICAZIONE	MASS MEDIA E INTRATTENIMENTO	3,95
SERVIZI DI COMUNICAZIONE	SERVIZI DI TELECOMUNICAZIONE	2,31
BENI DI CONSUMO DISCREZIONALI	SERVIZI AI CONSUMATORI	2,12
BENI DI CONSUMO DISCREZIONALI	VENDITA AL DETTAGLIO	0,72
SETTORE FINANZIARIO	SETTORE FINANZIARIO DIVERSIFICATO	1,00
SETTORE SANITARIO	SERVIZI E ATTREZZATURE SANITARIE	1,57
SETTORE INDUSTRIALE	BENI STRUMENTALI	4,89
SETTORE INDUSTRIALE	SERVIZI COMMERCIALI E PROFESSIONALI	0,84
INFORMATICA	SEMICONDUTTORI E ATTREZZATURE PER SEMICONDUTTORI	30,18
INFORMATICA	SOFTWARE E SERVIZI	30,96
INFORMATICA	ATTREZZATURE E HARDWARE TECNOLOGICI	17,14

Le attività abilitanti consentono direttamente ad altre attività di dare un contributo sostanziale a un obiettivo ambientale.

Le attività di transizione sono attività economiche per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano livelli di emissioni di gas serra corrispondenti alle migliori prestazioni.

In quale misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla Tassonomia dell'UE?¹

I dati disponibili in relazione all'allineamento alla Tassonomia dell'UE sono, attualmente, molto limitati, in particolare per quanto concerne il gas fossile e l'energia nucleare. Prevediamo che questo dato migliorerà nel tempo, man mano che un maggior numero di imprese renderà noto il proprio allineamento e i dati saranno sempre più disponibili.

Il Comparto non ha assunto alcun impegno minimo in materia di investimenti sostenibili con obiettivi ambientali allineati alla Tassonomia dell'UE.

Pertanto, il documento informativo precontrattuale del Comparto indica come 0% l'entità degli investimenti sostenibili mirati con un obiettivo ambientale allineato alla Tassonomia dell'UE. Qualsiasi allineamento delineato di seguito è un sottoprodotto del quadro del Comparto che considera gli investimenti che hanno caratteristiche ambientali e/o sociali e gli investimenti sostenibili (come definiti dall'SFDR).

I grafici seguenti illustrano l'effettiva entità degli investimenti sostenibili con un obiettivo ambientale allineato alla Tassonomia dell'UE, come misurata alla fine del periodo di riferimento.

- ***Il prodotto finanziario ha investito in attività legate al gas fossile e/o all'energia nucleare conformemente alla Tassonomia dell'UE?***

Sì

In gas fossile

In energia nucleare

No

Le attività allineate alla Tassonomia sono espresse come una quota di:

- il volume d'affari riflette la "ecologicità" dell'impresa partecipata oggi.
- le spese in conto capitale (capex) mostrano gli investimenti verdi effettuati dalle imprese partecipate, rilevanti

I grafici che seguono mostrano in verde la percentuale di investimenti che erano allineati alla Tassonomia dell'UE. Poiché non esiste una metodologia adeguata per determinare l'allineamento delle obbligazioni sovrane* alla Tassonomia, il primo grafico mostra l'allineamento alla Tassonomia in relazione a tutti gli investimenti del prodotto finanziario comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla Tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

per la transizione verso un'economia verde.
- le **spese operative** (opex) riflettono le attività operative verdi delle imprese partecipate.

Questo grafico rappresenta 3% dell'investimento totale.

*Ai fini di questi grafici, le 'obbligazioni sovrane' comprendono tutte le esposizioni sovrane.

¹ Le attività legate al gas fossile e/o al nucleare saranno conformi alla Tassonomia dell'UE solo se contribuiranno a limitare i cambiamenti climatici ("mitigazione dei cambiamenti climatici") e non danneggeranno in modo significativo alcun obiettivo della Tassonomia dell'UE - si veda la nota esplicativa sul margine sinistro. I criteri completi per le attività economiche relative al gas fossile e all'energia nucleare conformi alla Tassonomia UE sono stabiliti nel Regolamento Delegato (UE) 2022/1214 della Commissione.

● Qual era la quota degli investimenti effettuati in attività transitorie e abilitanti?

A seguito di quanto suddetto, il Comparto non ha assunto alcun impegno minimo di effettuare investimenti allineati alla Tassonomia UE - comprese le attività di Transizione e Abilitazione. Qualsiasi allineamento delineato di seguito è un sottoprodotto del quadro del Comparto che considera gli investimenti che hanno caratteristiche ambientali e/o sociali positive e gli investimenti sostenibili.

La quota calcolata delle attività di transizione rappresenta il 0,00% e la quota calcolata delle attività abilitanti rappresenta l' 1,52%, alla fine del periodo di riferimento.

● Qual è l'esito del raffronto della percentuale di investimenti allineati alla tassonomia dell'UE rispetto ai precedenti periodi di riferimento?

Non pertinente

 sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili conformemente al regolamento (UE) 2020/852.

Qual era la quota di investimenti sostenibili con un obiettivo ambientale che non erano allineati alla Tassonomia dell'UE?

La quota di investimenti sostenibili con un obiettivo ambientale non allineati alla Tassonomia dell'UE era del 52,87% del patrimonio alla fine del periodo di riferimento.

Qual era la quota di investimenti socialmente sostenibili?

La quota di investimenti socialmente sostenibili era pari al 18,83% del patrimonio alla fine del periodo di riferimento.

Quali investimenti erano compresi nella categoria “altri”, qual era il loro scopo ed esistevano garanzie minime di salvaguardia ambientale o sociale?

Il 13,80% degli attivi in investimenti “altri” è costituito da società che non soddisfano i criteri descritti in risposta alla domanda precedente, intitolata “Qual è stata la prestazione degli indicatori di sostenibilità?” per essere qualificate come imprese che presentano caratteristiche ambientali o sociali positive. Sono investimenti a fini di diversificazione. Gli asset liquidi accessori, i depositi presso gli istituti di credito, gli strumenti/fondi del mercato monetario (per la gestione delle sottoscrizioni e dei rimborsi in contanti, nonché dei pagamenti correnti ed eccezionali) e i derivati per l'EPM non sono inclusi nella % di asset riportata nel diagramma di ripartizione degli asset di cui sopra, incluso sotto la voce “altri”. Queste partecipazioni fluttuano a seconda dei flussi di investimento e sono accessorie alla politica di investimento con un impatto minimo o nullo sulle operazioni di investimento.

Tutti gli investimenti, compresi quelli "altri", sono stati soggetti alle seguenti salvaguardie/principi minimi ESG:

- Le salvaguardie minime come delineate dall'Articolo 18 del Regolamento sulla Tassonomia dell'UE (compreso l'allineamento con le Linee guida dell'OCSE per le imprese multinazionali e i Principi guida delle Nazioni Unite su imprese e diritti umani), come implementate dal Gestore degli Investimenti.
- Applicazione di prassi di buona governance (queste includono buone strutture di gestione, relazioni con il personale dipendente, remunerazione del personale e conformità fiscale), come implementate dal Gestore degli Investimenti.
- Conformità al principio “Non arrecare danno significativo”, come prescritto dalla definizione di investimento sostenibile nell'SFDR dell'UE.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

I seguenti elementi vincolanti della strategia d'investimento sono stati applicati durante il periodo di riferimento per selezionare gli investimenti al fine di conseguire ciascuna delle caratteristiche ambientali o sociali:

- L'obbligo di investire almeno il 51% del patrimonio in imprese con caratteristiche ambientali e/o sociali positive.
- Lo screening basato su valori e norme per implementare le esclusioni complete in relazione agli emittenti che sono impegnati in determinate attività, come la produzione di armi controverse, e l'applicazione di soglie percentuali massime di ricavi, produzione o distribuzione ad altri emittenti, come quelli che operano nei settori del carbone termico e del tabacco. Per ulteriori informazioni, fare riferimento alla politica di esclusione del Comparto su www.jpmorganassetmanagement.lu, cercando il proprio Comparto specifico e accedendo alla sezione informazioni ESG.
- L'obbligo per tutte le imprese in portafoglio di seguire le prassi di buona governance.

Il Comparto si è inoltre impegnato a investire almeno l' 10% del patrimonio in investimenti sostenibili.

Ulteriori informazioni sull'impegno sono disponibili nella risposta alla domanda “Come sono stati presi in considerazione gli indicatori degli impatti negativi sui fattori di sostenibilità?”

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento sostenibile?

Non pertinente

- ***In quale modo l'indice di riferimento differiva da un indice generale di mercato?***

Non pertinente

I benchmark di riferimento sono indici per misurare se il prodotto finanziario raggiunge le caratteristiche ambientali o sociali che promuove.

- ***Qual è stata la prestazione di questo prodotto finanziario in relazione agli indicatori di sostenibilità per determinare l'allineamento dell'indice di riferimento con le caratteristiche ambientali o sociali promosse?***

Non pertinente

- ***Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?***

Non pertinente

- ***Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice generale di mercato?***

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: **The Jupiter Global Fund – Jupiter European Growth**

Legal entity identifier: **549300G82NGMSULN1N18**

Environmental and/or social characteristics

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

It made **sustainable investments with an environmental objective:**

%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** %

No

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **NA** % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and social characteristics promoted by the Fund were: (i) the transition to a low carbon economy in seeking to promote the goal of net zero greenhouse gas emissions by 2050 or sooner; and (ii) the upholding of responsibilities to people and planet in seeking compliance with the UN Global Compact Principles.

The environmental characteristic promoted by the Fund was pursued through the targeting of issuers achieving net zero greenhouse gas emissions by 2050 or sooner. Industry guidance through the Net Zero Investment Framework (NZIF) was utilised to assess a company's status under the net zero pathway. The long-term 2050 goal is subject to short and medium-term milestones and incorporates engagement protocols for companies that the Investment Manager classifies as high impact based on the NZIF's material sector guidance.

The social characteristic promoted by the Fund was pursued through seeking compliance with the UN Global Compact Principles.

The Investment Manager's investment due diligence process included an initial evaluation and ongoing monitoring of issuers' compliance with the UN Global Compact Principles using third party ESG risk data.

Where an issuer was determined by the Investment Manager as having breached the UN Global Compact Principles, the issuer was not counted as a holding that was deemed to be promoting the social characteristic of the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

It has been assessed that 82% of the portfolio is on a Net zero pathway according to the stated methodology summarised above and therefore is aligned with the promotion of the E characteristic.

It has been assessed that 100% of the portfolio is in compliance with the UNGC principles therefore is aligned with the promotion of the S characteristic.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Not applicable as the Fund has not committed to make sustainable investments.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Not applicable as the Fund has not committed to make sustainable investments.

● **How were the indicators for adverse impacts on sustainability factors taken into account?**

Not applicable

● **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Not applicable

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors were considered as an additional consideration in the Investment Manager’s portfolio construction process. A list of the key principle adverse impact indicators considered by the Fund can be found on the website: <https://www.jupiteram.com/board-and-governance/#sustainable-finance-disclosures>.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is as at 30 September 2022.

What were the top investments of this financial product?

Largest Investments	Sector	% of Net Assets	Country
RELX plc	Financial services	6.93	United Kingdom
Novo-Nordisk A/S	Pharmaceuticals	5.96	Denmark
Pernod-Ricard SA	Beverages	5.51	France
Edenred	Commercial services	5.37	France
Dassault Systemes SE	Software	5.21	France
Amadeus IT Holding SA - A	Software	4.88	Spain
Louis Vuitton Moet Hennessy SE	Holding companies	4.41	France
Wolters Kluwer NV	Media	3.88	Netherlands
ASML Holding NV	Semiconductors	3.84	Netherlands
FincoBank Banca Finco SpA	Banks	3.58	Italy
IMCD Group NV	Chemicals	3.19	Netherlands
Experian plc	Financial services	3.12	Jersey - Channel Islands
Lonza Group AG	Chemicals	2.81	Switzerland
AllFunds Group plc	Commercial services	2.61	United Kingdom
Adidas AG	Apparel	2.46	Germany
		63.76	

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

Not applicable as the Fund has not committed to make sustainable Investments.

● What was the asset allocation?

82% of the Fund's investment portfolio was aligned with both of the environmental and social characteristics promoted by the Fund.

The remaining portion of the Fund's investment portfolio ("#2Other") consisted of investments which were not aligned to the ESG Characteristics promoted by the Fund, investments for which relevant data was not available and/or deposits at sight, deposits, money market instruments and money market Funds held on an ancillary basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Taxonomy-aligned activities are expressed as a share of:

turnover reflects the “greenness” of investee companies today.

capital expenditure (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.

operational expenditure (OpEx) reflects the green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **In which economic sectors were the investments made?**

Refer to table above in top investments

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Please note that the Fund did not make a commitment to make EU Taxonomy aligned investments. Therefore, the EU Taxonomy alignment figures reported below are an incidental result of the Fund’s investment strategy and promotion of environmental and social characteristics.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The share of investments made in transitional activities was 0%. The share of investments made in enabling activities was 1.35%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable as the Fund has not committed to make sustainable Investments.

What was the share of socially sustainable investments?

Not applicable as the Fund has not committed to make socially sustainable Investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

All of the Fund’s investments were held with a view to achieving the Fund’s investment objective, including any that were not aligned to the ESG Characteristics promoted by the Fund.

Sustainability risks were integrated into the investment decision making process. The active ownership approach considered material ESG factors which strengthened the assessment of the risks and opportunities that drive returns.

The Investment Manager took sustainability risks (defined in SFDR as an environmental, social or governance event or condition that, if it occurs, could cause a negative material impact on the value of the investment) and ESG Characteristics into account as part of its selection process.

In addition to investments made by the Fund in pursuit of its investment strategy, the Fund may also have held deposit at sight, deposits, money market instruments and money market Funds on an ancillary basis in order to achieve its investment goals, for treasury purposes and in case of unfavourable market conditions. No minimum environmental or social safeguards were applied in relation to these holdings.

This category may also have included investments for which relevant data was not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Investment Manager conducted detailed assessments of underlying investment issuers progress and trajectory along the net zero alignment pathway based on the NZIF guidance. The Investment Manager utilised the detailed understanding gathered from the assessments to establish engagement priorities linked to the transition to a low carbon economy for each issuer.

The Investment Manager also conducted an engagement prioritisation assessment at the portfolio level. The prioritisation assessment was not solely linked to high impact or heavy emitting companies because these companies typically already have in place more progressive net zero strategies, policies and disclosures.

Given the systematic nature of the environmental characteristic of the transition to a low carbon economy that is promoted by the Fund, the Investment Manager deemed it necessary to engage more broadly at an industry level to tackle these macro challenges. The Investment Manager engaged with investor bodies and industry peers to consider and discuss climate policies targeted at investors.

How did this financial product perform compared to the reference benchmark?

Not applicable

● How does the reference benchmark differ from a broad market index?

Not applicable

● How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable

● How did this financial product perform compared with the reference benchmark?

Not applicable

● How did this financial product perform compared with the broad market index?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name: Echiquier Arty SRI

Legal entity identifier: 969500I9FE435QANAU40

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input type="radio"/> <input type="checkbox"/> Yes	<input type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 40% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund's responsible investment strategy is based on ESG criteria highlighting the environmental and/or social characteristics promoted by this financial product, such as reducing the environmental impact of companies in terms of air pollution, protecting biodiversity, ensuring that companies take environmental risks into account, improving working conditions, protecting employees and combating discrimination.

All portfolio positions have benefited from extra-financial analysis

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The sustainable investment objectives partly pursued by the financial product were to contribute to achieving the United Nations' Sustainable Development Goals (SDGs) (including combating climate change, protecting biodiversity and improving access to healthcare worldwide). To assess this positive contribution to society and the environment, the financial product uses the three impact scores developed in-house by La Financière de l'Échiquier (ODD Score (focus on 9 ODD), Climate & Biodiversity Maturity Score (MCB), AAAA Score (focusing on access to health)) and an external score called "MSCI ODD Score" built from MSCI ESG Research data. If the issuer scores sufficiently well on one of these four scores, it will be considered to be contributing to an environmental or social objective through its economic activity. Finally, in the event that none of the four above-mentioned impact scores is available for a company (notably in the case of a company not covered by MSCI), an analysis of its contribution to the SDGs will be carried out internally using the "Score ODD ID" internal score (broader than the SDG Score, as it focuses on 17 SDGs instead of 9).

In practice, this financial product has achieved 75% sustainable investment.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that the financial product's sustainable investments do not cause significant harm to an environmental or social objective (DNSH), La Financière de l'Échiquier has applied a "DNSH" procedure for products with a sustainable investment objective, including:

- Sectoral and normative exclusions (recalled below) that reduce exposure to social and environmental harm: tobacco, coal, recreational cannabis, controversial armaments.

— — — *How were the indicators for adverse impacts on sustainability factors taken into account?*

With regard to negative impacts, this financial product has taken into account 14 mandatory indicators from Table 1 of Annex I of the European Commission's Delegated Regulation (EU) 2022/1288, and also includes 2 additional indicators (investments in companies with no carbon reduction initiatives and investments in issuers with no policy to prevent work-related accidents). They are taken into account in the various aspects of the management company's responsible investment approach: through the exclusion policy (sectoral and normative), the ESG analysis methodology, the various Impact scores, and the measurement and management of ESG performance indicators (carbon intensity, ESG controversy score) as shown below:

CLIMATE & ENVIRONMENT PILLAR

- Scope 1, 2 and 3 greenhouse gas emissions by measuring and managing CO2 emissions and equivalents for all scopes (1, 2, 3),
- Carbon footprint, measured and managed using the Carbon Impact Ratio methodology (ratio of emissions saved to emissions induced),
- Carbon intensity of invested companies (in teqCO2) calculated according to the intensity of induced emissions (WACI),
- Exposure of invested companies to fossil fuels taken into account in ESG analysis,
- The proportion of non-renewable energy consumption and production taken into account in ESG analysis,
- Impact on biodiversity through ESG analysis, Climate and Biodiversity Maturity Score and Biodiversity Footprint measurement,
- Impact on biodiversity through ESG analysis and measurement of biodiversity footprint,
- Tons of priority substances discharged into water taken into account in ESG analysis
- Tons of hazardous waste included in ESG analysis,
- Investments in companies without carbon reduction initiatives in the ESG analysis (additional indicator).

SOCIAL PILLAR, HUMAN RESOURCES AND RESPECT FOR RIGHTS INCLUDING HUMAN RIGHTS

- The proportion of issuers involved in violations of the UN Global Compact or OECD Guidelines, through MSCI ESG Research's normative exclusion policy and controversy monitoring,
- The proportion of investments in issuers without a compliance process and mechanism to monitor compliance with the principles of the United Nations Global Compact or the OECD Guidelines, through MSCI ESG Research's normative exclusion policy and controversy monitoring,
- The gender pay gap taken into account in ESG analysis,
- Diversity on company boards in terms of % of women, depending on the different legislation in different countries and the level of proactivity of companies in this area, taken into account in ESG analysis,
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, etc.) taken into account in the sectoral exclusion policy,
- Investments in issuers with no workplace accident prevention policy taken into account in the ESG analysis (additional indicator).

— — — *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Thanks to our normative exclusion policy and MSCI ESG Research's controversy monitoring, which includes the exclusion of the most controversial companies (including those guilty of violating the United Nations Global Compact), we have ensured that the following two IAPs are taken into account:

- The proportion of issuers involved in breaches of the UN Global Compact or the OECD Guidelines,

- The proportion of investments in issuers with no compliance process or mechanism for monitoring compliance with the principles of the United Nations Global Compact or the OECD Guidelines.

How did this financial product consider principal adverse impacts on sustainability factors?

With regard to negative impacts, this financial product has taken into account 14 mandatory indicators from Table 1 of Annex I of the European Commission's Delegated Regulation (EU) 2022/1288, and also includes the following 2 additional indicators: investments in companies with no carbon reduction initiatives, and investments in issuers with no policy to prevent work-related accidents. They are taken into account in the various aspects of the management company's

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

responsible investment approach: through the exclusion policy (sectoral and normative), the ESG analysis methodology, the various Impact scores, and the measurement and management of ESG performance indicators (carbon intensity, ESG controversy score). Details of the indicators taken into account are given above.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:

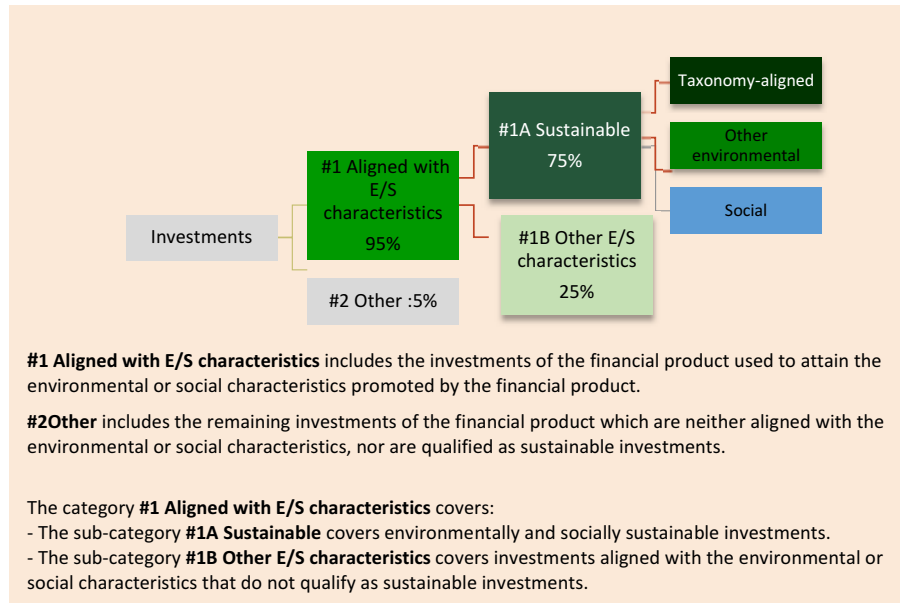

Major investments at 03/31/2023	Economic sectors	% of assets	Country

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **In which economic sectors were the investments made?**

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

Yes:

 In fossil gas In nuclear energy

 No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

- **What was the share of investments made in transitional and enabling activities?**

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

Not applicable

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

To date, the methodology used to calculate sustainable investments does not allow us to precisely identify sustainable investments that meet only environmental objectives.

What was the share of socially sustainable investments?

To date, the methodology used to calculate sustainable investments does not make it possible to precisely identify sustainable investments that meet only social objectives.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The "non-sustainable" category was made up of corporate bonds that do not meet our sustainable investment criteria, as well as cash. The same sectoral and normative exclusion policy applies to all assets in the portfolio.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The "non-sustainable" category was made up of corporate bonds that do not meet our sustainable investment criteria, as well as cash. The same sectoral and normative exclusion policy applies to all assets in the portfolio.

How did this financial product perform compared to the reference benchmark?

The Fund does not have a sustainable investment objective.

- **How does the reference benchmark differ from a broad market index?**

Not applicable

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

Not applicable

- **How did this financial product perform compared with the reference benchmark?**

Not applicable

- **How did this financial product perform compared with the broad market index?**

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Echiquier Major SRI Growth Europe **Legal entity identifier:** 969500YB517DJ067N354

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
●● <input type="checkbox"/> Yes	● ● <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 40% of sustainable investments <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund's responsible investment strategy is based on ESG criteria highlighting the environmental and/or social characteristics promoted by this financial product, such as reducing the environmental impact of companies in terms of air pollution, protecting biodiversity, ensuring that companies take environmental risks into account, improving working conditions, protecting employees and combating discrimination.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The sustainable investment objectives partly pursued by the financial product were to contribute to achieving the United Nations' Sustainable Development Goals (SDGs) (including combating climate change, protecting biodiversity and improving access to healthcare worldwide). To assess this positive contribution to society and the environment, the financial product uses the three impact scores developed in-house by La Financière de l'Échiquier (ODD Score (focus on 9 ODD), Climate & Biodiversity Maturity Score (MCB), AAAA Score (focusing on access to health)) and an external score called "MSCI ODD Score" built from MSCI ESG Research data. If the issuer scores sufficiently well on one of these four scores, it will be considered to be contributing to an environmental or social objective through its economic activity. Finally, in the event that none of the four above-mentioned impact scores is available for a company (notably in the case of a company not covered by MSCI), an analysis of its contribution to the SDGs will be carried out internally using the "Score ODD ID" internal score (broader than the SDG Score, as it focuses on 17 SDGs instead of 9).

In practice, this financial product has achieved 85% sustainable investment.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that the financial product's sustainable investments do not cause significant harm to an environmental or social objective (DNSH), La Financière de l'Échiquier has applied a "DNSH" procedure for products with a sustainable investment objective, including:

- Sectoral and normative exclusions (recalled below) that reduce exposure to social and environmental harm: tobacco, coal, recreational cannabis, controversial armaments.

— — — *How were the indicators for adverse impacts on sustainability factors taken into account?*

With regard to negative impacts, this financial product has taken into account 14 mandatory indicators from Table 1 of Annex I of the European Commission's Delegated Regulation (EU) 2022/1288, and also includes 2 additional indicators (investments in companies with no carbon reduction initiatives and investments in issuers with no policy to prevent work-related accidents). They are taken into account in the various aspects of the management company's responsible investment approach: through the exclusion policy (sectoral and normative), the ESG analysis methodology, the various Impact scores, and the measurement and management of ESG performance indicators (carbon intensity, ESG controversy score) as shown below:

CLIMATE & ENVIRONMENT PILLAR

- Scope 1, 2 and 3 greenhouse gas emissions by measuring and managing CO2 emissions and equivalents for all scopes (1, 2, 3),
- Carbon footprint, measured and managed using the Carbon Impact Ratio methodology (ratio of emissions saved to emissions induced),
- Carbon intensity of invested companies (in teqCO2) calculated according to the intensity of induced emissions (WACI),
- Exposure of invested companies to fossil fuels taken into account in ESG analysis,
- The proportion of non-renewable energy consumption and production taken into account in ESG analysis,
- Impact on biodiversity through ESG analysis, Climate and Biodiversity Maturity Score and Biodiversity Footprint measurement,
- Impact on biodiversity through ESG analysis and measurement of biodiversity footprint,
- Tons of priority substances discharged into water taken into account in ESG analysis
- Tons of hazardous waste included in ESG analysis,
- Investments in companies without carbon reduction initiatives in the ESG analysis (additional indicator).

SOCIAL PILLAR, HUMAN RESOURCES AND RESPECT FOR RIGHTS INCLUDING HUMAN RIGHTS

- The proportion of issuers involved in violations of the UN Global Compact or OECD Guidelines, through MSCI ESG Research's normative exclusion policy and controversy monitoring,
- The proportion of investments in issuers without a compliance process and mechanism to monitor compliance with the principles of the United Nations Global Compact or the OECD Guidelines, through MSCI ESG Research's normative exclusion policy and controversy monitoring,
- The gender pay gap taken into account in ESG analysis,
- Diversity on company boards in terms of % of women, depending on the different legislation in different countries and the level of proactivity of companies in this area, taken into account in ESG analysis,
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, etc.) taken into account in the sectoral exclusion policy,
- Investments in issuers with no workplace accident prevention policy taken into account in the ESG analysis (additional indicator).

— — — *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Thanks to our normative exclusion policy and MSCI ESG Research's controversy monitoring, which includes the exclusion of the most controversial companies (including those guilty of violating the United Nations Global Compact), we have ensured that the following two IAPs are taken into account:

- The proportion of issuers involved in breaches of the UN Global Compact or the OECD Guidelines,

- The proportion of investments in issuers with no compliance process or mechanism for monitoring compliance with the principles of the United Nations Global Compact or the OECD Guidelines.

How did this financial product consider principal adverse impacts on sustainability factors?

With regard to negative impacts, this financial product has taken into account 14 mandatory indicators from Table 1 of Annex I of the European Commission's Delegated Regulation (EU) 2022/1288, and also includes the following 2 additional indicators: investments in companies with no carbon reduction initiatives, and investments in issuers with no policy to prevent work-related accidents. Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

ANNEX IV

Model periodic information for financial products referred to in Article 8(1), (2) and (2a) of Regulation (EU) 2019/2088 and in the first paragraph of Article 6 of Regulation (EU) 2020/852

Product Name: **Echiquier Patrimoine**

Legal Entity ID: 969500U9Q44OMJ82T630

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
●● <input type="checkbox"/> Yes	● <input type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 10 % of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent have the environmental and/or social characteristics promoted by this financial product been achieved?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The responsible investment strategy is based on ESG criteria highlighting the environmental and/or social characteristics promoted by this financial product, such as the reduction of the environmental impact of companies in terms of air pollution, the protection of biodiversity, the consideration by companies of environmental risks... or the improvement of working conditions, the protection of employees, the fight against discrimination...

All the positions in the portfolio have benefited from an extra financial analysis (excluding SPAC).

● **How did the sustainability indicators perform?**

Indicators	31/03/2023

**The calculation of these indicators can be based on estimated data*

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The sustainable investment objectives of the financial product were to contribute to the achievement of the United Nations Sustainable Development Goals (including the fight against climate change, the protection of biodiversity and the improvement of access to health in the world). To assess this positive contribution to society and the environment, the financial product uses three impact scores developed internally by La Financière de l'Échiquier (SDG Score (focus on 9 SDGs), Climate & Biodiversity Maturity Score (MCB), AAAA Score (focus on access to health)) and an external score called the "MSCI SDG Score" built from MSCI ESG Research data. If the issuer has a sufficient score on one of these four scores, it will be

considered that its economic activity contributes to an environmental or social objective. Finally, in the event that none of the four impact scores mentioned above is available for a company (notably in the case of a company not covered by MSCI), an analysis of the contribution to the SDGs will be carried out internally through the internal "SDG ID Score" (broader than the SDG Score because it focuses on 17 SDGs instead of 9).

In practice, this financial product has achieved 75% of sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

To ensure that the financial product's sustainable investments do not cause significant harm to an environmental or social objective (DNSH), La Financière de l'Echiquier has applied a "DNSH" procedure for products with a sustainable investment objective, including:

- Sectoral and normative exclusions (recalled below) that reduce its exposure to social and environmental harms: tobacco, coal, recreational cannabis, controversial armaments.

How were the indicators for adverse impacts on sustainability factors taken into account?

Regarding negative impacts, this financial product has taken into account 14 mandatory indicators from Table 1 of Annex I of the European Commission's Delegated Regulation (EU) 2022/1288, and also includes 2 additional indicators (investments in companies without carbon reduction initiatives and investments in issuers without a policy to prevent work accidents). These indicators are taken into account in the various aspects of the management company's responsible investment approach: through the exclusion policy (sectoral and normative), the ESG analysis methodology, the various Impact scores, and the measurement and monitoring of ESG performance indicators (carbon intensity, ESG controversy score) as follows

CLIMATE & ENVIRONMENT PILLAR

- Scope 1, 2 and 3 greenhouse gas emissions by measuring and monitoring CO2 emissions and equivalents for all scopes (1, 2, 3),
- The carbon footprint, measured and monitored using the Carbon Impact Ratio methodology (ratio of saved emissions to induced emissions),
- The carbon intensity of the invested companies (in tCO2) calculated according to the intensity of the induced emissions (WACI),
- The exposure of invested companies to fossil fuels is taken into account in the ESG analysis,
- The share of non-renewable energy consumption and production taken into account in the ESG analysis,
- The impact on biodiversity through ESG analysis, the Climate and Biodiversity Maturity Score and the measurement of the biodiversity footprint,
- The impact on biodiversity through ESG analysis and the measurement of the biodiversity footprint,
- Tons of priority substances discharged into water considered in ESG analysis
- Tons of hazardous waste considered in the ESG analysis,
- Investments in companies without carbon reduction initiatives in the ESG analysis (additional indicator).

SOCIAL PILLAR, HUMAN RESOURCES AND RESPECT FOR RIGHTS INCLUDING HUMAN RIGHTS

- The share of issuers involved in violations of the UN Global Compact or the OECD Guidelines, through MSCI ESG Research's normative exclusion policy and controversy monitoring,
- The proportion of investments in issuers without a compliance process and mechanism to monitor compliance with the principles of the UN Global Compact or the OECD Guidelines, through MSCI ESG Research's normative exclusion policy and controversy monitoring,
- The gender pay gap taken into account in the ESG analysis,
- Diversity on company boards in terms of % of women according to the different legislation between countries and the level of voluntarism and proactivity of companies on the subject, taken into account in the ESG analysis,
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, etc.) taken into account in the sectoral exclusion policy,
- Investments in issuers without a policy of prevention of occupational accidents taken into account in the ESG analysis (additional indicator).

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and

Human Rights? Details:

Through our normative exclusion policy and MSCI ESG Research's controversy monitoring, including the exclusion of the most controversial companies (including companies guilty of violating the UN Global Compact), we have ensured that the following two PAIs are included:

- The share of issuers involved in violations of the UN Global Compact or the OECD Guidelines,
- The proportion of investments in issuers without a compliance process and mechanism to monitor compliance with the UN Global Compact or OECD Guidelines.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product address key negative impacts on sustainability factors?

Regarding negative impacts, this financial product has taken into account 14 mandatory indicators from Table 1 of Annex I of the European Commission's Delegated Regulation (EU) 2022/1288, and also includes the following two additional indicators: investments in companies without carbon reduction initiatives and investments in issuers without a policy to prevent work-related accidents. These indicators are taken into account in the various aspects of the management company's responsible investment approach: through the exclusion policy (sectoral and normative), the ESG analysis methodology, the various Impact scores, and the measurement and monitoring of ESG performance indicators (carbon intensity, ESG controversy score). The details of the indicators taken into account are mentioned above.

What were the main investments in this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is:

Largest investments as of 31/03/2023	Economic sectors	of assets	Country
Cash in Euro	-	8,80%	-
BFCM 3% T2 05/2024	Financial products	2,20%	France

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

● **What was the asset allocation?**

● **In which economic sectors were the investments made?**

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules. **Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU taxonomy?

Has the financial product invested in fossil gas and/or nuclear energy activities that comply with the EU taxonomy¹ ?

Yes :

In fossil gas

In nuclear energy

No

¹ Fossil gas and/or nuclear activities will only be consistent with the EU taxonomy if they contribute to limiting climate change ("mitigation") and do not cause significant harm to any objective of the EU taxonomy - see explanatory note in the left margin. The set of criteria for economic activities in the fossil gas and nuclear energy sectors that are consistent with the EU taxonomy are defined in Commission Delegated Regulation (EU) 2022/1214.

In the absence of data reported by companies, we do not produce data on this indicator.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) shows the green investments made by investee companies, e.g. relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purposes of these charts, "sovereign bonds" include all sovereign exposures.

How much of the investment was in transitional and enabling activities?

Not applicable

What is the percentage of investments aligned with the EU taxonomy compared to previous reporting periods?

Not applicable

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

To date, the methodology for calculating sustainable investments does not allow for the precise identification of sustainable investments that meet only environmental objectives.

What was the share of socially sustainable investments?

To date, the methodology for calculating sustainable investments does not allow for the precise identification of sustainable investments that meet only social objectives.

What investments were included in the "other" category, what was their purpose, and were there any minimum environmental or social safeguards?

The "non-sustainable" category was composed of stocks of companies that do not meet our sustainable investment criteria, as well as cash. The same sector and normative exclusion policy applies to all portfolio assets.

What actions were taken to meet environmental and/or social characteristics during the reporting period?

The "non-sustainable" category was composed of stocks of companies that do not meet our sustainable investment criteria, as well as cash. The same sector and normative exclusion policy applies to all portfolio assets.

How has this financial product performed against the benchmark?

The UCI does not have a sustainable investment objective.

How does the benchmark differ from a broad market index?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

Not applicable

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable

How has this financial product performed against the benchmark?

Not applicable

How has this financial product performed against the broad market index?

Not applicable

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: LAZARD CREDIT FI SRI

Legal entity identifier: 969500FR3TNUVM8YL814

Environmental and/or social characteristics

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

It made **sustainable investments with an environmental objective:**

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a minimum of **sustainable investments with a social objective**

No

It promoted **Environmental/Social (E/S) characteristics** and

while it did not have as its objective a sustainable investment, it had a proportion of 50,27% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

In implementing its investment strategy, security analysis, and ESG integration process described below, the portfolio promotes the following environmental characteristics:

Environmental policy:

- Integration by companies of environmental factors appropriate to the sector, geographic location and any other relevant material factor
- Development of an environmental management strategy and system
- Development of a climate strategy

Controlling environmental impacts:

- Limiting and adapting to global warming
- Responsible water and waste management
- Preservation of biodiversity

Managing the environmental impact of products and services:

- Ecodesign of products and services
- Environmental innovation

Moreover, the portfolio promotes the following social characteristics:

Respect for human rights:

- Prevention of situations of human rights violations
- Respect for the right to safety and security of persons
- Privacy and data protection

Human resources management:

- Constructive social dialogue
- Training and career management conducive to human development
- Promotion of diversity
- Health, safety and well-being at work

Value chain management:

- Responsible supply chain management
- Product quality, safety and traceability

This product does not use a specific index to determine its alignment with the environmental and social characteristics it promotes.

● ***How did the sustainability indicators perform?***

The achievement of the environmental and social characteristics promoted by this product is measured by sustainability indicators at several levels:

In terms of valuation in the internal analysis model:

The ESG analysis of directly held securities is based on a proprietary model that relies on an internal ESG grid. Based on the various data provided by our ESG partners (non-financial analysis agencies, external service providers, etc.), the annual reports of the companies and direct exchanges with them, the analysts responsible for monitoring each stock draw up an internal ESG rating.

This rating is based on both a quantitative (energy intensity, staff turnover rate, board independence rate, etc.) and qualitative approach (solidity of environmental policy, employment strategy, competence of directors, etc.).

Each E, S and G pillar is rated from 1 to 5 based on a minimum of ten relevant key indicators per dimension.

These internal ESG ratings are built into the valuation models through the Beta used to define the weighted average cost of capital (WACC) for equity management and to the issuer selection process and the determination of issuers' weight in the portfolio for bond management. In terms of controlling the elements of the investment strategy with an external data provider: In addition, to confirm the robustness of the internal model, the analysts-managers in charge of management compare the portfolio's average ESG rating to that of its reference ESG universe using Moody's ESG Solutions ratings (ratings between 0 and 100).

Evolution of the ESG score

The portfolio's ESG reference universe is:

The Eurozone universe provided by our ESG partners, equi-weighted, restricted to the following sectors: Diversified Banks, Insurance, Financial Services General, Retail and Specialized Banks

ESG score by pillar

- ***...and compared to previous periods?***

Not applicable

- ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

The definition of sustainable investment within the meaning of the SFDR is based on the selection of indicators that show a substantial contribution to one or more environmental and social objectives, which do not harm any of the adverse impact indicators and ensures good governance principles.

The environmental indicators used are as follows:

- Carbon footprint (PAI 2)
- Carbon intensity (PAI 3)
- Implied temperature rise (ITR)
- Number of “low-carbon” patents held

The social indicators used are as follows:

- % women in executive management
- Number of hours of training for employees
- Benefits coverage
- Diversity policies by management

A sustainable investment objective is attained if the substantial contribution of the corresponding indicator is validated, the other indicators are not prejudiced, and good governance principles are complied with. Substantial contribution is measured by the application of thresholds for each of the above indicators.

The table below presents the rules (targets) set for each indicator as well as the result obtained over the past period. The result is the average share of the portfolio invested in companies meeting these criteria, calculated on a quarterly basis. The average share is calculated according to the average positions observed over the past period, coupled with the non-financial data at the end of the period.

	Rule	Average share of the portfolio
Carbon footprint in €m	Included in the lowest 20% of the sector	2,59%
GHG intensity	Included in the lowest 20% of the sector	5,40%
Implied temperature rise in 2100	≤2°C	36,07%
Number of low-carbon patents	Included in the top 20% of the universe	-
% of women in executive management	Included in the top 20% of the universe	-
Number of hours of training for employees	Included in the top 20% of the universe	0,99%
Benefits coverage	See sustainable investment presentation www.lazardfreresgestion.fr	5,11 %
Diversity policies by management	See presentation www.lazardfreresgestion.fr	16,72%

- ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

The absence of significant harm is assessed on the basis of all the PAI indicators listed in Table 1 of Annex I to Delegated Regulation (EU) 2022/1288 of 6 April 2022. In the event of insufficient coverage of the investment universe for certain indicators, alternative criteria may be used on an exceptional basis (such as for PAI 12, use of an

indicator on management attention to diversity). Using alternative criteria is subject to the independent control of the Risks and Compliance department. Alternative indicators are also presented on the Lazard Frères Gestion website under the heading “Sustainable investment methodology”.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Indicators of the principal adverse sustainability impacts (PAI) are considered at two levels.

Firstly, they are integrated into the internal analysis of each security monitored, carried out by our analyst-managers in the internal ESG analysis grids.

In addition, they are used to assess the share of sustainable investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Compliance with minimum labour and human rights safeguards (OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights) and the eight fundamental conventions of the International Labour Organization is a key indicator for verifying that companies in which investments are made apply good governance practices.

We therefore check whether the company applies a labour rights due diligence policy in accordance with the eight fundamental conventions of the International Labour Organization (PAI 10) as part of our DNSH process. We also ensure that the investments made apply good governance practices, by monitoring a governance rating from a data provider and the internal rating on the Governance pillar.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The proprietary model for ESG analysis of portfolio companies takes into account all indicators related to companies' principal adverse impacts (PAI) in terms of sustainability.

These indicators are integrated into the internal grids used to establish a security's ESG rating, which is taken into account in the valuation models through the Beta used to define the weighted average cost of capital for equity management and in the process of selecting issuers and determining their portfolio weight for bond management.

In addition, as stated above, all of the PAI indicators listed in Table 1 of Annex I of the Regulatory Technical Standards of the SFDR are taken into account in the definition of sustainable investment.

What were the top investments of this financial product?

Largest investments	Sector	Percentage of assets	Country
1. LAZARD EURO MONEY MARKET	UCI	3,67%	France
2. FORTIS BKTV07-191272 CV	Unknown sector	2,87%	United States

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/04/2022 to 31/03/2023

Largest investments	Sector	Percentage of assets	Country
3. FONDIARIASAI 5.75% 31-12-99	Financial and insurance activities	2,48%	Italy
4. RAIFFEISEN BANK INTL AG 2.875% 18-06-32	Financial and insurance activities	2,02%	Austria
5. DEUTSCHE BANK 4.296% 05/28	Financial and insurance activities	1,81%	Germany

14. UNICAJA BAN 2.875% 13-11-29	Financial and insurance activities	1,46%	Spain
15. BBVA 6.0% PERP	Financial and insurance activities	1,46%	Spain

What was the proportion of sustainability-related investment?

- **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Details of sustainable investments	
Weight of sustainable investments in the portfolio	50,27%
Of which sustainable investments E	43,75%
Of which sustainable investments S	24,92%

An investment is considered to be sustainable if it complies with at least one of the rules presented above, while not prejudicing any of the negative impact indicators and ensuring good governance criteria. A company can therefore be considered as environmentally and socially sustainable.

- **In which economic sectors were the investments made?**

Exposure to the fossil fuel sector averaged 1,07% over the period.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today;
- **capital expenditure (CapEx)** shows the green investments made by investee companies, relevant for a transition to a green economy;
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

- ***Has the financial product invested in Taxonomy aligned activities linked to fossil fuels and/or nuclear energy?***

At the date of production of this document, Lazard Frères Gestion does not have the data needed to identify the share of activities related to Taxonomy aligned fossil fuel and/or nuclear energy sectors.

The two graphs below show in green the minimum percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The calculation of investment percentages aligned with the EU Taxonomy is based on estimated data.

● **What was the share of investments made in transitional and enabling activities?**

At the date of production of this document, Lazard Frères Gestion does not have the data needed to identify the share of transitional or enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy is 43,75%

It corresponds to all activities not aligned with the Taxonomy but respecting the environmental objectives of sustainable investment mentioned above.

What was the share of socially sustainable investments?

The share of socially sustainable investments is 24,92%.

It corresponds to all activities that achieve one or more of the social objectives of sustainable investment mentioned above.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The "other" category consists mainly of money market UCIs and cash. Over the past period, the "other" segment represented on average 9,51%.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To promote environmental and social characteristics, the following elements have been respected:

- The non-financial analysis rate

The non-financial analysis rate of the product's investments is over 90%.

This rate is expressed as a percentage of total assets.

Over the past period, the non-financial analysis rate was 90,49% on average.

- The portfolio's average ESG rating

The analysts-managers ensure that the portfolio's weighted average ESG rating is higher than the average of the reference universe by using Moody's ESG Solutions non-financial rating framework (ratings between 0 and 100), after eliminating the 20% of the lowest rated securities.

In addition, the management company makes exclusions prior to investments:

- Normative exclusions related to controversial weapons (cluster munitions, anti-personnel mines, biological and chemical weapons) and violations of the UN Global Compact.
- Sector exclusions (tobacco and thermal coal).
- Geographical exclusions (tax havens on the FATF list).

For more information on the engagement and voting policy, please refer to the voting and engagement reports available at <https://www.lazardfreresgestion.fr>.

Benchmark indices are indices used to measure whether the financial product has the environmental or social characteristics it promotes.

How did this financial product perform compared to the reference benchmark?

Not applicable.

- ***How does the reference benchmark differ from a broad market index?***

Not applicable.

FTGF Brandywine Global Fixed Income Fund

LEI entità: 549300TFZOEP7EEQG432

FRANKLIN TEMPLETON

Caratteristiche ambientali e/o sociali

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?

SÌ

- Ha effettuato **investimenti sostenibili con un obiettivo ambientale:** ____%
- in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE
- in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE
- Ha effettuato **investimenti sostenibili con un obiettivo sociale:** ____%

NO

- Ha **promosso caratteristiche ambientali/sociali (A/S)** e, pur non avendo come obiettivo un investimento sostenibile, aveva una quota minima del(lo) 0,00% di investimenti sostenibili
- con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE
- con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE
- con un obiettivo sociale
- Ha promosso caratteristiche A/S, ma **non ha effettuato alcun investimento sostenibile**

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, a condizione che tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e che l'impresa beneficiaria degli investimenti rispetti prassi di buona governance.

La **Tassonomia dell'UE** è un sistema di classificazione istituito dal Regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale Regolamento non comprende un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero non risultare allineati alla tassonomia

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Non tutte le caratteristiche ambientali e/o sociali elencate di seguito sono state promosse da ciascun investimento o dal Fondo in ogni momento.

Le caratteristiche ambientali promosse erano:

- Qualità dell'aria
- Biodiversità e aree protette (marine)
- Biodiversità e aree protette (terrestri)
- Capacità di adattamento ai cambiamenti climatici
- Esposizione al cambiamento climatico
- Sensibilità al cambiamento climatico
- Vulnerabilità al cambiamento climatico
- Emissioni di CO2 generate dal consumo di energia
- Emissioni di CO2 dovute al cambiamento di uso del suolo e alla silvicoltura
- Politica del carbonio - Sovrana
- Dipendenza dalle esportazioni di combustibili fossili
- Deforestazione
- Rischio di siccità
- Sicurezza energetica
- Pressione sull'ambiente
- Emissione totale di gas serra (GHG)
- Riduzione delle emissioni di gas serra: Progresso verso gli obiettivi
- Economia a basse emissioni di carbonio
- Sicurezza delle risorse
- Gestione dei rifiuti
- Inquinamento delle acque
- Sicurezza dell'acqua

Le caratteristiche sociali promosse erano:

- Rischio relativo all'accesso alla giustizia
- Lavoro minorile
- Disordini civili
- Discriminazione sul posto di lavoro
- Salari dignitosi
- Istruzione
- Libertà di associazione e contrattazione collettiva
- Sicurezza alimentare
- Capacità del settore sanitario
- Capitale umano
- Diritti dei popoli indigeni
- Forza lavoro informale
- Lavoratori migranti
- Diritti delle minoranze
- Schiavitù moderna
- Salute e sicurezza sul lavoro
- Povertà
- Minoranze sessuali
- Tendenze della popolazione in età lavorativa
- Diritti delle donne e delle ragazze
- Giovani lavoratori

Durante il periodo di riferimento, gli emittenti inclusi nel 10% con il punteggio più basso (decile inferiore) sono stati esclusi dall'universo investibile.

Gli emittenti che si trovano nel 10-20% del punteggio più basso (secondo decile inferiore) sono stati trattati come candidati per attività di coinvolgimento durante il periodo di riferimento.

Non sono stati utilizzati strumenti derivati per realizzare le caratteristiche ambientali o sociali promosse dal Fondo.

Non è stato stabilito un indice di riferimento inteso a conseguire le caratteristiche ambientali / sociali promosse dal Fondo.

Gli indicatori di sostenibilità misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse del prodotto finanziario.

● Qual è stata la prestazione degli indicatori di sostenibilità?

Di seguito sono riportati gli indicatori di sostenibilità utilizzati per misurare il rispetto delle caratteristiche ambientali o sociali promosse dal Fondo:

A. Informazioni specifiche da inserire nella metodologia di calcolo del punteggio ESG utilizzata dal Gestore del Portafoglio in linea con le caratteristiche ambientali o sociali promosse dal Fondo. Queste informazioni sono tratte da:

1. L'applicazione delle esclusioni ESG.

Il Fondo si impegna a escludere gli emittenti che si trovano nel decile di punteggio più basso dell'universo di investimento. Non sono stati effettuati disinvestimenti in quanto nessuna partecipazione ricadeva nel decile inferiore. Il decile inferiore è rimasto escluso.

2. Il Fondo considera gli emittenti che si collocano nel secondo decile più basso come candidati per attività di coinvolgimento. Di conseguenza, sono state condotte le seguenti iniziative di coinvolgimento: Malesia.

B. Tracciamento degli indicatori specifici del Principal Adverse Impact (PAI). Si rimanda ai valori indicati nella sezione "In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?"

● ... e rispetto ai periodi precedenti?

Non applicabile in quanto non vi erano periodi di riferimento precedenti.

● Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha in parte realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?

Non rilevante. Il Fondo non s'impegna ad avere investimenti sostenibili.

Il Fondo non ha effettuato investimenti sostenibili con un obiettivo ambientale allineato alla tassonomia dell'UE.

● In che modo gli investimenti sostenibili che il prodotto finanziario ha in parte realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?

Non rilevante. Il Fondo non s'impegna ad avere investimenti sostenibili.

In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?

Non rilevante. Il Fondo non s'impegna ad avere investimenti sostenibili.

Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Dettagli:

Non rilevante. Il Fondo non s'impegna ad avere investimenti sostenibili.

La tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'Unione.

Il principio «non arrecare un danno significativo» si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri dell'UE per le attività economiche ecosostenibili.

Neppure eventuali altri investimenti sostenibili devono arrecare un danno significativo ad obiettivi ambientali o sociali.

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

I PAI obbligatori per gli enti sovrani sono stati tracciati e misurati e sono stati oggetto di rendicontazione; il Gestore del Portafoglio ha utilizzato anche le variazioni dei PAI e dei relativi KPI per valutare l'opportunità di miglioramento e i miglioramenti realizzati, che quindi hanno influito sugli investimenti e sulla portata delle singole posizioni. Ai fini delle decisioni di investimento, il Gestore del Portafoglio ha valutato le soglie "non arrecare un danno significativo" a livello fondamentale, di settore/industriale, di paese e di portafoglio. I due PAI per entità sovrane (PAI n. 15 (Intensità di GHG); e PAI n. 16 (Paesi oggetto di investimento soggetti a violazioni sociali)) sono stati compresi nella metodologia di calcolo del punteggio ESG di proprietà del Gestore del Portafoglio.

Indicatori PAI	Valore	Copertura
Intensità di gas serra dei paesi oggetto di investimento USD	488,87	86,14%
Paesi oggetto di investimento soggetti a violazioni sociali	0,00	86,14%

Quali sono stati i principali investimenti di questo prodotto finanziario?

I principali investimenti di questo Fondo, esclusi la liquidità e gli strumenti derivati, sono stati:

L'elenco comprende gli investimenti che costituiscono la **quota maggiore di investimenti** del prodotto finanziario durante il periodo di riferimento, ossia: 2022-01-01 - 2022-12-31.

Investimenti di maggiore entità	Settore	Quota	Paese

Qual è stata la quota degli investimenti in materia di sostenibilità?

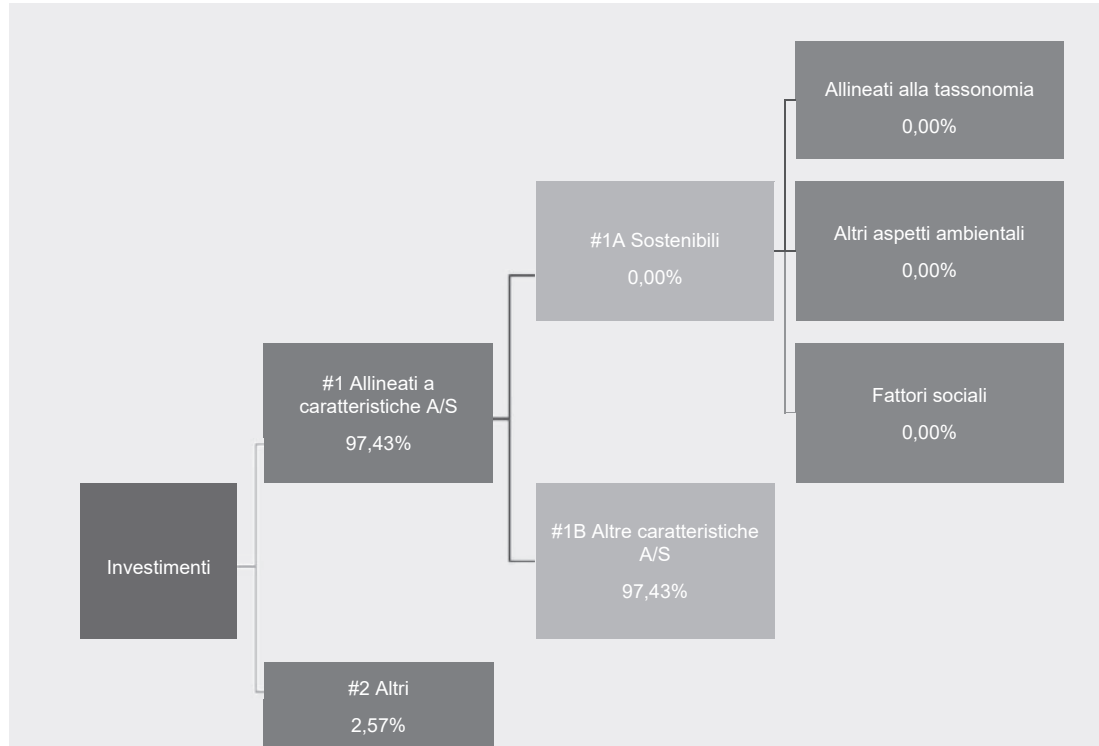

La percentuale di investimenti legati alla sostenibilità era dello 0%.

L'allocazione degli attivi descrive la quota di investimenti in attivi specifici.

Qual è stata l'allocazione degli attivi?

Il 97,43% del portafoglio era allineato alle caratteristiche E/S promosse dal Fondo. La parte restante (2,57%) non era allineata con le caratteristiche promosse e consisteva principalmente in attività liquide.

Il Fondo non ha effettuato alcun investimento sostenibile.

#1 Allineati a caratteristiche A/S: comprende gli investimenti del prodotto finanziario utilizzati per rispettare le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

#2 Altri: comprende gli investimenti rimanenti del prodotto finanziario che non sono allineati alle caratteristiche ambientali o sociali, né sono considerati investimenti sostenibili.

La categoria **#1 Allineati a caratteristiche A/S** comprende:

- La sottocategoria **# 1A Sostenibili**, che contempla gli investimenti sostenibili dal punto di vista ambientale e sociale.
- La sottocategoria **# 1B Altre caratteristiche A/S**, che contempla gli investimenti allineati alle caratteristiche ambientali o sociali che non sono considerati investimenti sostenibili.

● **In quali settori economici sono stati effettuati gli investimenti?**

Settore principale	Quota
Titoli di Stato	96,35%
Derivati	0,89%

Sottosettore principale	Quota
SOVRANI	84,56%
BANCA SOVRANAZIONALE	9,14%
AGENZIE REGIONALI	2,65%
DERIVATI	0,89%

Per conformarsi alla tassonomia dell'UE, i criteri per il **gas fossile** comprendono limitazioni delle emissioni e il passaggio all'energia da fonti rinnovabili o ai combustibili a basse emissioni di carbonio entro la fine del 2035. Per l'**energia nucleare** i criteri comprendono norme complete in materia di sicurezza e gestione dei rifiuti.

Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale.

Le **attività di transizione** sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano, tra l'altro, livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

Le attività allineate alla tassonomia sono espresse in percentuale di:

- **fatturato**: quota di entrate da attività verdi delle imprese beneficiarie degli investimenti.

- **spese in conto capitale (CapEx)**: investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, ad es. per la transizione verso un'economia verde.

- **spese operative (OpEx)**: attività operative verdi delle imprese beneficiarie degli investimenti.

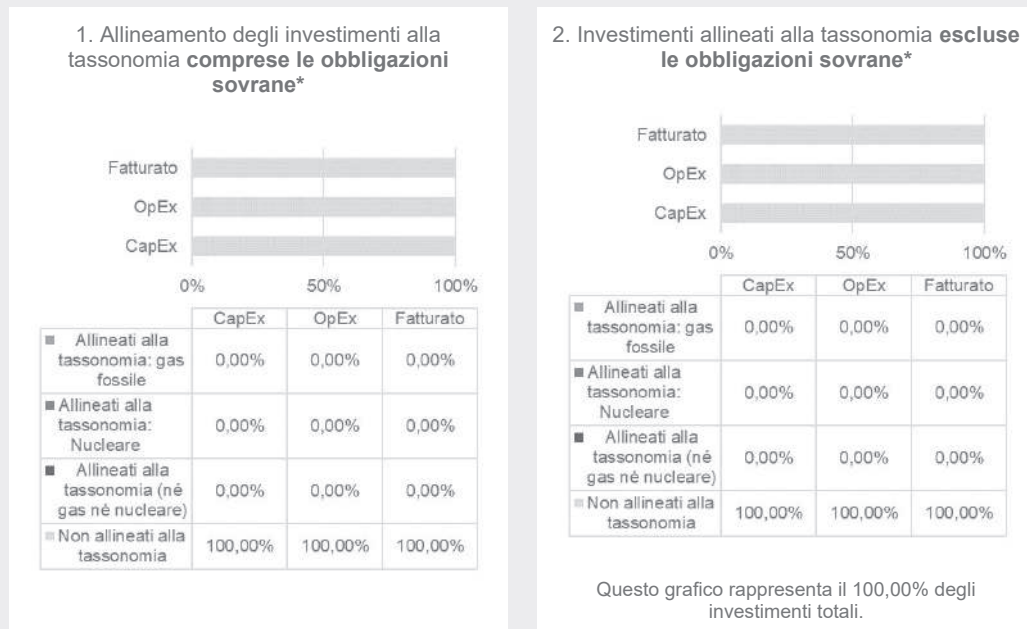

In che misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Il Fondo non ha effettuato investimenti sostenibili con un obiettivo ambientale allineato alla tassonomia dell'UE.

Il prodotto finanziario ha investito in attività connesse al gas fossile e/o all'energia nucleare che erano conformi alla tassonomia dell'UE?¹

- Sì
 In gas fossile In energia nucleare
 No

I due grafici che seguono mostrano in verde la percentuale minima di investimenti allineati alla tassonomia dell'UE. Poiché non esiste una metodologia adeguata per determinare l'allineamento delle obbligazioni sovrane* alla tassonomia, il primo grafico mostra l'allineamento alla tassonomia in relazione a tutti gli investimenti del prodotto finanziario comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

* Ai fini dei grafici di cui sopra, per "obbligazioni sovrane" si intendono tutte le esposizioni sovrane

Qual era la quota degli investimenti effettuati in attività di transizione e abilitanti?

¹ Le attività connesse al gas fossile e/o all'energia nucleare sono conformi alla tassonomia dell'UE solo se contribuiscono all'azione di contenimento dei cambiamenti climatici («mitigazione dei cambiamenti climatici») e non arrecano un danno significativo a nessuno degli obiettivi della tassonomia dell'UE - cfr. nota esplicativa sul margine sinistro. I criteri completi riguardanti le attività economiche connesse al gas fossile e all'energia nucleare che sono conformi alla tassonomia dell'UE sono stabiliti nel regolamento delegato (UE) 2022/1214 della Commissione.

Il Fondo non ha investito in attività transitorie e abilitanti

● **Come si rapporta la percentuale di investimenti allineati alla tassonomia dell'UE con i precedenti periodi di riferimento?**

Non rilevante.

 sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

● **Qual era la quota di investimenti sostenibili con un obiettivo ambientale non allineato alla tassonomia dell'UE?**

Lo 0% degli investimenti del Fondo sono stati investimenti sostenibili con un obiettivo ambientale che non sono allineati alla tassonomia dell'UE.

● **Qual era la quota di investimenti socialmente sostenibili?**

Lo 0% degli investimenti del Fondo è stato effettuato in attività socialmente sostenibili.

● **Quali investimenti erano compresi nella categoria «#2 Altri» e qual era il loro scopo? Esistevano garanzie minime di salvaguardia ambientale o sociale?**

La quota di investimenti alla voce "#2 Altro" era del 2,57% e comprendeva liquidità in deposito e strumenti derivati utilizzati per la copertura e i derivati per i quali non sono previste garanzie ambientali o sociali minime.

● **Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?**

1. Il Fondo si impegna a escludere gli emittenti che si trovano nel decile di punteggio più basso dell'universo di investimento. Non sono stati effettuati disinvestimenti in quanto nessuna partecipazione ricadeva nel decile inferiore. Il decile inferiore è rimasto escluso.
2. Il Fondo considera gli emittenti che si collocano nel secondo decile più basso come candidati per attività di coinvolgimento. Di conseguenza, sono state condotte le seguenti iniziative di coinvolgimento: Malesia
3. Fino al 90% degli investimenti è stato monitorato per verificare il peggioramento o il miglioramento dei fattori ambientali e sociali

● **Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?**

Gli **indici di riferimento** sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

Non applicabile

Il Fondo non ha investito in attività transitorie e abilitanti

● **Come si rapporta la percentuale di investimenti allineati alla tassonomia dell'UE con i precedenti periodi di riferimento?**

Non rilevante.

 sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

Qual era la quota di investimenti sostenibili con un obiettivo ambientale non allineato alla tassonomia dell'UE?

Lo 0% degli investimenti del Fondo sono stati investimenti sostenibili con un obiettivo ambientale che non sono allineati alla tassonomia dell'UE.

Qual era la quota di investimenti socialmente sostenibili?

Lo 0% degli investimenti del Fondo è stato effettuato in attività socialmente sostenibili.

Quali investimenti erano compresi nella categoria «#2 Altri» e qual era il loro scopo? Esistevano garanzie minime di salvaguardia ambientale o sociale?

La quota di investimenti alla voce "#2 Altro" era del 2,57% e comprendeva liquidità in deposito e strumenti derivati utilizzati per la copertura e i derivati per i quali non sono previste garanzie ambientali o sociali minime.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

1. Il Fondo si impegna a escludere gli emittenti che si trovano nel decile di punteggio più basso dell'universo di investimento. Non sono stati effettuati disinvestimenti in quanto nessuna partecipazione ricadeva nel decile inferiore. Il decile inferiore è rimasto escluso.
2. Il Fondo considera gli emittenti che si collocano nel secondo decile più basso come candidati per attività di coinvolgimento. Di conseguenza, sono state condotte le seguenti iniziative di coinvolgimento: Malesia
3. Fino al 90% degli investimenti è stato monitorato per verificare il peggioramento o il miglioramento dei fattori ambientali e sociali

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?

Gli **indici di riferimento** sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

Non applicabile

Caratteristiche ambientali e/o sociali

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?

SÌ

- Ha effettuato **investimenti sostenibili con un obiettivo ambientale: ___%**
 - in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE
 - in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE
- Ha effettuato **investimenti sostenibili con un obiettivo sociale: ___%**

NO

- Ha **promosso caratteristiche ambientali/sociali (A/S)** e, pur non avendo come obiettivo un investimento sostenibile, aveva una quota minima del(lo) 1,18% di investimenti sostenibili
 - con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE
 - con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE
 - con un obiettivo sociale
- Ha promosso caratteristiche A/S, ma **non ha effettuato alcun investimento sostenibile**

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, a condizione che tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e che l'impresa beneficiaria degli investimenti rispetti prassi di buona governance.

La **Tassonomia dell'UE** è un sistema di classificazione istituito dal Regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale Regolamento non comprende un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero non risultare allineati alla tassonomia

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Poiché il Fondo ha perseguito una strategia non vincolata, le caratteristiche ambientali e/o sociali promosse dal Fondo riflettono molteplici settori del reddito fisso e sono state considerate su base nazionale, fondamentale e settoriale. Non tutte le caratteristiche ambientali e/o sociali elencate di seguito sono state promosse da ciascun investimento o dal Fondo in ogni momento.

Le caratteristiche ambientali sovrane promosse dal Fondo in relazione ai suoi investimenti in obbligazioni sovrane erano:

- Qualità dell'aria
- Biodiversità e aree protette (marine)
- Biodiversità e aree protette (terrestri)
- Capacità di adattamento ai cambiamenti climatici
- Esposizione al cambiamento climatico
- Sensibilità al cambiamento climatico
- Vulnerabilità al cambiamento climatico
- Emissioni di CO₂ generate dal consumo di energia
- Emissioni di CO₂ dovute al cambiamento di uso del suolo e alla silvicoltura
- Politica del carbonio - Sovrana
- Dipendenza dalle esportazioni di combustibili fossili
- Deforestazione
- Rischio di siccità
- Sicurezza energetica
- Pressione sull'ambiente
- Emissioni totali di gas serra
- Riduzione delle emissioni di gas serra: Progresso verso gli obiettivi
- Economia a basse emissioni di carbonio
- Sicurezza delle risorse
- Gestione dei rifiuti
- Inquinamento delle acque

- Sicurezza dell'acqua

Le caratteristiche sociali sovrane promosse dal Fondo in relazione ai suoi investimenti in obbligazioni sovrane erano:

- Rischio relativo all'accesso alla giustizia
- Lavoro minorile
- Disordini civili
- Discriminazione sul posto di lavoro
- Salari dignitosi
- Istruzione
- Libertà di associazione e contrattazione collettiva
- Sicurezza alimentare
- Capacità del settore sanitario
- Capitale umano
- Diritti dei popoli indigeni
- Forza lavoro informale
- Lavoratori migranti
- Diritti delle minoranze
- Schiavitù moderna
- Salute e sicurezza sul lavoro
- Povertà
- Minoranze sessuali
- Tendenze della popolazione in età lavorativa
- Diritti delle donne e delle ragazze
- Giovani lavoratori

Le caratteristiche ambientali e sociali promosse dal Fondo in relazione ai suoi investimenti in obbligazioni societarie erano:

- Emissioni di gas serra
- Impronta di carbonio
- Intensità di gas serra delle società partecipate
- Esposizione a società attive nel settore dei combustibili fossili
- Quota di consumo e produzione di energia non rinnovabile
- Intensità del consumo energetico per settore ad alto impatto climatico
- Attività che incidono negativamente su aree sensibili alla biodiversità
- Emissioni nelle acque
- Quota di rifiuti pericolosi
- Violazione dei principi del Global Compact delle Nazioni Unite e delle linee guida dell'Organizzazione per la cooperazione e lo sviluppo economico (OCSE) per le imprese multinazionali
- Assenza di processi e meccanismi di conformità per monitorare il rispetto dei principi del Global Compact delle Nazioni Unite e delle linee guida dell'OCSE per le imprese multinazionali
- Divario retributivo di genere non corretto
- Diversificazione dei sessi nel consiglio di amministrazione
- Esposizione ad armi controverse (mine antiuomo, munizioni a grappolo, armi chimiche e armi biologiche)

Durante il periodo di riferimento, gli emittenti inclusi nel 10% con il punteggio più basso (decile inferiore) sono stati esclusi dall'universo investibile.

Gli emittenti che si trovano nel 10-20% del punteggio più basso (secondo decile inferiore) sono stati trattati come candidati per attività di coinvolgimento durante il periodo di riferimento.

Non sono stati utilizzati strumenti derivati per realizzare le caratteristiche ambientali o sociali promosse dal Fondo.

Non è stato stabilito un indice di riferimento inteso a conseguire le caratteristiche ambientali / sociali promosse dal Fondo.

Gli indicatori di sostenibilità misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse del prodotto finanziario.

● Qual è stata la prestazione degli indicatori di sostenibilità?

Di seguito sono riportati gli indicatori di sostenibilità utilizzati per misurare il rispetto delle caratteristiche ambientali o sociali promosse dal Fondo:

A. Informazioni specifiche da inserire nella metodologia di calcolo del punteggio ESG utilizzata dal Gestore del Portafoglio in linea con le caratteristiche ambientali o sociali promosse dal Fondo. Queste informazioni sono tratte da:

1. L'applicazione delle esclusioni ESG.

Il Fondo si impegna a escludere gli emittenti che si trovano nel decile di punteggio più basso dell'universo di investimento. Sono stati quindi effettuati i seguenti disinvestimenti: Hercules Capital, Weibo Corp, Meta Platforms.

2. Il Fondo considera gli emittenti che si collocano nel secondo decile più basso come candidati per attività di coinvolgimento. Di conseguenza, sono state condotte le seguenti iniziative di coinvolgimento: Carnival Cruise Corp., Dish Network Corp., Taseko Mines Ltd., Owl Rock Capital Corporation, e Brasile.

B. Tracciamento degli indicatori specifici del Principal Adverse Impact (PAI) relativamente a ciascun emittente. Si rimanda ai valori indicati nella sezione "In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?"

C. Esposizione alle obbligazioni verdi, sociali e legate alla sostenibilità (GSS) all'1,18%. L'uso dei proventi delle obbligazioni è stato specificato dall'emittente (e verificato da un terzo o dal Gestore del Portafoglio), ed è andato a beneficio di progetti ambientali o sociali sottostanti quali, a titolo meramente esemplificativo:

- Riduzione delle emissioni di gas serra
- Incremento della disponibilità di prodotti nei Paesi a basso e medio reddito
- Creazione di città e comunità sostenibili finanziando trasporti puliti, energia, acqua e servizi igienici
- Iniziative in tema di diversità, equità e inclusione

● ... e rispetto ai periodi precedenti?

Non applicabile in quanto non vi erano periodi di riferimento precedenti.

● Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha in parte realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?

Il Fondo ha investito almeno l'1% del proprio patrimonio netto in obbligazioni verdi e/o sociali che costituiscono investimenti sostenibili. Il Fondo ha effettuato tali investimenti solo quando l'uso fatto dei proventi delle obbligazioni era stato specificato dall'emittente (e verificato da un terzo o dal Gestore del Portafoglio), ed esso è andato a beneficio di progetti ambientali o sociali sottostanti quali, a titolo meramente esemplificativo:

- Riduzione delle emissioni di gas serra
- Incremento della disponibilità di prodotti nei Paesi a basso e medio reddito
- Creazione di città e comunità sostenibili finanziando trasporti puliti, energia, acqua e servizi igienici
- Iniziative in tema di diversità, equità e inclusione

Il Fondo non ha effettuato investimenti sostenibili con un obiettivo ambientale allineato alla tassonomia dell'UE.

● In che modo gli investimenti sostenibili che il prodotto finanziario ha in parte realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?

Nel valutare il principio DNSH, il Gestore del Portafoglio si è basato su una combinazione di ricerca fondamentale interna, ricerca sell-side, notizie, PAI e dati ESG di fornitori terzi.

Il Gestore del Portafoglio ha esaminato tutte le sanzioni pubbliche segnalate attraverso le schermate messe a disposizione da un fornitore terzo, relative alle inadempienze rispetto al Global Compact delle Nazioni Unite (UNGC), oltre che le misurazioni e i KPI relativi ai PAI obbligatori sia per le società che per i soggetti sovrani. Per gli investimenti sostenibili in titoli emessi da società, il Gestore del Portafoglio ha valutato il principio DNSH a livello di emittente societario. Per gli investimenti sostenibili in titoli emessi da governi od organizzazioni sovranazionali (che non hanno una missione specifica dichiarata secondo la quale tutte le attività/progetti finanziati sono sostenibili), il Gestore del Portafoglio ha valutato il principio DNSH a livello di utilizzo dei proventi.

Il Fondo ha tenuto traccia dei PAI obbligatori per identificare le esposizioni con impatto negativo.

----- In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?

I PAI obbligatori per le imprese e gli enti sovrani sono stati tracciati, misurati e oggetto di rendicontazione. Ai fini delle decisioni di investimento, il Gestore del Portafoglio ha valutato le soglie DNSH a livello fondamentale, di settore/industriale, di Paese e di portafoglio. La politica del Gestore del Portafoglio consiste nell'impegnarsi con gli emittenti, tenendo come ultima opzione quella del disinvestimento. Il Gestore del Portafoglio ha operato un disinvestimento immediato quando ha rilevato un rischio sostanziale a breve termine.

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Dettagli:

Il Gestore del Portafoglio ha tenuto traccia delle violazioni rispetto ai principi OCSE/UNGC (ricevute automaticamente da un terzo a partire da gennaio 2022) e dei fallimenti; le società che non hanno rispettato i requisiti sono state escluse dal portafoglio/universo di investimento.

La tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'Unione.

Il principio «non arrecare un danno significativo» si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri dell'UE per le attività economiche ecosostenibili.

Neppure eventuali altri investimenti sostenibili devono arrecare un danno significativo ad obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

I PAI obbligatori per le imprese e gli enti sovrani sono stati tracciati, misurati e oggetto di rendicontazione. Il Gestore del Portafoglio ha utilizzato anche le variazioni dei PAI e dei relativi KPI per valutare l'opportunità di miglioramento e i miglioramenti realizzati, che quindi influiranno sugli investimenti e sulla portata delle singole posizioni.

Ai fini delle decisioni di investimento, il Gestore del Portafoglio ha valutato le soglie DNSH a livello fondamentale, di settore/industriale, di Paese e di portafoglio.

I PAI obbligatori non sono stati tutti intrinsecamente inclusi nel punteggio ESG proprietario di questo Fondo. Tuttavia, il Gestore del Portafoglio ha tracciato e monitorato i PAI.

Indicatori PAI	Valore	Copertura
Emissioni di gas serra: Scope 1 USD	47 610,47	60,85%

Qual è stata la quota degli investimenti in materia di sostenibilità?

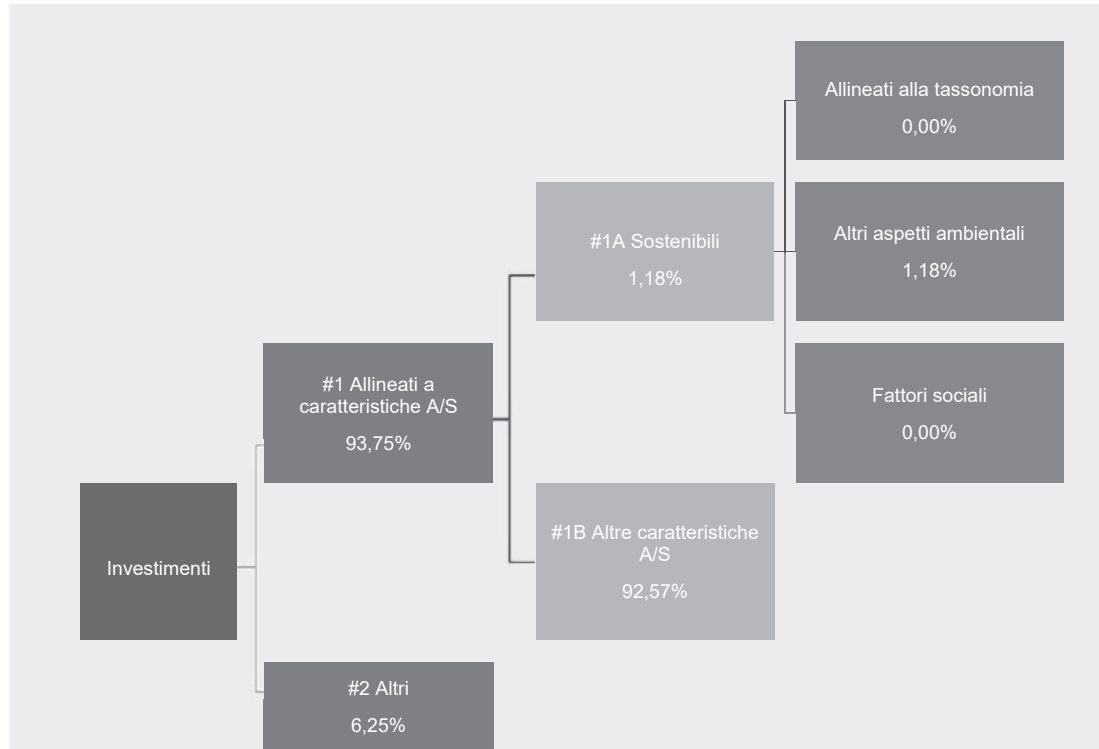

La percentuale di investimenti legati alla sostenibilità era dell'1,18%.

L'allocazione degli attivi descrive la quota di investimenti in attivi specifici.

Qual è stata l'allocazione degli attivi?

Il 93,75% del portafoglio era allineato alle caratteristiche E/S promosse dal Fondo. La parte restante (6,25%) non era allineata con le caratteristiche promosse e consisteva principalmente in attività liquide.

Nel segmento di portafoglio del Fondo allineato alle caratteristiche ambientali e/o sociali promosse, il Fondo ha investito l'1,18% del portafoglio in investimenti sostenibili.

#1 Allineati a caratteristiche A/S: comprende gli investimenti del prodotto finanziario utilizzati per rispettare le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

#2 Altri: comprende gli investimenti rimanenti del prodotto finanziario che non sono allineati alle caratteristiche ambientali o sociali, né sono considerati investimenti sostenibili.

La categoria **#1 Allineati a caratteristiche A/S** comprende:

- La sottocategoria **# 1A Sostenibili**, che contempla gli investimenti sostenibili dal punto di vista ambientale e sociale.
- La sottocategoria **# 1B Altre caratteristiche A/S**, che contempla gli investimenti allineati alle caratteristiche ambientali o sociali che non sono considerati investimenti sostenibili.

Per conformarsi alla tassonomia dell'UE, i criteri per il **gas fossile** comprendono limitazioni delle emissioni e il passaggio all'energia da fonti rinnovabili o ai combustibili a basse emissioni di carbonio entro la fine del 2035. Per l'**energia nucleare** i criteri comprendono norme complete in materia di sicurezza e gestione dei rifiuti.

Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale.

Le **attività di transizione** sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano, tra l'altro, livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

Le attività allineate alla tassonomia sono espresse in percentuale di:

- **fatturato**: quota di entrate da attività verdi delle imprese beneficiarie degli investimenti.

- **spese in conto capitale (CapEx)**: investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, ad es. per la transizione verso un'economia verde.

- **spese operative (OpEx)**: attività operative verdi delle imprese beneficiarie degli investimenti.

In che misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Il Fondo non ha effettuato investimenti sostenibili con un obiettivo ambientale allineato alla tassonomia dell'UE.

Il prodotto finanziario ha investito in attività connesse al gas fossile e/o all'energia nucleare che erano conformi alla tassonomia dell'UE?¹

- Sì
 In gas fossile In energia nucleare
 No

I due grafici che seguono mostrano in verde la percentuale minima di investimenti allineati alla tassonomia dell'UE. Poiché non esiste una metodologia adeguata per determinare l'allineamento delle obbligazioni sovrane* alla tassonomia, il primo grafico mostra l'allineamento alla tassonomia in relazione a tutti gli investimenti del prodotto finanziario comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

* Ai fini dei grafici di cui sopra, per "obbligazioni sovrane" si intendono tutte le esposizioni sovrane

Qual era la quota degli investimenti effettuati in attività di transizione e abilitanti?

¹ Le attività connesse al gas fossile e/o all'energia nucleare sono conformi alla tassonomia dell'UE solo se contribuiscono all'azione di contenimento dei cambiamenti climatici («mitigazione dei cambiamenti climatici») e non arrecano un danno significativo a nessuno degli obiettivi della tassonomia dell'UE - cfr. nota esplicativa sul margine sinistro. I criteri completi riguardanti le attività economiche connesse al gas fossile e all'energia nucleare che sono conformi alla tassonomia dell'UE sono stabiliti nel regolamento delegato (UE) 2022/1214 della Commissione.

Il Fondo non ha investito in attività transitorie e abilitanti.

● **Come si rapporta la percentuale di investimenti allineati alla tassonomia dell'UE con i precedenti periodi di riferimento?**

Non applicabile

 sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

 **Qual era la quota di investimenti sostenibili con un obiettivo ambientale non allineato alla tassonomia dell'UE?**

Come risultato della strategia di investimento, il Fondo non ha effettuato investimenti sostenibili con un obiettivo ambientale allineato alla Tassonomia UE e, di conseguenza, alla fine di febbraio 2023, l'1,18% del portafoglio del Fondo era composto da investimenti con un obiettivo ambientale non allineato alla tassonomia UE.

 **Qual era la quota di investimenti socialmente sostenibili?**

Lo 0% degli investimenti del Fondo è stato effettuato in attività socialmente sostenibili.

 **Quali investimenti erano compresi nella categoria «#2 Altri» e qual era il loro scopo? Esistevano garanzie minime di salvaguardia ambientale o sociale?**

La quota di investimenti alla voce "N. 2 Altro" era del 6,25% e comprendeva liquidità in deposito e strumenti derivati utilizzati per la copertura e i derivati per i quali non sono previste garanzie ambientali o sociali minime.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

1. Il Fondo si impegna a escludere gli emittenti che si trovano nel decile di punteggio più basso dell'universo di investimento. Sono stati quindi effettuati i seguenti disinvestimenti: Hercules Capital, Weibo Corp, Meta Platforms.
2. Il Fondo considera gli emittenti che si collocano nel secondo decile più basso come candidati per attività di coinvolgimento. Di conseguenza, sono state condotte le seguenti iniziative di coinvolgimento: Carnival Cruise Corp., Dish Network Corp., Taseko Mines Ltd., Owl Rock Capital Corporation, e Brasile
3. Fino all'80% degli investimenti è stato monitorato per verificare il peggioramento e/o il miglioramento dei fattori ambientali e sociali.
4. Il Fondo ha investito oltre l'1% del proprio patrimonio netto in investimenti sostenibili con obiettivi ambientali/sociali, come sopra illustrato.

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?

Non applicabile

Gli **indici di riferimento** sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

Caratteristiche ambientali e/o sociali

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, purché tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e l'impresa beneficiaria degli investimenti rispetti prassi di buona governance.

La **tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non stabilisce un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere allineati o no alla tassonomia.

Gli indicatori di sostenibilità misurano in che modo sono raggiunti gli obiettivi sostenibili di questo prodotto finanziario.

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?

- Si** **No**
- Ha effettuato **investimenti sostenibili con un obiettivo ambientale: _____%**
- in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE
 - in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE
- Ha effettuato **investimenti sostenibili con un obiettivo sociale: _____%**
- Ha **promosso caratteristiche ambientali/sociali (A/S)** e, pur non avendo come obiettivo un investimento sostenibile, ha avuto una quota del(lo) _____ % di investimenti sostenibili
- con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE
 - con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE
 - con un obiettivo sociale
- Ha promosso **caratteristiche A/S, ma non effettuerà alcun investimento sostenibile**

In che misura le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario sono state conseguite?

Il Comparto non persegue obiettivi o risultati specifici di natura ambientale o sociale. Nonostante non miri a realizzare un obiettivo ambientale o sociale sostenibile, il Comparto si propone di promuovere prassi ambientali e/o sociali e/o di governance integrando nel suo processo di investimento considerazioni sui rischi di sostenibilità al fine di contribuire a ridurre le esternalità ambientali e di altro genere avverse associate all'economia globale.

Applicando requisiti ambientali, sociali e di governance minimi e soglie di investimento basate su fattori di sostenibilità, il Gestore ritiene di poter indurre le società e gli emittenti ad adottare prassi aziendali più sostenibili generando, alla fine, un cambiamento ambientale e sociale positivo. Tuttavia, al momento non è possibile valutare se queste soglie e questi requisiti minimi stiano promuovendo un cambiamento significativo. È evidente che la maggior parte degli indicatori che segnalano un cambiamento ambientale negativo continua a peggiorare e che l'economia globale è largamente incapace di far fronte ai danni ambientali o di porvi rimedio. Pertanto, il Gestore ritiene che l'adozione e l'integrazione di politiche significative di screening, esclusione, restrizione ed engagement continueranno necessariamente a essere parte integrante dei processi di investimento del Comparto.

• **Qual è stata la performance degli indicatori di sostenibilità?**

Nell'informativa precontrattuale del Comparto conforme alle disposizioni dell'SFDR non sono stati individuati indicatori di sostenibilità specifici relativi al periodo coperto dal presente rapporto. Ciò nonostante, il Gestore ritiene che i dati sotto riportati possano essere molto utili per valutare il profilo ambientale e sociale complessivo del Comparto.

Vaglio e classificazione ESG

Il Gestore utilizza la metodologia di valutazione della materialità industriale ESG/CAR di Lombard Odier ("LO ESG/CAR Rating Materialità") per classificare ogni società in cui investe il Comparto, impiegando una scala di rating compresa tra A+ e D (dove A+ rappresenta la valutazione migliore).

La tabella che segue mostra il rating del portafoglio societario del Comparto in base alla metodologia LO ESG/CAR Rating Materialità al 30 settembre 2022:

Lombard Odier ESG/CAR Rating Industriale Materialità	Comparto	Performance confronto indice*
ESG Materialità grado	B+	B

La tabella che segue mostra la ripartizione in percentuale del portafoglio societario del Comparto in ciascun segmento di rating principale della metodologia LO ESG/CAR Rating Materialità al 30 settembre 2022:

Lombard Odier ESG/CAR Rating Industriale Materialità	Comparto	Performance confronto indice*
ESG Materialità distribuzione		
A	56%	62%
B	18%	23%
C	6%	6%
D	0%	1%

* Bloomberg Barclays Global Aggregate Corporates 500MM TR: l'indice di confronto della performance non intende essere un indice di riferimento per conseguire le caratteristiche ambientali o sociali promosse dal Comparto. È l'indice individuato nella sezione Obiettivo e politica di investimento del prospetto del Comparto per consentire confronti di performance e/o per monitorare internamente il rischio.

Indicatori dei principali effetti negativi ("PEN")

La metodologia LO ESG/CAR Rating Materialità comprende dati mappati rispetto ai temi individuati dagli indicatori dei principali effetti negativi per la sostenibilità stabiliti dall'SFDR.

Le informazioni che seguono sono fornite con riferimento al portafoglio del Comparto per i PEN suindicati e per il periodo coperto dal presente rapporto:

PEN	Unità	Valore
Tabella I – Emissioni di gas serra (GHG)		
1 – GHG Emissioni – (Emissioni totali, ambito 1, 2 e 3)	tCO2eq	22 730
2 – Impronta di carbonio – (ambito 1, 2 e 3)	tCO2e / Mio. EUR investito	333
4 – Esposizione a società attive nel settore dei combustibili fossili	% del portafoglio	5.8%
Tabella I – Questioni sociali e dipendenti		
10 – Violazione del PGNU (Patto Globale delle Nazioni Unite)	% del portafoglio	4.3%
11 – Mancanza di monitor PGNU	% del portafoglio	0.5%
14 – Esposizione ad armi controverse	% del portafoglio	0.0%
Tabella II – Emissioni		
4 – Investimenti in società senza iniziative di riduzione delle emissioni di carbonio	% del portafoglio	17.1%
Tabella III – Diritti umani		
12 – Incidenti di lavoro minorile	% del portafoglio	0.2%

Si fa rilevare che la disponibilità e la qualità dei dati dei PEN si modificano rapidamente. Le informazioni sopra riportate si basano su dati che provengono direttamente dalle aziende, da fornitori terzi di dati e da modelli o stime del Gestore. I valori futuri potrebbero essere sensibilmente diversi non solo perché varia la composizione del portafoglio del Comparto o l'attività svolta dalle aziende o dagli emittenti in cui il Comparto ha investito, ma anche perché si modificano la disponibilità e la qualità dei dati che dovrebbero migliorare sensibilmente nei prossimi anni.

- **E rispetto ai periodi precedenti?**

N/A – Questo è il primo periodo.

- **Quali sono stati gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha in parte realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?**

N/A – Il Comparto non si impegna a investire in investimenti sostenibili.

- **In che modo gli investimenti sostenibili che il prodotto finanziario ha in parte realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?**

N/A – Il Comparto non si impegna a investire in investimenti sostenibili.

In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?

N/A – Il Comparto non si impegna a investire in investimenti sostenibili.

Gli investimenti sostenibili erano in linea con le Direttive OCSE per le imprese multinazionali e i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:

N/A – Il Comparto non si impegna a investire in investimenti sostenibili.

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

La tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'UE.

Il principio "non arrecare un danno significativo" si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'Unione Europea per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri dell'Unione Europea per le attività economiche ecosostenibili.

Neppure eventuali altri investimenti sostenibili devono arrecare un danno significativo ad obiettivi ambientali o sociali.

Il Gestore utilizza la metodologia LO ESG/CAR Rating Materialità per analizzare e classificare le società in cui investe il Comparto. Tale metodologia impiega più di 150 dati di sostenibilità compresi, ove disponibili, i dati mappati rispetto ai temi individuati dagli indicatori dei principali effetti negativi ("PEN").

Inoltre, il Gestore considera i "PEN" uno strumento per comprendere la performance ambientale e sociale del portafoglio del Comparto rispetto a criteri di sostenibilità oggettivamente valutabili e applicati in tutta l'Unione Europea. Oltre che per la metodologia LO ESG/CAR Rating Materialità, l'esame dei PEN è utilizzato soprattutto per comprendere, ex post, l'andamento generale del Comparto in materia di sostenibilità. Inoltre, la considerazione dei PEN più rilevanti può incidere sulle decisioni di investimento (soprattutto se i PEN dimostrano che un investimento potrebbe arrecare danni significativi). Va osservato che non tutti i PEN possono avere rilevanza per tutti gli investimenti o lo stesso peso. Inoltre, l'esame dei PEN rappresenta solo una parte della valutazione più ampia eseguita dal Gestore sui fattori di sostenibilità che incidono sul Comparto.

Quali sono stati i maggiori investimenti effettuati da questo prodotto finanziario?

L'elenco comprende investimenti che costituiscono le maggiori esposizioni assunte dal prodotto finanziario durante il periodo di riferimento che è al settembre 2022.

L'allocazione degli attivi descrive la quota di investimenti in attivi specifici.

Qual è stata la percentuale di investimenti legati alla sostenibilità?

N/A – Il Comparto non si impegna a investire in investimenti sostenibili.

- **Qual è stata l'allocazione degli attivi?**

Al 30 settembre 2022:

86% del patrimonio del Comparto è stato allocato a investimenti #1 Allineati con caratteristiche A/S
14% del patrimonio del Comparto è stato allocato a investimenti #2 Altri

#1 Allineati con caratteristiche A/S comprende gli investimenti del prodotto finanziario utilizzati per rispettare le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

#2 Altri comprende gli investimenti rimanenti del prodotto finanziario che non sono allineati alle caratteristiche ambientali o sociali, né sono considerati investimenti sostenibili.

Le attività allineate alla tassonomia sono espresse in percentuale di:

- **fatturato:** grado attuale di "ecosostenibilità" delle imprese beneficiarie degli investimenti;
- **spese in conto capitale (CapEx):** investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, rilevanti per la transizione verso un'economia verde;
- **spese operative (OpEx):** attività operative verdi delle imprese beneficiarie degli investimenti.

• *In quali settori economici sono stati effettuati gli investimenti?*

Al 30 settembre 2022, il Comparto era investito nei seguenti settori economici:

Energia	2.0%
Perforazioni di petrolio e gas	0.3%
Apparecchiature e servizi per l'industria del petrolio e del gas	0.3%
Società integrate di petrolio e gas	0.1%

Aziende idriche	-
Produttori indipendenti di energia e di elettricità da fonti rinnovabili	0.4%
Immobiliare	5.4%

Il Gestore ha utilizzato i settori individuati dai Global Industry Classification Standard (GICS) nella tabella che precede. La tabella individua sottosectori/settori GICS che, secondo il Gestore, consentiranno un'analisi più granulare della dimensione ambientale/sociale degli investimenti del Comparto.

In quale misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

N/A – Il Comparto non si impegna a investire in investimenti sostenibili.

Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale.

Le **attività di transizione** sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano, tra l'altro, livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

Sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili conformemente al regolamento (UE) 2020/852.

- **Qual è stata la quota di investimenti in attività di transizione e abilitanti?**

N/A – Il Comparto non si impegna a investire in investimenti sostenibili.

- **Qual è stata la percentuale di investimenti allineati alla tassonomia dell'UE rispetto ai precedenti periodi di riferimento?**

N/A – Il Comparto non si impegna a investire in investimenti sostenibili.

Qual è stata la quota di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?

N/A – Il Comparto non si impegna a investire in investimenti sostenibili.

Qual è stata la quota di investimenti socialmente sostenibili?

N/A – Il Comparto non si impegna a investire in investimenti sostenibili.

Quali investimenti erano compresi nella categoria "Altri", qual era il loro scopo ed esistevano garanzie minime di salvaguardia ambientale o sociale?

Gli investimenti classificati come "#2 Altri" possono comprendere, senza limitarsi, investimenti in società/emittenti con bassi punteggi secondo la metodologia LO ESG/CAR Rating Materialità e che il Gestore ha incluso nel portafoglio del Comparto anche a scopo di diversificazione, per riflettere l'esposizione agli indici di riferimento tradizionali o al mercato più ampio oppure nel caso in cui l'universo del Comparto è già soggetto a restrizioni. "#2 Altri" comprende anche investimenti in società non coperte dalla metodologia LO ESG/CAR Rating Materialità e le Disponibilità liquide ed equivalenti.

Quali misure sono state poste in essere per conseguire le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Il Gestore ha svolto attività di engagement in linea con il proprio sistema aziendale di stewardship, che è guidato e ispirato dalla sua visione sulla sostenibilità e dal suo impegno in tale ambito. Ad oggi, le attività di engagement puntano a (i) incoraggiare l'allineamento delle aziende a percorsi sostenibili di transizione (ii) promuovere pratiche aziendali best-in-class e (iii) ad affrontare i casi di controversie gravi. La ricerca legata alle attività di engagement individua le debolezze, la mancanza di allineamento o l'esigenza di cambiamento e le traduce in obiettivi di impegno misurabili che consentono al Gestore di monitorare i progressi nel tempo. Gli obiettivi di fondo delle attività di engagement del Gestore sono cercare di comprendere meglio le specificità di un'azienda (il che potrebbe incidere sul rating calcolato con la metodologia LO ESG/CAR Rating Materialità descritta in precedenza), migliorare le informative disponibili al pubblico e promuovere il cambiamento in generale in materia di sostenibilità, corporate governance e tematiche sociali.

Il Gestore definisce un "engagement" come la somma di tutte le interazioni che ha con un'azienda su una tematica rilevante specifica. Ciò vuol dire che il coinvolgimento di una società può essere molto articolato se il Gestore si confronta più volte con il management su tematiche rilevanti diverse. Il Gestore definisce "interazione" il confronto che ha con un'azienda in un breve arco di tempo. Un'interazione può assumere la forma di un'e-mail, di una chiamata/videochiamata, di un incontro faccia a faccia o, in taluni casi, di un impegno collaborativo. Il Gestore raccoglie dati su ogni singola interazione; in particolare, dopo ogni interazione raccoglie dati quantitativi e qualitativi registrandoli in una nota standardizzata di stewardship. Ogni valutazione di stewardship comprende fino a venti diversi campi di dati. Un engagement viene chiuso quando il Gestore ha raggiunto gli obiettivi o se la società non risponde alle sollecitazioni.

Nel periodo 1° ottobre 2021-30 settembre 2022, il Gestore ha effettuato le seguenti interazioni e attività di engagement su tutti i portafogli da esso gestiti e non solo sugli investimenti detenuti per conto del Comparto.

Numero di società con almeno un'interazione nel periodo in esame	171
Numero di engagement con almeno un'interazione nel periodo in esame	184
Numero di interazioni nel periodo in esame	264
Numero di società coinvolte in un processo di engagement attivo alla fine del periodo in esame	181

	Numero di engagement su questa tematica	% di engagement su questa tematica
Corporate governance	23	13%
Zero netto/OMP	42	23%
Ambiente	1	1%
Comunicazioni ESG/TCFD	67	36%
Natural Capital	21	11%
Controversie	13	7%
ESG/prassi aziendali	5	3%
ESG generale	7	4%
Società	5	3%

Gli indici di riferimento sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

Qual è stata la performance di questo prodotto finanziario rispetto all'indice di riferimento?

N/A – Non è stato scelto alcun indice di riferimento.

- *In che modo l'indice di riferimento differisce da un indice generale di mercato?*

N/A

- *Qual è stata la performance di questo prodotto finanziario relativamente agli indicatori di sostenibilità per stabilire l'allineamento dell'indice di riferimento alle caratteristiche ambientali o sociali promosse?*

N/A

- *Qual è stata la performance di questo prodotto finanziario rispetto all'indice di riferimento?*

N/A

- *Qual è stata la performance di questo prodotto finanziario rispetto all'indice generale di mercato?*

N/A

Caratteristiche ambientali e/o sociali

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, purché tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e l'impresa beneficiaria degli investimenti rispetti prassi di buona governance.

La **tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non stabilisce un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere allineati o no alla tassonomia.

Gli indicatori di sostenibilità misurano in che modo sono raggiunti gli obiettivi sostenibili di questo prodotto finanziario.

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?

- Si** **No**
- Ha effettuato **investimenti sostenibili con un obiettivo ambientale: _____%**
- in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE
 - in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE
- Ha effettuato **investimenti sostenibili con un obiettivo sociale: _____%**
- Ha **promosso caratteristiche ambientali/sociali (A/S)** e, pur non avendo come obiettivo un investimento sostenibile, ha avuto una quota del(lo) _____ % di investimenti sostenibili
- con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE
 - con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE
 - con un obiettivo sociale
- Ha promosso **caratteristiche A/S, ma non effettuerà alcun investimento sostenibile**

In che misura le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario sono state conseguite?

Il Comparto non persegue obiettivi o risultati specifici di natura ambientale o sociale. Nonostante non miri a realizzare un obiettivo ambientale o sociale sostenibile, il Comparto si propone di promuovere prassi ambientali e/o sociali e/o di governance integrando nel suo processo di investimento considerazioni sui rischi di sostenibilità al fine di contribuire a ridurre le esternalità ambientali e di altro genere avverse associate all'economia globale.

Applicando requisiti ambientali, sociali e di governance minimi e soglie di investimento basate su fattori di sostenibilità, il Gestore ritiene di poter indurre le società e gli emittenti ad adottare prassi aziendali più sostenibili generando, alla fine, un cambiamento ambientale e sociale positivo. Tuttavia, al momento non è possibile valutare se queste soglie e questi requisiti minimi stiano promuovendo un cambiamento significativo. È evidente che la maggior parte degli indicatori che segnalano un cambiamento ambientale negativo continua a peggiorare e che l'economia globale è largamente incapace di far fronte ai danni ambientali o di porvi rimedio. Pertanto, il Gestore ritiene che l'adozione e l'integrazione di politiche significative di screening, esclusione, restrizione ed engagement continueranno necessariamente a essere parte integrante dei processi di investimento del Comparto.

- **Qual è stata la performance degli indicatori di sostenibilità?**

Nell'informativa precontrattuale del Comparto conforme alle disposizioni dell'SFDR non sono stati individuati indicatori di sostenibilità specifici relativi al periodo coperto dal presente rapporto. Ciò nonostante, il Gestore ritiene che i dati sotto riportati possano essere molto utili per valutare il profilo ambientale e sociale complessivo del Comparto.

Vaglio e classificazione ESG

Il Gestore utilizza la metodologia di valutazione della materialità industriale ESG/CAR di Lombard Odier ("LO ESG/CAR Rating Materialità") per classificare ogni società in cui investe il Comparto, impiegando una scala di rating compresa tra A+ e D (dove A+ rappresenta la valutazione migliore).

La tabella che segue mostra il rating del portafoglio societario del Comparto in base alla metodologia LO ESG/CAR Rating Materialità al 30 settembre 2022:

Lombard Odier ESG/CAR Rating Industriale Materialità	Comparto	Performance confronto indice*
ESG Materialità grado	B-	B-

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

La tabella che segue mostra la ripartizione in percentuale del portafoglio societario del Comparto in ciascun segmento di rating principale della metodologia LO ESG/CAR Rating Materialità al 30 settembre 2022:

Lombard Odier ESG/CAR Rating Industriale Materialità	Comparto	Performance confronto indice*
ESG Materialità distribuzione		
A	46%	48%
B	31%	29%
C	19%	19%

* Refinitiv Global Convertible Composite Hedged TR: l'indice di confronto della performance non intende essere un indice di riferimento per conseguire le caratteristiche ambientali o sociali promosse dal Comparto. È l'indice individuato nella sezione Obiettivo e politica di investimento del prospetto del Comparto per consentire confronti di performance e/o per monitorare internamente il rischio.

Indicatori dei principali effetti negativi ("PEN")

La metodologia LO ESG/CAR Rating Materialità comprende dati mappati rispetto ai temi individuati dagli indicatori dei principali effetti negativi per la sostenibilità stabiliti dall'SFDR.

Le informazioni che seguono sono fornite con riferimento al portafoglio del Comparto per i PEN suindicati e per il periodo coperto dal presente rapporto:

PEN	Unità	Valore
Tabella I – Emissioni di gas serra (GHG)		
1 – GHG Emissioni – (Emissioni totali, ambito 1, 2 e 3)	tCO2eq	972 755
2 – Impronta di carbonio – (ambito 1, 2 e 3)	tCO2e / Mio. EUR investito	675
4 – Esposizione a società attive nel settore dei combustibili fossili	% del portafoglio	9.1%
Tabella I – Questioni sociali e dipendenti		
10 – Violazione del PGNU (Patto Globale delle Nazioni Unite)	% del portafoglio	2.8%
11 – Mancanza di monitor PGNU	% del portafoglio	2.0%
14 – Esposizione ad armi controverse	% del portafoglio	0.0%
Tabella III – Diritti umani		
12 – Incidenti di lavoro minorile	% del portafoglio	0.3%

Si fa rilevare che la disponibilità e la qualità dei dati dei PEN si modificano rapidamente. Le informazioni sopra riportate si basano su dati che provengono direttamente dalle aziende, da fornitori terzi di dati e da modelli o stime del Gestore. I valori futuri potrebbero essere sensibilmente diversi non solo perché varia la composizione del portafoglio del Comparto o l'attività svolta dalle aziende o dagli emittenti in cui il Comparto ha investito, ma anche perché si modificano la disponibilità e la qualità dei dati che dovrebbero migliorare sensibilmente nei prossimi anni.

- ***E rispetto ai periodi precedenti?***

N/A – Questo è il primo periodo.

- ***Quali sono stati gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha in parte realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?***

N/A – Il Comparto non si impegna a investire in investimenti sostenibili.

- ***In che modo gli investimenti sostenibili che il prodotto finanziario ha in parte realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?***

N/A – Il Comparto non si impegna a investire in investimenti sostenibili.

In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?

N/A – Il Comparto non si impegna a investire in investimenti sostenibili.

Gli investimenti sostenibili erano in linea con le Direttive OCSE per le imprese multinazionali e i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:

N/A – Il Comparto non si impegna a investire in investimenti sostenibili.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

La tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'UE.

Il principio "non arrecare un danno significativo" si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'Unione Europea per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri dell'Unione Europea per le attività economiche ecosostenibili.

Neppure eventuali altri investimenti sostenibili devono arrecare un danno significativo ad obiettivi ambientali o sociali.

Il Gestore utilizza la metodologia LO ESG/CAR Rating Materialità per analizzare e classificare le società in cui investe il Comparto. Tale metodologia impiega più di 150 dati di sostenibilità compresi, ove disponibili, i dati mappati rispetto ai temi individuati dagli indicatori dei principali effetti negativi ("PEN").

Inoltre, il Gestore considera i "PEN" uno strumento per comprendere la performance ambientale e sociale del portafoglio del Comparto rispetto a criteri di sostenibilità oggettivamente valutabili e applicati in tutta l'Unione Europea. Oltre che per la metodologia LO ESG/CAR Rating Materialità, l'esame dei PEN è utilizzato soprattutto per comprendere, ex post, l'andamento generale del Comparto in materia di sostenibilità. Inoltre, la considerazione dei PEN più rilevanti può incidere sulle decisioni di investimento (soprattutto se i PEN dimostrano che un investimento potrebbe arrecare danni significativi). Va osservato che non tutti i PEN possono avere rilevanza per tutti gli investimenti o lo stesso peso. Inoltre, l'esame dei PEN rappresenta solo una parte della valutazione più ampia eseguita dal Gestore sui fattori di sostenibilità che incidono sul Comparto.

Quali sono stati i maggiori investimenti effettuati da questo prodotto finanziario?

L'elenco comprende investimenti che costituiscono le maggiori esposizioni assunte dal prodotto finanziario durante il periodo di riferimento che è al settembre 2022.

Maggiori posizioni	Settore	% del patrimonio	Paese

L'allocazione degli attivi descrive la quota di investimenti in attivi specifici.

Qual è stata la percentuale di investimenti legati alla sostenibilità?

N/A – Il Comparto non si impegna a investire in investimenti sostenibili.

- **Qual è stata l'allocazione degli attivi?**

Al 30 settembre 2022:

77% del patrimonio del Comparto è stato allocato a investimenti #1 Allineati con caratteristiche A/S
23% del patrimonio del Comparto è stato allocato a investimenti #2 Altri

#1 Allineati con caratteristiche A/S comprende gli investimenti del prodotto finanziario utilizzati per rispettare le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

#2 Altri comprende gli investimenti rimanenti del prodotto finanziario che non sono allineati alle caratteristiche ambientali o sociali, né sono considerati investimenti sostenibili.

Le attività allineate alla tassonomia sono espresse in percentuale di:

- **fatturato:** grado attuale di "ecosostenibilità" delle imprese beneficiarie degli investimenti;
- **spese in conto capitale (CapEx):** investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, rilevanti per la transizione verso un'economia verde;
- **spese operative (OpEx):** attività operative verdi delle imprese beneficiarie degli investimenti.

• *In quali settori economici sono stati effettuati gli investimenti?*

Al 30 settembre 2022, il Comparto era investito nei seguenti settori economici:

Energia	-
Perforazioni di petrolio e gas	-
Apparecchiature e servizi per l'industria del petrolio e del gas	-
Società integrate di petrolio e gas	-
Esplorazione e produzione di petrolio e gas	-
Raffinazione e commercializzazione di petrolio e gas	-

Immobiliare	0.9%

Il Gestore ha utilizzato i settori individuati dai Global Industry Classification Standard (GICS) nella tabella che precede. La tabella individua sottosectori/settori GICS che, secondo il Gestore, consentiranno un'analisi più granulare della dimensione ambientale/sociale degli investimenti del Comparto.

In quale misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

N/A – Il Comparto non si impegna a investire in investimenti sostenibili.

Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale.

Le **attività di transizione** sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano, tra l'altro, livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

Sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili conformemente al regolamento (UE) 2020/852.

- **Qual è stata la quota di investimenti in attività di transizione e abilitanti?**

N/A – Il Comparto non si impegna a investire in investimenti sostenibili.

- **Qual è stata la percentuale di investimenti allineati alla tassonomia dell'UE rispetto ai precedenti periodi di riferimento?**

N/A – Il Comparto non si impegna a investire in investimenti sostenibili.

Qual è stata la quota di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?

N/A – Il Comparto non si impegna a investire in investimenti sostenibili.

Qual è stata la quota di investimenti socialmente sostenibili?

N/A – Il Comparto non si impegna a investire in investimenti sostenibili.

Quali investimenti erano compresi nella categoria "Altri", qual era il loro scopo ed esistevano garanzie minime di salvaguardia ambientale o sociale?

Gli investimenti classificati come "#2 Altri" possono comprendere, senza limitarsi, investimenti in società/emittenti con bassi punteggi secondo la metodologia LO ESG/CAR Rating Materialità e che il Gestore ha incluso nel portafoglio del Comparto anche a scopo di diversificazione, per riflettere l'esposizione agli indici di riferimento tradizionali o al mercato più ampio oppure nel caso in cui l'universo del Comparto è già soggetto a restrizioni. "#2 Altri" comprende anche investimenti in società non coperte dalla metodologia LO ESG/CAR Rating Materialità e le Disponibilità liquide ed equivalenti.

Quali misure sono state poste in essere per conseguire le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Il Gestore ha svolto attività di engagement in linea con il proprio sistema aziendale di stewardship, che è guidato e ispirato dalla sua visione sulla sostenibilità e dal suo impegno in tale ambito. Ad oggi, le attività di engagement puntano a (i) incoraggiare l'allineamento delle aziende a percorsi sostenibili di transizione (ii) promuovere pratiche aziendali best-in-class e (iii) ad affrontare i casi di controversie gravi. La ricerca legata alle attività di engagement individua le debolezze, la mancanza di allineamento o l'esigenza di cambiamento e le traduce in obiettivi di impegno misurabili che consentono al Gestore di monitorare i progressi nel tempo. Gli obiettivi di fondo delle attività di engagement del Gestore sono cercare di comprendere meglio le specificità di un'azienda (il che potrebbe incidere sul rating calcolato con la metodologia LO ESG/CAR Rating Materialità descritta in precedenza), migliorare le informative disponibili al pubblico e promuovere il cambiamento in generale in materia di sostenibilità, corporate governance e tematiche sociali.

Il Gestore definisce un "engagement" come la somma di tutte le interazioni che ha con un'azienda su una tematica rilevante specifica. Ciò vuol dire che il coinvolgimento di una società può essere molto articolato se il Gestore si confronta più volte con il management su tematiche rilevanti diverse. Il Gestore definisce "interazione" il confronto che ha con un'azienda in un breve arco di tempo. Un'interazione può assumere la forma di un'e-mail, di una chiamata/videochiamata, di un incontro faccia a faccia o, in taluni casi, di un impegno collaborativo. Il Gestore raccoglie dati su ogni singola interazione; in particolare, dopo ogni interazione raccoglie dati quantitativi e qualitativi registrandoli in una nota standardizzata di stewardship. Ogni valutazione di stewardship comprende fino a venti diversi campi di dati. Un engagement viene chiuso quando il Gestore ha raggiunto gli obiettivi o se la società non risponde alle sollecitazioni.

Nel periodo 1° ottobre 2021-30 settembre 2022, il Gestore ha effettuato le seguenti interazioni e attività di engagement su tutti i portafogli da esso gestiti e non solo sugli investimenti detenuti per conto del Comparto.

Numero di società con almeno un'interazione nel periodo in esame	171
Numero di engagement con almeno un'interazione nel periodo in esame	184
Numero di interazioni nel periodo in esame	264
Numero di società coinvolte in un processo di engagement attivo alla fine del periodo in esame	181

	Numero di engagement su questa tematica	% di engagement su questa tematica
Corporate governance	23	13%
Zero netto/OMP	42	23%
Ambiente	1	1%
Comunicazioni ESG/TCFD	67	36%
Natural Capital	21	11%
Controversie	13	7%
ESG/prassi aziendali	5	3%
ESG generale	7	4%
Società	5	3%

Gli indici di riferimento sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

Qual è stata la performance di questo prodotto finanziario rispetto all'indice di riferimento?

N/A – Non è stato scelto alcun indice di riferimento.

- *In che modo l'indice di riferimento differisce da un indice generale di mercato?*

N/A

- *Qual è stata la performance di questo prodotto finanziario relativamente agli indicatori di sostenibilità per stabilire l'allineamento dell'indice di riferimento alle caratteristiche ambientali o sociali promosse?*

N/A

- *Qual è stata la performance di questo prodotto finanziario rispetto all'indice di riferimento?*

N/A

- *Qual è stata la performance di questo prodotto finanziario rispetto all'indice generale di mercato?*

N/A

Caratteristiche ambientali e/o sociali

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, purché tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e l'impresa beneficiaria degli investimenti rispetti prassi di buona governance.

La **tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non stabilisce un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere allineati o no alla tassonomia.

Gli indicatori di sostenibilità misurano in che modo sono raggiunti gli obiettivi sostenibili di questo prodotto finanziario.

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?

- Si** **No**
- Ha effettuato **investimenti sostenibili con un obiettivo ambientale: _____%**
- in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE
 - in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE
- Ha effettuato **investimenti sostenibili con un obiettivo sociale: _____%**
- Ha **promosso caratteristiche ambientali/sociali (A/S)** e, pur non avendo come obiettivo un investimento sostenibile, ha avuto una quota del(lo) _____ % di investimenti sostenibili
- con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE
 - con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE
 - con un obiettivo sociale
- Ha promosso **caratteristiche A/S, ma non effettuerà alcun investimento sostenibile**

In che misura le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario sono state conseguite?

Il Comparto non persegue obiettivi o risultati specifici di natura ambientale o sociale. Nonostante non miri a realizzare un obiettivo ambientale o sociale sostenibile, il Comparto si propone di promuovere prassi ambientali e/o sociali e/o di governance integrando nel suo processo di investimento considerazioni sui rischi di sostenibilità al fine di contribuire a ridurre le esternalità ambientali e di altro genere avverse associate all'economia globale.

Applicando requisiti ambientali, sociali e di governance minimi e soglie di investimento basate su fattori di sostenibilità, il Gestore ritiene di poter indurre le società e gli emittenti ad adottare prassi aziendali più sostenibili generando, alla fine, un cambiamento ambientale e sociale positivo. Tuttavia, al momento non è possibile valutare se queste soglie e questi requisiti minimi stiano promuovendo un cambiamento significativo. È evidente che la maggior parte degli indicatori che segnalano un cambiamento ambientale negativo continua a peggiorare e che l'economia globale è largamente incapace di far fronte ai danni ambientali o di porvi rimedio. Pertanto, il Gestore ritiene che l'adozione e l'integrazione di politiche significative di screening, esclusione, restrizione ed engagement continueranno necessariamente a essere parte integrante dei processi di investimento del Comparto.

- **Qual è stata la performance degli indicatori di sostenibilità?**

Nell'informativa precontrattuale del Comparto conforme alle disposizioni dell'SFDR non sono stati individuati indicatori di sostenibilità specifici relativi al periodo coperto dal presente rapporto. Ciò nonostante, il Gestore ritiene che i dati sotto riportati possano essere molto utili per valutare il profilo ambientale e sociale complessivo del Comparto.

Vaglio e classificazione ESG

Il Gestore utilizza la metodologia di valutazione della materialità industriale ESG/CAR di Lombard Odier ("LO ESG/CAR Rating Materialità") per classificare ogni società in cui investe il Comparto, impiegando una scala di rating compresa tra A+ e D (dove A+ rappresenta la valutazione migliore).

La tabella che segue mostra il rating del portafoglio societario del Comparto in base alla metodologia LO ESG/CAR Rating Materialità al 30 settembre 2022:

Lombard Odier ESG/CAR Rating Industriale Materialità	Comparto	Performance confronto indice*
ESG Materialità grado	C+	B

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

La tabella che segue mostra la ripartizione in percentuale del portafoglio societario del Comparto in ciascun segmento di rating principale della metodologia LO ESG/CAR Rating Materialità al 30 settembre 2022:

Lombard Odier ESG/CAR Rating Industriale Materialità	Comparto	Performance confronto indice*
ESG Materialità distribuzione		
A	42%	64%
B	29%	28%
C	24%	7%
D	2%	0%

* MSCI World TR ND: l'indice di confronto della performance non intende essere un indice di riferimento per conseguire le caratteristiche ambientali o sociali promosse dal Comparto. È l'indice individuato nella sezione Obiettivo e politica di investimento del prospetto del Comparto per consentire confronti di performance e/o per monitorare internamente il rischio.

Indicatori dei principali effetti negativi ("PEN")

La metodologia LO ESG/CAR Rating Materialità comprende dati mappati rispetto ai temi individuati dagli indicatori dei principali effetti negativi per la sostenibilità stabiliti dall'SFDR.

Le informazioni che seguono sono fornite con riferimento al portafoglio del Comparto per i PEN suindicati e per il periodo coperto dal presente rapporto:

PEN	Unità	Valore
Tabella I – Emissioni di gas serra (GHG)		
4 – Esposizione a società attive nel settore dei combustibili fossili	% del portafoglio	0.0%
Tabella I – Questioni sociali e dipendenti		
10 – Violazione del PGNU (Patto Globale delle Nazioni Unite)	% del portafoglio	2.1%
11 – Mancanza di monitor PGNU	% del portafoglio	3.0%
14 – Esposizione ad armi controverse	% del portafoglio	0.0%
Tabella III – Diritti umani		
12 – Incidenti di lavoro minorile	% del portafoglio	1.0%

Si fa rilevare che la disponibilità e la qualità dei dati dei PEN si modificano rapidamente. Le informazioni sopra riportate si basano su dati che provengono direttamente dalle aziende, da fornitori terzi di dati e da modelli o stime del Gestore. I valori futuri potrebbero essere sensibilmente diversi non solo perché varia la composizione del portafoglio del Comparto o l'attività svolta dalle aziende o dagli emittenti in cui il Comparto ha investito, ma anche perché si modificano la disponibilità e la qualità dei dati che dovrebbero migliorare sensibilmente nei prossimi anni.

- **E rispetto ai periodi precedenti?**

N/A – Questo è il primo periodo.

- **Quali sono stati gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha in parte realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?**

N/A – Il Comparto non si impegna a investire in investimenti sostenibili.

- **In che modo gli investimenti sostenibili che il prodotto finanziario ha in parte realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?**

N/A – Il Comparto non si impegna a investire in investimenti sostenibili.

In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?

N/A – Il Comparto non si impegna a investire in investimenti sostenibili.

Gli investimenti sostenibili erano in linea con le Direttive OCSE per le imprese multinazionali e i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:

N/A – Il Comparto non si impegna a investire in investimenti sostenibili.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

La tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'UE.

Il principio "non arrecare un danno significativo" si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'Unione Europea per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri dell'Unione Europea per le attività economiche ecosostenibili.

Neppure eventuali altri investimenti sostenibili devono arrecare un danno significativo ad obiettivi ambientali o sociali.

Il Gestore utilizza la metodologia LO ESG/CAR Rating Materialità per analizzare e classificare le società in cui investe il Comparto. Tale metodologia impiega più di 150 dati di sostenibilità compresi, ove disponibili, i dati mappati rispetto ai temi individuati dagli indicatori dei principali effetti negativi ("PEN").

Inoltre, il Gestore considera i "PEN" uno strumento per comprendere la performance ambientale e sociale del portafoglio del Comparto rispetto a criteri di sostenibilità oggettivamente valutabili e applicati in tutta l'Unione Europea. Oltre che per la metodologia LO ESG/CAR Rating Materialità, l'esame dei PEN è utilizzato soprattutto per comprendere, ex post, l'andamento generale del Comparto in materia di sostenibilità. Inoltre, la considerazione dei PEN più rilevanti può incidere sulle decisioni di investimento (soprattutto se i PEN dimostrano che un investimento potrebbe arrecare danni significativi). Va osservato che non tutti i PEN possono avere rilevanza per tutti gli investimenti o lo stesso peso. Inoltre, l'esame dei PEN rappresenta solo una parte della valutazione più ampia eseguita dal Gestore sui fattori di sostenibilità che incidono sul Comparto.

Quali sono stati i maggiori investimenti effettuati da questo prodotto finanziario?

L'elenco comprende investimenti che costituiscono le maggiori esposizioni assunte dal prodotto finanziario durante il periodo di riferimento che è al settembre 2022.

Maggiori posizioni	Settore	% del patrimonio	Paese
THERMO FISHER SCIENTIFIC	Sanità	2.93	Stati Uniti

L'allocazione degli attivi descrive la quota di investimenti in attivi specifici.

Qual è stata la percentuale di investimenti legati alla sostenibilità?

N/A – Il Comparto non si impegna a investire in investimenti sostenibili.

- **Qual è stata l'allocazione degli attivi?**

Al 30 settembre 2022:

71% del patrimonio del Comparto è stato allocato a investimenti #1 Allineati con caratteristiche A/S
29% del patrimonio del Comparto è stato allocato a investimenti #2 Altri

#1 Allineati con caratteristiche A/S comprende gli investimenti del prodotto finanziario utilizzati per rispettare le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

#2 Altri comprende gli investimenti rimanenti del prodotto finanziario che non sono allineati alle caratteristiche ambientali o sociali, né sono considerati investimenti sostenibili.

Le attività allineate alla tassonomia sono espresse in percentuale di:

- **fatturato:** grado attuale di "ecosostenibilità" delle imprese beneficiarie degli investimenti;
- **spese in conto capitale (CapEx):** investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, rilevanti per la transizione verso un'economia verde;
- **spese operative (OpEx):** attività operative verdi delle imprese beneficiarie degli investimenti.

• *In quali settori economici sono stati effettuati gli investimenti?*

Al 30 settembre 2022, il Comparto era investito nei seguenti settori economici:

Energia	-
Perforazioni di petrolio e gas	-
Apparecchiature e servizi per l'industria del petrolio e del gas	-
Società integrate di petrolio e gas	-
Esplorazione e produzione di petrolio e gas	-
Raffinazione e commercializzazione di petrolio e gas	-
Stoccaggio e trasporto di petrolio e gas	-
Carbone e combustibili	-
Materiali	-
Prodotti chimici	-
Materiali per l'edilizia	-
Container e imballaggi	-
Metalli e minerali	-
Carta e prodotti forestali	-
Beni industriali	1.8%
Beni di investimento	1.8%
Servizi commerciali e professionali	-
Trasporti	-
Beni voluttuari	20.4%
Beni di consumo primari	5.3%
Sanità	42.5%
Finanza	23.8%
Tecnologie dell'informazione	2.1%

Servizi di pubblica utilità	-
Aziende elettriche	-
Aziende di erogazione di gas	-
Aziende multiservizi	-
Aziende idriche	-
Produttori indipendenti di energia e di elettricità da fonti rinnovabili	-
Immobiliare	1.8%

Il Gestore ha utilizzato i settori individuati dai Global Industry Classification Standard (GICS) nella tabella che precede. La tabella individua sottosectori/settori GICS che, secondo il Gestore, consentiranno un'analisi più granulare della dimensione ambientale/sociale degli investimenti del Comparto.

In quale misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

N/A – Il Comparto non si impegna a investire in investimenti sostenibili.

Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale.

Le **attività di transizione** sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano, tra l'altro, livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

Sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili conformemente al regolamento (UE) 2020/852.

- **Qual è stata la quota di investimenti in attività di transizione e abilitanti?**

N/A – Il Comparto non si impegna a investire in investimenti sostenibili.

- **Qual è stata la percentuale di investimenti allineati alla tassonomia dell'UE rispetto ai precedenti periodi di riferimento?**

N/A – Il Comparto non si impegna a investire in investimenti sostenibili.

Qual è stata la quota di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?

N/A – Il Comparto non si impegna a investire in investimenti sostenibili.

Qual è stata la quota di investimenti socialmente sostenibili?

N/A – Il Comparto non si impegna a investire in investimenti sostenibili.

Quali investimenti erano compresi nella categoria "Altri", qual era il loro scopo ed esistevano garanzie minime di salvaguardia ambientale o sociale?

Gli investimenti classificati come "#2 Altri" possono comprendere, senza limitarsi, investimenti in società/emittenti con bassi punteggi secondo la metodologia LO ESG/CAR Rating Materialità e che il Gestore ha incluso nel portafoglio del Comparto anche a scopo di diversificazione, per riflettere l'esposizione agli indici di riferimento tradizionali o al mercato più ampio oppure nel caso in cui l'universo del Comparto è già soggetto a restrizioni. "#2 Altri" comprende anche investimenti in società non coperte dalla metodologia LO ESG/CAR Rating Materialità e le Disponibilità liquide ed equivalenti.

Quali misure sono state poste in essere per conseguire le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Il Gestore ha svolto attività di engagement in linea con il proprio sistema aziendale di stewardship, che è guidato e ispirato dalla sua visione sulla sostenibilità e dal suo impegno in tale ambito. Ad oggi, le attività di engagement puntano a (i) incoraggiare l'allineamento delle aziende a percorsi sostenibili di transizione (ii) promuovere pratiche aziendali best-in-class e (iii) ad affrontare i casi di controversie gravi. La ricerca legata alle attività di engagement individua le debolezze, la mancanza di allineamento o l'esigenza di cambiamento e le traduce in obiettivi di impegno misurabili che consentono al Gestore di monitorare i progressi nel tempo. Gli obiettivi di fondo delle attività di engagement del Gestore sono cercare di comprendere meglio le specificità di un'azienda (il che potrebbe incidere sul rating calcolato con la metodologia LO ESG/CAR Rating Materialità descritta in precedenza), migliorare le informative disponibili al pubblico e promuovere il cambiamento in generale in materia di sostenibilità, corporate governance e tematiche sociali.

Il Gestore definisce un "engagement" come la somma di tutte le interazioni che ha con un'azienda su una tematica rilevante specifica. Ciò vuol dire che il coinvolgimento di una società può essere molto articolato se il Gestore si confronta più volte con il management su tematiche rilevanti diverse. Il Gestore definisce "interazione" il confronto che ha con un'azienda in un breve arco di tempo. Un'interazione può assumere la forma di un'e-mail, di una chiamata/videochiamata, di un incontro faccia a faccia o, in taluni casi, di un impegno collaborativo. Il Gestore raccoglie dati su ogni singola interazione; in particolare, dopo ogni interazione raccoglie dati quantitativi e qualitativi registrandoli in una nota standardizzata di stewardship. Ogni valutazione di stewardship comprende fino a venti diversi campi di dati. Un engagement viene chiuso quando il Gestore ha raggiunto gli obiettivi o se la società non risponde alle sollecitazioni.

Nel periodo 1° ottobre 2021-30 settembre 2022, il Gestore ha effettuato le seguenti interazioni e attività di engagement su tutti i portafogli da esso gestiti e non solo sugli investimenti detenuti per conto del Comparto.

Numero di società con almeno un'interazione nel periodo in esame	171
Numero di engagement con almeno un'interazione nel periodo in esame	184
Numero di interazioni nel periodo in esame	264
Numero di società coinvolte in un processo di engagement attivo alla fine del periodo in esame	181

	Numero di engagement su questa tematica	% di engagement su questa tematica
Corporate governance	23	13%
Zero netto/OMP	42	23%
Ambiente	1	1%
Comunicazioni ESG/TCFD	67	36%
Natural Capital	21	11%
Controversie	13	7%
ESG/prassi aziendali	5	3%
ESG generale	7	4%
Società	5	3%

Gli indici di riferimento sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

Qual è stata la performance di questo prodotto finanziario rispetto all'indice di riferimento?

N/A – Non è stato scelto alcun indice di riferimento.

- *In che modo l'indice di riferimento differisce da un indice generale di mercato?*

N/A

- *Qual è stata la performance di questo prodotto finanziario relativamente agli indicatori di sostenibilità per stabilire l'allineamento dell'indice di riferimento alle caratteristiche ambientali o sociali promosse?*

N/A

- *Qual è stata la performance di questo prodotto finanziario rispetto all'indice di riferimento?*

N/A

- *Qual è stata la performance di questo prodotto finanziario rispetto all'indice generale di mercato?*

N/A

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product Name: M&G (Lux) Investment Funds 1 - M&G (Lux) Dynamic Allocation Fund
Legal Entity Identifier: 549300PZ80BI5Q8OS924

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:**

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:**

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 71.33% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted the use of an Exclusionary Approach (as defined below):

The Fund excluded certain potential investments from its investment universe to mitigate potential negative effects on the environment and society. For securitised investments such as asset-backed securities (ABS), this also included assessing them against the Investment Manager's proprietary scoring methodology ("Exclusionary Approach"). Accordingly, the Investment Manager promoted environmental and/or social characteristics by excluding certain investments that are considered to be detrimental to ESG Factors.

No reference benchmark was designated for the purpose of attaining the Fund's promoted environmental and/or social characteristics.

The Investment Manager operates a data driven quantitative good governance test used to consider investments into companies. M&G excludes investments in securities that are considered as failing the Investment Manager's good governance test. When assessing good governance practice the Investment Manager will, as a minimum, have regard to matters it sees relevant to the four identified pillars of good governance (sound management structures, employee relations, remuneration of staff and tax compliance).

The alignment percentage indicated in the graphic below shows the allocation between such investments and "Other" Investments.

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

The Fund's sustainability indicators to test its compliance with its Exclusionary Approach were met at all times during the reporting period.

- **...and compared to previous periods?**

The Fund is not yet able to provide comparison to a previous reporting period as this is the Fund's first SFDR Level 2 Periodic Report. The Fund will provide historic comparison in the next Periodic Report.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The Fund may allocate to sustainable investments of any type, i.e. investments with an environmental, and/or a social objective. The Fund is not required to favour any specific type of sustainable investment.

The Investment Manager used a series of proprietary tests based on available data to determine whether and how an investment made positive contribution(s) towards environmental and social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Sustainable investments that the Fund made did not cause significant harm to any environmental or social sustainable investment objective as they passed a series of tests, including:

1. Whether they represent significant exposure to businesses the Investment Manager considers harmful
2. Principal Adverse Impact indicators considered to render the investment incompatible with sustainable investment (violations of the UN Global Compact Principles or the OECD Guidelines for Multinational Enterprises, social violations by sovereigns such as being subject to sanctions, negative effects on biodiversity sensitive areas)
3. Other Principal Adverse Impact indicators form part of a materiality assessment to understand whether any exposures were compatible with sustainable investment

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Investment Manager's research process included consideration of Principal Adverse Impact indicators for all investments where data was available (i.e. not just for sustainable investments), which allowed the Investment Manager to make informed investment decisions.

The Fund's consideration of Principal Adverse Impact indicators was used as part of understanding the operating practices of the investments purchased by the Fund. Investments held by the Fund were then subject to ongoing monitoring and a quarterly review process.

Further information on the Principal Adverse Impact indicators which were taken into account by the Investment Manager can be found in the Annex to the Investment Manager's website disclosures for the Fund.

- **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

All investments purchased by the Fund passed the Investment Manager's good governance tests, and in addition, sustainable investments also passed tests to confirm they do no significant harm, as described above. These tests embed a consideration of the OECD Guidelines and UN Guiding Principles

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

For sustainable investments, principal adverse impacts are a key part of assessing such investments do not do significant harm as explained above.

For other investments the Investment Manager's research process included consideration of Principal Adverse Impact indicators for all investments where data was available, which allows the Investment Manager to make informed investment decisions, as explained above.

Further information on the Principal Adverse Impact indicators which are taken into account by the Investment Manager can be found in the Annex to the Investment Manager's website disclosures for the Fund.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/04/2022 to 31/03/2023

Largest investments	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

In the SFDR Level 2 Pre-Contractual Disclosure (annex to the Fund Prospectus) the Fund committed to a minimum of 70% of the Fund to be aligned to the promoted E/S characteristics and for a minimum of 20% of the Fund to be in Sustainable Investments.

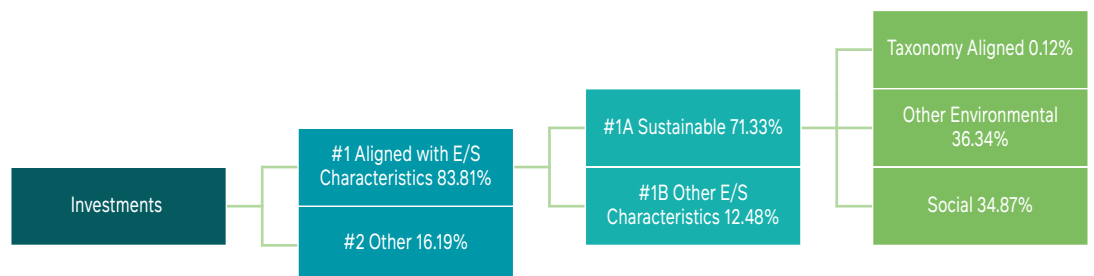

Asset allocations below are expressed as a percentage of Net Asset Value (NAV). The % of investments that were aligned to the environmental or social characteristic promoted was 83.81% of NAV as at 31 March 2023. This comprised 71.33% of NAV in sustainable investments, and the remaining 12.48% of NAV in investments with other environmental and or social characteristics.

Whilst the Fund did not commit to invest in investments aligned to the EU Taxonomy, 0.12% were aligned to the EU Taxonomy. 36.34% related to investments with other environmental characteristics, and 34.87% related to socially sustainable investments.

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The graphic below provides an overview of the asset allocation.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- **In which economic sectors were the investments made?**

The investment breakdown uses NACE (Nomenclature of Economic Activities) and is expressed as a % of Net Asset Value (NAV).

Economic sector	% Assets
Public administration and defence; compulsory social security	39.12%
Financial and insurance activities	34.12%
Other	7.87%
Manufacturing	7.17%
Information and communication	2.51%
Mining and quarrying	2.43%
Wholesale and retail trade; repair of motor vehicles and motorcycles	1.59%
Electricity, gas, steam and air conditioning supply	0.95%
Transportation and storage	0.94%
Real estate activities	0.90%
Human health and social work activities	0.54%
Professional, scientific and technical activities	0.48%
Administrative and support service activities	0.42%
Construction	0.31%
Accommodation and food service activities	0.24%
Water supply; sewerage, waste management and remediation activities	0.20%
Activities of extraterritorial organisations and bodies	0.09%
Arts, entertainment and recreation	0.07%
Other service activities	0.02%
Education	0.01%
Agriculture, forestry and fishing	0.01%

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to Taxonomy-aligned sustainable investments is 0%, the Fund is permitted to allocate to such investments, which would form part of its overall allocation to sustainable investments with environmental objectives.

The share of the Fund's investments that were aligned with the environmental objectives under the Taxonomy Regulation during the reference period was 0.12%. This percentage is determined by taking the quarter end figure for each quarter in the reference period and averaging it. The information was obtained from public disclosures.

No assurance from an auditor, third party or review was undertaken on the EU Taxonomy data.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure (CapEx)** shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure (OpEx)** reflects the green operational activities of investee companies.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

- Yes: In fossil gas In nuclear energy
- No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The share of the Fund's investments made in transitional activities was 0% and in enabling activities was 0.01% over the period. This compares to a minimum percentage commitment of 0% stated in the Fund's precontractual disclosure.

Activity	Percentage Investments
Share of Transitional Activities	0.00%
Share of Enabling Activities	0.01%

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Fund is not yet able to provide comparison to a previous reporting period as this is the Fund's first SFDR Level 2 Periodic Report. The Fund will provide historic comparison in the next Periodic Report.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

During the reference period the Fund held cash, near cash, money market funds and derivatives as “Other” investments, for any purpose permitted by the Fund’s investment policy. No minimum environmental or social safeguards were applied, other than as set out below.

Derivatives used to take investment exposure to diversified financial indices, and funds (i.e., UCITS and other UCIs) may be held for any reason permitted by the Fund’s investment policy and will be subject to such minimum environmental or social safeguard tests as the Investment Manager considers appropriate, for example a minimum weighted ESG score test. No minimum environmental or social safeguards are applied to FX derivatives.

The Fund may also hold as Other investments those investments where insufficient data exists to determine the investments’ alignment with the promoted characteristics.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund applied an exclusion policy to achieve its Exclusionary Approach and it maintained a weighted average ESG rating that was higher than that of the equity market as represented by its investment universe. Its compliance with the same is reported in the sustainability indicators above.

How did this financial product perform compared to the reference benchmark?

N/A. No reference benchmark was designated for the purpose of attaining the Fund’s sustainable investment objective.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How does the reference benchmark differ from a broad market index?**
N/A

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**
N/A

- **How did this financial product perform compared with the reference benchmark?**
N/A

- **How did this financial product perform compared with the broad market index?**
N/A

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product Name: M&G (Lux) Investment Funds 1 - M&G (Lux) Global Dividend Fund
Legal Entity Identifier: 549300TRK90WIUZI3612

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes
 No

It made **sustainable investments with an environmental objective:**

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:**

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 82.74% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted the use of an Exclusionary Approach and a Positive ESG Tilt (as defined below):

The Fund excluded certain potential investments from its investment universe to mitigate potential negative effects on the environment and society ("Exclusionary Approach"). Accordingly, the Investment Manager promoted environmental and/or social characteristics by excluding certain investments that are considered to be detrimental to ESG Factors.

The Fund maintained a weighted average ESG rating that was higher than that of the equity market as represented by its investment universe.

In constructing a portfolio positively tilted towards investments with better ESG characteristics, the Investment Manager may nonetheless invest in investments across the full spectrum of ESG ratings. At an individual security level, the Investment Manager favours investments with better ESG characteristics where this is not detrimental to the pursuit of the financial investment objective.

No reference benchmark was designated for the purpose of attaining the Fund's promoted environmental and/or social characteristics.

The Investment Manager operates a data driven quantitative good governance test used to consider investments into companies. M&G excludes investments in securities that are considered as failing the Investment Manager's good governance test. When assessing good governance practice the Investment Manager will, as a minimum, have regard to matters it sees relevant to the four identified pillars of good governance (sound management structures, employee relations, remuneration of staff and tax compliance).

The alignment percentage indicated in the graphic below shows the allocation between such investments and "Other" Investments.

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

● How did the sustainability indicators perform?

The Fund's sustainability indicators to test its compliance with its Exclusionary Approach and Positive ESG Tilt were met at all times during the reporting period.

Please see the below table for an overview of the Fund's performance relative to its sustainability indicator.

The 'Eligibility' figure is a measure of the percentage of Fund assets which are eligible to be measured by the sustainability indicator. The 'Coverage' figure indicates the percentage of eligible assets for which data is available.

Sustainability Indicator Name	Value	Eligibility	Coverage
As at - 31 March 2023			
Portfolio weighted average ESG score for the fund	7.55 ESG Score	96.47%	99.85%
Portfolio weighted average ESG score for the Investment Universe	6.79 ESG Score	98.36%	49.67%

● ...and compared to previous periods?

The Fund is not yet able to provide comparison to a previous reporting period as this is the Fund's first SFDR Level 2 Periodic Report. The Fund will provide historic comparison in the next Periodic Report.

● What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Fund may allocate to sustainable investments of any type, i.e., investments with an environmental and/or social objective. The Fund is not required to favour any specific type of sustainable investment.

The Investment Manager used a series of proprietary tests based on available data to determine whether and how an investment made positive contribution(s) towards environmental and social objectives.

● How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the Fund made did not cause significant harm to any environmental or social sustainable investment objective as they passed a series of tests, including:

1. Whether they represent significant exposure to businesses the Investment Manager considers harmful
2. Principal Adverse Impact indicators considered to render the investment incompatible with sustainable investment (violations of the UN Global Compact Principles or the OECD Guidelines for Multinational Enterprises, social violations by sovereigns such as being subject to sanctions, negative effects on biodiversity sensitive areas)
3. Other Principal Adverse Impact indicators form part of a materiality assessment to understand whether any exposures were compatible with sustainable investment

● How were the indicators for adverse impacts on sustainability factors taken into account?

The Investment Manager's research process includes consideration of Principal Adverse Impact indicators for all investments where data is available (i.e. not just for sustainable investments), which allowed the Investment Manager to make informed investment decisions.

The Fund's consideration of Principal Adverse Impact indicators is used as part of understanding the operating practices of the investments purchased by the Fund.

Investments held by the Fund were then subject to ongoing monitoring and a quarterly review process. Further information on the Principal Adverse Impact indicators which are taken into account by the Investment Manager can be found in the Annex to the Investment Manager's website disclosures for the Fund.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

All investments purchased by the Fund passed the Investment Manager's good governance tests, and in addition, sustainable investments also passed tests to confirm they do no significant harm, as described above. These tests embed a consideration of the OECD Guidelines and UN Guiding Principles.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

For sustainable investments, principal adverse impacts are a key part of assessing such investments do not do significant harm as explained above. For other investments the Investment Manager's research process includes consideration of Principal Adverse Impact indicators for all investments where data was available, which allows the Investment Manager to make informed investment decisions, as explained above.

Further information on the Principal Adverse Impact indicators which are taken into account by the Investment Manager can be found in the Annex to the Investment Manager's website disclosures for the Fund. Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/04/2022 to 31/03/2023

Largest investments	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

In the SFDR Level 2 Pre-Contractual Disclosure (annex to the Fund Prospectus) the Fund committed to 70% of the Fund to be aligned to the promoted E/S characteristics and a minimum of 20% in Sustainable Investments.

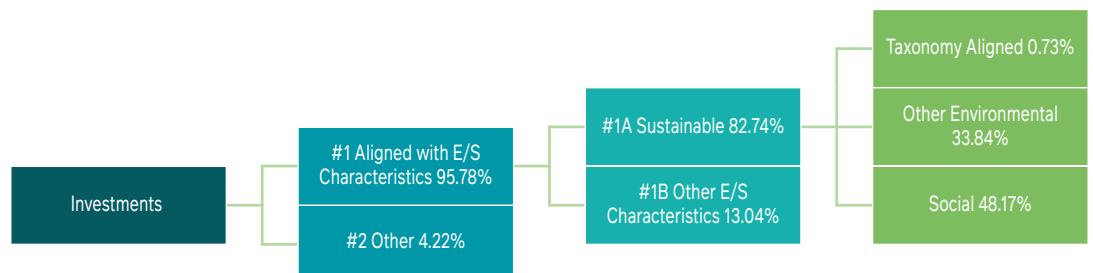

Asset allocations below are expressed as a percentage of Net Asset Value (NAV). The % of investments that were aligned to the environmental or social characteristic promoted was 95.78% of NAV as at 31 March 2023. This comprised 82.74% of NAV in sustainable investments, and the remaining 13.04% of NAV in investments with other environmental and or social characteristics.

Whilst the Fund did not commit to invest in investments aligned to the EU Taxonomy, 0.73% were aligned to the EU Taxonomy. 33.84% related to investments with other environmental characteristics, and 48.17% related to socially sustainable investments.

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The graphic below provides an overview of the asset allocation.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

The investment breakdown uses NACE (Nomenclature of Economic Activities) and is expressed as a % of Net Asset Value (NAV).

Economic sector	% Assets
Manufacturing	61.94%
Financial and insurance activities	13.72%
Wholesale and retail trade; repair of motor vehicles and motorcycles	12.93%
Information and communication	5.81%
Other	3.67%
Mining and quarrying	1.70%
Professional, scientific and technical activities	0.22%

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to Taxonomy-aligned sustainable investments is 0%, the Fund is permitted to allocate to such investments, which would form part of its overall allocation to sustainable investments with environmental objectives.

The share of the Fund's investments that were aligned with the environmental objectives under the Taxonomy Regulation during the reference period was 0.73%. This percentage is determined by taking the quarter end figure for each quarter in the reference period and averaging it. The information was obtained from public disclosures.

No assurance from an auditor, third party or review was undertaken on the EU Taxonomy data.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the "greenness" of investee companies today.
- **capital expenditure (CapEx)** shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure (OpEx)** reflects the green operational activities of investee companies.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**

The share of the Fund's investments made in transitional activities over the period was 0% and in enabling activities 0.18%. This compares to a minimum percentage commitment of 0% stated in the Fund's precontractual disclosure.

Activity	Percentage Investments
Share of Transitional Activities	0%
Share of Enabling Activities	0.18%

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Fund is not yet able to provide comparison to a previous reporting period as this is the Fund's first SFDR Level 2 Periodic Report. The Fund will provide historic comparison in the next Periodic Report.

 are sustainable investments with an environmental objective that **do not take into account** the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

- **What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?**

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 33.84%. This compares to a minimum percentage commitment of 5% in environmentally sustainable investments (i.e., both aligned to the EU Taxonomy and not) stated in the Fund's precontractual disclosure.

- **What was the share of socially sustainable investments?**

The share of socially sustainable investments was 48.17%. This compares to a minimum percentage commitment of 5% stated in the Fund's precontractual disclosure.

- **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

During the reference period the Fund held cash, near cash and money market funds as "Other" investments, for any purpose permitted by the Fund's investment policy. No minimum environmental or social safeguards were applied, other than as set out below.

Derivatives used to take investment exposure to diversified financial indices, and funds (i.e. UCITS and other UCIs) may be held for any reason permitted by the Fund's investment policy and will be subject to such minimum environmental or social safeguard tests as the Investment Manager considers appropriate, for example a minimum weighted ESG score test. No minimum environmental or social safeguards are applied to FX derivatives.

The Fund may also hold as Other investments those investments where insufficient data exists to determine the investments' alignment with the promoted characteristics.

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

The Fund applied an exclusion policy to achieve its Exclusionary Approach and it maintained a weighted average ESG rating that was higher than that of the equity market as represented by its investment universe. Its compliance with the same is reported in the sustainability indicators above.

- **How did this financial product perform compared to the reference benchmark?**

N/A. No reference benchmark was designated for the purpose of attaining the Fund's sustainable investment objective.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How does the reference benchmark differ from a broad market index?**
N/A
- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**
N/A
- **How did this financial product perform compared with the reference benchmark?**
N/A
- **How did this financial product perform compared with the broad market index?**
N/A

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product Name: M&G (Lux) Investment Funds 1 - M&G (Lux) Global Macro Bond Fund
Legal Entity Identifier: 549300OHGMRPCONPD471

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes
 No

It made **sustainable investments with an environmental objective:**

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:**

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 55.85% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted the use of an Exclusionary Approach (as defined below):

The Fund excluded certain potential investments from its investment universe to mitigate potential negative effects on the environment and society. For securitised investments such as asset-backed securities (ABS), this also included assessing them against the Investment Manager's proprietary scoring methodology ("Exclusionary Approach"). Accordingly, the Investment Manager promoted environmental and/or social characteristics by excluding certain investments that are considered to be detrimental to ESG Factors.

No reference benchmark was designated for the purpose of attaining the Fund's promoted environmental and/or social characteristics.

The Investment Manager operates a data driven quantitative good governance test used to consider investments into companies. M&G excludes investments in securities that are considered as failing the Investment Manager's good governance test. When assessing good governance practice the Investment Manager will, as a minimum, have regard to matters it sees relevant to the four identified pillars of good governance (sound management structures, employee relations, remuneration of staff and tax compliance).

The alignment percentage indicated in the graphic below shows the allocation between such investments and "Other" Investments.

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

The Fund's sustainability indicators to test its compliance with its Exclusionary Approach were met at all times during the reporting period.

- **...and compared to previous periods?**

The Fund is not yet able to provide comparison to a previous reporting period as this is the Fund's first SFDR Level 2 Periodic Report. The Fund will provide historic comparison in the next Periodic Report.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The Fund may allocate to sustainable investments of any type, i.e., investments with an environmental and/or social objective. The Fund is not required to favour any specific type of sustainable investment.

The Investment Manager used a series of proprietary tests based on available data to determine whether and how an investment made positive contribution(s) towards environmental and social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Sustainable investments that the Fund made did not cause significant harm to any environmental or social sustainable investment objective as they passed a series of tests, including:

1. Whether they represent significant exposure to businesses the Investment Manager considers harmful
2. Principal Adverse Impact indicators considered to render the investment incompatible with sustainable investment (violations of the UN Global Compact Principles or the OECD Guidelines for Multinational Enterprises, social violations by sovereigns such as being subject to sanctions, negative effects on biodiversity sensitive areas)
3. Other Principal Adverse Impact indicators form part of a materiality assessment to understand whether any exposures were compatible with sustainable investment

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Investment Manager's research process included consideration of Principal Adverse Impact indicators for all investments where data was available (i.e. not just for sustainable investments), which allows the Investment Manager to make informed investment decisions.

The Fund's consideration of Principal Adverse Impact indicators is used as part of understanding the operating practices of the investments purchased by the Fund. Investments held by the Fund were then subject to ongoing monitoring and a quarterly review process.

Further information on the Principal Adverse Impact indicators which were taken into account by the Investment Manager can be found in the Annex to the Investment Manager's website disclosures for the Fund.

- **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

All investments purchased by the Fund passed the Investment Manager's good governance tests, and in addition, sustainable investments also passed tests to confirm they do no significant harm, as described above. These tests embed a consideration of the OECD Guidelines and UN Guiding Principles.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager's research process included consideration of Principal Adverse Impact indicators for all investments where data was available, which allows the Investment Manager to make informed investment decisions.

Further information on the Principal Adverse Impact indicators which are taken into account by the Investment Manager can be found in the Annex to the Investment Manager's website disclosures for the Fund.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/04/2022 to 31/03/2023

Largest investments	Sector	% Assets	Country
TREASURY BOND	Public administration and defence; compulsory social security	5.49%	US

What was the proportion of sustainability-related investments?

In the SFDR Level 2 Pre-Contractual Disclosure (annex to the Fund Prospectus) the Fund committed to 70% of the Fund to be aligned to the promoted E/S characteristics.

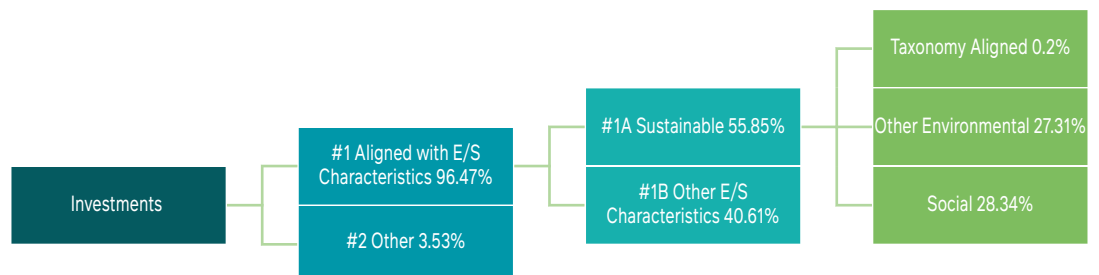

Asset allocations below are expressed as a percentage of Net Asset Value (NAV). The % of investments that were aligned to the environmental or social characteristic promoted was 96.47% of NAV as at 31 March 2023. This comprised 55.85% of NAV in sustainable investments, and the remaining 40.61% of NAV in investments with other environmental and or social characteristics.

Whilst the Fund did not commit to invest in investments aligned to the EU Taxonomy, 0.2% were aligned to the EU Taxonomy. 27.31% related to investments with other environmental characteristics, and 28.31% related to socially sustainable investments.

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The graphic below provides an overview of the asset allocation.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- **In which economic sectors were the investments made?**

The investment breakdown uses NACE (Nomenclature of Economic Activities) and is expressed as a % of Net Asset Value (NAV).

Economic sector	% Assets
Public administration and defence; compulsory social security	65.21%
Financial service activities, except insurance and pension funding	18.90%
Other	8.32%
Manufacturing	2.80%
Information and communication	2.78%
Electricity, gas, steam and air conditioning supply	0.59%
Wholesale and retail trade; repair of motor vehicles and motorcycles	0.56%
Real estate activities	0.30%
Accommodation and food service activities	0.29%
Transportation and storage	0.20%
Administrative and support service activities	0.06%

- **To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?**

Whilst the minimum mandatory allocation to Taxonomy-aligned sustainable investments is 0%, the Fund is permitted to allocate to such investments, which would form part of its overall allocation to sustainable investments with environmental objectives.

The Fund held 0.2% in Taxonomy-aligned sustainable investments during the reference period. This percentage is determined by taking the quarter end figure for each quarter in the reference period and averaging it. The information was obtained from public disclosures.

No assurance from an auditor, third party or review was undertaken on the EU Taxonomy data.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

- Yes: In fossil gas In nuclear energy
- No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the "greenness" of investee companies today.
- **capital expenditure (CapEx)** shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure (OpEx)** reflects the green operational activities of investee companies.

The graphs below show the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The share of the Fund's investments made in transitional activities over the period was 0% and in enabling activities 0.11%. This compares to a minimum percentage commitment of 0% stated in the Fund's precontractual disclosure.

Activity	Percentage Investments
Share of Transitional Activities	0.00%
Share of Enabling Activities	0.11%

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Fund is not yet able to provide comparison to a previous reporting period as this is the Fund's first SFDR Level 2 Periodic Report. The Fund will provide historic comparison in the next Periodic Report.

are sustainable investments with an environmental objective that **do not take into account** the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?**

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 27.31%. This compares to a minimum percentage commitment of 0% stated in the Fund's precontractual disclosure.

● **What was the share of socially sustainable investments?**

The share of socially sustainable investments was 28.34%. This compares to a minimum percentage commitment of 0% stated in the Fund's precontractual disclosure.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product Name: M&G (Lux) Investment Funds 1 - M&G (Lux) Income Allocation Fund
Legal Entity Identifier: 5493009TGYUIY117X013

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

 No

It made **sustainable investments with an environmental objective:**

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:**

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 62.83% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted the use of an Exclusionary Approach (as defined below):

The Fund excluded certain potential investments from its investment universe to mitigate potential negative effects on the environment and society. For securitised investments such as asset-backed securities (ABS), this also includes assessing them against the Investment Manager's proprietary scoring methodology ("Exclusionary Approach").

No reference benchmark was designated for the purpose of attaining the Fund's promoted environmental and/or social characteristics.

The Investment Manager operates a data driven quantitative good governance test used to consider investments into companies. M&G excludes investments in securities that are considered as failing the Investment Manager's good governance test. When assessing good governance practice the Investment Manager will, as a minimum, have regard to matters it sees relevant to the four identified pillars of good governance (sound management structures, employee relations, remuneration of staff and tax compliance).

The alignment percentage indicated in the graphic below shows the allocation between such investments and "Other" Investments.

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

The Fund's sustainability indicators to test its compliance with its Exclusionary Approach were met at all times during the reporting period.

- **...and compared to previous periods?**

The Fund is not yet able to provide comparison to a previous reporting period as this is the Fund's first SFDR Level 2 Periodic Report. The Fund will provide historic comparison in the next Periodic Report.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The Fund may allocate to sustainable investments of any type, i.e., investments with an environmental and/or social objective. The Fund is not required to favour any specific type of sustainable investment.

The Investment Manager used a series of proprietary tests based on available data to determine whether and how an investment made positive contribution(s) towards environmental and social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Sustainable investments that the Fund made did not cause significant harm to any environmental or social sustainable investment objective as they passed a series of tests, including:

1. Whether they represent significant exposure to businesses the Investment Manager considers harmful
2. Principal Adverse Impact indicators considered to render the investment incompatible with sustainable investment (violations of the UN Global Compact Principles or the OECD Guidelines for Multinational Enterprises, social violations by sovereigns such as being subject to sanctions, negative effects on biodiversity sensitive areas)
3. Other Principal Adverse Impact indicators form part of a materiality assessment to understand whether any exposures were compatible with sustainable investment

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Investment Manager's research process included consideration of Principal Adverse Impact indicators for all investments where data was available (i.e. not just for sustainable investments), which allowed the Investment Manager to make informed investment decisions.

The Fund's consideration of Principal Adverse Impact indicators was used as part of understanding the operating practices of the investments purchased by the Fund. Investments held by the Fund were then subject to ongoing monitoring and a quarterly review process.

Further information on the Principal Adverse Impact indicators which were taken into account by the Investment Manager can be found in the Annex to the Investment Manager's website disclosures for the Fund.

- **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

All investments purchased by the Fund passed the Investment Manager's good governance tests, and in addition, sustainable investments also passed tests to confirm they do no significant harm, as described above. These tests embed a consideration of the OECD Guidelines and UN Guiding Principles

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

For sustainable investments, principal adverse impacts are a key part of assessing such investments do not do significant harm as explained above.

For other investments the Investment Manager's research process included consideration of Principal Adverse Impact indicators for all investments where data was available, which allows the Investment Manager to make informed investment decisions, as explained above.

Further information on the Principal Adverse Impact indicators which are taken into account by the Investment Manager can be found in the Annex to the Investment Manager's website disclosures for the Fund.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/04/2022 to 31/03/2023

What was the proportion of sustainability-related investments?

In the SFDR Level 2 Pre-Contractual Disclosure (annex to the Fund Prospectus) the Fund committed to a minimum of 70% of the Fund to be aligned to the promoted E/S characteristics and for a minimum of 20% of the Fund to be in Sustainable Investments.

Asset allocations below are expressed as a percentage of Net Asset Value (NAV). The % of investments that were aligned to the environmental or social characteristic promoted was 96.05% of NAV as at 31 March 2023. This comprised 62.83% of NAV in sustainable investments, and the remaining 33.22% of NAV in investments with other environmental and or social characteristics.

Whilst the Fund did not commit to invest in investments aligned to the EU Taxonomy, 0.08% were aligned to the EU Taxonomy. 33.17% related to investments with other environmental characteristics, and 29.58% related to socially sustainable investments.

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The graphic below provides an overview of the asset allocation.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- **In which economic sectors were the investments made?**

The investment breakdown uses NACE (Nomenclature of Economic Activities) and is expressed as a % of Net Asset Value (NAV).

Economic sector	% Assets
Public administration and defence; compulsory social security	40.36%
Financial and insurance activities	21.52%
Manufacturing	16.99%
Information and communication	4.77%
Other	3.74%
Construction	3.14%
Wholesale and retail trade; repair of motor vehicles and motorcycles	2.50%
Activities of extraterritorial organisations and bodies	2.15%
Real estate activities	1.85%
Human health and social work activities	1.10%
Transportation and storage	0.94%
Administrative and support service activities	0.60%
Accommodation and food service activities	0.21%
Electricity, gas, steam and air conditioning supply	0.06%
Mining and quarrying	0.05%
Other service activities	0.00%

- **To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?**

Whilst the minimum mandatory allocation to Taxonomy-aligned sustainable investments is 0%, the Fund is permitted to allocate to such investments, which would form part of its overall allocation to sustainable investments with environmental objectives.

The share of the Fund's investments that were aligned with the environmental objectives under the Taxonomy Regulation during the reference period was 0.08%. This percentage is determined by taking the quarter end figure for each quarter in the reference period and averaging it. The information was obtained from public disclosures.

No assurance from an auditor, third party or review was undertaken on the EU Taxonomy data.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

- Yes: In fossil gas In nuclear energy
- No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure (CapEx)** shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure (OpEx)** reflects the green operational activities of investee companies.

The graphs below show the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The share of the Fund's investments made in transitional activities over the period was 0% and in enabling activities 0.02%. This compares to a minimum percentage commitment of 0% stated in the Fund's precontractual disclosure.

Activity	Percentage Investments
Share of Transitional Activities	0%
Share of Enabling Activities	0.02%

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Fund is not yet able to provide comparison to a previous reporting period as this is the Fund's first SFDR Level 2 Periodic Report. The Fund will provide historic comparison in the next Periodic Report.

are sustainable investments with an environmental objective that **do not take into account** the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 33.17%. This compares to a minimum percentage commitment of 5% in environmentally sustainable investments (i.e., both aligned to the EU Taxonomy and not) stated in the Fund's precontractual disclosure.

What was the share of socially sustainable investments?

The share of socially sustainable investments was 29.58%. This compares to a minimum percentage commitment of 5% stated in the Fund's precontractual disclosure.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

During the reference period the Fund held cash, near cash, collectives, FX derivatives and similar derivatives. No safeguards were applied.

The Fund may hold cash, near cash and money market funds, FX, interest rate derivatives and similar derivatives (which may include certain technical trades such as government bond futures used for duration trades) as “Other” investments, for any purpose permitted by the Fund’s investment policy. No minimum environmental or social safeguards are applied.

Derivatives used to take investment exposure to diversified financial indices (excluding technical trades), and funds (i.e. UCITS and other UCIs) may be held for any reason permitted by the Fund’s investment policy and will be subject to such minimum environmental or social safeguard tests as the Investment Manager considers appropriate, for example a minimum weighted ESG score test.

The Fund may also hold as Other investments those investments where insufficient data exists to determine the investments’ alignment with the promoted characteristics.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund applied an exclusion policy to achieve its Exclusionary Approach. Its compliance with the same is reported in the sustainability indicators above.

How did this financial product perform compared to the reference benchmark?

N/A. No reference benchmark was designated for the purpose of attaining the Fund’s sustainable investment objective.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How does the reference benchmark differ from a broad market index?**

N/A

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

N/A

- **How did this financial product perform compared with the reference benchmark?**

N/A

- **How did this financial product perform compared with the broad market index?**

N/A

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Legal Entity Identifier: 549300OR1ZG2XAP7AU07

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes
 No

It made **sustainable investments with an environmental objective:**

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:**

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 62.51% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted the use of an Exclusionary Approach and a Positive ESG Tilt (as defined below):

The Fund excluded certain potential investments from its investment universe to mitigate potential negative effects on the environment and society ("Exclusionary Approach"). Accordingly, the Investment Manager promoted environmental and/or social characteristics by excluding certain investments that are considered to be detrimental to ESG Factors.

The Fund maintained a weighted average ESG rating that was equivalent to at least an MSCI A rating.

In constructing a portfolio positively tilted towards investments with better ESG characteristics, the Investment Manager may nonetheless invest in investments across the full spectrum of ESG ratings. At an individual security level, the Investment Manager favours investments with better ESG characteristics where this is not detrimental to the pursuit of the financial investment objective.

No reference benchmark was designated for the purpose of attaining the Fund's promoted environmental and/or social characteristics.

The Investment Manager operates a data driven quantitative good governance test used to consider investments into companies. M&G excludes investments in securities that are considered as failing the Investment Manager's good governance test. When assessing good governance practice the Investment Manager will, as a minimum, have regard to matters it sees relevant to the four identified pillars of good governance (sound management structures, employee relations, remuneration of staff and tax compliance).

The alignment percentage indicated in the graphic below shows the allocation between such investments and "Other" Investments.

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

● How did the sustainability indicators perform?

The Fund's sustainability indicators to test its compliance with its Exclusionary Approach and Positive ESG Tilt were met at all times during the reporting period.

The Fund committed to maintain a weighted average ESG rating that is either:

1. Higher than that of the equity market as represented by its investment universe; or
2. Equivalent to at least an MSCI A rating, whichever is lower ("Positive ESG Tilt").

The second of these tests was met.

Please see the below table for an overview of the Fund's performance relative to its sustainability indicator.

The 'Eligibility' figure is a measure of the percentage of Fund assets which are eligible to be measured by the sustainability indicator. The 'Coverage' figure indicates the percentage of eligible assets for which data is available.

Sustainability Indicator Name	Value	Eligibility	Coverage
As at - 31 March 2023			
Portfolio weighted average ESG score for the Fund	6.69 ESG Score	98.78%	98.60%
Portfolio weighted average ESG score for the Investment Universe	7.15 ESG Score	99.42%	50%

● ...and compared to previous periods?

The Fund is not yet able to provide comparison to a previous reporting period as this is the Fund's first SFDR Level 2 Periodic Report. The Fund will provide historic comparison in the next Periodic Report.

● What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Fund may allocate to sustainable investments of any type, i.e., investments with an environmental and/or social objective. The Fund is not required to favour any specific type of sustainable investment.

The Investment Manager used a series of proprietary tests based on available data to determine whether and how an investment made positive contribution(s) towards environmental and social objectives.

● How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the Fund made did not cause significant harm to any environmental or social sustainable investment objective as they passed a series of tests, including:

1. Whether they represent significant exposure to businesses the Investment Manager considers harmful
2. Principal Adverse Impact indicators considered to render the investment incompatible with sustainable investment (violations of the UN Global Compact Principles or the OECD Guidelines for Multinational Enterprises, social violations by sovereigns such as being subject to sanctions, negative effects on biodiversity sensitive areas)
3. Other Principal Adverse Impact indicators form part of a materiality assessment to understand whether any exposures were compatible with sustainable investment

● How were the indicators for adverse impacts on sustainability factors taken into account?

The Investment Manager's research process includes consideration of Principal Adverse Impact indicators for all investments where data is available (i.e. not just for sustainable investments), which allowed the Investment Manager to make informed investment decisions.

The Fund's consideration of Principal Adverse Impact indicators is used as part of understanding the operating practices of the investments purchased by the Fund.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Investments held by the Fund were then subject to ongoing monitoring and a quarterly review process. Further information on the Principal Adverse Impact indicators which are taken into account by the Investment Manager can be found in the Annex to the Investment Manager's website disclosures for the Fund.

● **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

All investments purchased by the Fund passed the Investment Manager's good governance tests, and in addition, sustainable investments also passed tests to confirm they do no significant harm, as described above. These tests embed a consideration of the OECD Guidelines and UN Guiding Principles.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

For sustainable investments, principal adverse impacts are a key part of assessing such investments do not do significant harm as explained above. For other investments the Investment Manager's research process includes consideration of Principal Adverse Impact indicators for all investments where data was available, which allows the Investment Manager to make informed investment decisions, as explained above.

Further information on the Principal Adverse Impact indicators which are taken into account by the Investment Manager can be found in the Annex to the Investment Manager's website disclosures for the Fund.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/04/2022 to 31/03/2023

Largest investments	Sector	% Assets	Country
MITSUBISHI UFJ FINANCIAL GROUP INC	Financial and insurance activities	4.00%	JP
HITACHI LTD	Information and communication	3.64%	JP
TOYOTA MOTOR CORP	Manufacturing	3.47%	JP
SEVEN & I HOLDINGS LTD	Wholesale and retail trade; repair of motor vehicles and motorcycles	3.44%	JP
MITSUI LTD	Mining and quarrying	3.37%	JP
ORIX CORP	Financial and insurance activities	3.23%	JP
CREDIT SAISON LTD	Financial and insurance activities	3.19%	JP
SONY GROUP CORP	Manufacturing	3.18%	JP
NIPPON TELEGRAPH AND TELEPHONE COR	Information and communication	3.10%	JP
HONDA MOTOR LTD	Manufacturing	2.87%	JP
SPARX GROUP LTD	Financial and insurance activities	2.63%	JP
KIRIN HOLDINGS LTD	Manufacturing	2.54%	JP
NIKON CORP	Manufacturing	2.51%	JP
MITSUI FUDOSAN LTD	Real estate activities	2.43%	JP
TOYOTA INDUSTRIES CORP	Manufacturing	2.32%	JP

What was the proportion of sustainability-related investments?

In the SFDR Level 2 Pre-Contractual Disclosure (annex to the Fund Prospectus) the Fund committed to 70% of the Fund to be aligned to the promoted E/S characteristics and a minimum of 20% in Sustainable Investments.

Asset allocations below are expressed as a percentage of Net Asset Value (NAV). The % of investments that were aligned to the environmental or social characteristic promoted was 97.93% of NAV as at 31st March 2023. This comprised 62.51% of NAV in sustainable investments, and the remaining 35.42% of NAV in investments with other environmental and or social characteristics.

The Fund did not commit to invest in investments aligned to the EU Taxonomy, 0% were aligned to the EU Taxonomy. 37.29% related to investments with other environmental characteristics, and 25.22% related to socially sustainable investments.

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The graphic below provides an overview of the asset allocation.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

The investment breakdown uses NACE (Nomenclature of Economic Activities) and is expressed as a % of Net Asset Value (NAV).

Economic sector	% Assets
Manufacturing	40.67%
Information and communication	14.23%
Financial and insurance activities	13.98%
Wholesale and retail trade; repair of motor vehicles and motorcycles	5.95%
Administrative and support service activities	5.66%
Transportation and storage	4.84%
Construction	4.38%
Mining and quarrying	3.37%
Real estate activities	2.72%
Professional, scientific and technical activities	1.95%
Other	1.77%
Arts, entertainment and recreation	0.49%

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to Taxonomy-aligned sustainable investments is 0%, the Fund is permitted to allocate to such investments, which would form part of its overall allocation to sustainable investments with environmental objectives.

The share of the Fund's investments that were aligned with the environmental objectives under the Taxonomy Regulation during the reference period was 0%. This percentage is determined by taking the quarter end figure for each quarter in the reference period and averaging it. The information was obtained from public disclosures.

No assurance from an auditor, third party or review was undertaken on the EU Taxonomy data.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflects the "greenness" of investee companies today.
- **capital expenditure (CapEx)** shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure (OpEx)** reflects the green operational activities of investee companies.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- Yes: In fossil gas In nuclear energy
- No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**

The share of the Fund's investments made in transitional and enabling activities over the period was 0%. This compares to a minimum percentage commitment of 0% stated in the Fund's precontractual disclosure.

Activity	Percentage Investments
Share of transitional activities	0%
Share of enabling activities	0%

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Fund is not yet able to provide comparison to a previous reporting period as this is the Fund's first SFDR Level 2 Periodic Report. The Fund will provide historic comparison in the next Periodic Report.

 are sustainable investments with an environmental objective that **do not take into account** the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

- **What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?**

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 37.29%. This compares to a minimum percentage commitment of 5% in environmentally sustainable investments (i.e., both aligned to the EU Taxonomy and not) stated in the Fund's precontractual disclosure.

- **What was the share of socially sustainable investments?**

The share of socially sustainable investments was 25.22%. This compares to a minimum percentage commitment of 5% stated in the Fund's precontractual disclosure.

- **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

During the reference period the Fund held cash and near cash as "Other" investments, for any purpose permitted by the Fund's investment policy. No minimum environmental or social safeguards were applied, other than as set out below.

Derivatives used to take investment exposure to diversified financial indices, and funds (i.e. UCITS and other UCIs) may be held for any reason permitted by the Fund's investment policy and will be subject to such minimum environmental or social safeguard tests as the Investment Manager considers appropriate, for example a minimum weighted ESG score test. No minimum environmental or social safeguards are applied to FX derivatives.

The Fund may also hold as Other investments those investments where insufficient data exists to determine the investments' alignment with the promoted characteristics.

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

The Fund applied an exclusion policy to achieve its Exclusionary Approach. The Fund committed to maintain a weighted average ESG rating that is either

1. higher than that of the equity market as represented by its investment universe; or
2. equivalent to at least an MSCI A rating, whichever is lower ("Positive ESG Tilt").

The second of these tests was met. Its compliance with the same is reported in the sustainability indicators above.

- **How did this financial product perform compared to the reference benchmark?**

N/A. No reference benchmark was designated for the purpose of attaining the Fund's sustainable investment objective.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How does the reference benchmark differ from a broad market index?**
N/A
- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**
N/A
- **How did this financial product perform compared with the reference benchmark?**
N/A
- **How did this financial product perform compared with the broad market index?**
N/A

- **How did this financial product perform compared with the reference benchmark?**
N/A
- **How did this financial product perform compared with the broad market index?**
N/A

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product Name: M&G (Lux) Investment Funds 1 - M&G (Lux) Optimal Income Fund
Legal Entity Identifier: 54930080N30V4FEXKY59

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes
 No

It made **sustainable investments with an environmental objective:**

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:**

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 61.81% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promotes the use of an Exclusionary Approach and a Positive ESG Tilt (as defined below):

The Fund excluded certain potential investments from its investment universe to mitigate potential negative effects on the environment and society. For securitised investments such as asset-backed securities (ABS), this also included assessing them against the Investment Manager's proprietary scoring methodology ("Exclusionary Approach"). Accordingly, the Investment Manager is promoted environmental and/or social characteristics by excluding certain investments that are considered to be detrimental to ESG factors.

The Fund maintained a weighted average ESG rating that was higher than its investment universe ("Positive ESG Tilt"). In constructing a portfolio positively tilted towards investments with better ESG characteristics, the Investment Manager may nonetheless invest in investments across the full spectrum of ESG ratings. At an individual security level, the Investment Manager favours investments with better ESG characteristics where this is not detrimental to the pursuit of the financial investment objective.

No reference benchmark was designated for the purpose of attaining the Fund's promoted environmental and/or social characteristics.

The Investment Manager operates a data driven quantitative good governance test used to consider investments into companies. M&G excludes investments in securities that are considered as failing the Investment Manager's good governance test. When assessing good governance practice the Investment Manager will, as a minimum, have regard to matters it sees relevant to the four identified pillars of good governance (sound management structures, employee relations, remuneration of staff and tax compliance).

The alignment percentage indicated in the graphic below shows the allocation between such investments and "Other" Investments.

Sustainability indicators

measure how the environmental or social characteristics promoted

● How did the sustainability indicators perform?

The Fund's sustainability indicators to test its compliance with its Exclusionary Approach and Positive ESG Tilt outcome were met at all times during the reporting period.

by the financial product are attained.

Please see the below table for an overview of the Fund's performance relative to its sustainability indicator.

The 'Eligibility' figure is a measure of the percentage of Fund assets which are eligible to be measured by the sustainability indicator. The 'Coverage' figure indicates the percentage of eligible assets for which data is available.

Sustainability Indicator Name	Value	Eligibility	Coverage
As at - 31 March 2023			
Portfolio weighted average ESG score for the fund	6.83 ESG score	65.38%	91.16%
Portfolio weighted average ESG score for the Investment Universe	6.11 ESG score	64.60%	42.62%

- **...and compared to previous periods?**

The Fund is not yet able to provide comparison to a previous reporting period as this is the Fund's first SFDR Level 2 Periodic Report. The Fund will provide historic comparison in the next Periodic Report.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The Fund may allocate to sustainable investments of any type, i.e., investments with an environmental and/or social objective. The Fund is not required to favour any specific type of sustainable investment.

The Investment Manager used a series of proprietary tests based on available data to determine whether and how an investment made positive contribution(s) towards environmental and social objectives.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Sustainable investments that the Fund made did not cause significant harm to any environmental or social sustainable investment objective as they passed a series of tests, including:

1. Whether they represent significant exposure to businesses the Investment Manager considers harmful
2. Principal Adverse Impact indicators considered to render the investment incompatible with sustainable investment (violations of the UN Global Compact Principles or the OECD Guidelines for Multinational Enterprises, social violations by sovereigns such as being subject to sanctions, negative effects on biodiversity sensitive areas)
3. Other Principal Adverse Impact indicators form part of a materiality assessment to understand whether any exposures were compatible with sustainable investment

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Investment Manager's research process included consideration of Principal Adverse Impact indicators for all investments where data was available (i.e. not just for sustainable investments), which allows the Investment Manager to make informed investment decisions.

The Fund's consideration of Principal Adverse Impact indicators is used as part of understanding the operating practices of the investments purchased by the Fund. Investments held by the Fund were then subject to ongoing monitoring and a quarterly review process.

Further information on the Principal Adverse Impact indicators which were taken into account by the Investment Manager can be found in the Annex to the Investment Manager's website disclosures for the Fund.

- **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

All investments purchased by the Fund passed the Investment Manager's good governance tests, and in addition, sustainable investments also passed tests to confirm they do no significant harm, as described above. These tests embed a consideration of the OECD Guidelines and UN Guiding Principles.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

For sustainable investments, principal adverse impacts are a key part of assessing such investments do not do significant harm as explained above.

For other investments the Investment Manager's research process included consideration of Principal Adverse Impact indicators for all investments where data was available, which allows the Investment Manager to make informed investment decisions, as explained above.

Further information on the Principal Adverse Impact indicators which were taken into account by the Investment Manager can be found in the Annex to the Investment Manager's website disclosures for the Fund.

What were the top investments of this financial product?

What was the proportion of sustainability-related investments?

In the SFDR Level 2 Pre-Contractual Disclosure (annex to the Fund Prospectus) the Fund committed to 70% of the Fund to be aligned to the promoted E/S characteristics and a minimum of 20% in Sustainable Investments.

Asset allocations below are expressed as a percentage of Net Asset Value (NAV). The % of investments that were aligned to the environmental or social characteristic promoted was 92.67% of NAV as at 31st March 2023. This comprised 61.81% of NAV in sustainable investments, and the remaining 30.86% of NAV in investments with other environmental and or social characteristics.

Whilst the Fund did not commit to invest in investments aligned to the EU Taxonomy, 0.10% were aligned to the EU Taxonomy. 28.55% related to investments with other environmental characteristics, and 33.16% related to socially sustainable investments.

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The graphic below provides an overview of the asset allocation.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- **In which economic sectors were the investments made?**

The investment breakdown uses NACE (Nomenclature of Economic Activities) and is expressed as a % of Net Asset Value (NAV).

Economic sector	% Assets
Financial and insurance activities	43.70%
Public administration and defence; compulsory social security	26.47%
Manufacturing	8.92%
Other	8.27%
Information and communication	4.57%
Electricity, gas, steam and air conditioning supply	2.62%
Real estate activities	0.90%
Administrative and support service activities	0.79%
Accommodation and food service activities	0.68%
Human health and social work activities	0.66%
Transportation and storage	0.65%
Wholesale and retail trade; repair of motor vehicles and motorcycles	0.62%
Activities of extraterritorial organisations and bodies	0.49%
Professional, scientific and technical activities	0.39%
Construction	0.14%
Mining and quarrying	0.10%
Water supply; sewerage, waste management and remediation activities	0.03%

- **To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?**

Whilst the minimum mandatory allocation to Taxonomy-aligned sustainable investments is 0%, the Fund is permitted to allocate to such investments, which would form part of its overall allocation to sustainable investments with environmental objectives.

The Fund held 0.10% in Taxonomy-aligned sustainable investments during the reference period. This percentage is determined by taking the quarter end figure for each quarter in the reference period and averaging it. The information was obtained from public disclosures.

No assurance from an auditor, third party or review was undertaken on the EU Taxonomy data.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

- Yes: In fossil gas In nuclear energy
- No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure** (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflects the green operational activities of investee companies.

The graphs below show the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

● **What was the share of investments made in transitional and enabling activities?**

The share of the Fund's investments made in transitional activities over the period was 0% and in enabling activities 0.01%. This compares to a minimum percentage commitment of 0% stated in the Fund's precontractual disclosure.

Activity	Percentage Investments
Share of transitional activities	0%
Share of enabling activities	0.1%

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Fund is not yet able to provide comparison to a previous reporting period as this is the Fund's first SFDR Level 2 Periodic Report. The Fund will provide historic comparison in the next Periodic Report.

are sustainable investments with an environmental objective that **do not take into account** the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?**

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 28.55%. This compares to a minimum percentage commitment of 5% stated in the Fund's precontractual disclosure.

● **What was the share of socially sustainable investments?**

The share of socially sustainable investments was 33.16%. This compares to a minimum percentage commitment of 5% stated in the Fund's precontractual disclosure.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

During the reference period the Fund held cash, near cash and money market funds, FX, interest rate derivatives and similar derivatives (which may include certain technical trades such as government bond futures used for duration trades) as “Other” investments, for any purpose permitted by the Fund’s investment policy. No minimum environmental or social safeguards were applied.

Derivatives used to take investment exposure to diversified financial indices (excluding technical trades), and funds (i.e. UCITS and other UCIs) may be held for any reason permitted by the Fund’s investment policy and will be subject to such minimum environmental or social safeguard tests as the Investment Manager considers appropriate, for example a minimum weighted ESG score test.

The Fund may also hold as Other investments those investments where insufficient data exists to determine the investments’ alignment with the promoted characteristics.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund applied an exclusion policy to achieve its Exclusionary Approach and maintained an ESG rating that was higher than its investment universe, thereby applying a Positive ESG tilt to the portfolio. Its compliance with the same is reported in the sustainability indicators above.

How did this financial product perform compared to the reference benchmark?

N/A. No reference benchmark was designated for the purpose of attaining the Fund’s sustainable investment objective.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How does the reference benchmark differ from a broad market index?**
N/A

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

- **How did this financial product perform compared with the reference benchmark?**

N/A

- **How did this financial product perform compared with the broad market index?**

N/A

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product Name: M&G (Lux) Global Listed Infrastructure Fund
Legal Entity Identifier: 222100K85SU14IF7PW30

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

● ● Yes ● ● No

It made **sustainable investments with an environmental objective:**

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:**

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 51.43% of sustainable investments
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted the use of an Exclusionary Approach and it made investments that are SDG-aligned (as defined below):

The Fund excluded certain potential investments from its investment universe to mitigate potential negative effects on the environment and society and to assist it in delivering more sustainable outcomes ("Exclusionary Approach").

The Fund considered the UN Sustainable Development Goals (SDGs) as part of its investment process and the sustainability themes considered by the Investment Manager are based on the SDGs as a relevant framework to measure contribution to sustainability factors ("SDG-alignment"). 98.91% of the Fund's investments by value were in investments considered by the Investment Manager to be related to sustainability themes.

No reference benchmark was designated for the purpose of attaining the Fund's promoted environmental and/or social characteristics.

The Investment Manager operates a data driven quantitative good governance test used to consider investments into companies. M&G excludes investments in securities that are considered as failing the Investment Manager's good governance test. When assessing good governance practice the Investment Manager will, as a minimum, have regard to matters it sees relevant to the four identified pillars of good governance (sound management structures, employee relations, remuneration of staff and tax compliance).

The alignment percentage indicated in the graphic below shows the allocation between such investments and "Other" Investments.

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

● How did the sustainability indicators perform?

The Fund's sustainability indicators to test its compliance with its Exclusionary Approach and SDG-alignment were met at all times during the reporting period.

Please see the below table for an overview of the Funds' performance relative to its sustainability indicator.

The 'Eligibility' figure is a measure of the percentage of Fund assets which are eligible to be measured by the

sustainability indicator. The 'Coverage' figure indicates the percentage of eligible assets for which data is available.

Sustainability Indicator Name	Value	Eligibility	Coverage
As at - 31 March 2023			
Percentage (%) of investments by value that is SDG-aligned	81.11%	97.33%	99.72%

- **...and compared to previous periods?**

The Fund is not yet able to provide comparison to a previous reporting period as this is the Fund's first SFDR Level 2 Periodic Report. The Fund will provide historic comparison in the next Periodic Report.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The Fund may allocate to sustainable investments of any type, i.e., investments with an environmental and/or social objective. The Fund is not required to favour any specific type of sustainable investment.

The Investment Manager used a series of proprietary tests based on available data to determine whether and how an investment made positive contribution(s) towards environmental and social objectives.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Sustainable investments that the Fund made did not cause significant harm to any environmental or social sustainable investment objective as they passed a series of tests, including:

1. Whether they represent significant exposure to businesses the Investment Manager considers harmful
2. Principal Adverse Impact indicators considered to render the investment incompatible with sustainable investment (violations of the UN Global Compact Principles or the OECD Guidelines for Multinational Enterprises, social violations by sovereigns such as being subject to sanctions, negative effects on biodiversity sensitive areas)
3. Other Principal Adverse Impact indicators form part of a materiality assessment to understand whether any exposures were compatible with sustainable investment

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Investment Manager's research process includes consideration of Principal Adverse Impact indicators for all investments where data was available (i.e. not just for sustainable investments), which allows the Investment Manager to make informed investment decisions.

The Fund's consideration of Principal Adverse Impact indicators was used as part of understanding the operating practices of the investments purchased by the Fund.

Investments held by the Fund are then subject to ongoing monitoring and a quarterly review process.

Further information on the Principal Adverse Impact indicators which are taken into account by the Investment Manager can be found in the Annex to the Investment Manager's website disclosures for the Fund.

- **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

All investments purchased by the Fund passed the Investment Manager's good governance tests, and in addition, sustainable investments also passed tests to confirm they do no significant harm, as described above. These tests embed a consideration of the OECD Guidelines and UN Guiding Principles.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

For sustainable investments, principal adverse impacts are a key part of assessing such investments do not do significant harm as explained above. For other investments the Investment Manager's research process included consideration of Principal Adverse Impact indicators for all investments where data was available, which allows the Investment Manager to make informed investment decisions, as explained above.

Further information on the Principal Adverse Impact indicators which are taken into account by the Investment Manager can be found in the Annex to the Investment Manager's website disclosures for the Fund. Information on how the principal adverse impacts were taken into account will be provided in the Fund's annual report.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/04/22 to 31/03/23

Largest investments	Sector	% Assets	Country
ENEL	Electricity, gas, steam and air conditioning supply	3.74%	IT
E.ON N	Electricity, gas, steam and air conditioning supply	3.53%	DE
CROWN CASTLE INC	Other	3.26%	US
TC ENERGY CORP	Transportation and storage	3.13%	CA
PRAIRIESKY ROYALTY LTD	Mining and quarrying	3.04%	CA
FRANCO NEVADA CORP	Financial and insurance activities	3.03%	CA
EDISON INTERNATIONAL	Electricity, gas, steam and air conditioning supply	2.95%	US
TRANSURBAN GROUP STAPLED UNITS	Transportation and storage	2.94%	AU
GIBSON ENERGY INC	Wholesale and retail trade; repair of motor vehicles and motorcycles	2.89%	CA
SEGRO REIT PLC	Real estate activities	2.83%	GB
EQUINIX REIT INC	Information and communication	2.81%	US
VINCI SA	Construction	2.71%	FR
INFRASTRUTTURE WIRELESS ITALIANE	Information and communication	2.63%	IT
KEYERA CORP	Wholesale and retail trade; repair of motor vehicles and motorcycles	2.57%	CA
AES CORP	Electricity, gas, steam and air conditioning supply	2.50%	US

What was the proportion of sustainability-related investments?

In the SFDR Level 2 Pre-Contractual Disclosure (annex to the Fund Prospectus) the Fund committed to a minimum of 70% of the Fund to be aligned to the promoted E/S characteristics and for a minimum of 51% of the Fund to be in Sustainable Investments.

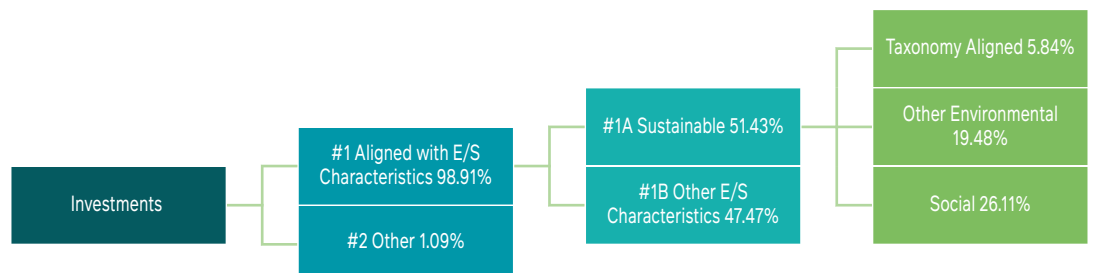

Asset allocations below are expressed as a percentage of Net Asset Value (NAV). The % of investments that were aligned to the environmental or social characteristic promoted was 98.91% of NAV as at 31 March 2023. This comprised 51.43% of NAV in sustainable investments, and the remaining 47.47% of NAV in investments with other environmental and or social characteristics.

Whilst the Fund did not commit to invest in investments aligned to the EU Taxonomy, 5.84% were aligned to the EU Taxonomy, 19.48% related to investments with other environmental characteristics, and 26.11% related to socially sustainable investments.

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The graphic below provides an overview of the asset allocation.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- **In which economic sectors were the investments made?**

The investment breakdown uses NACE (Nomenclature of Economic Activities) and is expressed as a % of Net Asset Value (NAV).

Economic sector	% Assets
Electricity, gas, steam and air conditioning supply	30.43%
Financial and insurance activities	15.96%
Transportation and storage	12.92%
Real estate activities	12.72%
Information and communication	7.08%
Construction	6.45%
Wholesale and retail trade; repair of motor vehicles and motorcycles	5.46%
Mining and quarrying	5.01%
Water supply; sewerage, waste management and remediation activities	2.27%
Other	0.95%
Administrative and support service activities	0.75%

- **To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?**

Whilst the minimum mandatory allocation to Taxonomy-aligned sustainable investments is 0%, the Fund is permitted to allocate to such investments, which would form part of its overall allocation to sustainable investments with environmental objectives.

The share of the Fund's investments that were aligned with the environmental objectives under the Taxonomy Regulation during the reference period was 5.84%. This percentage is determined by taking the quarter end figure for each quarter in the reference period and averaging it. The information was obtained from public disclosures.

No assurance from an auditor, third party or review was undertaken on the EU Taxonomy data.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

- Yes: In fossil gas In nuclear energy
- No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the "greenness" of investee companies today.
- **capital expenditure (CapEx)** shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure (OpEx)** reflects the green operational activities of investee companies.

The graphs below show the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The share of the Sub-Fund's investments made in transitional activities over the period was 0% and in enabling activities 1.75%. This compares to a minimum percentage commitment of 0% stated in the Sub-Fund's precontractual disclosure.

Activity	Percentage Investments
Share of Transitional Activities	0.00%
Share of Enabling Activities	1.75%

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Fund is not yet able to provide comparison to a previous reporting period as this is the Fund's first SFDR Level 2 Periodic Report. The Fund will provide historic comparison in the next Periodic Report.

are sustainable investments with an environmental objective that **do not take into account** the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 19.48%. This compares to a minimum percentage commitment of 5% in environmentally sustainable investments (i.e., both aligned to the EU Taxonomy and not) stated in the Fund's precontractual disclosure.

What was the share of socially sustainable investments?

The share of socially sustainable investments was 26.11%. This compares to a minimum percentage commitment of 5% stated in the Fund's precontractual disclosure.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

During the reference period the Sub-Fund held varying levels of cash and cash equivalents as “Other” investments during the reporting period as part of normal liquidity management. No minimum safeguards were applied.

Derivatives used to take investment exposure to diversified financial indices (excluding technical trades), and funds (i.e. UCITS and other UCIs) may be held for any reason permitted by the Fund’s investment policy and will be subject to such minimum environmental or social safeguard tests as the Investment Manager considers appropriate, for example a minimum weighted ESG score test.

The Fund may also hold as Other investments those investments where insufficient data exists to determine the investments’ alignment with the promoted characteristics.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund applied an exclusion policy to achieve its Exclusionary Approach and it made investments that are SDG-aligned. Its compliance with the same is reported in the sustainability indicators above.

How did this financial product perform compared to the reference benchmark?

N/A. No reference benchmark was designated for the purpose of attaining the Fund’s sustainable investment objective.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How does the reference benchmark differ from a broad market index?**

N/A

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

N/A

- **How did this financial product perform compared with the reference benchmark?**

N/A

- **How did this financial product perform compared with the broad market index?**

N/A

Name of the product:

Mandarine Funds – Mandarine Unique Small&Mid Caps Europe (the “Fund”)

Legal entity identifier:

LEI: 549300I3D737ZMJINE38

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

It made sustainable investments with an environmental objective

In economic activities that qualify as environmentally sustainable under the EU Taxonomy

In economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made sustainable investments with a social objective

No

It promoted environmental and/or social (E/S) characteristics and although it did not have a sustainable investment objective, it had a proportion of 67.94% of sustainable investments

With an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

With an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

With a social objective

It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund continued to promote environmental and social characteristics (the “E/S Characteristics”), notably through the implementation, during the period under review, of a series of normative and sectoral exclusions:

- Any direct investment in companies involved in the manufacture, trade, stockpiling or services for anti-personnel mines, cluster bombs, in accordance with the Ottawa and Oslo Treaty;
- Companies producing, stockpiling or trading in chemical, biological and depleted uranium weapons;
- Companies that seriously and repeatedly violate one or more of the 10 principles of the UN Global Compact;
- The companies which are subject to the most serious controversies (severity level 5 on a scale of 1 to 5);
- Companies or sectors considered to be particularly exposed to sustainability risk
- Exclusion of 20% of the lowest rated issuers through a “Best-In-Universe” approach

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The promotion of E/S characteristics was also reflected in:

Analysis of sustainability indicators:

- (i) Monitoring of the performance of a series of sustainability indicators;
- (ii) Compared to the previous period when applicable;

And Sustainable Investments:

- (i) A commitment to respect a minimum proportion of sustainable investment in the portfolio during the financial year under review;
- (ii) The latter are subject to control of the absence of material harm to another sustainable investment objective;
- (iii) In particular, by analysis of the principal adverse impacts of such investments.

○ **How did the sustainability indicators perform?**

Indicators	Description	Performance of the indicator
Synthetic Sustainability Risk Indicator (SRI)	<p>Based on specifically risk-oriented ESG data, the aim of the SRI is to establish an overall level of risk for each investment in the portfolio in question.</p> <p>This sustainability risk monitoring indicator is based on external data from a non-financial information provider "Sustainalytics". This is a "sustainability" risk measurement rating that is broken down into five parts:</p> <ul style="list-style-type: none"> • Company risk exposure, which is mainly a function of the risks associated with its sector of activity; • The portion of risk exposure that may be taken on by the company; • The portion of risk exposure taken on by the company; • The portion of unhedged risk that can be taken on by the company; <p>And finally the portion of unhedged risk that cannot be taken on by the company.</p>	3
Human capital indicators	The annual staff turnover of a company is calculated as the ratio of the sum of departures and arrivals to the company's total workforce at the beginning of the year. The data used is provided by companies in their annual reports.	14.89%
Carbon Footprint	<p>Expressed in Mt CO2e/€M invested, this corresponds to the weighted average of greenhouse gas emissions corresponding to the direct activities of companies (Scope 1) and those related to the consumption of electricity, heat or steam required to manufacture products (Scope 2) and those related to first line suppliers with which the companies have a direct relationship (part of upstream scope 3).</p> <p>The carbon footprint calculation reflects CO2 emissions at a given point in time. Greenhouse gas emissions data is provided by Trucost.</p>	100.89
Diversity of the Board	The data used is provided by companies in their annual reports and is weighted according to the weight of each company in the fund. Board members are considered independent in light of the recommendations of the AFEP-MEDEF Governance Code. An independent director is a member who is free of interest, i.e. who does not perform any management functions of the	52.8%

	company or its group and is free of special interests (shareholder, employee, other, etc.)	
Company engagement	The data used regarding the commitment to the Global Compact comes from the United Nations. This binary data (Yes/No) is weighted according to the relative weight of each company in the Fund. The Global Compact is a United Nations initiative launched in 2000. Today, more than 9,600 companies around the world are signatories to the Global Compact. This is the largest international voluntary commitment to sustainable development initiative.	36%
Eligibility for the EU Taxonomy or “green share”	The green share of the portfolio corresponds to the percentage of turnover of companies eligible for the European Taxonomy. This green taxonomy describes the criteria for guiding finance towards climate-compatible activities. Three types of activities: <ul style="list-style-type: none"> - Low-carbon activity; - Transition activity; and - Activity making carbon neutrality possible. 	
Monitoring of the 2°C alignment defined in the Paris agreements.	The Fund monitors the alignment of its temperature with the +2°C trajectory mainly on the basis of the Science Based Targets (SBT) initiative, which permits companies to define and submit their greenhouse gas reduction targets (Scopes 1 and 2 + Scope 3 if this represents more than 40% of emissions). This methodology was developed in order to comply with the Paris Agreement on Climate Change (signed in 2015), whose aim was to limit global warming to below 2°C compared to the pre-industrial era and continuing efforts to limit it to 1.5°C. It is mainly based on the allocation of a carbon budget by business sector by 2100. Mandarine Gestion is a signatory of the Net Zero Asset Manager Initiative, whose objective is to align part of the assets under management with the trajectory of the Paris Agreement and to revise this objective every year.	Less than 2°

○ ...and compared to previous periods?

Not applicable

○ **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investments contribute to such objectives?**

The EU Taxonomy identifies six environmental objectives: climate change mitigation, adaptation to climate change, sustainable use and protection of water and marine resources, transition to a circular economy (including waste prevention and recycling), pollution prevention and control, and protection and restoration of biodiversity and ecosystems, and identifies economic activities considered environmentally sustainable for investment purposes. The alignment of companies' activities with the objectives of the EU taxonomy is identified and assessed provided that data is available and of adequate quality.

The Fund selects sustainable investments, i.e. carrying out economic activities that contribute substantially to a sustainable social or environmental objective (particularly the European taxonomy), while not significantly undermining other sustainable objectives and meeting a minimum standard of governance.

To qualify as a sustainable investment, the Fund benefits from a non-financial rating of issuers in its investment universe. The construction of this rating is based on the proprietary ESG-View system, which is based on four pillars: Environment (E), Social (S), Governance (G) and Stakeholders (SH). Analysis of the extra-financial indicators making up the pillars results in a score (the “**ESG-View Score**”) for each pillar, ranging from -2 to +2.

Sustainable investment is subject to a regulatory definition, according to the provisions of the SFDR regulation. It corresponds to an investment in an economic activity:

- 1) Contributing significantly to an environmental (taxonomy or not) or social objective,
- 2) Provided that these investments do not cause significant harm to any of these objectives (the “Do Not Significantly Harm” or DNSH principle)
- 3) and that the companies in which investments are made apply good governance practices.

In addition to the constraints related to the promotion of E and S characteristics, economic activities qualifying as sustainable investments must verify points 1 to 3 above, as follows:

- 1) **Significant contribution:** The issuer’s ESG-View Score must be strictly above average, i.e. 0 for a score between -2 and +2, on the E or S pillar, in order to be considered as contributing significantly to an E or S objective.
- 2) **No significant harm:**
 - a. The absence of significant detriment to other sustainable objectives is verified by requiring an ESG-View Score above -1 on both pillars E and S for a score between -2 and +2. The ESG-View Score includes indicators relating to the main negative impacts on each of the E and S pillars, enabling the management company to ensure that the economic activity being invested in complies with the DNSH principle.
 - b. For issuers passing this first filter, all 14 indicators relating to the Principal Adverse Impact (PAI) defined by the regulation are analysed, as well as those (at least two) of the 26 optional indicators that are relevant. Thresholds are defined for each of these indicators and crossing a threshold is considered as an alert, leading to the need for a specific analysis by an ESG analyst, which will lead to the acceptance or refusal of the issuer’s sustainable investment status.
- 3) **Good governance:** Finally, the eligible issuer will have to achieve an ESG-View Governance Score above -1 to ensure that it applies certain minimum standards.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Based on this definition, 67.94% of net assets are sustainable:
 - 46.66% contribute to a non-taxonomy environmental objective
 - 18.14% contributes to a social objective
 - 3.14% contribute to an environmental objective under the EU taxonomy
- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

None of the sustainable investments made by the Fund should significantly harm a sustainable investment objective. This lack of significant harm to a sustainable investment objective is analysed in two different ways by the Fund:

1/ Within the very definition of sustainable investment.

When characterising a sustainable investment, the issuer's ESG View® rating on the environment pillar and on the social pillar must be greater than -1. Otherwise, the issuer is considered non-sustainable.

2/ As part of the analysis of the Principal Adverse Impacts

In order to be qualified as sustainable, an issuer must also be analysed against the *Principal Adverse Impacts* ("PAIs"). Each issuer, qualified as sustainable according to the method described in the section entitled "*What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investments contribute to such objectives?*", is then analysed according to its performance on each of the 16 PAIs listed in the section entitled "*How did this financial product consider principal adverse impacts on sustainability factors?*". If the issuer breaches one of the objectives attached to the PAIs, it is subject to an additional qualitative analysis. In the absence of a favourable additional qualitative analysis within a reasonable period of time, or in the event of an unfavourable opinion, the issuer is considered non-sustainable.

The analysis of PAIs and, more generally, the definition of sustainable investment are regularly updated. Thus, a stock qualified as sustainable at the date of its acquisition may be requalified as a non-sustainable stock during the duration of its holding by the Fund and lead to an obligation to sell it within a reasonable period of time.

- *How have the indicators concerning adverse impacts on sustainability factors been taken into account?*

As mentioned above, the characterisation of sustainable investing is based in particular on the analysis of the absence of material harm to other sustainable investment objectives is integrated into the determination of sustainable investment objectives.

Firstly, the rating system incorporates a minimum rating on all E and S pillars made up of sustainability indicators in the environmental and social categories. It is also supplemented by a mandatory minimum rating focused on a series of indicators that make up the pillar of good governance.

Once this rating filter is passed, each issuer is analysed against the principal adverse impacts ("PAIs") as described in the section below entitled "*How did this financial product consider principal adverse impacts on sustainability factors?*".

The "do no significant harm" principle applies only to investments qualifying as sustainable.

- *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is tested and ensured through the process of identifying sustainable investments.

The EU Taxonomy establishes a principle of “do not cause significant harm” under which investments aligned with the taxonomy should not cause significant harm to the objectives of the EU taxonomy and be accompanied by specific Union criteria.

The “do no significant harm” principle only applies to investments underlying the financial product that take into account the European Union’s criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

○ **How did this financial product consider principal adverse impacts on sustainability factors?**

During the year under review, PAIs were taken into account for each investment in order to qualify it as sustainable.

PAIs are specific indicators designed to ensure that issuers meeting a sustainable investment objective do not undermine another sustainable investment objective. The indicators below are analysed on the basis of sector thresholds.

Greenhouse gas (GHG) emissions	<ol style="list-style-type: none"> 1. Greenhouse gas emissions; 2. Carbon footprint; 3. Greenhouse gas emission intensity of invested companies; 4. Exposure to companies operating in the fossil fuel sector; 5. Share of non-renewable energy consumption and production; 6. Energy consumption intensity by high climate impact sectors;
Biodiversity	<ol style="list-style-type: none"> 7. Activity with a negative impact on biodiversity-sensitive areas
Water	<ol style="list-style-type: none"> 8. Activity with a negative impact on water
Waste	<ol style="list-style-type: none"> 9. Ratio of hazardous waste
Social and employee issues	<ol style="list-style-type: none"> 10. Violation of the principles of the UN Global Compact and the OECD Guidelines for Multinational Enterprises; 11. Lack of control and compliance relating to point 10.; 12. Unadjusted gender pay gap; 13. Gender balance on the board of directors; 14. Exposure to controversial weapons.
Water, waste and other materials (optional)	<ol style="list-style-type: none"> 15. Non-recyclable waste ratio.
Social and employee issues (optional)	<ol style="list-style-type: none"> 16. Lack of a mechanism for dealing with disputes or complaints relating to employee issues

In order to be qualified as sustainable, an issuer must also be analysed against the *Principal Adverse Impacts* (“PAIs”). Each issuer, qualified as sustainable according to the method described in the section entitled “*What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investments contribute to such objectives?*”, is then analysed according to its performance on each of the 16 PAIs listed in the section entitled “*How did this financial product consider principal adverse impacts on sustainability factors?*”. If the issuer breaches one of the objectives attached to the PAIs, it is subject to an additional qualitative analysis. In the absence of a favourable additional qualitative analysis within a reasonable period of time, or in the event of an unfavourable opinion, the issuer is considered non-sustainable.

The analysis of PAIs and, more generally, the definition of sustainable investment are regularly updated. Thus, a stock qualified as sustainable at the date of its acquisition may be requalified as a non-sustainable stock during the duration of its holding by the Fund and lead to an obligation to sell it within a reasonable period of time.

What were the main investments in this financial product?

The table below lists the Fund’s top 15 investments calculated on the basis of a monthly average.

The list includes the investments making up the largest proportion of the financial product’s investments during the reporting period, namely:
1 January 2022 – 30 December 2022

Largest investments	Sector	% of assets	Country
Edenred	Professional and commercial services	3.25%	France
ELIS SA	Professional and commercial services	3.20%	France
Remy Cointreau	Food, beverage and tobacco products	2.73%	France
FINECOBANK SPA	Banks	2.59%	Italy
MONCLER SPA	Consumer durables & apparel	2.55%	Italy
D Ieteren	Distribution	2.45%	Belgium
CRODA INTERNATIONAL PLC	Materials	2.40%	United Kingdom
Ackermans & Van Haaren	Financial services	2.37%	Belgium
Kingspan Group	Capital goods	2.33%	Ireland
Amplifon SpA	Healthcare equipment and services	2.16%	Italy
SIEGFRIED HOLDING AG-REG	Pharmaceutical, biotechnological and biological sciences	2.15%	Switzerland
S.O.I.T.E.C.	Semiconductors and equipment for their manufacture	2.10%	France
Lotus Bakeries	Food, beverage and tobacco products	2.08%	Belgium
Interpump Group SpA	Capital goods	2.07%	Italy
Andritz Ag	Capital goods	2.02%	Austria

What was the proportion of sustainability-related investments?

As at the closing date, 80% of the Fund’s net assets are made up of assets aligned with the promotion of ESG characteristics and 67.94% are sustainable investments.

Asset allocation describes the proportion of investments in specific assets.

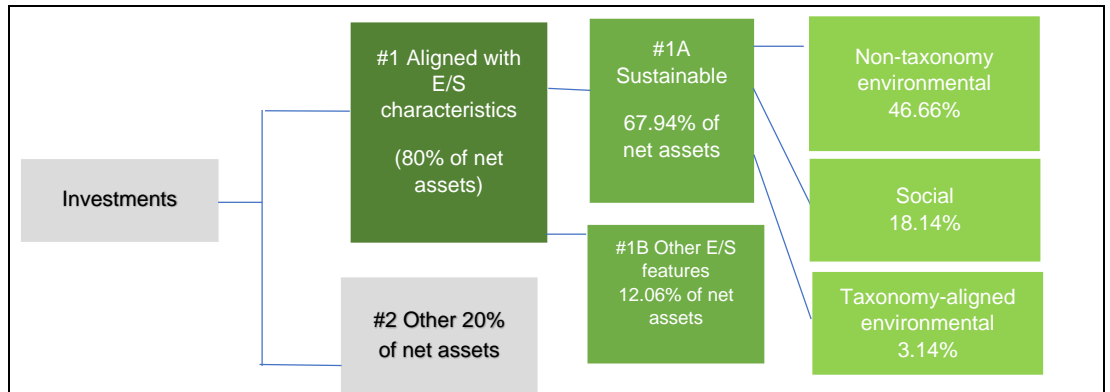

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035.

For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

○ **What was the asset allocation?**

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- the sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives;
- The subcategory **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

○ **In which economic sectors were the investments made?**

The table below lists the Fund's sectors calculated on the basis of a monthly average.

Sectors	Proportion
Capital goods	17.73%
Materials	7.39%
Consumer discretionary and distribution	7.04%
Professional and commercial services	6.96%
Media & entertainment	5.89%
Healthcare equipment and services	5.71%
Food, beverage and tobacco products	5.18%
Pharmaceutical, biotechnological and biological sciences	5.13%
Consumer durables & apparel	4.89%
Cash and other	4.79%
Software and services	4.69%
Semiconductors and equipment for their manufacture	3.94%
IT hardware and equipment	2.90%
Real estate management and development	2.80%
Transport	2.67%
Banks	2.59%
Financial services	1.83%
Automobiles & automobile components	1.62%
Consumer services	1.41%
Energy – oil and gas equipment and services	1.08%
Energy – oil and gas storage and transportation	1.06%
Listed real estate investment companies (SIIC)	0.79%
Utilities	0.72%
Insurance	0.63%
Domestic and personal care products	0.56%

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

3.14% of the Fund's net assets had turnover aligned with the first two environmental objectives within the meaning of the taxonomy. However, in the absence of reliable data on the distribution between the two environmental objectives, it is not possible to communicate this data. No third party has granted any guarantee relating to the production of such data. This figure is determined on the basis of the figures directly reported by the issuers in the portfolio, as transmitted through Bloomberg. The figures are not reprocessed by Mandarin Gestion or Bloomberg.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

- Yes
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy alignment of sovereign bonds, the first graph shows the taxonomy alignment with respect to all investments in the financial product, including sovereign bonds, while the second graph represents the taxonomy alignment only with respect to investments in the financial product other than sovereign bonds.*

Taxonomy-aligned activities are expressed as a share of:

-

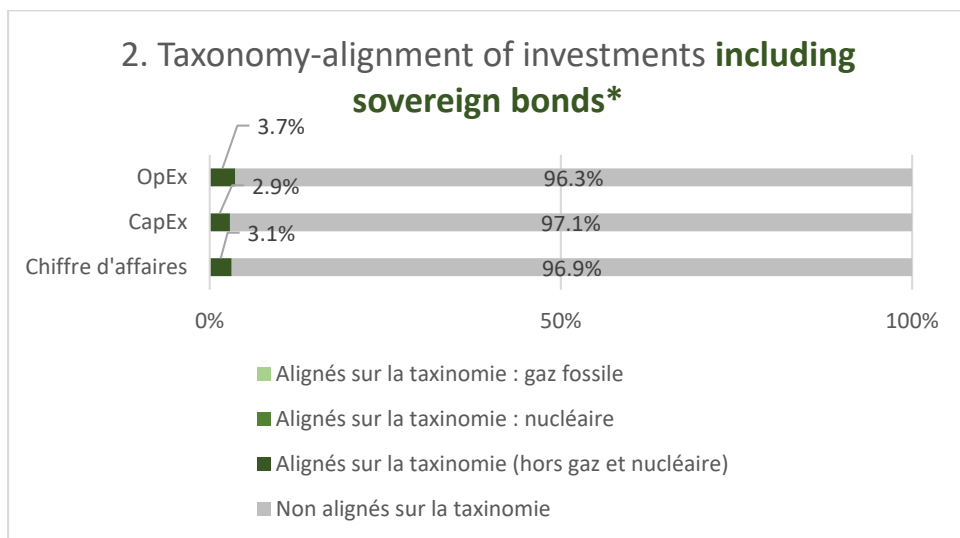

turnover reflecting the share of revenue from green activities of investee companies;

- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy;

- operational expenditure (OpEx) reflecting green operational activities of investee companies.

-

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

¹ Fossil gas and/or nuclear-related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

- **What was the share of investments made in transitional and enabling activities ?**

As at the Fund's closing date, in the absence of reliable data on the distribution between transitional and enabling activities, it is not possible to communicate this data.

- **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable

- **What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?**

The Fund's environmental definition of sustainable investment is based on a series of environmental criteria and indicators that do not exclusively take into account the criteria specific to the European Taxonomy.

This is due in particular to the fact that the sufficiently reliable data regarding the alignment with the taxonomy is scarce and data coverage remains too low to rely on a reliable definition of the taxonomy-aligned investment in this fund.

As at the Fund's closing date, the share of sustainable investments with an environmental objective that was not aligned with the EU taxonomy was 46.7%.

- **What was the share of socially sustainable investments?**

As at the Fund's closing date, the share of socially sustainable investments was 18.14%.

- **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

During the reference period, the "Other" category included the following investments, up to a maximum of 20% of net assets:

- in entities that have not been assessed due to a lack of available information or contradictory information;
or

- Cash, any UCIs including MMFs for cash management purposes
- The Fund was able to use derivative instruments for hedging purposes or to manage investments in issuers listed in a currency other than the fund's reference currency (i.e. USD, GBP, CHF, etc.).

Minimum environmental or social guarantees include the implementation of exclusions to restrict investments in companies and issuers that have significant exposure to certain activities likely to harm the environment or society in the broad sense:

- Any direct investment in companies involved in the manufacture, trade, stockpiling or services for anti-personnel mines, cluster bombs, in accordance with the Ottawa and Oslo Treaty;
- Companies producing, stockpiling or trading in chemical, biological and depleted uranium weapons;
- Companies that seriously and repeatedly violate one or more of the 10 principles of the UN Global Compact;
- The companies which are subject to the most serious controversies (severity level 5 on a scale of 1 to 5);
- Companies or sectors considered to be particularly exposed to sustainability risk;
- In addition, the Fund implements an exclusion resulting from its "Best-in-universe" strategy, leading to the impossibility of investing in entities representing the lowest 20% ESG-rated entities. At least 90% of the Fund's net assets are subject to an ESG rating.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Management Company's shareholder engagement also made it possible to respect the environmental and social characteristics promoted by the Fund during the reference period.

Number of general meetings (GMs) voted on	28
Voting participation rate at GMs (%)	50
Approval rate for resolutions (%)	92
Percentage of GMs that were the subject of a negative vote (%)	64
External resolutions filed	0
"Say on Climate ² "	1
Ongoing commitments	10
Targeted commitments	3

How did this financial product perform compared with the reference benchmark?

- **How does the reference benchmark differ from a broad market index?**
Not applicable
- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**
Not applicable
- **How did this financial product perform compared with the reference benchmark?**
Not applicable
- **How did this financial product perform compared with the broad market index?**
Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

² Resolution to the agenda of general meetings, which may be tabled by the company itself or by its shareholders, in order to have shareholders vote each year on the climate policy of listed companies and therefore ensure an ongoing dialogue on environmental issues

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Product name: MFS Meridian Funds – Global Concentrated Fund ("MFS Global Concentrated Fund")
Legal entity identifier: BMRY0ZKI2EE3QEBKPG73

Environmental and/or social characteristics

---	---

To what extent were the environmental and/or social characteristics are promoted by this financial product met?

Effective 31 December 2021, the MFS Global Concentrated Fund promoted the MFS Low Carbon Transition Characteristic, which refers to the transition to a low carbon economy that MFS as an allocator of capital will promote through active engagement and the application of climate criteria to certain investments made by this product. In particular, the MFS Global Concentrated Fund will aim to have at least 50% of the equity securities in the portfolio invested in equity issuers that meet at least one of the three climate criteria (see below) from 1 January 2027 (the "Transition Date").

As of 31 January 2023, 82.50% of the equity securities in the portfolio of the MFS Global Concentrated Fund met at least one of the climate criteria, which represented 81.19% of the total assets. Equity securities represented 98.40% of the assets of the MFS Global Concentrated Fund as of 31 January 2023. Please note that percentages of total assets may differ from the financial statements included in the Shareholder Annual Report due to certain adjustments which have been made for reporting purposes.

How did the sustainability indicators perform?

This periodic disclosure relates to the period from 31 December 2021 to 31 January 2023.

Climate Criterion 1 - Measuring GHG intensity of equity issuers: the percentage (%) of equity securities in the portfolio invested in equity issuers that reduced their annual GHG intensity in accordance with the methodology set out in the website disclosure (see link below).

Climate Criterion 1	% of equity securities in the portfolio meeting this criterion	% of total assets in the portfolio meeting this criterion
31 January 2023	69.12	68.02
30 November 2021	73.91	70.03

Climate Criterion 2 - Measuring recognised GHG emissions reduction or stabilization program: the percentage (%) of equity securities in the portfolio invested in equity issuers that have adopted such programs in accordance with the methodology set out in the website disclosure (see link below).

Climate Criterion 2	% of equity securities in the portfolio meeting this criterion	% of total assets in the portfolio meeting this criterion
31 January 2023	64.39	63.37
30 November 2021	67.20	66.38

Climate Criterion 3 - Measuring 'net-zero' issuers: the percentage (%) of equity securities in the portfolio invested in equity issuers that are operating at 'net-zero' determined in accordance with the methodology set out in the website disclosure (see link below).

Climate Criterion 3	% of equity securities in the portfolio meeting this criterion	% of total assets in the portfolio meeting this criterion
31 January 2023	0	0
30 November 2021	0	0

Compliance with climate criteria – measuring the percentage (%) of equity securities in the portfolio that complied with at least one of Climate Criterion 1, 2 and / or 3 in accordance with the methodology set out in the website disclosure (see link below).

Climate Criteria	% of equity securities in the portfolio meeting any criteria	% of total assets in the portfolio meeting any criteria
31 January 2023	82.50	81.19
30 November 2021	96.46	95.31

... and compared to previous periods?

Not applicable.

What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?

Not applicable.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Not applicable.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

The MFS Global Concentrated Fund does not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation. Therefore, the "do no significant harm" principle does not apply to any of the investments of this financial product.

How did this financial product consider principal adverse impacts on sustainability factors?

MFS believes that integrating financially material sustainability (environmental, social and governance or ESG) factors into investment analysis and decision-making processes leads to better informed decision-making which will drive investment returns over the long term. MFS investment professionals across the MFS Global Integrated Research Platform have access to proprietary interactive dashboards which allow them to visualize and analyze various ESG data elements, including the principal adverse impact indicators set out below. These ESG data elements are intended to enable MFS investment professionals to better understand and assess the financial impact of sustainability (ESG) factors on issuers and the portfolio, the negative external impact of issuers and the portfolio on sustainability (ESG) factors, and make informed long term investment decisions that are consistent with the financial investment objective of the MFS Global Concentrated Fund.

To complement the promotion of the MFS Low Carbon Transition Characteristic which incorporates the **GHG emissions** (scope 1 and 2, and 3 where available) and **GHG intensity of investee companies** principal adverse impact indicators, MFS also makes available to investment professionals the following additional greenhouse gas emissions principal adverse impact indicators: **carbon footprint, exposure to active in the fossil fuel sector, share of non-renewable energy consumption and production and energy consumption intensity per high impact climate sector** (collectively, the "**Additional Emissions Indicators**"). At a portfolio level, MFS investment professionals considered these Additional Emissions Indicators alongside the MFS Low Carbon Transition Characteristic and underlying climate criteria from July 2022. MFS investment professionals will use the Additional Emissions Indicators as part of their broader assessment to address the readiness of issuers to transition their activities towards a low carbon economy and will engage with issuers consistent with the MFS Low Carbon Transition Characteristic. MFS also makes available to investment professionals the following social principal adverse impact indicators: **violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises and board gender diversity**. MFS investment professionals will consider these indicators within their broader ESG integration framework in the investment process to assess financial materiality and also their engagement practices. In partnership with our global stewardship team and our team of ESG specialists, MFS assesses and addresses the potential adverse impact of companies assessed at the portfolio level through its engagement approach, which may include direct engagement, proxy voting and industry collaborations (as appropriate).

Sustainability issues are complex, interconnected and evolving. MFS believes that the materiality of principal adverse impacts cannot be reduced to an automated process. The consideration of principal adverse impacts by MFS investment professionals for financial materiality is generally subjective and often involves considering risks or opportunities that are intangible and hard to measure. Their analysis will therefore be in-depth, qualitative, issuer-specific and contextual. MFS investment professionals retain flexibility to consider the principal adverse impacts within different points of the investment process and engagement activities, and the extent to which MFS investment professionals consider

Principal adverse impacts are the most significant negative impacts of investment decision on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

principal adverse impact indicators may vary. Importantly, MFS investment professionals do not apply principal adverse impact indicators as the basis for exclusions or screens, nor would these indicators be used within a purely quantitative portfolio optimization framework. As principal adverse indicators are considered at the portfolio level, MFS investment professionals will engage with certain issuers in the portfolio with respect to issues that are considered to be financially material and not engage with every issuer within the portfolio.

What were the top investments of this financial product?

The list includes investments constituting the greatest proportion of investments of the financial product during the reference period which is 31 December 2021 to 31 January 2023.

Largest investments	Sector	% Asset	Country
Thermo Fisher Scientific Inc	Health Care	6.30	United States

Cie Financiere Richemont SA	Consumer Discretionary	3.63	Switzerland

The top investment holdings above represent the average security weights for the top 15 securities in the portfolio at the end of the 31 March 2022, 30 June 2022, 30 September 2022 and 31 December 2022 quarter end periods. Weights are based on equivalent exposure, which measures how a portfolio's value would change due to price changes in an asset held either directly or, in the case of a derivative contract, indirectly. The market value of the holding may differ. Sectors shown are based on the Global Industry Classification Standard (GICS®) sectors and MFS classifications. GICS was developed by and/or is the exclusive property of MSCI, Inc. and S&P Global Market Intelligence Inc. ("S&P Global Market Intelligence"). GICS is a service mark of MSCI and S&P Global Market Intelligence and has been licensed for use by MFS. MFS has applied its own internal sector/industry classification methodology for equity securities and non-equity securities that are unclassified by GICS.

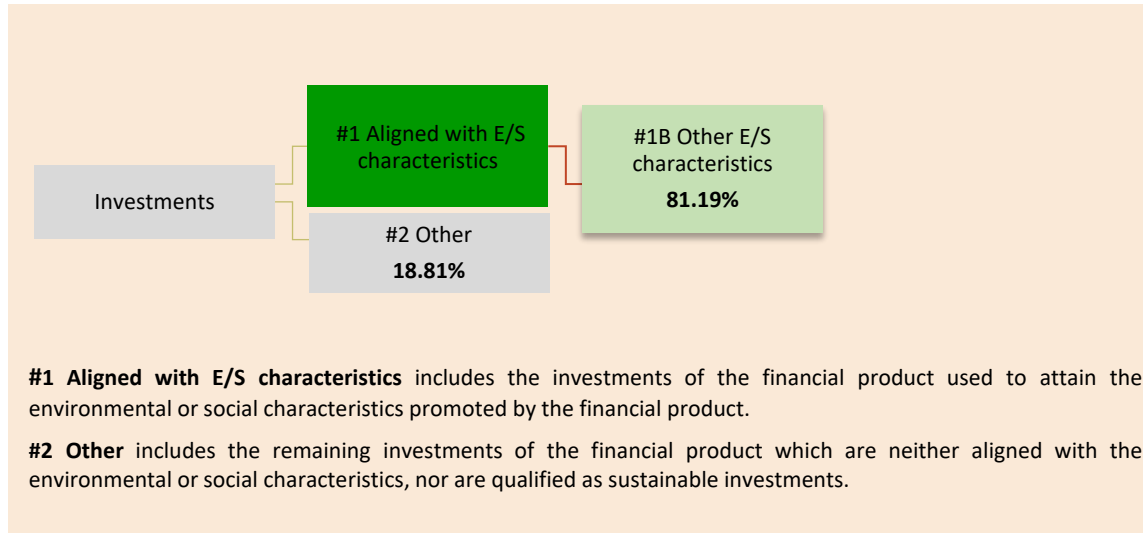

What was the proportion of sustainability-related investments?

The MFS Global Concentrated Fund aims to have at least 50% of the equity securities in the portfolio invested in equity issuers meeting at least one of the climate criteria from the Transition Date and therefore aligned with the E/S characteristics promoted by the Global Concentrated Fund (i.e. # 1) from the Transition Date.

What was the asset allocation?

As of 31 January 2023, equity securities represented 98.40% of the total assets of the portfolio of the MFS Global Concentrated Fund; the remaining investments of the 1.60% portfolio included cash and / or cash equivalent instruments; 82.50% of the equity securities in the portfolio of the MFS Global Concentrated Fund met at least one of the climate criteria, which represented 81.19% of the total assets of the portfolio that attained the MFS Low Carbon Transition Characteristic (which did not qualify as sustainable investments); 18.81% of the total assets were not aligned with the MFS Low Carbon Transition Characteristic or qualified as sustainable investments. Please note that percentages of total assets may differ from the financial statements included in the Shareholder Annual Report due to certain adjustments which have been made for reporting purposes.

Asset allocation describes the share of investments in specific assets.

● **In which economic sectors were the investments made?**

Sectors	% Average weight
Health Care	22.19
Industrials	21.01
Information Technology	14.24
Consumer Staples	14.14
Communication Services	8.86
Consumer Discretionary	8.74
Materials	5.82
Financials	4.14
Cash & Cash Equivalents	0.80
Equity Warrants	0.15
Other	-0.08

The sector holdings above represent the average sector weight for the portfolio at the end of the 31 March 2022, 30 June 2022, 30 September 2022 and quarter end periods. Weights are based on equivalent exposure, which measures how a portfolio's value would change due to price changes in an asset held either directly or, in the case of a derivative contract, indirectly. The market value of the holding may differ. Sectors shown are based on the Global Industry Classification Standard (GICS®) sectors and MFS classifications. GICS was developed by and/or is the exclusive property of MSCI, Inc. and S&P Global Market Intelligence Inc. ("S&P Global Market Intelligence"). GICS is a service mark of MSCI and S&P Global Market Intelligence and has been licensed for use by MFS. MFS has applied its own internal sector/industry classification methodology for equity securities and non-equity securities that are unclassified by GICS.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

Zero. The MFS Global Concentrated Fund does not aim or commit to invest in sustainable investments with an environmental objective aligned with the EU Taxonomy.

● **Did the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy?**

Yes:

In fossil fuel In nuclear energy

No. The MFS Global Concentrated Fund does not commit to make investments aligned with the EU Taxonomy.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What was the share of investments made in transitional and enabling activities?

Zero. The MFS Global Concentrated Fund does not aim or commit to invest in transitional or enabling activities as defined under the EU Taxonomy.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Not applicable.

What was the share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Zero. The MFS Global Concentrated Fund does not aim or commit to invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What was the share of sustainable investments with a social objective?

Not applicable.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

For those equity securities that do not adhere to the climate criteria of the MFS Low Carbon Transition Characteristic, MFS investment professionals will continue to actively engage with these issuers on the climate criteria. The remaining portfolio held instruments not subject to the MFS Low Carbon Transition Characteristic which may include cash and cash equivalent instruments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What actions have been taken to meet the environmental and / or social characteristics during the reference period?

The MFS Global Concentrated Fund is managed by MFS investment professionals operating within the MFS integrated global research platform. As well as supporting strategy level investment analysis and decision making, certain initiatives are undertaken at the platform level for all MFS portfolios ("Platform Initiatives"). Information on Platform Initiatives that support the MFS Low Carbon Transition Characteristic are included below.

Platform Initiatives

Net Zero Assets Managers ("NZAM") - In 2021, MFS joined NZAM initiative. As a signatory, MFS is required to commit a portion of AUM that will align to net zero principles. In May 2022, MFS published interim and long-term targets to align with the Net Zero Asset Managers initiative. As of 2022, 90% of total MFS assets under management will be considered in-scope, including investments in equity securities of the MFS Global Concentrated Fund.

MFS interim and long-term targets:

- 2030 – 90% of in scope AUM is considered net zero aligned or aligning
- 2040 – 100% of in scope AUM is considered net zero aligned.
- 2050 – 100% of AUM is considered 'achieving net zero'.

The MFS approach is predicated on the belief that engaging investee companies across all industry sectors to transition in line with the decarbonization of the global economy will reduce the overall climate-related financial risks within our clients' investment portfolios. We believe this approach will help to influence positive change, is in the best interest of clients and aligned with our purpose of creating long-term value responsibly.

Task Force on Climate related Financial Disclosures ("TCFD") – MFS became a signatory in 2019. In 2022, MFS produced its first annual report in line with the TCFD recommendations. This report demonstrates our progress in integrating climate-risk awareness into our business operations and investment strategy. The full report is available on www.mfs.com.

MFS Climate Letter – MFS wrote to 700 issuers that represent our largest and highest emitting portfolio holdings. This letter outlined MFS' support of the Paris Agreement and the goal of limiting temperature increases to below 1.5° Celsius relative to pre-industrial levels. MFS requested these issuers to disclose carbon and related data, plan strategies to reduce their impacts, and act on those strategies in both the short and intermediate terms.

MFS Climate Working Group – MFS established an internal climate working group with the goal of engaging the broader MFS investment professionals on climate change and environmental impact within the MFS investment process and corporate engagement activity. Recent activities during the reporting period include the following: developed an internal climate framework that is Paris aligned, across all sectors, geographies and asset classes; ongoing integration of climate consideration and process across the MFS integrated global research platform; collaborating externally with groups such as NZAM, Climate Action 100+ and other initiatives.

Engagements and Proxy Voting - MFS Global Concentrated Fund

During the reporting period, MFS investment professionals conducted at least 5 engagements with issuers in the portfolio on climate related risks and opportunities including: Accenture PLC, Boston Scientific Corp, and Danone SA. Topics engaged on include identification of climate risk, climate transition risk, climate change physical risk and Net Zero/ SBTi initiatives. MFS investment professionals assessed and voted FOR management proposals on climate transition plans of the following issuer during the reporting period: Canadian National Railway Company. MFS investment professionals assessed and voted FOR climate related shareholder proposals of the following issuers during the reporting period: Honeywell International, Charter Communications, Inc and United Parcel Service, Inc. MFS investment professionals assessed and voted AGAINST climate related shareholder proposal of the following issuer during the reporting period: Comcast Corp.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference

benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

---	--

To what extent were the environmental and/or social characteristics are promoted by this financial product met?

Effective 31 December 2021, the MFS Global Equity Fund promoted the MFS Low Carbon Transition Characteristic, which refers to the transition to a low carbon economy that MFS as an allocator of capital will promote through active engagement and the application of climate criteria to certain investments made by this product. In particular, the MFS Global Equity Fund will aim to have at least 50% of the equity securities in the portfolio invested in equity issuers that meet at least one of the three climate criteria (see below) from 1 January 2027 (the "Transition Date").

As of 31 January 2023, 80.79% of the equity securities in the portfolio of the MFS Global Equity Fund met at least one of the climate criteria, which represented 80.10% of the total assets. Equity securities represented 99.14% of the assets of the MFS Global Equity Fund as of 31 January 2023. Please note that percentages of total assets may differ from the financial statements included in the Shareholder Annual Report due to certain adjustments which have been made for reporting purposes.

How did the sustainability indicators perform?

This periodic disclosure relates to the period from 31 December 2021 to 31 January 2023.

Climate Criterion 1 - Measuring GHG intensity of equity issuers: the percentage (%) of equity securities in the portfolio invested in equity issuers that reduced their annual GHG intensity in accordance with the methodology set out in the website disclosure (see link below).

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Climate Criterion 1	% of equity securities in the portfolio meeting this criterion	% of total assets in the portfolio meeting this criterion
31 January 2023	63.97	63.42
30 November 2021	69.34	68.94

Climate Criterion 2 - Measuring recognised GHG emissions reduction or stabilization program: the percentage (%) of equity securities in the portfolio invested in equity issuers that have adopted such programs in accordance with the methodology set out in the website disclosure (see link below).

Climate Criterion 2	% of equity securities in the portfolio meeting this criterion	% of total assets in the portfolio meeting this criterion
31 January 2023	65.39	64.83
30 November 2021	60.40	60.04

Climate Criterion 3 - Measuring 'net-zero' issuers: the percentage (%) of equity securities in the portfolio invested in equity issuers that are operating at 'net-zero' determined in accordance with the methodology set out in the website disclosure (see link below).

Climate Criterion 3	% of equity securities in the portfolio meeting this criterion	% of total assets in the portfolio meeting this criterion
31 January 2023	0	0
30 November 2021	0	0

Compliance with climate criteria – measuring the percentage (%) of equity securities in the portfolio that complied with at least one of Climate Criterion 1, 2 and / or 3 in accordance with the methodology set out in the website disclosure (see link below).

Climate Criteria	% of equity securities in the portfolio meeting any criteria	% of total assets in the portfolio meeting any criteria
31 January 2023	80.79	80.10
30 November 2021	86.59	86.09

... and compared to previous periods?

Not applicable.

What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?

Not applicable.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Not applicable.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

The MFS Global Equity Fund does not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation. Therefore, the “do no significant harm” principle does not apply to any of the investments of this financial product.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decision on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

MFS believes that integrating financially material sustainability (environmental, social and governance or ESG) factors into investment analysis and decision-making processes leads to better informed decision-making which will drive investment returns over the long term. MFS investment professionals across the MFS Global Integrated Research Platform have access to proprietary interactive dashboards which allow them to visualize and analyze various ESG data elements, including the principal adverse impact indicators set out below. These ESG data elements are intended to enable MFS investment professionals to better understand and assess the financial impact of sustainability (ESG) factors on issuers and the portfolio, the negative external impact of issuers and the portfolio on sustainability (ESG) factors, and make informed long term investment decisions that are consistent with the financial investment objective of the MFS Global Equity Fund.

To complement the promotion of the MFS Low Carbon Transition Characteristic which incorporates the **GHG emissions** (scope 1 and 2, and 3 where available) and **GHG intensity of investee companies** principal adverse impact indicators, MFS also makes available to investment professionals the following additional greenhouse gas emissions principal adverse impact indicators: **carbon footprint, exposure to active in the fossil fuel sector, share of non-renewable energy consumption and production and energy consumption intensity per high impact climate sector** (collectively, the “**Additional Emissions Indicators**”). At a portfolio level, MFS investment professionals considered these Additional Emissions Indicators alongside the MFS Low Carbon Transition Characteristic and underlying climate criteria from July 2022. MFS investment professionals will use the Additional Emissions Indicators as part of their broader assessment to address the readiness of issuers to transition their activities towards a low carbon economy and will engage with issuers consistent with the MFS Low Carbon Transition Characteristic. MFS also makes available to investment professionals the following social principal adverse impact indicators: **violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises** and **board gender diversity**. MFS investment professionals will consider these indicators within their broader ESG integration framework in the investment process to assess financial materiality and also their engagement practices. In partnership with our global stewardship team and our team of ESG specialists, MFS assesses and addresses the potential adverse impact of companies assessed at the portfolio level through its engagement approach, which may include direct engagement, proxy voting and industry collaborations (as appropriate).

Sustainability issues are complex, interconnected and evolving. MFS believes that the materiality of principal adverse impacts cannot be reduced to an automated process. The consideration of principal adverse impacts by MFS investment professionals for financial materiality is generally subjective and often involves considering risks or opportunities that are intangible and hard to measure. Their analysis will therefore be in-depth, qualitative, issuer-specific and contextual. MFS investment professionals retain flexibility to consider the principal adverse impacts within different points of the investment process and engagement activities, and the extent to which MFS investment professionals consider principal adverse impact indicators may vary. Importantly, MFS investment professionals do not apply

principal adverse impact indicators as the basis for exclusions or screens, nor would these indicators be used within a purely quantitative portfolio optimization framework. As principal adverse indicators are considered at the portfolio level, MFS investment professionals will engage with certain issuers in the portfolio with respect to issues that are considered to be financially material and not engage with every issuer within the portfolio.

What were the top investments of this financial product?

The list includes investments constituting the greatest proportion of investments of the financial product during the reference period which is 30 November 2021 to 31 January 2023.

The top investment holdings above represent the average security weights for the top 15 securities in the portfolio at the end of the 31 March 2022, 30 June 2022, 30 September 2022 and 31 December 2022 quarter end periods. Weights are based on equivalent exposure, which measures how a portfolio's value would change due to price changes in an asset held either directly or, in the case of a derivative contract, indirectly. The market value of the holding may differ. Sectors shown are based on the Global Industry Classification Standard (GICS®) sectors and MFS classifications. GICS was developed by and/or is the exclusive property of MSCI, Inc. and S&P Global Market Intelligence Inc. ("S&P Global Market Intelligence"). GICS is a service mark of MSCI and S&P Global Market Intelligence and has been licensed for use by MFS. MFS has applied its own internal sector/industry classification methodology for equity securities and non-equity securities that are unclassified by GICS.

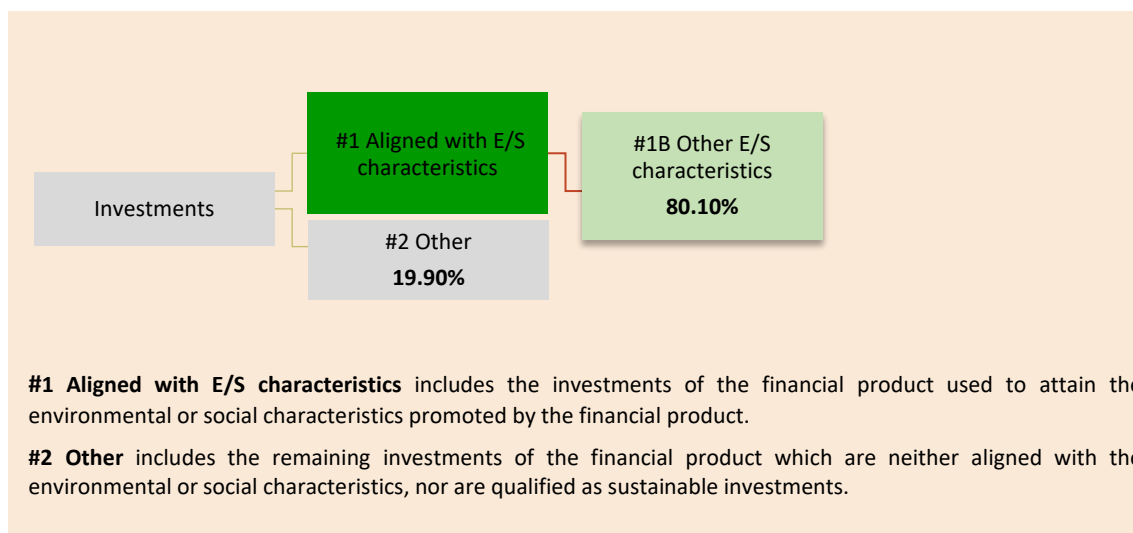

What was the proportion of sustainability-related investments?

The MFS Global Equity Fund aims to have at least 50% of the equity securities in the portfolio invested in equity issuers meeting at least one of the climate criteria from the Transition Date and therefore aligned with the E/S characteristics promoted by the MFS Global Equity Fund (i.e. # 1) from the Transition Date.

What was the asset allocation?

As of 31 January 2023, equity securities represented 99.14% of the total assets of the portfolio of the MFS Global Equity Fund; the remaining investments of 0.86% the portfolio included cash and / or cash equivalent instruments; 80.79% of the equity securities in the portfolio of the MFS Global Equity Fund met at least one of the climate criteria, which represented 80.10% of the total assets of the portfolio that attained the MFS Low Carbon Transition Characteristic (which did not qualify as sustainable investments); 19.90% of the total assets were not aligned with the MFS Low Carbon Transition Characteristic or qualified as sustainable investments. Please note that percentages of total assets may differ from the financial statements included in the Shareholder Annual Report due to certain adjustments which have been made for reporting purposes.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

Zero. The MFS Global Equity Fund does not aim or commit to invest in sustainable investments with an environmental objective aligned with the EU Taxonomy.

● **Did the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy?**

Yes:

In fossil fuel In nuclear energy

No. The MFS Global Equity Fund does not commit to make investments aligned with the EU Taxonomy.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Enabling activities

directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities

are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What was the share of investments made in transitional and enabling activities?

Zero. The MFS Global Equity Fund does not aim or commit to invest in transitional or enabling activities as defined under the EU Taxonomy.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Not applicable.

What was the share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Zero. The MFS Global Equity Fund does not aim or commit to invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What was the share of sustainable investments with a social objective?

Not applicable.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

For those equity securities that do not adhere to the climate criteria of the MFS Low Carbon Transition Characteristic, MFS investment professionals will continue to actively engage with these issuers on the

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

climate criteria. The remaining portfolio held instruments not subject to the MFS Low Carbon Transition Characteristic which may include cash and cash equivalent instruments.

What actions have been taken to meet the environmental and / or social characteristics during the reference period?

The MFS Global Equity Fund is managed by MFS investment professionals operating within the MFS integrated global research platform. As well as supporting strategy level investment analysis and decision making, certain initiatives are undertaken at the platform level for all MFS portfolios ("Platform Initiatives"). Information on Platform Initiatives that support the MFS Low Carbon Transition Characteristic are included below.

Platform Initiatives

Net Zero Assets Managers ("NZAM") - In 2021, MFS joined NZAM initiative. As a signatory, MFS is required to commit a portion of AUM that will align to net zero principles. In May 2022, MFS published interim and long-term targets to align with the Net Zero Asset Managers initiative. As of 2022, 90% of total MFS assets under management will be considered in-scope, including investments in equity securities of the MFS Global Equity Fund.

MFS interim and long-term targets:

- 2030 – 90% of in scope AUM is considered net zero aligned or aligning
- 2040 – 100% of in scope AUM is considered net zero aligned.
- 2050 – 100% of AUM is considered 'achieving net zero'.

The MFS approach is predicated on the belief that engaging investee companies across all industry sectors to transition in line with the decarbonization of the global economy will reduce the overall climate-related financial risks within our clients' investment portfolios. We believe this approach will help to influence positive change, is in the best interest of clients and aligned with our purpose of creating long-term value responsibly.

Task Force on Climate related Financial Disclosures ("TCFD") – MFS became a signatory in 2019. In 2022, MFS produced its first annual report in line with the TCFD recommendations. This report demonstrates our progress in integrating climate-risk awareness into our business operations and investment strategy. The full report is available on www.mfs.com.

MFS Climate Letter – MFS wrote to 700 issuers that represent our largest and highest emitting portfolio holdings. This letter outlined MFS' support of the Paris Agreement and the goal of limiting temperature increases to below 1.5° Celsius relative to pre-industrial levels. MFS requested these issuers to disclose carbon and related data, plan strategies to reduce their impacts, and act on those strategies in both the short and intermediate terms.

MFS Climate Working Group – MFS established an internal climate working group with the goal of engaging the broader MFS investment professionals on climate change and environmental impact within the MFS investment process and corporate engagement activity. Recent activities during the reporting period include the following: developed an internal climate framework that is Paris aligned, across all sectors, geographies and asset classes; ongoing integration of climate consideration and process across the MFS integrated global research platform; collaborating externally with groups such as NZAM, Climate Action 100+ and other initiatives.

Engagements and Proxy Voting - MFS Global Equity Fund

During the reporting period, MFS investment professionals conducted at least 15 engagements with issuers in the portfolio on climate related risks and opportunities including: Accenture PLC, Boston Scientific Corp, Check Point Software Technologies Ltd, Colgate-Palmolive, Danone SA, Heineken NV, Hoya Corp, PPG Industries Inc, Rolls-Royce Holdings PLC, Union Pacific Corp, and Whitbread PLC. Topics engaged on include identification of climate change risk, transition risk, climate scenario analysis, and Net Zero / SBTi initiatives. MFS investment professionals assessed and voted FOR management proposals on climate transition plans of the following issuers during the reporting period: Aena S.M.E. SA, UBS Group, Canadian Pacific Railway, London Stock Exchange Group plc and Canadian National Railway Company. MFS investment professionals assessed and voted FOR climate related shareholder proposals of the following issuers during the reporting period: Honeywell International and United

Parcel Service, Inc. MFS investment professionals assessed and voted AGAINST climate related shareholder proposal of the following issuer during the reporting period: Comcast Corp.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Link to access website disclosure:

<https://www.mfs.com/content/mfs-enterprise/microsites/meridian/global/en/mfs-meridian-funds.html>

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Product name: MFS Meridian Funds – Prudent Wealth Fund ("MFS Prudent Wealth Fund")

---	--

To what extent were the environmental and/or social characteristics are promoted by this financial product met?

Effective 31 December 2021, the MFS Prudent Wealth Fund promoted the MFS Low Carbon Transition Characteristic, which refers to the transition to a low carbon economy that MFS as an allocator of capital will promote through active engagement and the application of climate criteria to certain investments made by this product. In particular, the MFS Prudent Wealth Fund will aim to have at least 50% of the equity securities and 50% of the corporate debt instruments (as applicable) in the portfolio invested in equity issuers and corporate debt issuers that meet at least one of the four climate criteria (see below) from 1 January 2027 (the "Transition Date").

As of 31 January 2023: 60.92% of the equity securities in the portfolio of the MFS Prudent Wealth Fund met at least one of the climate criteria, which represented 41.12% of the total assets; 100% of the corporate debt instruments in the portfolio of the MFS Prudent Wealth Fund met at least one of the climate criteria, which represented 1.14% of total assets. Equity securities represented 67.51% and corporate debt instruments represented 1.14% of the assets of the MFS Prudent Wealth Fund as of 31 January 2023. Please note that percentages of total assets may differ from the financial statements included in the Shareholder Annual Report due to certain adjustments which have been made for reporting purposes. Corporate debt instruments percentages included in this report include any accrued interest amounts.

● **How did the sustainability indicators perform?**

This periodic disclosure relates to the period from 31 December 2021 to 31 January 2023.

Climate Criterion 1 - Measuring GHG intensity of equity issuers and corporate debt issuers: the percentage (%) of equity securities and corporate debt instruments in the portfolio invested in equity issuers and corporate debt issuers that reduced their annual GHG intensity in accordance with the methodology set out in the website disclosure (see link below).

Climate Criterion 1	% of equity securities in the portfolio meeting this criterion	% of total assets in the portfolio meeting this criterion
31 January 2023	39.18	26.45
30 November 2021	67.01	37.0

Climate Criterion 1	% of corporate debt instruments in the portfolio meeting this criterion	% of total assets in the portfolio meeting this criterion
31 January 2023	100	1.14
30 November 2021	100	0.90

Climate Criterion 2 - Measuring recognised GHG emissions reduction or stabilization program: the percentage (%) of equity securities and corporate debt instruments in the portfolio invested in equity issuers and corporate debt issuers that have adopted such programs in accordance with the methodology set out in the website disclosure (see link below).

Climate Criterion 2	% of equity securities in the portfolio meeting this criterion	% of total assets in the portfolio meeting this criterion
31 January 2023	54.86	37.04
30 November 2021	43.80	24.20

Climate Criterion 2	% of corporate debt instruments in the portfolio meeting this criterion	% of total assets in the portfolio meeting this criterion
31 January 2023	30.70	0.35
30 November 2021	33.1	0.28

Climate Criterion 3 - Measuring 'net-zero' issuers: the percentage (%) of equity securities and corporate debt instruments in the portfolio invested in equity issuers and corporate debt issuers that are operating at 'net-zero' determined in accordance with the methodology set out in the website disclosure (see link below).

Climate Criterion 3	% of equity securities in the portfolio meeting this criterion	% of total assets in the portfolio meeting this criterion
31 January 2023	0	0
30 November 2021	0	0

Climate Criterion 3	% of corporate debt instruments in the portfolio meeting this criterion	% of total assets in the portfolio meeting this criterion
31 January 2023	0	0
30 November 2021	0	0

Climate Criterion 4 – Measuring activities that facilitate transition to a low carbon economy: the percentage (%) of corporate debt instruments in the portfolio invested in corporate debt issuers that have committed to use the proceeds raised to finance climate change adaptation and / or mitigation activities or to attain a reduction in GHG emissions determined in accordance with the methodology in the website disclosure (see link below).

Climate Criterion 4	% of corporate debt instruments in the portfolio meeting this criterion	% of total assets in the portfolio meeting this criterion
31 January 2023	0	0
30 November 2021	0	0

Compliance with climate criteria – measuring the percentage (%) of equity securities in the portfolio that complied with at least one of Climate Criterion 1, 2 and / or 3 in accordance with the methodology set out in the website disclosure (see link below).

Climate Criteria	% of equity securities in the portfolio meeting any criteria	% of total assets in the portfolio meeting this criterion
31 January 2023	60.92	41.12
30 November 2022	76.12	42.03

Compliance with climate criteria – measuring the percentage (%) of corporate debt instruments in the portfolio that complied with at least one of Climate Criterion 1, 2 and / or 3 in accordance with the methodology set out in the website disclosure (see link below).

Climate Criteria	% of corporate debt instruments in the portfolio meeting any criteria	% of total assets in the portfolio meeting any criteria
31 January 2023	100	1.14
30 November 2022	100	0.90

... and compared to previous periods?

Not applicable.

What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?

Not applicable.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Not applicable.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

The MFS Prudent Wealth Fund does not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation. Therefore, the “do no significant harm” principle does not apply to any of the investments of this financial product.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decision on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

MFS believes that integrating financially material sustainability (environmental, social and governance or ESG) factors into investment analysis and decision-making processes leads to better informed decision-making which will drive investment returns over the long term. MFS investment professionals across the MFS Global Integrated Research Platform have access to proprietary interactive dashboards which allow them to visualize and analyze various ESG data elements, including the principal adverse impact indicators set out below. These ESG data elements are intended to enable MFS investment professionals to better understand and assess the financial impact of sustainability (ESG) factors on issuers and the portfolio, the negative external impact of issuers and the portfolio on sustainability (ESG) factors, and make informed long term investment decisions that are consistent with the financial investment objective of the MFS Prudent Wealth Fund.

To complement the promotion of the MFS Low Carbon Transition Characteristic which incorporates the **GHG emissions** (scope 1 and 2, and 3 where available) and **GHG intensity of investee companies** principal adverse impact indicators, MFS also makes available to investment professionals the following additional greenhouse gas emissions principal adverse impact indicators: **carbon footprint, exposure to active in the fossil fuel sector, share of non-renewable energy consumption and production and energy consumption intensity per high impact climate sector** (collectively, the "**Additional Emissions Indicators**"). At a portfolio level, MFS investment professionals considered these Additional Emissions Indicators alongside the MFS Low Carbon Transition Characteristic and underlying climate criteria from July 2022. MFS investment professionals will use the Additional Emissions Indicators as part of their broader assessment to address the readiness of issuers to transition their activities towards a low carbon economy and will engage with issuers consistent with the MFS Low Carbon Transition Characteristic. MFS also makes available to investment professionals the following social principal adverse impact indicators: **violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises** and **board gender diversity**. MFS investment professionals will consider these indicators within their broader ESG integration framework in the investment process to assess financial materiality and also their engagement practices. In partnership with our global stewardship team and our team of ESG specialists, MFS assesses and addresses the potential adverse impact of companies assessed at the portfolio level through its engagement approach, which may include direct engagement, proxy voting and industry collaborations (as appropriate).

Sustainability issues are complex, interconnected and evolving. MFS believes that the materiality of principal adverse impacts cannot be reduced to an automated process. The consideration of principal adverse impacts by MFS investment professionals for financial materiality is generally subjective and often involves considering risks or opportunities that are intangible and hard to measure. Their analysis will therefore be in-depth, qualitative, issuer-specific and contextual. MFS investment professionals retain flexibility to consider the principal adverse impacts within different points of the investment process and engagement activities, and the extent to which MFS investment professionals consider principal adverse impact indicators may vary. Importantly, MFS investment professionals do not apply principal adverse impact indicators as the basis for exclusions or screens, nor would these indicators be used within a purely quantitative portfolio optimization framework. As principal adverse indicators are considered at the portfolio level, MFS investment professionals will engage with certain issuers in the portfolio with respect to issues that are considered to be financially material and not engage with every issuer within the portfolio.

The top investment holdings above represent the average security weights for the top 15 securities in the portfolio at the end of the 31 March 2022, 30 June 2022, 30 September 2022 and 31 December 2022 quarter end periods. Weights are based on equivalent exposure, which measures how a portfolio's value would change due to price changes in an asset held either directly or, in the case of a derivative contract, indirectly. The market value of the holding may differ. Sectors shown are based on the Global Industry Classification Standard (GICS®) sectors and MFS classifications. GICS was developed by and/or is the exclusive property of MSCI, Inc. and S&P Global Market Intelligence Inc. ("S&P Global Market Intelligence"). GICS is a service mark of MSCI and S&P Global Market Intelligence and has been licensed for use by MFS. MFS has applied its own internal sector/industry classification methodology for equity securities and non-equity securities that are unclassified by GICS.

What was the proportion of sustainability-related investments?

The MFS Prudent Wealth Fund aims to have at least 50% of the equity securities and 50% of the corporate debt instruments in the portfolio invested in equity issuers and corporate debt issuers meeting at least one of the climate criteria from the Transition Date and therefore aligned with the E/S characteristics promoted by the MFS Prudent Wealth Fund (i.e. # 1) from the Transition Date.

What was the asset allocation?

As of 31 January 2023, equity securities represented 67.51% and corporate debt instruments represented 1.14% of the total assets of the portfolio of the MFS Prudent Wealth Fund; the remaining investments of the portfolio included non-corporate debt instruments, derivatives, cash and / or cash equivalent instruments; 60.92% of the equity securities in the portfolio of the MFS Prudent Wealth Fund met at least one of the climate criteria, which represented 41.12% of the total assets of the portfolio; 62.92% of the corporate debt instruments in the portfolio of the MFS Prudent Wealth Fund met at least one of the climate criteria, which represented 6.82% of the total assets of the portfolio; 47.94% of the total assets of the portfolio attained the MFS Low Carbon Transition Characteristic (which did not qualify as sustainable investments); 52.06% of the total assets were not aligned with the MFS Low Carbon Transition Characteristic or qualified as sustainable investments. Please note that percentages of total assets may differ from the financial statements included in the Shareholder Annual Report due to certain adjustments which have been made for reporting purposes. Corporate debt instruments percentages included in this report include any accrued interest amounts.

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The sector holdings above represent the average sector weight for the portfolio at the end of the 31 March 2022, 30 June 2022, 30 September 2022 and 31 December 2022 quarter end periods.] Weights are based on equivalent exposure, which measures how a portfolio's value would change due to price changes in an asset held either directly or, in the case of a derivative contract, indirectly. The market value of the holding may differ. Sectors shown are based on the Global Industry Classification Standard (GICS®) sectors and MFS classifications. GICS was developed by and/or is the exclusive property of MSCI, Inc. and S&P Global Market Intelligence Inc. ("S&P Global Market Intelligence"). GICS is a service mark of MSCI and S&P Global Market Intelligence and has been licensed for use by MFS. MFS has applied its own internal sector/industry classification methodology for equity securities and non-equity securities that are unclassified by GICS.

Taxonomy-aligned activities are expressed as a shareof:
 - **turnover** reflecting the share of revenue from green activities of investee companies
 - **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
 - **operational expenditure** (OpEx) reflecting green operational activities of investee.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Zero. The MFS Prudent Wealth Fund does not aim or commit to invest in sustainable investments with an environmental objective aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy?

Yes:
 In fossil fuel In nuclear energy

No. The MFS Prudent Wealth Fund does not commit to make investments aligned with the EU Taxonomy.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

Zero. The MFS Prudent Wealth Fund does not aim or commit to invest in transitional or enabling activities as defined under the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable.

● **What was the share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

Zero. The MFS Prudent Wealth Fund does not aim or commit to invest in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

● **What was the share of sustainable investments with a social objective?**

Not applicable.

● **What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?**

For those equity securities and corporate debt instruments that do not adhere to the climate criteria of the MFS Low Carbon Transition Characteristic, MFS investment professionals will continue to actively engage with these issuers on the climate criteria. The remaining portfolio held instruments not subject to the MFS Low Carbon Transition Characteristic which may include non-corporate debt instruments, derivatives, cash and cash equivalent instruments.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What actions have been taken to meet the environmental and / or social characteristics during the reference period?

The MFS Prudent Wealth Fund is managed by MFS investment professionals operating within the MFS integrated global research platform. As well as supporting strategy level investment analysis and decision making, certain initiatives are undertaken at the platform level for all MFS portfolios ("Platform Initiatives"). Information on Platform Initiatives that support the MFS Low Carbon Transition Characteristic are included below.

Platform Initiatives

Net Zero Assets Managers ("NZAM") - In 2021, MFS joined NZAM initiative. As a signatory, MFS is required to commit a portion of AUM that will align to net zero principles. In May 2022, MFS published interim and long-term targets to align with the Net Zero Asset Managers initiative. As of 2022, 90% of total MFS assets under management will be considered in-scope, including investments in equity securities and corporate debt instruments of the MFS Prudent Wealth Fund.

MFS interim and long-term targets:

- 2030 – 90% of in scope AUM is considered net zero aligned or aligning
- 2040 – 100% of in scope AUM is considered net zero aligned.
- 2050 – 100% of AUM is considered 'achieving net zero'.

The MFS approach is predicated on the belief that engaging investee companies across all industry sectors to transition in line with the decarbonization of the global economy will reduce the overall climate-related financial risks within our clients' investment portfolios. We believe this approach will help to influence positive change, is in the best interest of clients and aligned with our purpose of creating long-term value responsibly.

Task Force on Climate related Financial Disclosures ("TCFD") – MFS became a signatory in 2019. In 2022, MFS produced its first annual report in line with the TCFD recommendations. This report demonstrates our progress in integrating climate-risk awareness into our business operations and investment strategy. The full report is available on www.mfs.com.

MFS Climate Letter – MFS wrote to 700 issuers that represent our largest and highest emitting portfolio holdings. This letter outlined MFS' support of the Paris Agreement and the goal of limiting temperature increases to below 1.5° Celsius relative to pre-industrial levels. MFS requested these issuers to disclose carbon and related data, plan strategies to reduce their impacts, and act on those strategies in both the short and intermediate terms.

MFS Climate Working Group – MFS established an internal climate working group with the goal of engaging the broader MFS investment professionals on climate change and environmental impact within the MFS investment process and corporate engagement activity. Recent activities during the reporting period include the following: developed an internal climate framework that is Paris aligned, across all sectors, geographies and asset classes; ongoing integration of climate consideration and process across the MFS integrated global research platform; collaborating externally with groups such as NZAM, Climate Action 100+ and other initiatives.

Engagements and Proxy Voting - MFS Prudent Wealth Fund

During the reporting period, MFS investment professionals conducted at least 6 engagements with issuers in the portfolio on climate related risks and opportunities including: Check Point Software, Danone, Iberdrola, and LEG Immobilien SE. Topics engaged on include identification of climate change risk, transition risk, and Net Zero / SBTi initiatives. MFS investment professionals also assessed and voted FOR climate related shareholder proposals of the following issuers during the reporting period: Charter Communications Inc. and Alphabet Inc. MFS investment professionals also assessed and voted AGAINST climate related shareholder proposals of the following issuers during the reporting period: Booking Holdings inc. and Microsoft.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Allegato 9: Informativa sulla finanza sostenibile (non certificato)

Al 31 dicembre 2022

Informativa periodica per i prodotti finanziari di cui all'Articolo 8, paragrafi 1, 2 e 2a del Regolamento (UE) 2019/2088 e Articolo 6, primo paragrafo, del Regolamento (UE) 2020/852

Nome del prodotto: **US Advantage Fund**

Identificativo dell'entità legale: **2NPF4LYIICQVCUT1Q64**

Periodo di riferimento: **dal 16 maggio 2022 al 31 dicembre 2022**

La classificazione di questo fondo quale Articolo 8 ai sensi dell'SFDR è entrata in vigore il 16 maggio 2022. Salvo altrimenti dichiarato, i seguenti valori sono stati calcolati in base agli investimenti del Fondo al 30 dicembre 2022.

Caratteristiche ambientali e sociali

Questo prodotto finanziario ha un obiettivo d'investimento sostenibile?

- | <input type="checkbox"/> Sì | <input checked="" type="checkbox"/> No |
|---|---|
| <input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo ambientale: ___% <ul style="list-style-type: none"> <input type="checkbox"/> in attività economiche qualificate come ecosostenibili ai sensi della Tassonomia UE <input type="checkbox"/> in attività economiche non qualificate come ecosostenibili ai sensi della Tassonomia UE | <input type="checkbox"/> Ha promosso caratteristiche ambientali/sociali (E/S) e pur non avendo come obiettivo un investimento sostenibile, aveva una quota di investimenti sostenibili pari a ___% <ul style="list-style-type: none"> <input type="checkbox"/> con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla Tassonomia UE <input type="checkbox"/> con un obiettivo ambientale in attività economiche non considerate ecosostenibili conformemente alla Tassonomia UE <input type="checkbox"/> con un obiettivo sociale |
| <input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo sociale: ___% | <input checked="" type="checkbox"/> Ha promosso caratteristiche E/S ma non ha effettuato alcun investimento sostenibile |

Investimento sostenibile indica un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, a condizione che l'investimento non danneggi in misura significativa qualsiasi obiettivo ambientale o sociale e che le società partecipate adottino buone pratiche di governance.

La **Tassonomia UE** è un sistema di classificazione descritto nel Regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Questo Regolamento non include alcun elenco di attività economiche socialmente sostenibili. Un investimento sostenibile con un obiettivo ambientale potrebbe non essere allineato alla Tassonomia.

Allegato 9: Informativa sulla finanza sostenibile (non certificato) Al 31 dicembre 2022 (seguito)

Fino a che punto le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario sono state soddisfatte?

Durante il periodo di riferimento il Fondo ha promosso le seguenti caratteristiche ambientali e sociali:

- Il Fondo ha promosso la caratteristica ambientale della limitazione delle esternalità ambientali, evitando investimenti in carbone termico; e
- il Fondo ha promosso la caratteristica sociale di evitare investimenti in alcune attività che possono nuocere alla salute e al benessere dell'uomo, come il tabacco e alcuni tipi di armi, tra cui armi da fuoco ad uso civile, munizioni a grappolo e mine antiuomo.

Maggiori dettagli sulla natura di queste esclusioni sono riportati di seguito (in risposta alla domanda "Quale è stata la performance degli indicatori di sostenibilità?").

Non vi sono state eccezioni alla realizzazione da parte del Fondo delle sue caratteristiche ambientali e sociali.

Indicatori di sostenibilità
misurano come sono realizzate le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

Quale è stata la performance degli indicatori di sostenibilità?

Indicatore di sostenibilità	Soglia dell'indicatore	Valore dell'indicatore 2022
Esclusioni – Emittenti societari:		
% investita dal Fondo in società il cui sottosettore GICS è:		
Tabacchi	0,00%	0,00%
Carbone e combustibili di consumo	0,00%	0,00%
% investita dal Fondo in società che traggono profitto da:		
Tabacco (>5% dei ricavi dell'anno recente)	0,00%	0,00%
Carbone termico (>10% dei ricavi dell'anno recente)	0,00%	0,00%
Manifattura di armi da fuoco e munizioni per uso civile (>10% dei ricavi dell'anno recente)	0,00%	0,00%
% del Fondo investita in società coinvolte tramite la proprietà societaria nella produzione di sistemi fondamentali per le armi o componenti/servizi fondamentali per le armi considerati come personalizzati ed essenziali per l'uso letale di munizioni a grappolo e mine antiuomo	0,00%	0,00%

La Tassonomia UE stabilisce un principio di "non arrecare un danno significativo" secondo il quale gli investimenti allineati alla Tassonomia non dovrebbero arrecare danni significativi agli obiettivi della Tassonomia ed è accompagnata da criteri UE specifici.

Il principio di "non arrecare un danno significativo" si applica unicamente agli investimenti sottostanti del prodotto finanziario che tengono conto dei criteri UE per attività economiche ecosostenibili. Gli investimenti sottostanti della quota restante di questo prodotto finanziario non tengono conto dei criteri UE in materia di attività economiche ecosostenibili.

Qualsiasi altro investimento sostenibile non deve inoltre arrecare danni significativi a qualsiasi obiettivo ambientale o sociale.

Il Regolamento richiede l'inclusione di queste dichiarazioni nel presente documento. Tuttavia, per evitare qualsiasi dubbio, questo Fondo non ha tenuto e non tiene conto dei criteri UE per attività economiche ecosostenibili nella Tassonomia UE.

Allegato 9: Informativa sulla finanza sostenibile (non certificato)

Al 31 dicembre 2022 (seguito)

Come sono stati considerati da questo prodotto finanziario gli impatti negativi più importanti sui fattori di sostenibilità?

Il Fondo ha preso in considerazione i seguenti principali effetti negativi sui fattori di sostenibilità mediante le opportune esclusioni:

il Fondo ha escluso emittenti che traggono una determinata percentuale di ricavi dall'estrazione di carbone. Pertanto, il Fondo ha tenuto parzialmente conto dell'indicatore n° 4, e cioè dell'esposizione ad aziende operanti nel settore dei combustibili fossili.

Il Fondo ha escluso emittenti coinvolti nella produzione dei meccanismi principali di munizioni a grappolo e mine antiuomo. Pertanto, il Fondo ha tenuto parzialmente conto dell'indicatore n° 14, e cioè l'esposizione alle armi controverse.

Dove il Consulente per gli Investimenti ha ritenuto che gli indicatori dei principali effetti negativi sotto elencati fossero particolarmente rilevanti per le attività di un emittente, ovvero significativamente impattati da queste, ha tenuto conto anche dei seguenti effetti negativi sui fattori di sostenibilità. Allo scopo, il Consulente per gli Investimenti ha provveduto a:

- integrare analisi ESG nel processo di ricerca e/o
- interloquire con gli organi dirigenti delle imprese beneficiarie.

I principali effetti negativi presi in considerazione sono:

Indicatore dei principali effetti negativi n° 1: Emissioni di gas serra (GHG).

Indicatore dei principali effetti negativi n° 3: Intensità di emissioni GHG.

Indicatore dei principali effetti negativi n° 5: consumo e produzione di energia da fonti non rinnovabili; e

Indicatore dei principali effetti negativi n° 6: intensità del consumo energetico in settori ad alto impatto climatico.

Sono compresi nell'elenco gli investimenti che costituiscono **la quota maggiore degli investimenti** del prodotto finanziario durante il periodo di riferimento, ossia: 52,96%

Quali sono stati gli investimenti principali di questo prodotto finanziario?

Titolo	Settore	% attivi	Paese
Snowflake, Inc. 'A'	Informatica	7,30%	Stati Uniti d'America
Uber Technologies, Inc.	Prodotti industriali	7,09%	Stati Uniti d'America
Royalty Pharma plc 'A'	Sanità	6,91%	Stati Uniti d'America
ASML Holding NV, NYRS	Informatica	6,43%	Paesi Bassi
Shopify, Inc. 'A'	Informatica	5,60%	Canada
Trade Desk, Inc. (The) 'A'	Servizi di comunicazione	5,50%	Stati Uniti d'America
Cloudflare, Inc. 'A'	Informatica	5,24%	Stati Uniti d'America
Amazon.com, Inc.	Beni di lusso	4,48%	Stati Uniti d'America
Datadog, Inc. 'A'	Informatica	4,41%	Stati Uniti d'America

Allegato 9: Informativa sulla finanza sostenibile (non certificato)

Al 31 dicembre 2022 (seguito)

Qual era la quota di investimenti correlati alla sostenibilità?

95,98% degli investimenti del Fondo ha realizzato le caratteristiche ambientali e sociali promosse dal Fondo. Il resto degli investimenti erano investimenti per strumenti liquidi detenuti ai fini di liquidità accessoria e derivati detenuti a fini di copertura, che non avevano realizzato le caratteristiche ambientali e sociali promosse durante il periodo di riferimento e non erano soggetti a qualsiasi salvaguardia minima ambientale o sociale.

Il Fondo non ha effettuato alcun investimento sostenibile ai sensi del Regolamento sull'Informativa per la finanza sostenibile ("SFDR").

Quale è stata l'allocazione degli attivi?

L'**Allocazione degli attivi** descrive la quota di investimenti in attivi specifici.

#1 Allineati a caratteristiche E/S comprende gli investimenti del prodotto finanziario utilizzati per realizzare le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

#2 Altro comprende gli investimenti restanti del prodotto finanziario non allineati alle caratteristiche ambientali o sociali e non qualificati quali investimenti sostenibili.

In quali settori economici sono stati effettuati gli investimenti?

Settore	% attivi
Informatica	37,07%
Beni di lusso	17,66%
Servizi di comunicazione	15,66%
Sanità	12,78%
Prodotti industriali	9,32%
Materiali	1,82%
Finanziari	1,67%
Esplorazione, attività mineraria, estrazione, produzione, trattamento, stoccaggio, raffinazione o distribuzione, inclusi trasporto, stoccaggio e commercio di combustibili fossili	0,00%

Nella tabella qui sopra sono riportati solo investimenti effettuati dal Fondo, ed esclusi altri attivi del Fondo, ad esempio liquidità e strumenti di copertura.

Allegato 9: Informativa sulla finanza sostenibile (non certificato)

Al 31 dicembre 2022 (seguito)

In che misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla Tassonomia UE?

Il Consulente per gli investimenti non ha tenuto conto della Tassonomia UE nella gestione del Fondo. Nessun investimento del Fondo che promuoveva caratteristiche ambientali è stato valutato dal Consulente per gli investimenti come allineato alla Tassonomia UE durante il periodo di riferimento.

Ai fini di conformità con la Tassonomia UE, i criteri relativi ai gas fossili includono limitazioni delle emissioni e passaggio a energia rinnovabile o carburanti a basse emissioni di carbonio entro la fine del 2035. Per l'energia nucleare, i criteri includono norme esaustive relative alla sicurezza e gestione delle scorie.

Attività abilitatrici abilitano direttamente altre attività per apportare un contributo concreto a un obiettivo ambientale.

Attività transizionali sono attività economiche per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e i cui livelli di emissione di gas con effetto serra corrispondono alla performance migliore.

Il prodotto finanziario ha investito in attività correlate a gas fossili e/o energia nucleare conformi alla Tassonomia UE¹?

- Sì
- No

I grafici qui avanti indicano in verde la percentuale degli investimenti allineati alla Tassonomia UE. Non essendoci alcuna metodologia appropriata per stabilire l'allineamento alla tassonomia di obbligazioni sovrane*, il primo grafico mostra l'allineamento alla Tassonomia in relazione a tutti gli investimenti del prodotto finanziario, comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla Tassonomia solo in relazione agli investimenti del prodotto diversi da obbligazioni sovrane.

Ai fini di questi grafici, le "obbligazioni sovrane" sono tutte le esposizioni sovrane.

¹ Attività legate a gas fossili e/o nucleare saranno conformi alla Tassonomia UE solo laddove contribuiscano alla limitazione del cambiamento climatico ("mitigazione del cambiamento climatico") e non arrechino seri danni a qualsiasi obiettivo della Tassonomia UE – cfr. Nota esplicativa nel margine a sinistra. Si può trovare una descrizione completa dei criteri relativi ad attività legate a gas fossili ed energia nucleare conformi alla Tassonomia UE nel Regolamento delegato delle Commissioni (UE) 2022/1214.

Allegato 9: Informativa sulla finanza sostenibile (non certificato) Al 31 dicembre 2022 (seguito)

Le attività allineate alla tassonomia sono espresse come una quota di:

- **fatturato** riflette quanto le società partecipate siano “verdi” oggi.
- **spesa in conto capitale** (CapEx) mostra gli investimenti verdi effettuati dalle società partecipate, rilevanti per una transizione a un’economia verde.
- **spesa operativa** (OpEx) riflette le attività operative verdi delle società partecipate.

Quale era la quota di investimenti effettuati in attività transizionali e abilitatrici?

Il Fondo non ha effettuato alcun investimento in attività valutate dal Consulente per gli investimenti come transizionali o abilitatrici secondo la Tassonomia UE.

Quali investimenti erano inclusi tra gli “altri”, quale era la loro finalità e vi erano salvaguardie ambientali o sociali minime?

4,02% degli investimenti del Fondo non era allineato alle caratteristiche ambientali e sociali del Fondo, ed è stato quindi incluso nella categoria “Altro”. Questi investimenti erano costituiti da strumenti liquidi detenuti ai fini di una liquidità accessoria e derivati detenuti a fini di copertura e non erano soggetti a qualsiasi salvaguardia minima ambientale o sociale.

Allegato 9: Informativa sulla finanza sostenibile (non certificato) Al 31 dicembre 2022 (seguito)

Quali azioni sono state adottate per soddisfare caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Durante il periodo di riferimento, il Consulente per gli Investimenti ha monitorato l'universo di investimento conformemente alle caratteristiche ambientali e sociali del Fondo, allo scopo di evitare qualsiasi nuovo investimento in società coinvolte in attività escluse o investimenti in società già in portafoglio che hanno avviato attività escluse. Il Consulente di investimento si è inoltre impegnato con la dirigenza della società su questioni specifiche per ciascuna attività con un focus su rischi e opportunità ESG concreti che potrebbero influire sul valore dei titoli di una società.

Il Consulente per gli Investimenti ha utilizzato il proprio Schema "SR Tailwinds" per classificare le attività economiche delle società partecipate (ad esempio l'allocazione di risorse o la produzione di beni e servizi) in base a criteri di sostenibilità (come il Tailwind 5: Efficienza delle risorse, Opportunità upstream). Ciò ha permesso al team di investimento di capire se le società partecipate stiano creando valore finanziario ed externalità positive che possono apportare un beneficio sociale. Questo schema organizzativo ha inoltre aiutato il team di investimento a categorizzare e descrivere meglio gli elementi positivi o negativi per il valore di una società dovuti all'effetto della sua attività sulle persone, il pianeta o i sistemi.

Il Consulente per gli Investimenti ha stabilito l'allineamento approssimativo dei ricavi per ogni società nel portafoglio e i rispettivi SR Tailwind per aiutare a valutare l'effettiva opportunità offerta dai tailwind per ogni partecipazione, che dovrebbe a sua volta aiutare il Consulente per gli Investimenti a comprendere la prevalenza di ciascun SR Tailwind a livello del portafoglio. Quest'analisi è stata effettuata in aggiunta all'analisi tradizionale dei fondamentali e delle attività di stewardship.

Limitazioni dei dati

Generalmente Morgan Stanley Investment Management utilizza svariate fonti di dati e l'analisi interna quali input nei suoi processi ESG. Possono essere inclusi dati ottenuti da fonti esterne, anche per redigere le informative in questa relazione. Tali dati possono essere soggetti a limitazioni metodologiche e a ritardi, vuoti di copertura o altre questioni con un impatto sulla qualità dei dati. Le informazioni correlate a fattori ESG, comprese quelle ottenute da fornitori esterni, si basano spesso su determinazioni qualitative o soggettive, e le singole fonti dei dati potrebbero di per sé non presentare un quadro completo relativo alle metriche ESG rappresentate. Si possono anche verificare discrepanze minime nei dati riportati relativi ai pesi nel portafoglio del Fondo, qualora questi abbia fatto ricorso a fonti sottostanti diverse per i dati relativi alle partecipazioni allo scopo di redigere le informative incluse nella relazione. Morgan Stanley Investment Management adotta le misure ragionevoli per mitigare il rischio di tali limitazioni. Tuttavia non rilascia alcuna dichiarazione o garanzia riguardo alla completezza o accuratezza di tali dati. Tutti questi dati possono anche essere modificati dal fornitore esterno senza preavviso. Morgan Stanley Investment Management può pertanto scegliere di agire (o di non agire) relativamente alle variazioni dei dati forniti da terzi come ritiene opportuno in base alle circostanze.

Questa relazione è stata redatta in base alle partecipazioni nel portafoglio del Fondo unicamente alla data specificata all'inizio di questo documento (salvo altrimenti indicato dal contesto). Salvo altrimenti indicato, le percentuali incluse in questa relazione sono state misurate conformemente al peso nel portafoglio, che si basa sul valore di mercato degli investimenti del Fondo.

Allegato 9: Informativa sulla finanza sostenibile (non certificato)

Al 31 dicembre 2022

Informativa periodica per i prodotti finanziari di cui all'Articolo 8, paragrafi 1, 2 e 2a del Regolamento (UE) 2019/2088 e Articolo 6, primo paragrafo, del Regolamento (UE) 2020/852

Nome del prodotto: Global Brands Fund

Identificativo dell'entità legale: ZGXTXPGVP03JQIVJJ255

Periodo di riferimento: dal 16 maggio 2022 al 31 dicembre 2022

Questa classificazione del Fondo quale Articolo 8 ai sensi dell'SFDR è entrata in vigore il 16 maggio 2022. Salvo altrimenti indicato, i valori di seguito riportati sono stati calcolati in base agli investimenti del Fondo al 30 dicembre 2022.

Caratteristiche ambientali e sociali

Investimento sostenibile indica un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, a condizione che l'investimento non danneggi in misura significativa qualsiasi obiettivo ambientale o sociale e che le società partecipate adottino buone pratiche di governance.

La **Tassonomia UE** è un sistema di classificazione descritto nel Regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Questo Regolamento non include alcun elenco di attività economiche socialmente sostenibili. Un investimento sostenibile con un obiettivo ambientale potrebbe non essere allineato alla Tassonomia.

Questo prodotto finanziario ha un obiettivo d'investimento sostenibile?

- | <input type="checkbox"/> Sì | <input checked="" type="checkbox"/> No |
|---|--|
| <input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo ambientale: ___% <ul style="list-style-type: none"> <input type="checkbox"/> in attività economiche qualificate come ecosostenibili ai sensi della Tassonomia UE <input type="checkbox"/> in attività economiche non qualificate come ecosostenibili ai sensi della Tassonomia UE | <input checked="" type="checkbox"/> Ha promosso caratteristiche ambientali/sociali (E/S) e pur non avendo come obiettivo un investimento sostenibile, aveva una quota di investimenti sostenibili pari a 63,30% <ul style="list-style-type: none"> <input type="checkbox"/> con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla Tassonomia UE <input checked="" type="checkbox"/> con un obiettivo ambientale in attività economiche non considerate ecosostenibili conformemente alla Tassonomia UE <input checked="" type="checkbox"/> con un obiettivo sociale |
| <input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo sociale: ___% | <input type="checkbox"/> Ha promosso caratteristiche E/S ma non ha effettuato alcun investimento sostenibile |

Allegato 9: Informativa sulla finanza sostenibile (non certificato)

Al 31 dicembre 2022 (seguito)

Indicatori di sostenibilità misurano come sono realizzate le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

Fino a che punto le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario sono state soddisfatte?

Durante il periodo di riferimento, il Fondo ha promosso la caratteristica ambientale della mitigazione dei cambiamenti climatici, evitando investimenti in: (i) società che abbiano un qualsiasi legame con combustibili fossili; e (ii) società di altri settori ad alta intensità energetica. A scanso di equivoci, il Fondo non cerca di fare investimenti che contribuiscono a mitigare il cambiamento climatico ai sensi della Tassonomia UE.

Inoltre, il Fondo ha tenuto conto delle caratteristiche sociali applicando esclusioni vincolanti per: (i) società la cui attività principale riguarda le armi o le armi da fuoco per uso civile; e (ii) che siano abbiano un qualsiasi tipo di collegamento con le armi controverse.

Inoltre una quota degli investimenti del Fondo è stata classificata come investimenti sostenibili tramite una valutazione complessiva di tre test, che implicavano l'allineamento positivo agli Obiettivi di Sviluppo Sostenibile delle Nazioni Unite (OSS) delle società partecipate (ciascuna di esse, una "Società", complessivamente "le Società").

Non vi sono state eccezioni alla realizzazione da parte del Fondo delle sue caratteristiche ambientali e sociali.

Quale è stata la performance degli indicatori di sostenibilità?

Indicatore di sostenibilità	Soglia dell'indicatore	Valore del portafoglio 2022
Caratteristiche ambientali		
Esclusioni:		
% investita dal Fondo in società che:		
Hanno un qualsiasi legame con i combustibili fossili	0,00%	0,00%
sono classificate nei seguenti settori o comparti industriali secondo gli standard di classificazione settoriale pubblicati da MSCI GICS: energia, materiali da costruzione, servizi di pubblica utilità (escluse l'elettricità da fonti rinnovabili e la fornitura di acqua), metallurgia e attività minerario-estratte	0,00%	0,00%
Caratteristiche sociali		
Esclusioni:		
% investita dal Fondo in società che traggono profitto da:		
Armi da fuoco per uso civile (>10% dei ricavi)	0,00%	0,00%
Armi (>10% dei ricavi)	0,00%	0,00%
% investita dal Fondo in società che hanno legami con armi controverse	0,00%	0,00%
Investimenti sostenibili:		
% investita dal Fondo in società classificate come investimenti sostenibili	10,00%	63,30%

Allegato 9: Informativa sulla finanza sostenibile (non certificato) Al 31 dicembre 2022 (seguito)

Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha in parte realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?

Le società classificate quali investimenti sostenibili secondo le norme SFDR hanno superato una serie di test che implicavano la dimostrazione di un contributo positivo a obiettivi ambientali o sociali che il Fondo definisce come allineati positivamente agli Obiettivi di Sviluppo Sostenibile delle Nazioni Unite ("OSS"). Gli OSS delle Nazioni Unite comprendono obiettivi ambientali (p.es., Agire per il clima o Vita sulla terra) e sociali (p.es., Salute e Benessere). Per essere classificati come sostenibili, gli investimenti del Fondo devono aver avuto un allineamento netto positivo agli OSS delle Nazioni Unite, sia tramite prodotti e servizi propri (p.es., i prodotti medici di una società farmaceutica possono essere allineati positivamente all'OSS "Salute e Benessere"), sia tramite pratiche, politiche, interventi e obiettivi aziendali, volti a soddisfare uno o più OSS (p.es., un'azienda con un valido programma di riduzione delle emissioni di CO2 può essere allineata all'OSS Agire per il clima riducendo le proprie emissioni, convertendosi all'uso di energie rinnovabili o cercando di ridurre le emissioni nella propria filiera con il coinvolgimento dei fornitori e/o con un'adeguata progettazione dei prodotti).

Il Consulente per gli Investimenti ha classificato una società in base al suo contributo positivo a un obiettivo ambientale o sociale quando soddisfaceva contemporaneamente tre criteri valutati utilizzando dati forniti da terzi: 1) avere un punteggio totale netto positivo per l'allineamento a tutti gli OSS (ossia, la somma dei punteggi che misurano l'allineamento positivo ai singoli OSS deve essere maggiore della somma dei punteggi di allineamento negativo), 2) avere un allineamento sufficientemente positivo (secondo il Consulente per gli Investimenti d'investimento) con almeno un singolo OSS conseguito e 3) non avere disallineamenti importanti su nessun OSS.

In determinati casi, e laddove abbia ritenuto opportuno farlo in virtù di una propria analisi interna (tenendo conto dell'interlocuzione con la società o di altre fonti di dati), il Consulente per gli Investimenti può aver considerato un investimento come idoneo rispetto ai criteri di investimento sostenibile, in disaccordo con la valutazione emergente dal punteggio di allineamento agli OSS fornito da terze parti. Questo può essere avvenuto, per esempio, se il Consulente per gli Investimenti ha ritenuto - in virtù di ricerche proprie e interlocuzioni - che i dati di allineamento agli OSS forniti da terze parti non fossero aggiornati o corretti.

Allegato 9: Informativa sulla finanza sostenibile (non certificato) Al 31 dicembre 2022 (seguito)

Gli **Impatti nocivi principali (PAI)** sono gli impatti negativi più importanti di decisioni di investimento su fattori di sostenibilità relativi a questioni ambientali, sociali e concernenti i dipendenti, rispetto per i diritti umani e questioni di anticorruzione attiva e passiva.

In che modo gli investimenti sostenibili parzialmente effettuati dal prodotto finanziario non hanno provocato danni significativi per qualsiasi obiettivo di investimento sostenibile sociale o ambientale?

Il Consulente per gli Investimenti ha applicato il principio del “non arrecare nessun danno significativo” agli investimenti sostenibili del Fondo per assicurare che non includessero: (1) investimenti che arrecano un danno significativo agli indicatori dei principali effetti negativi (“PAI”) che il Consulente per gli Investimenti deve obbligatoriamente prendere in considerazione in ottemperanza al Regolamento SFDR dell’UE e che abbiano un ruolo rilevante per l’investimento, o (2) investimenti che non soddisfano le garanzie sociali minime stabilite dal Regolamento SFDR.

Come sono stati considerati gli indicatori di impatti negativi sui fattori di sostenibilità?

Per la valutazione degli indicatori dei principali effetti negativi, il Fondo ha utilizzato dati provenienti da fornitori terzi e da ricerche interne.

Per stabilire se è stato arrecato un danno significativo, sono state impostate delle soglie iniziali per ciascun indicatore obbligatorio degli effetti negativi opportuni.

In mancanza di dati disponibili, si è ritenuto che l’investimento non superasse il test iniziale di idoneità e, pertanto, non potesse essere considerato un investimento sostenibile.

Tuttavia, qualora il fornitore terzo di dati abbia ritenuto che un dato indicatore di effetti negativi non fosse significativo vista la natura o il settore dell’emittente e non abbia fornito dati per questo motivo, l’investimento è stato considerato superare il test iniziale, essendo improbabile che le attività dell’investimento arrechino danni significativi al tema ambientale o sociale coperto da quell’indicatore.

Inoltre, in alcuni casi il risultato del test iniziale può essere stato integrato (se del caso) da valutazioni qualitative interne del Consulente per gli Investimenti in merito a possibili danni significativi (tenendo conto di altre fonti di dati e/o delle interlocuzioni con gli amministratori delle società) per uno o più indicatori.

Nel quadro di un approccio d’investimento a lungo termine, i responsabili dell’investimento hanno cercato anche di interloquire con i dirigenti e i consigli di amministrazione delle società per incoraggiarli a migliorare le pratiche ESG.

Allegato 9: Informativa sulla finanza sostenibile (non certificato) Al 31 dicembre 2022 (seguito)

Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:

Il Fondo non ha classificato come investimenti sostenibili:

- emittenti che non hanno rispettato i temi e i valori promossi dal Global Compact delle Nazioni Unite o dalle Linee guida dell'OCSE destinate alle imprese multinazionali (che incorporano i Principi fondamentali dell'OIL); e
- emittenti che non disponevano di processi e meccanismi di conformità per monitorare la conformità ai principi e ai valori promossi dal Global Compact delle Nazioni Unite e dalle Linee guida dell'OCSE fondamentali alle imprese multinazionali (che incorporano i Principi fondamentali dell'OIL).

La valutazione, in ogni caso, si è basata su dati di fornitori terzi e/o su analisi interne.

La Tassonomia UE stabilisce un principio di “non arrecare un danno significativo” secondo il quale gli investimenti allineati alla Tassonomia non dovrebbero arrecare danni significativi agli obiettivi della Tassonomia ed è accompagnata da criteri UE specifici.

Il principio di “non arrecare un danno significativo” si applica unicamente agli investimenti sottostanti del prodotto finanziario che tengono conto dei criteri UE per attività economiche ecosostenibili. Gli investimenti sottostanti della quota restante di questo prodotto finanziario non tengono conto dei criteri UE in materia di attività economiche ecosostenibili.

Qualsiasi altro investimento sostenibile non deve inoltre arrecare danni significativi a qualsiasi obiettivo ambientale o sociale.

La normativa impone che il presente documento includa queste dichiarazioni. Tuttavia, per evitare qualsiasi dubbio, questo Fondo non ha tenuto e non tiene conto dei criteri UE per attività economiche ecosostenibili nella Tassonomia UE.

Allegato 9: Informativa sulla finanza sostenibile (non certificato)

Al 31 dicembre 2022 (seguito)

Come sono stati considerati da questo prodotto finanziario gli impatti negativi più importanti sui fattori di sostenibilità?

Al fine di classificare come sostenibili alcuni investimenti del Fondo, il Consulente per gli Investimenti ha preso in considerazione tutti gli opportuni indicatori dei principali effetti negativi definiti come obbligatori dal Regolamento SFDR.

I principali effetti negativi sono stati esaminati anche relativamente ad altri investimenti del Fondo, come di seguito indicato:

- le caratteristiche ambientali e sociali promosse dal Fondo incorporano, applicando esclusioni vincolanti, l'esame dei principali effetti negativi seguenti:
- Indicatore dei principali effetti negativi n° 4: Esposizione a società operanti nel settore dei combustibili fossili;
- Indicatore dei principali effetti negativi n° 14: Esposizione ad armi controverse (utilizzando dati di terzi con una metodologia conforme alla definizione del Regolamento SFDR);
- l'impegno e la responsabilità di gestione nei confronti degli emittenti per tutti gli indicatori dei principali effetti negativi definiti come obbligatori dal Regolamento SFDR (fatta eccezione per le armi controverse, poiché escluse) in base alla rilevanza (ossia, se il Consulente per gli Investimenti ritiene che un particolare indicatore di effetti negativi sia materialmente rilevante per la sostenibilità a lungo termine di elevati rendimenti del capitale ovvero sia materialmente influenzato negativamente dalle attività dell'emittente).

Quali sono stati gli investimenti principali di questo prodotto finanziario?

Sono compresi nell'elenco gli investimenti che costituiscono la **quota maggiore degli investimenti** del prodotto finanziario durante il periodo di riferimento, ossia: 51,71%

Titolo	Settore	% attivi	Paese
Microsoft Corp.	Informatica	8,74%	Stati Uniti d'America
Philip Morris International, Inc.	Beni di consumo di base	7,54%	Stati Uniti d'America
Visa, Inc. 'A'	Informatica	6,19%	Stati Uniti d'America
Reckitt Benckiser Group plc	Beni di consumo di base	5,77%	Regno Unito
Danaher Corp.	Sanità	5,31%	Stati Uniti d'America
SAP SE	Informatica	5,09%	Germania
Thermo Fisher Scientific, Inc.	Sanità	4,61%	Stati Uniti d'America
Accenture plc 'A'	Informatica	4,50%	Stati Uniti d'America
Intercontinental Exchange, Inc.	Finanziari	3,96%	Stati Uniti d'America

Allegato 9: Informativa sulla finanza sostenibile (non certificato) Al 31 dicembre 2022 (seguito)

Qual era la quota di investimenti correlati alla sostenibilità?

98,01% degli investimenti del Fondo era allineato con le relative caratteristiche ambientali e sociali.

63,30% degli attivi del Fondo era investito in società classificate come investimenti sostenibili, come spiegato ulteriormente nel diagramma dell'allocazione di attivi qui di seguito.

Quale è stata l'allocazione degli attivi?

L'**Allocazione degli attivi** descrive la quota di investimenti in attivi specifici.

#1 Allineati a caratteristiche E/S comprende gli investimenti del prodotto finanziario utilizzati per realizzare le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

#2 Altro comprende gli investimenti restanti del prodotto finanziario non allineati alle caratteristiche ambientali o sociali e non qualificati quali investimenti sostenibili.

La categoria **#1 Allineati a caratteristiche E/S** copre:

- la sottocategoria **#1A Sostenibili**, che comprende investimenti ambientalmente e socialmente sostenibili.
- la sottocategoria **#1B Altre caratteristiche E/S**, che comprende investimenti allineati alle caratteristiche ambientali o sociali non qualificati come investimenti sostenibili.

La metodologia del Fondo per la classificazione di società quali investimenti sostenibili comprende una valutazione basata sull'allineamento con gli OSS delle Nazioni Unite, che include sia fattori ambientali che sociali (a seconda del caso) come stabilito precedentemente. Il Fondo non classifica i suoi investimenti sostenibili come aventi un obiettivo ambientale o sociale.

Ai fini unicamente del reporting SFDR, il Consulente per gli Investimenti ha quindi diviso in parti uguali la quota degli attivi del Fondo investiti in società classificate come investimenti sostenibili in categorie ambientali e sociali nelle seguenti domande (“In che misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla Tassonomia UE?” e “Qual era la quota di investimenti socialmente sostenibili?”)

Allegato 9: Informativa sulla finanza sostenibile (non certificato)

Al 31 dicembre 2022 (seguito)

In quali settori economici sono stati effettuati gli investimenti?

Settore	% attivi
Informatica	31,27%
Beni di consumo di base	26,46%
Sanità	22,40%
Prodotti industriali	8,17%
Finanziari	5,20%
Beni di lusso	3,96%
Esplorazione, attività mineraria, estrazione, produzione, trattamento, stoccaggio, raffinazione o distribuzione, inclusi trasporto, stoccaggio e commercio di combustibili fossili	0,00%

Nella tabella qui sopra sono riportati solo investimenti effettuati dal Fondo, ed esclusi altri attivi del Fondo quali liquidità e strumenti del mercato monetario detenuti come liquidità accessoria.

Allegato 9: Informativa sulla finanza sostenibile (non certificato) Al 31 dicembre 2022 (seguito)

In che misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla Tassonomia UE?

Il Consulente per gli investimenti non ha tenuto conto della Tassonomia UE nella gestione del Fondo. Di conseguenza, nessuno degli attivi del Fondo investiti in società classificate come investimenti sostenibili stato è valutato dal Consulente per gli Investimenti come “allineato alla Tassonomia UE”

Ai fini di conformità con la Tassonomia UE, i criteri relativi ai gas fossili includono limitazioni delle emissioni e passaggio a energia rinnovabile o carburanti a basse emissioni di carbonio entro la fine del 2035. Per l'energia nucleare, i criteri includono norme esaustive relative alla sicurezza e gestione delle scorie.

Attività abilitatrici abilitano direttamente altre attività per apportare un contributo concreto a un obiettivo ambientale.

Attività transizionali sono attività economiche per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e i cui livelli di emissione di gas con effetto serra corrispondono alla performance migliore.

Il prodotto finanziario ha investito in attività correlate a gas fossili e/o energia nucleare conformi alla Tassonomia UE¹?

- Sì
- No

I grafici qui avanti indicano in verde la percentuale degli investimenti allineati alla Tassonomia UE. Non essendoci alcuna metodologia appropriata per stabilire l'allineamento alla tassonomia di obbligazioni sovrane*, il primo grafico mostra l'allineamento alla Tassonomia in relazione a tutti gli investimenti del prodotto finanziario, comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla Tassonomia solo in relazione agli investimenti del prodotto diversi da obbligazioni sovrane.

Ai fini di questi grafici, le “obbligazioni sovrane” sono tutte le esposizioni sovrane.

¹ Attività legate a gas fossili e/o nucleare saranno conformi alla Tassonomia UE solo laddove contribuiscano alla limitazione del cambiamento climatico (“mitigazione del cambiamento climatico”) e non arrechino seri danni a qualsiasi obiettivo della Tassonomia UE – cfr. Nota esplicativa nel margine a sinistra. Si può trovare una descrizione completa dei criteri relativi ad attività legate a gas fossili ed energia nucleare conformi alla Tassonomia UE nel Regolamento delegato delle Commissioni (UE) 2022/1214.

Allegato 9: Informativa sulla finanza sostenibile (non certificato)

Al 31 dicembre 2022 (seguito)

Le attività allineate alla tassonomia sono espresse come una quota di:

- **fatturato** riflette quanto le società partecipate siano “verdi” oggi.
- **spesa in conto capitale** (CapEx) mostra gli investimenti verdi effettuati dalle società partecipate, rilevanti per una transizione a un’economia verde.
- **spesa operativa** (OpEx) riflette le attività operative verdi delle società partecipate.

Quale era la quota di investimenti effettuati in attività transizionali e abilitatrici?

Il Fondo non ha effettuato alcun investimento in attività valutate dal Consulente per gli investimenti come transizionali o abilitatrici secondo la Tassonomia UE.

*Investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per attività economiche ecosostenibili ai sensi del Regolamento (UE) 2020/852.

Qual era la proporzione di investimenti sostenibili con un obiettivo ambientale non allineati alla Tassonomia UE?

31,65% degli attivi del Fondo era investito in società classificate come investimenti sostenibili con un obiettivo ambientale che non erano allineate alla Tassonomia. La Tassonomia dell’UE non copre in modo esaustivo tutti i comparti industriali e i settori di attività né tutti gli obiettivi ambientali. Di conseguenza il Consulente per gli investimenti ha utilizzato la sua metodologia per stabilire se gli investimenti fossero sostenibili conformemente al test per l’investimento sostenibile SFDR e quindi investire in tali asset per il Fondo. Il Fondo non tiene conto dei criteri per attività economiche ecosostenibili ai sensi della Tassonomia UE.

Come indicato qui sopra in risposta alla domanda “Qual era l’allocazione di attività?” il Fondo non classifica i suoi investimenti sostenibili in base un eventuale obiettivo ambientale o sociale. Ai fini unicamente del reporting SFDR, il Consulente per gli Investimenti ha diviso in parti uguali tra le categorie ambientale e sociale la quota di attivi del Fondo investita in società classificate come investimenti sostenibili.

Qual era la quota di investimenti socialmente sostenibili?

31,65% degli attivi del Fondo era investito in società classificate come investimenti sostenibili con un obiettivo sociale.

Come indicato qui sopra in risposta alla domanda “Qual era l’allocazione di attività?” il Fondo non classifica i suoi investimenti sostenibili in base un eventuale obiettivo ambientale o sociale. Ai fini unicamente del reporting SFDR, il Consulente per gli Investimenti ha diviso in parti uguali tra le categorie ambientale e sociale la quota di attivi del Fondo investita in società classificate come investimenti sostenibili.

Allegato 9: Informativa sulla finanza sostenibile (non certificato) Al 31 dicembre 2022 (seguito)

Quali investimenti erano inclusi tra gli “altri”, quale era la loro finalità e vi erano salvaguardie ambientali o sociali minime?

1,99% degli investimenti del Fondo non era allineato alle caratteristiche ambientali e sociali del Fondo, ed è stato quindi incluso nella categoria “Altro”. Comprende liquidità e strumenti del mercato monetario detenuti come liquidità accessoria e non era soggetto a qualsiasi salvaguardia minima ambientale o sociale.

Quali azioni sono state adottate per raggiungere le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Durante il periodo di riferimento, il Consulente per gli Investimenti ha applicato le esclusioni e ha valutato le società al fine di classificarle come investimenti sostenibili o non sostenibili. Ha inoltre monitorato regolarmente gli investimenti del Fondo conformemente alle caratteristiche ambientali e sociali dello stesso.

Il Consulente per gli Investimenti si è anche impegnato direttamente con le società in merito a questioni ambientali e sociali rilevanti per la sostenibilità dei rendimenti. Il processo di investimento è focalizzato sulla comprensione della fattibilità a lungo termine dei rendimenti di una società sul capitale operativo e a tale riguardo l'impegno con la dirigenza ha un ruolo vitale. Informa se la dirigenza è in grado di mantenere tali rendimenti contemporaneamente a una crescita dell'attività nel lungo termine. Ciò comporta anche l'impegno diretto con società e consigli di amministrazione in merito a opportunità e rischi ESG rilevanti.

Limitazioni dei dati

Generalmente Morgan Stanley Investment Management utilizza svariate fonti di dati e l'analisi interna quali input nei suoi processi ESG. Possono essere inclusi dati ottenuti da fonti esterne, anche per redigere le informative in questa relazione. Tali dati possono essere soggetti a limitazioni metodologiche e a ritardi, vuoti di copertura o altre questioni con un impatto sulla qualità dei dati. Le informazioni correlate a fattori ESG, comprese quelle ottenute da fornitori esterni, si basano spesso su determinazioni qualitative o soggettive, e le singole fonti dei dati potrebbero di per sé non presentare un quadro completo relativo alle metriche ESG rappresentate. Si possono anche verificare discrepanze minime nei dati riportati relativi ai pesi nel portafoglio del Fondo, qualora questi abbia fatto ricorso a fonti sottostanti diverse per i dati relativi alle partecipazioni allo scopo di redigere le informative incluse nella relazione. Morgan Stanley Investment Management adotta le misure ragionevoli per mitigare il rischio di tali limitazioni. Tuttavia non rilascia alcuna dichiarazione o garanzia riguardo alla completezza o accuratezza di tali dati. Tutti questi dati possono anche essere modificati dal fornitore esterno senza preavviso. Morgan Stanley Investment Management può pertanto scegliere di agire (o di non agire) relativamente alle variazioni dei dati forniti da terzi come ritiene opportuno in base alle circostanze.

Questa relazione è stata redatta in base alle partecipazioni nel portafoglio del Fondo unicamente alla data specificata all'inizio di questo documento (salvo altrimenti indicato dal contesto). Salvo altrimenti indicato, le percentuali incluse in questa relazione sono state misurate conformemente al peso nel portafoglio, che si basa sul valore di mercato degli investimenti del Fondo.

Modello di informativa periodica per i prodotti finanziari di cui all'articolo 8, paragrafi 1, 2 e 2 bis, del regolamento (UE) 2019/2088 e all'articolo 6, primo comma, del regolamento (UE) 2020/852

Nome del prodotto: Muzinich Global Tactical Credit Fund

Identificativo della persona giuridica: 549300914IEWVSO6QI72

Caratteristiche ambientali e/o sociali

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?

Sì

Ha effettuato **investimenti sostenibili con un obiettivo ambientale:** ___%

in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE

in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE

Ha effettuato **investimenti sostenibili con un obiettivo sociale:** ___%

No

Ha promosso **caratteristiche ambientali/sociali (A/S)** e pur non avendo come obiettivo un investimento sostenibile, aveva una quota dell'1,12% di investimenti sostenibili

con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE

con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE

con un obiettivo sociale

Ha promosso caratteristiche A/S, ma **non ha effettuato alcun investimento sostenibile**

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, purché tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e l'impresa beneficiaria degli investimenti segua prassi di buona governance.

La **tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non stabilisce un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere allineati o no alla tassonomia.

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Questo prodotto finanziario ha promosso determinate caratteristiche ambientali e/o sociali nel suo portafoglio applicando un elenco di esclusione settoriale e determinati criteri di condotta per evitare investimenti in società che il Gestore degli Investimenti considera fundamentalmente non sostenibili. Questo prodotto finanziario si conforma inoltre a un obiettivo di intensità di carbonio media ponderata (WACI) per rimanere almeno il 10% al di sotto di quella dell'indice di riferimento del prodotto finanziario. Inoltre, gli investimenti in portafoglio sono tenuti a seguire pratiche di buona governance.

Gli **indicatori di sostenibilità** misurano il raggiungimento delle caratteristiche ambientali o sociali promosse dal prodotto finanziario.

● **Qual è stata la prestazione degli indicatori di sostenibilità?**

Gli indicatori di sostenibilità del prodotto finanziario hanno avuto la seguente prestazione:

Indicatore di sostenibilità	Prestazione dell'indicatore di sostenibilità
Percentuale dei ricavi di un singolo emittente che può essere ottenuta da specifiche attività commerciali (ad esempio, la produzione di armi controverse).	<p>Alla fine di ciascuno dei quattro trimestri del periodo di riferimento, questo prodotto finanziario:</p> <ul style="list-style-type: none"> • deteneva 0 emittenti (0% in termini di ponderazione) coinvolti nella fabbricazione finale di armi controverse • deteneva 0 emittenti (0% in termini di ponderazione) che generavano più del 10% dei ricavi dal gioco d'azzardo • deteneva 0 emittenti (0% in termini di ponderazione) che generavano più del 10% dei ricavi dall'intrattenimento per adulti • deteneva 0 emittenti (0% in termini di ponderazione) che generavano più del 10% dei ricavi dalla produzione di tabacco • deteneva 0 emittenti (0% in termini di ponderazione) che generavano più del 10% dei ricavi dall'estrazione del carbone o dalla produzione di elettricità legata al carbone.
Allineamento dell'emittente alle norme riconosciute e/o agli standard internazionali relativi al rispetto dei diritti umani, ai rapporti di lavoro, alla protezione da gravi danni ambientali e alle norme in materia di frode e/o corruzione grave.	<p>Il Gestore degli Investimenti ha utilizzato questi indicatori per segnalare gli emittenti che potenzialmente violano i suoi criteri interni di idoneità ESG sulla condotta aziendale. Gli emittenti segnalati dai fornitori indipendenti di dati ESG del Gestore degli Investimenti poiché potenzialmente in contrasto con tali norme o standard sono stati discussi dal Comitato di idoneità ESG del Gestore degli Investimenti. Alla fine di ciascuno dei quattro trimestri del periodo di riferimento, questo prodotto finanziario deteneva 2 emittenti (o un'esposizione dello 0,19% in termini di ponderazione) che il Comitato di idoneità ESG del Gestore degli Investimenti considerava a rischio di grave violazione di norme o standard riconosciuti in materia di diritti umani, rapporti di lavoro, protezione da gravi danni ambientali e frode e/o corruzione grave.</p>
Punteggio delle controversie ESG, che misura la gravità degli incidenti legati alla sostenibilità di un emittente.	<p>Il Gestore degli Investimenti ha monitorato il punteggio delle controversie ESG degli emittenti in portafoglio nell'ambito del suo processo di ricerca e monitoraggio continuo per identificare le società che potrebbero presentare rischi eccessivi per gli emittenti. Tuttavia questi indicatori non sono utilizzati come elementi vincolanti della politica ESG di questo prodotto d'investimento. La quota di partecipazioni del fondo con un punteggio delle controversie di 5/5, calcolata come media delle quattro percentuali di fine trimestre nel periodo di riferimento, è pari allo 0,49% degli attivi in gestione. Gli emittenti con il punteggio delle controversie più elevato (5/5) sono stati discussi dal Comitato di idoneità ESG del Gestore degli Investimenti che ha approvato la prosecuzione degli investimenti.</p>
Indicatori dei principali effetti negativi secondo la definizione dell'SFDR	<p>Il Gestore degli Investimenti ha considerato i principali effetti negativi delle sue decisioni di investimento sui fattori di sostenibilità. I risultati di tali considerazioni sono presentati nell'Allegato I in appendice al presente documento.</p>
Margine percentuale tra l'intensità di carbonio media ponderata del portafoglio del prodotto finanziario e quella di un universo investibile comparabile di titoli, per determinare se il prodotto finanziario soddisfa o viola i suoi criteri di intensità di carbonio.	<p>L'intensità di carbonio media ponderata di questo prodotto finanziario è rimasta inferiore di oltre il 10% (cioè meno intensiva in carbonio) rispetto a un universo investibile comparabile di titoli rappresentato dall'indice di riferimento per tutto il periodo di investimento, come illustrato nel grafico seguente.</p> <p>Non è stato designato un benchmark di riferimento per il raggiungimento delle caratteristiche ambientali o sociali promosse da questo prodotto finanziario, tuttavia è stato utilizzato un indice di riferimento per misurare e pubblicare il raggiungimento dell'obiettivo WACI. Il benchmark di riferimento utilizzato da questo prodotto finanziario è un</p>

indice mainstream ed è utilizzato solo per il confronto delle caratteristiche ambientali.

L'indice utilizzato è l'ICE BofA Global Corporate & High Yield Index (GI00) ed è stato scelto come universo d'investimento rappresentativo della strategia d'investimento di questo prodotto finanziario. La linea grigia delta ("Δ") mostra la differenza tra l'intensità di carbonio media ponderata di questo prodotto finanziario e quella dell'indice di riferimento, che dovrebbe rimanere al di sopra del "target minimo WACI".

● **...e rispetto ai periodi precedenti?**

Non applicabile, in quanto si tratta del primo periodo di riferimento per il quale il Gestore degli Investimenti presenta una relazione.

● **Quali erano gli obiettivi degli Investimenti sostenibili che il prodotto finanziario in parte ha realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?**

Questo prodotto d'investimento non aveva l'obiettivo ambientale di investire in attività economiche che si qualificano come ecosostenibili secondo la tassonomia dell'UE o che non si allineano alla tassonomia dell'UE, né in attività socialmente sostenibili. Tuttavia, il prodotto ha effettuato alcuni investimenti che rientrano nella definizione di attività commerciali allineate alla tassonomia dell'UE con attività di mitigazione e/o adattamento al clima.

● **In che modo gli investimenti sostenibili che il prodotto finanziario in parte ha realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?**

Nel corso del periodo di riferimento, il Gestore degli Investimenti ha preso in considerazione alcuni criteri di condotta aziendale relativi ai diritti umani, ai diritti del lavoro, alla tutela dell'ambiente e alle pratiche di governance attraverso il processo di due diligence e di monitoraggio continuo, al fine di garantire che le partecipazioni non danneggiassero in modo significativo gli obiettivi ambientali o sociali.

— — *In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?*

Nel corso del periodo di riferimento, il Gestore degli Investimenti ha preso in considerazione i principali effetti negativi (“PAI”) sui fattori di sostenibilità al momento di prendere le decisioni di investimento relative a questo prodotto finanziario, nell’ambito della due diligence, della ricerca e del monitoraggio continuo dei singoli emittenti e attraverso l’impegno con alcuni emittenti. Il Gestore degli Investimenti ha preso in considerazione i PAI monitorando gli indicatori obbligatori di cui alla Tabella 1 dell’Allegato 1 del regolamento delegato (UE) 2022/1288 della Commissione in relazione alle norme tecniche di regolamentazione che integrano l’SFDR. Ulteriori informazioni sulla considerazione dei fattori PAI sono disponibili alla fine di questo documento.

— — *Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:*

Il Gestore degli Investimenti considera l’allineamento degli emittenti con queste linee guida e principi come parte del suo processo di ricerca degli investimenti. Il Gestore degli Investimenti ha utilizzato indicatori forniti da fornitori indipendenti di dati ESG che segnalano gli emittenti che potenzialmente violano le linee guida dell’OCSE destinate alle imprese multinazionali e i Principi guida delle Nazioni Unite su imprese e diritti umani, che a loro volta violerebbero i suoi criteri interni di idoneità ESG sulla condotta aziendale. Gli emittenti segnalati sono stati discussi dal Comitato di idoneità ESG del Gestore degli Investimenti. Il Gestore degli Investimenti ritiene che gli investimenti effettuati nel corso del periodo di riferimento siano conformi a tali linee guida e principi.

Durante il periodo d’investimento questo prodotto finanziario è stato sottoposto a screening su base trimestrale per determinare l’allineamento con tali linee guida. Il Gestore degli Investimenti non ha ritenuto che nel periodo di riferimento si siano verificate gravi violazioni da parte delle partecipazioni a questo prodotto finanziario.

La tassonomia dell’UE stabilisce il principio “non arrecare un danno significativo”, in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell’UE, ed è corredata di criteri specifici dell’Unione.

Il principio “non arrecare un danno significativo” si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell’Unione per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri dell’Unione per le attività economiche ecosostenibili.

Nessun altro investimento sostenibile deve arrecare un danno significativo agli obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

I **principali effetti negativi** sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

Il Gestore degli Investimenti ha preso in considerazione i PAI sui fattori di sostenibilità quando ha adottato le decisioni di investimento relative a questo prodotto finanziario attraverso una combinazione di decisioni di allocazione di attivi, esclusioni o sottopesi a livello di settore o di società, esclusioni basate sulla condotta, coinvolgimento degli emittenti e l'applicazione di un obiettivo di riduzione dell'intensità di carbonio. Gli elementi vincolanti della politica ESG di questo prodotto finanziario si riferiscono direttamente alla mitigazione dei PAI. Il Gestore degli Investimenti prende in considerazione altri PAI nell'ambito del suo processo di ricerca sugli investimenti, compresa la sua metodologia proprietaria di punteggio ESG, e/o delle attività di engagement. Il Gestore degli Investimenti ha classificato i PAI nella tabella sottostante secondo una priorità "bassa", "media" o "elevata", in base all'importanza che attribuisce a ciascun fattore, alla qualità o alla copertura dei dati generalmente disponibili su tali fattori e alla capacità di influenzare materialmente le società in portafoglio su tali fattori attraverso l'engagement. La politica ESG di questo prodotto finanziario ha affrontato direttamente i PAI ad alta priorità escludendo o limitando l'esposizione agli emittenti rilevanti.

In particolare, in relazione a questo prodotto finanziario, il Gestore degli Investimenti considera i fattori PAI elencati nella tabella seguente. Il Gestore degli Investimenti si procura i dati PAI da fornitori indipendenti di dati ESG e indirettamente da altre fonti di dati ESG, come i punteggi sulle controversie. I dati sui fattori PAI relativi a questo prodotto finanziario sono disponibili alla fine del presente Allegato.

PAI considerato	Priorità	Azione/i chiave relativa/e ai PAI
Emissioni GHG	Elevata	1) Il presente prodotto finanziario escludeva gli emittenti direttamente coinvolti in entità che traevano più del 10% dei loro ricavi annuali dall'estrazione di carbone termico e/o dalla produzione di energia da carbone termico, fatta salva una possibilità per le entità che il Gestore degli Investimenti riteneva avessero un piano di transizione credibile per ridurre la loro dipendenza o esposizione al carbone termico a favore di forme di energia a minore intensità di carbonio, come le energie rinnovabili. 2) Il Gestore degli Investimenti ha mantenuto un obiettivo WACI al fine di ridurre l'intensità di carbonio complessiva di questo prodotto finanziario rispetto a un indice di riferimento scelto.
Impronta di carbonio	Elevata	
Intensità di gas serra delle imprese beneficiarie degli investimenti	Elevata	
Esposizione ad attività nel settore dei combustibili fossili	Elevata	
Consumo e produzione di energie non rinnovabili	Media	Il Gestore degli Investimenti ha monitorato questi PAI attraverso rapporti mensili sulle emissioni di carbonio del portafoglio, che includono i mix energetici delle società in portafoglio e sono collegati all'obiettivo di efficienza di carbonio di questo prodotto finanziario. Il Gestore degli Investimenti ha effettuato attività di engagement con alcuni emittenti laddove ritiene che vi sia l'opportunità per l'emittente di mitigare il proprio impatto su questo fattore.
Intensità del consumo energetico per settore ad alto impatto climatico	Bassa	
Attività che incidono negativamente sulle aree sensibili sotto il profilo della biodiversità	Media	Il Gestore degli Investimenti monitora le controversie relative a questo fattore PAI e può scegliere di coinvolgere emittenti che non forniscono un'informativa adeguata, o di gestire i rischi relativi a questo fattore PAI. Il periodo di riferimento rappresenta il primo anno in cui il Gestore degli Investimenti ha monitorato formalmente questo PAI. Il Gestore degli Investimenti prenderà in considerazione ulteriori
Emissioni in acqua	Bassa	

Tasso di rifiuti pericolosi	Bassa	azioni per mitigarlo una volta che avrà potuto confrontare i diversi investimenti su un periodo di ricerca più lungo. In alcune circostanze il Gestore degli Investimenti può decidere di rifiutare un'opportunità di investimento o di disinvestire da entità che causano gravi effetti negativi su questo fattore. Principali effetti
Violazione dei principi del Global Compact delle Nazioni Unite e delle linee guida dell'Organizzazione per la cooperazione e lo sviluppo economico (OCSE) destinate alle imprese multinazionali	Elevata	
Politiche, procedure e meccanismi di conformità per monitorare la conformità ai principi del Global Compact delle Nazioni Unite e alle linee guida OCSE destinate alle imprese multinazionali	Elevata	Nei casi in cui il Gestore degli Investimenti o il suo fornitore indipendente di dati ESG ritenga che un emittente abbia violato gravemente i principi UNGC e le linee guida dell'OCSE destinate alle imprese multinazionali, è stato chiesto al Comitato di idoneità ESG interno del Gestore degli Investimenti di stabilire se tale emittente debba rimanere idoneo all'investimento in questo prodotto finanziario. Le decisioni del Comitato di idoneità vengono registrate e attuate tramite il team di rischio e i gestori di portafoglio del Gestore degli Investimenti.
Divario retributivo di genere non corretto	Media	
Diversità di genere nel consiglio	Media

In alcune circostanze il Gestore degli Investimenti può decidere di rifiutare un'opportunità di investimento o di disinvestire da entità che causano gravi effetti negativi su questo fattore. Principali effetti.

Quali sono stati i principali investimenti di questo prodotto finanziario?

Investimenti di maggiore entità	Settore	% di attivi	Paese
US Treasury N/b	Amministrazione pubblica e difesa; assicurazione sociale obbligatoria	16,72%	US
Treasury Bill	Amministrazione pubblica e difesa; assicurazione sociale obbligatoria	7,57%	US
Ford Motor Credit Co Llc	Attività manifatturiere	2,22%	US
T-mobile USA Inc	Informazione e comunicazione	1,22%	US
HCA Inc	Attività dei servizi sanitari e di assistenza sociale	1,03%	US
Albertsons Cos/safeway	Commercio all'ingrosso e al dettaglio; riparazione di autoveicoli e motocicli	0,88%	US
Sherwin-williams Co	Attività manifatturiere	0,87%	US
Cco Hldgs Llc/cap Corp	Informazione e comunicazione	0,84%	US
Sprint Corp	Informazione e comunicazione	0,79%	US
Ing Groep Nv	Attività finanziarie e assicurative	0,78%	NL
Constellation Brands Inc	Attività manifatturiere	0,73%	US
Viterra Finance Bv	Commercio all'ingrosso e al dettaglio; riparazione di autoveicoli e motocicli	0,69%	NL
Cheniere Corp Christi Hd	Trasporto e magazzinaggio	0,68%	US
Qnb Finance Ltd	Attività finanziarie e assicurative	0,68%	KY
Transdigm Inc	Attività manifatturiere	0,61%	US

L'elenco comprende gli investimenti che hanno costituito la **quota maggiore di investimenti** del prodotto finanziario durante il periodo di riferimento, ossia:

1° gennaio 2022 – 31 dicembre 2022

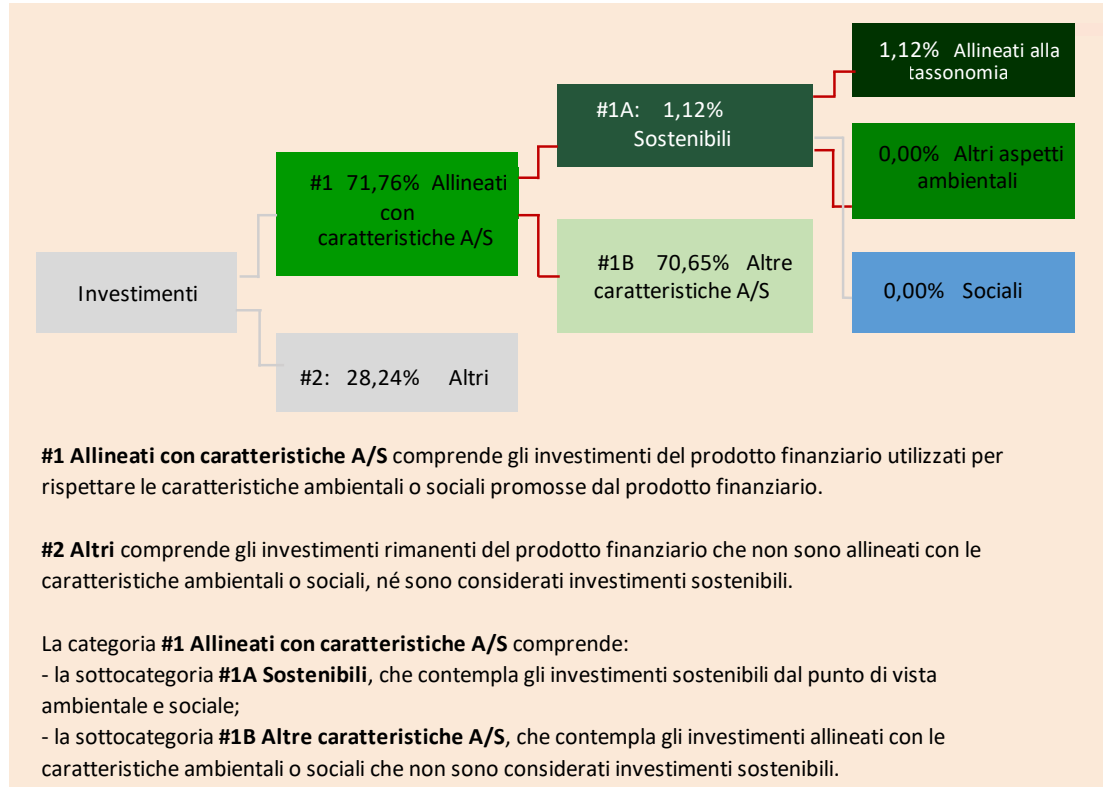

Le percentuali di attivi indicate sono calcolate come allocazione media agli emittenti al 31/03/2022, 30/06/2022, 30/09/2022 e 31/12/2022.

Qual è stata la quota degli investimenti in materia di sostenibilità?

La quota di investimenti legati alla sostenibilità per questo prodotto finanziario nel corso del periodo di riferimento è illustrata nel grafico seguente.

Qual è stata l'allocazione degli attivi?

In quali settori economici sono stati effettuati gli investimenti?

L'allocazione settoriale è calcolata come allocazione media di questo prodotto finanziario al 31/03/2022, 30/06/2022, 30/09/2022 e 31/12/2022. I calcoli escludono le allocazioni in contanti.

L'allocazione degli attivi descrive la quota di investimenti in attivi specifici.

Conformemente alla tassonomia dell'UE, i criteri per il **gas fossile** includono limitazioni alle emissioni e il passaggio a energia completamente rinnovabile o a combustibili a basso contenuto di carbonio entro la fine del 2035. Per quanto riguarda l'**energia nucleare**, i criteri includono norme esaustive sulla sicurezza e sulla gestione delle scorie.

Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale.

Le **attività di transizione** sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano, tra l'altro, livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

In quale misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Questo prodotto finanziario non ha fissato un'allocazione minima per gli investimenti sostenibili allineati alla tassonomia dell'UE. Tuttavia, ha effettuato alcuni investimenti allineati alla tassonomia dell'UE, come illustrato di seguito.

Il prodotto finanziario ha investito in attività legate al gas fossile e/o all'energia nucleare conformi alla tassonomia dell'UE¹?

Sì _____

In gas fossile

In energia nucleare

No

I due grafici che seguono mostrano in verde la percentuale di investimenti che erano allineati alla tassonomia dell'UE. Poiché non esiste una metodologia adeguata per determinare l'allineamento delle obbligazioni sovrane* alla tassonomia, il primo grafico mostra l'allineamento alla tassonomia in relazione a tutti gli investimenti del prodotto finanziario comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

*Ai fini dei grafici di cui sopra, per "obbligazioni sovrane" si intendono tutte le esposizioni sovrane.

1. Investimenti allineati alla tassonomia comprese le obbligazioni sovrane*			
	OpEx	CapEx	Fatturato
Gas fossile allineato alla tassonomia	0,00%	0,02%	0,00%
Nucleare allineato alla tassonomia	0,00%	0,08%	0,03%
Allineato alla tassonomia (escl. gas e nucl.)	0,00%	0,83%	1,08%
Non allineato alla tassonomia	100,00%	99,08%	98,88%

2. Investimenti allineati alla tassonomia escluse le obbligazioni sovrane*			
	OpEx	CapEx	Fatturato
Gas fossile allineato alla tassonomia	0,00%	0,02%	0,00%
Nucleare allineato alla tassonomia	0,00%	0,11%	0,04%
Allineato alla tassonomia (escl. gas e nucl.)	0,01%	1,11%	1,45%
Non allineato alla tassonomia	99,99%	98,76%	98,50%

¹Le attività legate al gas fossile e/o al nucleare saranno conformi alla tassonomia dell'UE solo se contribuiranno a limitare i cambiamenti climatici ("mitigazione dei cambiamenti climatici") e non arrecheranno danni significativi ad alcun obiettivo della tassonomia dell'UE - si veda la nota esplicativa sul margine sinistro. I criteri completi per le attività economiche legate all'energia fossile e nucleare conformi alla tassonomia dell'UE sono stabiliti nel regolamento delegato (UE) 2022/1214 della Commissione.

I dati di allineamento alla tassonomia dell'UE sono calcolati come allocazione media di questo prodotto finanziario al 31/03/2022, 30/06/2022, 30/09/2022 e 31/12/2022. I calcoli escludono le allocazioni in contanti. L'allineamento alla tassonomia del gas fossile e/o dell'energia nucleare comprende qualsiasi emittente che abbia ricavi superiori allo 0% derivanti da tali settori.

● **Qual era la quota degli investimenti effettuati in attività transitorie e abilitanti?**

Questo prodotto finanziario ha effettuato investimenti in attività di transizione e/o abilitanti come segue:

Investimenti in attività di transizione e abilitanti	
Attività di transizione	0,09%
Attività abilitanti	0,25%

Questi dati di allineamento alla tassonomia sono calcolati come allocazione media di questo prodotto finanziario al 31/03/2022, 30/06/2022, 30/09/2022 e 31/12/2022. I calcoli escludono le allocazioni in contanti.

● **Qual è l'esito del raffronto della percentuale di investimenti che erano allineati alla tassonomia dell'UE rispetto ai precedenti periodi di riferimento?**

Non applicabile, in quanto si tratta del primo periodo per il quale il Gestore degli Investimenti presenta una relazione su questo prodotto finanziario.

Sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

Qual era la quota di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?

Non applicabile, in quanto questo prodotto finanziario non ha effettuato investimenti sostenibili non allineati con la tassonomia UE.

Qual era la quota di investimenti socialmente sostenibili?

Non applicabile, in quanto questo prodotto finanziario non ha effettuato investimenti socialmente sostenibili.

Quali investimenti erano compresi nella categoria "Altri", qual era il loro scopo ed esistevano garanzie minime di salvaguardia ambientale o sociale??

Gli investimenti inclusi nella voce "#2 Altri" rappresentano liquidità ed equivalenti di liquidità, strumenti del mercato monetario e alcuni strumenti di copertura, compresi i derivati. Tali investimenti sono detenuti per una serie di motivi, tra cui, a titolo esemplificativo, la gestione del rischio e/o per garantire un'adeguata liquidità, copertura e garanzia. Il Gestore degli Investimenti ritiene che queste partecipazioni non si riferiscano direttamente a un emittente specifico e quindi non siano collegate alla gestione dei rischi di sostenibilità e/o dei PAI. Il Gestore degli Investimenti non ritiene pertanto che sia possibile effettuare una determinazione ragionevole su considerazioni relative a salvaguardie ambientali o sociali minime, in parte a caUS della mancanza di dati rilevanti relativi a tali strumenti.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Il Gestore degli Investimenti effettua uno screening dell'universo investibile di questo prodotto finanziario su base trimestrale per produrre elenchi di emittenti idonei o non idonei all'investimento. Tali elenchi sono stati programmati nei sistemi di trade compliance del Gestore degli Investimenti per evitare investimenti in emittenti non idonei e per monitorare e identificare qualsiasi potenziale violazione passiva dei criteri.

Il Gestore degli Investimenti ha redatto rapporti mensili sull'impronta di carbonio per quilibrio presente esteso prodotto finanziario per garantire il rispetto del suo obiettivo di intensità di carbonio. Il Gestore degli Investimenti viene informato di eventuali violazioni per garantire che vengano rettificate entro la fine del mese successivo. Al Gestore degli Investimenti viene fornito un elenco degli emittenti con le emissioni più elevate in portafoglio, in modo da poter prendere decisioni informate in merito al mantenimento di un'intensità di carbonio inferiore agli obiettivi dichiarati.

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?

Non è stato designato un benchmark di riferimento per il raggiungimento delle caratteristiche ambientali o sociali promosse da questo prodotto finanziario. Tuttavia è stato utilizzato un indice di riferimento per misurare e pubblicare il raggiungimento dell'obiettivo WACI. Il benchmark di riferimento utilizzato da questo prodotto finanziario è un indice mainstream ed è utilizzato solo per il confronto delle caratteristiche ambientali. L'indice mainstream non considera i fattori ESG e non è quindi coerente con le caratteristiche ambientali e/o sociali promosse dal prodotto finanziario. L'allocazione degli attivi del portafoglio di questo prodotto finanziario non è vincolata ad alcun benchmark.

Gli **indici di riferimento** sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

- ***In che modo l'indice di riferimento differisce da un indice generale di mercato?***
Non applicabile
- ***Qual è stata la prestazione di questo prodotto finanziario in relazione agli indicatori di sostenibilità per determinare l'allineamento dell'indice di riferimento con le caratteristiche ambientali o sociali promosse?***
Non applicabile
- ***Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?***
Non applicabile
- ***Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice generale di mercato?***
Non applicabile

Modello di informativa periodica per i prodotti finanziari di cui all'articolo 8, paragrafi 1, 2 e 2 bis, del regolamento (UE) 2019/2088 e all'articolo 6, primo comma, del regolamento (UE) 2020/852

Nome del prodotto: Muzinich ShortDurationHighYield Fund

Identificativo della persona giuridica: 549300JY3OQ0XVIAWY52

Caratteristiche ambientali e/o sociali

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?

Sì

Ha effettuato **investimenti sostenibili con un obiettivo ambientale**: ___%

in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE

in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE

Ha effettuato **investimenti sostenibili con un obiettivo sociale**: ___%

No

Ha promosso **caratteristiche ambientali/sociali (A/S)** e pur non avendo come obiettivo un investimento sostenibile, aveva una quota dello 0,54% di investimenti sostenibili

con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE

con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE

con un obiettivo sociale

Ha promosso caratteristiche A/S, ma **non ha effettuato alcun investimento sostenibile**

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, purché tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e l'impresa beneficiaria degli investimenti segua prassi di buona governance.

La **tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non stabilisce un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere allineati o no alla tassonomia.

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Questo prodotto finanziario ha promosso determinate caratteristiche ambientali e/o sociali nel suo portafoglio applicando un elenco di esclusione settoriale e determinati criteri di condotta per evitare investimenti in società che il Gestore degli Investimenti considera fundamentalmente non sostenibili. Questo prodotto finanziario si conforma inoltre a un obiettivo di intensità di carbonio media ponderata (WACI) per rimanere almeno il 10% al di sotto di quella dell'indice di riferimento del prodotto finanziario. Inoltre, gli investimenti in portafoglio sono tenuti a seguire pratiche di buona governance.

Gli **indicatori di sostenibilità** misurano il raggiungimento delle caratteristiche ambientali o sociali promosse dal prodotto finanziario.

● **Qual è stata la prestazione degli indicatori di sostenibilità?**

Gli indicatori di sostenibilità del prodotto finanziario hanno avuto la seguente prestazione:

Indicatore di sostenibilità	Prestazione dell'indicatore di sostenibilità
Percentuale dei ricavi di un singolo emittente che può essere ottenuta da specifiche attività commerciali (ad esempio, la produzione di armi controverse).	Alla fine di ciascuno dei quattro trimestri del periodo di riferimento, questo prodotto finanziario: <ul style="list-style-type: none"> • deteneva 0 emittenti (0% in termini di ponderazione) coinvolti nella fabbricazione finale di armi controverse • deteneva 0 emittenti (0% in termini di ponderazione) che generavano più del 10% dei ricavi dalla produzione di tabacco • deteneva 0 emittenti (0% in termini di ponderazione) che generavano più del 10% dei ricavi dall'estrazione del carbone o dalla produzione di elettricità legata al carbone, o emittenti con un massimo del 30% di ricavi legati al carbone che non si erano impegnati pubblicamente a smantellare i loro attivi di carbone entro il 2025.
Allineamento dell'emittente alle norme riconosciute e/o agli standard internazionali relativi al rispetto dei diritti umani, ai rapporti di lavoro, alla protezione da gravi danni ambientali e alle norme in materia di frode e/o corruzione grave.	Il Gestore degli Investimenti ha utilizzato questi indicatori per segnalare gli emittenti che potenzialmente violano i suoi criteri interni di idoneità ESG sulla condotta aziendale. Gli emittenti segnalati dai fornitori indipendenti di dati ESG del Gestore degli Investimenti poiché potenzialmente in contrasto con tali norme o standard sono stati discussi dal Comitato di idoneità ESG del Gestore degli Investimenti. Alla fine di ciascuno dei quattro trimestri del periodo di riferimento, questo prodotto finanziario deteneva 0 emittenti (o un'esposizione dello 0% in termini di ponderazione) che il Comitato di idoneità ESG del Gestore degli Investimenti considerava a rischio di grave violazione di norme o standard riconosciuti in materia di diritti umani, rapporti di lavoro, protezione da gravi danni ambientali e frode e/o corruzione grave.
Punteggio delle controversie ESG, che misura la gravità degli incidenti legati alla sostenibilità di un emittente.	Il Gestore degli Investimenti ha monitorato il punteggio delle controversie ESG degli emittenti in portafoglio nell'ambito del suo processo di ricerca e monitoraggio continuo per identificare le società che potrebbero presentare rischi eccessivi per gli emittenti. Tuttavia questi indicatori non sono utilizzati come elementi vincolanti della politica ESG di questo prodotto d'investimento. La quota di partecipazioni del fondo con un punteggio delle controversie di 5/5, calcolata come media delle quattro percentuali di fine trimestre nel periodo di riferimento, è pari allo 0,33% degli attivi in gestione. Gli emittenti con il punteggio delle controversie più elevato (5/5) sono stati discussi dal Comitato di idoneità ESG del Gestore degli Investimenti che ha approvato la prosecuzione degli investimenti.
Indicatori dei principali effetti negativi secondo la definizione dell'SFDR.	Il Gestore degli Investimenti ha considerato i principali effetti negativi delle sue decisioni di investimento sui fattori di sostenibilità. I risultati di tali considerazioni sono presentati nell'Allegato I annesso al presente documento.
Margine percentuale tra l'intensità di carbonio media ponderata del portafoglio del prodotto finanziario e quella di un universo investibile comparabile di titoli, per determinare se il prodotto finanziario soddisfa o viola i suoi criteri di intensità di carbonio.	L'intensità di carbonio media ponderata di questo prodotto finanziario è rimasta inferiore di oltre il 10% (cioè meno intensiva in carbonio) rispetto a un universo investibile comparabile di titoli rappresentato dall'indice di riferimento per tutto il periodo di investimento, come illustrato nel grafico seguente. Non è stato designato un benchmark di riferimento per il raggiungimento delle caratteristiche ambientali o sociali promosse da questo prodotto finanziario, tuttavia è stato utilizzato un indice di riferimento per misurare e pubblicare il raggiungimento dell'obiettivo WACI. Il benchmark di riferimento utilizzato da questo prodotto finanziario è un indice mainstream ed è utilizzato solo per il confronto delle caratteristiche ambientali.

● **...e rispetto ai periodi precedenti?**

Non applicabile, in quanto si tratta del primo periodo di riferimento per il quale il Gestore degli Investimenti presenta una relazione.

● **Quali erano gli obiettivi degli Investimenti sostenibili che il prodotto finanziario in parte ha realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?**

Questo prodotto d'investimento non aveva l'obiettivo ambientale di investire in attività economiche che si qualificano come ecosostenibili secondo la tassonomia dell'UE o che non si allineano alla tassonomia dell'UE, né in attività socialmente sostenibili. Tuttavia, il prodotto ha effettuato alcuni investimenti che rientrano nella definizione di attività commerciali allineate alla tassonomia dell'UE con attività di mitigazione e/o adattamento al clima.

● **In che modo gli investimenti sostenibili che il prodotto finanziario in parte ha realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?**

Nel corso del periodo di riferimento, il Gestore degli Investimenti ha preso in considerazione alcuni criteri di condotta aziendale relativi ai diritti umani, ai diritti del lavoro, alla tutela dell'ambiente e alle pratiche di governance attraverso il processo di due diligence e di monitoraggio continuo, al fine di garantire che le partecipazioni non danneggiassero in modo significativo gli obiettivi ambientali o sociali.

— **In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?**

Nel corso del periodo di riferimento, il Gestore degli Investimenti ha preso in considerazione i principali effetti negativi ("PAI") sui fattori di sostenibilità al momento di prendere le decisioni di investimento relative a questo prodotto

finanziario, nell'ambito della due diligence, della ricerca e del monitoraggio continuo dei singoli emittenti e attraverso l'impegno con alcuni emittenti. Il Gestore degli Investimenti ha preso in considerazione i PAI monitorando gli indicatori obbligatori di cui alla Tabella 1 dell'Allegato 1 del regolamento delegato (UE) 2022/1288 della Commissione in relazione alle norme tecniche di regolamentazione che integrano l'SFDR. Ulteriori informazioni sulla considerazione dei fattori PAI sono disponibili alla fine di questo documento.

Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:

Il Gestore degli Investimenti considera l'allineamento degli emittenti con queste linee guida e principi come parte del suo processo di ricerca degli investimenti. Il Gestore degli Investimenti ha utilizzato indicatori forniti da fornitori indipendenti di dati ESG che segnalano gli emittenti che potenzialmente violano le linee guida dell'OCSE destinate alle imprese multinazionali e i Principi guida delle Nazioni Unite su imprese e diritti umani, che a loro volta violerebbero i suoi criteri interni di idoneità ESG sulla condotta aziendale. Gli emittenti segnalati sono stati discussi dal Comitato di idoneità ESG del Gestore degli Investimenti. Il Gestore degli Investimenti ritiene che gli investimenti effettuati nel corso del periodo di riferimento siano conformi a tali linee guida e principi.

Durante il periodo d'investimento questo prodotto finanziario è stato sottoposto a screening su base trimestrale per determinare l'allineamento con tali linee guida. Il Gestore degli Investimenti non ha ritenuto che nel periodo di riferimento si siano verificate gravi violazioni da parte delle partecipazioni a questo prodotto finanziario.

La tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'Unione.

Il principio "non arrecare un danno significativo" si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'Unione per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri dell'Unione per le attività economiche ecosostenibili.

Nessun altro investimento sostenibile deve arrecare un danno significativo agli obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

I **principali effetti negativi** sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

Il Gestore degli Investimenti ha preso in considerazione i PAI sui fattori di sostenibilità quando ha adottato le decisioni di investimento relative a questo prodotto finanziario attraverso una combinazione di decisioni di allocazione di attivi, esclusioni o sottopesi a livello di settore o di società, esclusioni basate sulla condotta, coinvolgimento degli emittenti e l'applicazione di un obiettivo di riduzione dell'intensità di carbonio. Gli elementi vincolanti della politica ESG di questo prodotto finanziario si riferiscono direttamente alla mitigazione dei PAI. Il Gestore degli Investimenti prende in considerazione altri PAI nell'ambito del suo processo di ricerca sugli investimenti, compresa la sua metodologia proprietaria di punteggio ESG, e/o delle attività di engagement. Il Gestore degli Investimenti ha classificato i PAI nella tabella sottostante secondo una priorità "bassa", "media" o "elevata", in base all'importanza che attribuisce a ciascun fattore, alla qualità o alla copertura dei dati generalmente disponibili su tali fattori e alla capacità di influenzare materialmente le società in portafoglio su tali fattori attraverso l'engagement. La politica ESG di questo prodotto finanziario ha affrontato direttamente i PAI ad alta priorità escludendo o limitando l'esposizione agli emittenti rilevanti.

In particolare, in relazione a questo prodotto finanziario, il Gestore degli Investimenti considera i fattori PAI elencati nella tabella seguente. Il Gestore degli Investimenti si procura i dati PAI da fornitori indipendenti di dati ESG e indirettamente da altre fonti di dati ESG, come i punteggi sulle controversie. I dati sui fattori PAI relativi a questo prodotto finanziario sono disponibili alla fine del presente Allegato.

PAI considerato	Priorità	Azione/i chiave relativa/e ai PAI
Emissioni GHG	Elevata	1) Il presente prodotto finanziario escludeva gli emittenti direttamente coinvolti in entità che traevano più del 10% dei loro ricavi annuali dall'estrazione di carbone termico e/o dalla produzione di energia da carbone termico, fatta salva una possibilità per le entità che il Gestore degli Investimenti riteneva avessero un piano di transizione credibile per ridurre la loro dipendenza o esposizione al carbone termico a favore di forme di energia a minore intensità di carbonio, come le energie rinnovabili. 2) Il Gestore degli Investimenti ha mantenuto un obiettivo WACI al fine di ridurre l'intensità di carbonio complessiva di questo prodotto finanziario rispetto a un indice di riferimento scelto.
Impronta di carbonio	Elevata	
Intensità di gas serra delle imprese beneficiarie degli investimenti	Elevata	
Esposizione ad attività nel settore dei combustibili fossili	Elevata	
Consumo e produzione di energie non rinnovabili	Media	Il Gestore degli Investimenti ha monitorato questi PAI attraverso rapporti mensili sulle emissioni di carbonio del portafoglio, che includono i mix energetici delle società in portafoglio e sono collegati all'obiettivo di efficienza di carbonio di questo prodotto finanziario. Il Gestore degli Investimenti ha effettuato attività di engagement con alcuni emittenti laddove ritiene che vi sia l'opportunità per l'emittente di mitigare il proprio impatto su questo fattore.
Intensità del consumo energetico per settore ad alto impatto climatico	Bassa	
Attività che incidono negativamente sulle aree sensibili sotto il profilo della biodiversità	Media	Il Gestore degli Investimenti monitora le controversie relative a questo fattore PAI e può scegliere di coinvolgere emittenti che non forniscono un'informativa adeguata, o di gestire i rischi relativi a questo fattore PAI. Il periodo di riferimento rappresenta il primo anno in cui il Gestore degli Investimenti ha monitorato formalmente questo PAI. Il Gestore degli Investimenti prenderà in considerazione ulteriori
Emissioni in acqua	Bassa	

Tasso di rifiuti pericolosi	Bassa	azioni per mitigarlo una volta che avrà potuto confrontare i diversi investimenti su un periodo di ricerca più lungo. In alcune circostanze il Gestore degli Investimenti può decidere di rifiutare un'opportunità di investimento o di disinvestire da entità che causano gravi effetti negativi su questo fattore. Principali effetti
Violazione dei principi del Global Compact delle Nazioni Unite e delle linee guida dell'Organizzazione per la cooperazione e lo sviluppo economico (OCSE) destinate alle imprese multinazionali	Elevata	
Politiche, procedure e meccanismi di conformità per monitorare la conformità ai principi del Global Compact delle Nazioni Unite e alle linee guida OCSE destinate alle imprese multinazionali	Elevata	Nei casi in cui il Gestore degli Investimenti o il suo fornitore indipendente di dati ESG ritenga che un emittente abbia violato gravemente i principi UNGC e le linee guida dell'OCSE destinate alle imprese multinazionali, è stato chiesto al Comitato di idoneità ESG interno del Gestore degli Investimenti di stabilire se tale emittente debba rimanere idoneo all'investimento in questo prodotto finanziario. Le decisioni del Comitato di idoneità vengono registrate e attuate tramite il team di rischio e i gestori di portafoglio del Gestore degli Investimenti.
Divario retributivo di genere non corretto	Media	
Diversità di genere nel consiglio	Media	
Esposizione ad armi controverse	Elevata	
Investimenti effettuati in imprese che non adottano iniziative per ridurre le emissioni di carbonio	Media	
Insufficiente protezione degli informatori	Media	
Assenza di una politica in materia di diritti umani	Elevata	
Assenza di politiche di lotta alla corruzione attiva e passiva	Elevata	Il Gestore degli Investimenti monitora le controversie relative a questo fattore PAI e può scegliere di coinvolgere emittenti che non forniscono un'informativa adeguata, o di gestire i rischi relativi a questo fattore PAI. Il periodo di riferimento rappresenta il primo anno in cui il Gestore degli Investimenti ha monitorato formalmente questo PAI. Il Gestore degli Investimenti prenderà in considerazione ulteriori azioni per mitigarlo una volta che avrà potuto confrontare i diversi investimenti su un periodo di ricerca più lungo. In alcune circostanze il Gestore degli Investimenti può decidere di rifiutare un'opportunità di investimento o di disinvestire da entità che causano gravi effetti negativi su questo fattore. Principali effetti.

Quali sono stati i principali investimenti di questo prodotto finanziario?

Investimenti di maggiore entità	Settore	% di attivi	Paese
Albertsons Cos/safeway	Commercio all'ingrosso e al dettaglio; riparazione di autoveicoli e motocicli	1,93%	US
Connect Finco Sarl/conne	Informazione e comunicazione	1,32%	GB

L'elenco comprende gli investimenti che hanno costituito la **quota maggiore di investimenti** del prodotto finanziario durante il periodo di riferimento, ossia:

1° gennaio 2022 – 31 dicembre 2022

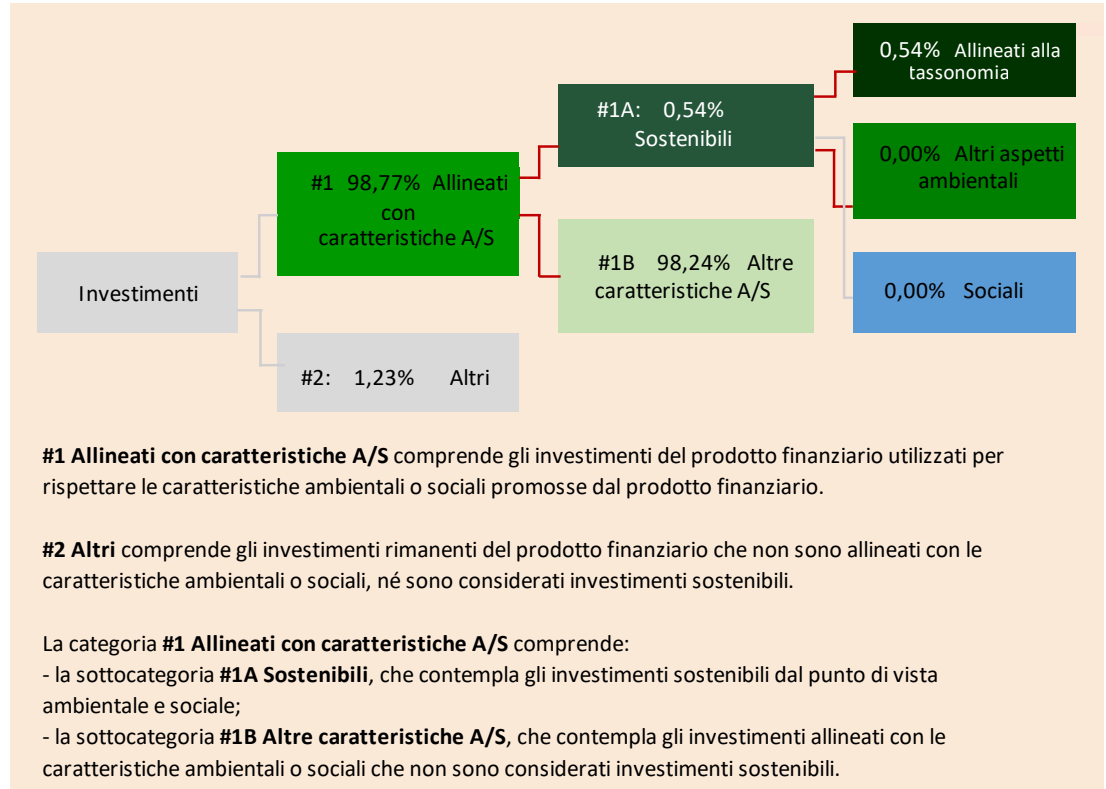

Le percentuali di attivi indicate sono calcolate come allocazione media agli emittenti al 31/03/2022, 30/06/2022, 30/09/2022 e 31/12/2022.

Qual è stata la quota degli investimenti in materia di sostenibilità?

La quota di investimenti legati alla sostenibilità per questo prodotto finanziario nel corso del periodo di riferimento è illustrata nel grafico seguente.

Qual è stata l'allocazione degli attivi?

In quali settori economici sono stati effettuati gli investimenti?

L'allocazione settoriale è calcolata come allocazione media di questo prodotto finanziario al 31/03/2022, 30/06/2022, 30/09/2022 e 31/12/2022. I calcoli escludono le allocazioni in contanti.

In quale misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Questo prodotto finanziario non ha fissato un'allocazione minima per gli investimenti sostenibili allineati alla tassonomia dell'UE. Tuttavia, ha effettuato alcuni investimenti allineati alla tassonomia dell'UE, come illustrato di seguito.

● Il prodotto finanziario ha investito in attività legate al gas fossile e/o all'energia nucleare conformi alla tassonomia dell'UE¹?

Sì _____

In gas fossile

In energia nucleare

No

Le due grafici che seguono mostrano in verde la percentuale di investimenti che erano allineati alla tassonomia dell'UE. Poiché non esiste una metodologia adeguata per determinare l'allineamento delle obbligazioni sovrane alla tassonomia, il primo grafico mostra l'allineamento alla tassonomia in relazione a tutti gli investimenti del prodotto finanziario comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.*

**Ai fini dei grafici di cui sopra, per "obbligazioni sovrane" si intendono tutte le esposizioni sovrane.*

1. Investimenti allineati alla tassonomia comprese le obbligazioni sovrane*			
	OpEx	CapEx	Fatturato
Gas fossile allineato alla tassonomia	0,00%	0,00%	0,00%
Nucleare allineato alla tassonomia	0,00%	0,00%	0,00%
Allineato alla tassonomia (escl. gas e nucl.)	0,00%	0,12%	0,54%
Non allineato alla tassonomia	100,00%	99,88%	99,46%

2. Investimenti allineati alla tassonomia escluse le obbligazioni sovrane*			
	OpEx	CapEx	Fatturato
Gas fossile allineato alla tassonomia	0,00%	0,00%	0,00%
Nucleare allineato alla tassonomia	0,00%	0,00%	0,00%
Allineato alla tassonomia (escl. gas e nucl.)	0,00%	0,12%	0,54%
Non allineato alla tassonomia	100,00%	99,88%	99,46%

¹Le attività legate al gas fossile e/o al nucleare saranno conformi alla tassonomia dell'UE solo se contribuiranno a limitare i cambiamenti climatici ("mitigazione dei cambiamenti climatici") e non arrecheranno danni significativi ad alcun obiettivo della tassonomia dell'UE - si veda la nota esplicativa sul margine sinistro. I criteri completi per le attività economiche legate all'energia fossile e nucleare conformi alla tassonomia dell'UE sono stabiliti nel regolamento delegato (UE) 2022/1214 della Commissione.

I dati di allineamento alla tassonomia dell'UE sono calcolati come allocazione media di questo prodotto finanziario al 31/03/2022, 30/06/2022, 30/09/2022 e 31/12/2022. I calcoli escludono le allocazioni in contanti. L'allineamento alla tassonomia del gas fossile e/o dell'energia nucleare comprende qualsiasi emittente che abbia ricavi superiori allo 0% derivanti da tali settori.

● **Qual era la quota degli investimenti effettuati in attività transitorie e abilitanti?**

Questo prodotto finanziario ha effettuato investimenti in attività di transizione e/o abilitanti come segue:

Investimenti in attività di transizione e abilitanti	
Attività di transizione	0,00%
Attività abilitanti	0,00%

Questi dati di allineamento alla tassonomia sono calcolati come allocazione media di questo prodotto finanziario al 31/03/2022, 30/06/2022, 30/09/2022 e 31/12/2022. I calcoli escludono le allocazioni in contanti.

● **Qual è l'esito del raffronto della percentuale di investimenti che erano allineati alla tassonomia dell'UE rispetto ai precedenti periodi di riferimento?**

Non applicabile, in quanto si tratta del primo periodo per il quale il Gestore degli Investimenti presenta una relazione su questo prodotto finanziario.

Sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

Qual era la quota di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?

Non applicabile, in quanto questo prodotto finanziario non ha effettuato investimenti sostenibili non allineati con la tassonomia UE.

Qual era la quota di investimenti socialmente sostenibili?

Non applicabile, in quanto questo prodotto finanziario non ha effettuato investimenti socialmente sostenibili.

Quali investimenti erano compresi nella categoria "Altri", qual era il loro scopo ed esistevano garanzie minime di salvaguardia ambientale o sociale??

Gli investimenti inclusi nella voce "#2 Altri" rappresentano liquidità ed equivalenti di liquidità, strumenti del mercato monetario e alcuni strumenti di copertura, compresi i derivati. Tali investimenti sono detenuti per una serie di motivi, tra cui, a titolo esemplificativo, la gestione del rischio e/o per garantire un'adeguata liquidità, copertura e garanzia. Il Gestore degli Investimenti ritiene che queste partecipazioni non si riferiscano direttamente a un emittente specifico e quindi non siano collegate alla gestione dei rischi di sostenibilità e/o dei PAI. Il Gestore degli Investimenti non ritiene pertanto che sia possibile effettuare una determinazione ragionevole su considerazioni relative a salvaguardie ambientali o sociali minime, in parte a caUS della mancanza di dati rilevanti relativi a tali strumenti.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Il Gestore degli Investimenti effettua uno screening dell'universo investibile di questo prodotto finanziario su base trimestrale per produrre elenchi di emittenti idonei o non idonei all'investimento. Tali elenchi sono stati programmati nei sistemi di trade compliance del Gestore degli Investimenti per evitare investimenti in emittenti non idonei e per monitorare e identificare qualsiasi potenziale violazione passiva dei criteri.

Il Gestore degli Investimenti ha redatto rapporti mensili sull'impronta di carbonio per quilibrio presente esteso prodotto finanziario per garantire il rispetto del suo obiettivo di intensità di carbonio. Il Gestore degli Investimenti viene informato di eventuali violazioni per garantire che vengano rettificate entro la fine del mese successivo. Al Gestore degli Investimenti viene fornito un elenco degli emittenti con le emissioni più elevate in portafoglio, in modo da poter prendere decisioni informate in merito al mantenimento di un'intensità di carbonio inferiore agli obiettivi dichiarati.

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?

Non è stato designato un benchmark di riferimento per il raggiungimento delle caratteristiche ambientali o sociali promosse da questo prodotto finanziario. Tuttavia è stato utilizzato un indice di riferimento per misurare e pubblicare il raggiungimento dell'obiettivo WACI. Il benchmark di riferimento utilizzato da questo prodotto finanziario è un indice mainstream ed è utilizzato solo per il confronto delle caratteristiche ambientali. L'indice mainstream non considera i fattori ESG e non è quindi coerente con le caratteristiche ambientali e/o sociali promosse dal prodotto finanziario. L'allocazione degli attivi del portafoglio di questo prodotto finanziario non è vincolata ad alcun benchmark.

Gli **indici di riferimento** sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Seeyond Multi Asset Conservative Growth Fund

Legal entity identifier: 549300XJFU886LPPMT78

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
●● <input type="checkbox"/> Yes	● ● <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund sought to promote the environmental and social characteristics of maintaining a value weighted ESG score better than its “investment universe” (as defined below), maintaining a carbon footprint lower than that of its “investment universe”, and excluding companies that are considered as controversial and actively engaging with portfolio companies on ESG issues.No reference benchmark has been designated for the purpose of attaining the E/S characteristics promoted by the fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

As of 30th of June 2023, the results of the sustainable indicators are :

For Equities

- ESG Risk Score Equity : 15,66
- ESG Risk Score investment universe : 21,27
- GHG Intensity Equity : 46,29
- GHG Intensity of the SRI investment universe : 123,93
- Mean percentage of independent administrators for Equity : 82,21
- Mean percentage of independent administrators of the investment universe : 80,27
- Percentage issuers, who did not respect the UN principles related to Human Rights, labour international standards, environment & anti-corruption during the investment's decision for Equity : 0%
- Percentage issuers, who did not respect the UN principles related to Human Rights, labour international standards, environment & anti-corruption during the investment's decision of the investment universe : 0,26%

For Fixed Income

- Global ESG Score Fixed Income : 13,52
- Global ESG Score investment universe : 13,86
- Climate Risk Fixed Income : 89,12
- Climate Risk of the investment universe : 92,2

How did this financial product consider principal adverse impacts on sustainability factors?

The fund considered these impacts through the following means:

Exclusions :

For Equity : this ensures that the portfolio excludes certain issuers on the basis of specific regulatory, sectoral and normative criteria.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

These exclusions include, inter alia, the following :

- As required by law, companies that are involved in the production or distribution of anti-personnel mines or duster bombs, in accordance with the Ottawa and Oslo Conventions.
- Companies involved in the production, use, storage, sale or transfer of depleted uranium, chemical and biological weapons.
- Companies whose have significant revenue exposure in coal mining and coal-fired power generation
- Companies that are involved in serious controversies are also excluded, Such as those that violate the principles of the UN Global Compact (UNGC).
For Sovereign Bonds :The purpose of this step is to reduce the government bond investment universe on the basis of non-financial, regulatory or normative criteria, as well as relative to their ESG rating.
- Countries that are "blacklisted", i.e. under US or European embargo mentioned on the EU list of non-cooperative jurisdictions for tax purposes, or identified by the Financial Action Task Force (FATF) as having strategic deficiencies in terms of anti-money laundering or counter-terrorist financing;
- Governments having a high ESG risk per the standard developed by external rating agencies are also excluded.

Relative approach applied to Global Equities : the ESG issues considered and their impact on stock ratings may depend on the company's sector, geographic location and capitalisation size.

- Environmental (E) issues include, in particular, carbon emissions, waste treatment and water stress.
- Social (S) issues include, in particular, employee safety, human capital management, and compliance with international labour standards.
- Corporate governance (G) issues include, in particular, the composition of supervisory and governance bodies, and accounting practices.
The first non-financial objective of the so-called "score-improving" global equity investment strategy is to improve the overall ESG rating (by relying on an ESG risk indicator supplied by a non-financial rating agency) of the securities held as compared to the investment universe from which the lowest-rated 20% of companies are excluded.

The purpose of the second "non-financial-indicator-improving" objective is to improve:

- A climate-related indicator: this consists in improving the overall carbon intensity level (total carbon emissions of a company compared to its revenue) of the securities held, in comparison With the investment universe. Aggregated to the portfolio, the objective is to achieve an average carbon intensity level below that of its investment universe
- A good governance-related indicator: this consists in improving the overall independence level of the bodies governing the securities held, as compared to the investment universe. In other words, aggregated to the portfolio, having a higher average percentage of directors meeting independence criteria than the investment universe

Global Sovereign Bonds : the ESG issues considered, and their impact on how securities are rated, are related to the nature of their issuers (sovereign states).

- Environmental (E) factors include the analysis of energy and natural resource issues.
- Social responsibility (S) factors include criteria related to meeting basic needs, health, and fairness,
- Governance (G) factors include analysis of institutions, compliance with laws and civil rights, and political stability.

The number-one objective of the "non-financial-indicator-improving sovereign bond investment strategy is to improve the overall ESG score of the securities held, compared to the investment universe filtered by our exclusion policy. This overall ESG rating is based on evaluations by an external service provider.

The second "non-financial-indicator-improving" objective is to improve climate risk measurement using a proprietary method. This measurement is based primarily on a carbon intensity analysis as well as the Governance quality of the sovereign issuers. The aim of the strategy is to improve this rating compared to the investment universe filtered by our exclusion policy.

More information on principal adverse impacts on sustainability factors is available in the periodic reporting pursuant to Article 11(2) of the SFDR.

What were the top investments of this financial product?

Please refer to the Top15 Investments below :

Largest Investments	Sector	% Assets	Country
US TREASURY N/B 1.625% 15-02-26	Sovereign	6.55	United States

What was the proportion of sustainability-related investments?

As of 30th of June 2023, the share of sustainability related investment was 0%

● *What was the asset allocation?*

As of 30st of June 2023, the fund invested 93.69% of its NAV in companies that qualify as aligned with E/S characteristics (#Aligned with E/S characteristics). Hence, the fund invested 6.31% in the category # Other.

● *In which economic sectors were the investments made?*

All economic sectors belonging to the investment universe except those subject to exclusions, in accordance with the exclusion policies applied by the fund

Asset allocation describes the share of investments in specific assets.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

● **Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with EU Taxonomy¹?**

Yes : In fossil gas In nuclear energy

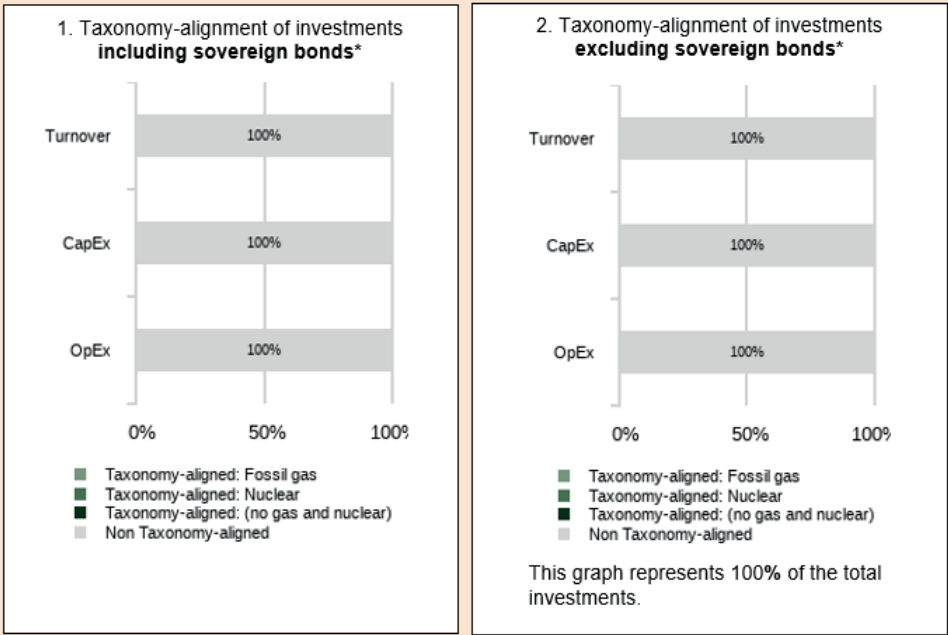

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

At the reporting date, based on the available reported and estimated issuer data, the management company did not identify any gas or nuclear taxonomy alignment in the investment portfolio.

● **What was the share of investments made in transitional and enabling activities?**

As the fund does not commit to invest in any “sustainable investment” within the meaning of the Taxonomy Regulation, the minimum share of investments in transitional and enabling activities within the meaning of the Taxonomy Regulation is therefore also set at 0%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The fund promotes environmental and social characteristics but does not commit to making any sustainable investments. As a consequence, the fund does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What was the share of socially sustainable investments ?

Non Applicable

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

Few issuers may not be covered by the ESG Analysis while cash management is used for liquidity and passive management purposes. Then the fund may include derivatives and cash positions (which are not aligned with the E/S characteristics) as well as securities of issuers that are neither aligned with the fund’s E/S characteristics nor qualify as sustainable (but do meet the E/S safeguards defined in the UN Guiding Principles on Business and Human Rights).

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In compliance with the application of the models, Management team has systematically integrated Environmental, Social and Governance considerations into the investment selection process. Regular monitoring of changes in the extra-financial rating of securities is carried out to ensure that none of the investments contravene the fund's ESG philosophy

How did this financial product perform compared to the reference benchmark?

Not Applicable

- ***How does the reference benchmark differ from a broad market index?***

Not Applicable

- ***How did this financial product perform compared with the broad market index?***

Not Applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Informativa periodica per i prodotti finanziari di cui all'articolo 8, paragrafi 1, 2 e 2 bis, del regolamento (UE) 2019/2088 e all'articolo 6, primo comma, del regolamento (UE) 2020/852

Nome del prodotto: Thematics AI and Robotics Fund

Identificativo della persona giuridica: 5493004HP7GJL5FJZV84

Caratteristiche ambientali e/o sociali

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, purché tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e l'impresa beneficiaria degli investimenti segua prassi di buona governance.

La **tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non comprende un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere allineati o no alla tassonomia.

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?	
●● <input type="checkbox"/> Sì	●● <input checked="" type="checkbox"/> No
<input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo ambientale: ___% <input type="checkbox"/> in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo sociale: ___%	<input type="checkbox"/> Ha promosso caratteristiche ambientali/sociali (A/S) e, pur non avendo come obiettivo un investimento sostenibile, aveva una quota pari a di investimenti sostenibili <input type="checkbox"/> con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> con un obiettivo sociale <input checked="" type="checkbox"/> Ha promosso caratteristiche A/S, ma non ha effettuato alcun investimento sostenibile

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

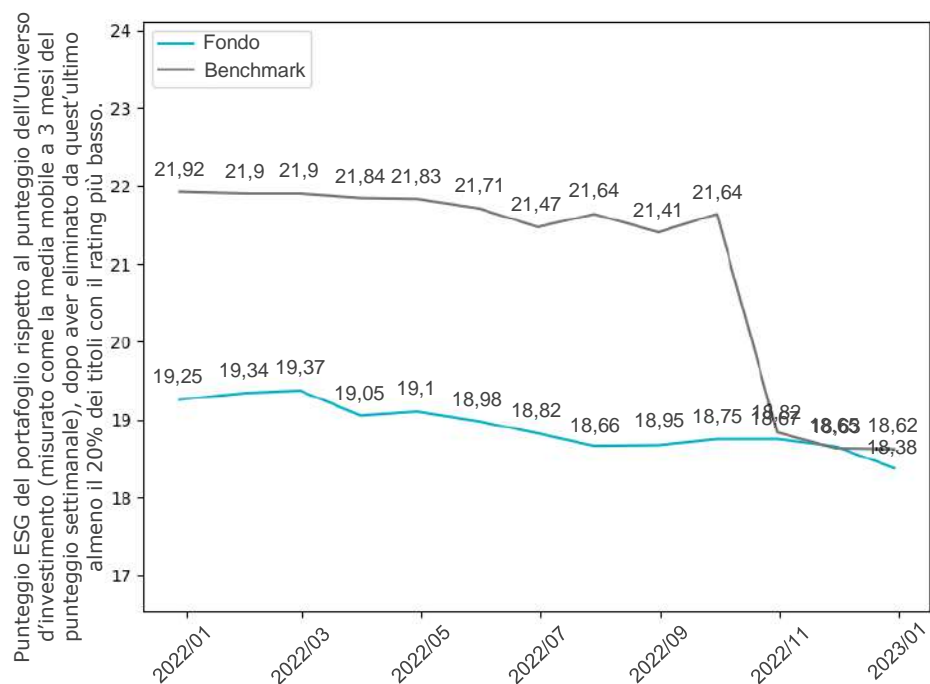

Il Fondo investe in società esposte alla tendenza strutturale globale dell'intelligenza artificiale e della robotica. Mira a promuovere i fattori ESG attraverso la selezione di società esposte all'ambito di applicazione del tema, evitando quelle esposte ad attività controverse, non conformi agli standard e alle norme di sostenibilità globali ed esposte a controversie ESG da elevate con prospettive negative a gravi, mantenendo un punteggio ESG migliore rispetto all'Universo d'investimento, partecipando attivamente al voto e impegnandosi con le imprese beneficiarie degli investimenti. Non è stato designato alcun indice di riferimento al fine di rispettare le caratteristiche A/S promosse dal Fondo.

Gli **indicatori di sostenibilità** misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

● **Qual è stata la prestazione degli indicatori di sostenibilità?**

Salvo diversa indicazione, i dati sono al 31/12/2022:

1. La percentuale del patrimonio gestito del Fondo che contribuisce ai temi e soddisfa i criteri di materialità o leadership è del 100%, esclusa la liquidità.
2. La percentuale del patrimonio gestito del Fondo di emittenti che generano più del 5% dei ricavi da attività dannose e/o controverse è pari allo 0%.
3. La percentuale del patrimonio gestito del Fondo di emittenti la cui condotta e performance complessiva sono considerate non conformi alle norme e ai principi di sostenibilità globali consolidati che disciplinano la condotta societaria è pari allo 0%.
4. La percentuale del patrimonio gestito del Fondo soggetta ad analisi ESG da parte dei Gestori degli investimenti è pari al 100%.
5. Il punteggio ESG del portafoglio supera il punteggio ESG dell'Universo d'investimento (misurato come la media mobile a 3 mesi del punteggio settimanale), dopo aver eliminato almeno il 20% dei titoli con i rating più bassi di quest'ultimo, in base al punteggio del rischio ESG di terze parti esterne.

6.

1. La percentuale del patrimonio gestito del Fondo di emittenti oggetto di recente investimento che al momento dell'investimento hanno già controversie ESG elevate con prospettive negative e/o gravi è pari allo 0%
2. Il numero di emittenti già oggetto di investimento che diventano esposti a controversie ESG elevate con prospettive negative e/o gravi e che sono soggetti a un limite massimo del 2% è pari a 0, inferiore al massimo di 5.
3. Il numero di emittenti già oggetto di investimento che diventano esposti a controversie ESG elevate con prospettive negative e/o gravi e, entro un arco temporale di 6 mesi:
 - non si impegnano o,
 - sono coinvolti, ma non dimostrano un miglioramento delle prestazioni sufficiente,
 - è 0.

7.

1. La percentuale totale dei voti espressi nel 2022 è del 100%, superiore al minimo 95%.
2. La percentuale di voti espressi in base alla politica di voto basata su principi di sostenibilità del 2022 è del 100%, superiore al minimo del 95%.
8. La percentuale di emittenti investiti oggetto del coinvolgimento target è del 9%, superiore al 5% minimo.

- ***Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha in parte realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?***

Non applicabile

- ***In che modo gli investimenti sostenibili che il prodotto finanziario ha in parte realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?***

Non applicabile

- ***In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?***

Non applicabile

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:

Non applicabile

La tassonomia dell'UE stabilisce il principio «non arrecare un danno significativo», in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'Unione.

Il principio «non arrecare un danno significativo» si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'Unione per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri dell'Unione per le attività economiche ecosostenibili.

Neppure eventuali altri investimenti sostenibili devono arrecare un danno significativo ad obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

Come già detto, il Fondo ha considerato i PAI del SFDR dell'UE e altri criteri ESG in fasi diverse del suo processo d'investimento attraverso i suoi 4 approcci di sostenibilità: esclusione, valutazione basata su norme, integrazione ESG, voto e coinvolgimento.

- i. Il Fondo esclude le società con i seguenti PAI: quelle esposte ad armi illegali o controverse; che generano più del 5% dei ricavi da combustibili fossili; con violazioni dei principi del Global Compact dell'ONU e delle linee guida dell'Organizzazione per la cooperazione e lo sviluppo economico (OCSE) destinate alle imprese multinazionali; e società del settore energetico la cui intensità delle emissioni di gas serra non è allineata all'Accordo di Parigi. Oltre a questi PAI, il Fondo esclude anche le società con un'esposizione dei ricavi superiore al 5% alle seguenti attività: petrolio e gas convenzionali, petrolio e gas non convenzionali, armi convenzionali, piccole armi e tabacco. Su base annua, il Fondo rendiconta la propria esposizione a tali indicatori.
- ii. Nell'esclusione basata su comportamenti/norme, vengono presi in considerazione i seguenti PAI: escludiamo le società che non dispongono di processi e meccanismi di conformità mirati a monitorare la conformità ai principi del Global Compact delle Nazioni Unite e alle linee guida dell'OCSE destinate alle imprese multinazionali e le Attività che influiscono negativamente sull'area sensibile alla biodiversità. Inoltre, il Fondo esclude anche le società esposte a un livello di rischio elevato e grave di controversie ESG con prospettive negative [che non dispongono di una gestione del rischio sufficiente]. Con cadenza annuale, il Fondo rendiconta la propria esposizione a società non conformi o a società esposte a controversie ESG con un livello di rischio elevato o grave.

- iii. Nella nostra integrazione ESG, in cui attribuiamo un punteggio alle società in base a indicatori ESG rilevanti, vengono presi in considerazione i seguenti PAI: emissioni e intensità di gas serra; impronta di carbonio; intensità del consumo di energia per settore climatico ad alto impatto; attività che influiscono negativamente sulle aree sensibili alla biodiversità; emissioni in acqua; indice di pericolosità dei rifiuti; diversità di genere nel Consiglio; quota di consumo e produzione di energia non rinnovabile; divario retributivo di genere non corretto. Su base annuale, il Fondo rendiconta il proprio punteggio di rischio ESG rispetto al suo universo d'investimento, dimostrando una sovraperformance in termini di gestione del rischio ESG.
- iv. Dopo l'investimento, votiamo in base a principi di sostenibilità e puntiamo ad alcune società per un impegno formale, incluse quelle che non dispongono di processi e meccanismi di conformità atti a monitorare la conformità ai principi del Global Compact delle Nazioni Unite e alle linee guida OCSE destinate alle imprese multinazionali, nonché società che non hanno informative e processi di governance sull'intensità e sulle emissioni di gas serra, sull'impronta di carbonio e sul divario retributivo di genere non corretto. Su base annuale, il Fondo rendiconta i suoi dati di voto e i risultati del coinvolgimento per dimostrare il suo voto in linea con i principi di sostenibilità, nonché il suo voto in merito alle proposte su tematiche correlate, quali il clima e le lacune in termini di retribuzione.

Quali sono stati i principali investimenti di questo prodotto finanziario?

L'elenco comprende gli investimenti che costituiscono la **quota maggiore di investimenti** del prodotto finanziario durante il periodo di riferimento, ossia: 31 dicembre 2022

Investimenti di maggiore entità	Settore	% di attivi	Paese
KLA CORP UW USD	Apparecchiature per semiconduttori	3,30%	Stati Uniti
ASML HOLDING NA EUR	Apparecchiature per semiconduttori	3,23%	Olanda
SPLUNK INC UW USD	Software applicativo	3,14%	Stati Uniti
SYNOPSIS INC UW USD	Software applicativo	3,09%	Stati Uniti
SERVICENOW UN USD	Software di sistema	3,05%	Stati Uniti
INTUITIVE UW USD	Apparecchiature sanitarie	3,01%	Stati Uniti
PTC INC UW USD	Software applicativo	2,97%	Stati Uniti
CADENCE UW USD	Software applicativo	2,92%	Stati Uniti
NVIDIA CORP UW USD	Semiconduttori	2,81%	Stati Uniti
SNOWFLAKE UN USD	Servizi Internet e infrastrutture	2,81%	Stati Uniti
KEYENCE CORP JT JPY	Apparecchiature e strumenti elettronici	2,79%	Giappone
SARTORIUS FP EUR	Strumenti e servizi per scienze	2,68%	Francia
TECAN GROUP SE CHF	Strumenti e servizi per scienze	2,66%	Svizzera
ALPHABET UW USD	Media e servizi interattivi	2,60%	Stati Uniti
FANUC CORP JT JPY	Macchinari industriali	2,49%	Giappone

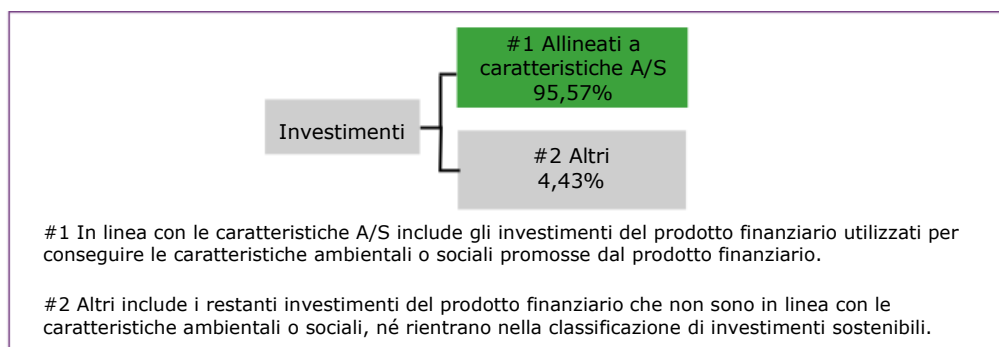

Qual è stata la quota degli investimenti in materia di sostenibilità?

Non applicabile.

● Qual è stata l'allocazione degli attivi?

Allineato A/S: 95,57%

Liquidità: 4,43%

● In quali settori economici sono stati effettuati gli investimenti?

Il Fondo ha investito in tutti i settori economici ad eccezione del settore energetico.

In che misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Non applicabile

● Il prodotto finanziario ha investito in attività legate al gas fossile e/o all'energia nucleare conformi alla tassonomia dell'UE¹?

Sì:

Nel gas fossile Nell'energia nucleare

No

¹Le attività legate al gas fossile e/o al nucleare saranno conformi alla tassonomia dell'UE solo se contribuiscono a limitare il cambiamento climatico ("mitigazione del cambiamento climatico") e non danneggiano in modo significativo alcun obiettivo della tassonomia dell'UE - si veda la nota esplicativa al margine sinistro. I criteri completi per le attività economiche legate ai gas fossili e all'energia nucleare conformi alla tassonomia dell'UE sono stabiliti nel regolamento delegato (UE) 2022/1214 della Commissione.

L'allocazione degli attivi descrive la quota di investimenti in attivi specifici.

Per conformarsi alla tassonomia dell'UE, i criteri per il **gas fossile** comprendono limitazioni delle emissioni e il passaggio all'energia da fonti totalmente rinnovabili o ai combustibili a basse emissioni di carbonio entro la fine del 2035. Per l'**energia nucleare**, i criteri comprendono norme generali sulla sicurezza e sulla gestione dei rifiuti. Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale. Le **attività di transizione** sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano, tra l'altro, livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

Le attività allineate alla tassonomia sono espresse in percentuale di:

- **fatturato**: quota di entrate da attività verdi delle imprese beneficiarie degli investimenti
- **spese in conto capitale (CapEx)**: investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, ad es. per la transizione verso un'economia verde.
- **spese operative (OpEx)**: attività operative verdi delle imprese beneficiarie degli investimenti

I due grafici che seguono mostrano in verde la percentuale di investimenti che sono allineati alla tassonomia dell'UE. Poiché non esiste una metodologia adeguata per determinare l'allineamento delle obbligazioni sovrane* alla tassonomia, il primo grafico mostra l'allineamento alla tassonomia in relazione a tutti gli investimenti del prodotto finanziario comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

1. Investimenti allineati alla tassonomia comprese le obbligazioni sovrane*

Categoria	Allineati alla tassonomia (né gas né nucleare)	Non allineati alla tassonomia
Fatturato	0%	100%
CapEx	0%	100%
OpEx	0%	100%

2. Investimenti allineati alla tassonomia escluse le obbligazioni sovrane*

Categoria	Allineati alla tassonomia (né gas né nucleare)	Non allineati alla tassonomia
Fatturato	0%	100%
CapEx	0%	100%
OpEx	0%	100%

Questo grafico rappresenta il **100%** degli investimenti totali.

*** Ai fini dei grafici di cui sopra, per «obbligazioni sovrane» si intendono tutte le esposizioni sovrane**

● **Qual era la quota degli investimenti effettuati in attività di transizione e abilitanti?**

Non applicabile

Sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

Qual era la quota di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?

Non applicabile

Qual era la quota di investimenti socialmente sostenibili?

Non applicabile

Quali investimenti erano compresi nella categoria «Altri» e qual era il loro scopo? Esistevano garanzie minime di salvaguardia ambientale o sociale?

Investimento in contanti a fini di liquidità. Questo investimento non incorpora alcuna garanzia minima di salvaguardia ambientale o sociale.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Abbiamo seguito la strategia d'investimento:

1. Screening tematico positivo

I Gestori degli investimenti selezionano i titoli:

- che contribuiscono al tema attraverso sottosegmenti tematici, che a loro volta contribuiscono a 1 o più dei seguenti obiettivi di sostenibilità: ottimizzazione dell'uso delle risorse, mitigazione e resilienza climatiche, salute e sicurezza, qualità superiore e accesso all'assistenza sanitaria e abitazioni e città smart.
- che soddisfano i requisiti di materialità o leadership dei temi.
 - Per materialità si intende: l'emittente deve generare almeno il 20% dei ricavi e/o degli utili dai rispettivi prodotti.
 - Requisiti di leadership: i prodotti dell'emittente devono, a parere dei Gestori degli investimenti, essere leader del settore, innovativi o potenzialmente rivoluzionari.

2. Esclusione basata sull'attività

Il Gestore degli investimenti ha escluso i titoli esposti ad attività dannose e controverse, quali carbone, petrolio e gas convenzionali, armi non convenzionali, ecc. Per ulteriori informazioni, fare riferimento alla nostra politica di esclusione alla pagina: <https://www.thematics-am.com/en-FR/being-responsible/reports-and-publications>.

3. Esclusione basata sul comportamento

Inoltre, i Gestori degli investimenti escludono sistematicamente i titoli la cui condotta e performance complessiva sono considerate non conformi alle norme e ai principi globali di sostenibilità che disciplinano il comportamento societario, in particolare in materia di tutela ambientale, diritti umani, diritti del lavoro ed etica aziendale. Questi standard includono i Principi del Global Compact delle Nazioni Unite, le Linee guida OCSE destinate alle imprese multinazionali, i Principi guida delle Nazioni Unite su imprese e diritti umani e le Convenzioni internazionali sul lavoro. Lo screening si basa su dati di terze parti.

4. Nella fase finale di costruzione del portafoglio, i Gestori degli investimenti eseguono analisi ESG utilizzando la propria valutazione ESG proprietaria guidata da quadri di materialità consolidati, quali, a titolo esemplificativo ma non esaustivo, il Sustainability Accounting Standards Board (SASB) e la

Modello di informativa periodica per i prodotti finanziari di cui all'articolo 8, paragrafi 1, 2 e 2 bis, del regolamento (UE) 2019/2088 e all'articolo 6, primo comma, del regolamento (UE) 2020/852

Nome del prodotto: Neuberger Berman Corporate Hybrid Bond Fund (il "Portafoglio")

Identificativo della persona giuridica: 549300TMYI9EFR4Q1G47

Caratteristiche ambientali e/o sociali

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, a condizione che tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e l'impresa beneficiaria degli investimenti segua pratiche di buona governance.

La **tassonomia dell'UE** è un sistema di classificazione istituito dal Regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non comprende un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere allineati o no alla tassonomia.

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Sì	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo ambientale: ___% <input type="checkbox"/> in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE	<input type="checkbox"/> Ha promosso caratteristiche ambientali/sociali (A/S) e pur non avendo come obiettivo un investimento sostenibile, aveva una quota del(lo) ___% di investimenti sostenibili <input type="checkbox"/> con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> con un obiettivo sociale
<input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo sociale: ___%	<input checked="" type="checkbox"/> Ha promosso caratteristiche A/S, ma non ha effettuato alcun investimento sostenibile

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Il Portafoglio ha promosso le seguenti caratteristiche ambientali e sociali:

- **Caratteristiche ambientali:** biodiversità e uso responsabile del suolo; riduzione dell'impronta di carbonio; gestione ambientale; emissioni di gas a effetto serra ("**GHG**"); opportunità nelle tecnologie pulite; opportunità nell'edilizia verde; opportunità nelle energie rinnovabili; approvvigionamento responsabile di materie prime; sottoscrizione responsabile e trasparente; emissioni tossiche e rifiuti; gestione dei rifiuti e gestione idrica.
- **Caratteristiche sociali:** accesso ai finanziamenti; accesso ai farmaci; accessibilità e prezzi equi; etica aziendale e trasparenza dei rapporti con i governi; sicurezza chimica; rapporti con le comunità; approvvigionamento controverso; comportamento aziendale; sicurezza dei farmaci e gestione degli effetti collaterali; marketing e pratiche etiche; salute e nutrizione; salute e sicurezza; sviluppo del capitale umano; gestione del lavoro; riservatezza e sicurezza dei dati; sicurezza e qualità dei prodotti; contenziosi e controversie correlate.

La prestazione relativa a queste caratteristiche ambientali e sociali è stata misurata mediante il Quoziente ESG di NB ed è di seguito riportata in forma aggregata.

Qual è stata la prestazione degli indicatori di sostenibilità?

Nell'ambito del processo di investimento, il Subgestore degli investimenti ha considerato diversi indicatori di sostenibilità per misurare le caratteristiche ambientali e/o sociali promosse dal Portafoglio. Gli indicatori di sostenibilità sono elencati di seguito:

1. Quoziente ESG di NB:

Il sistema proprietario di rating ESG di Neuberger Berman (il "**Quoziente ESG di NB**") è costruito intorno al concetto di rischio e opportunità ESG specifici del settore e produce un rating ESG complessivo per gli emittenti valutandoli rispetto a determinate metriche ESG.

Il Quoziente ESG di NB si basa sulla matrice di rilevanza proprietaria di Neuberger Berman ("**NB**"), focalizzata sulle caratteristiche ESG che sono state considerate come i più probabili fattori rilevanti del rischio e delle opportunità ESG per ogni settore. Ogni criterio settoriale è stato costruito usando dati ESG di terzi e ricavati internamente e integrati da un'analisi qualitativa interna, avvalendosi della significativa esperienza settoriale del team di analisti del Portafoglio. La matrice di rilevanza di NB ha permesso al Subgestore degli investimenti di ricavare il rating del Quoziente ESG di NB, per confrontare le caratteristiche ambientali e sociali di settori ed emittenti.

Il Quoziente ESG di NB ha assegnato una ponderazione alle caratteristiche ambientali, sociali e di governance di ogni settore per ricavare il rating del Quoziente ESG di NB per gli emittenti. A tal fine, il Subgestore degli investimenti si è impegnato con emittenti con un basso Quoziente ESG di NB con l'obiettivo di migliorare nel tempo le caratteristiche ambientali e sociali sottostanti (che costituiscono il Quoziente ESG di NB).

31 dicembre 2022	Rating	Copertura combinata
Quoziente ESG di NB	58	96%
Dati di terzi	6,9	

Gli indicatori di sostenibilità misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

Per quanto riguarda il rating del Quoziente NB di ESG, si usa un punteggio compreso tra 1 e 100, dove 1 rappresenta la valutazione minima e 100 quella massima. Questo Portafoglio non ha un rating minimo del Quoziente ESG di NB. Il rating medio del Quoziente ESG di NB è una media ponderata e non rappresenta un rating della strategia del Portafoglio in sé.

Per misurare le caratteristiche ambientali e sociali promosse dal Portafoglio sono stati usati anche dati di terzi. I rating dei dati di terzi vanno da 0 a 10, dove 0 è la valutazione minima e 10 quella massima.

2. Climate Value-at-Risk:

Nel periodo di riferimento, il Climate Value-at-Risk (“**CVaR**”) ha misurato l'esposizione ai rischi climatici fisici e di transizione. Il CVaR è uno strumento di analisi di scenario che valuta i rischi economici nel quadro di scenari di gradi diversi (ossia, l'entità di riscaldamento previsto) e potenziali contesti normativi in paesi differenti.

Il CVaR è un tipo di analisi di scenario che è definito come il valore attuale dei costi futuri aggregati dei rischi politici, dei profitti da opportunità tecnologiche, nonché dei costi e dei profitti di eventi meteorologici estremi espressi in percentuale del valore di mercato di un titolo o del portafoglio in funzione dello scenario climatico previsto.

Calcolando i rischi finanziari derivanti dai cambiamenti climatici per ciascun titolo e per ogni scenario, il CVaR fornisce un quadro che aiuta a quantificare e comprendere tali rischi. La metrica CVaR approfondisce l'analisi della stima in caso di stress climatico delle attività sulla base di scenari di gradi specifici, offrendo una valutazione di quanto un titolo potrebbe perdere o guadagnare a causa dell'impatto dei cambiamenti climatici.

Al 31 dicembre 2022 il CVaR aveva previsto la possibilità che uno scenario climatico di riscaldamento potesse causare un deprezzamento dell'5,22% delle attività in esame.

Questa analisi intende offrire una panoramica generale dello stile e del processo di investimento del team.

Su base globale, i risultati sono stati valutati dai gestori e analisti di portafoglio del Subgestore degli investimenti. L'analisi dello scenario è servita come punto di partenza per un'ulteriore analisi bottom-up e per individuare i potenziali rischi legati al clima da affrontare tramite l'impegno dell'emittente.

Considerate le limitazioni dei dati, il CVaR non è stato applicato a tutti gli emittenti in Portafoglio ma solo agli emittenti per i quali il Subgestore degli investimenti dispone di dati sufficienti e affidabili. Il Portafoglio aveva una copertura CVaR del 41%.

L'analisi CVaR è rivista almeno una volta all'anno.

3. Politiche di esclusione ESG:

Per assicurare il raggiungimento delle caratteristiche ambientali o sociali che ha promosso, il Portafoglio non ha investito in titoli di emittenti le cui attività violassero o non fossero coerenti con la Politica di Neuberger Berman in materia di armi controverse e la Politica di Neuberger Berman in materia di coinvolgimento nel carbone termico. Oltre all'applicazione della Politica di Neuberger Berman in materia di coinvolgimento nel carbone termico, il Subgestore degli investimenti ha vietato l'apertura di nuove posizioni di investimento in titoli di emittenti che (i) ottengono più del 25% dei loro ricavi dall'estrazione di carbone termico; o (ii) stanno espandendo la produzione di energia da carbone termico. Inoltre, dal 6 aprile 2022 gli strumenti in Portafoglio non hanno investito in titoli di emittenti le cui attività siano state identificate come in violazione della Politica di Neuberger Berman in materia di standard globali, che esclude i soggetti identificati come trasgressori di quanto segue: (i) i principi del Global Compact delle Nazioni Unite (“**Principi del Global Compact delle Nazioni Unite**”), (ii) le linee guida OCSE destinate alle imprese

multinazionali (“**Linee guida dell’OCSE**”), (iii) i principi guida delle Nazioni Unite su imprese e diritti umani (“**Principi guida delle Nazioni Unite su imprese e diritti umani**”) e (iv) gli standard internazionali del lavoro (“**Standard OIL**”).

Nell’applicare le esclusioni ESG al Portafoglio, il Subgestore degli investimenti ha usato dati di terzi per individuare gli emittenti che violano le esclusioni ESG elencate sopra. Laddove possibile, il Subgestore degli investimenti ha cercato di sovrapporre questi dati di terzi con le competenze qualitative dei propri analisti di ricerca per ottenere un quadro attuale e olistico dell’emittente. Il Subgestore degli investimenti ha discusso e dibattuto le differenze tra i trasgressori individuati dai dati di terzi e quelli identificati a seguito della sua ricerca, che si è basata sui dati del Quoziente ESG di NB e sugli impegni diretti con l’emittente.

● **...e rispetto ai periodi precedenti?**

N.d.; questo è il primo periodo di riferimento.

● **Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario in parte ha realizzato e in che modo l’investimento sostenibile ha contribuito a tali obiettivi?**

N.d.; il Portafoglio non si è impegnato a detenere investimenti sostenibili.

● **In che modo gli investimenti sostenibili che il prodotto finanziario in parte ha realizzato non hanno arrecato un danno significativo ad alcun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?**

N.d.; il Portafoglio non si è impegnato a detenere investimenti sostenibili.

I **principali effetti negativi** sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

— **In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?**

N.d.; il Portafoglio non si è impegnato a detenere investimenti sostenibili.

— **Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:**

Benché il Portafoglio non si sia impegnato a detenere investimenti sostenibili, dal 6 aprile 2022 il Subgestore degli investimenti non ha investito in emittenti le cui attività siano state individuate come in violazione delle Linee guida dell’OCSE, dei Principi del Global Compact delle Nazioni Unite, degli Standard OIL e dei Principi guida delle Nazioni Unite su imprese e diritti umani, recepiti dalla Politica di Neuberger Berman in materia di standard globali.

La Tassonomia dell'UE stabilisce il principio «non arrecare un danno significativo», in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'Unione.

Il principio «non arrecare un danno significativo» si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri UE per le attività economiche ecosostenibili.

Neppure eventuali altri investimenti sostenibili devono arrecare un danno significativo ad obiettivi ambientali o sociali.

N.d.; il Portafoglio non si è impegnato a detenere investimenti allineati alla tassonomia.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

Una selezione dei principali indicatori di effetti negativi è stata considerata direttamente (ad es. tramite le politiche di esclusione ESG elencate sopra) e/o indirettamente (ad es. nell'ambito della valutazione degli emittenti da parte del Subgestore degli investimenti) per tutto il periodo di riferimento 2022.

Dal 28 novembre 2022 il Subgestore degli investimenti ha considerato i seguenti principali effetti negativi per il Portafoglio, vale a dire: emissioni di gas a effetto serra, impronta di carbonio, intensità dei gas a effetto serra, esposizione ai combustibili fossili, diversità di genere nel consiglio, violazioni dei Principi del Global Compact delle Nazioni Unite e delle Linee guida dell'OCSE e armi controverse (i **“PAI a livello di prodotto”**).

La considerazione dei PAI a livello di prodotto è stata limitata dalla disponibilità (secondo il parere soggettivo del Subgestore degli investimenti) di una copertura adeguata, affidabile e verificabile dei dati. Il Subgestore degli investimenti ha utilizzato dati di terzi e dati surrogati insieme alla ricerca interna per considerare i PAI a livello di prodotto.

Il Subgestore degli investimenti ha considerato i PAI a livello di prodotto mediante una combinazione di:

- Monitoraggio del Portafoglio, in particolare nel caso in cui sia sceso sotto le soglie di tolleranza quantitative e qualitative stabilite dal Subgestore degli investimenti per ogni PAI a livello di prodotto;
- Gestione e/o definizione degli obiettivi di impegno nel caso in cui il Portafoglio sia sceso sotto le soglie di tolleranza quantitative e qualitative stabilite per un PAI a livello di prodotto; e
- Applicazione delle politiche di esclusione ESG sopra menzionate, che ha compreso la considerazione di vari PAI a livello di prodotto.

Quali sono stati i principali investimenti di questo prodotto finanziario?

Il Subgestore degli investimenti ha usato la ripartizione per settori economici basata sulla classificazione statistica delle attività economiche dell'UE ("NACE") per identificare i settori economici dei 15 principali investimenti del Portafoglio. I dati seguenti sono aggiornati al 31 dicembre 2022.

L'elenco comprende gli investimenti che hanno costituito la quota maggiore degli investimenti del prodotto finanziario durante il periodo di riferimento, ossia: 1° gennaio 2022 - 31 dicembre 2022

Investimenti di maggiore entità	Settore	% di attivi	Paese
NGG FINANCE PLC RegS	K - Attività finanziarie e assicurative	7,0%	Regno Unito
ELECTRICITE DE FRANCE SA MTN RegS	D - Fornitura di energia elettrica, gas, vapore e aria condizionata	5,2%	Francia

VEOLIA ENVIRONNEMENT SA RegS	E - Fornitura di acqua; reti fognarie, attività di trattamento dei rifiuti e risanamento	2,0%	Francia
EVONIK INDUSTRIES AG RegS	C - Attività manifatturiere	1,9%	Germania

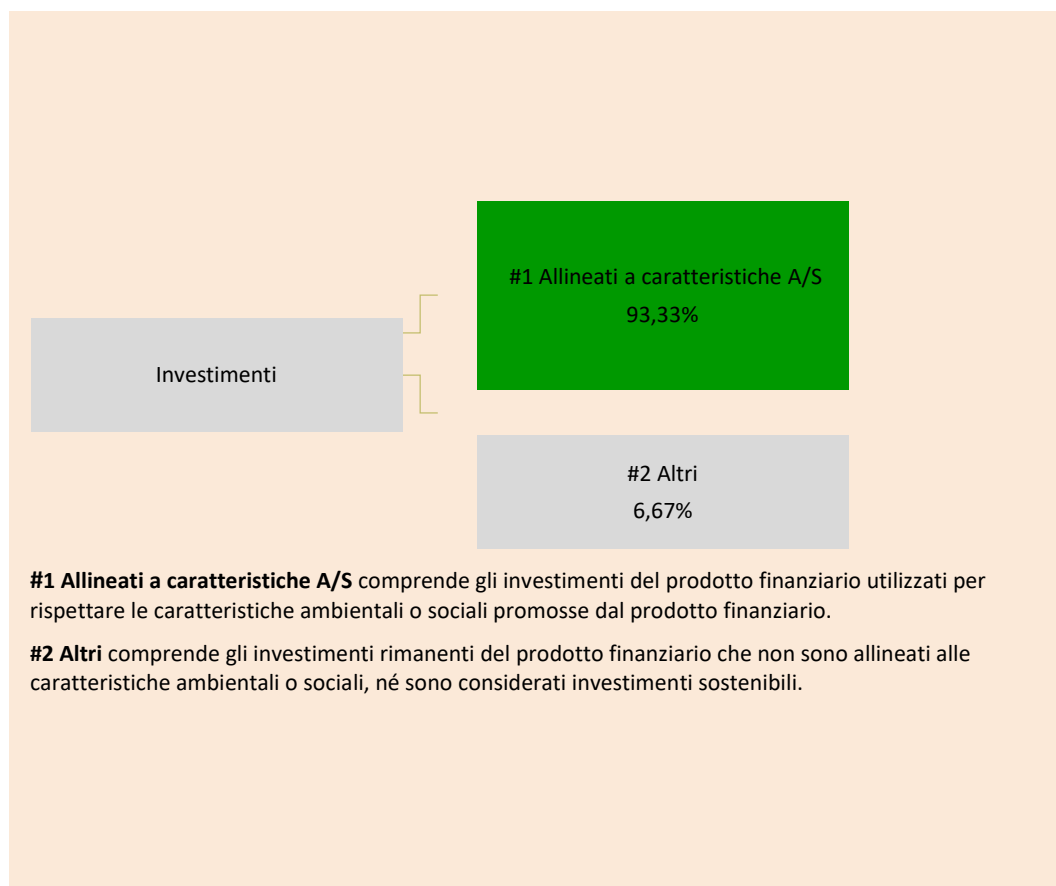

Qual è stata la quota degli investimenti in materia di sostenibilità?

L'allocazione degli attivi descrive la quota di investimenti in attivi specifici.

Qual è stata l'allocazione degli attivi?

Il Subgestore degli investimenti ha calcolato la percentuale di investimenti allineati alle caratteristiche ambientali e/o sociali promosse dal Portafoglio in riferimento alla percentuale di emittenti presenti nel Portafoglio: i) che abbiano ottenuto un rating del Quoziente ESG di NB o un rating di terzi equivalente all'ESG e usato nell'ambito del processo di costruzione del portafoglio e di gestione degli investimenti del Portafoglio; e/o ii) con cui il Subgestore degli investimenti si sia impegnato direttamente. Questo calcolo si è basato su una valutazione mark-to-market del Portafoglio e potrebbe avvalersi di dati incompleti o imprecisi dell'emittente o di terzi. Per il solo periodo di riferimento 2022, il calcolo si è basato sulle posizioni in Portafoglio al 31 dicembre 2022, essendo l'unica chiusura trimestrale del periodo di riferimento successiva alla pubblicazione dell'Allegato SFDR del Portafoglio che illustra la sua allocazione degli attivi pianificata. Per tutti i periodi di riferimento successivi, questo calcolo si baserà sulla media delle quattro chiusure trimestrali.

● **In quali settori economici sono stati effettuati gli investimenti?**

Dati al 31 dicembre 2022	
Settore economico – NACE	% di attivi
B - Attività estrattiva	0,01%
C - Attività manifatturiere	19,24%
D - Fornitura di energia elettrica, gas, vapore e aria condizionata	37,22%
E - Fornitura di acqua; reti fognarie, attività di trattamento dei rifiuti e risanamento	7,48%
F - Costruzioni	0,00%
G - Commercio all'ingrosso e al dettaglio; riparazione di autoveicoli e motocicli	0,02%
H - Trasporto e magazzinaggio	3,79%
I - Servizi di alloggio e di ristorazione	0,00%
J - Servizi di informazione e comunicazione	7,80%
K - Attività finanziarie e assicurative	23,95%
L - Attività immobiliari	0,45%
M - Attività professionali, scientifiche e tecniche	0,00%
N - Attività amministrative e di servizi di supporto	0,01%
O - Amministrazione pubblica e difesa; assicurazione sociale obbligatoria	0,02%
Q - Sanità e assistenza sociale	0,00%
U - Attività di organizzazioni e organismi extraterritoriali	0,00%

Per conformarsi alla tassonomia dell'UE, i criteri per il **gas fossile** comprendono limitazioni delle emissioni e il passaggio all'energia da fonti totalmente rinnovabili o ai combustibili a basse emissioni di carbonio entro la fine del 2035. Per l'**energia nucleare**, i criteri comprendono norme complete in materia di sicurezza e gestione dei rifiuti.

Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale.

- Le **attività di transizione** sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano, tra l'altro, livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

In quale misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Gli obblighi di informativa e di analisi introdotti dalla tassonomia dell'UE sono molto dettagliati e la loro osservanza richiede la disponibilità di numerosi dati specifici per ogni investimento effettuato dal Portafoglio. Il Subgestore degli investimenti non può confermare che il Portafoglio abbia effettuato collocamenti in investimenti considerati ecosostenibili ai fini della tassonomia dell'UE. Le informative e la reportistica sull'allineamento della tassonomia verranno sviluppate man mano che il quadro UE si evolverà e gli emittenti renderanno disponibili i dati. Il Subgestore degli investimenti terrà sotto controllo la misura in cui gli investimenti sostenibili con un obiettivo ambientale sono allineati alla tassonomia dell'UE, con il miglioramento della disponibilità e della qualità dei dati.

- Il prodotto finanziario ha investito in attività connesse al gas fossile e/o all'energia nucleare che erano conformi alla tassonomia dell'UE¹?

Sì:

Gas fossile

Energia nucleare

No

¹ Le attività connesse al gas fossile e/o all'energia nucleare sono conformi alla tassonomia dell'UE solo se contribuiscono all'azione di contenimento dei cambiamenti climatici ("mitigazione dei cambiamenti climatici") e non arrecano un danno significativo ad alcuno degli obiettivi della tassonomia dell'UE - cfr. nota esplicativa sul margine sinistro. I criteri completi riguardanti le attività economiche connesse al gas fossile e all'energia nucleare che sono conformi alla tassonomia dell'UE sono stabiliti nel regolamento delegato (UE) 2022/1214 della Commissione.

I due grafici che seguono mostrano in verde la percentuale di investimenti che erano allineati alla tassonomia dell'UE. Poiché non esiste una metodologia adeguata per determinare l'allineamento delle obbligazioni sovrane* alla tassonomia, il primo grafico mostra l'allineamento alla tassonomia in relazione a tutti gli investimenti del prodotto finanziario comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

Le attività allineate alla tassonomia sono espresse in percentuale di:

- **fatturato:** quota di entrate da attività verdi delle imprese beneficiarie degli investimenti.
- **spese in conto capitale (CapEx):** investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, ad esempio per la transizione verso un'economia verde.
- **spese operative (OpEx):** attività operative verdi delle imprese beneficiarie degli investimenti.

*Ai fini dei grafici di cui sopra, per "obbligazioni sovrane" si intendono tutte le esposizioni sovrane.

● **Qual era la quota degli investimenti effettuati in attività di transizione e abilitanti?**

N.d.; il Portafoglio non si è impegnato a detenere investimenti allineati alla tassonomia.

● **Qual è l'esito del raffronto della percentuale di investimenti che erano allineati alla tassonomia dell'UE rispetto ai precedenti periodi di riferimento?**

N.d.; il Portafoglio non si è impegnato a detenere investimenti allineati alla tassonomia.

Qual era la quota minima di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?

N.d.; il Portafoglio non si è impegnato a detenere investimenti sostenibili.

sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

Qual era la quota di investimenti socialmente sostenibili?

N.d.; il Portafoglio non si è impegnato a detenere investimenti sostenibili.

Quali investimenti erano compresi nella categoria "Altri", qual era il loro scopo ed esistevano garanzie minime di salvaguardia ambientale o sociale?

La categoria "Altri" comprendeva i restanti investimenti del Portafoglio (inclusi, a titolo esemplificativo ma non esaustivo, i derivati o i titoli garantiti da un pool di attività o crediti simili elencati nel Supplemento al Portafoglio) che non erano allineati alle caratteristiche ambientali o sociali, né considerati investimenti sostenibili.

La sezione "Altri" del Portafoglio è stata detenuta per diversi motivi ritenuti dal Subgestore degli investimenti vantaggiosi per il Portafoglio quali, a titolo esemplificativo ma non esaustivo, la gestione del rischio, e/o per assicurare liquidità, copertura e garanzia adeguate.

Come indicato in precedenza, il Portafoglio è stato investito in conformità con le politiche di esclusione ESG, su base continuativa. In questo modo si è garantito che gli investimenti effettuati dal Portafoglio fossero in linea con le garanzie internazionali minime di salvaguardia ambientale o sociale, come i Principi del Global Compact delle Nazioni Unite, i Principi guida delle Nazioni Unite su imprese e diritti umani, le Linee guida dell'OCSE e gli Standard OIL.

Il Subgestore degli investimenti ritiene che queste politiche abbiano impedito l'investimento in emittenti che hanno violato in modo più eclatante gli standard minimi ambientali e/o sociali e abbiano garantito al Portafoglio di promuovere con successo le sue caratteristiche ambientali e sociali.

Le suddette misure hanno assicurato l'adozione di solide garanzie minime di salvaguardia ambientale e sociale.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Il Portafoglio è stato gestito in linea con l'obiettivo di investimento e sono state intraprese le seguenti azioni:

I. Integrazione dell'analisi ESG proprietaria:

I rating del Quoziente ESG di NB sono stati generati per gli emittenti in Portafoglio. Il rating del Quoziente ESG di NB per gli emittenti è stato utilizzato per semplificare l'identificazione di rischi e opportunità nella valutazione complessiva del credito e del valore.

Il Quoziente ESG di NB ha rappresentato una componente chiave dei rating creditizi interni e consentito di individuare i rischi aziendali (compresi quelli ESG) in grado di causare un deterioramento del profilo di credito di un emittente. I rating creditizi interni possono essere aumentati o diminuiti in base al rating del Quoziente ESG di NB, e questo aspetto è stato monitorato dal Subgestore degli investimenti in quanto componente importante del processo di investimento del Portafoglio.

Integrando l'analisi ESG proprietaria del team di investimento (il Quoziente ESG di NB) nei rating creditizi interni, si è creato un collegamento diretto tra l'analisi delle caratteristiche ESG sostanziali e le attività di costruzione del portafoglio nella strategia di investimento.

A tal fine, il Subgestore degli investimenti si è impegnato con emittenti con un basso rating del Quoziente ESG di NB con l'obiettivo di migliorare nel tempo le caratteristiche ambientali e sociali sottostanti (che costituiscono il Quoziente ESG di NB).

II. Impegno:

Il Subgestore degli investimenti si è impegnato con gli emittenti nel quadro di un solido programma di impegno ESG. Hanno cercato di dare priorità agli impegni costruttivi e di impegnarsi su tematiche (comprese quelle ESG) a loro giudizio finanziariamente rilevanti per l'emittente pertinente. Il Subgestore degli investimenti ha considerato questo impegno con gli emittenti una parte importante del suo processo di investimento. I progressi in materia di impegno sono stati monitorati a livello centrale nello strumento di tracciamento dell'impegno del Subgestore degli investimenti.

III. Politiche di esclusione settoriale ESG:

Per assicurare il raggiungimento delle caratteristiche ambientali e sociali promosse, il Portafoglio ha applicato le politiche di esclusione ESG sopra menzionate, che hanno posto limitazioni all'universo investibile.

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?

N.d.; l'indice di riferimento del Portafoglio non è stato designato come indice di riferimento. Pertanto, non è coerente con le caratteristiche ambientali o sociali promosse dal Portafoglio.

- ***In che modo l'indice di riferimento differisce da un indice generale di mercato?***
n.d.
- ***Qual è stata la prestazione di questo prodotto finanziario in relazione agli indicatori di sostenibilità per determinare l'allineamento dell'indice di riferimento con le caratteristiche ambientali o sociali promosse?***
n.d.
- ***Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?***
n.d.
- ***Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice generale di mercato?***
n.d.

Gli **indici di riferimento** sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

Modello di informativa periodica per i prodotti finanziari di cui all'articolo 8, paragrafi 1, 2 e 2 bis, del regolamento (UE) 2019/2088 e all'articolo 6, primo comma, del regolamento (UE) 2020/852

Nome del prodotto: Neuberger Berman High Yield Bond Fund (il "Portafoglio")

Identificativo della persona giuridica: 549300IJY8N43QRUU802

Caratteristiche ambientali e/o sociali

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, a condizione che tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e l'impresa beneficiaria degli investimenti segua pratiche di buona governance.

La **tassonomia dell'UE** è un sistema di classificazione istituito dal Regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non comprende un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere allineati o no alla tassonomia.

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?

Sì

No

Ha effettuato **investimenti sostenibili con un obiettivo ambientale:** ___%

in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE

in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE

Ha effettuato **investimenti sostenibili con un obiettivo sociale:** ___%

Ha **promosso caratteristiche ambientali/sociali (A/S)** e pur non avendo come obiettivo un investimento sostenibile, aveva una quota del(lo) ___% di investimenti sostenibili

con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE

con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE

con un obiettivo sociale

Ha promosso caratteristiche A/S, ma **non ha effettuato alcun investimento sostenibile**

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Il Portafoglio ha promosso le seguenti caratteristiche ambientali e sociali:

- **Caratteristiche ambientali:** biodiversità e uso responsabile del suolo; riduzione dell'impronta di carbonio; emissioni di gas a effetto serra ("**GHG**"); opportunità nelle tecnologie pulite; opportunità nell'edilizia verde; approvvigionamento responsabile di materie prime; pratiche e tendenze di riciclaggio; emissioni tossiche e rifiuti; gestione dei rifiuti e gestione idrica.
- **Caratteristiche sociali:** accesso ai finanziamenti; accesso alla sanità; accesso ai farmaci; etica aziendale e trasparenza dei rapporti con i governi; sicurezza chimica; rapporti con le comunità; approvvigionamento controverso; comportamento aziendale; gestione della sicurezza e degli effetti collaterali dei farmaci; salute e nutrizione; salute e sicurezza; sviluppo del capitale umano; gestione del lavoro; riservatezza e sicurezza dei dati; sicurezza e qualità dei prodotti; qualità delle cure e soddisfazione del paziente.

La prestazione relativa a queste caratteristiche ambientali e sociali è stata misurata mediante il Quoziente ESG di NB ed è di seguito riportata in forma aggregata.

Gli indicatori di sostenibilità misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

Qual è stata la prestazione degli indicatori di sostenibilità?

Nell'ambito del processo di investimento, il Subgestore degli investimenti ha considerato diversi indicatori di sostenibilità per misurare le caratteristiche ambientali e/o sociali promosse dal Portafoglio. Gli indicatori di sostenibilità sono elencati di seguito:

1. Quoziente ESG di NB:

Il sistema proprietario di rating ESG di Neuberger Berman (il "**Quoziente ESG di NB**") è costruito intorno al concetto di rischio e opportunità ESG specifici del settore e produce un rating ESG complessivo per gli emittenti valutandoli rispetto a determinate metriche ESG.

Il Quoziente ESG di NB si basa sulla matrice di rilevanza proprietaria di Neuberger Berman ("**NB**"), focalizzata sulle caratteristiche ESG che sono state considerate come i più probabili fattori rilevanti del rischio e delle opportunità ESG per ogni settore. La matrice di rilevanza di NB ha permesso al Subgestore degli investimenti di ricavare il rating del Quoziente ESG di NB, per confrontare le caratteristiche ambientali e sociali di settori ed emittenti. Ogni criterio settoriale è stato costruito usando dati ESG di terzi e ricavati internamente e integrati da un'analisi qualitativa interna, avvalendosi della significativa esperienza settoriale del team di analisti del Portafoglio.

Il Quoziente ESG di NB ha assegnato una ponderazione alle caratteristiche ambientali, sociali e di governance di ogni settore per ricavare il rating del Quoziente ESG di NB per gli emittenti. Gli emittenti con un Quoziente ESG di NB positivo e/o in via di miglioramento hanno avuto maggiori possibilità di essere incluse nel Portafoglio. La probabilità di rimozione dall'universo di investimento o dal Portafoglio è stata maggiore per un emittente con un basso rating del Quoziente ESG di NB, soprattutto se non affrontato dall'emittente stesso. Il Subgestore degli investimenti ha inoltre cercato di dare priorità agli impegni costruttivi con gli emittenti societari.

31 dicembre 2022	Rating	Copertura combinata
Quoziente ESG di NB	57	99%
Dati di terzi	5,0	

Per quanto riguarda il rating del Quoziente NB di ESG, si usa un punteggio compreso tra 1 e 100, dove 1 rappresenta la valutazione minima e 100 quella massima. Questo Portafoglio non ha un rating minimo del Quoziente ESG di NB. Il rating medio del Quoziente ESG di NB è una media ponderata e non rappresenta un rating della strategia del Portafoglio in sé.

Per misurare le caratteristiche ambientali e sociali promosse dal Portafoglio sono stati usati anche dati di terzi. I rating dei dati di terzi vanno da 0 a 10, dove 0 è la valutazione minima e 10 quella massima.

2. Climate Value-at-Risk:

Nel periodo di riferimento, il Climate Value-at-Risk ("**CVaR**") ha misurato l'esposizione ai rischi climatici fisici e di transizione. Il CVaR è uno strumento di analisi di scenario che valuta i rischi economici nel quadro di scenari di gradi diversi (ossia, l'entità di riscaldamento previsto) e potenziali contesti normativi in paesi differenti.

Il CVaR è un tipo di analisi di scenario che è definito come il valore attuale dei costi futuri aggregati dei rischi politici, dei profitti da opportunità tecnologiche, nonché dei costi e dei profitti di eventi meteorologici estremi espressi in percentuale del valore di mercato di un titolo o del portafoglio in funzione dello scenario climatico previsto.

Calcolando i rischi finanziari derivanti dai cambiamenti climatici per ciascun titolo e per ogni scenario, il CVaR fornisce un quadro che aiuta a quantificare e comprendere tali rischi. La metrica CVaR approfondisce l'analisi della stima in caso di stress climatico delle attività sulla base di scenari di gradi specifici, offrendo una valutazione di quanto un titolo potrebbe perdere o guadagnare a causa dell'impatto dei cambiamenti climatici.

Al 31 dicembre 2022 il CVaR aveva previsto la possibilità che uno scenario climatico di riscaldamento potesse causare un deprezzamento dell'11,99% delle attività in esame. Il Portafoglio aveva una copertura CVaR del 57%.

Questa analisi intende offrire una panoramica generale dello stile e del processo di investimento del team.

Su base globale, i risultati sono stati valutati dai gestori e analisti di portafoglio del Subgestore degli investimenti. L'analisi dello scenario è servita come punto di partenza per un'ulteriore analisi bottom-up e per individuare i potenziali rischi legati al clima da affrontare tramite l'impegno dell'emittente.

Considerate le limitazioni dei dati, il CVaR non è stato applicato a tutti gli emittenti in Portafoglio ma solo a coloro per i quali il Subgestore degli investimenti disponeva di dati sufficienti e affidabili.

L'analisi CVaR è rivista almeno una volta all'anno.

3. Politiche di esclusione ESG:

Per assicurare il raggiungimento delle caratteristiche ambientali o sociali promosse, il Portafoglio non ha investito in titoli di emittenti le cui attività violassero o non fossero coerenti con la Politica di Neuberger Berman in materia di armi controverse e la Politica di Neuberger Berman in materia di coinvolgimento nel carbone termico. Oltre all'applicazione della Politica di Neuberger Berman in materia di coinvolgimento nel carbone termico, il Subgestore degli investimenti ha vietato l'apertura di nuove posizioni di investimento in titoli di emittenti che (i) ottengono più del 25% dei loro ricavi dall'estrazione di carbone termico; o (ii) stanno espandendo la produzione di energia da carbone termico. Inoltre, dal 6 aprile 2022 gli strumenti in Portafoglio non hanno investito in titoli di emittenti le cui attività siano state identificate come in violazione della Politica di Neuberger Berman in materia di standard globali, che esclude i soggetti identificati come trasgressori di quanto segue: (i) i principi del Global Compact delle Nazioni Unite ("**Principi del Global Compact delle Nazioni Unite**"), (ii) le linee guida OCSE destinate alle imprese multinazionali ("**Linee guida dell'OCSE**"), (iii) i principi guida delle Nazioni Unite su imprese e diritti umani ("**Principi guida delle Nazioni Unite su imprese e diritti umani**") e (iv) gli standard internazionali del lavoro ("**Standard OIL**").

Nell'applicare le esclusioni ESG al Portafoglio, il Subgestore degli investimenti ha usato dati di terzi per individuare gli emittenti che violano le esclusioni ESG elencate sopra. Laddove possibile, il Subgestore degli investimenti ha cercato di sovrapporre questi dati di terzi con le competenze qualitative dei propri analisti di ricerca per ottenere un quadro attuale e olistico dell'emittente. Il Subgestore degli investimenti ha discusso e dibattuto le differenze tra i trasgressori individuati dai dati di terzi e quelli identificati a seguito della sua ricerca, che si è basata sui dati del Quoziente ESG di NB e sugli impegni diretti con l'emittente.

● ***...e rispetto ai periodi precedenti?***

N.d.; questo è il primo periodo di riferimento.

● ***Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario in parte ha realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?***

N.d.; il Portafoglio non si è impegnato a detenere investimenti sostenibili.

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

In che modo gli investimenti sostenibili che il prodotto finanziario in parte ha realizzato non hanno arrecato un danno significativo ad alcun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?

N.d.; il Portafoglio non si è impegnato a detenere investimenti sostenibili.

In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?

n.d.

Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:

Benché il Portafoglio non si sia impegnato a detenere investimenti sostenibili, dal 6 aprile 2022 il Subgestore degli investimenti non ha investito in emittenti le cui attività siano state individuate come in violazione delle Linee guida dell'OCSE, dei Principi del Global Compact delle Nazioni Unite, degli Standard OIL e dei Principi guida delle Nazioni Unite su imprese e diritti umani, recepiti dalla Politica di Neuberger Berman in materia di standard globali.

La Tassonomia dell'UE stabilisce il principio «non arrecare un danno significativo», in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'Unione.

Il principio «non arrecare un danno significativo» si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri UE per le attività economiche ecosostenibili.

Neppure eventuali altri investimenti sostenibili devono arrecare un danno significativo ad obiettivi ambientali o sociali.

N.d.; il Portafoglio non si è impegnato a detenere investimenti allineati alla tassonomia.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

Una selezione dei principali indicatori di effetti negativi è stata considerata direttamente (ad es. tramite le politiche di esclusione ESG elencate sopra) e/o indirettamente (ad es. nell'ambito della valutazione degli emittenti da parte del Subgestore degli investimenti) per tutto il periodo di riferimento 2022.

Dal 28 novembre 2022, il Subgestore degli investimenti ha considerato i seguenti principali effetti negativi, vale a dire: emissioni di gas a effetto serra, impronta di carbonio, intensità dei gas a effetto serra, esposizione ai combustibili fossili, diversità di genere nel consiglio, violazioni dei Principi del Global Compact delle Nazioni Unite e delle Linee guida dell'OCSE e armi controverse (i "**PAI a livello di prodotto**").

La considerazione dei PAI è stata limitata dalla disponibilità (secondo il parere soggettivo del Subgestore degli investimenti) di una copertura adeguata, affidabile e verificabile dei dati. Il Subgestore degli investimenti ha utilizzato dati di terzi e dati surrogati insieme alla ricerca interna per considerare i PAI.

Il Subgestore degli investimenti ha considerato i PAI a livello di prodotto mediante una combinazione di:

- Monitoraggio del Portafoglio, in particolare nel caso in cui sia sceso sotto le soglie di tolleranza quantitative e qualitative stabilite dal Subgestore degli investimenti per ogni PAI a livello di prodotto;
- Gestione e/o definizione di obiettivi di impegno nel caso in cui il Portafoglio sia sceso sotto le soglie di tolleranza quantitative e qualitative stabilite dal Subgestore degli investimenti per un PAI a livello di prodotto; e
- Applicazione delle politiche di esclusione ESG sopra menzionate, che ha compreso la considerazione di vari PAI a livello di prodotto.

Quali sono stati i principali investimenti di questo prodotto finanziario?

Il Subgestore degli investimenti ha usato la ripartizione per settori economici basata sulla classificazione statistica delle attività economiche dell'UE ("NACE") per identificare i settori economici dei 15 principali investimenti del Portafoglio. I dati seguenti sono aggiornati al 31 dicembre 2022.

L'elenco comprende gli investimenti che hanno costituito la **quota maggiore degli investimenti** del prodotto finanziario durante il periodo di riferimento, ossia: 1° gennaio 2022 - 31 dicembre 2022

Investimenti di maggiore entità	Settore	% di attivi	Paese
AMERICAN AIRLINES INC 144A	H - Trasporto e magazzinaggio	1,2%	Stati Uniti
LEVEL 3 FINANCING INC 144A	K - Attività finanziarie e assicurative	1,1%	Stati Uniti
GLOBAL AIRCRAFT LEASING CO LTD 144A	N - Attività amministrative e di servizi di supporto	1,0%	Isole Cayman
CSC HOLDINGS LLC 144A	J - Servizi di informazione e comunicazione	0,9%	Stati Uniti
AMERICAN AIRLINES INC 144A	H - Trasporto e magazzinaggio	0,8%	Stati Uniti
ONEMAIN FINANCE CORP	K - Attività finanziarie e assicurative	0,8%	Stati Uniti
NB GLOBAL MONTHLY INCOME FUND LTD	K - Attività finanziarie e assicurative	0,8%	Guernsey, Isole del Canale
ALLIANT HOLDINGS INTERMEDIATE LLC 144A	K - Attività finanziarie e assicurative	0,8%	Stati Uniti

PAREXEL 2L TL-B 7/21 Prvt	N - Attività amministrative e di servizi di supporto	0,6%	Stati Uniti
REALOGY GROUP LLC 144A	L - Attività immobiliari	0,6%	Stati Uniti

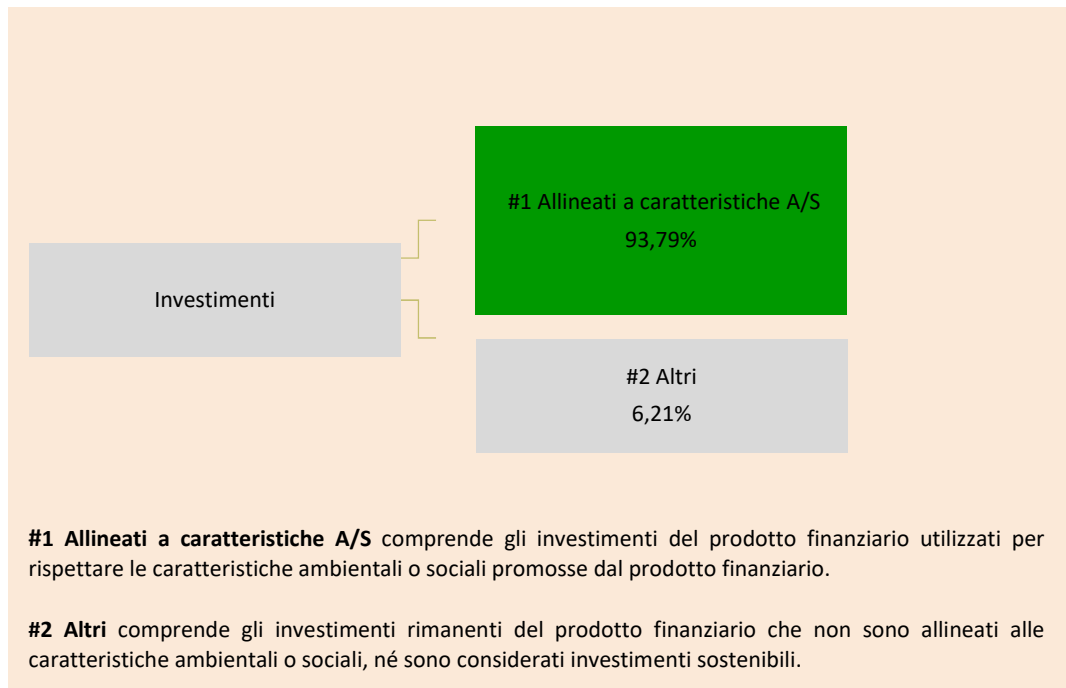

Qual è stata la quota degli investimenti in materia di sostenibilità?

L'allocazione degli attivi descrive la quota di investimenti in attivi specifici.

● **Qual è stata l'allocazione degli attivi?**

Il Subgestore degli investimenti ha calcolato la percentuale di investimenti allineati alle caratteristiche ambientali e/o sociali promosse dal Portafoglio in riferimento alla percentuale di emittenti presenti nel Portafoglio: i) che abbiano ottenuto un rating del Quoziente ESG di NB o un rating di terzi equivalente all'ESG e usato nell'ambito del processo di costruzione del portafoglio e di gestione degli investimenti del Portafoglio; e/o ii) con cui il Subgestore degli investimenti si sia impegnato direttamente. Questo calcolo si è basato su una valutazione mark-to-market del Portafoglio e potrebbe avvalersi di dati incompleti o imprecisi dell'emittente o di terzi. Per il solo periodo di riferimento 2022, il calcolo si è basato sulle posizioni in Portafoglio al 31 dicembre 2022, essendo l'unica chiusura trimestrale del periodo di riferimento successiva alla pubblicazione dell'Allegato SFDR del Portafoglio che illustra la sua allocazione degli attivi pianificata. Per tutti i periodi di riferimento successivi, questo calcolo si baserà sulla media delle quattro chiusure trimestrali.

Per conformarsi alla tassonomia dell'UE, i criteri per il **gas fossile** comprendono limitazioni delle emissioni e il passaggio all'energia da fonti totalmente rinnovabili o ai combustibili a basse emissioni di carbonio entro la fine del 2035. Per l'**energia nucleare**, i criteri comprendono norme complete in materia di sicurezza e gestione dei rifiuti.

Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale.

- Le **attività di transizione** sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano, tra l'altro, livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

In quali settori economici sono stati effettuati gli investimenti?

Dati al 31 dicembre 2022	
Settore economico – NACE	% di attivi
B - Attività estrattiva	7,76%
C - Attività manifatturiere	11,86%
D - Fornitura di energia elettrica, gas, vapore e aria condizionata	4,32%
F - Costruzioni	1,57%
G - Commercio all'ingrosso e al dettaglio; riparazione di autoveicoli e motocicli	3,10%
H - Trasporto e magazzinaggio	10,75%
I - Servizi di alloggio e di ristorazione	0,46%
J - Servizi di informazione e comunicazione	15,88%
K - Attività finanziarie e assicurative	19,32%
L - Attività immobiliari	4,55%
M - Attività professionali, scientifiche e tecniche	0,73%
N - Attività amministrative e di servizi di supporto	10,24%
P - Istruzione	0,04%
Q - Sanità e assistenza sociale	3,48%
R - Attività artistiche, di intrattenimento e divertimento	1,48%
S - Altre attività di servizi	0,35%
Nessuna	4,08%

In che misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Gli obblighi di informativa e di analisi introdotti dalla tassonomia dell'UE sono molto dettagliati e la loro osservanza richiede la disponibilità di numerosi dati specifici per ogni investimento effettuato dal Portafoglio. Il Subgestore degli investimenti non può confermare che il Portafoglio abbia effettuato collocamenti in investimenti considerati ecosostenibili ai fini della tassonomia dell'UE. Le informative e la reportistica sull'allineamento della tassonomia verranno sviluppate man mano che il quadro UE si evolverà e gli emittenti renderanno disponibili i dati. Il Subgestore degli investimenti terrà sotto controllo la misura in cui gli investimenti sostenibili con un obiettivo ambientale sono allineati alla tassonomia dell'UE, con il miglioramento della disponibilità e della qualità dei dati.

● Il prodotto finanziario ha investito in attività connesse al gas fossile e/o all'energia nucleare che erano conformi alla tassonomia dell'UE¹?

- Sì:
 Gas fossile Energia nucleare
 No

I due grafici che seguono mostrano in verde la percentuale di investimenti che erano allineati alla tassonomia dell'UE. Poiché non esiste una metodologia adeguata per determinare l'allineamento delle obbligazioni sovrane alla tassonomia, il primo grafico mostra l'allineamento alla tassonomia in relazione a tutti gli investimenti del prodotto finanziario comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.*

Le attività allineate alla tassonomia sono espresse in percentuale di:

- **fatturato**: quota di entrate da attività verdi delle imprese beneficiarie degli investimenti.
- **spese in conto capitale (CapEx)**: investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, ad esempio per la transizione verso un'economia verde.
- **spese operative (OpEx)**: attività operative verdi delle imprese beneficiarie degli investimenti.

*Ai fini dei grafici di cui sopra, per "obbligazioni sovrane" si intendono tutte le esposizioni sovrane.

¹ Le attività connesse al gas fossile e/o all'energia nucleare sono conformi alla tassonomia dell'UE solo se contribuiscono all'azione di contenimento dei cambiamenti climatici ("mitigazione dei cambiamenti climatici") e non arrecano un danno significativo ad alcuno degli obiettivi della tassonomia dell'UE - cfr. nota esplicativa sul margine sinistro. I criteri completi riguardanti le attività economiche connesse al gas fossile e all'energia nucleare che sono conformi alla tassonomia dell'UE sono stabiliti nel regolamento delegato (UE) 2022/1214 della Commissione.

sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

- **Qual era la quota degli investimenti effettuati in attività di transizione e abilitanti?**

N.d.; il Portafoglio non si è impegnato a detenere investimenti allineati alla tassonomia.

- **Qual è l'esito del raffronto della percentuale di investimenti che erano allineati alla tassonomia dell'UE rispetto ai precedenti periodi di riferimento?**

N.d.; il Portafoglio non si è impegnato a detenere investimenti allineati alla tassonomia.

- **Qual era la quota minima di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?**

N.d.; il Portafoglio non si è impegnato a detenere investimenti sostenibili.

- **Qual era la quota di investimenti socialmente sostenibili?**

N.d.; il Portafoglio non si è impegnato a detenere investimenti sostenibili.

- **Quali investimenti erano compresi nella categoria "Altri", qual era il loro scopo ed esistevano garanzie minime di salvaguardia ambientale o sociale?**

La categoria "Altri" comprendeva i restanti investimenti del Portafoglio (inclusi, a titolo esemplificativo ma non esaustivo, i derivati o i titoli garantiti da un pool di attività o crediti simili elencati nel Supplemento al Portafoglio) che non erano allineati alle caratteristiche ambientali o sociali, né considerati investimenti sostenibili.

La sezione "Altri" del Portafoglio è stata detenuta per diversi motivi ritenuti dal Subgestore degli investimenti vantaggiosi per il Portafoglio quali, a titolo esemplificativo ma non esaustivo, la gestione del rischio, e/o per assicurare liquidità, copertura e garanzia adeguate.

Come indicato in precedenza, il Portafoglio è stato investito in conformità con le politiche di esclusione ESG, su base continuativa. In questo modo si è garantito che gli investimenti effettuati dal Portafoglio fossero in linea con le garanzie internazionali minime di salvaguardia ambientale o sociale, come i Principi del Global Compact delle Nazioni Unite, i Principi guida delle Nazioni Unite su imprese e diritti umani, le Linee guida dell'OCSE e gli Standard OIL.

Il Subgestore degli investimenti ritiene che queste politiche abbiano impedito l'investimento negli emittenti che hanno violato in modo più eclatante gli standard minimi ambientali e/o sociali e abbiano garantito al Portafoglio di promuovere con successo le sue caratteristiche ambientali e sociali.

Le suddette misure hanno assicurato l'adozione di solide garanzie minime di salvaguardia ambientale e sociale.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Il Portafoglio è stato gestito in linea con l'obiettivo di investimento e sono state intraprese le seguenti azioni:

I. Integrazione dell'analisi ESG proprietaria:

I rating del Quoziente ESG di NB sono stati generati per gli emittenti in Portafoglio. Il rating del Quoziente ESG di NB per gli emittenti è stato utilizzato per semplificare l'identificazione di rischi e opportunità nella valutazione complessiva del credito e del valore.

Il Quoziente ESG di NB ha rappresentato una componente chiave dei rating creditizi interni e consentito di individuare i rischi aziendali (compresi quelli ESG) in grado di causare un deterioramento del profilo di credito di un emittente. I rating creditizi interni possono essere aumentati o diminuiti in base al rating del Quoziente ESG di NB, e questo aspetto è stato monitorato dal Subgestore degli investimenti in quanto componente importante del processo di investimento del Portafoglio.

Integrando l'analisi ESG proprietaria del team di investimento (il Quoziente ESG di NB) nei rating creditizi interni, si è creato un collegamento diretto tra l'analisi delle caratteristiche ESG sostanziali e le attività di costruzione del portafoglio nella strategia di investimento.

Gli emittenti con un Quoziente ESG di NB o un rating di terzi positivo e/o in via di miglioramento hanno avuto maggiori possibilità di essere incluse nel Portafoglio. La probabilità di rimozione dall'universo di investimento o dal Portafoglio è stata maggiore per un emittente con un basso rating del Quoziente ESG di NB, soprattutto se non affrontato dall'emittente stesso.

II. Impegno:

Il Subgestore degli investimenti si è impegnato con gli emittenti nel quadro di un solido programma di impegno ESG. Hanno cercato di dare priorità agli impegni costruttivi e di impegnarsi su tematiche (comprese quelle ESG) a loro giudizio finanziariamente rilevanti per l'emittente pertinente. Il Subgestore degli investimenti ha considerato questo impegno con gli emittenti una parte importante del suo processo di investimento. I progressi in materia di impegno sono stati monitorati a livello centrale nello strumento di tracciamento dell'impegno del Subgestore degli investimenti.

III. Politiche di esclusione settoriale ESG:

Per assicurare il raggiungimento delle caratteristiche ambientali e sociali promosse, il Portafoglio ha applicato le politiche di esclusione ESG sopra menzionate, che hanno posto limitazioni all'universo investibile.

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?

N.d.; l'indice di riferimento del Portafoglio non è stato designato come indice di riferimento. Pertanto, non è coerente con le caratteristiche ambientali o sociali promosse dal Portafoglio.

- ***In che modo l'indice di riferimento differisce da un indice generale di mercato?***
n.d.
- ***Qual è stata la prestazione di questo prodotto finanziario in relazione agli indicatori di sostenibilità per determinare l'allineamento dell'indice di riferimento con le caratteristiche ambientali o sociali promosse?***
n.d.
- ***Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?***
n.d.
- ***Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice generale di mercato?***
n.d.

Gli **indici di riferimento** sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

Modello di informativa periodica per i prodotti finanziari di cui all'articolo 8, paragrafi 1, 2 e 2 bis, del regolamento (UE) 2019/2088 e all'articolo 6, primo comma, del regolamento (UE) 2020/852

Nome del prodotto: Neuberger Berman Short Duration Emerging Market Debt Fund (il "Portafoglio")

Identificativo della persona giuridica: 549300J30SXW5866TW70

Caratteristiche ambientali e/o sociali

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, a condizione che tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e l'impresa beneficiaria degli investimenti segua pratiche di buona governance.

La **tassonomia dell'UE** è un sistema di classificazione istituito dal Regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non comprende un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere allineati o no alla tassonomia.

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Sì	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo ambientale: ___% <ul style="list-style-type: none"> <input type="checkbox"/> in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE 	<input checked="" type="checkbox"/> Ha promosso caratteristiche ambientali/sociali (A/S) e pur non avendo come obiettivo un investimento sostenibile, aveva una quota del 28,08%* di investimenti sostenibili <ul style="list-style-type: none"> <input type="checkbox"/> con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE <input checked="" type="checkbox"/> con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE <input checked="" type="checkbox"/> con un obiettivo sociale
<input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo sociale: ___%	<input type="checkbox"/> Ha promosso caratteristiche A/S, ma non ha effettuato alcun investimento sostenibile

*Per ulteriori dettagli sulla quota minima di investimenti sostenibili che hanno promosso caratteristiche ambientali o sociali, si rimanda alla domanda "Qual è stata la quota degli investimenti in materia di sostenibilità?" nel prosieguo.

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Il Portafoglio ha promosso le seguenti caratteristiche ambientali e sociali per gli emittenti sovrani:

- **Caratteristiche ambientali:** efficienza energetica degli emittenti sovrani; adattamento ai cambiamenti climatici; deforestazione; emissioni di gas a effetto serra (“GHG”); inquinamento atmosferico e domestico; e servizi igienico-sanitari non sicuri.
- **Caratteristiche sociali:** progressi verso gli obiettivi di sviluppo sostenibile (“SDG”) delle Nazioni Unite; livelli di salute e istruzione; qualità della regolamentazione; stabilità politica e libertà; parità di genere; e ricerca e sviluppo.

Il Portafoglio ha promosso le seguenti caratteristiche ambientali e sociali per gli emittenti societari:

- **Caratteristiche ambientali:** biodiversità e uso del suolo; emissioni di carbonio; opportunità nelle tecnologie pulite; stress idrico; emissioni tossiche e rifiuti; impatto ambientale dei finanziamenti; impronta di carbonio dei prodotti; politica ambientale; sistema di gestione ambientale; programma di riduzione dei gas a effetto serra; politica per gli appalti verdi; e programmi per le emissioni atmosferiche di gas non a effetto serra.
- **Caratteristiche sociali:** salute e sicurezza; sviluppo del capitale umano; gestione del lavoro; riservatezza e sicurezza dei dati; sicurezza e qualità dei prodotti; sicurezza dei prodotti finanziari; politica in materia di discriminazione; programmi di coinvolgimento della comunità; programmi per la diversità e politica in materia di diritti umani.

La prestazione relativa a queste caratteristiche ambientali e sociali è stata misurata mediante il Quoziente ESG di NB ed è di seguito riportata in forma aggregata.

Gli indicatori di sostenibilità misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

Qual è stata la prestazione degli indicatori di sostenibilità?

Nell'ambito del processo di investimento, il Gestore e il Subgestore degli investimenti hanno considerato diversi indicatori di sostenibilità per misurare le caratteristiche ambientali e/o sociali promosse dal Portafoglio. Gli indicatori di sostenibilità sono elencati di seguito:

1. Quoziente ESG di NB:

Il sistema proprietario di rating ESG di Neuberger Berman (il “**Quoziente ESG di NB**”) è costruito intorno al concetto di rischio e opportunità ESG specifici del settore e produce un rating ESG complessivo per gli emittenti valutandoli rispetto a determinate metriche ESG.

Il Quoziente ESG di NB ha assegnato una ponderazione alle caratteristiche ambientali, sociali e di governance di ogni settore per ricavare il rating del Quoziente ESG di NB per gli emittenti. Il Gestore e il Subgestore degli investimenti hanno usato il Quoziente ESG di NB per promuovere le caratteristiche ambientali e sociali elencate, dando la priorità agli investimenti in titoli di emittenti con un rating del Quoziente ESG di NB relativamente positivo e/o in via di miglioramento. Di conseguenza, il Gestore e il Subgestore degli investimenti hanno limitato l'esposizione agli emittenti con il peggiore rating del Quoziente ESG di NB, salvo ove vi fosse un'aspettativa ragionevole di miglioramento del rating del Quoziente ESG di NB nel corso del tempo.

31 dicembre 2022	Rating	Copertura combinata
Quoziente ESG di NB	55	95%
Dati di terzi	4,2	

Per quanto riguarda il rating del Quoziente NB di ESG, si usa un punteggio compreso tra 1 e 100, dove 1 rappresenta la valutazione minima e 100 quella massima. Questo Portafoglio non ha un rating minimo del Quoziente ESG di NB. Il rating medio del Quoziente ESG di NB è una media ponderata e non rappresenta un rating della strategia del Portafoglio in sé.

Per misurare le caratteristiche ambientali e sociali promosse dal Portafoglio sono stati usati anche dati di terzi. I rating dei dati di terzi vanno da 0 a 10, dove 0 è la valutazione minima e 10 quella massima.

2. Politiche di esclusione ESG:

Per assicurare il raggiungimento delle caratteristiche ambientali o sociali promosse, il Portafoglio non ha investito in titoli di emittenti le cui attività violassero o non fossero coerenti con la Politica di Neuberger Berman in materia di armi controverse e la Politica di Neuberger Berman in materia di coinvolgimento nel carbone termico. Il Portafoglio sta gradualmente eliminando l'esposizione al carbone termico e ha vietato l'investimento in titoli di emittenti che ottengono più del 10% dei ricavi dall'estrazione di carbone termico o che stanno espandendo la generazione di energia da carbone termico, come determinato in base a criteri di vaglio interni. Il Portafoglio ha inoltre vietato gli investimenti in emittenti nel settore della produzione di energia che utilizzano carbone termico come fonte energetica per più del 95% della loro capacità installata di generazione di energia, che stanno espandendo la generazione di energia da carbone termico, o i cui bilanci di previsione delle spese in conto capitale a fini di espansione non comprendano una soglia minima per gli investimenti non in carbone, come determinato in base a criteri di vaglio interni. Inoltre, dal 6 aprile 2022 gli strumenti in Portafoglio non hanno investito in titoli di emittenti le cui attività siano state identificate come in violazione della Politica di Neuberger Berman in materia di standard globali, che esclude i soggetti identificati come trasgressori di quanto segue: (i) i principi del Global Compact delle Nazioni Unite ("Principi del Global Compact delle Nazioni Unite"), (ii) le linee guida OCSE destinate alle imprese multinazionali ("Linee guida dell'OCSE"), (iii) i principi guida delle Nazioni Unite su imprese e diritti umani ("Principi guida delle Nazioni Unite su imprese e diritti umani") e (iv) gli standard internazionali del lavoro ("Standard OIL"). Il Portafoglio ha inoltre escluso i titoli di emittenti coinvolti in lavoro minorile diretto, nel settore del tabacco, nonché di alcuni emittenti con un'esposizione significativa alle sabbie bituminose.

Nell'applicare le esclusioni ESG al Portafoglio, il Gestore e il Subgestore degli investimenti hanno usato dati di terzi per individuare gli emittenti che violano le esclusioni ESG elencate sopra. Laddove possibile, il Gestore e il Subgestore degli investimenti hanno cercato di sovrapporre questi dati di terzi con le competenze qualitative dei propri analisti di ricerca per ottenere un quadro attuale e olistico dell'emittente. Il Gestore e il Subgestore degli investimenti hanno discusso e dibattuto le differenze tra i trasgressori individuati dai dati di terzi e quelli identificati a seguito della loro ricerca, che si è basata sui dati del Quoziente ESG di NB e sugli impegni diretti con l'emittente.

● ***...e rispetto ai periodi precedenti?***

N.d.; questo è il primo periodo di riferimento.

● ***Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario in parte ha realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?***

Sebbene abbia promosso caratteristiche ambientali e sociali, questo Portafoglio non aveva un obiettivo di investimento sostenibile. Tuttavia, il Portafoglio ha detenuto investimenti sostenibili che hanno promosso le caratteristiche ambientali e sociali elencate sopra.

La considerazione degli investimenti effettuati dal Portafoglio in quanto investimenti sostenibili è stata effettuata in riferimento al quadro di investimenti sostenibili di NB. Questo quadro comprendeva una valutazione per stabilire (i) se l'investimento contribuisce a un obiettivo ambientale e/o sociale, (ii) se l'investimento arreca un danno significativo a tali obiettivi (come descritto di seguito) e (iii) una valutazione del rating complessivo di governance dell'emittente per determinare se l'emittente ottiene una valutazione di buona governance.

Nell'ambito di questo quadro di investimenti sostenibili, il Gestore e il Subgestore degli investimenti sono ricorsi a numerosi dati che misurano l'allineamento dell'attività economica di un emittente alle caratteristiche ambientali o sociali.

Il Gestore e il Subgestore degli investimenti hanno vagliato gli emittenti alla ricerca di controversie, danni significativi e violazioni delle garanzie minime di salvaguardia. Laddove gli emittenti hanno superato questo vaglio, il Gestore e il Subgestore degli investimenti hanno proceduto a misurare il contributo economico ambientale o sociale degli emittenti.

Per gli emittenti societari, il Gestore e il Subgestore degli investimenti hanno misurato questo aspetto in due modi:

- Allineamento delle entrate alla tassonomia dell'UE (eventuale); e
- Allineamento delle entrate agli Obiettivi di sviluppo sostenibile ("SDG") delle Nazioni Unite.

La considerazione dell'allineamento delle entrate agli SDG è stata limitata dalla disponibilità - secondo il parere soggettivo del Gestore e del Subgestore degli investimenti - di una copertura adeguata, affidabile e verificabile dei dati. Per contenere i casi di scarsa copertura dei dati, il Gestore e il Subgestore degli investimenti hanno utilizzato dati di terzi e dati surrogati insieme alla ricerca interna e all'analisi qualitativa nell'ambito del quadro di investimenti sostenibili di NB.

Per gli emittenti sovrani, il Gestore e il Subgestore degli investimenti hanno misurato questo aspetto nei modi seguenti:

- Progressi a livello di adattamento e mitigazione dei cambiamenti climatici; e
- Progressi a livello di conseguimento degli SDG, con particolare riguardo all'aspettativa di vita e all'istruzione

In che modo gli investimenti sostenibili che il prodotto finanziario in parte ha realizzato non hanno arrecato un danno significativo ad alcun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?

Nell'ambito del quadro di investimenti sostenibili del Gestore e del Subgestore degli investimenti, sono stati esclusi gli investimenti che arrecano danni significativi agli obiettivi ambientali o sociali. Per stabilire se un investimento arreca un danno significativo, il Gestore e il Subgestore degli investimenti hanno considerato il danno significativo con riferimento a determinati indicatori principali di effetti negativi e alle violazioni delle garanzie minime di salvaguardia.

Il Gestore e il Subgestore degli investimenti hanno considerato i seguenti principali indicatori di effetti negativi per stabilire se gli investimenti sostenibili effettuati dal Portafoglio non abbiano arrecato danni significativi ad alcun obiettivo di investimento sostenibile ambientale o sociale: emissioni di gas a effetto serra; impronta di carbonio; intensità dei gas a effetto serra degli emittenti; esposizione a emittenti attivi nel settore dei combustibili fossili; quota di consumo e produzione di energia non rinnovabile; intensità di consumo energetico per settore ad alto impatto climatico; attività che incidono negativamente sulle aree sensibili sotto il profilo della biodiversità; emissioni in acqua; rapporto tra rifiuti pericolosi e rifiuti radioattivi; violazioni dei Principi del Global Compact delle Nazioni Unite e delle Linee guida dell'OCSE; mancanza di procedure e meccanismi di conformità per monitorare la conformità ai Principi del Global Compact delle Nazioni Unite e alle Linee guida dell'OCSE; divario retributivo di genere non corretto, diversità di genere nel consiglio; ed esposizione ad armi controverse (mine antiuomo, munizioni a grappolo, armi chimiche e armi biologiche, i "PAI") per gli emittenti societari e intensità dei gas a effetto serra e paesi che beneficiano degli investimenti soggetti a violazioni sociali (i "PAI sovrani") per gli emittenti sovrani.

La considerazione dei PAI è stata limitata dalla disponibilità (secondo il parere soggettivo del Gestore e del Subgestore degli investimenti) di una copertura adeguata, affidabile e verificabile dei dati. Il Gestore e il Subgestore degli investimenti hanno utilizzato dati di terzi e dati surrogati insieme alla ricerca interna per considerare i PAI.

Il Gestore e il Subgestore degli investimenti hanno considerato anche le violazioni delle garanzie minime di salvaguardia. Dal 6 aprile 2022, il Gestore e il Subgestore degli investimenti non hanno investito in emittenti le cui attività siano state identificate come in violazione delle Linee guida dell'OCSE,

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

dei Principi del Global Compact delle Nazioni Unite, degli Standard OIL e dei Principi guida delle Nazioni Unite su imprese e diritti umani, recepiti dalla Politica di Neuberger Berman in materia di standard globali.

La combinazione di tutti questi fattori ha generato una convalida quantitativa di "sostenibilità" che è stata usata per garantire che gli investimenti sostenibili effettuati dal Portafoglio non hanno arrecato un danno significativo ad alcun obiettivo sostenibile ambientale o sociale.

In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?

Il Gestore e il Subgestore degli investimenti hanno considerato i PAI al momento di stabilire se gli investimenti sostenibili effettuati dal Portafoglio non abbiano arrecato un danno significativo ad alcun obiettivo di investimento sostenibile ambientale o sociale degli investimenti sostenibili del Portafoglio, mediante una combinazione di:

- Monitoraggio degli emittenti che siano scesi sotto le soglie di tolleranza quantitative e qualitative stabilite per ogni PAI dal Gestore e dal Subgestore degli investimenti;
- Gestione e/o definizione di obiettivi di impegno con emittenti che siano scesi sotto le soglie di tolleranza quantitative e qualitative stabilite per un PAI dal Gestore e dal Subgestore degli investimenti; e
- Applicazione delle politiche di esclusione ESG sopra menzionate, che ha compreso la considerazione di vari PAI.

Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:

Dal 6 aprile 2022, il Gestore e il Subgestore degli investimenti non hanno investito in emittenti le cui attività siano state individuate come in violazione delle Linee guida dell'OCSE, dei Principi del Global Compact delle Nazioni Unite, degli Standard OIL e dei Principi guida delle Nazioni Unite su imprese e diritti umani, recepiti dalla Politica di Neuberger Berman in materia di standard globali.

La Tassonomia dell'UE stabilisce il principio «non arrecare un danno significativo», in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'Unione.

Il principio «non arrecare un danno significativo» si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri UE per le attività economiche ecosostenibili.

Neppure eventuali altri investimenti sostenibili devono arrecare un danno significativo ad obiettivi ambientali o sociali.

N.d.; il Portafoglio non si è impegnato a detenere investimenti allineati alla tassonomia.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

Una selezione dei principali indicatori di effetti negativi è stata considerata direttamente (ad es. tramite le politiche di esclusione ESG elencate sopra) e/o indirettamente (ad es. nell'ambito della valutazione degli emittenti da parte del Gestore e del Subgestore degli investimenti) per tutto il periodo di riferimento 2022.

Il Gestore e il Subgestore degli investimenti hanno considerato i PAI rispetto al Portafoglio in due modi:

1. Tutti i PAI sono stati considerati al momento di stabilire se gli investimenti sostenibili effettuati dal Portafoglio non avessero arrecato un danno significativo ad alcun obiettivo di investimento sostenibile ambientale o sociale, come sopra spiegato.
2. Dal 28 novembre 2022, il Gestore e il Subgestore degli investimenti hanno considerato i seguenti principali effetti negativi sui fattori di sostenibilità in relazione agli investimenti del Portafoglio che promuovevano caratteristiche ambientali o sociali, ossia: PAI sovrani per gli emittenti sovrani ed emissioni di gas a effetto serra, impronta di carbonio, intensità dei gas a effetto serra, esposizione a combustibili fossili e diversità di genere nel consiglio per gli emittenti societari (congiuntamente i **"PAI a livello di prodotto"**).

La considerazione dei PAI a livello di prodotto è stata limitata dalla disponibilità (secondo il parere soggettivo del Gestore e del Subgestore degli investimenti) di una copertura adeguata, affidabile e verificabile dei dati. Il Gestore e il Subgestore degli investimenti hanno utilizzato dati di terzi e dati surrogati insieme alla ricerca interna per considerare i PAI a livello di prodotto.

Il Gestore e il Subgestore degli investimenti hanno considerato i PAI a livello di prodotto mediante una combinazione di:

- Monitoraggio del Portafoglio, in particolare nel caso in cui sia sceso sotto le soglie di tolleranza quantitative e qualitative stabilite dal Gestore e dal Subgestore degli investimenti per ogni PAI a livello di prodotto;
- Gestione e/o definizione di obiettivi di impegno nel caso in cui il Portafoglio sia sceso sotto le soglie di tolleranza quantitative e qualitative stabilite dal Gestore e dal Subgestore degli investimenti per un PAI a livello di prodotto; e
- Applicazione delle politiche di esclusione ESG sopra menzionate, che ha compreso la considerazione di vari PAI a livello di prodotto.

Quali sono stati i principali investimenti di questo prodotto finanziario?

Il Gestore e il Subgestore degli investimenti hanno usato la ripartizione per settori economici basata sulla classificazione statistica delle attività economiche dell'UE ("NACE") per identificare i settori economici dei 15 principali investimenti del Portafoglio. I dati seguenti sono aggiornati al 31 dicembre 2022.

L'elenco comprende gli investimenti che hanno costituito la **quota maggiore degli investimenti** del prodotto finanziario durante il periodo di riferimento, ossia: 1° gennaio 2022 - 31 dicembre 2022

Investimenti di maggiore entità	Settore	% di attivi	Paese
STATE OIL CO OF AZERBAIJAN REPUBLI MTN	B - Attività estrattiva	1,4%	Azerbaijan
NB EURO SHORT TERM ENHANC USD CL Z	n.d.	1,4%	Irlanda

Qual è stata la quota degli investimenti in materia di sostenibilità?

L'**allocazione degli attivi** descrive la quota di investimenti in attivi specifici.

Qual è stata l'allocazione degli attivi?

Il Gestore e il Subgestore degli investimenti hanno calcolato la percentuale di investimenti allineati alle caratteristiche ambientali e/o sociali promosse dal Portafoglio in riferimento alla percentuale di emittenti presenti nel Portafoglio: i) che abbiano ottenuto un rating del Quoziente ESG di NB o un rating ESG equivalente di terzi usato nell'ambito del processo di costruzione del portafoglio e di gestione degli investimenti del Portafoglio; e/o ii) con cui il Gestore e il Subgestore degli investimenti si siano impegnati direttamente. Questo calcolo si è basato su una valutazione mark-to-market del Portafoglio e potrebbe avvalersi di dati incompleti o imprecisi dell'emittente o di terzi. Per il solo periodo di riferimento 2022, il calcolo si è basato sulle posizioni in Portafoglio al 31 dicembre 2022, essendo l'unica chiusura trimestrale del periodo di riferimento successiva alla pubblicazione dell'Allegato SFDR del Portafoglio che illustra la sua allocazione degli attivi pianificata. Per tutti i periodi di riferimento successivi, questo calcolo si baserà sulla media delle quattro chiusure trimestrali.

#1 Allineati a caratteristiche A/S comprende gli investimenti del prodotto finanziario utilizzati per rispettare le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

#2 Altri comprende gli investimenti rimanenti del prodotto finanziario che non sono allineati alle caratteristiche ambientali o sociali, né sono considerati investimenti sostenibili.

La categoria **#1 Allineati a caratteristiche A/S** comprende:

- la sottocategoria **#1A Sostenibili**, che contempla gli investimenti sostenibili dal punto di vista ambientale e sociale;

- la sottocategoria **#1B Altri investimenti allineati alle caratteristiche A/S**, che contempla gli investimenti allineati alle caratteristiche ambientali o sociali che non sono considerati investimenti sostenibili.

In quali settori economici sono stati effettuati gli investimenti?

Dati al 31 dicembre 2022

Settore economico – NACE	% di attivi
B - Attività estrattiva	8,89%
C - Attività manifatturiere	4,58%
D - Fornitura di energia elettrica, gas, vapore e aria condizionata	3,35%
E - Fornitura di acqua; reti fognarie, attività di trattamento dei rifiuti e risanamento	0,00%
F - Costruzioni	0,44%
G - Commercio all'ingrosso e al dettaglio; riparazione di autoveicoli e motocicli	0,34%
H - Trasporto e magazzinaggio	2,36%
I - Servizi di alloggio e di ristorazione	0,73%
J - Servizi di informazione e comunicazione	0,30%
K - Attività finanziarie e assicurative	51,31%
L - Attività immobiliari	0,52%
M - Attività professionali, scientifiche e tecniche	0,07%
N - Attività amministrative e di servizi di supporto	0,83%
O - Pubblica amministrazione e difesa; previdenza sociale obbligatoria	23,36%
R - Attività artistiche, di intrattenimento e divertimento	0,35%
U - Attività di organizzazioni e organismi extraterritoriali	1,36%
Nessuna	1,22%

Per conformarsi alla tassonomia dell'UE, i criteri per il **gas fossile** comprendono limitazioni delle emissioni e il passaggio all'energia da fonti totalmente rinnovabili o ai combustibili a basse emissioni di carbonio entro la fine del 2035. Per l'**energia nucleare**, i criteri comprendono norme complete in materia di sicurezza e gestione dei rifiuti.

Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale.

- Le **attività di transizione** sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano, tra l'altro, livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

In quale misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Gli obblighi di informativa e di analisi introdotti dalla tassonomia dell'UE sono molto dettagliati e la loro osservanza richiede la disponibilità di numerosi dati specifici per ogni investimento effettuato dal Portafoglio. Il Gestore e il Subgestore degli investimenti non possono confermare che il Portafoglio abbia effettuato collocamenti in investimenti considerati ecosostenibili ai fini della tassonomia dell'UE. Le informative e la reportistica sull'allineamento della tassonomia verranno sviluppate man mano che il quadro UE si evolverà e gli emittenti renderanno disponibili i dati. Il Gestore e il Subgestore degli investimenti terranno sotto controllo la misura in cui gli investimenti sostenibili con un obiettivo ambientale sono allineati alla tassonomia dell'UE, con il miglioramento della disponibilità e della qualità dei dati.

● Il prodotto finanziario ha investito in attività connesse al gas fossile e/o all'energia nucleare che erano conformi alla tassonomia dell'UE¹?

Sì:

Gas fossile

Energia nucleare

No

¹ Le attività connesse al gas fossile e/o all'energia nucleare sono conformi alla tassonomia dell'UE solo se contribuiscono all'azione di contenimento dei cambiamenti climatici ("mitigazione dei cambiamenti climatici") e non arrecano un danno significativo ad alcuno degli obiettivi della tassonomia dell'UE - cfr. nota esplicativa sul margine sinistro. I criteri completi riguardanti le attività economiche connesse al gas fossile e all'energia nucleare che sono conformi alla tassonomia dell'UE sono stabiliti nel regolamento delegato (UE) 2022/1214 della Commissione.

I due grafici che seguono mostrano in verde la percentuale di investimenti che erano allineati alla tassonomia dell'UE. Poiché non esiste una metodologia adeguata per determinare l'allineamento delle obbligazioni sovrane* alla tassonomia, il primo grafico mostra l'allineamento alla tassonomia in relazione a tutti gli investimenti del prodotto finanziario comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

Le attività allineate alla tassonomia sono espresse in percentuale di:

- **fatturato**: quota di entrate da attività verdi delle imprese beneficiarie degli investimenti.
- **spese in conto capitale (CapEx)**: investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, ad esempio per la transizione verso un'economia verde.
- **spese operative (OpEx)**: attività operative verdi delle imprese beneficiarie degli investimenti.

*Ai fini dei grafici di cui sopra, per "obbligazioni sovrane" si intendono tutte le esposizioni sovrane.

● **Qual era la quota degli investimenti effettuati in attività di transizione e abilitanti?**

N.d.; il Portafoglio non si è impegnato a detenere investimenti allineati alla tassonomia.

● **Qual è l'esito del raffronto della percentuale di investimenti che erano allineati alla tassonomia dell'UE rispetto ai precedenti periodi di riferimento?**

N.d.; il Portafoglio non si è impegnato a detenere investimenti allineati alla tassonomia.

Qual era la quota minima di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?

8,74%

Il Portafoglio ha effettuato collocamenti in investimenti sostenibili con un obiettivo ambientale, i quali non si sono tuttavia impegnati ad allinearsi alla tassonomia.

sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

Qual era la quota di investimenti socialmente sostenibili?

19,34%

Quali investimenti erano compresi nella categoria "Altri", qual era il loro scopo ed esistevano garanzie minime di salvaguardia ambientale o sociale?

La categoria "Altri" comprendeva i restanti investimenti del Portafoglio (inclusi, a titolo esemplificativo ma non esaustivo, i derivati o i titoli garantiti da un pool di attività o crediti simili elencati nel Supplemento al Portafoglio) che non erano allineati alle caratteristiche ambientali o sociali, né considerati investimenti sostenibili.

La sezione "Altri" del Portafoglio è stata detenuta per diversi motivi ritenuti dal Gestore e dal Subgestore degli investimenti vantaggiosi per il Portafoglio quali, a titolo esemplificativo ma non esaustivo, la gestione del rischio, e/o per assicurare liquidità, copertura e garanzia adeguate.

Come indicato in precedenza, il Portafoglio è stato investito in conformità con le politiche di esclusione ESG, su base continuativa. In questo modo si è garantito che gli investimenti effettuati dal Portafoglio fossero in linea con le garanzie internazionali minime di salvaguardia ambientale o sociale, come i Principi del Global Compact delle Nazioni Unite, i Principi guida delle Nazioni Unite su imprese e diritti umani, le Linee guida dell'OCSE e gli Standard OIL.

Il Gestore e il Subgestore degli investimenti ritengono che queste politiche abbiano impedito l'investimento negli emittenti che hanno violato in modo più eclatante gli standard minimi ambientali e/o sociali e abbiano garantito al Portafoglio di promuovere con successo le sue caratteristiche ambientali e sociali.

Le suddette misure hanno assicurato l'adozione di solide garanzie minime di salvaguardia ambientale e sociale.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Il Portafoglio è stato gestito in linea con l'obiettivo di investimento e sono state intraprese le seguenti azioni:

I. Integrazione dell'analisi ESG proprietaria:

I rating del Quoziente ESG di NB sono stati generati per gli emittenti in Portafoglio. Il rating del Quoziente ESG di NB per gli emittenti è stato utilizzato per semplificare l'identificazione di rischi e opportunità nella valutazione complessiva del credito e del valore.

Il Quoziente ESG di NB ha rappresentato una componente chiave dei rating creditizi interni e consentito di individuare i rischi aziendali (compresi quelli ESG) in grado di causare un deterioramento del profilo di credito di un emittente. I rating creditizi interni possono essere aumentati o diminuiti in base al rating del Quoziente ESG di NB, e questo aspetto è stato monitorato dal Gestore e dal Subgestore degli investimenti in quanto componente importante del processo di investimento del Portafoglio.

Integrando l'analisi ESG proprietaria del team di investimento (il Quoziente ESG di NB) nei rating creditizi interni, si è creato un collegamento diretto tra l'analisi delle caratteristiche ESG sostanziali e le attività di costruzione del portafoglio nella strategia di investimento.

Gli emittenti con un Quoziente ESG di NB o un rating di terzi positivo e/o in via di miglioramento hanno avuto maggiori possibilità di essere incluse nel Portafoglio. Sono stati esclusi dal Portafoglio gli emittenti con un basso rating del Quoziente ESG di NB, soprattutto se non affrontato dall'emittente stesso.

II. Impegno:

Il Gestore e il Subgestore degli investimenti si sono impegnati con gli emittenti nel quadro di un solido programma di impegno ESG. Hanno cercato di dare priorità agli impegni costruttivi e di impegnarsi su tematiche (comprese quelle ESG) a loro giudizio finanziariamente rilevanti per l'emittente pertinente. Il Gestore e il Subgestore degli investimenti considerano questo impegno con gli emittenti una parte importante del loro processo di investimento. I progressi in materia di impegno sono stati monitorati a livello centrale nello strumento di tracciamento dell'impegno del Gestore e del Subgestore degli investimenti.

III. Politiche di esclusione settoriale ESG:

Per assicurare il raggiungimento delle caratteristiche ambientali e sociali promosse, il Portafoglio ha applicato le politiche di esclusione ESG sopra menzionate, che hanno posto limitazioni all'universo investibile.

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?

N.d.; l'indice di riferimento del Portafoglio non è stato designato come indice di riferimento. Pertanto, non è coerente con le caratteristiche ambientali o sociali promosse dal Portafoglio.

- ***In che modo l'indice di riferimento differisce da un indice generale di mercato?***
n.d.
- ***Qual è stata la prestazione di questo prodotto finanziario in relazione agli indicatori di sostenibilità per determinare l'allineamento dell'indice di riferimento con le caratteristiche ambientali o sociali promosse?***
n.d.
- ***Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?***
n.d.
- ***Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice generale di mercato?***
n.d.

Gli **indici di riferimento** sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

Modello di informativa periodica per i prodotti finanziari di cui all'articolo 8, paragrafi 1, 2 e 2 bis, del regolamento (UE) 2019/2088 e all'articolo 6, primo comma, del regolamento (UE) 2020/852

Nome del prodotto: Neuberger Berman Short Duration High Yield SDG Engagement Fund (il "Portafoglio")

Identificativo della persona giuridica: 5493009EN8Z7034TFP15

Caratteristiche ambientali e/o sociali

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, a condizione che tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e l'impresa beneficiaria degli investimenti segua pratiche di buona governance.

La **tassonomia dell'UE** è un sistema di classificazione istituito dal Regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non comprende un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere allineati o no alla tassonomia.

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?

Sì

Ha effettuato **investimenti sostenibili con un obiettivo ambientale:** ___%

in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE

in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE

Ha effettuato **investimenti sostenibili con un obiettivo sociale:** ___%

No

Ha **promosso caratteristiche ambientali/sociali (A/S)** e pur non avendo come obiettivo un investimento sostenibile, aveva una quota del(lo) ___% di investimenti sostenibili

con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE

con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE

con un obiettivo sociale

Ha promosso caratteristiche A/S, ma **non ha effettuato alcun investimento sostenibile**

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Il Portafoglio ha promosso le seguenti caratteristiche ambientali e sociali:

- **Caratteristiche ambientali:** biodiversità e uso responsabile del suolo; riduzione dell'impronta di carbonio; emissioni di gas a effetto serra ("**GHG**"); opportunità nelle tecnologie pulite; opportunità nell'edilizia verde; approvvigionamento responsabile di materie prime; pratiche e tendenze di riciclaggio; emissioni tossiche e rifiuti; gestione dei rifiuti e gestione idrica.

Al fine di allineare il Portafoglio all'obiettivo di azzeramento delle emissioni nette, il Subgestore degli investimenti ha promosso e continua a promuovere la riduzione dell'impronta di carbonio del Portafoglio per quanto riguarda le emissioni di gas a effetto serra di ambito 1, 2 e di ambito rilevante 3,¹ per realizzare l'ambizione del Portafoglio di conseguire una riduzione del 50% entro il 2030 rispetto allo scenario di riferimento del 2019 e conseguenti cali fino a raggiungere l'azzeramento delle emissioni nette entro il 2050. Lo scenario di riferimento 2019 potrebbe essere ricalcolato man mano che la qualità e le informative si amplieranno nel tempo, in particolare per quanto riguarda le emissioni di ambito 3.

- **Caratteristiche sociali:** accesso ai finanziamenti; accesso alla sanità; accesso ai farmaci; etica aziendale e trasparenza dei rapporti con i governi; sicurezza chimica; rapporti con le comunità; approvvigionamento controverso; comportamento aziendale; gestione della sicurezza e degli effetti collaterali dei farmaci; salute e nutrizione; salute e sicurezza; sviluppo del capitale umano; gestione del lavoro; riservatezza e sicurezza dei dati; sicurezza e qualità dei prodotti; qualità delle cure e soddisfazione del paziente.

Il Subgestore degli investimenti ha mantenuto un rating ESG medio del Portafoglio superiore a quello del mercato high yield USA generale, rappresentato dall'indice ICE BofA U.S. High Yield, valutato sulla base di rating ESG di terzi comunicati da un fornitore esterno riconosciuto. Questo calcolo si è basato sul rating ESG del Portafoglio in ciascuna delle quattro chiusure dei trimestri civili nel periodo di riferimento 2022. Il Portafoglio è stato gestito attivamente e l'indice ICE BofA U.S. High Yield è stato utilizzato esclusivamente ai fini del confronto dei rating ESG e della riduzione dell'intensità di carbonio.

La prestazione relativa a queste caratteristiche ambientali e sociali è stata misurata mediante il Quoziente ESG di NB ed è di seguito riportata in forma aggregata.

● Qual è stata la prestazione degli indicatori di sostenibilità?

Nell'ambito del processo di investimento, il Subgestore degli investimenti ha considerato diversi indicatori di sostenibilità per misurare le caratteristiche ambientali e/o sociali promosse dal Portafoglio. Gli indicatori di sostenibilità sono elencati di seguito:

1. Quoziente ESG di NB:

Il sistema proprietario di rating ESG di Neuberger Berman (il "**Quoziente ESG di NB**") è costruito intorno al concetto di rischio e opportunità ESG specifici del settore e produce un rating ESG complessivo per gli emittenti valutandoli rispetto a determinate metriche ESG.

Il Quoziente ESG di NB si basa sulla matrice di rilevanza proprietaria di NB, focalizzata sulle caratteristiche ESG che sono state considerate come i più probabili fattori rilevanti del rischio e delle opportunità ESG per ogni settore. Ogni criterio settoriale è stato costruito usando dati ESG di terzi e ricavati internamente e integrati da un'analisi qualitativa interna, avvalendosi della significativa esperienza settoriale del team di analisti del Portafoglio. La matrice di rilevanza di NB ha

Gli indicatori di sostenibilità misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

¹ Le emissioni di ambito 1 sono emissioni dirette provenienti da fonti di proprietà di o controllate da un emittente (come le emissioni create direttamente dai processi aziendali o dai veicoli di proprietà dell'emittente). Le emissioni di ambito 2 sono emissioni indirette derivanti dalla generazione di elettricità, vapore, riscaldamento e raffreddamento consumati dall'emittente. Le emissioni di ambito 3 sono tutte le altre emissioni indirette generate nella catena del valore di un emittente (come le emissioni dei prodotti o dei servizi consumati dall'emittente, lo smaltimento dei rifiuti, il pendolarismo dei dipendenti, la distribuzione e il trasporto dei suoi prodotti o investimenti).

permesso al Subgestore degli investimenti di ricavare il rating del Quoziente ESG di NB, per confrontare le caratteristiche ambientali e sociali di settori ed emittenti. Ogni criterio settoriale è stato costruito usando dati ESG di terzi e ricavati internamente e integrati da un'analisi qualitativa interna, avvalendosi della significativa esperienza settoriale del team di analisti del Subgestore degli investimenti.

Il Quoziente ESG di NB ha assegnato una ponderazione alle caratteristiche ambientali, sociali e di governance di ogni settore per ricavare il rating del Quoziente ESG di NB per gli emittenti. Gli emittenti con un Quoziente ESG di NB positivo e/o in via di miglioramento hanno avuto maggiori possibilità di essere incluse nel Portafoglio. Sono stati esclusi dal Portafoglio gli emittenti con un basso rating del Quoziente ESG di NB, soprattutto se non affrontato dall'emittente stesso. Il Subgestore degli investimenti ha inoltre cercato di dare priorità agli impegni costruttivi con il 90% degli emittenti.

31 dicembre 2022	Rating	Copertura combinata
Quoziente ESG di NB	57	100%
Dati di terzi	5,3	

Per quanto riguarda il rating del Quoziente NB di ESG, si usa un punteggio compreso tra 1 e 100, dove 1 rappresenta la valutazione minima e 100 quella massima. Questo Portafoglio non ha un rating minimo del Quoziente ESG di NB. Il rating medio del Quoziente ESG di NB è una media ponderata e non rappresenta un rating della strategia del Portafoglio in sé.

Per misurare le caratteristiche ambientali e sociali promosse dal Portafoglio sono stati usati anche dati di terzi. I rating dei dati di terzi vanno da 0 a 10, dove 0 è la valutazione minima e 10 quella massima.

2. Reportistica sull'impegno:

Di seguito il Subgestore ha inserito una sintesi degli impegni intrapresi. I dati seguenti coprono il periodo dal 1° gennaio 2022 al 31 dicembre 2022.

Il Subgestore degli investimenti si è impegnato con 114 imprese detenute dal Portafoglio nel 2022.
Il 65% degli impegni del Subgestore degli investimenti è stato di natura individuale (sia a distanza che di persona).
Il 48% degli impegni del Subgestore degli investimenti ha coinvolto personale a livello di CEO / CFO.
Gli obiettivi di impegno del Subgestore degli investimenti hanno riguardato 14 dei 17 Obiettivi complessivi di sviluppo sostenibile delle Nazioni Unite ("SDG").
Il 16% delle imprese interessate dagli impegni nel periodo di riferimento 2022 ha conseguito interamente l'obiettivo di impegno oppure ha intrapreso azioni parziali volte a conseguire il rispettivo obiettivo di impegno.

Ulteriori informazioni sugli impegni intrapresi dal Subgestore degli investimenti sono disponibili qui https://www.nb.com/handlers/documents.ashx?item_id=454c682e-ea4b-4406-af2f-b6ef65c2ef00

3. Climate Value-at-Risk:

Nel periodo di riferimento, il Climate Value-at-Risk ("CVaR") ha misurato l'esposizione ai rischi climatici fisici e di transizione. Il CVaR è uno strumento di analisi di scenario che valuta i rischi economici nel quadro di scenari di gradi diversi (ossia, l'entità di riscaldamento previsto) e potenziali contesti normativi in paesi

differenti.

Il CVaR è un tipo di analisi di scenario che è definito come il valore attuale dei costi futuri aggregati dei rischi politici, dei profitti da opportunità tecnologiche, nonché dei costi e dei profitti di eventi meteorologici estremi espressi in percentuale del valore di mercato di un titolo o del portafoglio in funzione dello scenario climatico previsto.

Calcolando i rischi finanziari derivanti dai cambiamenti climatici per ciascun titolo e per ogni scenario, il CVaR fornisce un quadro che aiuta a quantificare e comprendere tali rischi. La metrica CVaR approfondisce l'analisi della stima in caso di stress climatico delle attività sulla base di scenari di gradi specifici, offrendo una valutazione di quanto un titolo potrebbe perdere o guadagnare a causa dell'impatto dei cambiamenti climatici.

Al 31 dicembre 2022 il CVaR aveva previsto la possibilità che uno scenario climatico di riscaldamento potesse causare un deprezzamento dell'12,37% delle attività in esame.

Questa analisi intende offrire una panoramica generale dello stile e del processo di investimento del team.

Su base globale, i risultati sono stati valutati dai gestori e analisti di portafoglio del Subgestore degli investimenti. L'analisi dello scenario è servita come punto di partenza per un'ulteriore analisi bottom-up e per individuare i potenziali rischi legati al clima da affrontare tramite l'impegno dell'emittente.

Considerate le limitazioni dei dati, il CVaR non è stato applicato a tutti gli emittenti in Portafoglio ma solo a coloro per i quali il Subgestore degli investimenti disponeva di dati sufficienti e affidabili. Il Portafoglio aveva una copertura CVaR del 60%.

L'analisi CVaR è rivista almeno una volta all'anno.

4. Politiche di esclusione ESG:

Per assicurare il raggiungimento delle caratteristiche ambientali o sociali promosse, il Portafoglio non ha investito in titoli di emittenti le cui attività violassero o non fossero coerenti con la Politica di Neuberger Berman in materia di armi controverse, la Politica di Neuberger Berman in materia di coinvolgimento nel carbone termico e la Politica di Neuberger Berman in materia di esclusione sostenibile. Oltre all'applicazione della Politica di Neuberger Berman in materia di coinvolgimento nel carbone termico, il Subgestore degli investimenti ha vietato l'apertura di nuove posizioni di investimento in titoli di emittenti che (i) ottengono più del 25% dei loro ricavi dall'estrazione di carbone termico; o (ii) stanno espandendo la produzione di energia da carbone termico. Inoltre, dal 6 aprile 2022 gli strumenti in Portafoglio non hanno investito in titoli di emittenti le cui attività siano state identificate come in violazione della Politica di Neuberger Berman in materia di standard globali, che esclude i soggetti identificati come trasgressori di quanto segue: (i) i principi del Global Compact delle Nazioni Unite ("**Principi del Global Compact delle Nazioni Unite**"), (ii) le linee guida OCSE destinate alle imprese multinazionali ("**Linee guida dell'OCSE**"), (iii) i principi guida delle Nazioni Unite su imprese e diritti umani ("**Principi guida delle Nazioni Unite su imprese e diritti umani**") e (iv) gli standard internazionali del lavoro ("**Standard OIL**"). Il Portafoglio ha escluso gli emittenti coinvolti in attività e comportamenti controversi, come i produttori di pellicce, il gioco d'azzardo e l'energia nucleare.

Nell'applicare le esclusioni ESG al Portafoglio, il Subgestore degli investimenti ha usato dati di terzi per individuare gli emittenti che violano le esclusioni ESG elencate sopra. Laddove possibile, il Subgestore degli investimenti ha cercato di sovrapporre questi dati di terzi con le competenze qualitative dei propri analisti di ricerca per ottenere un quadro attuale e olistico dell'emittente. Il Subgestore degli investimenti ha discusso e dibattuto le differenze tra i trasgressori individuati dai dati di terzi e quelli identificati a seguito della sua ricerca, che si è basata sui dati del Quoziente ESG di NB e sugli impegni diretti con l'emittente.

● **...e rispetto ai periodi precedenti?**

N.d.; questo è il primo periodo di riferimento.

● **Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario in parte ha realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?**

N.d.; il Portafoglio non si è impegnato a detenere investimenti sostenibili.

● **In che modo gli investimenti sostenibili che il prodotto finanziario in parte ha realizzato non hanno arrecato un danno significativo ad alcun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?**

N.d.; il Portafoglio non si è impegnato a detenere investimenti sostenibili.

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

— **In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?**

n.d.

— **Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:**

Benché il Portafoglio non si sia impegnato a detenere investimenti sostenibili, dal 6 aprile 2022 il Subgestore degli investimenti non ha investito in emittenti le cui attività siano state individuate come in violazione delle Linee guida dell'OCSE, dei Principi del Global Compact delle Nazioni Unite, degli Standard OIL e dei Principi guida delle Nazioni Unite su imprese e diritti umani, recepiti dalla Politica di Neuberger Berman in materia di standard globali.

La Tassonomia dell'UE stabilisce il principio «non arrecare un danno significativo», in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'Unione.

Il principio «non arrecare un danno significativo» si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri UE per le attività economiche ecosostenibili.

Neppure eventuali altri investimenti sostenibili devono arrecare un danno significativo ad obiettivi ambientali o sociali.

N.d.; il Portafoglio non si è impegnato a detenere investimenti allineati alla tassonomia.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

Una selezione dei principali indicatori di effetti negativi è stata considerata direttamente (ad es. tramite le politiche di esclusione ESG elencate sopra) e/o indirettamente (ad es. nell'ambito della valutazione degli emittenti da parte del Subgestore degli investimenti) per tutto il periodo di riferimento 2022.

Dal 28 novembre 2022, il Subgestore degli investimenti ha considerato i seguenti principali effetti negativi, vale a dire: emissioni di gas a effetto serra, impronta di carbonio, intensità dei gas a effetto serra, esposizione ai combustibili fossili, diversità di genere nel consiglio, violazioni dei Principi del Global Compact delle Nazioni Unite e delle Linee guida dell'OCSE e armi controverse (i "PAI a livello di prodotto").

La considerazione dei PAI a livello di prodotto è stata limitata dalla disponibilità (secondo il parere soggettivo del Subgestore degli investimenti) di una copertura adeguata, affidabile e verificabile dei dati. Il Subgestore degli investimenti ha utilizzato dati di terzi e dati surrogati insieme alla ricerca interna per considerare i suddetti PAI a livello di prodotto.

Il Subgestore degli investimenti ha considerato i PAI a livello di prodotto mediante una combinazione di:

- Monitoraggio del Portafoglio, in particolare nel caso in cui sia sceso sotto le soglie di tolleranza quantitative e qualitative stabilite dal Subgestore degli investimenti per ogni PAI a livello di prodotto;
- Gestione e/o definizione di obiettivi di impegno nel caso in cui il Portafoglio sia sceso sotto le soglie di tolleranza quantitative e qualitative stabilite dal Subgestore degli investimenti per un PAI a livello di prodotto; e
- Applicazione delle politiche di esclusione ESG sopra menzionate, che ha compreso la considerazione di vari PAI a livello di prodotto.

Quali sono stati i principali investimenti di questo prodotto finanziario?

Il Subgestore degli investimenti ha usato la ripartizione per settori economici basata sulla classificazione statistica delle attività economiche dell'UE ("NACE") per identificare i settori economici dei 15 principali investimenti del Portafoglio. I dati seguenti sono aggiornati al 31 dicembre 2022.

L'elenco comprende gli investimenti che hanno costituito la **quota maggiore degli investimenti del prodotto finanziario durante il periodo di riferimento, ossia: 1° gennaio 2022 – 31 dicembre 2022**

Investimenti di maggiore entità	Settore	% di attivi	Paese
AMERICAN AIRLINES INC 144A	H – Trasporto e magazzinaggio	1,9%	Stati Uniti
APX GROUP INC 144A	K – Attività finanziarie e assicurative	1,5%	Stati Uniti
IRON MOUNTAIN INC 144A	L – Attività immobiliari	1,4%	Stati Uniti
GENESIS ENERGY LP	C – Attività manifatturiere	1,4%	Stati Uniti
SUNNOVA ENERGY CORP 144A	D – Fornitura di energia elettrica, gas, vapore e aria condizionata	1,3%	Stati Uniti
PERFORMANCE FOOD GROUP INC 144A	G – Commercio all'ingrosso e al dettaglio; riparazione di autoveicoli e motocicli	1,3%	Stati Uniti
GARDA WORLD SECURITY CORP 144A	N – Attività amministrative e di servizi di supporto	1,1%	Canada
BUCKEYE PARTNERS LP	H – Trasporto e magazzinaggio	1,0%	Stati Uniti
ASSURED PARTNERS INC 144A	K – Attività finanziarie e assicurative	1,0%	Stati Uniti
ALLIANT HOLDINGS INTERMEDIATE LLC 144A	K – Attività finanziarie e assicurative	1,0%	Stati Uniti
BANIJAY ENTERTAINMENT SAS 144A	J – Servizi di informazione e comunicazione	1,0%	Francia
CSC HOLDINGS LLC	J – Servizi di informazione e comunicazione	0,9%	Stati Uniti
TRIVIUM PACKAGING FINANCE BV 144A	K – Attività finanziarie e assicurative	0,9%	Paesi Bassi

ANTERO MIDSTREAM PARTNERS LP 144A	H - Trasporto e magazzinaggio	0,9%	Stati Uniti
XHR LP 144A	L - Attività immobiliari	0,9%	Stati Uniti

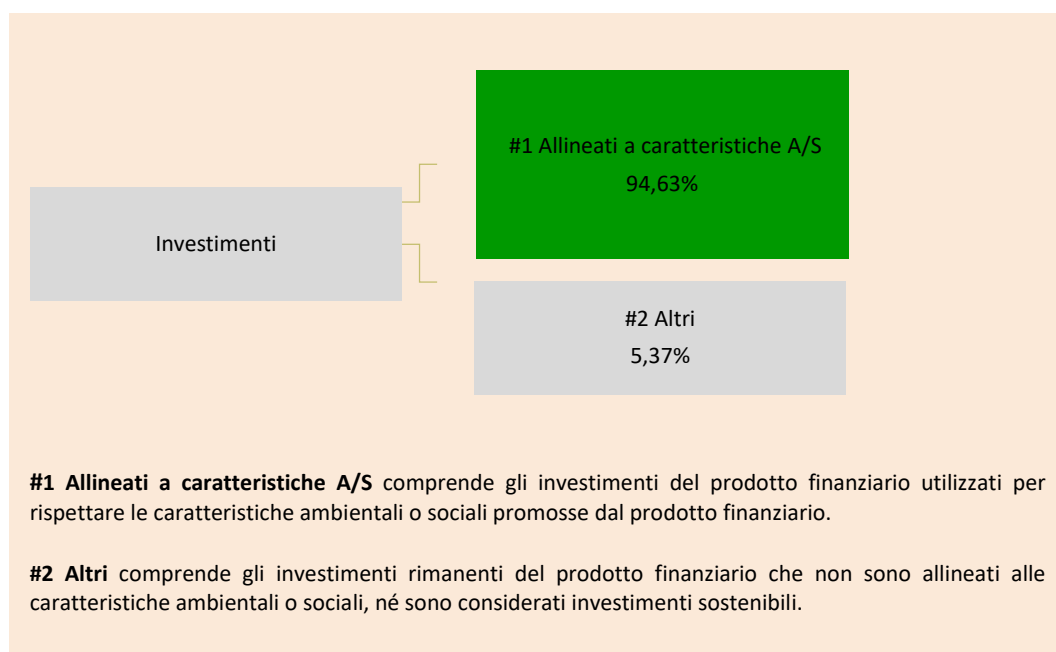

Qual è stata la quota degli investimenti in materia di sostenibilità?

L'allocazione degli attivi descrive la quota di investimenti in attivi specifici.

Qual è stata l'allocazione degli attivi?

Il Subgestore degli investimenti ha calcolato la percentuale di investimenti allineati alle caratteristiche ambientali e/o sociali promosse dal Portafoglio in riferimento alla percentuale di emittenti presenti nel Portafoglio: i) che abbiano ottenuto un rating del Quoziente ESG di NB o un rating di terzi equivalente all'ESG e usato nell'ambito del processo di costruzione del portafoglio e di gestione degli investimenti del Portafoglio; e/o ii) con cui il Subgestore degli investimenti si sia impegnato direttamente. Questo calcolo si è basato su una valutazione mark-to-market del Portafoglio e potrebbe avvalersi di dati incompleti o imprecisi dell'emittente o di terzi. Per il solo periodo di riferimento 2022, il calcolo si è basato sulle posizioni in Portafoglio al 31 dicembre 2022, essendo l'unica chiusura trimestrale del periodo di riferimento successiva alla pubblicazione dell'Allegato SFDR del Portafoglio che illustra la sua allocazione degli attivi pianificata. Per tutti i periodi di riferimento successivi, questo calcolo si baserà sulla media delle quattro chiusure trimestrali.

In quali settori economici sono stati effettuati gli investimenti?

Dati al 31 dicembre 2022	
Settore economico – NACE	% di attivi
B – Attività estrattiva	5,36%
C – Attività manifatturiere	14,09%
D – Fornitura di energia elettrica, gas, vapore e aria condizionata	3,45%
E – Fornitura di acqua; reti fognarie, attività di trattamento dei rifiuti e risanamento	1,01%
F – Costruzioni	1,80%
G – Commercio all'ingrosso e al dettaglio; riparazione di autoveicoli e motocicli	4,84%
H – Trasporto e magazzinaggio	10,98%
I – Servizi di alloggio e di ristorazione	1,39%
J – Servizi di informazione e comunicazione	13,48%
K – Attività finanziarie e assicurative	19,09%
L – Attività immobiliari	5,14%
M – Attività professionali, scientifiche e tecniche	0,60%
N – Attività amministrative e di servizi di supporto	8,47%
P – Istruzione	0,00%
Q – Sanità e assistenza sociale	2,86%
R – Attività artistiche, di intrattenimento e divertimento	2,70%
S – Altre attività di servizi	0,15%
Nessuna	4,60%

Per conformarsi alla tassonomia dell'UE, i criteri per il **gas fossile** comprendono limitazioni delle emissioni e il passaggio all'energia da fonti totalmente rinnovabili o ai combustibili a basse emissioni di carbonio entro la fine del 2035. Per l'**energia nucleare**, i criteri comprendono norme complete in materia di sicurezza e gestione dei rifiuti.

Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale.

- Le **attività di transizione** sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano, tra l'altro, livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

In quale misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Gli obblighi di informativa e di analisi introdotti dalla tassonomia dell'UE sono molto dettagliati e la loro osservanza richiede la disponibilità di numerosi dati specifici per ogni investimento effettuato dal Portafoglio. Il Subgestore degli investimenti non può confermare che il Portafoglio abbia effettuato collocamenti in investimenti considerati ecosostenibili ai fini della tassonomia dell'UE. Le informative e la reportistica sull'allineamento della tassonomia verranno sviluppate man mano che il quadro UE si evolverà e gli emittenti renderanno disponibili i dati. Il Subgestore degli investimenti terrà sotto controllo la misura in cui gli investimenti sostenibili con un obiettivo ambientale sono allineati alla tassonomia dell'UE, con il miglioramento della disponibilità e della qualità dei dati.

● Il prodotto finanziario ha investito in attività connesse al gas fossile e/o all'energia nucleare che erano conformi alla tassonomia dell'UE²?

Sì:

Gas fossile

Energia nucleare

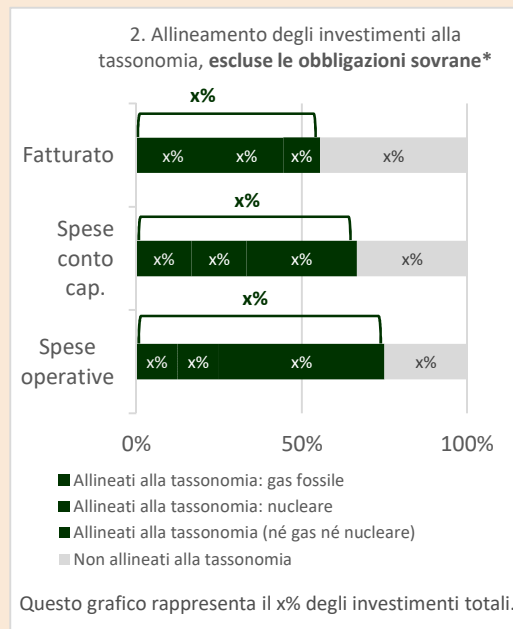

No

² Le attività connesse al gas fossile e/o all'energia nucleare sono conformi alla tassonomia dell'UE solo se contribuiscono all'azione di contenimento dei cambiamenti climatici ("mitigazione dei cambiamenti climatici") e non arrecano un danno significativo ad alcuno degli obiettivi della tassonomia dell'UE - cfr. nota esplicativa sul margine sinistro. I criteri completi riguardanti le attività economiche connesse al gas fossile e all'energia nucleare che sono conformi alla tassonomia dell'UE sono stabiliti nel regolamento delegato (UE) 2022/1214 della Commissione.

I due grafici che seguono mostrano in verde la percentuale di investimenti che erano allineati alla tassonomia dell'UE. Poiché non esiste una metodologia adeguata per determinare l'allineamento delle obbligazioni sovrane* alla tassonomia, il primo grafico mostra l'allineamento alla tassonomia in relazione a tutti gli investimenti del prodotto finanziario comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

Le attività allineate alla tassonomia sono espresse in percentuale di:

- **fatturato**: quota di entrate da attività verdi delle imprese beneficiarie degli investimenti.
- **spese in conto capitale (CapEx)**: investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, ad esempio per la transizione verso un'economia verde.
- **spese operative (OpEx)**: attività operative verdi delle imprese beneficiarie degli investimenti.

*Ai fini dei grafici di cui sopra, per "obbligazioni sovrane" si intendono tutte le esposizioni sovrane.

- **Qual era la quota degli investimenti effettuati in attività di transizione e abilitanti?**

N.d.; il Portafoglio non si è impegnato a detenere investimenti allineati alla tassonomia.

- **Qual è l'esito del raffronto della percentuale di investimenti che erano allineati alla tassonomia dell'UE rispetto ai precedenti periodi di riferimento?**

N.d.; il Portafoglio non si è impegnato a detenere investimenti allineati alla tassonomia.

sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

Qual era la quota minima di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?

N.d.; il Portafoglio non si è impegnato a detenere investimenti sostenibili.

Qual era la quota di investimenti socialmente sostenibili?

N.d.; il Portafoglio non si è impegnato a detenere investimenti sostenibili.

Quali investimenti erano compresi nella categoria "Altri", qual era il loro scopo ed esistevano garanzie minime di salvaguardia ambientale o sociale?

La categoria "Altri" comprendeva i restanti investimenti del Portafoglio (inclusi, a titolo esemplificativo ma non esaustivo, i derivati o i titoli garantiti da un pool di attività o crediti simili elencati nel Supplemento al Portafoglio) che non erano allineati alle caratteristiche ambientali o sociali, né considerati investimenti sostenibili.

La sezione "Altri" del Portafoglio è stata detenuta per diversi motivi ritenuti dal Subgestore degli investimenti vantaggiosi

per il Portafoglio quali, a titolo esemplificativo ma non esaustivo, la gestione del rischio, e/o per assicurare liquidità, copertura e garanzia adeguate.

Come indicato in precedenza, il Portafoglio è stato investito in conformità con le politiche di esclusione ESG, su base continuativa. In questo modo si è garantito che gli investimenti effettuati dal Portafoglio fossero in linea con le garanzie internazionali minime di salvaguardia ambientale o sociale, come i Principi del Global Compact delle Nazioni Unite, i Principi guida delle Nazioni Unite su imprese e diritti umani, le Linee guida dell'OCSE e gli Standard OIL.

Il Subgestore degli investimenti ha ritenuto che queste politiche impediscano l'investimento negli emittenti che hanno violato in modo più eclatante gli standard minimi ambientali e/o sociali e abbiano garantito al Portafoglio di promuovere con successo le sue caratteristiche ambientali e sociali.

Le suddette misure hanno assicurato l'adozione di solide garanzie minime di salvaguardia ambientale e sociale.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Il Portafoglio è stato gestito in linea con l'obiettivo di investimento e sono state intraprese le seguenti azioni:

I. Integrazione dell'analisi ESG proprietaria:

I rating del Quoziente ESG di NB sono stati generati per gli emittenti in Portafoglio. Il rating del Quoziente ESG di NB per gli emittenti è stato utilizzato per semplificare l'identificazione di rischi e opportunità nella valutazione complessiva del credito e del valore.

Il Quoziente ESG di NB ha rappresentato una componente chiave dei rating creditizi interni e consentito di individuare i rischi aziendali (compresi quelli ESG) in grado di causare un deterioramento del profilo di credito di un emittente. I rating creditizi interni possono essere aumentati o diminuiti in base al rating del Quoziente ESG di NB, e questo aspetto è stato monitorato dal Subgestore degli investimenti in quanto componente importante del processo di investimento del Portafoglio.

Integrando l'analisi ESG proprietaria del team di investimento (il Quoziente ESG di NB) nei rating creditizi interni, si è creato un collegamento diretto tra l'analisi delle caratteristiche ESG sostanziali e le attività di costruzione del portafoglio nella strategia di investimento.

Gli emittenti con un Quoziente ESG di NB o un rating di terzi positivo e/o in via di miglioramento hanno avuto maggiori possibilità di essere incluse nel Portafoglio. Sono stati esclusi dal Portafoglio gli emittenti con un basso rating del Quoziente ESG di NB, soprattutto se non affrontato dall'emittente stesso.

II. Impegno:

Il Subgestore degli investimenti si è impegnato con gli emittenti nel quadro di un solido programma di impegno ESG. Hanno cercato di dare priorità agli impegni costruttivi e di impegnarsi su tematiche (comprese quelle ESG) a loro giudizio finanziariamente rilevanti per l'emittente pertinente. Il Subgestore degli investimenti ha considerato questo impegno con gli emittenti una parte importante del suo processo di investimento.

Questo programma si è concentrato su incontri di persona e teleconferenze per comprendere i rischi e le opportunità ESG e valutare le prassi di buona governance degli emittenti societari. Nell'ambito del processo di impegno diretto, il Subgestore degli investimenti stabilisce gli obiettivi che gli emittenti sono chiamati a raggiungere. Questi obiettivi e i progressi degli emittenti rispetto agli stessi sono stati monitorati e tenuti sotto controllo dal Subgestore degli investimenti mediante uno strumento interno di tracciamento dell'impegno di NB (per ulteriori dettagli si rimanda alla precedente sezione relativa alla reportistica sull'impegno).

Il Portafoglio:

- Ha contribuito al conseguimento degli SDG impegnandosi con almeno il 90% degli emittenti societari in azioni incrementali che potessero essere intraprese nell'ambito dei loro prodotti, servizi, attività o processi, allineati a questi obiettivi (oppure dove vi fosse la possibilità di maggiore allineamento a tali obiettivi, a seguito dell'impegno con gli emittenti societari in questione).
- Ha mantenuto un rating ESG medio del Portafoglio superiore a quello del mercato high yield USA generale, rappresentato dall'indice ICE BofA U.S.

High Yield, valutato sulla base di rating ESG di terzi comunicati da un fornitore esterno riconosciuto. Questo calcolo si è basato sul rating ESG del Portafoglio in ciascuna delle quattro chiusure dei trimestri civili nel periodo di riferimento 2022.

Il Subgestore degli investimenti ha usato uno strumento interno per vagliare la probabilità di conseguire il successo dell'impegno con un emittente prima dell'investimento (l'"**Indicatore di potenziale impegno**"). L'Indicatore di potenziale impegno, su una scala di 1-5, ha fornito una valutazione sistematica della disponibilità e della capacità di un emittente di impegnarsi con il Subgestore degli investimenti sul fronte degli SDG. Ad esempio, un emittente giudicato indisponibile o incapace di impegnarsi ha ottenuto un Indicatore di potenziale impegno pari a "1", mentre un emittente disposto a impegnarsi a diventare un leader contribuendo agli SDG ha ottenuto un Indicatore di potenziale impegno pari a "5". Il Subgestore degli investimenti ha dato la priorità agli investimenti in emittenti con un rating dell'Indicatore di potenziale impegno compreso tra "2" e "5". L'Indicatore di potenziale impegno ha considerato una serie diversificata di fattori quali la rilevanza degli SDG per le attività operative di un emittente, le prassi di informativa di un emittente e il rapporto del Subgestore degli investimenti con l'emittente, oltre alle restrizioni finanziarie dell'emittente.

III. Politiche di esclusione settoriale ESG:

Per assicurare il raggiungimento delle caratteristiche ambientali e sociali promosse, il Portafoglio ha applicato le politiche di esclusione ESG sopra menzionate, che hanno posto limitazioni all'universo investibile.

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?

N.d.; il Portafoglio non utilizza alcun indice di riferimento.

- ***In che modo l'indice di riferimento differisce da un indice generale di mercato?***
n.d.
 - ***Qual è stata la prestazione di questo prodotto finanziario in relazione agli indicatori di sostenibilità per determinare l'allineamento dell'indice di riferimento con le caratteristiche ambientali o sociali promosse?***
n.d.
 - ***Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?***
n.d.
-

Gli **indici di riferimento** sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

● ***Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice generale di mercato?***

n.d.

Modello di informativa periodica per i prodotti finanziari di cui all'articolo 8, paragrafi 1, 2 e 2 bis, del regolamento (UE) 2019/2088 e all'articolo 6, primo comma, del regolamento (UE) 2020/852

Nome del prodotto: Neuberger Berman US Long Short Equity Fund (il "Portafoglio")

Identificativo della persona giuridica: 54930034RCIO16VO2Z23

Caratteristiche ambientali e/o sociali

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?

<input checked="" type="radio"/> <input type="radio"/> <input type="checkbox"/> Sì	<input type="radio"/> <input checked="" type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo ambientale : ___% <input type="checkbox"/> in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE	<input type="checkbox"/> Ha promosso caratteristiche ambientali/sociali (A/S) e pur non avendo come obiettivo un investimento sostenibile, aveva una quota del(lo) ___% di investimenti sostenibili <input type="checkbox"/> con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> con un obiettivo sociale
<input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo sociale : ___%	<input checked="" type="checkbox"/> Ha promosso caratteristiche A/S, ma non ha effettuato alcun investimento sostenibile

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, a condizione che tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e l'impresa beneficiaria degli investimenti segua pratiche di buona governance.

La **tassonomia dell'UE** è un sistema di classificazione stabilito dal Regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non comprende un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere allineati o no alla tassonomia.

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Il Portafoglio ha promosso le seguenti caratteristiche ambientali e sociali:

- **Caratteristiche ambientali:** qualità dell'aria, biodiversità e uso del suolo, gestione dell'energia, esposizione al rischio ambientale, risparmio di carburante, emissioni di gas a effetto serra ("GHG"), opportunità nelle tecnologie pulite, emissioni tossiche e rifiuti, gestione idrica, gestione del ciclo di vita degli imballaggi, approvvigionamento dei materiali e gestione del ciclo di vita dei prodotti.
- **Caratteristiche sociali:** accesso ai finanziamenti; accesso alla sanità; relazioni con la comunità; riservatezza e sicurezza dei dati; incentivi per i dipendenti e assunzione di rischi; salute e nutrizione; salute e sicurezza; sviluppo del capitale umano; gestione del lavoro; sicurezza e integrità dei prodotti; standard lavorativi della catena di approvvigionamento; diversità e inclusione della forza lavoro; trasparenza dei prezzi e marketing responsabile.

La prestazione relativa a queste caratteristiche ambientali e sociali è stata misurata mediante il Quoziente ESG di NB ed è di seguito riportata in forma aggregata.

● **Qual è stata la prestazione degli indicatori di sostenibilità?**

Nell'ambito del processo di investimento, il Subgestore degli investimenti ha considerato diversi indicatori di sostenibilità per misurare le caratteristiche ambientali e/o sociali promosse dal Portafoglio. Gli indicatori di sostenibilità sono elencati di seguito:

1. Quoziente ESG di NB:

Il sistema proprietario di rating ESG di Neuberger Berman (il "Quoziente ESG di NB") è costruito intorno al concetto di rischio e opportunità ESG specifici del settore e produce un rating ESG complessivo per le imprese valutandole rispetto a determinate metriche ESG.

Questo quadro ESG è stato applicato al lato lungo del Portafoglio, che ha un orizzonte temporale pluriennale. Le posizioni corte del Subgestore degli investimenti sono espresse tramite derivati, pertanto non si è impegnato a considerare i fattori ESG. L'allocazione long/short prevista del Portafoglio è descritta nella sezione del Supplemento intitolata "Approccio agli investimenti".

Il Quoziente ESG di NB si basa sulla matrice di rilevanza proprietaria di Neuberger Berman ("NB"), focalizzata sulle caratteristiche ESG che sono state considerate come i più probabili fattori rilevanti del rischio e delle opportunità ESG per ogni settore. Ogni criterio settoriale è stato costruito usando dati ESG di terzi e tratti internamente e integrati da un'analisi qualitativa interna, avvalendosi della significativa esperienza settoriale del team di analisti del pertinente Subgestore degli investimenti. La matrice di rilevanza di NB ha permesso al Subgestore degli investimenti di ricavare il rating del Quoziente ESG di NB, per confrontare le caratteristiche ambientali e sociali di settori e imprese.

Il Quoziente ESG di NB ha assegnato una ponderazione ai fattori ambientali, sociali e di governance di ogni settore per ricavare il rating del Quoziente ESG di NB. Le imprese con un Quoziente ESG di NB o un rating di terzi positivo e/o in via di miglioramento hanno avuto maggiori possibilità di essere incluse nel lato lungo del Portafoglio. La probabilità di rimozione dall'universo di investimento lungo o dal Portafoglio lungo è stata maggiore per un'impresa con un basso Quoziente ESG di NB o rating di terzi, soprattutto se non affrontato dall'impresa stessa. Il Subgestore degli investimenti ha inoltre cercato di dare priorità agli impegni costruttivi con le imprese che avevano un basso Quoziente ESG di NB o rating di terzi, al fine di valutare se i timori venivano affrontati in modo adeguato.

Gli indicatori di sostenibilità misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

31 dicembre 2022	Rating	Copertura combinata
Quoziente ESG di NB	ES: B G: 2,2	98%
Dati di terzi	6,5	

Per valutare il Quoziente ESG di NB, nel caso dei rating ambientali e sociali (ES) si usano i quartili da A a D, dove A è la valutazione massima (quartile superiore) e D quella minima (quartile inferiore). Per valutare la governance (G) si usano i quartili da 1 a 4, dove 1 è la valutazione massima e 4 quella minima. Questo Portafoglio non ha un rating minimo del Quoziente ESG di NB. Il rating medio del Quoziente ESG di NB è una media ponderata e non rappresenta un rating della strategia del Portafoglio in sé.

Per misurare le caratteristiche ambientali e sociali promosse dal Portafoglio sono stati usati anche dati di terzi. I rating dei dati di terzi vanno da 0 a 10, dove 0 è la valutazione minima e 10 quella massima.

2. Climate Value-at-Risk:

Nel periodo di riferimento, il Climate Value-at-Risk (“**CVaR**”) ha misurato l'esposizione ai rischi climatici fisici e di transizione. Il CVaR è uno strumento di analisi di scenario che valuta i rischi economici nel quadro di scenari di gradi diversi (ossia, l'entità di riscaldamento previsto) e potenziali contesti normativi in paesi differenti.

Il CVaR è un tipo di analisi di scenario che è definito come il valore attuale dei costi futuri aggregati dei rischi politici, dei profitti da opportunità tecnologiche, nonché dei costi e dei profitti di eventi meteorologici estremi espressi in percentuale del valore di mercato di un titolo o del portafoglio in funzione dello scenario climatico previsto.

Calcolando i rischi finanziari derivanti dai cambiamenti climatici per ciascun titolo e per ogni scenario, il CVaR fornisce un quadro che aiuta a quantificare e comprendere tali rischi. La metrica CVaR approfondisce l'analisi della stima in caso di stress climatico delle attività sulla base di scenari di gradi specifici, offrendo una valutazione di quanto un titolo potrebbe perdere o guadagnare a causa dell'impatto dei cambiamenti climatici.

Al 31 dicembre 2022 il CVaR aveva previsto la possibilità che uno scenario climatico di riscaldamento potesse causare un deprezzamento dell'16,60% delle attività in esame.

Questa analisi intende offrire una panoramica generale dello stile e del processo di investimento del team.

Su base globale, i risultati sono stati valutati dai gestori e analisti di portafoglio del Subgestore degli investimenti. L'analisi dello scenario è servita come punto di partenza per un'ulteriore analisi bottom-up e per individuare i potenziali rischi legati al clima da affrontare tramite l'impegno delle imprese.

Considerate le limitazioni dei dati, il CVaR non è stato applicato a tutte le imprese in Portafoglio ma solo alle imprese per le quali il Subgestore degli investimenti disponeva di dati sufficienti e affidabili. Il Portafoglio aveva una copertura CVaR del 59%.

L'analisi CVaR è rivista almeno una volta all'anno.

3. Politiche di esclusione ESG:
