

Rendicontazione sulla Trasparenza della promozione delle caratteristiche ambientali o sociali e degli investimenti sostenibili nelle relazioni periodiche (ai sensi dell'art. 65 del Regolamento delegato (UE) 2022/1288 che integra l'art. 11 del Regolamento (UE) 2019/2088)

CREDEMVITA COLLECTION PRO - 60083

Gentile Cliente,

le comunichiamo che, nell'anno di riferimento della rendicontazione 2022, la Sua Polizza ha promosso, tra le altre, caratteristiche ambientali o sociali qualora i premi da lei corrisposti siano stati, in tutto o in parte, investiti in fondi d'investimento qualificati come prodotti finanziari che promuovono caratteristiche ambientali o sociali o che hanno come obiettivo investimenti sostenibili ai sensi dell'art. 8 o 9 del Regolamento (UE) 2019/2088 ("SFDR").

Pertanto, ai fini della rendicontazione periodica sulla trasparenza della promozione delle caratteristiche ambientali o sociali degli investimenti sostenibili per i prodotti assicurativi di investimento ai sensi dell'art. 11 del SFDR (la "Rendicontazione ESG"), seguono in allegato:

- la lista delle opzioni ESG disponibili al 31/12/2022 nella sua Polizza (Allegato 1);
- la rendicontazione ESG di ciascuna delle opzioni di cui al punto precedente, laddove attualmente disponibile (Allegato 2). Le tempistiche di produzione delle rendicontazioni ESG delle opzioni sottostanti a questa polizza, infatti, dipendono dal gestore di ciascuna opzione e, per questo, alcune rendicontazioni potrebbero non essere ancora state pubblicate. Sarà nostra premura aggiornare questo documento, che rimarrà consultabile sull'Area Riservata, per aggiungere le rendicontazioni ESG che saranno tempo per tempo rese disponibili.

Si precisa che la promozione delle caratteristiche ESG da parte della Polizza è subordinato all'effettiva e continuata detenzione degli investimenti nei fondi di cui agli art. 8 e/o art. 9 del SFDR. Le ricordiamo che può in ogni caso trovare la lista di tutte le specifiche opzioni (anche non ESG) in cui la sua Polizza attualmente investe all'interno del Documento Unico di Rendicontazione che le è reso disponibile su base annuale, al fine di darle una informativa circa l'andamento del portafoglio riferito alla sua Polizza.

Le ricordiamo che per qualsiasi informazione il suo consulente di riferimento è a completa disposizione.

Rendicontazioni SFDR

Product name:

Allianz Climate Transition

Legal entity identifier: 52990080FLOXFRNVGP49

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 56.4% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Climate Transition (the «Sub-Fund») promoted environmental, social, human rights, governance, and business behaviour factors (this domain does not apply for sovereigns issued by a Sovereign Entity) through integration of a best-in-class approach into the investment process. This encompassed the evaluation of corporate or sovereign issuers based on an SRI Rating which is used to construct the portfolio.

In addition, sustainable minimum exclusion criteria were applied.

No reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the as the Sub-Fund does not use a sustainability benchmark nor has defined its binding elements in comparison to the benchmark. However, sustainability indicators are partly reported in comparison to the benchmark in order to increase the informative value.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The actual percentage of the Sub-Fund's Portfolio (Portfolio, in this respect, did not comprise on-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits)) invested in best-in-class issuers (issuers with a minimum SRI Rating of 2 out of a scale from 0-4) was 101.21 %
- The actual percentage of the benchmark invested in best-in-class issuers was 93.15 %
- The Sub-Fund adhered to a 20 % reduction of investment universe
- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:
 - securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,

- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, PAI indicators were, among other sustainability factors, applied to derive the SRI Rating. The SRI Rating is used for the portfolio construction.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio

- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2022-30/09/2023

Largest investment	Sector	% Assets	Country
ASTRAZENECA PLC	MANUFACTURING	3.30 %	United Kingdom
NOVARTIS AG-REG	MANUFACTURING	2.68 %	Switzerland

VINCI SA	CONSTRUCTION	2.01 %	France
DIAGEO PLC	MANUFACTURING	2.01 %	United Kingdom

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental

or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
B	MINING AND QUARRYING	2.66 %
B09	Mining support service activities	2.66 %

Other	NOT SECTORIZED	-1.23 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 0.22 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 9.21 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 39.04 %.

What investments were included under “#2 Other”, what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental and/or

Reference benchmarks

are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

social characteristics promoted by the Sub-Fund.

Product name:

Allianz Dynamic Multi Asset Strategy SRI 50

Legal entity identifier: 529900NLULWWNUAUMG29

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 29.93% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Dynamic Multi Asset Strategy SRI 50 (the «Sub-Fund») promoted environmental, social, human rights, governance, and business behaviour factors (this domain does not apply for sovereigns issued by a Sovereign Entity) through integration of a best-in-class approach into the investment process. This encompassed the evaluation of corporate or sovereign issuers based on an SRI Rating which is used to construct the portfolio.

In addition, sustainable minimum exclusion criteria were applied.

No reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The actual percentage of the Sub-Fund's Portfolio (Portfolio, in this respect, did not comprise on-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits)) invested in best-in-class issuers (issuers with a minimum SRI Rating of 1 out of a scale from 0-4) was 90.15 %

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, PAI indicators were, among other sustainability factors, applied to derive the SRI Rating. The SRI Rating is used for the portfolio construction.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2022-30/09/2023

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 15.51 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- [What was the share of investments made in transitional and enabling activities?](#)

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 7.06 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 21.05 %.

What investments were included under “#2 Other”, what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-

based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- How did the reference benchmark differ from a broad market index?
Not applicable
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?
Not applicable
- How did this financial product perform compared with the reference benchmark?
Not applicable
- How did this financial product perform compared with the broad market index?
Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Europe Equity Growth

Legal entity identifier: 549300N3S28ICP3HG051

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 42.38% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Europe Equity Growth (the «Sub-Fund») was managed according to the Sustainability Key Performance Indicator Strategy (Relative) («KPI Strategy (Relative)») and promoted environmental characteristics by addressing greenhouse gas (GHG) Intensity. The «Sustainability KPI» measured the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on company`s annual sales («GHG Intensity»). GHG Intensity was addressed by outperforming the Weighted Average GHG Intensity of the Sub-Fund against its benchmark. Until the 28.09.2023 the Sub-Fund promoted environmental characteristics through integrating the transition to a low carbon economy of the top 10 carbon emitting issuers as part of the Climate Engagement with Outcome Strategy (CEWO-Strategy).

In addition, sustainable minimum exclusion criteria were applied.

A reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

Sustainability-indicators of the CEWO-Strategy as of 28.09.2023:

- The response rate (companies replied to the engagement questionnaire) of engagement with the top 15 emitters was 100% (the top 10 carbon emitting issuers are determined periodically. Over the reference dates Q4/2020, Q1/2022 and Q1/2023 the 15 emitters were identified)

- The change of the carbon footprint of the top 15 (for which the relevant information is available both for the base and reference years) emitters compared to the base year was -19,5% (CO2 emissions of the year 2019 compared to 2021).

- In case of investments in sovereign issuers, all sovereigns were evaluated by an SRI Rating.

Sustainability-indicators of the KPI Strategy as of 30.09.2023:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)) was 99.35 %
- The actual weighted average GHG Intensity portfolio vs weighted average GHG Intensity of the benchmark was 76.88 %

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:
 - securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
 - securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
 - securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
 - securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
 - securities issued by utility companies that generate more than 20% of their revenues from coal,
 - securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, the Investment Manager considers GHG related PAI indicators by outperforming the Weighted Average GHG Intensity against its benchmark.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2022-30/09/2023

Largest investment	Sector	% Assets	Country
ASML HOLDING NV	MANUFACTURING	9.06 %	Netherlands
NOVO NORDISK A/S-B	MANUFACTURING	7.28 %	Denmark
DSV A/S	TRANSPORTATION AND STORAGE	6.70 %	Denmark
SIKA AG-REG	MANUFACTURING	4.53 %	Switzerland
LVMH MOET HENNESSY LOUIS VUI	MANUFACTURING	4.40 %	France
INFINEON TECHNOLOGIES AG	MANUFACTURING	4.25 %	Germany
ATLAS COPCO AB-A SHS	MANUFACTURING	3.38 %	Sweden
L'OREAL	MANUFACTURING	3.19 %	France
ASSA ABLOY AB-B	ADMINISTRATIVE AND SUPPORT SERVICE ACTIVITIES	2.96 %	Sweden
PARTNERS GROUP HOLDING AG	FINANCIAL AND INSURANCE ACTIVITIES	2.86 %	Switzerland
ADIDAS AG	MANUFACTURING	2.69 %	Germany

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the

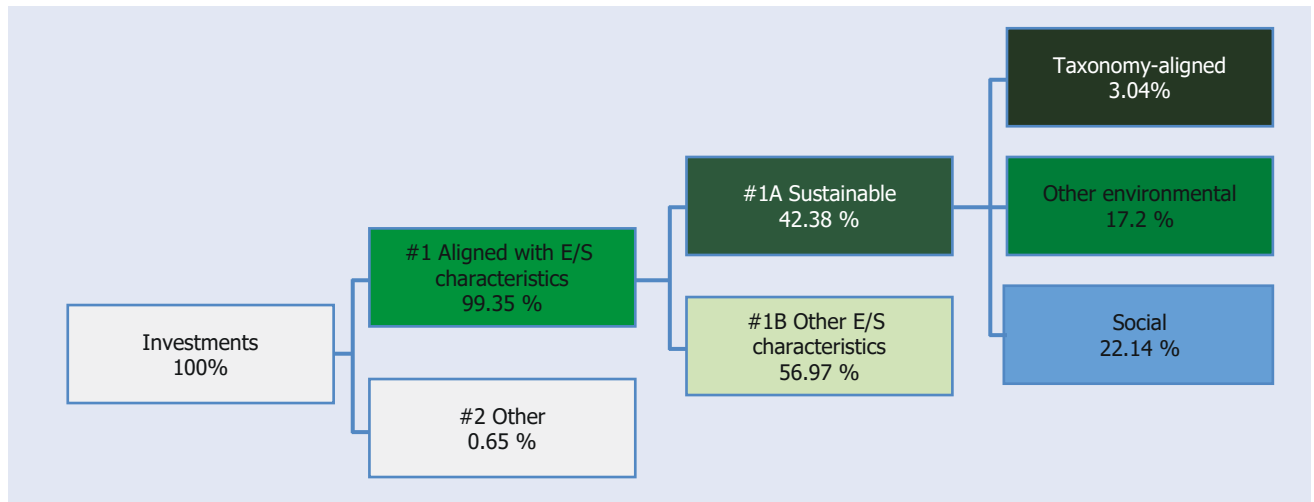

environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation
describes the share of
investments in specific
assets.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	71.27 %
C10	Manufacture of food products	2.37 %
C14	Manufacture of wearing apparel	4.19 %
C15	Manufacture of leather and related products	2.90 %

N	ADMINISTRATIVE AND SUPPORT SERVICE ACTIVITIES	3.74 %
N80	Security and investigation activities	2.94 %
N81	Services to buildings and landscape activities	0.80 %
Other	NOT SECTORIZED	0.44 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas In nuclear energy

No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 17.2 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 22.14 %.

What investments were included under “#2 Other”, what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

Legal entity identifier: 5493004ZRV2CSS15YF05

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 47.56% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Thematica (the «Sub-Fund») was managed according to the Sustainability Key Performance Indicator Strategy (Absolute Threshold) («KPI Strategy (Absolute Threshold)») which targets a specific minimum allocation into Sustainable Investments. Sustainable investments are investments in economic activities which contribute to environmental and/or social objectives, for which the Investment Managers uses as reference frameworks the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

Furthermore, the Sub-Fund limited its allocation into issuers which significantly harm environmental and/or social objectives.

Until the 28.09.2023 the Sub-Fund promoted environmental characteristics through integrating the transition to a low carbon economy of the top 10 carbon emitting issuers as part of the Climate Engagement with Outcome Strategy (CEWO-Strategy).

In addition, sustainable minimum exclusion criteria were applied.

No reference benchmark had been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

Sustainability-indicators of the CEWO-Strategy as of 28.09.2023:

- The response rate (companies replied to the engagement questionnaire) of engagement with the top 21 emitters was 100% (the top 10 carbon emitting issuers are determined periodically. Over the reference dates Q4/2020, Q1/2022 and Q1/2023 the 21 emitters were identified)
- The change of the carbon footprint of the top 21 (for which the relevant information is available both for the base and reference years) emitters compared to the base year was -12,7% (CO2 emissions of the year 2019 compared to 2021).

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- In case of investments in sovereign issuers, all sovereigns were evaluated by an SRI Rating. Sustainability-indicators of the KPI Strategy as of 30.09.2023:
- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)) was 95.65 %.
- The actual weighted average sustainable investment share of Sub-Fund Assets was 47.56 %.
- The actual share of investments not satisfying the Do No Significant Harm («DNSH») assessment of Sub-Fund Assets was 6.01 %.

- The Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors were considered through the adherence to the exclusion criteria applied for direct investments. The following sustainable minimum exclusion criteria for direct investments were applied:
 - securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
 - securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
 - securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
 - securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
 - securities issued by utility companies that generate more than 20% of their revenues from coal,
 - securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score were excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review was performed at least half yearly.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Sustainable Investments contributed to environmental and/or social objectives, for which the Investment Managers used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The assessment of the positive contribution to the environmental or social objectives was based on a proprietary framework which combined quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

The positive contribution on the Sub-Fund level was calculated by considering the revenue share of each issuer attributable to business activities which contributed to environmental and/or social objectives, provided the issuer satisfied the Do No Significant Harm («DNSH») and Good Governance principles. In the second step, asset-weighted aggregation was performed. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives, the overall investment was considered to contribute to environmental and/or social objectives. Further, in these cases, a DNSH as well as a Good Governance check for issuers was performed.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure that Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager of the Sub-Fund leveraged the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance thresholds might have been engaged for a limited period to remediate the adverse impact. Otherwise, if the issuer did not meet the defined significance

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

thresholds twice subsequently or in case of a failed engagement, it did not pass the DNSH assessment. Investments in securities of issuers which did not pass the DNSH assessment were not counted as sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's sustainable minimum exclusion list screened out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights as securities issued by companies having a severe violation of these frameworks were restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Management Company joined the Net Zero Asset Manager Initiative and considered PAI indicators through stewardship including engagement, both of which were relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company had set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considered PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index was applied to investments in sovereigns. PAI indicators were considered within the Investment Manager's investment process through the means of exclusions as described in the sustainability indicator section.

Moreover, the data coverage for the data required for the PAI indicators were heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators were considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues.

Additionally, the Investment Manager considered PAI indicators by limiting its allocation into issuers

which significantly harm environmental and/or social objectives.

The following PAI indicators were considered:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and / or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector «Public administration and defence; compulsory social security», the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors «Administration of the State and the economic and social policy of the community», «Provision of services to the community as a whole» (which includes, among others, defence activities) and «Compulsory social security activities».

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

Largest investment	Sector	% Assets	Country

AGCO CORP	MANUFACTURING	0.77 %	USA
ALIGN TECHNOLOGY INC	MANUFACTURING	0.77 %	USA
ALPHABET INC-CL A	INFORMATION AND COMMUNICATION	0.75 %	USA

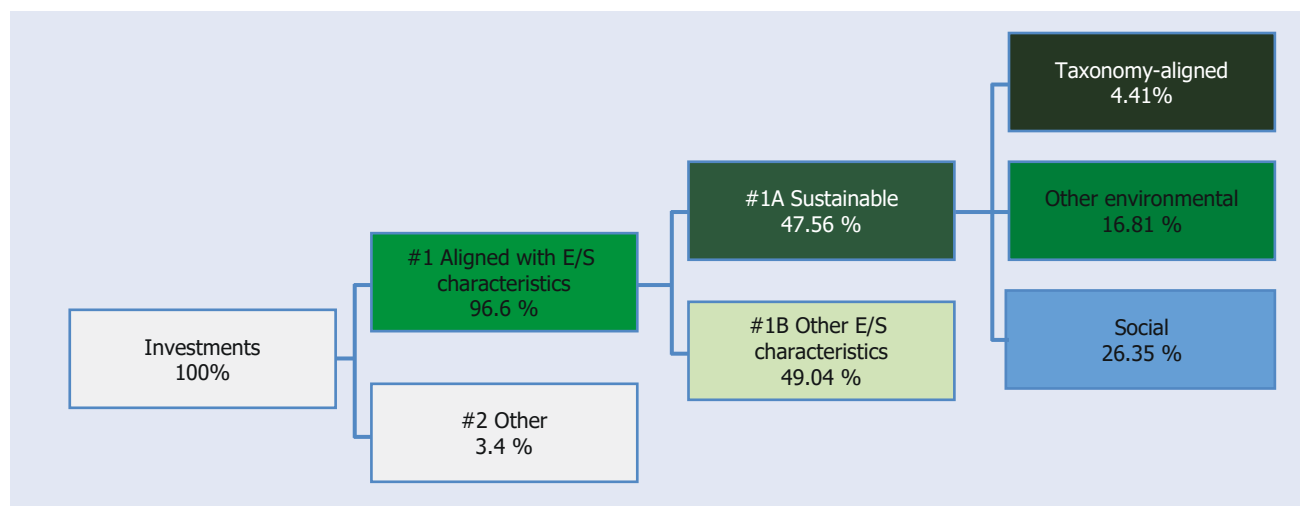

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

Some business activities may contribute to more than one sustainable sub-category (social, taxonomy aligned or other environmental). This can lead to situations, in which the sum of the sustainable sub-categories does not match to overall number of the sustainable category. Nonetheless, no double counting is possible on the sustainable investment overall category.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments included debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. Taxonomy-aligned data is provided by an external data provider. Taxonomy-aligned data was, only in rare cases, data reported by companies in accordance with the EU Taxonomy. The data provider derived Taxonomy-aligned data from other available equivalent company data.

The data were not subject to an assurance provided by auditors or a review by third parties.

The data does not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 0 % (calculated based on look-through approach).

As of the reporting date Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available. Therefore, the corresponding values for CAPEX and OPEX are displayed as zero.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The breakdown of the shares of investments by environmental objectives in fossil gas and in nuclear energy is not possible at present, as the data is not yet available in verified form.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

It is currently not possible to break down the shares of investments by environmental objectives, as the data is not yet available in a verified form.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

The Sub-Fund's Investment Manager has not committed to a split of minimum taxonomy alignment into transitional, enabling activities and own performance. Currently the Investment Manager does not have complete, verifiable and up-to-date data to review all investments with respect to the technical assessment criteria for enabling and transitional activities as set out in the Taxonomy Regulation. Therefore, the corresponding values on the enabling and transitional activities are stated as 0%. Non-financial undertakings will disclose information on the taxonomy-alignment of their economic activities in the form of pre-defined KPIs, indicating to which environmental objective activities contribute and whether it is a transitional or enabling economic activity, only starting from 01 January 2023 (financial undertakings - from 01 January 2024). This information is a mandatory basis for this evaluation.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 16.81 %.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 26.35 %.

What investments were included under “#2 Other”, what is their purpose and were there any minimum environmental or social safeguards?

Under «#2 Other» investments which were included were Cash, share of non-sustainable investments of Targets Funds, or Derivatives (calculation was based on a look-through approach). Derivatives were used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager’s engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI’s strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI’s holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- How did the reference benchmark differ from a broad market index?
Not applicable
- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?
Not applicable
- How did this financial product perform compared with the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable

- How did this financial product perform compared with the broad market index?

Not applicable

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name:
AMUNDI MSCI WORLD CLIMATE TRANSITION CTB

Legal entity identifier:
222100479LWJEIXZB875

Sustainable investment objective

Did this financial product have a sustainable investment objective?

X

Yes

No

It made **sustainable investments with an environmental objective: 47.12%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:**

It promotes **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of _____ of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The Sub Fund promoted environmental and/or social characteristics through among others replicating an index meeting the minimum standards for EU Climate Transition Benchmarks (EU CTBs) under Regulation (EU) 2019/2089 amending Regulation (EU) 2016/1011.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Date	Index	Carbon Intensity	Coverage
30/11/2022	MSCI Europe Climate Change CTB Select Index Net EUR	147,4	100%
30/11/2022	MSCI EUROPE	379,8	99%

● **... and compared to previous periods?**

The above sustainability indicators were not compared to previous in the previous periods as the regulation was not yet in force

● **What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?**

The objectives of the sustainable investments were to invest in investee companies that seek to meet two criteria:

1. Follow best environmental and social practices; and
2. Avoid making products or providing services that harm the environment and society.

At the investee company level this means that an investee company must be a “best performer” within its sector of activity on at least one of its material environmental or social factors. The definition of “best performer” relies on Amundi’s proprietary ESG methodology which aims to measure the ESG performance of an investee company.

In order to be considered a “best performer”, an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score.

Amundi considers the second criterion as met if the investee company does not have significant exposure to activities not compatible with such criteria (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production).

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure sustainable investments do no significant harm (‘DNSH’), Amundi utilises two tests:

The first DNSH test relies on monitoring the mandatory Principal Adverse Impacts indicators where robust data is available via a combination of indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors)
- Have a Board of Directors’ diversity which does not belong to the last decile compared to other companies within its sector
- Be cleared of any controversy in relation to work conditions and human rights

- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first test, Amundi has defined a second test in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The first DNSH test relies on monitoring the mandatory Principal Adverse Impacts indicators where robust data is available via a combination of indicators and specific thresholds or rules as described above.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called "Community Involvement & Human Rights" which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labor relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Amundi considers all the mandatory Principal Adverse Impacts applying to the Product's strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- **Exclusion:** Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- **Engagement:** Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories : to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy. This approach applies to all of Amundi products. In 2021, Amundi has engaged with 1364 companies.
- **Vote:** Amundi's voting policy responds to an holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information please refer to Amundi's Voting Policy . This approach applies by default to all of Amundi products. In 2021, Amundi has voted 4 008 companies.

Controversies monitoring: Amundi has developed a controversy tracking system that relies on three data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/10/2021 to 30/09/2022**

Taxonomy-aligned activities are expressed as a share of:
-turnover

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Reliable data regarding the EU Taxonomy was not available during the period

reflecting the share of revenue from green activities of investee companies

-capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
 - operational expenditure (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign first graph shows the Taxonomy alignment in relation to all the investments of the financial product sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investment financial product other than sovereign bonds.

Data not yet available

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities?**

Reliable data regarding transitional and enabling activities was not available during the period.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Reliable data regarding EU Taxonomy was not available during on the previous reference periods

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with environmental objective not aligned to taxonomy is **35.63%**

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

What was the share of socially sustainable investments?

under the EU Taxonomy.

This product does not commit to have social sustainable investments

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

“#2 Other” includes cash and unrated instruments held for the purpose of liquidity and portfolio risk management. There were no minimum environmental or social safeguards in place for these investments.

What actions have been taken to meet the sustainable investment objective during the reference period?

This product is passively managed. Its investment strategy is to replicate the Index while minimizing the related tracking error. Binding elements in the Index methodology ensure environmental and/or social characteristics are met at each rebalancing date. The Product strategy is also relying on systematic exclusions policies (normative and sectorial) as further described in Amundi Responsible Investment policy .

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

This product is passively managed. Its investment strategy is to replicate the Index while minimizing the related tracking error.

● ***How does the reference benchmark differ from a broad market index?***

The MSCI World Climate Change CTB Select Index is an equity index based on the MSCI World Index ("Parent Index"). representative of the large and mid-cap securities across 23 Developed Markets countries (as of December 2020). The Index aims to represent the performance of a strategy that reweights securities based upon the opportunities and risks associated with the climate transition to meet the EU Climate Transition Benchmark (EU CTB) label minimum requirements.

● ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?***

This product is passively managed. Its investment strategy is to replicate the Index while minimizing the related tracking error. As a result, the sustainability indicators of the Product performed overall in line with the ones of the Index

● ***How did this financial product perform compared with the reference benchmark?***

This product is passively managed. Its investment strategy is to replicate the Index while minimizing the related tracking error. As a result, the sustainability indicators of the Product performed overall in line with the ones of the Index.

● ***How did this financial product perform compared with the broad market index?***

This product is passively managed. Its investment strategy is to replicate the Index while minimizing the related tracking error. A comparison of the Index replicated by the Sub Fund vs its Parent index has already been detailed on section How did the sustainability indicators perform?

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS
EMERGING MARKETS CORPORATE
BOND

Legal entity identifier:
529900YJOJ3E3FRQQ325

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** _____

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **20.92%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **JP MORGAN CEMBI BROAD DIVERSIFIED**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **-0.11 (D)**.
- The weighted average ESG rating of the ESG investment universe is **-0.17 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

The above sustainability indicators were not compared to previous periods as the regulation was not yet in force

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification

of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g.tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g.GHG intensity of investee companies) via a combination of indicators (e.g.carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi’s voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi’s Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of

each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/07/2022 to 30/06/2023**

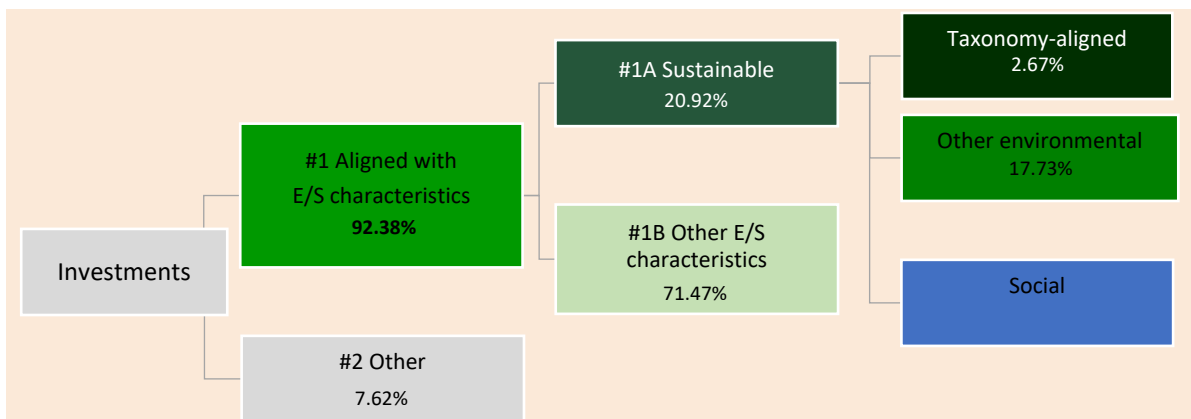

Largest Investments	Sector	% Assets	Country
A-F EMERG MARKETS GREEN BD - SE USD	Mutual funds	3.26%	LUX

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **In which economic sectors were the investments made ?**

<i>Sector</i>	<i>% Assets</i>
<i>Financials</i>	27.46%
<i>Industrials</i>	15.29%
<i>Energy</i>	12.06%
<i>Communication Services</i>	10.26%
<i>Consumer Discretionary</i>	8.38%
<i>Mutual funds</i>	5.85%
<i>Consumer Staples</i>	5.63%

<i>SOVEREIGN</i>	5.18%
<i>Utilities</i>	4.21%
<i>SUPRANATIONAL</i>	1.90%
<i>TREASURIES</i>	1.18%
<i>Forex</i>	0.37%
<i>AGENCIES</i>	0.29%
<i>Real Estate</i>	0.26%
<i>Information Technology</i>	0.24%
<i>Other</i>	0.00%
<i>Cash</i>	1.41%

Taxonomy-aligned activities are expressed as a share of: **-turnover** reflecting the share of revenue from green activities of investee companies

-capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- operational expenditure (OpEx) reflecting green operational activities of investee companies.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 2.67% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change obligation or climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?

Yes:

In fossil gas In nuclear energy

X

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

⁴Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Enabling activities

directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are

activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2023, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 0.00%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

In previous periods the regulation was not yet in force.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The share of sustainable investments with environmental objective not aligned to taxonomy was **17.73%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

What was the share of socially sustainable investments ?

This product did not commit to have social sustainable investments over the period.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

This product does not have an ESG Benchmark.

- **How does the reference benchmark differ from a broad market index ?**

This product does not have an ESG Benchmark

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

This product does not have an ESG Benchmark.

- **How did this financial product perform compared with the reference benchmark ?**

Additional Information (unaudited)

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS CASH
EUR

Legal entity identifier:
5299002SSK89DA5VPJ96

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

X

No

It made **sustainable investments with an environmental objective**:

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective**: _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 50.85% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **ICE BOFA 1-3 YEAR GLOBAL CORPORATE INDEX**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **0.66 (C)**.
- The weighted average ESG rating of the ESG investment universe is **0.04 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

The above sustainability indicators were not compared to previous periods as the regulation was not yet in force

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial

data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our

proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: **From 01/07/2022 to 30/06/2023**

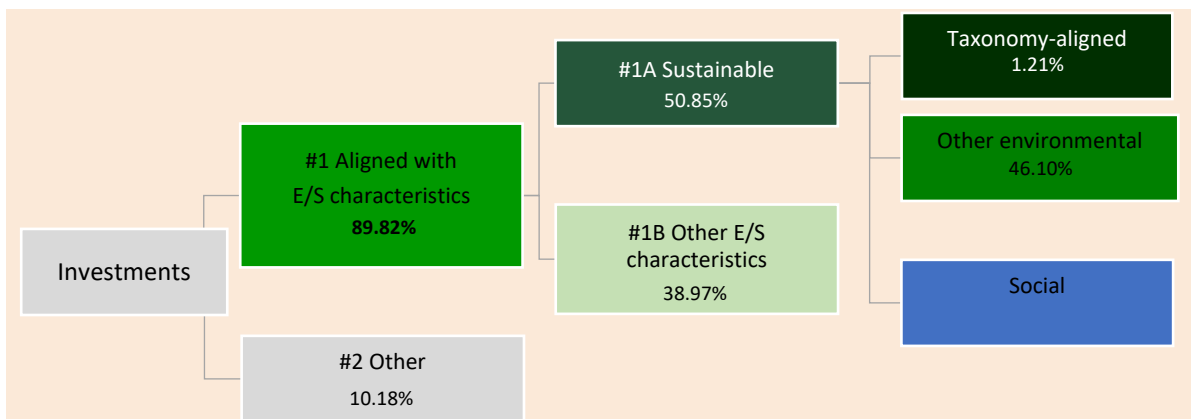

Largest Investments	Sector	% Assets	Country
BTPS 0.25% 03/28 7Y	TREASURIES	6.61%	ITA

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **In which economic sectors were the investments made ?**

<i>Sector</i>	<i>% Assets</i>
<i>Financials</i>	<i>53.11%</i>
<i>TREASURIES</i>	<i>20.21%</i>
<i>Other</i>	<i>14.77%</i>
<i>Information Technology</i>	<i>5.75%</i>
<i>Consumer Discretionary</i>	<i>4.05%</i>
<i>Industrials</i>	<i>3.77%</i>
<i>Communication Services</i>	<i>1.72%</i>

<i>Consumer Staples</i>	1.71%
<i>Real Estate</i>	0.09%
<i>Cash</i>	-4.33%

Taxonomy-aligned activities are expressed as a share of:

- turnover** reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 1.21% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change obligation or climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Enabling activities

directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are

activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2023, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 0.00%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

In previous periods the regulation was not yet in force.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The share of sustainable investments with environmental objective not aligned to taxonomy was **46.10%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

What was the share of socially sustainable investments ?

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities

under the EU Taxonomy.

This product did not commit to have social sustainable investments over the period.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

This product does not have an ESG Benchmark.

- ***How does the reference benchmark differ from a broad market index ?***

This product does not have an ESG Benchmark

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS EUROPEAN CONVERTIBLE BOND

Legal entity identifier: 529900644PSS3LALW918

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes
 No

<p><input type="checkbox"/> It made sustainable investments with an environmental objective: _____</p> <p><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> It made a sustainable investments with a social objective: _____</p>	<p><input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 68.45% of sustainable investments</p> <p><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p><input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> with a social objective</p> <p><input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments</p>
--	--

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **REFINITIV EUROPEAN CONVERTIBLE HEDGED**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer’s industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **0.94 (C)**.
- The weighted average ESG rating of the ESG investment universe is **0.71 (C)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

The above sustainability indicators were not compared to previous periods as the regulation was not yet in force

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial

data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our

proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- Engagement : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- Vote : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- Controversies monitoring : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: **From 01/07/2022 to 30/06/2023**

Largest Investments	Sector	% Assets	Country
AMX/KPN 0% 03/24 CV	Communication Services	5.08%	NLD
SAFRAN 0.875% 05/27 CV	Industrials	4.44%	FRA
CELLNEX 0.75% 11/31 CV	Communication Services	3.86%	ESP

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **In which economic sectors were the investments made ?**

<i>Sector</i>	<i>% Assets</i>
<i>Industrials</i>	<i>24.30%</i>
<i>Consumer Discretionary</i>	<i>15.28%</i>
<i>Communication Services</i>	<i>14.69%</i>
<i>Financials</i>	<i>10.57%</i>
<i>Information Technology</i>	<i>10.56%</i>
<i>Health Care</i>	<i>5.65%</i>
<i>Consumer Staples</i>	<i>5.10%</i>

<i>Materials</i>	4.61%
<i>Utilities</i>	3.10%
<i>Mutual funds</i>	2.11%
<i>Real Estate</i>	1.98%
<i>Energy</i>	1.28%
<i>Forex</i>	0.23%
<i>Other</i>	0.04%
<i>Cash</i>	0.51%

Taxonomy-aligned activities are expressed as a share of: **-turnover** reflecting the share of revenue from green activities of investee companies

-capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- operational expenditure (OpEx) reflecting green operational activities of investee companies.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 4.23% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change obligation or climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

- Yes:
- In fossil gas In nuclear energy
- No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full

criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Enabling activities

directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are

activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2023, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 0.00%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

In previous periods the regulation was not yet in force.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The share of sustainable investments with environmental objective not aligned to taxonomy was **49.94%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

are sustainable investments with an environmental objective that **do not take into**

account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of socially sustainable investments ?

This product did not commit to have social sustainable investments over the period.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Additional Information (unaudited)

This product does not have an ESG Benchmark.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI FUNDS NET ZERO AMBITION MULTI-ASSET

Legal entity identifier: 549300UWEKCHQNE88693

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

X

No

It made **sustainable investments with an environmental objective**:

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective**: _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 57.60% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **5% MSCI USD HY CORPORATE BOND INDEX + 60% MSCI ACWI + 5% MSCI EUR HY CORPORATE BOND INDEX + 15% MSCI USD IG CORPORATE BOND + 15% MSCI EUR IG CORPORATE BOND INDEX**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

The product is labeled SRI (Social and Responsible Investment). It sought throughout the year to promote the 3 dimensions (environmental, social and governance) by taking into account the ESG rating of issuers in the construction of the portfolio.

The ESG rating of issuers aims to assess their ability to manage the potential negative impact of their activities on sustainability factors. This analysis thus aims to assess their Environmental and Societal behaviors in terms of Governance by assigning them an ESG rating ranging from A (best rating) to G (worse rating), so as to achieve a more global assessment of the risks.

1. The portfolio has consistently applied the following Amundi exclusion policy:
 - Legal exclusions on controversial weapons
 - Companies that seriously and repeatedly contravene one or more of the 10 principles of the Global Compact (UN Global Compact), without credible corrective measures;
 - The sectoral exclusions of the Amundi group on Coal and Tobacco; (details of this policy are available in Amundi's Responsible Investment Policy available on the website www.amundi.fr)
2. No investment has been made in issuers rated F or G. For any issuer whose rating has been downgraded to F or G, the securities already present in the portfolio were sold within the timeframe committed to in the prospectus and taking into account financial interest of holders
3. The weighted average ESG score of the portfolio has consistently been higher than the weighted average ESG score of the fund's investment universe after eliminating the 20% of the worst issuers
4. The fund has favored issuers that are leaders in their sector of activity according to the ESG criteria identified by the team of extra-financial analysts of the management company ("best in class" approach). With the exception of the above exclusions, all economic sectors are represented in this approach and the UCI may therefore be exposed to certain controversial sectors.

During the financial year, the product continuously promoted environmental characteristics by aiming to reduce its carbon intensity by aligning its carbon footprint intensity to that of its Benchmark **5% MSCI USD HY CORPORATE BOND INDEX + 60% MSCI ACWI + 5% MSCI EUR HY CORPORATE BOND INDEX + 15% MSCI USD IG CORPORATE BOND + 15% MSCI EUR IG CORPORATE BOND INDEX.**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the "Best-in-class" approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **0.46 (D)**.
- The weighted average ESG rating of the ESG investment universe is **-0.04 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers' ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse

emissions, fighting resource depletion and protecting biodiversity.

- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer's strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

The sustainability indicator used is the portfolio carbon footprint intensity, which is calculated as an asset weighted portfolio average and compared to the asset weighted carbon footprint intensity of the Benchmark. As a result, securities with relatively low environmental footprints had a higher probability of being selected in the portfolio compared to securities with relatively high environmental footprints.

- The weighted average carbon footprint intensity of the portfolio is **122.08**
- The weighted average carbon footprint intensity of the Benchmark is **221.64**

● ***... and compared to previous periods?***

The above sustainability indicators were not compared to previous periods as the regulation was not yet in force

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g.tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called "Community Involvement & Human Rights" which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- **Exclusion :** Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- **ESG factors integration :** Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- **Engagement :** Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- **Vote :** Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- **Controversies monitoring :** Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments

Largest Investments	Sector	% Assets	Country
---------------------	--------	----------	---------

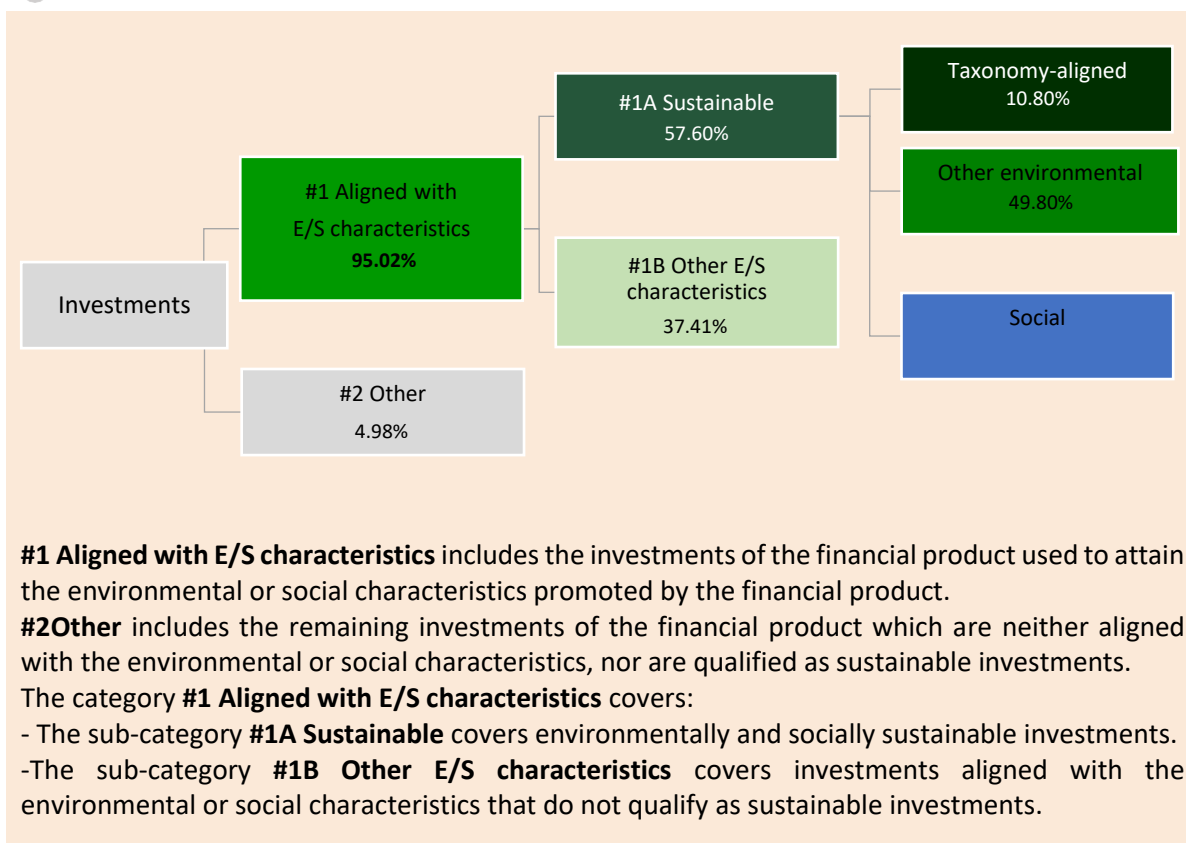

constituting the greatest proportion of investments of the financial product during the reference period which is: From 01/07/2022 to 30/06/2023

MICROSOFT CORP	Information Technology	1.76%	USA
APPLE INC	Information Technology	1.66%	USA
EU 0.4% 02/37 NGEU	SUPRANATIONAL	1.51%	SUP
DBR 0% 08/31 G	TREASURIES	1.29%	DEU
ALPHABET INC CL A	Communication Services	0.89%	USA
NVIDIA CORP	Information Technology	0.86%	USA
DANAHER CORP	Health Care	0.80%	USA
TAIWAN SEMICONDUCTOR MANUFAC	Information Technology	0.76%	TWN
XYLEM INC	Industrials	0.68%	USA
SAMSUNG ELECTRONICS	Information Technology	0.65%	KOR
AECOM	Industrials	0.65%	USA
AMERICAN WATER WORKS	Utilities	0.62%	USA
BTPS 1.5% 04/45 34Y	TREASURIES	0.55%	ITA
VISA INC -A	Financials	0.52%	USA
CROWN HOLDINGS I	Materials	0.52%	USA

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

● *In which economic sectors were the investments made ?*

<i>Sector</i>	<i>% Assets</i>
<i>Financials</i>	26.60%
<i>Information Technology</i>	14.96%
<i>Industrials</i>	9.63%
<i>Communication Services</i>	9.05%
<i>Consumer Discretionary</i>	7.85%
<i>Utilities</i>	6.31%
<i>Consumer Staples</i>	6.14%
<i>Health Care</i>	6.03%
<i>Materials</i>	3.07%
<i>Real Estate</i>	2.46%
<i>SUPRANATIONAL</i>	2.07%
<i>TREASURIES</i>	1.84%
<i>Forex</i>	0.46%
<i>SOVEREIGN</i>	0.45%

<i>AGENCIES</i>	<i>0.31%</i>
<i>Energy</i>	<i>0.29%</i>
<i>Other</i>	<i>0.13%</i>
<i>Mutual funds</i>	<i>0.11%</i>
<i>Cash</i>	<i>2.25%</i>

Taxonomy-aligned activities are expressed as a share of:

- turnover** reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 10.80% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change obligation or climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities

● **What was the share of investments in transitional and enabling activities ?**

As of 30/06/2023, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 0.07%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

In previous periods the regulation was not yet in force.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?**

The share of sustainable investments with environmental objective not aligned to taxonomy was **49.80%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

 **What was the share of socially sustainable investments ?**

under the EU Taxonomy.

This product did not commit to have social sustainable investments over the period.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

● ***How does the reference benchmark differ from a broad market index ?***

A broad market index, does not assess or include its constituents according to environment characteristics and therefore is not aligned with environmental characteristics.

The index used is a "Paris Aligned Benchmark" which incorporates specific objectives related to emission reductions and the transition to a low-carbon economy through the selection and weighting of underlying constituents.

● ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

- The weighted average carbon footprint intensity of the portfolio is **122.08**
- The weighted average carbon footprint intensity of the Benchmark is **221.64**

● ***How did this financial product perform compared with the reference benchmark ?***

The sustainable investment objective is attained by aligning the carbon footprint reduction objectives of the fund with MSCI World Climate Paris Aligned Net USD Index. The portfolio carbon footprint intensity is calculated as an asset weighted portfolio average and compared to the asset weighted carbon footprint intensity of the Index.

As a result, securities with relatively low environmental footprints have a higher probability of being selected in the portfolio compared to securities with relatively high environmental footprints. In addition, the fund excludes companies on the basis of controversial behavior and (or) controversial products in accordance with the Responsible Investment Policy.

- The weighted average carbon footprint intensity of the portfolio is **122.08**
- The weighted average carbon footprint intensity of the Benchmark is **221.64**

● ***How did this financial product perform compared with the broad market index ?***

A broad market index, does not assess or include its constituents according to environment characteristics and therefore is not aligned with environmental characteristics.

The index used is a "Paris Aligned Benchmark" which incorporates specific objectives related to emission reductions and the transition to a low-carbon economy through the selection and weighting of underlying constituents.

Product Name: AXA IM Fixed Income Investment Strategies - US SHORT DURATION HIGH YIELD **Entity LEI:** 2138004B7WO5WYWQR680

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input type="checkbox"/> YES	<input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 18.95% of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input checked="" type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

● **How did the sustainability indicators perform?**

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to during the reference period.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	4.86 Score over max 10	4.79 Score over max 10	100%

● **... And compared to previous periods?**

Not applicable.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?**

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG)of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2.Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3.Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability LinkedBonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	
Ecosystem Protection & Deforestation policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	% of investments	
Climate Risk policy (engagement only)	PAI 5 : Share of non-renewable energy consumption and production	% of total energy sources	
Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	

The Financial Product is also taking into account the environmental optional indicator PAI 6 ‘Water usage and recycling’ and the social optional indicator PAI 15 ‘Lack of anti-corruption and anti-bribery policies’.

Please note that, despite our commitment in the precontractual SFDR annex to publish these indicators in our periodic reporting SFDR annex, SFDR Level 2 requirements – such as the integration of PAI indicators in the investment process – only entered into force on 01/01/2023, after this report’s reference period. Therefore, PAI indicators will start being disclosed in the periodic reporting SFDR annex relative to the reference period in which SFDR Level 2 requirements entered into application.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	

Please note that, despite our commitment in the precontractual SFDR annex to publish these indicators in our periodic reporting SFDR annex, SFDR Level 2 requirements – such as the integration of PAI indicators in the investment process – only entered into force on 01/01/2023, after this report’s reference period. Therefore, PAI indicators will start being disclosed in the periodic reporting SFDR annex relative to the reference period in which SFDR Level 2 requirements entered into application.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

Top investments	Sector	Proportion	Country
ARGIHC 7% - 15/06/2025 Call	Restaurants and mobile food service activities	1.53%	US
RDIO 6.75% - 15/07/2025 Call	Other manufacturing n.e.c.	1.4%	US

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2022-12-30

BWY 5.5% - 15/04/2024 Call	Manufacture of other articles of paper and paperboard	1.36%	US
BGS 5.25% - 01/04/2025 Call	Manufacture of condiments and seasonings	1.35%	US
COMM 6% - 01/03/2026 Call	Manufacture of communication equipment	1.34%	US
LABL 6.75% - 15/07/2026 Call	Manufacture of other articles of paper and paperboard	1.3%	US
CMLP 5.75% - 01/04/2025 Call	Transport via pipeline	1.26%	US
ARMK 6.375% - 01/05/2025 Call	Other food service activities	1.26%	US
SRCL 5.375% - 15/07/2024 Call	Collection of hazardous waste	1.23%	US
HLF 7.875% - 01/09/2025 Call	Manufacture of other food products n.e.c.	1.22%	US
GTN 5.875% - 15/07/2026 Call	Television programming and broadcasting activities	1.18%	US
VCVHHO 9.75% - 15/08/2026 Call	Other information service activities n.e.c.	1.16%	US
BMCAUS 5% - 15/02/2027 Call	Manufacture of other builders' carpentry and joinery	1.15%	US
GTN 7% - 15/05/2027 Call	Television programming and broadcasting activities	1.13%	US
GRSTAR 5.75% - 01/12/2025 Call	Renting and operating of own or leased real estate	1.12%	US

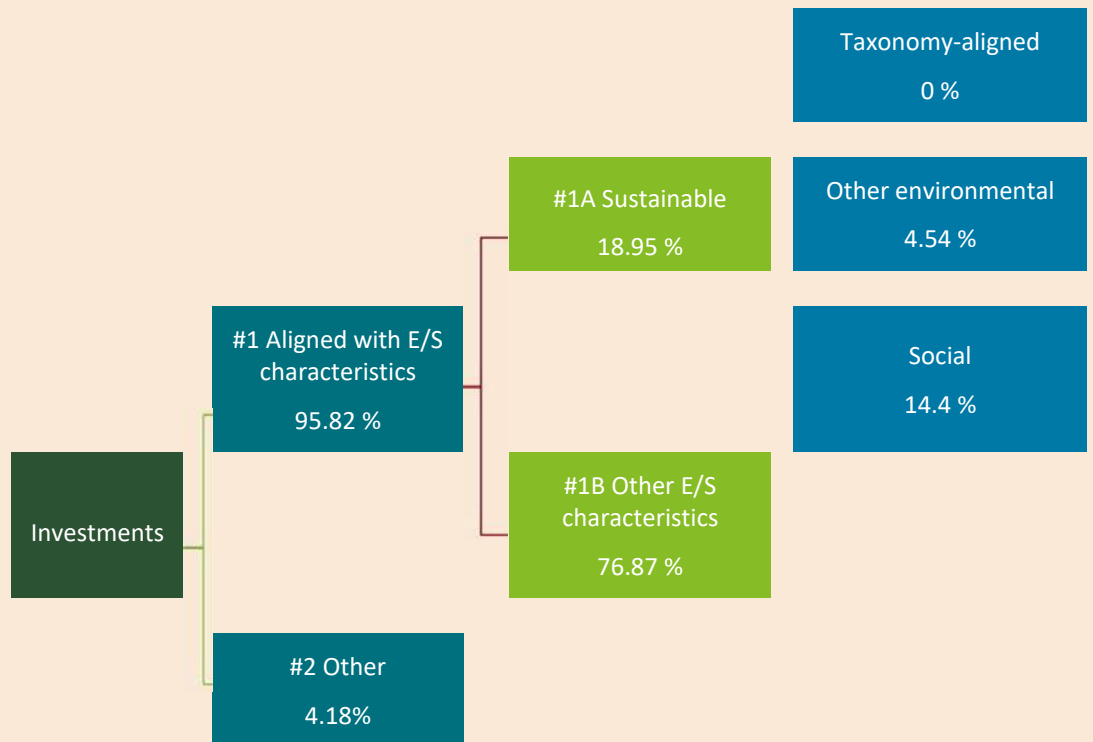

The portfolio proportions of investments hereabove presented were measured on 30/12/2022 and may not be representative of the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● ***In which economic sectors were the investments made?***

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Manufacture of other articles of paper and paperboard	5.6%
Renting and operating of own or leased real estate	5.16%
Satellite telecommunications activities	4.49%
Other software publishing	4.32%
Private security activities	4.2%
Other monetary intermediation	3.41%
Gambling and betting activities	3.22%
Television programming and broadcasting activities	3.22%
Transport via pipeline	3.16%
Hospital activities	2.87%
Wired telecommunications activities	2.77%
Activities of holding companies	2.65%
General public administration activities	2.6%
Manufacture of communication equipment	2.4%
Other food service activities	2.33%
Other manufacturing n.e.c.	2.24%
Manufacture of other builders' carpentry and joinery	2.2%
Restaurants and mobile food service activities	2.04%
Other credit granting	1.85%
Manufacture of hollow glass	1.6%
Other human health activities	1.58%
Retail sale of hardware, paints and glass in specialised stores	1.58%
Manufacture of light metal packaging	1.38%
Agents involved in the sale of food, beverages and tobacco	1.36%
Manufacture of condiments and seasonings	1.35%
Manufacture of batteries and accumulators	1.32%
Extraction of crude petroleum and natural gas	1.3%
Waste collection, treatment and disposal activities, materials recovery	1.27%
Collection of hazardous waste	1.23%
Manufacture of other food products n.e.c.	1.22%
Manufacture of motor vehicles	1.22%

Other information service activities n.e.c.	1.16%
Activities of amusement parks and theme parks	1.15%
Rental and leasing activities	1.09%
Advertising agencies	1.02%
Freight rail transport	0.99%
Aluminium production	0.98%
Other activities auxiliary to financial services, except insurance and pension funding	0.95%
Wireless telecommunications activities	0.9%
Manufacture of plastic packing goods	0.9%
Manufacture of electrical equipment	0.9%
Manufacture of underwear	0.88%
Motion picture, video and television programme production activities	0.88%
Support activities to performing arts	0.87%
Web portals	0.81%
Retail trade, except of motor vehicles and motorcycles	0.78%
Retail sale of automotive fuel in specialised stores	0.76%
Manufacture of paints, varnishes and similar coatings, printing ink and mastics	0.74%
Manufacture of chemicals and chemical products	0.68%
Activities of insurance agents and brokers	0.65%
Computer programming, consultancy and related activities	0.65%
Retail sale of sporting equipment in specialised stores	0.53%
Sale of cars and light motor vehicles	0.5%
Wholesale trade, except of motor vehicles and motorcycles	0.5%
Manufacture of grain mill products	0.48%
Architectural and engineering activities, technical testing and analysis	0.41%
Manufacture of other organic basic chemicals	0.38%
Manufacture of other parts and accessories for motor vehicles	0.28%
Manufacture of other special-purpose machinery n.e.c.	0.27%
Publishing of newspapers	0.27%
Manufacture of other inorganic basic chemicals	0.26%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Manufacture of other chemical products n.e.c.	0.22%
Manufacture of games and toys	0.19%
Manufacture of computers and peripheral equipment	0.18%
Other amusement and recreation activities	0.16%
Wholesale of chemical products	0.14%
Manufacture of machinery and equipment n.e.c.	0.1%
Processing and preserving of meat	0.09%
Manufacture of tubes, pipes, hollow profiles and related fittings, of steel	0.08%
Accommodation	0.06%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

Yes

In fossil gas In nuclear energy

No

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments **including** sovereign bonds*

2. Taxonomy-alignment of investments **excluding** sovereign bonds*

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 4.54% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 14.4% of sustainable investments with a social objective.

● **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 4.18% of the Financial Product’s Net Asset Value. The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments being bank deposit, eligible money market instruments and money market funds used for managing the liquidity of the Financial Product, and;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2022, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Product Name: AXA WORLD FUNDS – EURO CREDIT SHORT DURATION

Entity LEI: 213800R84TOP7WXDMI25

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input type="checkbox"/> YES	<input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 66.78% of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

● How did the sustainability indicators perform?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to during the reference period.

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	7.39 Score over max 10	7.33 Score over max 10	96.81%

● **... And compared to previous periods?**

Not applicable.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?**

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

- a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2.Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3.Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

- a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.
- b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.

- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	
Ecosystem Protection & Deforestation policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	% of investments	
Climate Risk policy (engagement only)	PAI 5 : Share of non-renewable energy consumption and production	% of total energy sources	
Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	

SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average
-------------------------------------	--	--

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

Please note that, despite our commitment in the precontractual SFDR annex to publish these indicators in our periodic reporting SFDR annex, SFDR Level 2 requirements – such as the integration of PAI indicators in the investment process – only entered into force on 01/01/2023, after this report's reference period. Therefore, PAI indicators will start being disclosed in the periodic reporting SFDR annex relative to the reference period in which SFDR Level 2 requirements entered into application.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	

Please note that, despite our commitment in the precontractual SFDR annex to publish these indicators in our periodic reporting SFDR annex, SFDR Level 2 requirements – such as the integration of PAI indicators in the investment process – only entered into force on 01/01/2023, after this report’s reference period. Therefore, PAI indicators will start being disclosed in the periodic reporting SFDR annex relative to the reference period in which SFDR Level 2 requirements entered into application.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2022-12-30

Top investments	Sector	Proportion	Country
AXA IM EURO LIQUIDITY SRI Capitalisation EUR pf	Trusts, funds and similar financial entities	2.19%	FR
BTF 0 - 22/02/2023	General public administration activities	1.54%	FR
ACHMEA 6% Var - 04/04/2043 Call	Non-life insurance	1.22%	NL
SRGIM 3.375% - 05/12/2026 Call	Distribution of gaseous fuels through mains	1.2%	IT
ACAFP 4% Var - 12/10/2026 Call	Other monetary intermediation	1.14%	FR
VZ 1.625% - 01/03/2024	Wireless telecommunications activities	1.12%	US
AXA WF Euro Credit Total Return M Capitalisation E	Trusts, funds and similar financial entities	1.11%	LU

The portfolio proportions of investments hereabove presented were measured on 30/12/2022 and may not be representative of the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● ***In which economic sectors were the investments made?***

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Other monetary intermediation	34.45%
Trusts, funds and similar financial entities	8.35%
Renting and operating of own or leased real estate	7.31%
Manufacture of motor vehicles	6.17%
Wireless telecommunications activities	4.98%
Electricity, gas, steam and air conditioning supply	4.78%
Other activities auxiliary to financial services, except insurance and pension funding	2.67%
Distribution of gaseous fuels through mains	2.66%
Production of electricity	2.29%
Manufacture of refined petroleum products	2.21%
Security and commodity contracts brokerage	2.13%
Manufacture of basic pharmaceutical products	1.94%
Life insurance	1.84%
General public administration activities	1.54%
Service activities incidental to land transportation	1.36%
Non-life insurance	1.32%
Manufacture of beer	0.98%
Advertising agencies	0.97%
Wired telecommunications activities	0.96%
Service activities incidental to air transportation	0.88%
Web portals	0.86%
Distribution of electricity	0.76%
Other credit granting	0.69%
Satellite telecommunications activities	0.68%
Financial leasing	0.66%
Passenger air transport	0.44%
Manufacture of electrical equipment	0.42%
Manufacture of motor vehicles, trailers and semi-trailers	0.39%
Manufacture of electrical and electronic equipment for motor vehicles	0.38%
Restaurants and mobile food service activities	0.36%

Retail trade, except of motor vehicles and motorcycles	0.35%
Manufacture of other non-metallic mineral products	0.34%
Passenger rail transport, interurban	0.34%
Water collection, treatment and supply	0.32%
Manufacture of electric motors, generators and transformers	0.32%
Wholesale trade, except of motor vehicles and motorcycles	0.31%
Transmission of electricity	0.3%
Manufacture of computers and peripheral equipment	0.29%
Research and experimental development on biotechnology	0.29%
Management of real estate on a fee or contract basis	0.28%
Manufacture of instruments and appliances for measuring, testing and navigation	0.26%
Manufacture of soft drinks, production of mineral waters and other bottled waters	0.25%
Land transport and transport via pipelines	0.22%
Manufacture of tobacco products	0.2%
Manufacture of chemicals and chemical products	0.18%
Reinsurance	0.17%
Other information service activities n.e.c.	0.15%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

Yes

In fossil gas In nuclear energy

No

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the "do not significantly harm" criteria of the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable.

 are sustainable investments with an environmental objective that **do not**

 **What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 27.49% for this Financial Product during the reference period.

take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 39.29% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 4.8% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments being bank deposit, eligible money market instruments and money market funds used for managing the liquidity of the Financial Product, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2022, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - EURO CREDIT TOTAL RETURN

Entity LEI: 213800FPDKN4GVHVJI39

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input type="checkbox"/> YES	<input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 59.93% of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

● How did the sustainability indicators perform?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to during the reference period.

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	7.25 Score over max 10	6.64 Score over max 10	96.09%

● **... And compared to previous periods?**

Not applicable.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?**

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

- a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2.Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3.Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

- a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.
- b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.

- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	
Ecosystem Protection & Deforestation policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	% of investments	
Climate Risk policy (engagement only)	PAI 5 : Share of non-renewable energy consumption and production	% of total energy sources	
Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	

SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	
-------------------------------------	--	--	--

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

Please note that, despite our commitment in the precontractual SFDR annex to publish these indicators in our periodic reporting SFDR annex, SFDR Level 2 requirements – such as the integration of PAI indicators in the investment process – only entered into force on 01/01/2023, after this report's reference period. Therefore, PAI indicators will start being disclosed in the periodic reporting SFDR annex relative to the reference period in which SFDR Level 2 requirements entered into application.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	

Please note that, despite our commitment in the precontractual SFDR annex to publish these indicators in our periodic reporting SFDR annex, SFDR Level 2 requirements – such as the integration of PAI indicators in the investment process – only entered into force on 01/01/2023, after this report’s reference period. Therefore, PAI indicators will start being disclosed in the periodic reporting SFDR annex relative to the reference period in which SFDR Level 2 requirements entered into application.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2022-12-30

Top investments	Sector	Proportion	Country
DBR 2% - 15/08/2023	General public administration activities	2.42%	DE
RBIASV 7.375% Var - 20/12/2032 Call	Other monetary intermediation	1.87%	AT

The portfolio proportions of investments hereabove presented were measured on 30/12/2022 and may not be representative of the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● ***In which economic sectors were the investments made?***

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Other monetary intermediation	45.84%
Renting and operating of own or leased real estate	13.43%
Life insurance	9.32%
Manufacture of refined petroleum products	3.92%
Production of electricity	3.16%
Wired telecommunications activities	2.47%
General public administration activities	2.42%
Non-life insurance	1.84%
Electricity, gas, steam and air conditioning supply	1.82%
Wireless telecommunications activities	1.75%
Distribution of gaseous fuels through mains	1.56%
Trusts, funds and similar financial entities	1.11%
Service activities incidental to land transportation	0.99%
Civil engineering	0.75%
Activities of insurance agents and brokers	0.7%
Research and experimental development on biotechnology	0.69%
Transmission of electricity	0.61%
Warehousing and support activities for transportation	0.58%
Other activities auxiliary to financial services, except insurance and pension funding	0.57%
Manufacture of motor vehicles	0.55%
Distribution of electricity	0.5%
Construction of utility projects for electricity and telecommunications	0.5%
Manufacture of other inorganic basic chemicals	0.46%
Reinsurance	0.44%
Manufacture of other chemical products n.e.c.	0.44%
Service activities incidental to air transportation	0.42%
Retail trade, except of motor vehicles and motorcycles	0.38%
Manufacture of builders ware of plastic	0.38%
Manufacture of instruments and appliances for measuring, testing and navigation	0.34%

Manufacture of concrete products for construction purposes	0.29%
Manufacture of other parts and accessories for motor vehicles	0.27%
Private security activities	0.25%
Collection of non-hazardous waste	0.22%
Manufacture of chemicals and chemical products	0.22%
Rental and leasing activities	0.2%
Other human health activities	0.19%
Other financial service activities, except insurance and pension funding n.e.c.	0.19%
Combined facilities support activities	0.16%
Manufacture of corrugated paper and paperboard and of containers of paper and paperboard	0.09%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

Yes

In fossil gas In nuclear energy

No

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

1. Taxonomy-alignment of investments **including** sovereign bonds*

2. Taxonomy-alignment of investments **excluding** sovereign bonds*

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 26.63% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

 **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 33.3% of sustainable investments with a social objective.

 **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 7.31% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments being bank deposit, eligible money market instruments and money market funds used for managing the liquidity of the Financial Product, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2022, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Product Name: AXA WORLD FUNDS - EURO INFLATION BONDS

Entity LEI: 2138002DL7V11O568C73

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="checkbox"/> YES	<input type="checkbox"/> <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___%	It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 3.28% of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

● How did the sustainability indicators perform?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	5.85 Score over max 10	5.82 Score over max 10	99.87%

● **... And compared to previous periods?**

Not applicable.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?**

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG)of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2.Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3.Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability LinkedBonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer falled within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the

- OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	
Ecosystem Protection & Deforestation policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	% of investments	
SDG no significantly negative score	PAI 5 : Share of non-renewable energy consumption and production	% of total energy sources	
Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	

ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	
SDG no significantly negative score	PAI 13: Board gender diversity	Expressed as a percentage of all board members	
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

Please note that, despite our commitment in the precontractual SFDR annex to publish these indicators in our periodic reporting SFDR annex, SFDR Level 2 requirements – such as the integration of PAI indicators in the investment process – only entered into force on 01/01/2023, after this report's reference period. Therefore, PAI indicators will start being disclosed in the periodic reporting SFDR annex relative to the reference period in which SFDR Level 2 requirements entered into application.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy Ecosystem protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	
Climate Risk policy Ecosystem protection & Deforestation policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	
Climate Risk policy Ecosystem protection & Deforestation policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	

Please note that, despite our commitment in the precontractual SFDR annex to publish these indicators in our periodic reporting SFDR annex, SFDR Level 2 requirements – such as the integration of PAI indicators in the investment process – only entered into force on 01/01/2023, after this report's reference period. Therefore, PAI indicators will start being disclosed in the periodic reporting SFDR annex relative to the reference period in which SFDR Level 2 requirements entered into application.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2022-12-30

Top investments	Sector	Proportion	Country
DBRI 0.5% - 15/04/2030 CPI	General public administration activities	5.18%	DE
FRTR 0.7% - 25/07/2030 CPI	General public administration activities	3.97%	FR
FRTR 1.85% - 25/07/2027 CPI	General public administration activities	3.76%	FR
BTPS 1.3% - 15/05/2028 CPI	General public administration activities	3.72%	IT

FRTR 0.25% - 25/07/2024 CPI	General public administration activities	3.68%	FR
SPGBEI 1% - 30/11/2030 CPI	General public administration activities	3.63%	ES
SPGBEI 1.8% - 30/11/2024 CPI	General public administration activities	3.59%	ES
BTPS 2.35% - 15/09/2035 CPI	General public administration activities	3.49%	IT
BTPS 2.55% - 15/09/2041 CPI	General public administration activities	3.37%	IT
DBRI 0.1% - 15/04/2046 CPI	General public administration activities	3.35%	DE
SPGBEI 0.7% - 30/11/2033 CPI	General public administration activities	3.34%	ES
FRTR 0.1% - 25/07/2031 CPI	General public administration activities	3.27%	FR
BTPS 3.1% - 15/09/2026 CPI	General public administration activities	3.21%	IT
FRTR 1.8% - 25/07/2040 CPI	General public administration activities	3.19%	FR
FRTR 3.15% - 25/07/2032 CPI	General public administration activities	3.13%	FR

The portfolio proportions of investments hereabove presented were measured on 30/12/2022 and may not be representative of the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
General public administration activities	97.11%
Trusts, funds and similar financial entities	2.89%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- Yes
 In fossil gas In nuclear energy
 No

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 2.43% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

 **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 0.84% of sustainable investments with a social objective.

 **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 0.85% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments being bank deposit, eligible money market instruments and money market funds used for managing the liquidity of the Financial Product, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2022, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production

derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - EUROPE REAL ESTATE Entity LEI: 2138008R504FRND40A57

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> YES	<input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ____%	It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 0% of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective : ____%	<input type="checkbox"/> with a social objective
	<input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

● How did the sustainability indicators perform?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to during the reference period.

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	7.92 Score over max 10	7.46 Score over max 10	98.48%

● **... And compared to previous periods?**

Not applicable.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?**

The Financial product did not make any sustainable investments during the reference period.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

The Financial product did not make any sustainable investments during the reference period.

----- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Financial product did not make any sustainable investments during the reference period.

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

Please note that, despite our commitment in the precontractual SFDR annex to publish these indicators in our periodic reporting SFDR annex, SFDR Level 2 requirements – such as the integration of PAI indicators in the investment process – only entered into force on 01/01/2023, after this report's reference period. Therefore, PAI indicators will start being disclosed in the periodic reporting SFDR annex relative to the reference period in which SFDR Level 2 requirements entered into application.

----- **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

The Financial product did not make any sustainable investments during the reference period.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	

Please note that, despite our commitment in the precontractual SFDR annex to publish these indicators in our periodic reporting SFDR annex, SFDR Level 2 requirements – such as the integration of PAI indicators in the investment process – only entered into force on 01/01/2023, after this report's reference period. Therefore, PAI indicators will start being disclosed in the periodic reporting SFDR annex relative to the reference period in which SFDR Level 2 requirements entered into application.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2022-12-30

Top investments	Sector	Proportion	Country
SEGR0 PLC XLON GBP	Renting and operating of own or leased real estate	6.27%	GB

The portfolio proportions of investments hereabove presented were measured on 30/12/2022 and may not be representative of the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Renting and operating of own or leased real estate	95.21%
Management of real estate on a fee or contract basis	2.86%
Real estate activities	1.1%
Activities of holding companies	0.83%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- Yes
 In fossil gas In nuclear energy
- No

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

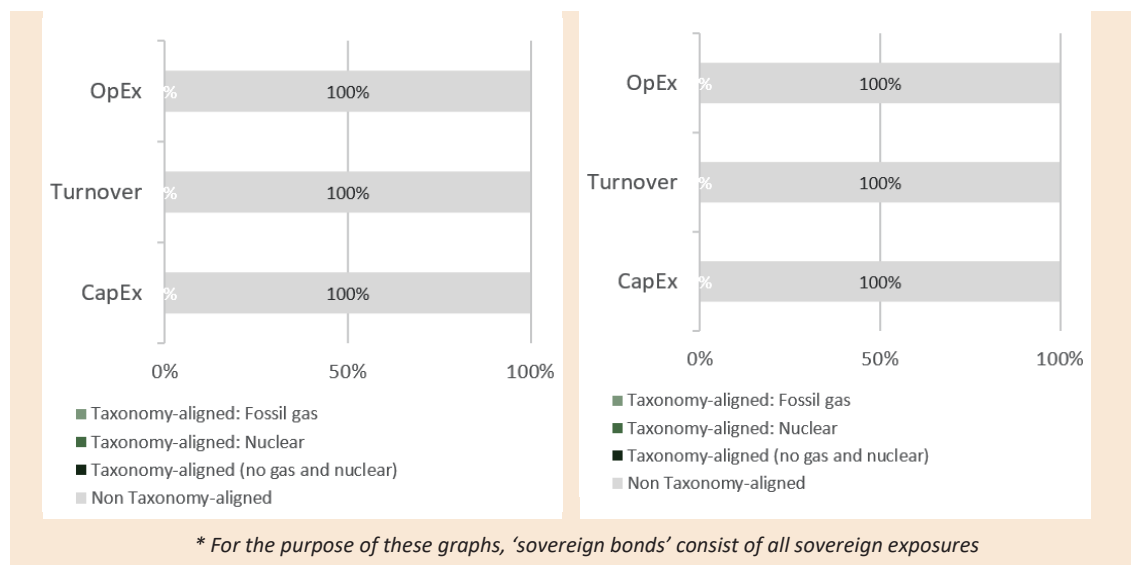

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

1. Taxonomy-alignment of investments including sovereign bonds* 2. Taxonomy-alignment of investments excluding sovereign bonds*

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?**

Not applicable.

 **What was the share of socially sustainable investments?**

Not applicable.

 **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 1.93% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments being bank deposit, eligible money market instruments and money market funds used for managing the liquidity of the Financial Product and
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be equity related instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and/or for diversification and/or hedging purposes.

Environmental or social safeguards are applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2022, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product Name: AXA WORLD FUNDS - FRAMLINGTON GLOBAL CONVERTIBLES

Entity LEI: 213800CD6MRQ8HCAOB54

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> YES	●● <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___%	It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 65.17% of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

● **How did the sustainability indicators perform?**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to during the reference period.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon intensity	154.67 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	372.98 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	96.03%

● **... And compared to previous periods?**

Not applicable.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?**

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2.Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below -5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to 'significantly contributing' to -10 corresponding to 'significantly obstructing', unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM's sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

----- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	
Ecosystem Protection & Deforestation policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	% of investments	
Climate Risk policy (engagement only)	PAI 5 : Share of non-renewable energy consumption and production	% of total energy sources	
Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

Please note that, despite our commitment in the precontractual SFDR annex to publish these indicators in our periodic reporting SFDR annex, SFDR Level 2 requirements – such as the integration of PAI indicators in the investment process – only entered into force on 01/01/2023, after this report's reference period. Therefore, PAI indicators will start being disclosed in the periodic reporting SFDR annex relative to the reference period in which SFDR Level 2 requirements entered into application.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	

Please note that, despite our commitment in the precontractual SFDR annex to publish these indicators in our periodic reporting SFDR annex, SFDR Level 2 requirements – such as the integration of PAI indicators in the investment process – only entered into force on 01/01/2023, after this report's reference period. Therefore, PAI indicators will start being disclosed in the periodic reporting SFDR annex relative to the reference period in which SFDR Level 2 requirements entered into application.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2022-12-30

Top investments	Sector	Proportion	Country
DXCM 0.25% - 15/11/2025 Conv	Manufacture of medical and dental instruments and supplies	2.27%	US
EDENFP 0 - 06/09/2024 Conv	Other business support service activities n.e.c.	2.27%	FR

AKAM 0.375% - 01/09/2027 Conv	Other software publishing	2.25%	US
JPM 0 - 10/06/2024 Conv	Trusts, funds and similar financial entities	2.21%	FR
LUV 1.25% - 01/05/2025 Conv	Trusts, funds and similar financial entities	2.17%	US
SHOPCN 0.125% - 01/11/2025 Conv	Other software publishing	1.97%	CA
PRYIM 0 - 02/02/2026 Conv	Manufacture of electrical equipment	1.83%	IT
ENPH 0 - 01/03/2026 Conv	Manufacture of other electrical equipment	1.79%	US
SUFP 0 - 15/06/2026 Conv	Manufacture of electric motors, generators and transformers	1.78%	FR
BNP 0 - 13/05/2025 Conv	Other monetary intermediation	1.77%	FR
F 0 - 15/03/2026 Conv	Manufacture of motor vehicles	1.71%	US
STM 0 - 04/08/2025 Conv	Manufacture of electronic components	1.68%	CH
Z 2.75% - 15/05/2025 Conv	Web portals	1.66%	US
MLFP 0 - 10/11/2023 Conv	Manufacture of rubber tyres and tubes, retreading and rebuilding of rubber tyres	1.57%	FR
MITCHM 0 - 29/03/2024 Conv	Manufacture of chemicals and chemical products	1.56%	JP

The portfolio proportions of investments hereabove presented were measured on 30/12/2022 and may not be representative of the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● ***In which economic sectors were the investments made?***

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Other software publishing	15.35%
Web portals	6.34%
Trusts, funds and similar financial entities	4.96%
Security and commodity contracts brokerage	4.05%
Manufacture of medical and dental instruments and supplies	3.97%
Passenger air transport	3.66%
Other monetary intermediation	3.66%
Manufacture of electronic components	3.4%
Other business support service activities n.e.c.	3.33%
Activities of holding companies	3.25%
Retail sale via mail order houses or via Internet	2.87%
Other activities auxiliary to financial services, except insurance and pension funding	2.77%
Publishing of computer games	2.62%
Manufacture of other electrical equipment	2.58%
Manufacture of motor vehicles	2.38%
Production of electricity	2.35%
Manufacture of pharmaceutical preparations	2.35%
Research and experimental development on biotechnology	2.12%
Manufacture of electrical equipment	1.83%
Wireless telecommunications activities	1.8%
Manufacture of electric motors, generators and transformers	1.78%
Mining of other non-ferrous metal ores	1.77%
Manufacture of rubber tyres and tubes, retreading and rebuilding of rubber tyres	1.57%
Manufacture of chemicals and chemical products	1.56%
Manufacture of basic pharmaceutical products	1.53%
Construction of utility projects for electricity and telecommunications	1.49%
Manufacture of air and spacecraft and related machinery	1.39%
Computer programming, consultancy and related activities	1.35%

Satellite telecommunications activities	1.33%
Water collection, treatment and supply	1.17%
Retail sale of clothing in specialised stores	1.05%
Manufacture of concrete products for construction purposes	1.01%
Transport via pipeline	0.84%
Data processing, hosting and related activities	0.83%
Television programming and broadcasting activities	0.75%
Other human health activities	0.75%
Other amusement and recreation activities	0.73%
Manufacture of other chemical products n.e.c.	0.71%
Manufacture of other special-purpose machinery n.e.c.	0.68%
Electricity, gas, steam and air conditioning supply	0.66%
Manufacture of computers and peripheral equipment	0.53%
Extraction of crude petroleum and natural gas	0.37%
Manufacture of instruments and appliances for measuring, testing and navigation	0.35%
General public administration activities	0.19%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

Yes

In fossil gas In nuclear energy

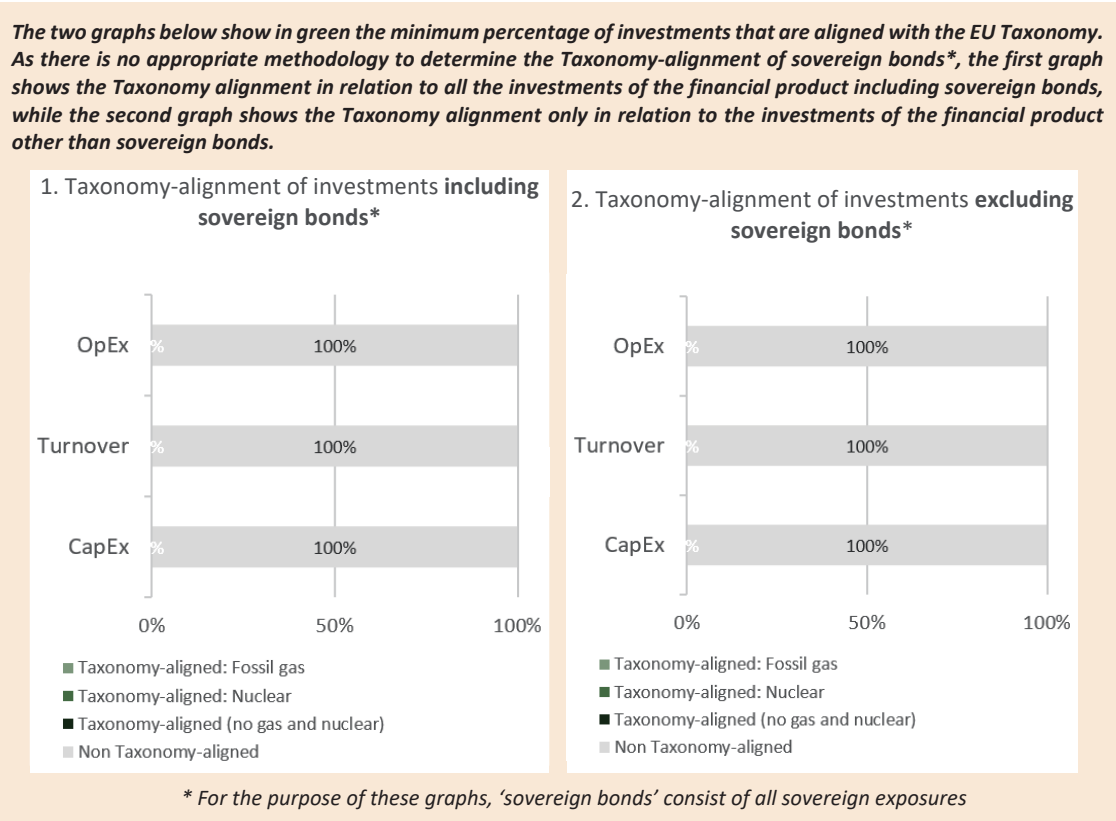

No

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable.

 are sustainable investments with an environmental objective that **do not**

 **What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 28.38% for this Financial Product during the reference period.

take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 36.79% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 4.75% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments being bank deposit, eligible money market instruments and money market funds used for managing the liquidity of the Financial Product, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2022, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (iii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - ITALY EQUITY

Entity LEI: 213800LNEKJGN8QM7D48

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> YES	<input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___%	It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 70.88% of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises. AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

● How did the sustainability indicators perform?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon intensity	226.13 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	267.01 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	92.12%

● **... And compared to previous periods?**

Not applicable.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?**

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG)of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2.Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

● **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	
Ecosystem Protection & Deforestation policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	% of investments	
SDG no significantly negative score	PAI 5 : Share of non-renewable energy consumption and production	% of total energy sources	
Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	

ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	
SDG no significantly negative score	PAI 13: Board gender diversity	Expressed as a percentage of all board members	
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

Please note that, despite our commitment in the precontractual SFDR annex to publish these indicators in our periodic reporting SFDR annex, SFDR Level 2 requirements – such as the integration of PAI indicators in the investment process – only entered into force on 01/01/2023, after this report's reference period. Therefore, PAI indicators will start being disclosed in the periodic reporting SFDR annex relative to the reference period in which SFDR Level 2 requirements entered into application.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	

Please note that, despite our commitment in the precontractual SFDR annex to publish these indicators in our periodic reporting SFDR annex, SFDR Level 2 requirements – such as the integration of PAI indicators in the investment process – only entered into force on 01/01/2023, after this report's reference period. Therefore, PAI indicators will start being disclosed in the periodic reporting SFDR annex relative to the reference period in which SFDR Level 2 requirements entered into application.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2022-12-30

Top investments	Sector	Proportion	Country
INTESA SANPAOLO MTAA EUR	Other monetary intermediation	9.44%	IT
ENEL SPA MTAA EUR	Electricity, gas, steam and air conditioning supply	9.34%	IT
FINECOBANK SPA MTAA EUR	Other monetary intermediation	8.89%	IT
PRYSMIAN SPA MTAA EUR	Manufacture of electrical equipment	6.03%	IT

CNH INDUSTRIAL NV MTAA EUR	Manufacture of agricultural and forestry machinery	5.01%	GB
TERNA-RETE ELETTRICA NAZIONALE MTAA EUR	Transmission of electricity	4.5%	IT
STELLANTIS NV MTAA EUR	Manufacture of motor vehicles	4.35%	NL
ERG SPA MTAA EUR	Production of electricity	4.12%	IT
STMICROELECTRONICS NV MTAA EUR	Manufacture of electronic components	4.04%	CH
MEDIOBANCA SPA MTAA EUR	Other monetary intermediation	3.9%	IT
NEXI SPA MTAA EUR	Other activities auxiliary to financial services, except insurance and pension funding	3.9%	IT
SSGA-CSH EUR-EUR D	Trusts, funds and similar financial entities	3.28%	IE
INTERPUMP GROUP SPA MTAA EUR	Manufacture of fluid power equipment	2.67%	IT
TECHNOPROBE SPA MTAA EUR	Manufacture of other special-purpose machinery n.e.c.	2.51%	IT
DIASORIN SPA MTAA EUR	Manufacture of pharmaceutical preparations	2.47%	IT

The portfolio proportions of investments hereabove presented were measured on 30/12/2022 and may not be representative of the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● ***In which economic sectors were the investments made?***

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Other monetary intermediation	26.6%
Electricity, gas, steam and air conditioning supply	9.34%
Manufacture of electrical equipment	6.03%
Manufacture of agricultural and forestry machinery	5.01%
Transmission of electricity	4.5%
Manufacture of motor vehicles	4.35%
Production of electricity	4.12%
Manufacture of electronic components	4.04%
Other activities auxiliary to financial services, except insurance and pension funding	3.9%
Manufacture of other special-purpose machinery n.e.c.	3.63%
Trusts, funds and similar financial entities	3.28%
Manufacture of fluid power equipment	2.67%
Manufacture of pharmaceutical preparations	2.47%
Other software publishing	2.31%
Wholesale of pharmaceutical goods	1.65%
Motion picture, video and television programme production activities	1.65%
Manufacture of perfumes and toilet preparations	1.56%
Manufacture of wearing apparel	1.5%
Manufacture of electric domestic appliances	1.49%
Other postal and courier activities	1.26%
Manufacture of sports goods	1.13%
Non-specialised wholesale of food, beverages and tobacco	0.9%
Manufacture of basic pharmaceutical products	0.79%
Manufacture of food products	0.72%
Distribution of electricity	0.7%
Computer programming activities	0.63%
Web portals	0.62%
Real estate activities	0.6%
Computer programming, consultancy and related activities	0.55%

Manufacture of medical and dental instruments and supplies	0.55%
Manufacture of other parts and accessories for motor vehicles	0.51%
Manufacture of batteries and accumulators	0.5%
Manufacture of air and spacecraft and related machinery	0.45%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

- Yes
- In fossil gas In nuclear energy
- No

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully

- **What was the share of investments made in transitional and enabling activities?**

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the "do not significantly harm" criteria of the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 31.33% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

 **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 39.56% of sustainable investments with a social objective.

 **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 11.09% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments being bank deposit, eligible money market instruments and money market funds used for managing the liquidity of the Financial Product, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2022, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (iii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Product Name: AXA WORLD FUNDS - ROBOTECH Entity LEI: 213800CU3X4UQM7PY924

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

YES

NO

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

It made **sustainable investments with an environmental objective**: ___%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ___%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 66.66% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon intensity
- Water Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

Sustainability indicators measure how the environmental or social characteristics promoted

by the financial product are attained.

● **How did the sustainability indicators perform?**

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has applied a socially responsible investment selectivity approach Best-in-Class on the investment universe during the reference period. The selectivity approach has reduced the investment universe at least by 20% based on a combination of AXA IM's Sectorial Exclusion and ESG Standards policies and their ESG Score to the exception of cash held on an ancillary basis and Solidarity Assets.

In addition, the investment strategy has outperformed its benchmark or investment universe on at least two ESG Key Performance Indicator that are Carbon intensity and Water Intensity during the reference period.

During the reference period, the following minimum coverage rates have been applied with the Financial Product portfolio (expressed as a percentage of at least % of the net assets, excluding bonds and other debt securities issued by public issuers, cash held on an ancillary basis and Solidarity Assets): i) 90% for the ESG analysis, ii) 90% for the Carbon intensity indicator and iii) 70% for the Water Intensity indicator.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon intensity	95.78 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	238.18 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	97.24%
Water intensity	472.75Thousands of cubic meters for corporates	11618.89Thousands of cubic meters for corporates	97.24%

● **... And compared to previous periods?**

Not applicable.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?**

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2.Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact ’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	
Ecosystem Protection & Deforestation policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	% of investments	
Climate Risk policy (engagement only)	PAI 5 : Share of non-renewable energy consumption and production	% of total energy sources	
Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	

SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

Please note that, despite our commitment in the precontractual SFDR annex to publish these indicators in our periodic reporting SFDR annex, SFDR Level 2 requirements – such as the integration of PAI indicators in the investment process – only entered into force on 01/01/2023, after this report's reference period. Therefore, PAI indicators will start being disclosed in the periodic reporting SFDR annex relative to the reference period in which SFDR Level 2 requirements entered into application.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	

Please note that, despite our commitment in the precontractual SFDR annex to publish these indicators in our periodic reporting SFDR annex, SFDR Level 2 requirements – such as the integration of PAI indicators in the investment process – only entered into force on 01/01/2023, after this report’s reference period. Therefore, PAI indicators will start being disclosed in the periodic reporting SFDR annex relative to the reference period in which SFDR Level 2 requirements entered into application.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2022-12-30

Top investments	Sector	Proportion	Country
INTUITIVE SURGICAL INC XNGS USD	Manufacture of medical and dental instruments and supplies	4.39%	US
DEXCOM INC XNGS USD	Manufacture of medical and dental instruments and supplies	4.09%	US
KEYENCE CORP XTKS JPY	Manufacture of other special-purpose machinery n.e.c.	3.68%	JP
SIEMENS AG-REG XETR EUR	Manufacture of electrical equipment	3.67%	DE
THERMO FISHER SCIENTIFIC INC XNYS USD	Manufacture of instruments and appliances for measuring, testing and navigation	3.28%	US
QUALCOMM INC XNGS USD	Manufacture of electronic components	3.09%	US
SILICON LABORATORIES INC XNGS USD	Manufacture of electronic components	2.95%	US

SCHNEIDER ELECTRIC SE XPAR EUR	Manufacture of electric motors, generators and transformers	2.4%	FR
NVIDIA CORP XNGS USD	Manufacture of electronic components	2.37%	US
INFINEON TECHNOLOGIES AG XETR EUR	Manufacture of electronic components	2.36%	DE
TERADYNE INC XNGS USD	Manufacture of other special-purpose machinery n.e.c.	2.34%	US

The portfolio proportions of investments hereabove presented were measured on 30/12/2022 and may not be representative of the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● ***In which economic sectors were the investments made?***

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Manufacture of electronic components	23.77%
Manufacture of other special-purpose machinery n.e.c.	17.88%
Manufacture of medical and dental instruments and supplies	12.63%
Other software publishing	10.24%
Manufacture of instruments and appliances for measuring, testing and navigation	7.17%
Manufacture of electrical equipment	5.36%
Manufacture of electric motors, generators and transformers	3.49%
Web portals	2.81%
Manufacture of communication equipment	2.44%
Manufacture of irradiation, electromedical and electrotherapeutic equipment	2.41%
Manufacture of lifting and handling equipment	2.33%
Retail sale via mail order houses or via Internet	2.18%
Manufacture of computer, electronic and optical products	2.09%
Manufacture of electrical and electronic equipment for motor vehicles	2.01%
Manufacture of machinery for food, beverage and tobacco processing	1.08%
Other business support service activities n.e.c.	0.81%
Retail trade, except of motor vehicles and motorcycles	0.75%
Manufacture of motor vehicles	0.56%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

Yes

In fossil gas In nuclear energy

No

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the "do not significantly harm" criteria of the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 30.78% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 35.88% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 4.93% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments being bank deposit, eligible money market instruments and money market funds used for managing the liquidity of the Financial Product, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2022, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - SUSTAINABLE EQUITY QI

Entity LEI: 21380043259EJLUQF79

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="checkbox"/> YES	<input type="checkbox"/> <input checked="" type="radio"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 59.32% of sustainable investments <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon intensity
- Water Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

Sustainability indicators measure how the environmental or social characteristics promoted

by the financial product are attained.

● **How did the sustainability indicators perform?**

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

During the reference period, the Financial Product has applied a ESG Score Upgrade Approach approach on its investment universe, according to which the ESG scoring of the Financial Product has been higher than the scoring of the investment universe after removing at least the 20% worst ESG Scores, on a weighted average basis.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon intensity	128.15 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	225.84 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	99.89%
Water intensity	7835.77Thousands of cubic meters for corporates	12712.05Thousands of cubic meters for corporates	99.89%

● **... And compared to previous periods?**

Not applicable.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?**

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2.Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer falled within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the

- OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	
Ecosystem Protection & Deforestation policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	% of investments	
Climate Risk policy (engagement only)	PAI 5 : Share of non-renewable energy consumption and production	% of total energy sources	
Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	

SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	
-------------------------------------	--	--	--

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

Please note that, despite our commitment in the precontractual SFDR annex to publish these indicators in our periodic reporting SFDR annex, SFDR Level 2 requirements – such as the integration of PAI indicators in the investment process – only entered into force on 01/01/2023, after this report's reference period. Therefore, PAI indicators will start being disclosed in the periodic reporting SFDR annex relative to the reference period in which SFDR Level 2 requirements entered into application.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	

Please note that, despite our commitment in the precontractual SFDR annex to publish these indicators in our periodic reporting SFDR annex, SFDR Level 2 requirements – such as the integration of PAI indicators in the investment process – only entered into force on 01/01/2023, after this report’s reference period. Therefore, PAI indicators will start being disclosed in the periodic reporting SFDR annex relative to the reference period in which SFDR Level 2 requirements entered into application.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2022-12-30

Top investments	Sector	Proportion	Country
APPLE INC XNGS USD	Manufacture of communication equipment	3.84%	US
MICROSOFT CORP XNGS USD	Other software publishing	2.9%	US
ALPHABET INC-CL A XNGS USD	Web portals	1.47%	US
PROCTER & GAMBLE CO/THE XNYS USD	Manufacture of household and sanitary goods and of toilet requisites	1.31%	US
BERKSHIRE HATHAWAY INC-CL B XNYS USD	Non-life insurance	1.29%	US
COCA-COLA CO/THE XNYS USD	Manufacture of soft drinks, production of mineral waters and other bottled waters	1.17%	US
PEPSICO INC XNGS USD	Manufacture of soft drinks, production of mineral waters and other bottled waters	1.12%	US
UNITEDHEALTH GROUP INC XNYS USD	Non-life insurance	0.98%	US
HOME DEPOT INC XNYS USD	Retail sale of hardware, paints and glass in specialised stores	0.95%	US
ROYAL BANK OF CANADA XTSE CAD	Other monetary intermediation	0.87%	CA
MERCK & CO. INC. XNYS USD	Manufacture of basic pharmaceutical products	0.87%	US
UNION PACIFIC CORP XNYS USD	Freight rail transport	0.84%	US
JPMORGAN CHASE & CO XNYS USD	Other monetary intermediation	0.82%	US
ABBOTT LABORATORIES XNYS USD	Manufacture of irradiation, electromedical and electrotherapeutic equipment	0.82%	US
NESTLE SA-REG XSWX CHF	Manufacture of food products	0.77%	CH

The portfolio proportions of investments hereabove presented were measured on 30/12/2022 and may not be representative of the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● ***In which economic sectors were the investments made?***

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Non-life insurance	6.96%
Other monetary intermediation	6.66%
Manufacture of communication equipment	4.95%
Other software publishing	4.41%
Manufacture of basic pharmaceutical products	4.28%
Manufacture of household and sanitary goods and of toilet requisites	3.47%
Freight rail transport	2.84%
Manufacture of soft drinks, production of mineral waters and other bottled waters	2.77%
Retail trade, except of motor vehicles and motorcycles	2.69%
Manufacture of instruments and appliances for measuring, testing and navigation	2.64%
Renting and operating of own or leased real estate	2.51%
Manufacture of electrical equipment	2.37%
Wireless telecommunications activities	2.27%
Other information service activities n.e.c.	2.06%
Other activities auxiliary to financial services, except insurance and pension funding	2.05%
Web portals	2.03%
Manufacture of food products	1.81%
Life insurance	1.69%
Retail sale of hardware, paints and glass in specialised stores	1.64%
Wholesale trade, except of motor vehicles and motorcycles	1.56%
Research and experimental development on biotechnology	1.51%
Manufacture of irradiation, electromedical and electrotherapeutic equipment	1.32%
Wholesale of pharmaceutical goods	1.31%
Manufacture of medical and dental instruments and supplies	1.22%
Administration of financial markets	1.18%
Activities of insurance agents and brokers	1.16%
Computer programming, consultancy and related activities	1.12%

Data processing, hosting and related activities	1.11%
Manufacture of electronic components	1.11%
Manufacture of motor vehicles	1.07%
Manufacture of other special-purpose machinery n.e.c.	1.01%
Satellite telecommunications activities	0.95%
Manufacture of rusks and biscuits, manufacture of preserved pastry goods and cakes	0.86%
Manufacture of other chemical products n.e.c.	0.76%
Manufacture of computers and peripheral equipment	0.74%
Retail trade of motor vehicle parts and accessories	0.72%
Water collection, treatment and supply	0.69%
Manufacture of electric motors, generators and transformers	0.61%
Retail sale via mail order houses or via Internet	0.6%
Manufacture of chemicals and chemical products	0.59%
Manufacture of ovens, furnaces and furnace burners	0.58%
Wired telecommunications activities	0.58%
Treatment and disposal of non-hazardous waste	0.55%
Other postal and courier activities	0.52%
Manufacture of paints, varnishes and similar coatings, printing ink and mastics	0.52%
Security systems service activities	0.51%
Manufacture of agricultural and forestry machinery	0.51%
Manufacture of pesticides and other agrochemical products	0.5%
Manufacture of fertilisers and nitrogen compounds	0.49%
Manufacture of fluid power equipment	0.48%
Manufacture of machinery for mining, quarrying and construction	0.47%
Production of electricity	0.47%
Distilling, rectifying and blending of spirits	0.47%
Other credit granting	0.46%
Other transportation support activities	0.45%
Manufacture of tools	0.44%
Manufacture of beer	0.43%

Reinsurance	0.39%
Other	0.37%
Manufacture of cocoa, chocolate and sugar confectionery	0.36%
Collection of non-hazardous waste	0.35%
Transport via pipeline	0.34%
Manufacture of fabricated metal products, except machinery and equipment	0.34%
Mining of other non-ferrous metal ores	0.33%
Other human health activities	0.32%
Freight transport by road	0.32%
Manufacture of ceramic sanitary fixtures	0.31%
Retail sale of medical and orthopaedic goods in specialised stores	0.3%
Distribution of electricity	0.3%
Manufacture of perfumes and toilet preparations	0.26%
Other personal service activities	0.26%
Manufacture of railway locomotives and rolling stock	0.25%
Manufacture of pharmaceutical preparations	0.25%
Manufacture of other pumps and compressors	0.25%
Manufacture of other articles of paper and paperboard	0.23%
Manufacture of lifting and handling equipment	0.21%
Manufacture of other parts and accessories for motor vehicles	0.21%
Transmission of electricity	0.2%
Retail sale of watches and jewellery in specialised stores	0.2%
Manufacture of rubber tyres and tubes, retreading and rebuilding of rubber tyres	0.2%
Trusts, funds and similar financial entities	0.18%
Hospital activities	0.18%
Computer consultancy activities	0.18%
Construction of residential and non-residential buildings	0.18%
Other information technology and computer service activities	0.16%
Retail sale of flowers, plants, seeds, fertilisers, pet animals and pet food in specialised stores	0.16%

Manufacture of macaroni, noodles, couscous and similar farinaceous products	0.14%
Private security activities	0.13%
Manufacture of concrete products for construction purposes	0.13%
Wholesale of chemical products	0.12%
Retail sale of clothing in specialised stores	0.11%
Manufacture of soap and detergents, cleaning and polishing preparations	0.11%
Security and commodity contracts brokerage	0.11%
Activities of employment placement agencies	0.11%
Mining of iron ores	0.11%
Manufacture of other organic basic chemicals	0.1%
Restaurants and mobile food service activities	0.1%
Computer programming activities	0.1%
Copper production	0.1%
Advertising agencies	0.1%
Operation of dairies and cheese making	0.1%
Management of real estate on a fee or contract basis	0.1%
Civil engineering	0.09%
Other cleaning activities	0.09%
Manufacture of consumer electronics	0.09%
Manufacture of computer, electronic and optical products	0.09%
Sale of cars and light motor vehicles	0.09%
Gambling and betting activities	0.09%
Manufacture of magnetic and optical media	0.09%
Sea and coastal freight water transport	0.08%
Manufacture of refined petroleum products	0.08%
Manufacture of other non-metallic mineral products	0.07%
Manufacture of industrial gases	0.06%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

Yes

In fossil gas In nuclear energy

No

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the "do not significantly harm" criteria of the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 31.91% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 27.41% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 1.54% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments being bank deposit, eligible money market instruments and money market funds used for managing the liquidity of the Financial Product, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2022, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - GLOBAL INFLATION SHORT DURATION BONDS Entity LEI: 2138002AGTWONS399W19

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input type="checkbox"/> YES	<input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 0% of sustainable investments <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective <input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

● How did the sustainability indicators perform?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	5.88 Score over max 10	5.88 Score over max 10	100%

● **... And compared to previous periods?**

Not applicable.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?**

The Financial product did not make any sustainable investments during the reference period.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

The Financial product did not make any sustainable investments during the reference period.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial product did not make any sustainable investments during the reference period.

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

Please note that, despite our commitment in the precontractual SFDR annex to publish these indicators in our periodic reporting SFDR annex, SFDR Level 2 requirements – such as the integration of PAI indicators in the investment process – only entered into force on 01/01/2023, after this report's reference period. Therefore, PAI indicators will start being disclosed in the periodic reporting SFDR annex relative to the reference period in which SFDR Level 2 requirements entered into application.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Financial product did not make any sustainable investments during the reference period.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	

Please note that, despite our commitment in the precontractual SFDR annex to publish these indicators in our periodic reporting SFDR annex, SFDR Level 2 requirements – such as the integration of PAI indicators in the investment process – only entered into force on 01/01/2023, after this report's reference period. Therefore, PAI indicators will start being disclosed in the periodic reporting SFDR annex relative to the reference period in which SFDR Level 2 requirements entered into application.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2022-12-30

Top investments	Sector	Proportion	Country
TII 0.625% - 15/01/2026 CPI	General public administration activities	8.24%	US
TII 0.125% - 15/04/2026 CPI	General public administration activities	5.35%	US
TII 0.125% - 15/04/2027 CPI	General public administration activities	5.15%	US
TII 0.375% - 15/07/2025 CPI	General public administration activities	4.39%	US

TII 0.125% - 15/10/2024 CPI	General public administration activities	4.39%	US
TII 0.375% - 15/01/2027 CPI	General public administration activities	4.35%	US
TII 0.125% - 15/04/2025 CPI	General public administration activities	4.18%	US
TII 0.25% - 15/01/2025 CPI	General public administration activities	4.14%	US
TII 0.125% - 15/07/2024 CPI	General public administration activities	4.1%	US
TII 0.125% - 15/10/2026 CPI	General public administration activities	3.73%	US
TII 1.625% - 15/10/2027 CPI	General public administration activities	3.53%	US
TII 0.625% - 15/01/2024 CPI	General public administration activities	3.31%	US
UKTI 0.125% - 22/03/2024 CPI	General public administration activities	3.25%	GB
TII 0.5% - 15/04/2024 CPI	General public administration activities	3.11%	US
UKTI 1.25% - 22/11/2027 CPI	General public administration activities	3.05%	GB

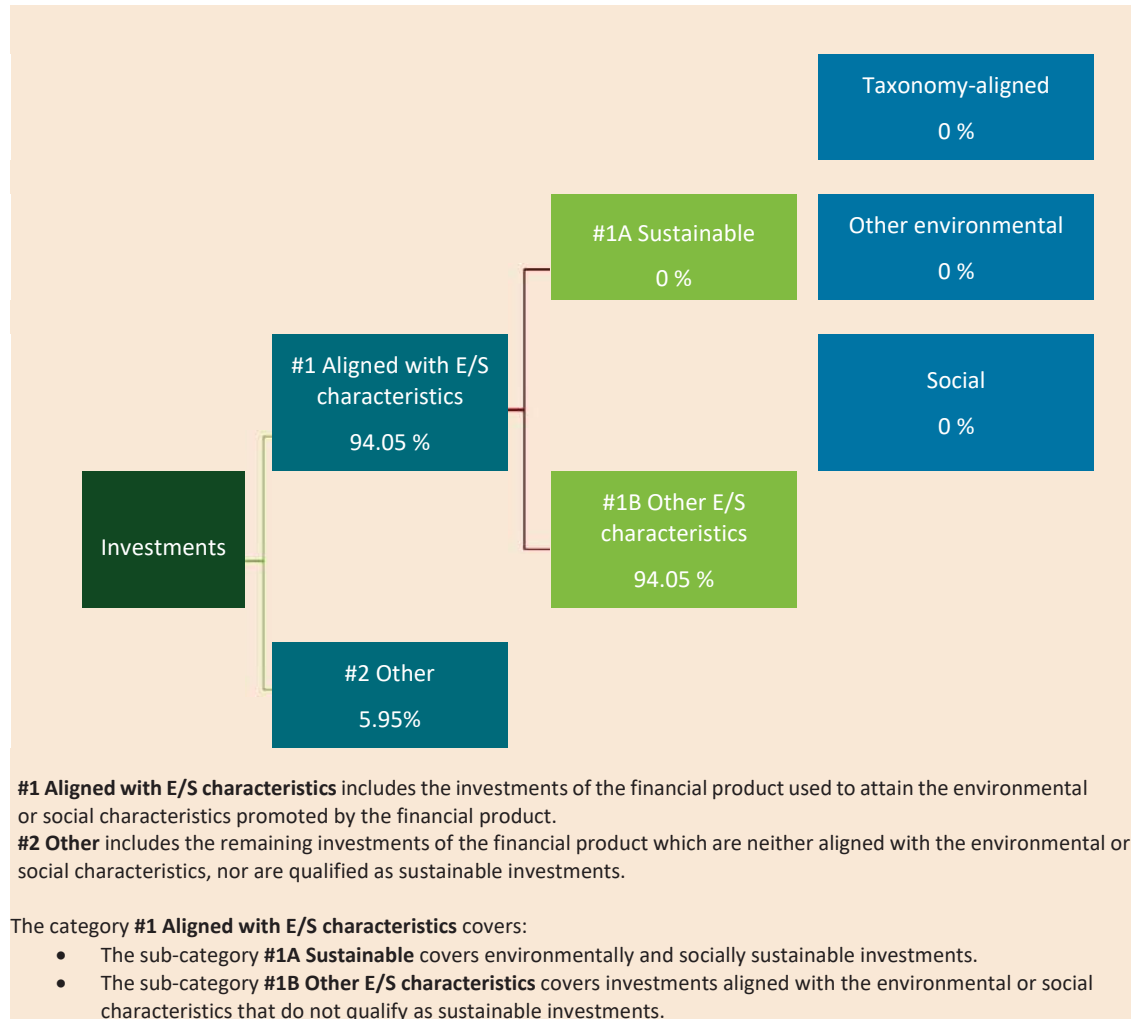

The portfolio proportions of investments hereabove presented were measured on 30/12/2022 and may not be representative of the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
General public administration activities	100%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- Yes
 - In fossil gas
 - In nuclear energy
- No

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?**

Not applicable.

 **What was the share of socially sustainable investments?**

Not applicable.

 **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 5.95% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments being bank deposit, eligible money market instruments and money market funds used for managing the liquidity of the Financial Product, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2022, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic

Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA WORLD FUNDS - GLOBAL OPTIMAL INCOME Entity LEI: 213800VRWFHRN3LIZV13

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input type="checkbox"/> YES	<input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 48.09% of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

● How did the sustainability indicators perform?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to during the reference period.

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	6.99 Score over max 10	6.22 Score over max 10	99.65%

● **... And compared to previous periods?**

Not applicable.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?**

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG)of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

- a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2.Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3.Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

- a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.
- b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability LinkedBonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.

- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	
Ecosystem Protection & Deforestation policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	% of investments	
Climate Risk policy (engagement only)	PAI 5 : Share of non-renewable energy consumption and production	% of total energy sources	
Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	

SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average
-------------------------------------	--	--

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

Please note that, despite our commitment in the precontractual SFDR annex to publish these indicators in our periodic reporting SFDR annex, SFDR Level 2 requirements – such as the integration of PAI indicators in the investment process – only entered into force on 01/01/2023, after this report's reference period. Therefore, PAI indicators will start being disclosed in the periodic reporting SFDR annex relative to the reference period in which SFDR Level 2 requirements entered into application.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	

Please note that, despite our commitment in the precontractual SFDR annex to publish these indicators in our periodic reporting SFDR annex, SFDR Level 2 requirements – such as the integration of PAI indicators in the investment process – only entered into force on 01/01/2023, after this report’s reference period. Therefore, PAI indicators will start being disclosed in the periodic reporting SFDR annex relative to the reference period in which SFDR Level 2 requirements entered into application.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2022-12-30

Top investments	Sector	Proportion	Country
ISHARES PHYSICAL GOLD ETC	Trusts, funds and similar financial entities	4.99%	IE
AXA WF Global Emerging Markets Bonds M (H) Capital	Trusts, funds and similar financial entities	2.64%	LU
BTF 0 - 08/03/2023	General public administration activities	2.56%	FR
PRYSMIAN SPA MTAA EUR	Manufacture of electrical equipment	2.48%	IT

The portfolio proportions of investments hereabove presented were measured on 30/12/2022 and may not be representative of the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● ***In which economic sectors were the investments made?***

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Trusts, funds and similar financial entities	14.85%
Other monetary intermediation	6.8%
Manufacture of basic pharmaceutical products	5.61%
General public administration activities	5.44%
Other software publishing	5.35%
Manufacture of other special-purpose machinery n.e.c.	4.97%
Manufacture of refined petroleum products	3.23%
Manufacture of motor vehicles	3.18%
Other activities auxiliary to financial services, except insurance and pension funding	2.92%
Other	2.89%
Other information service activities n.e.c.	2.7%
Manufacture of electrical equipment	2.48%
Distilling, rectifying and blending of spirits	2.33%
Mining of other non-ferrous metal ores	2.26%
Manufacture of medical and dental instruments and supplies	1.94%
Manufacture of food products	1.66%
Manufacture of instruments and appliances for measuring, testing and navigation	1.54%
Manufacture of jewellery and related articles	1.46%
Manufacture of household and sanitary goods and of toilet requisites	1.29%
Web portals	1.29%
Computer programming activities	1.13%
Manufacture of beer	1.08%
Manufacture of electric motors, generators and transformers	1.07%
Mining of iron ores	1.06%
Retail sale of clothing in specialised stores	0.97%
Manufacture of industrial gases	0.96%
Manufacture of electronic components	0.92%
Manufacture of luggage, handbags and the like, saddlery and harness	0.79%
Administration of financial markets	0.78%

Non-life insurance	0.77%
Manufacture of rubber tyres and tubes, retreading and rebuilding of rubber tyres	0.73%
Manufacture of paints, varnishes and similar coatings, printing ink and mastics	0.73%
Transmission of electricity	0.7%
Manufacture of other non-metallic mineral products	0.69%
Manufacture of musical instruments	0.67%
Civil engineering	0.66%
Computer programming, consultancy and related activities	0.57%
Manufacture of ovens, furnaces and furnace burners	0.57%
Manufacture of machinery for mining, quarrying and construction	0.53%
Manufacture of lifting and handling equipment	0.51%
Hotels and similar accommodation	0.5%
Wireless telecommunications activities	0.5%
Life insurance	0.5%
Engineering activities and related technical consultancy	0.42%
Fitness facilities	0.41%
Manufacture of communication equipment	0.4%
Manufacture of ceramic sanitary fixtures	0.38%
Sound recording and music publishing activities	0.37%
Retail sale of audio and video equipment in specialised stores	0.37%
Retail sale via mail order houses or via Internet	0.37%
Renting and operating of own or leased real estate	0.31%
Manufacture of air and spacecraft and related machinery	0.31%
Electricity, gas, steam and air conditioning supply	0.3%
Other postal and courier activities	0.29%
Other business support service activities n.e.c.	0.28%
Production of electricity	0.25%
Fishing and aquaculture	0.24%
Data processing, hosting and related activities	0.24%
Retail trade, except of motor vehicles and motorcycles	0.23%

Gambling and betting activities	0.21%
Motion picture, video and television programme production activities	0.21%
Manufacture of footwear	0.21%
Manufacture of other organic basic chemicals	0.2%
Support activities for petroleum and natural gas extraction	0.19%
Manufacture of ceramic tiles and flags	0.19%
Manufacture of perfumes and toilet preparations	0.19%
Construction of residential and non-residential buildings	0.19%
Publishing of computer games	0.17%
Service activities incidental to land transportation	0.16%
Manufacture of computers and peripheral equipment	0.15%
Growing of citrus fruits	0.14%
Manufacture of agricultural and forestry machinery	0.14%
Manufacture of other food products n.e.c.	0.14%
Wholesale of chemical products	0.14%
Manufacture of soft drinks, production of mineral waters and other bottled waters	0.11%
Manufacture of other parts and accessories for motor vehicles	0.08%
Manufacture of bodies (coachwork) for motor vehicles, manufacture of trailers and semi-trailers	0.07%
Water collection, treatment and supply	0.07%
Manufacture of other chemical products n.e.c.	0.07%
Collection of non-hazardous waste	0.07%
Other food service activities	0.07%
Passenger air transport	0.05%
Printing and reproduction of recorded media	0.03%
Manufacture of irradiation, electromedical and electrotherapeutic equipment	0.03%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

Yes

In fossil gas In nuclear energy

No

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the "do not significantly harm" criteria of the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 22.5% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 25.59% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 14.98% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments being bank deposit, eligible money market instruments and money market funds used for managing the liquidity of the Financial Product, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be equity or debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2022, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Product Name: AXA WORLD FUNDS - GLOBAL STRATEGIC BONDS Entity LEI: 213800DR687J9C7WK742

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input type="checkbox"/> YES	<input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___%	It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 24.51% of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

● How did the sustainability indicators perform?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

During the reference the period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to during the reference period.

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	6.09 Score over max 10	5.86 Score over max 10	98.93%

● **... And compared to previous periods?**

Not applicable.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?**

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

- a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2.Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3.Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

- a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.
- b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.

- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	
Ecosystem Protection & Deforestation policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	% of investments	
Climate Risk policy (engagement only)	PAI 5 : Share of non-renewable energy consumption and production	% of total energy sources	
Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	

SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	
-------------------------------------	--	--	--

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	

The Financial Product is also taking into account the environmental optional indicator PAI 6 ‘Water usage and recycling’ and the social optional indicator PAI 15 ‘Lack of anti-corruption and anti-bribery policies’.

Please note that, despite our commitment in the precontractual SFDR annex to publish these indicators in our periodic reporting SFDR annex, SFDR Level 2 requirements – such as the integration of PAI indicators in the investment process – only entered into force on 01/01/2023, after this report’s reference period. Therefore, PAI indicators will start being disclosed in the periodic reporting SFDR annex relative to the reference period in which SFDR Level 2 requirements entered into application.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	

Please note that, despite our commitment in the precontractual SFDR annex to publish these indicators in our periodic reporting SFDR annex, SFDR Level 2 requirements – such as the integration of PAI indicators in the investment process – only entered into force on 01/01/2023, after this report’s reference period. Therefore, PAI indicators will start being disclosed in the periodic reporting SFDR annex relative to the reference period in which SFDR Level 2 requirements entered into application.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2022-12-30

Top investments	Sector	Proportion	Country
T 1.125% - 15/02/2031	General public administration activities	4.29%	US
UKT 1% - 22/04/2024	General public administration activities	2.31%	GB
UKT 4.25% - 07/06/2032	General public administration activities	2.14%	GB
T 4.5% - 15/02/2036	General public administration activities	2.13%	US
FRTR 0.1% - 01/03/2025 CPI	General public administration activities	1.9%	FR
T 3% - 30/06/2024	General public administration activities	1.87%	US
TII 0.125% - 15/04/2025 CPI	General public administration activities	1.76%	US
T 3% - 15/05/2047	General public administration activities	1.62%	US
T 2% - 15/02/2050	General public administration activities	1.41%	US
UKTI 0.125% - 22/03/2026 CPI	General public administration activities	1.39%	GB

The portfolio proportions of investments hereabove presented were measured on 30/12/2022 and may not be representative of the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● ***In which economic sectors were the investments made?***

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
General public administration activities	31.88%
Other monetary intermediation	11.73%
Renting and operating of own or leased real estate	5.54%
Life insurance	4.82%
Manufacture of refined petroleum products	4.04%
Other software publishing	2%
Manufacture of other articles of paper and paperboard	1.82%
Transport via pipeline	1.66%
Non-life insurance	1.49%
Other information service activities n.e.c.	1.39%
Manufacture of other chemical products n.e.c.	1.38%
Restaurants and mobile food service activities	1.22%
Distribution of electricity	1.01%
Wireless telecommunications activities	0.93%
Service activities incidental to air transportation	0.9%
Other human health activities	0.84%
Mining of other non-ferrous metal ores	0.84%
Security and commodity contracts brokerage	0.83%
Web portals	0.82%
Trusts, funds and similar financial entities	0.81%
Private security activities	0.81%
Manufacture of other organic basic chemicals	0.8%
Other activities auxiliary to financial services, except insurance and pension funding	0.78%
Extraction of crude petroleum and natural gas	0.78%
Electricity, gas, steam and air conditioning supply	0.77%
Reinsurance	0.72%
Passenger rail transport, interurban	0.68%
Retail sale of hardware, paints and glass in specialised stores	0.67%
Activities of insurance agents and brokers	0.67%
Construction of residential and non-residential buildings	0.65%

Manufacture of basic pharmaceutical products	0.61%
Manufacture of medical and dental instruments and supplies	0.57%
Manufacture of beer	0.56%
Manufacture of other special-purpose machinery n.e.c.	0.56%
Manufacture of chemicals and chemical products	0.55%
Production of electricity	0.55%
Advertising agencies	0.54%
Satellite telecommunications activities	0.53%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

- Yes
 In fossil gas In nuclear energy
- No

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the "do not significantly harm" criteria of the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 9.97% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

 **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 14.54% of sustainable investments with a social objective.

 **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 8.58% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments being bank deposit, eligible money market instruments and money market funds used for managing the liquidity of the Financial Product, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2022, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (iii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Product Name: AXA WORLD FUNDS - OPTIMAL INCOME Entity LEI: 2138003LHHRO8T77DX76

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> YES	<input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___%	It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 59.81% of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon intensity
- Women on Board

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil sand activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

Sustainability indicators measure how the environmental or social characteristics promoted

by the financial product are attained.

● **How did the sustainability indicators perform?**

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has applied a socially responsible investment selectivity approach Best-in-class on the investment universe during the reference period. The selectivity approach has reduced the investment universe at least by 20% based on a combination of AXA IM’s Sectorial Exclusion and ESG Standards policies and their ESG Score to the exception of cash held on an ancillary basis and Solidarity Assets.

In addition, the investment strategy has outperformed its benchmark or investment universe on at least two ESG Key Performance Indicator that are Carbon intensity and Women on Board during the reference period.

During the reference period, the following minimum coverage rates have been applied with the Financial Product portfolio (expressed as a percentage of at least % of the net assets, excluding bonds and other debt securities issued by public issuers, cash held on an ancillary basis and Solidarity Assets): i) 90% for the ESG analysis, ii) 90% for the Carbon intensity indicator and iii) 70% for the Women on Board indicator.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon intensity	186.5 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	265.32 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	95.82%
Women on Board	40.34% of women on board	34.65% of women on board	95.44%

● **... And compared to previous periods?**

Not applicable.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objective?**

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous

practices from issuers, only Sustainability LinkedBonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer fell within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact ’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	
Ecosystem Protection & Deforestation policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/M€ or tCO2e/M\$)	
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	% of investments	
Climate Risk policy (engagement only)	PAI 5 : Share of non-renewable energy consumption and production	% of total energy sources	

Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested, expressed as a weighted average	

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Expressed as a percentage of all board members.	
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

Please note that, despite our commitment in the precontractual SFDR annex to publish these indicators in our periodic reporting SFDR annex, SFDR Level 2 requirements – such as the integration of PAI indicators in the investment process – only entered into force on 01/01/2023, after this report's reference period. Therefore, PAI indicators will start being disclosed in the periodic reporting SFDR annex relative to the reference period in which SFDR Level 2 requirements entered into application.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	

Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	
------------------------------	---	------------------	--

Please note that, despite our commitment in the precontractual SFDR annex to publish these indicators in our periodic reporting SFDR annex, SFDR Level 2 requirements – such as the integration of PAI indicators in the investment process – only entered into force on 01/01/2023, after this report's reference period. Therefore, PAI indicators will start being disclosed in the periodic reporting SFDR annex relative to the reference period in which SFDR Level 2 requirements entered into application.

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 2022-12-30

Top investments	Sector	Proportion	Country
ASML HOLDING NV XAMS EUR	Manufacture of other special-purpose machinery n.e.c.	4.27%	NL
AIR LIQUIDE PRIME FIDELITÄ© XPAR EUR	Manufacture of industrial gases	3.69%	FR
FINECOBANK SPA MTAA EUR	Other monetary intermediation	3.04%	IT
REMY COINTREAU XPAR EUR	Distilling, rectifying and blending of spirits	2.94%	FR
AWF Eur Inf P MC	Trusts, funds and similar financial entities	2.18%	LU
AXA IM FIIS Europe Short Duration High Yield A Cap	Trusts, funds and similar financial entities	2.18%	LU
AXA WF Next Generation M Capitalisation USD	Trusts, funds and similar financial entities	1.94%	LU

ROCHE HOLDING AG- GENUSSCHEIN XSWX CHF	Manufacture of basic pharmaceutical products	1.86%	CH
KABEL DEUTSCHLAND HOLDING AG XHAM EUR	Satellite telecommunications activities	1.86%	DE
BANCO BILBAO VIZCAYA ARGENTA XMAD EUR	Other monetary intermediation	1.73%	ES
AXA WF Dynamic Optimal Income M Capitalisation USD		1.7%	LU
EDENRED XPAR EUR	Other business support service activities n.e.c.	1.65%	FR
ASTRAZENECA PLC XLON GBP	Manufacture of basic pharmaceutical products	1.5%	GB
VOLVO AB-B SHS XSTO SEK	Manufacture of motor vehicles	1.43%	SE
AIR LIQUIDE SA-PF-2024 EUR	Manufacture of industrial gases	1.41%	FR

The portfolio proportions of investments hereabove presented were measured on 30/12/2022 and may not be representative of the reference period.

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period. Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

● ***In which economic sectors were the investments made?***

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Other monetary intermediation	16.24%
Trusts, funds and similar financial entities	9.55%
Manufacture of basic pharmaceutical products	5.48%
Manufacture of other special-purpose machinery n.e.c.	5.48%
Manufacture of industrial gases	5.23%
Manufacture of motor vehicles	4.29%
Distilling, rectifying and blending of spirits	4.15%
Other	3.91%
Manufacture of refined petroleum products	3.2%
Renting and operating of own or leased real estate	2.86%
General public administration activities	2.81%
Other business support service activities n.e.c.	2.13%
Satellite telecommunications activities	1.97%
Other software publishing	1.97%
Manufacture of rubber tyres and tubes, retreading and rebuilding of rubber tyres	1.35%
Manufacture of food products	1.31%
Manufacture of electrical equipment	1.27%
Wireless telecommunications activities	1.23%
Manufacture of agricultural and forestry machinery	1.22%
Manufacture of electric motors, generators and transformers	1.17%
Manufacture of ceramic sanitary fixtures	1.12%
Manufacture of air and spacecraft and related machinery	1.05%
Computer programming activities	1.02%
Manufacture of luggage, handbags and the like, saddlery and harness	0.97%
Life insurance	0.95%
Production of electricity	0.95%
Mining of other non-ferrous metal ores	0.92%
Data processing, hosting and related activities	0.87%
Manufacture of jewellery and related articles	0.85%
Other postal and courier activities	0.84%

Civil engineering	0.82%
Electricity, gas, steam and air conditioning supply	0.78%
Non-life insurance	0.77%
Transmission of electricity	0.67%
Manufacture of beer	0.58%
Retail trade, except of motor vehicles and motorcycles	0.53%
Manufacture of musical instruments	0.47%
Manufacture of machinery for mining, quarrying and construction	0.44%
Other information service activities n.e.c.	0.42%
Sound recording and music publishing activities	0.41%
Support activities for petroleum and natural gas extraction	0.38%
Distribution of gaseous fuels through mains	0.34%
Manufacture of bodies (coachwork) for motor vehicles, manufacture of trailers and semi-trailers	0.33%
Manufacture of electrical and electronic equipment for motor vehicles	0.32%
Motion picture, video and television programme production activities	0.31%
Administration of financial markets	0.29%
Service activities incidental to land transportation	0.29%
Manufacture of medical and dental instruments and supplies	0.29%
Advertising agencies	0.28%
Security and commodity contracts brokerage	0.28%
Passenger air transport	0.28%
Retail sale of clothing in specialised stores	0.27%
Wired telecommunications activities	0.25%
Manufacture of instruments and appliances for measuring, testing and navigation	0.25%
Service activities incidental to air transportation	0.23%
Water collection, treatment and supply	0.23%
Construction of residential and non-residential buildings	0.21%
Manufacture of other organic basic chemicals	0.21%
Other activities auxiliary to financial services, except insurance and pension funding	0.2%

Collection of non-hazardous waste	0.19%
Manufacture of ovens, furnaces and furnace burners	0.19%
Manufacture of other parts and accessories for motor vehicles	0.16%
Manufacture of other inorganic basic chemicals	0.16%
Other credit granting	0.16%
Manufacture of other chemical products n.e.c.	0.14%
Land transport and transport via pipelines	0.14%
Other food service activities	0.14%
Wholesale of chemical products	0.14%
Manufacture of communication equipment	0.12%
Mining of uranium and thorium ores	0.12%
Specialist medical practice activities	0.12%
Distribution of electricity	0.1%
Web portals	0.1%
Activities of holding companies	0.1%
Research and experimental development on biotechnology	0.1%
Manufacture of concrete products for construction purposes	0.1%
Manufacture of paints, varnishes and similar coatings, printing ink and mastics	0.06%
Management of real estate on a fee or contract basis	0.06%
Manufacture of electronic components	0.05%
Hotels and similar accommodation	0.05%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

Yes

In fossil gas In nuclear energy

No

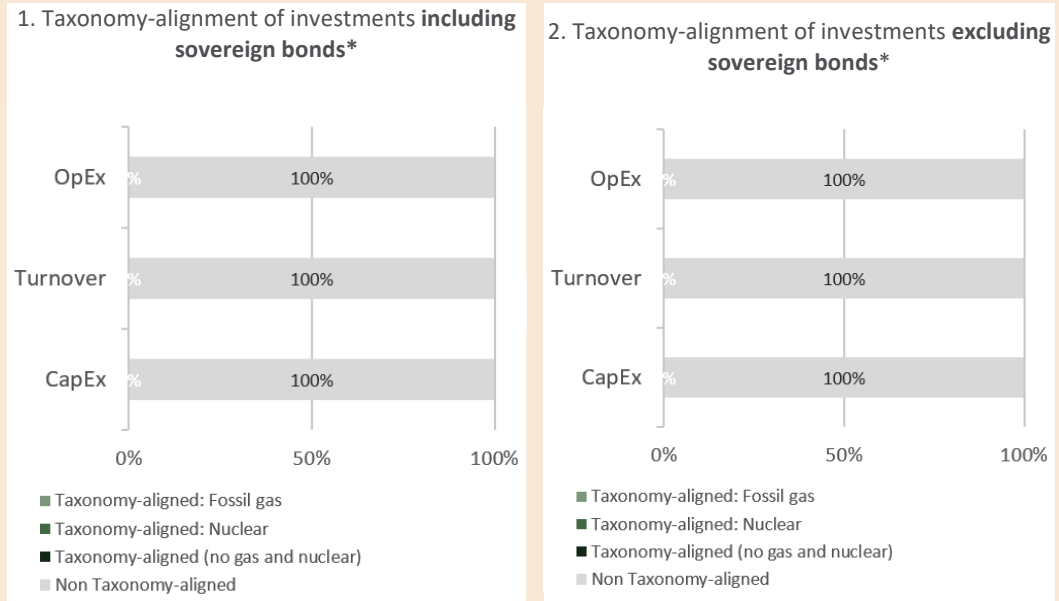

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the "do not significantly harm" criteria of the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable.

 are sustainable investments with an

 **What was the share of sustainable investments with an environmental objective not aligned with the EU taxonomy?**

environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 29.22% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 30.6% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 9.49% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments being bank deposit, eligible money market instruments and money market funds used for managing the liquidity of the Financial Product, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be equity or debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In 2022, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: BANTLEON OPPORTUNITIES L

Legal entity identifier (LEI-Code): 529900Q0M6ST2S9UZD14

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes **No**

<p><input type="checkbox"/> It made sustainable investments with an environmental objective: ___%</p> <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <p><input type="checkbox"/> It made sustainable investments with a social objective: ___%</p>	<p><input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments.</p> <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective <p><input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments.</p>
---	---

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and/or social characteristics promoted by the sub-fund include the following:

1. Use of value-based or norm-based criteria:
 - a. Companies participating in the UN Global Compact are favoured.
 - b. Companies from countries that promote the OECD Guidelines for Multinational Enterprises are favoured.
2. Use of screening criteria:
 - a. Companies:

Bei den **wichtigsten nachteiligen Auswirkungen** handelt es sich um die bedeutendsten nachteiligen Auswirkungen von Investitionsentscheidungen auf Nachhaltigkeitsfaktoren in den Bereichen Umwelt, Soziales und Beschäftigung, Achtung der Menschenrechte und Bekämpfung von Korruption und Bestechung.

- i. Manufacturers/distributors of anti-personnel mines (Ottawa Convention, 1997)
 - ii. Manufacturers/distributors of cluster munitions (Oslo Convention, 2008)
 - iii. Manufacturers/distributors of biological and chemical weapons
 - iv. Manufacturers/distributors of depleted uranium weapons
 - v. More than 10% of revenue from manufacturing and/or distributing defence goods
 - vi. More than 5% of revenue from manufacturing and/or distributing tobacco products
 - vii. More than 30% of revenue from extracting and/or distributing coal
 - viii. Severe violations of the UN Global Compact (with no positive outlook)
 - b. Government issuers:
 - i. Severe violations of democratic and human rights («Not Free» status according to the Freedom House Index or comparable internal/external ESG ratings).
3. Use of a minimum allocation to securities with a specific ESG rating
- i. At least 65% of the securities held by the sub-fund must be from issuers with an average ESG profile (equals a MSCI ESG rating »BB«, »BBB« or »A«) or above-average ESG profile (equals a MSCI ESG rating »AA« or »AAA«).

The above mentioned environmental and/or social characteristics promoted by the sub-fund were fully met during the reporting period. The sub-fund has not used any derivatives to enhance the promoted environmental and/or social characteristics.

• **How did the sustainability indicators perform?**

The following indicators were used to measure the extent to which individual environmental or social characteristics are achieved:

Environmental/social characteristic	Indicator
Favours companies participating in the UN Global Compact	Data field: <i>Global Compact Signatory</i> Data source: MSCI ESG Research
Favours companies from countries that promote the OECD Guidelines for Multinational Enterprises	The country in which the company has its registered office has signed up to the OECD Guidelines for Multinational Enterprises. Data sources: information in the public domain and information from MSCI ESG Research
Excludes manufacturers/distributors of: <ul style="list-style-type: none"> ▪ Anti-personnel mines ▪ Cluster munitions ▪ Biological and chemical weapons ▪ Depleted uranium weapons 	Revenue generated from or in connection with controversial weapons Data field: <i>Controversial Weapons – Any Tie</i> Data source: MSCI ESG Research

<p>Excludes companies in certain fields:</p> <ul style="list-style-type: none"> ▪ More than 10% of revenue from manufacturing and/or distributing defence goods ▪ More than 5% of revenue from manufacturing and/or distributing tobacco products ▪ More than 30% of revenue from extracting and/or distributing coal 	<p>Revenue in each field is measured as a percentage of the company's total revenue.</p> <p>Data fields:</p> <ul style="list-style-type: none"> ▪ <i>Weapons – Max. Percentage of Revenue</i> ▪ <i>Tobacco Producer – Max. Percentage of Revenue</i> ▪ <i>Generation Thermal Coal – Max. Percentage of Revenue</i> <p>Data source: MSCI ESG Research</p>
<p>Excludes companies that have committed severe violations of the UN Global Compact (with no positive outlook)</p>	<p>Analysis of controversies involving the company in relation to the UN Global Compact</p> <p>Data field: <i>Global Compact Compliance</i></p> <p>Data source: MSCI ESG Research</p>
<p>For government issuers: severe violations of democratic and human rights</p>	<p>»Not Free« status according to the Freedom House Index or comparable ESG ratings</p> <p>Data sources: MSCI ESG Research, comparable ESG research providers, in-house research</p>
<p>At least 65% of the securities held by the sub-fund must be from issuers with an average or above-average ESG profile.</p>	<p>Minimum rating of BB from MSCI ESG Research</p> <p>Data field: <i>ESG Rating</i></p> <p>Data source: MSCI ESG Research</p>

The selection criteria, restrictions and minimum requirements on which the defined sustainability indicators are based were continuously monitored during the reporting period and were complied with.

- ***...and compared to previous periods?***

N/A

- ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

N/A

- ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

N/A

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the principal adverse impacts on sustainability factors. The table below sets out which sustainability factors were considered and which measures/exclusions were foreseen to prevent or reduce the adverse impacts of investment decisions on these factors

Sustainability factors	Consideration	Reasoning
Indicators for investments in companies		
1. Greenhouse gas (GHG) emissions 2. Carbon footprint 3. Intensity of the company's GHG emissions	Screening criteria: No. 2a vii) and viii) No. 3 i)	The screening criteria rule out companies that: <ul style="list-style-type: none"> generate more than 30% of their revenue from coal-fired power generation are involved in severe controversies relating to the principles of the UN Global Compact (including Principles 7-9, which concern the environment) have high ESG risks (this applies to at least 65% of the sub-fund's assets) <p>It can therefore be assumed that the portfolio's direct and indirect emissions are lower.</p>
4. Investment in companies with fossil fuel operations	Screening criteria: No. 2a vii) No. 3 i)	The screening criteria rule out companies that: <ul style="list-style-type: none"> generate more than 30% of their revenue from coal-fired power generation have high ESG risks (this applies to at least 65% of the sub-fund's assets) <p>This partially avoids exposure to these types of company.</p>
5. Proportion of energy consumption and generation from non-renewable sources	Screening criterion: No. 2a vii)	This is taken into consideration because it can be assumed that reducing investments in non-renewable energy (in this case coal) will redirect capital flows towards renewable forms of energy, thus increasing their share of energy consumption and generation.
6. Intensity of energy consumption by climate-intensive sectors	Screening criterion: No. 2a viii)	Principles 7 to 9 of the UN Global Compact state that companies should support a precautionary approach to environmental challenges, undertake initiatives to promote greater environmental responsibility, and encourage the development and diffusion of environmentally friendly technologies. <p>It can therefore be assumed that companies that do not commit severe violations of the principles of the UN Global Compact will only</p>

		have a limited adverse impact on the intensity of energy consumption in a given sector.
7. Activities with an adverse impact on regions with biodiversity that requires protection 8. Water pollution 9. Proportion of hazardous and radioactive waste	Screening criterion: No. 2a viii)	Principle 7 of the UN Global Compact in particular states that companies should support a precautionary approach to environmental challenges. It can therefore be assumed that companies that do not commit severe violations of the principles of the UN Global Compact will only have a limited adverse impact on biodiversity, water pollution and hazardous/radioactive waste.
10. Violations of the principles of the UN Global Compact and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises	Screening criterion: No. 2a viii)	The screening criterion directly addresses violations of the UN Global Compact and the OECD Guidelines for Multinational Enterprises.
11. Insufficient processes and mechanisms for monitoring compliance with the principles of the UN Global Compact and the OECD Guidelines for Multinational Enterprises	Screening criteria: No. 2a viii) No. 3 i)	Severe violations of the UN Global Compact are a direct result of insufficient processes and mechanisms for monitoring compliance. Furthermore, a poor ESG profile according to MSCI also suggests similar organisational deficiencies. Both screening criteria thus serve to reduce adverse impacts.
12. Persistent gender pay gaps 13. Mix of genders in management and control bodies	Screening criteria: No. 2a viii) No. 3 i)	Principle 6 of the UN Global Compact states that companies should uphold the elimination of discrimination in respect of employment and occupation. An above-average MSCI ESG rating for the "S" (social) dimension, meanwhile, also addresses risks relating to equal treatment and discrimination. It can therefore be assumed that applying both criteria will reduce adverse impacts.
14. Involvement with controversial weapons (anti-personnel mines, cluster munitions, chemical and biological weapons)	Screening criteria: No. 2a i) to v)	Companies that are involved with and/or manufacture controversial weapons are categorically excluded, as are those that generate more than 10% of their revenue from defence goods. It can therefore be assumed that adverse impacts in this respect are significantly reduced or avoided altogether.
Indicators for investments in countries and supranational organisations		
15. Intensity of GHG emissions	Screening criterion: Country emits over 1,000 tonnes of CO ₂ per EUR 1	The screening criterion rules out countries that make no effort to bring their CO ₂ emissions (measured in tonnes) down to a

	<p>million of gross domestic product</p> <p>Data field: <i>Country GHG intensity</i></p> <p>Data source: MSCI ESG Research</p>	<p>reasonable level in relation to their gross domestic product.</p>
<p>16. Countries in which investments are made that violate social norms</p>	<p>Screening criterion:</p> <p>No. 2b</p>	<p>The screening criterion addresses severe violations of democratic and human rights based on »Not Free« status according to the Freedom House Index or comparable ESG ratings. It also prevents the acquisition of financial instruments from countries and supranational issuers that have committed such violations.</p> <p>This reduces adverse impacts.</p>

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

- **What was the asset allocation?**

According to the sales prospectus, at least 65% of the bonds of the sub-fund must fulfil the promoted environmental or social characteristics according to #1. As of the reporting date 30.11.2022, 97.06% of the sub-fund's bonds met the promoted environmental or social characteristics according to #1. #2 accounted for the sub-fund's remaining bonds as well as the sub-fund's cash and derivatives. The investment purpose of the investments covered by #2 is, on the one hand, to achieve the investment objective (securities and derivatives) and, on the other hand, to invest liquidity (cash); for the question of the description of any minimum environmental and social safeguards in the investments covered by #2, please refer to the section below "What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

The share of the sub-fund's investments in various sectors and sub-sectors as of the reporting date 30.11.2022 was assessed as follows:

Sectoren and sub-sectors	Share in %
Financials / Financials	1.29
Financials / Real Estate	0.59
Non-Financials / Real Estate	0
Non-Financials / Basic Materials	0.29
Non-Financials / Consumer Goods & Consumer Services	3.16

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

N/A

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A

What was the share of socially sustainable investments?

N/A

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

#2 Other investments covers investments held by the sub-fund that are permitted under the investment policy in the annex to this Sales Prospectus pertaining to the sub-fund but are neither aligned with environmental or social characteristics nor categorised as sustainable.

Up to 35% of the securities held by the sub-fund may fall under **#2 Other investments**. The following value-based and norm-based criteria and minimum screening criteria ensure a

minimum level of environmental or social characteristics with respect to these investments:

1. Use of value-based or norm-based criteria:
 - a. Companies participating in the UN Global Compact are favoured.
 - b. Companies from countries that promote the OECD Guidelines for Multinational Enterprises are favoured.

2. Use of screening criteria:
 - a. Companies:
 - i. Manufacturers/distributors of anti-personnel mines (Ottawa Convention, 1997)
 - ii. Manufacturers/distributors of cluster munitions (Oslo Convention, 2008)
 - iii. Manufacturers/distributors of biological and chemical weapons
 - iv. Manufacturers/distributors of depleted uranium weapons

The listed value and standard-based criteria and minimum exclusion criteria were complied with during the reporting period.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The measures taken during the reference period to comply with the sub-fund's environmental and/or social characteristics include, in particular, the implementation of sustainability analyses, compliance with ethical corporate principles and the analysis of reputational risks using ESG ratings from the data provider MSCI ESG Research as well as own analyses based on publicly available sources. The mapping of ESG restrictions was carried out within the framework of an investment compliance system, so that ex ante and ex post compliance with the specifications (and thus the environmental and/or social characteristics) could be technically verified at any time.

The participation policy defined by BANTLEON Invest GmbH as the sub-fund's management company on the basis of the EU Shareholder Rights Directive 2007/36/EC and Section 134b of the German Stock Corporation Act is not applied in the case of this sub-fund, as it does not invest in equities in accordance with its investment policy.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

N/A

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: BANTLEON OPPORTUNITIES S

Legal entity identifier (LEI-Code): 5299009B3CUH76W5J678

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes **No**

- It made **sustainable investments with an environmental objective:** ___%
 - in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective:** ___%

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments.
 - with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments.**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and/or social characteristics promoted by the sub-fund include the following:

1. Use of value-based or norm-based criteria:
 - a. Companies participating in the UN Global Compact are favoured.
 - b. Companies from countries that promote the OECD Guidelines for Multinational Enterprises are favoured.
2. Use of screening criteria:
 - a. Companies:

Bei den **wichtigsten nachteiligen Auswirkungen** handelt es sich um die bedeutendsten nachteiligen Auswirkungen von Investitionsentscheidungen auf Nachhaltigkeitsfaktoren in den Bereichen Umwelt, Soziales und Beschäftigung, Achtung der Menschenrechte und Bekämpfung von Korruption und Bestechung.

- i. Manufacturers/distributors of anti-personnel mines (Ottawa Convention, 1997)
 - ii. Manufacturers/distributors of cluster munitions (Oslo Convention, 2008)
 - iii. Manufacturers/distributors of biological and chemical weapons
 - iv. Manufacturers/distributors of depleted uranium weapons
 - v. More than 10% of revenue from manufacturing and/or distributing defence goods
 - vi. More than 5% of revenue from manufacturing and/or distributing tobacco products
 - vii. More than 30% of revenue from extracting and/or distributing coal
 - viii. Severe violations of the UN Global Compact (with no positive outlook)
 - b. Government issuers:
 - i. Severe violations of democratic and human rights («Not Free» status according to the Freedom House Index or comparable internal/external ESG ratings).
3. Use of a minimum allocation to securities with a specific ESG rating
- i. At least 65% of the securities held by the sub-fund must be from issuers with an average ESG profile (equals a MSCI ESG rating »BB«, »BBB« or »A«) or above-average ESG profile (equals a MSCI ESG rating »AA« or »AAA«).

The above mentioned environmental and/or social characteristics promoted by the sub-fund were fully met during the reporting period. The sub-fund has not used any derivatives to enhance the promoted environmental and/or social characteristics.

• **How did the sustainability indicators perform?**

The following indicators were used to measure the extent to which individual environmental or social characteristics are achieved:

Environmental/social characteristic	Indicator
Favours companies participating in the UN Global Compact	Data field: <i>Global Compact Signatory</i> Data source: MSCI ESG Research
Favours companies from countries that promote the OECD Guidelines for Multinational Enterprises	The country in which the company has its registered office has signed up to the OECD Guidelines for Multinational Enterprises. Data sources: information in the public domain and information from MSCI ESG Research
Excludes manufacturers/distributors of: <ul style="list-style-type: none"> ▪ Anti-personnel mines ▪ Cluster munitions ▪ Biological and chemical weapons ▪ Depleted uranium weapons 	Revenue generated from or in connection with controversial weapons Data field: <i>Controversial Weapons – Any Tie</i> Data source: MSCI ESG Research

<p>Excludes companies in certain fields:</p> <ul style="list-style-type: none"> ▪ More than 10% of revenue from manufacturing and/or distributing defence goods ▪ More than 5% of revenue from manufacturing and/or distributing tobacco products ▪ More than 30% of revenue from extracting and/or distributing coal 	<p>Revenue in each field is measured as a percentage of the company's total revenue.</p> <p>Data fields:</p> <ul style="list-style-type: none"> ▪ <i>Weapons – Max. How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the principal adverse impacts on sustainability factors. The table below sets out which sustainability factors were considered and which measures/exclusions were foreseen to prevent or reduce the adverse impacts of investment decisions on these factors

Sustainability factors	Consideration	Reasoning
Indicators for investments in companies		
1. Greenhouse gas (GHG) emissions 2. Carbon footprint 3. Intensity of the company's GHG emissions	Screening criteria: No. 2a vii) and viii) No. 3 i)	The screening criteria rule out companies that: <ul style="list-style-type: none"> generate more than 30% of their revenue from coal-fired power generation are involved in severe controversies relating to the principles of the UN Global Compact (including Principles 7-9, which concern the environment) have high ESG risks (this applies to at least 65% of the sub-fund's assets) It can therefore be assumed that the portfolio's direct and indirect emissions are lower.
4. Investment in companies with fossil fuel operations	Screening criteria: No. 2a vii) No. 3 i)	The screening criteria rule out companies that: <ul style="list-style-type: none"> generate more than 30% of their revenue from coal-fired power generation have high ESG risks (this applies to at least 65% of the sub-fund's assets) This partially avoids exposure to these types of company.
5. Proportion of energy consumption and generation from non-renewable sources	Screening criterion: No. 2a vii)	This is taken into consideration because it can be assumed that reducing investments in non-renewable energy (in this case coal) will redirect capital flows towards renewable forms of energy, thus increasing their share of energy consumption and generation.
6. Intensity of energy consumption by climate-intensive sectors	Screening criterion: No. 2a viii)	Principles 7 to 9 of the UN Global Compact state that companies should support a precautionary approach to environmental challenges, undertake initiatives to promote greater environmental responsibility, and encourage the development and diffusion of environmentally friendly technologies. It can therefore be assumed that companies that do not commit severe violations of the principles of the UN Global Compact will only

		have a limited adverse impact on the intensity of energy consumption in a given sector.
7. Activities with an adverse impact on regions with biodiversity that requires protection 8. Water pollution 9. Proportion of hazardous and radioactive waste	Screening criterion: No. 2a viii)	Principle 7 of the UN Global Compact in particular states that companies should support a precautionary approach to environmental challenges. It can therefore be assumed that companies that do not commit severe violations of the principles of the UN Global Compact will only have a limited adverse impact on biodiversity, water pollution and hazardous/radioactive waste.
10. Violations of the principles of the UN Global Compact and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises	Screening criterion: No. 2a viii)	The screening criterion directly addresses violations of the UN Global Compact and the OECD Guidelines for Multinational Enterprises.
11. Insufficient processes and mechanisms for monitoring compliance with the principles of the UN Global Compact and the OECD Guidelines for Multinational Enterprises	Screening criteria: No. 2a viii) No. 3 i)	Severe violations of the UN Global Compact are a direct result of insufficient processes and mechanisms for monitoring compliance. Furthermore, a poor ESG profile according to MSCI also suggests similar organisational deficiencies. Both screening criteria thus serve to reduce adverse impacts.
12. Persistent gender pay gaps 13. Mix of genders in management and control bodies	Screening criteria: No. 2a viii) No. 3 i)	Principle 6 of the UN Global Compact states that companies should uphold the elimination of discrimination in respect of employment and occupation. An above-average MSCI ESG rating for the "S" (social) dimension, meanwhile, also addresses risks relating to equal treatment and discrimination. It can therefore be assumed that applying both criteria will reduce adverse impacts.
14. Involvement with controversial weapons (anti-personnel mines, cluster munitions, chemical and biological weapons)	Screening criteria: No. 2a i) to v)	Companies that are involved with and/or manufacture controversial weapons are categorically excluded, as are those that generate more than 10% of their revenue from defence goods. It can therefore be assumed that adverse impacts in this respect are significantly reduced or avoided altogether.
Indicators for investments in countries and supranational organisations		
15. Intensity of GHG emissions	Screening criterion: Country emits over 1,000 tonnes of CO ₂ per EUR 1	The screening criterion rules out countries that make no effort to bring their CO ₂ emissions (measured in tonnes) down to a

	<p>million of gross domestic product</p> <p>Data field: <i>Country GHG intensity</i></p> <p>Data source: MSCI ESG Research</p>	<p>reasonable level in relation to their gross domestic product.</p>
<p>16. Countries in which investments are made that violate social norms</p>	<p>Screening criterion:</p> <p>No. 2b</p>	<p>The screening criterion addresses severe violations of democratic and human rights based on »Not Free« status according to the Freedom House Index or comparable ESG ratings. It also prevents the acquisition of financial instruments from countries and supranational issuers that have committed such violations.</p> <p>This reduces adverse impacts.</p>

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:

What were the top investments of this financial product?

Data as of 30.11.2022

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

- **What was the asset allocation?**

According to the sales prospectus, at least 65% of the bonds and equities of the sub-fund must fulfil the promoted environmental or social characteristics according to #1. As of the reporting date 30.11.2022, 97.62% of the sub-fund's bonds and equities met the promoted environmental or social characteristics according to #1. #2 accounted for the sub-fund's remaining bonds and equities as well as the sub-fund's cash and derivatives. The investment purpose of the investments covered by #2 is, on the one hand, to achieve the investment objective (securities and derivatives) and, on the other hand, to invest liquidity (cash); for the question of the description of any minimum environmental and social safeguards in the investments covered by #2, please refer to the section below "What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made?

The share of the sub-fund's investments in various sectors and sub-sectors as of the reporting date 30.11.2022 was assessed as follows:

Sectoren and sub-sectors	Share in %
Financials / Financials	0
Financials / Real Estate	0.19
Non-Financials / Real Estate	0
Non-Financials / Basic Materials	3.65
Non-Financials / Consumer Goods & Consumer Services	11.88
Non-Financials / Energy	1.64
Non-Financials / Health Care	4.57
Non-Financials / Industrials	4.61

Non-Financials / Oil & Gas	1.31
Non-Financials / Technology	3.91
Non-Financials / Telecommunications	3.34
Non-Financials / Utilities	4.05
Non-Financials / Others	0
Collateralized	22.26
Sovereigns	36.08
Sub-Sovereigns	0
Commodities (ETCs)	0
Funds	0

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

N/A

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A

What was the share of socially sustainable investments?

N/A

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

#2 Other investments covers investments held by the sub-fund that are permitted under the investment policy in the annex to this Sales Prospectus pertaining to the sub-fund but are neither aligned with environmental or social characteristics nor categorised as sustainable.

Up to 35% of the securities held by the sub-fund may fall under **#2 Other investments**. The following value-based and norm-based criteria and minimum screening criteria ensure a

minimum level of environmental or social characteristics with respect to these investments:

1. Use of value-based or norm-based criteria:
 - a. Companies participating in the UN Global Compact are favoured.
 - b. Companies from countries that promote the OECD Guidelines for Multinational Enterprises are favoured.

2. Use of screening criteria:
 - a. Companies:
 - i. Manufacturers/distributors of anti-personnel mines (Ottawa Convention, 1997)
 - ii. Manufacturers/distributors of cluster munitions (Oslo Convention, 2008)
 - iii. Manufacturers/distributors of biological and chemical weapons
 - iv. Manufacturers/distributors of depleted uranium weapons

The listed value and standard-based criteria and minimum exclusion criteria were complied with during the reporting period.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The measures taken during the reference period to comply with the sub-fund's environmental and/or social characteristics include, in particular, the implementation of sustainability analyses, compliance with ethical corporate principles and the analysis of reputational risks using ESG ratings from the data provider MSCI ESG Research as well as own analyses based on publicly available sources. The mapping of ESG restrictions was carried out within the framework of an investment compliance system, so that ex ante and ex post compliance with the specifications (and thus the environmental and/or social characteristics) could be technically verified at any time.

The participation policy defined by BANTLEON Invest GmbH as the sub-fund's management company on the basis of the EU Shareholder Rights Directive 2007/36/EC and Section 134b of the German Stock Corporation Act is applied in the case of this sub-fund, as it does invest in equities in accordance with its investment policy.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

N/A

Appendix IV – Supplementary Information (Unaudited) continued

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Continental European Flexible Fund

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Product name:
Continental European Flexible Fund

Legal entity identifier:
549300EK4APWIQOV3Y73

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: __%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: __%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of __% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following table lists the environmental and social characteristics which were promoted by the Fund throughout the reference period. Further information on these environmental and social characteristics is outlined in the Fund's prospectus. Please refer to the section below, "How did the sustainability indicators perform?", which provides information about the extent that the Fund met such environmental and social characteristics.

Appendix IV – Supplementary Information (Unaudited) continued

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Continental European Flexible Fund (continued)

Environmental and social characteristics promoted by the Fund

The Fund uses Blackrock's EMEA Baseline Screens with Fundamental Insights Methodology. The Fund may invest to a limited extent in issuers with exposure to nuclear weapons, fossil fuels, tobacco and civilian firearms. The basis for these investments is that the issuers are in "in transition" and focused on meeting sustainability criteria. However, issuers that do not meet the below screening criteria are excluded from investment

Exclusion of issuers which are engaged in, or are otherwise exposed to, the production of controversial weapons (including, but not limited to, cluster munitions, biological-chemical, landmines, depleted uranium, blinding laser, non-detectable fragments and/or incendiary weapons)

Exclusion of issuers deriving any revenue from direct involvement in the production of nuclear warheads

Exclusion of issuers deriving more than 25% of their revenue from thermal coal extraction and/or thermal coal-based power generation, with the exception of "green bonds", that are considered to comply with the International Capital Markets Association's Green Bond Principles

Exclusion of issuers deriving more than 25% of their revenue from the production of tar sands (also known as oil sands)

Exclusion of issuers which produce tobacco products

Exclusion of issuers which derive more than 5% of their revenue from the wholesale distribution and supply of tobacco related products

Exclusion of issuers domiciled in the United States which produce firearms and/or small arms ammunition intended for retail to civilians

Exclusion of issuers which derive more than 5% of their revenue from the production or retail distribution of firearms and/or small arms ammunition intended for civilian use

Exclusion of issuers which have been deemed to have failed to comply with UN Global Compact Principles (which cover human rights, labour standards, the environment and anticorruption)

Appendix IV – Supplementary Information (Unaudited) continued

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Continental European Flexible Fund (continued)

● **How did the sustainability indicators perform?**

The following table provides information about the performance of the sustainability indicators used to measure the attainment of each of the environmental and social characteristics promoted by the Fund, as further detailed in the Fund's prospectus.

Sustainability Indicator	Metric	Performance for the reference period
Exclusion of issuers based on exclusionary criteria as defined in table above "Environmental and social characteristics promoted by the Fund"	# of active breaches	No active breaches

● **...and compared to previous periods?**

As this is the first reference period that the periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852 are effective, no comparatives are presented.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

This section is not applicable for this Fund as it did not commit to holding Sustainable Investments during the reference period, however, certain Sustainable Investments may form part of the Fund's investment portfolio.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

This section is not applicable for this Fund as it did not commit to holding Sustainable Investments during the reference period, however, certain Sustainable Investments may form part of the Fund's investment portfolio.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

This section is not applicable for this Fund as it did not commit to holding Sustainable Investments during the reference period, however, certain Sustainable Investments may form part of the Fund's investment portfolio. Please refer to the section below, "How did this financial product consider principal adverse impacts on sustainability factors?", which describes how the Fund considered PAIs on sustainability factors.

- **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

This section is not applicable for this Fund as it did not commit to holding Sustainable Investments during the reference period, however, certain Sustainable Investments may form part of the Fund's investment portfolio.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Appendix IV – Supplementary Information (Unaudited) continued

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Continental European Flexible Fund (continued)

How did this financial product consider principal adverse impacts on sustainability factors?

The following table provides information about the impact of the principal adverse sustainability indicators taken into consideration by this Fund. The Fund considered the impact of the principal adverse sustainability indicators through the application of these minimum ESG and exclusionary criteria. The Investment Adviser has determined that those PAIs marked in the table below as “F” are fully considered or “P” are partially considered, as part of the investment selection criteria. A PAI is partially considered where a BlackRock internal assessment has determined the sustainability indicator partially meets the regulatory definition of the PAI outlined in Annex 1 supplementing Regulation (EU) 2019/2088 Regulatory Technical Standards (“RTS”). A PAI is fully considered where a BlackRock internal assessment has determined the sustainability indicator captures the full regulatory definition as outlined in Annex 1 supplementing Regulation (EU) 2019/2088 RTS.

Adverse Sustainability Indicator	Sustainability indicator			
	Exclusion of issuers which are engaged in, or are otherwise exposed to, the production of controversial weapons (including, but not limited to, cluster munitions, biological-chemical, landmines, depleted uranium, blinding laser, non-detectable fragments and/or incendiary weapons)	Exclusion of issuers deriving more than 25% of their revenue from the production and generation of tar sands (also known as oil sands)	Exclusion of issuers deriving more than 25% of their revenue from thermal coal extraction and/or thermal coal-based power generation, with the exception of “green bonds”, that are considered to comply with the International Capital Markets Association’s Green Bond Principles	Exclusion of issuers which have been deemed to have failed to comply with UN Global Compact Principles (which cover human rights, labour standards, the environment and anticorruption)
Exposure to companies active in the fossil fuel sector		P	P	
Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises				P
Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	F

● In which economic sectors were the investments made?

The following table details the economic sectors that the Fund was exposed to during the reference period.

Sector	Sub-Sector	% of Investments
Health Care	Pharma, Biotech & Life Sciences	16.60%
Financials	Banks	16.18%
Information Technology	Semiconductors & Semiconductor Equipment	16.14%
Industrials	Capital Goods	14.20%
Consumer Discretionary	Consumer Durables	13.09%
Materials	Materials	7.37%
Financials	Financial Services	5.13%
Industrials	Transportation	3.43%
Consumer Discretionary	Autos & Components	2.40%
Health Care	Health Care Equipment & Services	2.04%
Energy	Integrated Oil & Gas	0.93%

During the reference period, none of the Fund's investments were held in the following sub-sectors (as defined by the Global Industry Classification System): oil and gas exploration and production, oil and gas drilling, oil and gas equipment services, oil and gas storage and transportation, oil and gas refining and marketing, coal and consumable fuels.

Appendix IV – Supplementary Information (Unaudited) continued

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Continental European Flexible Fund (continued)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

For the reference period, the Fund's investment alignment with EU Taxonomy is shown in the graphs below.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

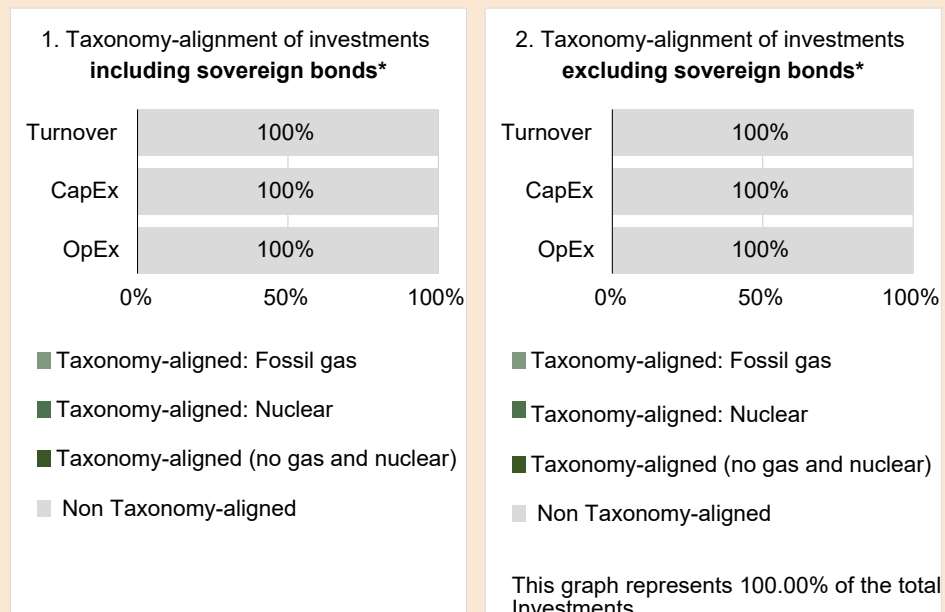

Yes:

In fossil gas In nuclear energy

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy alignment of sovereign bonds*, the first graph shows the taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Appendix IV – Supplementary Information (Unaudited) continued

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Continental European Flexible Fund (continued)

● What was the share of investments made in transitional and enabling activities?

For the reference period, 0% of the Fund's investments were made in transitional and enabling activities.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

As this is the first reference period that the periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852 are effective, no comparatives are presented.

Sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

This section is not applicable for this Fund as it did not commit to holding Sustainable Investments during the reference period, however, certain Sustainable Investments may form part of the Fund's investment portfolio.

● What was the share of socially sustainable investments?

This section is not applicable for this Fund as it did not commit to holding Sustainable Investments during the reference period, however, certain Sustainable Investments may form part of the Fund's investment portfolio.

● What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

Investments included under "#2 Other" included derivatives, cash and near cash instruments however such holdings did not exceed 20%. Such investments were used only for investment purposes in pursuit of the Fund's (non-ESG) investment objective, for the purposes of liquidity management and/or hedging. No other investments held by the Fund were assessed against minimum environmental or social safeguards.

● What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Investment Adviser has implemented internal quality controls such as compliance rule coding to ensure compliance with the environmental and social characteristics promoted by the Fund. The Investment Adviser regularly reviews the environmental and social characteristics promoted by the Fund to ensure they are still appropriate relative to the Fund's investment universe.

Where issuers are identified as potentially having issues with regards to good governance, the issuers are reviewed to ensure that, where the Investment Adviser agrees with this external assessment, the Investment Adviser is satisfied that the issuer has either taken remediation actions or will take remedial actions within a reasonable time frame based on the Investment Adviser's direct engagement with the issuer. The Investment Adviser may also decide to reduce exposure to such issuers.

The Investment Adviser is also subject to the shareholder engagement requirements of the Shareholders Rights Directive II (SRD) requirements. The SRD aims to strengthen the position of shareholders, enhance transparency and reduce excessive risk within companies traded on regulated EU marketplaces. Further details regarding the Investment Adviser's activities under the SRD are available on BlackRock's website at:

<https://www.blackrock.com/uk/professionals/solutions/shareholder-rights-directive>.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

European Equity Income Fund

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

European Equity Income Fund (continued)

Environmental and social characteristics promoted by the Fund

The Fund uses Blackrock's EMEA Baseline Screens with Fundamental Insights Methodology. The Fund may invest to a limited extent in issuers with exposure to nuclear weapons, fossil fuels, tobacco and civilian firearms. The basis for these investments is that the issuers are in "in transition" and focused on meeting sustainability criteria. However, issuers that do not meet the below screening criteria are excluded from investment

Exclusion of issuers which are engaged in, or are otherwise exposed to, the production of controversial weapons (including, but not limited to, cluster munitions, biological-chemical, landmines, depleted uranium, blinding laser, non-detectable fragments and/or incendiary weapons)

Exclusion of issuers deriving any revenue from direct involvement in the production of nuclear warheads

Exclusion of issuers deriving more than 25% of their revenue from thermal coal extraction and/or thermal coal-based power generation, with the exception of "green bonds", that are considered to comply with the International Capital Markets Association's Green Bond Principles

Exclusion of issuers deriving more than 25% of their revenue from the production of tar sands (also known as oil sands)

Exclusion of issuers which produce tobacco products

Exclusion of issuers which derive more than 5% of their revenue from the wholesale distribution and supply of tobacco related products

Exclusion of issuers domiciled in the United States which produce firearms and/or small arms ammunition intended for retail to civilians

Exclusion of issuers which derive more than 5% of their revenue from the production or retail distribution of firearms and/or small arms ammunition intended for civilian use

Exclusion of issuers which have been deemed to have failed to comply with UN Global Compact Principles (which cover human rights, labour standards, the environment and anticorruption)

● How did the sustainability indicators perform?

The following table provides information about the performance of the sustainability indicators used to measure the attainment of each of the environmental and social characteristics promoted by the Fund, as further detailed in the Fund's prospectus.

Sustainability Indicator	Metric	Performance for the reference period
Exclusion of issuers based on exclusionary criteria as defined in table above "Environmental and social characteristics promoted by the Fund"	# of active breaches	No active breaches

● ...and compared to previous periods?

As this is the first reference period that the periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852 are effective, no comparatives are presented.

● What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

This section is not applicable for this Fund as it did not commit to holding Sustainable Investments during the reference period, however, certain Sustainable Investments may form part of the Fund's investment portfolio.

● How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

This section is not applicable for this Fund as it did not commit to holding Sustainable Investments during the reference period, however, certain Sustainable Investments may form part of the Fund's investment portfolio.

- How were the indicators for adverse impacts on sustainability factors taken into account?

This section is not applicable for this Fund as it did not commit to holding Sustainable Investments during the reference period, however, certain Sustainable Investments may form part of the Fund's investment portfolio. Please refer to the section below, "How did this financial product consider principal adverse impacts on sustainability factors?", which describes how the Fund considered PAIs on sustainability factors.

- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

This section is not applicable for this Fund as it did not commit to holding Sustainable Investments during the reference period, however, certain Sustainable Investments may form part of the Fund's investment portfolio.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

European Equity Income Fund (continued)

How did this financial product consider principal adverse impacts on sustainability factors?

The following table provides information about the impact of the principal adverse sustainability indicators taken into consideration by this Fund. The Fund considered the impact of the principal adverse sustainability indicators through the application of these minimum ESG and exclusionary criteria. The Investment Adviser has determined that those PAIs marked in the table below as “F” are fully considered or “P” are partially considered, as part of the investment selection criteria. A PAI is partially considered where a BlackRock internal assessment has determined the sustainability indicator partially meets the regulatory definition of the PAI outlined in Annex 1 supplementing Regulation (EU) 2019/2088 Regulatory Technical Standards (“RTS”). A PAI is fully considered where a BlackRock internal assessment has determined the sustainability indicator captures the full regulatory definition as outlined in Annex 1 supplementing Regulation (EU) 2019/2088 RTS.

Adverse Sustainability Indicator	Sustainability indicator			
	Exclusion of issuers which are engaged in, or are otherwise exposed to, the production of controversial weapons (including, but not limited to, cluster munitions, biological-chemical, landmines, depleted uranium, blinding laser, non-detectable fragments and/or incendiary weapons)	Exclusion of issuers deriving more than 25% of their revenue from the production and generation of tar sands (also known as oil sands)	Exclusion of issuers deriving more than 25% of their revenue from thermal coal extraction and/or thermal coal-based power generation, with the exception of “green bonds”, that are considered to comply with the International Capital Markets Association’s Green Bond Principles	Exclusion of issuers which have been deemed to have failed to comply with UN Global Compact Principles (which cover human rights, labour standards, the environment and anticorruption)
Exposure to companies active in the fossil fuel sector		P	P	
Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises				P
Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	F

European Equity Income Fund (continued)

● In which economic sectors were the investments made?

The following table details the economic sectors representing 1% or more of investments held that the Fund was exposed to during the reference period.

Sector	Sub-Sector	% of Investments
Health Care	Pharma, Biotech & Life Sciences	18.63%
Industrials	Capital Goods	18.61%
Financials	Insurance	13.57%
Financials	Banks	10.04%
Energy	Integrated Oil & Gas	6.09%
Consumer Staples	Food Beverage Tobacco	5.41%
Information Technology	Semiconductors & Semiconductor Equipment	4.94%
Materials	Materials	4.88%
Utilities	Utilities	3.07%
Consumer Discretionary	Consumer Durables	2.70%
Industrials	Commercial & Professional Services	2.40%
Consumer Staples	Household & Personal Products	2.34%
Consumer Discretionary	Consumer Discretionary Distribution & Retail	2.07%
Communication	Telecom	1.41%
Industrials	Transportation	1.16%
Financials	Financial Services	1.13%

During the reference period, none of the Fund's investments were held in the following sub-sectors (as defined by the Global Industry Classification System): oil and gas exploration and production, oil and gas drilling, oil and gas equipment services, oil and gas storage and transportation, oil and gas refining and marketing, oil and gas equipment services, coal and consumable fuels.

Appendix IV – Supplementary Information (Unaudited) continued

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

European Equity Income Fund (continued)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

For the reference period, the Fund's investment alignment with EU Taxonomy is shown in the graphs below.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

Yes:

In fossil gas In nuclear energy

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy alignment of sovereign bonds*, the first graph shows the taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Appendix IV – Supplementary Information (Unaudited) continued

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

European Equity Income Fund (continued)

● What was the share of investments made in transitional and enabling activities?

For the reference period, 0% of the Fund's investments were made in transitional and enabling activities.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

As this is the first reference period that the periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852 are effective, no comparatives are presented.

Sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

This section is not applicable for this Fund as it did not commit to holding Sustainable Investments during the reference period, however, certain Sustainable Investments may form part of the Fund's investment portfolio.

● What was the share of socially sustainable investments?

This section is not applicable for this Fund as it did not commit to holding Sustainable Investments during the reference period, however, certain Sustainable Investments may form part of the Fund's investment portfolio.

● What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

Investments included under "#2 Other" included cash and near cash instruments however such holdings did not exceed 20%. Such investments were used only for investment purposes in pursuit of the Fund's (non-ESG) investment objective, for the purposes of liquidity management and/or hedging. No other investments held by the Fund were assessed against minimum environmental or social safeguards.

● What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Investment Adviser has implemented internal quality controls such as compliance rule coding to ensure compliance with the environmental and social characteristics promoted by the Fund. The Investment Adviser regularly reviews the environmental and social characteristics promoted by the Fund to ensure they are still appropriate relative to the Fund's investment universe.

Where issuers are identified as potentially having issues with regards to good governance, the issuers are reviewed to ensure that, where the Investment Adviser agrees with this external assessment, the Investment Adviser is satisfied that the issuer has either taken remediation actions or will take remedial actions within a reasonable time frame based on the Investment Adviser's direct engagement with the issuer. The Investment Adviser may also decide to reduce exposure to such issuers.

The Investment Adviser is also subject to the shareholder engagement requirements of the Shareholders Rights Directive II (SRD) requirements. The SRD aims to strengthen the position of shareholders, enhance transparency and reduce excessive risk within companies traded on regulated EU marketplaces. Further details regarding the Investment Adviser's activities under the SRD are available on BlackRock's website at:

<https://www.blackrock.com/uk/professionals/solutions/shareholder-rights-directive>.

European Focus Fund

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

European Value Fund (continued)

Environmental and social characteristics promoted by the Fund

The Fund uses Blackrock's EMEA Baseline Screens with Fundamental Insights Methodology. The Fund may invest to a limited extent in issuers with exposure to nuclear weapons, fossil fuels, tobacco and civilian firearms. The basis for these investments is that the issuers are in "in transition" and focused on meeting sustainability criteria. However, issuers that do not meet the below screening criteria are excluded from investment

Exclusion of issuers which are engaged in, or are otherwise exposed to, the production of controversial weapons (including, but not limited to, cluster munitions, biological-chemical, landmines, depleted uranium, blinding laser, non-detectable fragments and/or incendiary weapons)

Exclusion of issuers deriving any revenue from direct involvement in the production of nuclear warheads

Exclusion of issuers deriving more than 25% of their revenue from thermal coal extraction and/or thermal coal-based power generation, with the exception of "green bonds", that are considered to comply with the International Capital Markets Association's Green Bond Principles

Exclusion of issuers deriving more than 25% of their revenue from the production of tar sands (also known as oil sands)

Exclusion of issuers which produce tobacco products

Exclusion of issuers which derive more than 5% of their revenue from the wholesale distribution and supply of tobacco related products

Exclusion of issuers domiciled in the United States which produce firearms and/or small arms ammunition intended for retail to civilians

Exclusion of issuers which derive more than 5% of their revenue from the production or retail distribution of firearms and/or small arms ammunition intended for civilian use

Exclusion of issuers which have been deemed to have failed to comply with UN Global Compact Principles (which cover human rights, labour standards, the environment and anticorruption)

Appendix IV – Supplementary Information (Unaudited) continued

This section is not applicable for this Fund as it did not commit to holding Sustainable Investments during the reference period, however, certain Sustainable Investments may form part of the Fund's investment portfolio.

● What was the share of socially sustainable investments?

This section is not applicable for this Fund as it did not commit to holding Sustainable Investments during the reference period, however, certain Sustainable Investments may form part of the Fund's investment portfolio.

● What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

Investments included under "#2 Other" included cash and near cash instruments however such holdings did not exceed 20%. Such investments were used only for investment purposes in pursuit of the Fund's (non-ESG) investment objective, for the purposes of liquidity management and/or hedging. No other investments held by the Fund were assessed against minimum environmental or social safeguards.

● What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Investment Adviser has implemented internal quality controls such as compliance rule coding to ensure compliance with the environmental and social characteristics promoted by the Fund. The Investment Adviser regularly reviews the environmental and social characteristics promoted by the Fund to ensure they are still appropriate relative to the Fund's investment universe.

Where issuers are identified as potentially having issues with regards to good governance, the issuers are reviewed to ensure that, where the Investment Adviser agrees with this external assessment, the Investment Adviser is satisfied that the issuer has either taken remediation actions or will take remedial actions within a reasonable time frame based on the Investment Adviser's direct engagement with the issuer. The Investment Adviser may also decide to reduce exposure to such issuers.

The Investment Adviser is also subject to the shareholder engagement requirements of the Shareholders Rights Directive II (SRD) requirements. The SRD aims to strengthen the position of shareholders, enhance transparency and reduce excessive risk within companies traded on regulated EU marketplaces. Further details regarding the Investment Adviser's activities under the SRD are available on BlackRock's website at:

<https://www.blackrock.com/uk/professionals/solutions/shareholder-rights-directive>.

Appendix IV – Supplementary Information (Unaudited) continued

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

European Value Fund (continued)

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

For the reference period, an index has not been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the Fund, therefore this section is not applicable.

● How does the reference benchmark differ from a broad market index?

Not applicable.

● How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

● How did this financial product perform compared with the reference benchmark?

Not applicable.

● How did this financial product perform compared with the broad market index?

Not applicable.

Appendix IV – Supplementary Information (Unaudited) continued

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

World Technology Fund

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Product name:
World Technology Fund

5493007T8WWG2QURHU23

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

 No

<input type="checkbox"/> It made sustainable investments with an environmental objective : __% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : __%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of __% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective <input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments
---	--

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following table lists the environmental and social characteristics which were promoted by the Fund throughout the reference period. Further information on these environmental and social characteristics is outlined in the Fund's prospectus. Please refer to the section below, "How did the sustainability indicators perform?", which provides information about the extent that the Fund met such environmental and social characteristics.

Appendix IV – Supplementary Information (Unaudited) continued

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

World Technology Fund (continued)

Environmental and social characteristics promoted by the Fund

The Fund uses Blackrock's EMEA Baseline Screens with Fundamental Insights Methodology. The Fund may invest to a limited extent in issuers with exposure to nuclear weapons, fossil fuels, tobacco and civilian firearms. The basis for these investments is that the issuers are in "in transition" and focused on meeting sustainability criteria. However, issuers that do not meet the below screening criteria are excluded from investment

Exclusion of issuers which are engaged in, or are otherwise exposed to, the production of controversial weapons (including, but not limited to, cluster munitions, biological-chemical, landmines, depleted uranium, blinding laser, non-detectable fragments and/or incendiary weapons)

Exclusion of issuers deriving any revenue from direct involvement in the production of nuclear warheads

Exclusion of issuers deriving more than 25% of their revenue from thermal coal extraction and/or thermal coal-based power generation, with the exception of "green bonds", that are considered to comply with the International Capital Markets Association's Green Bond Principles

Exclusion of issuers deriving more than 25% of their revenue from the production of tar sands (also known as oil sands)

Exclusion of issuers which produce tobacco products

Exclusion of issuers which derive more than 5% of their revenue from the wholesale distribution and supply of tobacco related products

Exclusion of issuers domiciled in the United States which produce firearms and/or small arms ammunition intended for retail to civilians

Exclusion of issuers which derive more than 5% of their revenue from the production or retail distribution of firearms and/or small arms ammunition intended for civilian use

Exclusion of issuers which have been deemed to have failed to comply with UN Global Compact Principles (which cover human rights, labour standards, the environment and anticorruption)

Appendix IV – Supplementary Information (Unaudited) continued

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

World Technology Fund (continued)

● **How did the sustainability indicators perform?**

The following table provides information about the performance of the sustainability indicators used to measure the attainment of each of the environmental and social characteristics promoted by the Fund, as further detailed in the Fund's prospectus.

Sustainability Indicator	Metric	Performance for the reference period
Exclusion of issuers based on exclusionary criteria as defined in table above "Environmental and social characteristics promoted by the Fund"	# of active breaches	No active breaches

● **...and compared to previous periods?**

As this is the first reference period that the periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852 are effective, no comparatives are presented.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

This section is not applicable for this Fund as it did not commit to holding Sustainable Investments during the reference period, however, certain Sustainable Investments may form part of the Fund's investment portfolio.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

This section is not applicable for this Fund as it did not commit to holding Sustainable Investments during the reference period, however, certain Sustainable Investments may form part of the Fund's investment portfolio.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

This section is not applicable for this Fund as it did not commit to holding Sustainable Investments during the reference period, however, certain Sustainable Investments may form part of the Fund's investment portfolio. Please refer to the section below, "How did this financial product consider principal adverse impacts on sustainability factors?", which describes how the Fund considered PAIs on sustainability factors.

- **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

This section is not applicable for this Fund as it did not commit to holding Sustainable Investments during the reference period, however, certain Sustainable Investments may form part of the Fund's investment portfolio.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Appendix IV – Supplementary Information (Unaudited) continued

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

World Technology Fund (continued)

How did this financial product consider principal adverse impacts on sustainability factors?

The following table provides information about the impact of the principal adverse sustainability indicators taken into consideration by this Fund. The Fund considered the impact of the principal adverse sustainability indicators through the application of these minimum ESG and exclusionary criteria. The Investment Adviser has determined that those PAIs marked in the table below as “F” are fully considered or “P” are partially considered, as part of the investment selection criteria. A PAI is partially considered where a BlackRock internal assessment has determined the sustainability indicator partially meets the regulatory definition of the PAI outlined in Annex 1 supplementing Regulation (EU) 2019/2088 Regulatory Technical Standards (“RTS”). A PAI is fully considered where a BlackRock internal assessment has determined the sustainability indicator captures the full regulatory definition as outlined in Annex 1 supplementing Regulation (EU) 2019/2088 RTS.

Adverse Sustainability Indicator	Sustainability indicator			
	Exclusion of issuers which are engaged in, or are otherwise exposed to, the production of controversial weapons (including, but not limited to, cluster munitions, biological-chemical, landmines, depleted uranium, blinding laser, non-detectable fragments and/or incendiary weapons)	Exclusion of issuers deriving more than 25% of their revenue from the production and generation of tar sands (also known as oil sands)	Exclusion of issuers deriving more than 25% of their revenue from thermal coal extraction and/or thermal coal-based power generation, with the exception of “green bonds”, that are considered to comply with the International Capital Markets Association’s Green Bond Principles	Exclusion of issuers which have been deemed to have failed to comply with UN Global Compact Principles (which cover human rights, labour standards, the environment and anticorruption)
Exposure to companies active in the fossil fuel sector		P	P	
Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises				P
Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	F			

Appendix IV – Supplementary Information (Unaudited) continued

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

World Technology Fund (continued)

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: From 1 September 2022 to 31 August 2023.

Largest investments	Sector	% Assets	Country
Apple Inc	Information Technology	8.47%	United States
Microsoft Corp	Information Technology	8.32%	United States
Nvidia Corp	Information Technology	5.57%	United States
Asml Holding Nv	Information Technology	3.07%	Netherlands
Mastercard Inc Class A	Financials	3.00%	United States
Cadence Design Systems Inc	Information Technology	2.96%	United States
Tesla Inc	Consumer Discretionary	2.77%	United States
Visa Inc Class A	Financials	2.73%	United States
Alphabet Inc Class A	Communication	2.35%	United States
Broadcom Inc	Information Technology	2.25%	United States
Advanced Micro Devices Inc	Information Technology	2.18%	United States
Oracle Corp	Information Technology	1.90%	United States

World Technology Fund (continued)

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

Appendix IV – Supplementary Information (Unaudited) continued

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

World Technology Fund (continued)

● In which economic sectors were the investments made?

The following table details the economic sectors representing 1% or more of investments held that the Fund was exposed to during the reference period.

Sector	Sub-Sector	% of Investments
Information Technology	Software & Services	30.18%
Information Technology	Semiconductors & Semiconductor Equipment	26.85%
Information Technology	Tech Hardware & Equipment	11.83%
Financials	Financial Services	8.83%
Communication	Media & Entertainment	8.08%
Consumer Discretionary	Consumer Discretionary	4.28%
Consumer Discretionary	Distribution & Retail	4.28%
Consumer Discretionary	Autos & Components	2.87%
Industrials	Commercial & Professional Services	1.03%
Consumer Discretionary	Consumer Services	1.01%

During the reference period, none of the Fund's investments were held in the following sub-sectors (as defined by the Global Industry Classification System): integrated oil and gas, oil and gas exploration and production, oil and gas drilling, oil and gas equipment services, oil and gas storage and transportation, oil and gas refining and marketing, coal and consumable fuels.

Appendix IV – Supplementary Information (Unaudited) continued

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

World Technology Fund (continued)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

For the reference period, the Fund's investment alignment with EU Taxonomy is shown in the graphs below.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

Yes:

In fossil gas In nuclear energy

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy alignment of sovereign bonds*, the first graph shows the taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Appendix IV – Supplementary Information (Unaudited) continued

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

World Technology Fund (continued)

● What was the share of investments made in transitional and enabling activities?

For the reference period, 0% of the Fund's investments were made in transitional and enabling activities.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

As this is the first reference period that the periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852 are effective, no comparatives are presented.

Sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

This section is not applicable for this Fund as it did not commit to holding Sustainable Investments during the reference period, however, certain Sustainable Investments may form part of the Fund's investment portfolio.

● What was the share of socially sustainable investments?

This section is not applicable for this Fund as it did not commit to holding Sustainable Investments during the reference period, however, certain Sustainable Investments may form part of the Fund's investment portfolio.

● What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

Investments included under "#2 Other" included cash and near cash instruments however such holdings did not exceed 20%. Such investments were used only for investment purposes in pursuit of the Fund's (non-ESG) investment objective, for the purposes of liquidity management and/or hedging. No other investments held by the Fund were assessed against minimum environmental or social safeguards.

● What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Investment Adviser has implemented internal quality controls such as compliance rule coding to ensure compliance with the environmental and social characteristics promoted by the Fund. The Investment Adviser regularly reviews the environmental and social characteristics promoted by the Fund to ensure they are still appropriate relative to the Fund's investment universe.

Where issuers are identified as potentially having issues with regards to good governance, the issuers are reviewed to ensure that, where the Investment Adviser agrees with this external assessment, the Investment Adviser is satisfied that the issuer has either taken remediation actions or will take remedial actions within a reasonable time frame based on the Investment Adviser's direct engagement with the issuer. The Investment Adviser may also decide to reduce exposure to such issuers.

The Investment Adviser is also subject to the shareholder engagement requirements of the Shareholders Rights Directive II (SRD) requirements. The SRD aims to strengthen the position of shareholders, enhance transparency and reduce excessive risk within companies traded on regulated EU marketplaces. Further details regarding the Investment Adviser's activities under the SRD are available on BlackRock's website at:

<https://www.blackrock.com/uk/professionals/solutions/shareholder-rights-directive>.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

For the reference period, an index has not been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the Fund, therefore this section is not applicable.

● **How does the reference benchmark differ from a broad market index?**

Not applicable.

● **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

Not applicable.

● **How did this financial product perform compared with the reference benchmark?**

Not applicable.

● **How did this financial product perform compared with the broad market index?**

Not applicable.

BlackRock Strategic Funds

SUSTAINABILITY-RELATED DISCLOSURES (UNAUDITED) (continued)

BlackRock Sustainable Fixed Income Strategies Fund

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Product name:
BlackRock Sustainable Fixed Income Strategies Fund

Legal entity identifier:
549300NET6YB688UCO80

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ___%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 26.89% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following table lists the environmental and social characteristics which were promoted by the Fund throughout the reference period. Further information on these environmental and social characteristics is outlined in the Fund's prospectus. Please refer to the section below, "How did the sustainability indicators perform?", which provides information about the extent that the Fund met such environmental and social characteristics.

● How did the sustainability indicators perform?

The following table provides information about the performance of the sustainability indicators used to measure the attainment of each of the environmental and social characteristics promoted by the Fund, as further detailed in the Fund's prospectus.

Sustainability Indicator	Metric	Performance for the reference period
Investment in use-of-proceeds bonds	% use-of-proceeds bonds held by the Fund	13.83%
Investments in issuers deemed to have positive externalities, at a minimum 20%	% investments deemed to have positive externalities held by the Fund	49.41%
Limiting investments in issuers deemed to have negative externalities	# of active breaches	No active breaches
Exclusion of issuers based on exclusionary criteria as defined in table above "Environmental and social characteristics promoted by the Fund"	# of active breaches	No active breaches
Investment in Sustainable Investments	% of Sustainable Investments held by the Fund	26.89% ¹

¹Effective 29 December 2022, the Fund committed to holding Sustainable Investments, therefore this percentage has been presented using data from 29 December 2022 to 31 May 2023.

● ...and compared to previous periods?

As this is the first reference period that the periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852 are effective, no comparatives are presented.

● What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

During the reference period, the Fund invested 26.89% of its holdings in Sustainable Investments in pursuit of its investment objective.

Environmental and social objectives

The Fund invested in Sustainable Investments which contributed to a range of environmental and/or social objectives which may include but are not limited to, alternative and renewable energy, energy efficiency, pollution prevention or mitigation, reuse and recycling, health, nutrition, sanitation and education and the UN Sustainable Development Goals and other sustainability-related frameworks ("Environmental and Social Objectives").

Economic activity assessment

An investment was assessed as contributing to an environmental and/or social objective where:
 (i) a minimum proportion of the issuer's business activity contributed to an environmental and/or social objective; or the issuer's business practices contributed to an environmental and/or social objective; or
 (ii) the use of proceeds was assessed as contributing to an environmental and/or social objective such as green bonds, social bonds, and sustainability bonds; or
 (iii) the fixed income securities were aligned with an environmental and/or social objective.

BlackRock Strategic Funds

SUSTAINABILITY-RELATED DISCLOSURES (UNAUDITED) (continued)

BlackRock Sustainable Fixed Income Strategies Fund (continued)

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

The Sustainable Investments held by the Fund during the reference period met the do no significant harm ("DNSH") requirements, as defined by applicable law and regulation. BlackRock has developed a set of criteria across all Sustainable Investments to assess whether an issuer or investment does significant harm. Investments considered to be causing significant harm do not qualify as Sustainable Investments.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The indicators for principal adverse impacts ("PAI"s) on sustainability factors for each type of investment were assessed using BlackRock's Sustainable Investments proprietary methodology. All relevant mandatory PAI indicators included in Annex 1 of the Commission Delegated Regulation (EU) 22 / 1288 were considered. BlackRock makes use of fundamental analysis and/or third-party data sources to identify investments which negatively impact sustainability factors and cause significant harm. Please refer to the section below, "How did this financial product consider principal adverse impacts on sustainability factors?", which describes how the Fund considered PAIs on sustainability factors.

Use-of-proceeds bonds, such as green bonds, social bonds and sustainability bonds, held in the Fund complied with the ICMA Green Bond Principles, ICMA Social Bond Principles or ICMA Sustainability Bond Guidelines where applicable. Most PAIs are considered at the issuance level for use-of-proceeds bonds, except for involvement in controversial weapons and violation of UN Global Compact or OECD Guidelines for Multinational Enterprises, which are assessed at the issuer level.

- **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Sustainable Investments held during the reference period were assessed to consider any detrimental impacts and ensure compliance with international standards of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. Issuers deemed to have violated these conventions are not considered as Sustainable Investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

BlackRock Sustainable Fixed Income Strategies Fund (continued)

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

How did this financial product consider principal adverse impacts on sustainability factors?

The following table provides information about the impact of the principal adverse sustainability indicators taken into consideration by this Fund. The Fund considered the impact of the principal adverse sustainability indicators through the application of these minimum ESG and exclusionary criteria. The Investment Advisor has determined that those PAIs marked in the table below as “F” are fully considered or “P” are partially considered, as part of the investment selection criteria. A PAI is partially considered where a BlackRock internal assessment has determined the sustainability indicator partially meets the regulatory definition of the PAI outlined in Annex 1 supplementing Regulation (EU) 2019/2088 Regulatory Technical Standards (“RTS”). A PAI is fully considered where a BlackRock internal assessment has determined the sustainability indicator captures the full regulatory definition as outlined in Annex 1 supplementing Regulation (EU) 2019/2088 RTS.

Adverse Sustainability Indicator	Sustainability indicator				
	Investments in issuers deemed to have positive externalities	Exclusion of issuers which are engaged in, or are otherwise exposed to, the production of controversial weapons (including, but not limited to, cluster munitions, biological-chemical, landmines, depleted uranium, blinding laser, non-detectable fragments and/or incendiary weapons)	Exclusion of issuers deriving more than 5% of their revenue from the production and generation of tar sands (also known as oil sands)	Exclusion of issuers deriving more than 5% of their revenue from thermal coal extraction and/or thermal coal-based power generation, with the exception of “green bonds”, that are considered to comply with the International Capital Markets Association’s Green Bond Principles, from such issuers	Exclusion of issuers have been involved in violations of the UN Global Compact as determined by MSCI or such other external ESG research provider used by the Investment Advisor from time to time
Greenhouse gas (GHG) emissions					P
GHG intensity of investee companies					P
Exposure to companies active in the fossil fuel sector			P	P	
Energy consumption intensity per high impact climate sector	P				
Violations of UN Global Compact principles and Organisation for Economic Cooperation and					P

Industrial	Metals and Mining	0.22%
Industrial	Midstream	0.21%
Industrial	Independent	0.05%
Industrial	Refining	0.02%

During the reference period, none of the Fund's investments were held in the following sub-sectors (as defined by the Barclays Industry Classification System): oil field services

BlackRock Strategic Funds

SUSTAINABILITY-RELATED DISCLOSURES (UNAUDITED) (continued)

BlackRock Sustainable Fixed Income Strategies Fund (continued)

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

For the reference period, the Fund's investment alignment with EU Taxonomy is shown in the graphs below.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- Yes:
- In fossil gas
 - In nuclear energy
- No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy alignment of sovereign bonds*, the first graph shows the taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

BlackRock Strategic Funds

SUSTAINABILITY-RELATED DISCLOSURES (UNAUDITED) (continued)

BlackRock Sustainable Fixed Income Strategies Fund (continued)

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

● **What was the share of investments made in transitional and enabling activities?**

For the reference period, 0% of the Fund's investments were in transitional and enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

As this is the first reference period that the periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852 are effective, no comparatives are presented.

Sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

For the reference period, 24.26% of the Fund's investments were classified as Sustainable Investments with an environmental objective not aligned with EU Taxonomy.

The Fund invested in Sustainable Investments that were not aligned with the EU Taxonomy for the following reasons: (i) it is part of the investment strategy of the Fund; (ii) data to determine EU Taxonomy-alignment was unavailable; and/or (iii) underlying economic activities were not eligible under the EU Taxonomy's available technical screening criteria or did not comply with all requirements set out in such technical screening criteria.

● **What was the share of socially sustainable investments?**

For the reference period, 2.63% of the Fund's investments were classified as socially Sustainable Investments.

● **What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?**

Investments included under "#2 Other" can include cash, derivatives or fixed income transferable securities (also known as debt securities) issued by governments and agencies worldwide, however such holdings did not exceed 20%. Such investments were used only for investment purposes in pursuit of the Fund's (non-ESG) investment objective, for the purposes of liquidity management and/or hedging.

No other investments held by the Fund were assessed against minimum environmental or social safeguards.

● **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

The Investment Advisor has implemented internal quality controls such as compliance rule coding to ensure compliance with the environmental and social characteristics promoted by the Fund. The Investment Advisor regularly reviews the environmental and social characteristics promoted by the Fund to ensure they are still appropriate relative to the Fund's investment universe.

Where issuers are identified as potentially having issues with regards to good governance, the issuers are reviewed to ensure that, where the Investment Advisor agrees with this external assessment, the Investment Advisor is satisfied that the issuer has either taken remediation actions or will take remedial actions within a reasonable time frame based on the Investment Advisor's direct engagement with the issuer. The Investment Advisor may also decide to reduce exposure to such issuers.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

For the reference period, an index has not been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the Fund, therefore this section is not applicable.

● How does the reference benchmark differ from a broad market index?

Not applicable.

● How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

● How did this financial product perform compared with the reference benchmark?

Not applicable.

● How did this financial product perform compared with the broad market index?

Not applicable.

Appendix IV – Supplementary Information (Unaudited) continued

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

World Healthscience Fund

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

---	--

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following table lists the environmental and social characteristics which were promoted by the Fund throughout the reference period. Further information on these environmental and social characteristics is outlined in the Fund's prospectus. Please refer to the section below, "How did the sustainability indicators perform?", which provides information about the extent that the Fund met such environmental and social characteristics.

Appendix IV – Supplementary Information (Unaudited) continued

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

World Healthscience Fund (continued)

Environmental and social characteristics promoted by the Fund

The Fund uses Blackrock's EMEA Baseline Screens with Fundamental Insights Methodology. The Fund may invest to a limited extent in issuers with exposure to nuclear weapons, fossil fuels, tobacco and civilian firearms. The basis for these investments is that the issuers are in "in transition" and focused on meeting sustainability criteria. However, issuers that do not meet the below screening criteria are excluded from investment

Exclusion of issuers which are engaged in, or are otherwise exposed to, the production of controversial weapons (including, but not limited to, cluster munitions, biological-chemical, landmines, depleted uranium, blinding laser, non-detectable fragments and/or incendiary weapons)

Exclusion of issuers deriving any revenue from direct involvement in the production of nuclear warheads

Exclusion of issuers deriving more than 25% of their revenue from thermal coal extraction and/or thermal coal-based power generation, with the exception of "green bonds", that are considered to comply with the International Capital Markets Association's Green Bond Principles

Exclusion of issuers deriving more than 25% of their revenue from the production of tar sands (also known as oil sands)

Exclusion of issuers which produce tobacco products

Exclusion of issuers which derive more than 5% of their revenue from the wholesale distribution and supply of tobacco related products

Exclusion of issuers domiciled in the United States which produce firearms and/or small arms ammunition intended for retail to civilians

Exclusion of issuers which derive more than 5% of their revenue from the production or retail distribution of firearms and/or small arms ammunition intended for civilian use

Exclusion of issuers which have been deemed to have failed to comply with UN Global Compact Principles (which cover human rights, labour standards, the environment and anticorruption)

Appendix IV – Supplementary Information (Unaudited) continued

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

World Healthscience Fund (continued)

● **How did the sustainability indicators perform?**

The following table provides information about the performance of the sustainability indicators used to measure the attainment of each of the environmental and social characteristics promoted by the Fund, as further detailed in the Fund's prospectus.

Sustainability Indicator	Metric	Performance for the reference period
Exclusion of issuers based on exclusionary criteria as defined in table above "Environmental and social characteristics promoted by the Fund"	# of active breaches	No active breaches

● **...and compared to previous periods?**

As this is the first reference period that the periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852 are effective, no comparatives are presented.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

This section is not applicable for this Fund as it did not commit to holding Sustainable Investments during the reference period, however, certain Sustainable Investments may form part of the Fund's investment portfolio.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

This section is not applicable for this Fund as it did not commit to holding Sustainable Investments during the reference period, however, certain Sustainable Investments may form part of the Fund's investment portfolio.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

This section is not applicable for this Fund as it did not commit to holding Sustainable Investments during the reference period, however, certain Sustainable Investments may form part of the Fund's investment portfolio. Please refer to the section below, "How did this financial product consider principal adverse impacts on sustainability factors?", which describes how the Fund considered PAIs on sustainability factors.

- **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

This section is not applicable for this Fund as it did not commit to holding Sustainable Investments during the reference period, however, certain Sustainable Investments may form part of the Fund's investment portfolio.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Appendix IV – Supplementary Information (Unaudited) continued

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

World Healthscience Fund (continued)

How did this financial product consider principal adverse impacts on sustainability factors?

The following table provides information about the impact of the principal adverse sustainability indicators taken into consideration by this Fund. The Fund considered the impact of the principal adverse sustainability indicators through the application of these minimum ESG and exclusionary criteria. The Investment Adviser has determined that those PAIs marked in the table below as “F” are fully considered or “P” are partially considered, as part of the investment selection criteria. A PAI is partially considered where a BlackRock internal assessment has determined the sustainability indicator partially meets the regulatory definition of the PAI outlined in Annex 1 supplementing Regulation (EU) 2019/2088 Regulatory Technical Standards (“RTS”). A PAI is fully considered where a BlackRock internal assessment has determined the sustainability indicator captures the full regulatory definition as outlined in Annex 1 supplementing Regulation (EU) 2019/2088 RTS.

Adverse Sustainability Indicator	Sustainability indicator			
	Exclusion of issuers which are engaged in, or are otherwise exposed to, the production of controversial weapons (including, but not limited to, cluster munitions, biological-chemical, landmines, depleted uranium, blinding laser, non-detectable fragments and/or incendiary weapons)	Exclusion of issuers deriving more than 25% of their revenue from the production and generation of tar sands (also known as oil sands)	Exclusion of issuers deriving more than 25% of their revenue from thermal coal extraction and/or thermal coal-based power generation, with the exception of “green bonds”, that are considered to comply with the International Capital Markets Association’s Green Bond Principles	Exclusion of issuers which have been deemed to have failed to comply with UN Global Compact Principles (which cover human rights, labour standards, the environment and anticorruption)
Exposure to companies active in the fossil fuel sector		P	P	
Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises				P
Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	F

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

World Healthscience Fund (continued)

● In which economic sectors were the investments made?

The following table details the economic sectors representing 1% or more of investments held that the Fund was exposed to during the reference period.

Sector	Sub-Sector	% of Investments
Health Care	Pharma, Biotech & Life Sciences	61.73%
Health Care	Health Care Equipment & Services	36.24%

During the reference period, none of the Fund's investments were held in the following sub-sectors (as defined by the Global Industry Classification System): integrated oil and gas, oil and gas exploration and production, oil and gas drilling, oil and gas equipment services, oil and gas storage and transportation, oil and gas refining and marketing, coal and consumable fuels.

Appendix IV – Supplementary Information (Unaudited) continued

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

World Healthscience Fund (continued)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

For the reference period, the Fund's investment alignment with EU Taxonomy is shown in the graphs below.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

Yes:

In fossil gas In nuclear energy

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy alignment of sovereign bonds*, the first graph shows the taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Appendix IV – Supplementary Information (Unaudited) continued

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

World Healthscience Fund (continued)

● What was the share of investments made in transitional and enabling activities?

For the reference period, 0% of the Fund's investments were made in transitional and enabling activities.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

As this is the first reference period that the periodic disclosure for financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852 are effective, no comparatives are presented.

Sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

This section is not applicable for this Fund as it did not commit to holding Sustainable Investments during the reference period, however, certain Sustainable Investments may form part of the Fund's investment portfolio.

● What was the share of socially sustainable investments?

This section is not applicable for this Fund as it did not commit to holding Sustainable Investments during the reference period, however, certain Sustainable Investments may form part of the Fund's investment portfolio.

● What investments were included under "Other", what was their purpose and were there any minimum environmental or social safeguards?

Investments included under "#2 Other" included derivatives, cash and near cash instruments however such holdings did not exceed 20%. Such investments were used only for investment purposes in pursuit of the Fund's (non-ESG) investment objective, for the purposes of liquidity management and/or hedging. No other investments held by the Fund were assessed against minimum environmental or social safeguards.

● What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Investment Adviser has implemented internal quality controls such as compliance rule coding to ensure compliance with the environmental and social characteristics promoted by the Fund. The Investment Adviser regularly reviews the environmental and social characteristics promoted by the Fund to ensure they are still appropriate relative to the Fund's investment universe.

Where issuers are identified as potentially having issues with regards to good governance, the issuers are reviewed to ensure that, where the Investment Adviser agrees with this external assessment, the Investment Adviser is satisfied that the issuer has either taken remediation actions or will take remedial actions within a reasonable time frame based on the Investment Adviser's direct engagement with the issuer. The Investment Adviser may also decide to reduce exposure to such issuers.

The Investment Adviser is also subject to the shareholder engagement requirements of the Shareholders Rights Directive II (SRD) requirements. The SRD aims to strengthen the position of shareholders, enhance transparency and reduce excessive risk within companies traded on regulated EU marketplaces. Further details regarding the Investment Adviser's activities under the SRD are available on BlackRock's website at: <https://www.blackrock.com/uk/professionals/solutions/shareholder-rights-directive>.

World Healthscience Fund (continued)

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

For the reference period, an index has not been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the Fund, therefore this section is not applicable.

● **How does the reference benchmark differ from a broad market index?**

Not applicable.

● **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

Not applicable.

● **How did this financial product perform compared with the reference benchmark?**

Not applicable.

● **How did this financial product perform compared with the broad market index?**

Not applicable.

Sustainable Investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS FUNDS DISRUPTIVE TECHNOLOGY

Legal Entity Identifier: 2138004CX3USCVHG2V51

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Did this financial product have a sustainable investment objective?

Yes

No

It made a sustainable investment with an environmental objective: ___%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made sustainable investments with a social objective : ___%

It promoted Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it had a proportion of 51.3% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics did not make any sustainable investments

All actual data within this periodic report are calculated on the closing date of the accounting year.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?"

● *How did the sustainability indicators perform?*

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy: **100%**
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology: **98.9%**
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus: **60.9 vs 56.0** (MSCI World (EUR) NR)
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **51.3%**

● *...and compared to previous periods ?*

Not applicable for the first periodic report.

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: <https://www.bnpparibas-am.com/sustainability-documents/>

The share of financial product investments considered by the SFDR regulation to be sustainable investments contributes in the proportions described in the question on the allocation of assets to the environmental objectives defined in the European Regulation on Taxonomy in force to date: climate change mitigation and/or adaptation to climate change.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

— — *How were the indicators for adverse impacts on sustainability factors taken into account?*

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process : RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity

14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:

15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: <https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF>

— — — *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritise principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions :

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues - Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water

9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:

15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: <https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF>

What were the top investments of this financial product?

The list includes investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 30.12.2022

Largest investments	Sector	% Assets*	Country
MICROSOFT CORP	Information Technology	6.50%	United States
APPLE INC	Information Technology	5.35%	United States

GENMAB	Health Care	2.61%	Denmark

Source of data: BNP Paribas Asset Management, as at 30.12.2022

The largest investments are based on official accounting data and are based on the transaction date.

* Any percentage differences with the financial statement portfolios result from a rounding difference;

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets

● *What was the asset allocation ?*

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The proportion of such investments used to meet the environmental or social characteristics promoted by the financial product **83.9%**.

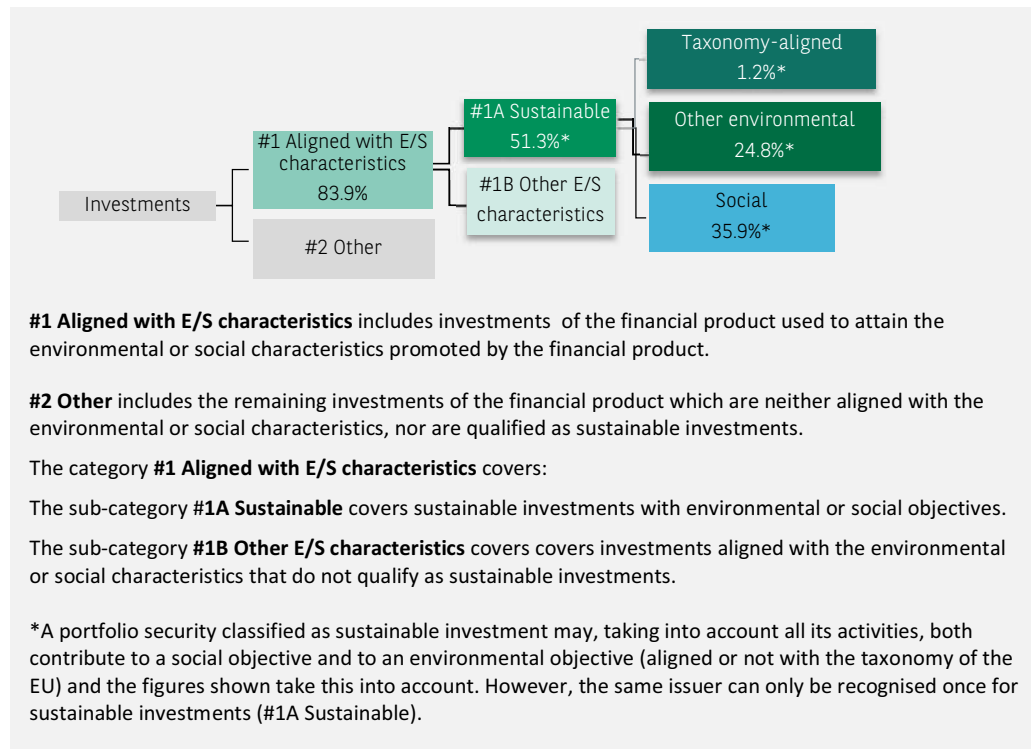

The proportion of sustainable investments of the financial product is **51.3%**.

The remaining proportion of the investments may include :

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards :

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

● *In which economic sectors were the investments made ?*

Sectors	% Asset
Information Technology	68.18%
Consumer Discretionary	7.85%

Health Care	4.50%
Real Estate	3.80%
Financials	2.53%
Cash	1.28%
Materials	0.46%
Forex contracts	0.10%

Source of data: BNP Paribas Asset Management, as at 30.12.2022
 The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Taxonomy-aligned activities are expressed as a share of: :

- **turnover** reflecting the "greenness" of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies relevant for a transition to a green economy
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

● **Did the financial product invest in fossil gas and/or nuclear energy activities that comply with the EU Taxonomy ¹?**

Yes: In fossil gas In nuclear energy

No:

At the date of closure of the accounting year and preparation of the annual report, the data are not available and the management company does not have the information relating to the previous year.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

**Real taxonomy aligned

***Real taxonomy aligned. At the date of preparation of this periodic information document, the management company does not have all the necessary data to determine the alignment of investments with the taxonomy, excluding sovereign bonds. The percentage of alignment of

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

investments with the taxonomy, including sovereign bonds being by construction a real minimum proportion is taken up accordingly.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of investments made in transitional and enabling activities?**

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

Not applicable for the first periodic report.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **24.8%**.

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **35.9%** of the financial product.

What investments were included under ' other', what is their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product must comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - Sustainability documents - BNPP AM Corporate English (<https://www.bnpparibas-am.com/sustainability-documents/>)

- The financial product must have the weighted average ESG score of its portfolio higher than the 7 weighted average ESG score of its investment universe, as defined in the Prospectus

- The financial product must have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology

- The financial product must invest at least 30% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: <https://www.bnpparibas-am.com/en/documentation-sustainability/>

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

● *How does the reference benchmark differ from a broad market index?*

Not applicable

● *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

Not applicable

● *How did this financial product perform compared with the reference benchmark?*

Not applicable

● *How did this financial product perform compared with the relevant market index?*

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS FUNDS EURO EQUITY

Legal Entity Identifier: 5493000XKEMVB00IEY27

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Did this financial product have a sustainable investment objective?

Yes

No

It made a **sustainable investment with an environmental objective**: ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective** : ___%

It promoted **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it had a proportion of 57.2% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promoted E/S characteristics **did not make any sustainable investments**

All actual data within this periodic report are calculated on the closing date of the accounting year.

To what extent were the environmental and/or social characteristics are promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental social and governance practices.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives? "

● *How did the sustainability indicators perform?*

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy: **100%**
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology: **100%**
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus: **64.5 vs 61.4 (MSCI EMU (EUR) NR)**
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **57.2%**

● *...and compared to previous periods ?*

Not applicable for the first periodic report.

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: <https://www.bnpparibas-am.com/sustainability-documents/>

The share of financial product investments considered by the SFDR regulation to be sustainable investments contributes in the proportions described in the question on the allocation of assets to the environmental objectives defined in the European Regulation on Taxonomy in force to date: climate change mitigation and/or adaptation to climate change.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

— — — *How were the indicators for adverse impacts on sustainability factors taken into account?*

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process : RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity

14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:

15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: <https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF>

— — — *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritise principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions :

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues - Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas

8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:

15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: <https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF>

What were the top investments of this financial product?

The list includes investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 30.12.2022

Largest investments	Sector	% Assets*	Country
LVMH	Consumer Discretionary	7.48%	France
ASML HOLDING NV	Information Technology	6.66%	Netherlands
TOTALENERGIES	Energy	5.86%	France
SIEMENS N AG N	Industrials	5.46%	Germany
SCHNEIDER ELECTRIC	Industrials	4.38%	France
SANOFI SA	Health Care	4.00%	France
PROSUS NV	Consumer Discretionary	3.80%	Netherlands
DEUTSCHE TELEKOM N AG N	Communication	3.73%	Germany
NESTE	Energy	3.51%	Finland
SAMPO A	Financials	3.51%	Finland
ESSILORLUXOTTICA SA	Health Care	3.44%	France
STMICROELECTRONICS NV	Information Technology	3.21%	Switzerland
BANCO SANTANDER SA	Financials	3.20%	Spain
LAIR LIQUIDE SA POUR LETUDE ET LEXPLO DES PROCEDES GEORGES CL	Materials	2.96%	France
ALLIANZ	Financials	2.84%	Germany

Source of data: BNP Paribas Asset Management, as at 30.12.2022

The largest investments are based on official accounting data and are based on the transaction date.

* Any percentage differences with the financial statement portfolios result from a rounding difference.

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

● *What was the asset allocation ?*

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The proportion of such investments used to meet the environmental or social characteristics promoted by the financial product is **100%**.

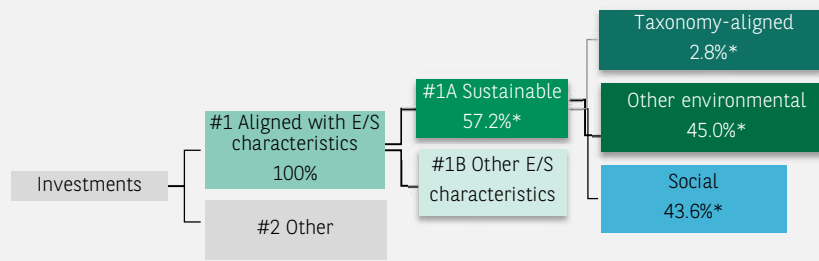

The proportion of sustainable investments of the financial product is **57.2%**.

The remaining proportion of the investments may include :

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards :

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

● *In which economic sectors were the investments made ?*

Sectors	% Asset
Financials	18.11%
Consumer Discretionary	17.01%
Information Technology	14.46%
Industrials	9.84%
Energy	9.37%
Materials	9.04%
Health Care	8.84%
Consumer Staples	6.57%
Communication Services	6.48%
Cash	0.27%

Source of data: BNP Paribas Asset Management, as at 30.12.2022
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the “greenness” of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies relevant for a transition to a green economy
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

● **Did the financial product invest in fossil gas and/or nuclear energy activities that comply with the EU Taxonomy ¹?**

Yes:

In fossil gas In nuclear energy

No:

At the date of closure of the accounting year and preparation of the annual report, the data are not available and the management company does not have the information relating to the previous year.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

**Real taxonomy aligned

*** Real taxonomy aligned. At the date of preparation of this periodic information document, the management company does not have all the necessary data to determine the alignment of investments with the taxonomy, excluding sovereign bonds. The percentage of alignment of investments with the taxonomy, including sovereign bonds being by construction a real minimum proportion is taken up accordingly.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of investments made in transitional and enabling activities?**

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

Not applicable for the first periodic report.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **45.0%**.

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **43.6%** of the financial product.

What investments were included under ' other', what is their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product must comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - Sustainability documents - BNPP AM Corporate English (<https://www.bnpparibas-am.com/sustainability-documents/>)

- The financial product must have the weighted average ESG score of its portfolio higher than the 7 weighted average ESG score of its investment universe, as defined in the Prospectus

- The financial product must have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology

- The financial product must invest at least 35% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: <https://www.bnpparibas-am.com/en/documentation-sustainability/>

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

● *How does the reference benchmark differ from a broad market index?*

Not applicable

● *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

Not applicable

● *How did this financial product perform compared with the reference benchmark?*

Not applicable

● *How did this financial product perform compared with the relevant market index?*

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Sustainable Investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS FUNDS EUROPE SMALL CAP
CONVERTIBLE

Legal Entity Identifier: 2138000XH9EGW1RJUY77

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Did this financial product have a sustainable investment objective?

Yes

No

It made a sustainable investment with an environmental objective: ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made sustainable investments with a social objective : ___%

It promoted Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it had a proportion of 36.2% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promoted E/S characteristics did not make any sustainable investments

All actual data within this periodic report are calculated on the closing date of the accounting year.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives? "

● *How did the sustainability indicators perform?*

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy: **100.0%**
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology : **93.5%**
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus: **56.1 VS 52.9** (25% MSCI Europe Small Caps (EUR) NR + 40% EMIX Smaller Euroland (EUR) RI + 20% ICE BofAML Euro High Yield (EUR) RI + 5% MSCI Europe Mid Cap (EUR) NR + 5% MSCI Europe Micro Cap (EUR) NR + 5% MSCI France Micro Cap (EUR) NR)
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **36.2%**

● *...and compared to previous periods ?*

Not applicable for the first periodic report

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: <https://www.bnpparibas-am.com/sustainability-documents/>

The share of financial product investments considered by the SFDR regulation to be sustainable investments contributes in the proportions described in the question on the allocation of assets to the environmental objectives defined in the European Regulation on Taxonomy in force to date: climate change mitigation and/or adaptation to climate change.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

— — — *How were the indicators for adverse impacts on sustainability factors taken into account?*

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process : RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:

15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: <https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF>

— — — *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritise principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions :

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector

7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:

15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: <https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF>

What were the top investments of this financial product?

The list includes investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 30/12/2022

Largest investments	Sector	% Assets*	Country

Source of data: BNP Paribas Asset Management, as at 30.12.2022

The largest investments are based on official accounting data and are based on the transaction date.

* Any percentage differences with the financial statement portfolios result from a rounding difference

What was the proportion of sustainability-related investments?

● *What was the asset allocation ?*

Asset allocation describes the share of investments in specific assets

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The proportion of such investments used to meet the environmental or social characteristics promoted by the financial product shall be at least **69.8%**.

The proportion of sustainable investments of the financial product is **36.2%**.

The remaining proportion of the investments may include :

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards :

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

#1 Aligned with E/S characteristics includes investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.

The sub-category **#1B Other E/S characteristics** covers covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

● *In which economic sectors were the investments made ?*

Sectors	% Asset
Technology	12.10%
Consumer staples	11.38%
Materials	10.44%
Utilities	10.36%
Industrials	8.82%
Real estate	8.73%
Financials	8.45%
Consumer discretionary	7.41%
Energy	6.50%
Cash	6.22%
Health care	5.34%
Communications	4.22%

Source of data: BNP Paribas Asset Management, as at 30.12.2022

The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Taxonomy-aligned activities are expressed as a share of: :

- **turnover** reflecting the “greenness” of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies relevant for a transition to a green economy
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

● **Did the financial product invest in fossil gas and/or nuclear energy activities that comply with the EU Taxonomy ¹?**

- Yes:
 - In fossil gas
 - In nuclear energy
- No:

At the date of closure of the accounting year and preparation of the annual report, the data are not available and the management company does not have the information relating to the previous year.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** Real taxonomy aligned

*** Real taxonomy aligned. At the date of this periodic information document, the management company does not have all the necessary data to determine the alignment of investments with the taxonomy excluding sovereign bonds. The percentage of alignment of investments with the taxonomy including sovereign bonds being by construction a real minimum proportion, this same figure is used accordingly.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities

directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are

activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● *What was the share of investments made in transitional and enabling activities?*

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

● *How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?*

Not applicable for the first periodic report..

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **18.3%**.

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy..

What was the share of socially sustainable investments?

Socially sustainable investments represent **22.8%** of the financial product..

What investments were included under ' other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product must comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - Sustainability documents - BNPP AM Corporate English (<https://www.bnpparibas-am.com/sustainability-documents/>)

- The financial product must have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus

- The financial product must have at least 75% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology

- The financial product must invest at least 10% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: <https://www.bnpparibas-am.com/en/documentation-sustainability/>

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

● *How does the reference benchmark differ from a broad market index?*

Not applicable

● *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

Not applicable

● *How did this financial product perform compared with the reference benchmark?*

Not applicable

● *How did this financial product perform compared with the relevant market index?*

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Sustainable Investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Did this financial product have a sustainable investment objective?

Yes

No

It made a **sustainable investment with an environmental objective**: ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective** : ___%

It promoted **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it had a proportion of 9.6% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promoted E/S characteristics **did not make any sustainable investments**

All actual data within this periodic report are calculated on the closing date of the accounting year.

To what extent were the environmental and/or social characteristics are promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

Corporate issuers

The investment strategy selects:

Corporate issuers with good or improving ESG practices within their sector of activity. The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution
- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital
- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives? "

● *How did the sustainability indicators perform?*

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy: **100%**
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology: **100%**
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus: **53.4 vs 49.9 (85% JPM GBI - EM**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Global Diversified ex-China (USD) RI + 10% Bloomberg China Aggregate Index (USD) RI + 5% ICE BofA Q5BW Custom (USD) RI)

- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **9.6%**

● *...and compared to previous periods ?*

Not applicable for the first periodic report.

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising

companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

- a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;
- b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: <https://www.bnpparibas-am.com/sustainability-documents/>

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

— — — ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process : RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:

15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: <https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF/>

— — — *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in

consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment

- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the underlying assets, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:

15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: <https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF>

What were the top investments of this financial product?

The list includes investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 30.12.2022

Largest investments	Sector	% Assets*	Country
BNPP RMB BOND-X C	Other	9.60%	Luxembourg

Source of data: BNP Paribas Asset Management, as at 30.12.2022

The largest investments are based on official accounting data and are based on the transaction date.

* Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

● What was the asset allocation ?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The proportion of such investments used to meet the environmental or social characteristics promoted by the financial product is **59.6%**

The proportion of sustainable investments of the financial product is **9.6%**

The remaining proportion of the investments may include :

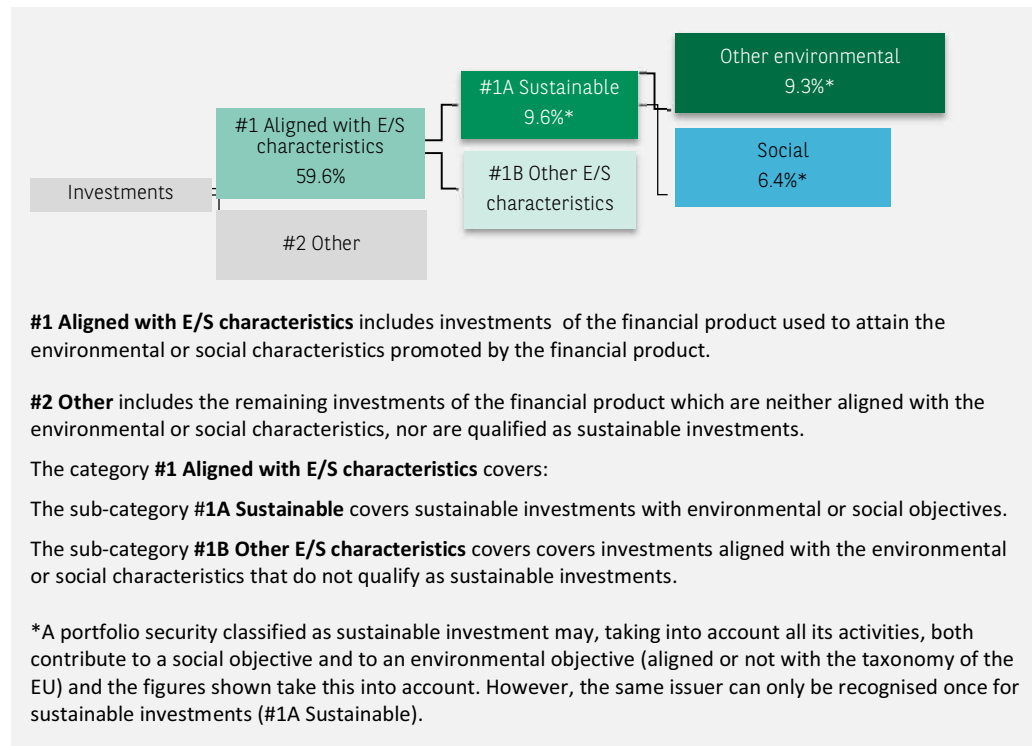

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes,

Asset allocation describes the share of investments in specific assets

notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards :

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

● *In which economic sectors were the investments made ?*

Sectors	% Asset
Government	85.95%
Other	9.60%
Cash	3.12%
Forex contracts	1.52%
Derivatives	-0.19%

Source of data: BNP Paribas Asset Management, as at 30.12.2022
 The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, and it did not do so.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management

● Did the financial product invest in fossil gas and/or nuclear energy activities that comply with the EU Taxonomy ¹?

Yes:

In fossil gas

In nuclear energy

No:

At the date of closure of the accounting year and preparation of the annual report, the data are not available and the management company does not have the information relating to the previous year.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

**Real taxonomy aligned

***Real taxonomy aligned. At the date of preparation of this periodic information document, the management company does not have all the necessary data to determine the alignment of investments with the taxonomy, excluding sovereign bonds. The percentage of alignment of investments with the taxonomy, including sovereign bonds being by construction a real minimum proportion is taken up accordingly.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the "greenness" of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies relevant for a transition to a green economy
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of investments made in transitional and enabling activities?**

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

Not applicable for the first periodic report.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **9.3%**.

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **6.4%** of the financial product.

What investments were included under ' other', what is their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product must comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - Sustainability documents - BNPP AM Corporate English (<https://www.bnpparibas-am.com/sustainability-documents/>)
- The financial product must have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product must have at least 75% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product must invest at least 20% of its assets in 'sustainable investments' as defined in Article 2 (17) of the must regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: <https://www.bnpparibas-am.com/en/documentation-sustainability/>

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

- ***How does the reference benchmark differ from a broad market index?***
Not applicable
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***
Not applicable
- ***How did this financial product perform compared with the reference benchmark?***
Not applicable
- ***How did this financial product perform compared with the relevant market index?***
Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name : BNP PARIBAS FUNDS TURKEY EQUITY

Legal Entity Identifier: 549300HW4YF2921JR655

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Did this financial product have a sustainable investment objective?

Yes

No

<p><input type="checkbox"/> It made a sustainable investment with an environmental objective: ___%</p> <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <p><input type="checkbox"/> It made sustainable investments with a social objective : ___%</p>	<p><input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it had a proportion of 40.4% of sustainable investments</p> <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <p><input type="checkbox"/> It promoted E/S characteristics but did not make any sustainable investments</p>
---	--

All actual data within this periodic report are calculated on the closing date of the accounting year.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives? "

● *How did the sustainability indicators perform?*

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy: **100%**
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology: **96.4%**
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus: **57.8 vs 54.9 (MSCI Turkey IMI 10/40 (EUR) NR)**

● *...and compared to previous periods ?*

Not applicable for the first periodic report.

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

- a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: <https://www.bnpparibas-am.com/sustainability-documents/>.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

--- How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process : RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:

15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: <https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF>

--- ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The

proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions :

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues - Ensuring all securities included in the portfolio have supportive ESG research
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

- Lack of a supplier code of conduct
- Lack of a human rights policy

Sovereign mandatory indicator:

- GHG intensity
- Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: <https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF>

What were the top investments of this financial product?

The list includes investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 30.12.2022

Source of data: BNP Paribas Asset Management, as at 30.12.2022

The largest investments are based on official accounting data and are based on the transaction date.

* Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

● What was the asset allocation ?

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The proportion of such investments used to meet the environmental or social characteristics promoted by the financial product **71.2%**

The proportion of sustainable investments of the financial product is **40.4%**.

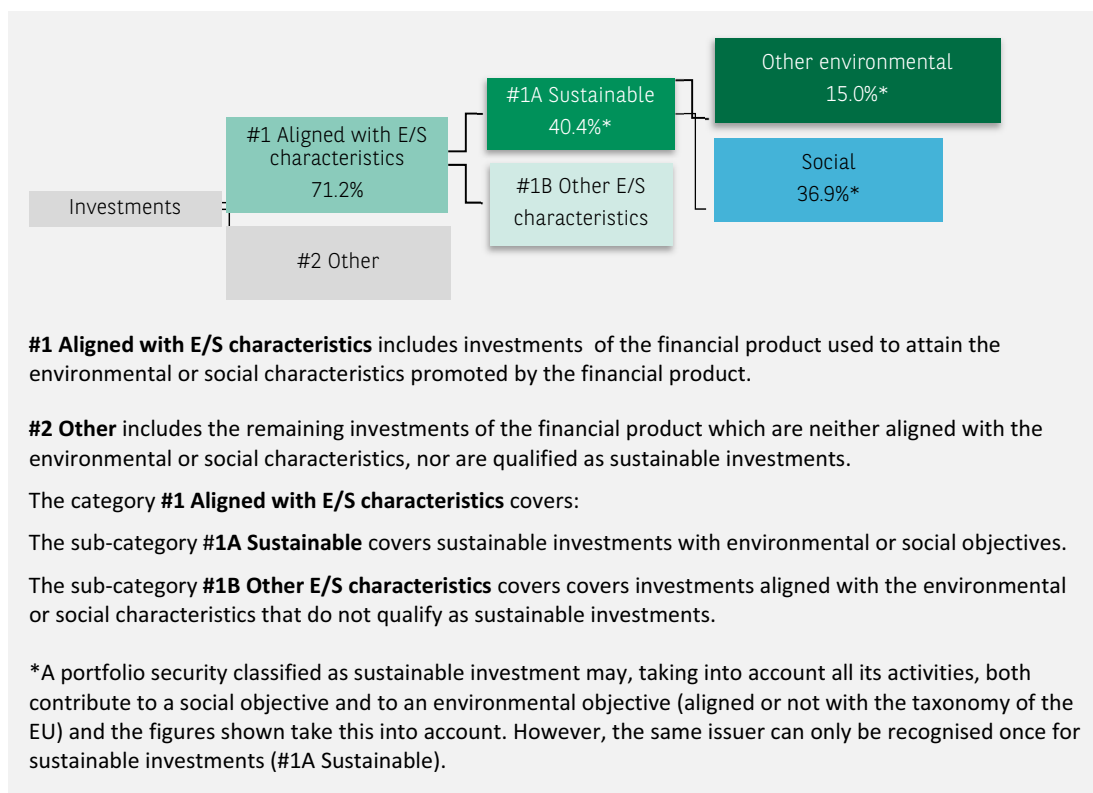

Asset allocation describes the share of investments in specific assets

The remaining proportion of the investments may include :

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards :

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

● *In which economic sectors were the investments made ?*

Sectors	% Asset
Industrials	31,63%
Financials	21,63%
Consumer Discretionary	14,37%
Consumer Staples	11,59%
Materials	7,28%
Communication Services	6,64%
Energy	3,48%
Cash	2,87%
Health Care	0,50%
Information Technology	0,01%

Source of data: BNP Paribas Asset Management, as at 30.12.2022
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, and it did not do so.

● ***Did the financial product invest in fossil gas and/or nuclear energy activities that comply with the EU Taxonomy ¹?***

- Yes:
- In fossil gas In nuclear energy
- No:

At the date of closure of the accounting year and preparation of the annual report, the data are not available and the management company does not have the information relating to the previous year.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the "greenness" of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies relevant for a transition to a green economy
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

Enabling activities

directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities

are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

**Real taxonomy aligned

***Real taxonomy aligned. At the date of preparation of this periodic information document, the management company does not have all the necessary data to determine the alignment of investments with the taxonomy, excluding sovereign bonds. The percentage of alignment of investments with the taxonomy, including sovereign bonds being by construction a real minimum proportion is taken up accordingly.

● What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Not applicable for the first periodic report.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **15.0%**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European

Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **36.9%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product must comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment. More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - Sustainability documents - BNPP AM Corporate English (<https://www.bnpparibas-am.com/sustainability-documents/>)

- The financial product must have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus

- The financial product must have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: <https://www.bnpparibas-am.com/en/documentation-sustainability/>

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

- *How does the reference benchmark differ from a broad market index?*

Not applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

Not applicable

- *How did this financial product perform compared with the reference benchmark?*

Not applicable

- *How did this financial product perform compared with the relevant market index?*

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Sustainable Investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS FUNDS HEALTH CARE INNOVATORS

Legal Entity Identifier: 2138000X5JSJS4FMQT04

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Did this financial product have a sustainable investment objective?

Yes

No

It made a sustainable investment with an environmental objective: ___%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made sustainable investments with a social objective : ___%

It promoted Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it had a proportion of 66.7% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics did not make any sustainable investments

All actual data within this periodic report are calculated on the closing date of the accounting year.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives? "

● *How did the sustainability indicators perform?*

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy: **100%**
- The percentage of the financial product's portfolio covered by the ESG analysis based on the ESG internal proprietary methodology: **99.3%**
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus: **60.0 vs 58.9** (66.67% MSCI World [S] Health Care 10/40 (EUR) NR + 33.33% MSCI World Health Care Small (USD) NR)
- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **66.7%**

● *...and compared to previous periods ?*

Not applicable for the first periodic report.

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;
2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: <https://www.bnpparibas-am.com/sustainability-documents/>

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

— — — *How were the indicators for adverse impacts on sustainability factors taken into account?*

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process : RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity

14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:

15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: <https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF>

— — — *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritise principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions :

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas

8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:

15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: <https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF>

What were the top investments of this financial product?

The list includes investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 30.12.2022

The largest investments are based on official accounting data and are based on the transaction date.

* Any percentage differences with the financial statement portfolios result from a rounding difference.

What was the proportion of sustainability-related investments?

Asset allocation
describes the share
of investments in
specific assets

● *What was the asset allocation ?*

The investments used to meet the environmental or social characteristics promoted by the financial product, taking into account all the binding elements of its investment strategy as mentioned above, represent the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies.

The proportion of such investments used to meet the environmental or social characteristics promoted by the financial product is **91.9%**.

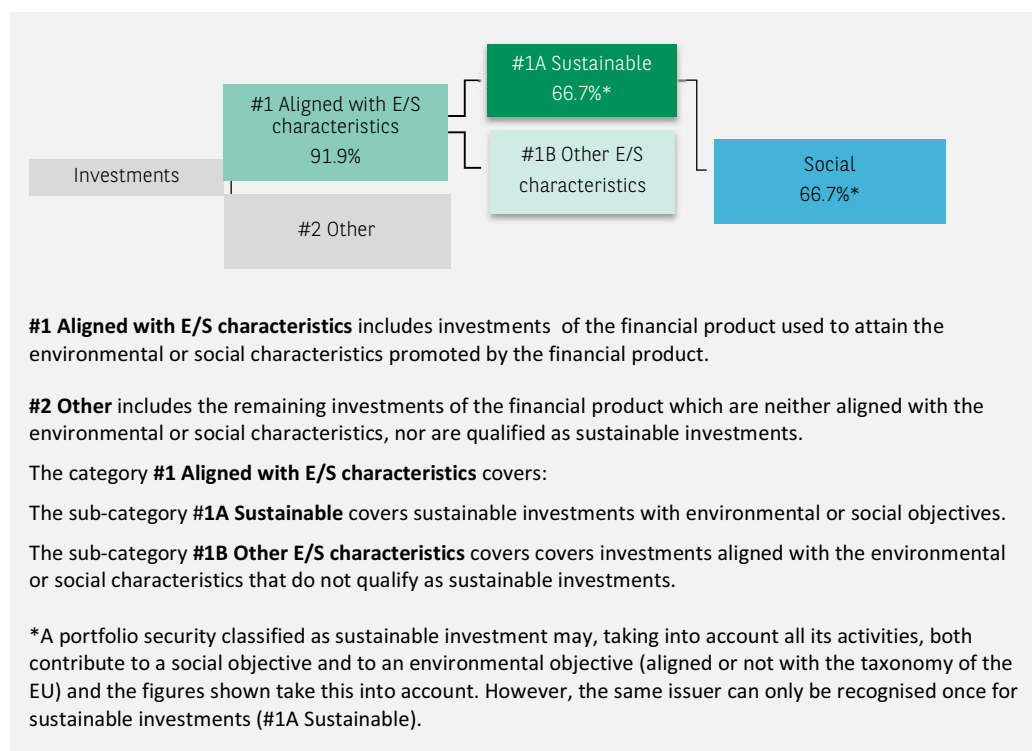

The proportion of sustainable investments of the financial product is **66.7%**

The remaining proportion of the investments may include :

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards :

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

● *In which economic sectors were the investments made ?*

Sectors	% Asset
Health Care	98.71%
Cash	1.24%
Forex contracts	0.05%

Source of data: BNP Paribas Asset Management, as at 30.12.2022
 The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Taxonomy-aligned activities are expressed as a share of: :

- **turnover** reflecting the "greenness" of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies relevant for a transition to a green economy
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **Did the financial product invest in fossil gas and/or nuclear energy activities that comply with the EU Taxonomy ¹?**

- Yes:
 - In fossil gas
 - In nuclear energy
- No:
 -

At the date of closure of the accounting year and preparation of the annual report, the data are not available and the management company does not have the information relating to the previous year.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

**Real taxonomy aligned

***Real taxonomy aligned. At the date of preparation of this periodic information document, the management company does not have all the necessary data to determine the alignment of investments with the taxonomy, excluding sovereign bonds. The percentage of alignment of investments with the taxonomy, including sovereign bonds being by construction a real minimum proportion is taken up accordingly.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities

directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are

activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● *What was the share of investments made in transitional and enabling activities?*

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

● *How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?*

Not applicable for the first periodic report.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable.

What was the share of socially sustainable investments?

Socially sustainable investments represent **66.7%** of the financial product.

What investments were included under ' other', what is their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that do not attain the minimum standard to meet environmental or social characteristics promoted by the financial product, being the proportion of assets with a positive ESG score combined with a positive E score or a positive S score and the proportion of assets being qualified as Sustainable Investment, both based on the BNPP AM ESG proprietary methodologies. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

The financial product must comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons,

asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - Sustainability documents - BNPP AM Corporate English (<https://www.bnpparibas-am.com/sustainability-documents/>)

- The financial product must have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus
- The financial product must have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology
- The financial product must invest at least 30% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: <https://www.bnpparibas-am.com/en/documentation-sustainability/>

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

- ***How does the reference benchmark differ from a broad market index?***
Not applicable
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***
Not applicable
- ***How did this financial product perform compared with the reference benchmark?***
Not applicable
- ***How did this financial product perform compared with the relevant market index?***
Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: BNY Mellon Mobility Innovation Fund **Legal entity identifier:** 2138000BBVFZ8TN6N134

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective? *[tick and fill in as relevant, the percentage figure represents sustainable investments]*

<input checked="" type="radio"/> <input type="radio"/> <input type="checkbox"/> Yes	<input type="radio"/> <input checked="" type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 80% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met? *[list the environmental and/or social characteristics promoted by the financial product. For the financial products referred to in Article 6, first paragraph, of Regulation (EU) 2020/852, in respect of sustainable investments with environmental objectives, list the environmental objectives set out in Article 9 of that Regulation to which the sustainable investment underlying the financial product contributed. For financial products that made sustainable investments with social objectives, list the social objectives]*

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The environmental and/or social characteristics promoted by the Sub-Fund were met to the following extent during the reference period 20 July 2022 to 31 December 2022 (the “Reference Period”).

The environmental and/or social characteristics promoted were:

- Investment in companies that align with the Investment Manager’s proprietary carbon red line
- Avoid investment in companies that have material unresolvable issues relating to human rights, labour, the environment, and corruption
- Investment in companies proactively seeking to manage social and environmental factors well
- - Improved environmental outcomes and other societal benefits, potentially provided by companies that are focused on innovation in transportation and related technologies.

All of the above characteristics were met by the Sub-Fund during the reference period.

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-Fund.

The SFDR Sustainable Investments underlying this Sub- Fund did not contribute to the environmental objectives set out in Article 9 of the EU Taxonomy Regulation.

The SFDR Sustainable Investments underlying this Sub- Fund contributed to the following environmental objectives not aligned with the EU Taxonomy:

- Contribution to the transition to a net zero world
- Electrification

The SFDR Sustainable Investments underlying this Sub- Fund contributed to the following social objectives:

- Improved digital infrastructure and connectivity that can have implications for transportation and its systems
- Improved infrastructure and products contributing to safer driving
- Contribution to social objectives as a result of investee companies’ internal business practices and successful management of competing interests of key stakeholder groups.

● *How did the sustainability indicators perform?*

The following sustainability indicators are used to measure how the environmental or social characteristics promoted by the Sub-Fund are attained:

Sustainability Indicator #1 - No more than 5% of Net Asset Value in companies that:

- Are in heavy emitting sectors as defined by the International Energy Agency (IEA); and
- Have a business incompatible with a scenario in which global temperatures rise more than 2 degrees above pre-industrial levels; and
- Do not have an adequate strategy to address emissions / climate change, or a credible transition plan.

In addition, where third party data is not available to assess these criteria or indicates that specific companies meet these criteria, the Investment Manager retains discretion to determine alignment with this sustainability indicator solely on the basis of its qualitative review process.

Sustainability Indicator #2 - 0% of Net Asset Value in investee companies that have been involved in violations of the UNGC principles.

Sustainability Indicator #3 - A weighted average ESG risk rating of 'medium' or better at the portfolio level. Such rating to be determined using third party data.

Sustainability Indicator #4 - All companies invested in by the Sub-Fund to align to the Investment Manager's proprietary CASE framework. This framework identifies which of the following theme(s) a company aligns to:

- Connectivity, which covers sub-themes including cloud storage, and high-speed data towers
- Autonomous Vehicles, which covers sub-themes including advanced driver assistance systems, and next generation auto parts
- Sharing, which covers sub-themes including ride hailing technology
- Electrification, which covers sub-themes including EV infrastructure, smart grid, and battery technology

The sustainability indicators performed as follows:

Indicator #	How did the indicator perform in the reference period?
Sustainability Indicator #1	0%
Sustainability Indicator #2	0%
Sustainability Indicator #3	Medium
Sustainability Indicator #4	100% of investments (excluding those held for liquidity and hedging purposes)

Excluding instruments held for liquidity and hedging purposes, the data coverage for the sustainability indicators was as follows:

Sustainability indicators #1 and #2 - 96.75% of the Sub-Fund.

Sustainability indicator #3 - 91% of the Sub-Fund.

Sustainability indicator #4 - 100% of the Sub-Fund.

No derivatives (FDI) were used to meet the environmental or social characteristics.

- **...and compared to previous periods?** *[include for financial products where at least one previous periodic report was provided]*

No comparison for previous periods is available at the date of this periodic report.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?** *[include for financial products that made sustainable investments, where not included in the reply to the above question, describe the objectives. Describe how the sustainable investments contributed to the sustainable investment objective. For the financial products referred to in Article 6, first paragraph, of Regulation (EU) 2020/852, list the environmental objectives set out in Article 9 of that Regulation to which the sustainable investment underlying the financial product contributed]*

The social objectives of the SFDR Sustainable Investments the Sub-Fund partially made are included above.

The SFDR Sustainable Investments contributed to the above social objectives in the following ways:

- Production of components used in systems that contribute to or enable enhanced vehicle safety
- Creation of products that enable a better and wider connected digital world.

The SFDR Sustainable Investments underlying this Sub- Fund did not contribute to environmental objectives set out in Article 9 of the EU Taxonomy Regulation.

The SFDR Sustainable Investments underlying this Sub-Fund contributed to environmental objectives not aligned with Article 9 of the EU Taxonomy Regulation.

The SFDR Sustainable Investments underlying this Sub-Fund contributed to the following environmental objectives not aligned with the EU Taxonomy:

- Contribution to the transition to a net zero world
- Electrification

The SFDR Sustainable Investments contributed to environmental objectives not aligned with the EU Taxonomy in the following ways:

- Electrification, or the enabling of, batteries and transport, contributing to reduced emissions

Contributing to the transition towards a net zero world through efficiency, green technology, and reduced car usage

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective? [include where the financial product includes sustainable investments]

The Investment Manager determined that SFDR Sustainable Investments in the Sub-Fund did no significant harm to any environmental or social objectives by assessing each SFDR Sustainable Investment's involvement in areas deemed to be harmful from an environmental or social perspective. Issuers that had involvement in activities deemed to be harmful from an environmental or social perspective were excluded from investment. Involvement in such activities was monitored on an ongoing basis.

— — — *How were the indicators for adverse impacts on sustainability factors taken into account?*

The Investment Manager reviewed the indicators for adverse impacts on sustainability factors for all SFDR Sustainable Investments where data was available. The Investment Manager reviewed PAIs for investee issuers using data from a designated third party data provider. If a given PAI or PAIs for an issuer appeared to exceed expectations based on the data obtained from the designated third-party data provider, further qualitative review was undertaken with respect to those issuer(s) and that product in order to determine whether such data indicated the evidence of significant harm. Where there were data gaps and the PAI was considered material for a company's sector, the Investment Manager's internal qualitative assessment was used to assess the PAIs.

The Sub-Fund took into account the following PAIs from:

- Table 1 of Annex I of the Commission Delegated Regulation:
 1. GHG emissions: Scope 1, 2 and 3
 2. Carbon footprint: Scope 1, 2 and 3
 3. GHG intensity of investee companies: Scope 1, 2 and 3
 4. Exposure to companies active in the fossil fuel sector
 5. Share of non-renewable energy consumption and production
 6. Energy consumption intensity per high impact climate sector: NACE A, B, C, D, E, F, G, H and L
 7. Activities negatively affecting biodiversity-sensitive areas
 8. Emissions to water
 9. Hazardous waste and radioactive waste ratio
 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
 12. Unadjusted gender pay gap

13. Board gender diversity
 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons).
- Table 2 of Annex I of the Commission Delegated Regulation: 4. Investments in companies without carbon emission reduction initiatives
 - Table 3 of Annex I of the Commission Delegated Regulation: 9. Lack of a human rights policy. 17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws.

— — — *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights (the “Responsible Business Practices”) collectively cover a very broad range of areas of responsible business, encompassing everything from labour rights to consumer protection to support for internationally recognised human rights within a company’s or issuer’s sphere of influence.

SFDR Sustainable Investments were considered aligned with the Responsible Business Practices as each company invested in passed screens provided by third parties which either directly cover one or more of the Responsible Business Practices or are considered appropriate proxies for one or more of the Responsible Business Practices. Each company invested in also passed the Investment Manager’s own qualitative review process which takes into account the Responsible Business Practices. In addition, where the companies invested in do not pass the relevant screens provided by third parties, the Investment Manager retains discretion to establish alignment with the Responsible Business Practices solely on the basis of its qualitative review process.

How did this financial product consider principal adverse impacts on sustainability factors? *[include section if the financial product considered principal adverse impacts on sustainability factors]*

The Investment Manager reviewed principal adverse impacts at the product level on a frequent basis during the reference period, notwithstanding certain

data coverage and data quality issues as further described below. The Investment Manager reviewed PAIs for investee issuers using data from a designated third party data provider. If a given PAI or PAIs for an issuer or product appeared to exceed expectations based on the data obtained from the designated third-party data provider, further qualitative review was undertaken with respect to those issuer(s) and that product in order to determine whether such data indicated the evidence of significant harm. In cases where, in the view of the Investment Manager, unresolvable significant harm was identified following further qualitative review, further action would be taken up to and including divestment. Over the course of the reference period no unresolvable significant harm was identified for investments in the Sub-Fund. Where there were data gaps and the PAI was considered material for a company's sector, the Investment Manager's internal qualitative assessment was used to assess the PAIs.

PAIs were categorised based on their characteristics (including their materiality and the Investment Manager's ability to estimate them), and such categories were used for the purpose of determining the actions and outcome when assessing the PAIs.

The Investment Manager was dependent upon information and data from third party data providers in order to be able to consider principal adverse impacts on sustainability factors. The availability and quality of such data impacted the extent to which each such PAI could be considered. In particular, the lack or incomplete reporting of metrics by some issuers meant that there was limited data on some adverse indicators. As such for some of the mandatory PAIs, data coverage was low. The Investment Manager's analysis of adverse indicators relied on this third-party information and data, and where such information was not available or was incomplete, the Investment Manager's analysis of adverse indicators was necessarily limited. As the data availability improves over time, it is expected that PAIs can be applied to a greater portion of the Investment Manager's investable universe. This will allow for enhanced insight into the adverse impacts caused by issuers.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 20th July 2022 – 31st December 2022

#	Largest Investments	Sector	% Assets	Country
1	HUBBELL INC USD 0.01	Industrials - Capital Goods	3.78	USA

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The asset allocation diagram illustrates the asset allocation of this Sub-Fund. 93.1% of Net Asset Value was used to meet the environmental or social characteristics promoted by the Sub-Fund in accordance with the binding elements of the investment strategy. The Sub-Fund invested 80% of Net Asset Value in SFDR Sustainable Investments of which 64.5% had an environmental objective not aligned with the EU Taxonomy and 15.5% had a social objective. 0% of the Net Asset Value of the Sub-Fund was invested in sustainable investments with an environmental objective aligned with the EU Taxonomy.

#1 Aligned with E/S characteristics: 93.1% of Net Asset Value

#1A Sustainable: 80% of Net Asset Value

- Taxonomy-aligned: 0% of Net Asset Value
- Environmental: 64.5% of Net Asset Value

- Social: 15.5% of Net Asset Value

#1B Other E/S characteristics: 13.1% of Net Asset Value

#2 Other: 6.9% of Net Asset Value

● **In which economic sectors were the investments made?**

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy? *[include section for the financial products referred to in Article 6, first paragraph, of Regulation (EU) 2020/852 and include information in accordance with Article 51 of this Regulation]*

SFDR Sustainable Investments with environmental objectives were not aligned with the EU Taxonomy.

The assessment of whether these investments complied with the EU Criteria for Environmentally Sustainable Economic Activities was not subject to an assurance provided by one or more auditors or a review by one or more third parties.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

Yes: *[specify below, and details in the graphs of the box]*

In fossil gas In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

[Include information on Taxonomy aligned fossil gas and nuclear energy and the explanatory text in the left hand margin on the previous page only if the financial product invested in fossil gas and/or nuclear energy Taxonomy-aligned economic activities during the reference period]

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

[include note for the financial products referred to in Article 6, first paragraph, of Regulation (EU) 2020/852

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

[include note for the financial products referred to in Article 6, first paragraph, of Regulation (EU) 2020/852 that invest in environmental economic activities that are not environmentally sustainable economic activities]

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

- **What was the share of investments made in transitional and enabling activities?** *[include a breakdown of the proportions of investments during the reference period]*

0.00%

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?** *[include where at least one previous periodic report was provided]*

No comparison for previous periods is available at the date of this periodic report.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

[include section only for the financial products referred to in Article 6, first subparagraph, of Regulation (EU) 2020/852 where the financial product included sustainable investments with an environmental objective that invested in economic activities that are not environmentally sustainable economic activities, and explain why the financial product invested in economic activities that were not Taxonomy-aligned]

The Sub-Fund invested 64.5% of NAV in SFDR Sustainable Investments with an environmental objective not aligned with the EU Taxonomy.

The Sub-Fund invested in SFDR Sustainable Investments with an environmental objective in economic activities that are not Taxonomy-aligned because evidence of taxonomy alignment is dependent on the availability of accurate, detailed and complete data on the investee companies to which the Sub-Fund has exposure. At this time, such information is not necessarily readily available from public disclosures by investee companies. While data availability is improving and is expected to improve over time, the data currently available is limited and varies between investee companies.

What was the share of socially sustainable investments? *[include only where the financial product included sustainable investments with a social objective]*

While the Sub-Fund does not commit to investing a minimum percentage of its Net Asset Value in socially sustainable investments, the Sub-Fund invested 15.5% of its Net Asset Value in SFDR Sustainable Investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The Sub-Fund invested 6.9% of Net Asset Value in category #2 (other) which comprised of:

- 1) 3.26% in cash held for liquidity purposes only. These instruments were not subject to environmental or social safeguards as the Investment Manager does not view environmental or social considerations as relevant for these instruments.
- 2) 3.64% in an agricultural machinery company which as at the end of the reference period was in the process of being reviewed by the Investment Manager to confirm its alignment with the Investment Manager's ESG and sustainability criteria.

What actions have been taken to meet the environmental and/or social characteristics during the reference period? *[list the actions*

taken within in the period covered by the periodic report to meet the environmental or social characteristics promoted by the financial product, including shareholder engagement as referred to in Article 3g of Directive 2007/36/EC and any other engagement relating to the environmental or social characteristics promoted by the financial product]

In order to meet the environmental and social characteristics, the Investment Manager took the following actions:

- Invested at least 20% of its Net Asset Value in SFDR Sustainable Investments
- Excluded issuers that produce tobacco products
- Excluded issuers that derive more than 10% of turnover from the sale of tobacco
- Excluded issuers that generate revenues from the production of controversial weapons
- Excluded issuers in breach of the Principles of the UN Global Compact (which includes principles relating to human rights, labour, environment and anti-corruption)
- Invested at least 90% of the Net Asset Value of the Sub-Fund net of the Sub-Fund's exposure to cash and liquid near cash assets, money market funds, and currency related FDI and FDI used for hedging purposes (the "Non-ESG Assets")) in companies that meet the Investment Manager's ESG and sustainability criteria at time of purchase and on an ongoing basis.
-

- Invested at least 80% of the Net Asset Value of the Sub-Fund in Mobility Innovation Companies. Mobility Innovation Companies include automobile manufacturers, component suppliers and automobile technology providers that focus on innovation in transportation relating to use, control and power such as enhanced infrastructure and data processing capabilities, clean energy production, the safety implications of advanced driver-assistance systems, and the companies which make use of or enable such mobility innovations.

Engagement is not a part of the environmental or social investment strategy of the Sub-Fund. However, engagement is an integral part of the Investment Manager's approach to investing as they believe that constructive dialogue with management teams not only affords real insight into how a company operates, it is an opportunity to advocate for positive change.

How did this financial product perform compared to the reference benchmark? *[include section where an index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product and indicate where the methodology used for the calculation of the designated index can be found]*

[include note for financial products where an index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product]

[include note for financial products where an index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product]

A reference benchmark has not been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

- **How does the reference benchmark differ from a broad market index?**

Not applicable

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

Not applicable

- **How did this financial product perform compared with the reference benchmark?**

Not applicable

- **How did this financial product perform compared with the broad market index?**

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Caratteristiche ambientali e/o sociali

Investimento sostenibile significa un investimento in un'attività economica che contribuisca ad un obiettivo ambientale o sociale, ponendo la condizione che tale investimento non arrechi un danno significativo ad alcun obiettivo ambientale o sociale e che le società oggetto dell'investimento seguano pratiche di buona governance.

La **Tassonomia dell'UE** è una classificazione definita nel Regolamento (UE) 2020/852 che stabilisce un **elenco di attività economiche ecosostenibili**. Tale Regolamento non include un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere allineati con la **Tassonomia** o meno.

Questo prodotto finanziario ha avuto un obiettivo di investimento sostenibile?

●● <input type="checkbox"/> SÌ	●● <input checked="" type="checkbox"/> NO
<input type="checkbox"/> ha effettuato investimenti sostenibili con un obiettivo ambientale : ____%	<input checked="" type="checkbox"/> Ha promosso aspetti ambientali/sociali (A/S) e, pur non ponendosi come obiettivo un investimento sostenibile, ha compreso una proporzione del 52% di investimenti sostenibili.
<input type="checkbox"/> in attività economiche che si qualificano come ecosostenibili secondo la Tassonomia UE	<input type="checkbox"/> con un obiettivo ambientale in attività economiche che si qualificano come ecosostenibili secondo la Tassonomia UE
<input type="checkbox"/> in attività economiche che non si qualificano come ecosostenibili secondo la Tassonomia UE	<input checked="" type="checkbox"/> con un obiettivo ambientale in attività economiche che non si qualificano come ecosostenibili secondo la Tassonomia UE
<input type="checkbox"/> ha effettuato investimenti sostenibili con un obiettivo sociale : ____%	<input checked="" type="checkbox"/> con un obiettivo sociale
	<input type="checkbox"/> ha promosso caratteristiche A/S ma non ha effettuato alcun investimento sostenibile

In quale misura sono state implementate le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Gli **indicatori di sostenibilità** determinano in quale misura sono state realizzate le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

Gli obiettivi ambientali e sociali promossi dal comparto sono stati realizzati come segue:

- evitando l'esposizione ai paesi considerati regimi oppressivi
- evitando l'esposizione a società che presentano rischi strutturali sostanziali e gravi e che violano gravemente i principi normativi, tenendo conto delle pratiche nelle questioni di carattere ambientale e sociali e della conformità alle norme quali il Patto globale delle Nazioni Unite (UNGC) e gli Orientamenti OCSE per le norme aziendali.
- evitando esposizione alle società significativamente esposte ad attività controverse, come l'estrazione, il trasporto o la distribuzione di carbone termico, la produzione o la vendita di tabacco e la produzione o la vendita di armi controverse (mine anti-uomo, bombe a grappolo, armi chimiche, biologiche, al fosforo bianco e all'uranio impoverito).
- integrando le metodologie di ricerca ESG di Candriam nel processo di investimento ed investendo una quota del suo patrimonio in Investimenti sostenibili.

● Cosa hanno rilevato gli indicatori di sostenibilità?

Per la selezione degli investimenti sostenibili, il gestore del portafoglio ha preso in considerazione le valutazioni ESG degli emittenti prodotte dal team di analisti ESG di Candriam.

Per le società, queste valutazioni sono basate sull'analisi delle interazioni della società con i principali stakeholder e sull'analisi delle sue attività commerciali e del loro impatto, positivo o negativo, sulle sfide chiave della sostenibilità come il

cambiamento climatico e l'impoverimento delle risorse. Inoltre, l'analisi ESG di Candriam comprende i filtri di esclusione basati sulla conformità alle norme internazionali e il coinvolgimento in attività controverse.

Per gli emittenti sovrani, queste valutazioni sono fondate sull'analisi della gestione del paese delle proprie risorse naturali, umane, sociali ed economiche. Inoltre, i filtri di esclusione sono utilizzati per vagliare gli emittenti esterni che non si attengono a standard democratici e di governance.

L'analisi e ricerca ESG di Candriam di investimenti sostenibili valuta inoltre la conformità degli investimenti al principio secondo il quale non devono "arrecare danno" all'obiettivo di un investimento sostenibile e le pratiche di buona governance.

L'integrazione della metodologia di ricerca ESG di Candriam ha permesso al Fondo di rispettare la proporzione minima di investimenti sostenibili definiti nel prospetto (20% minimo). La proporzione di investimenti sostenibili nel Fondo è stata pertanto al di sopra della soglia minima, come indicato nella sezione "Qual è stata la proporzione di investimenti associati alla sostenibilità?"

Nome dell'indicatore KPI	Valore	Indice di riferimento
Freedom House Index - Country - Higher than bench	60.55	51.49
Environmental Performance Index - Country - Higher than bench	42.65	38.64

● **...E rispetto ai periodi precedenti?**

Non applicabile in quanto non sono disponibili dati relativi al periodo precedente.

● **Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha parzialmente conseguito e come ha contribuito l'investimento sostenibile a tale obiettivo?**

Gli investimenti sostenibili che il comparto intendeva realizzare per una quota del portafoglio erano volti a produrre un impatto positivo a lungo termine in ambito ambientale e sociale.

La proporzione di investimenti sostenibili è stata superiore al minimo definito nel prospetto (20% minimo). Questo ha permesso al comparto di superare gli obiettivi stabiliti inizialmente.

In ogni caso, il comparto non è in grado di pubblicare una percentuale di allineamento alla Tassonomia in quanto solo un piccolo numero di società a livello globale forniscono i dati necessari per una valutazione rigorosa del loro allineamento alla Tassonomia.

● **In che modo gli investimenti sostenibili che il prodotto finanziario ha parzialmente realizzato non hanno arrecato un danno significativo all'obiettivo di investimento sostenibile sociale o ambientale?**

Candriam garantisce che i suoi investimenti sostenibili non hanno causato un danno significativo a qualsiasi obiettivo d'investimento sostenibile di carattere ambientale e/o sociale mediante la sua ricerca e analisi ESG degli emittenti societari e sovrani.

In base alle sue valutazioni e punteggi ESG, la metodologia ESG di Candriam definisce requisiti e soglie minime per identificare quegli emittenti che si qualificano come "investimento sostenibile" e, in particolare, non provocano danni significativi a qualsiasi obiettivo di investimento sostenibile ambientale e/o sociale.

In particolare, il principio di "non arrecare danno significativo", è stato valutato per le società tramite:

- la considerazione dei "principali impatti negativi"
- l'allineamento agli orientamenti OCSE per le società multinazionali e del Global Compact delle Nazioni Unite per garantire le tutele minime sociali e ambientali.

Per maggiori dettagli, fare riferimento alla sezione che segue sulla considerazione dei principali effetti avversi sui fattori della sostenibilità.

----- **In che modo sono stati presi in considerazione gli indicatori degli effetti avversi sui fattori di sostenibilità?**

I principali effetti avversi sono gli effetti negativi più rilevanti delle decisioni di investimento sui fattori di sostenibilità correlati ad aspetti ambientali e sociali, alle condizioni di lavoro, al rispetto dei diritti umani, all'anticorruzione e anticorruzione.

La considerazione dei principali effetti avversi costituisce una parte essenziale dell'approccio di Candriam all'investimento sostenibile. I principali effetti avversi sono stati presi in considerazione nell'ambito dell'intero processo di analisi e ricerca ESG e tramite

diversi metodi.

Per quanto riguarda l'analisi delle società, questi metodi comprendono:

1. Valutazione ESG delle società: la metodologia di ricerca e screening ESG considera e valuta i principali effetti negativi sulla sostenibilità da due angolazioni distinte ma correlate:

- e attività commerciali degli emittenti societari e l'impatto, positivo o negativo, sulle sfide chiave di sostenibilità come il cambiamento climatico e l'impoverimento delle risorse;
- le interazioni della società con i principali stakeholder.

2. Screening negativo delle società, costituito da un'esclusione normativa e un'esclusione delle società coinvolte in attività controverse.

3. Attività di coinvolgimento con le società basate sul dialogo, rivolto ad evitare o mitigare l'impatto avverso. Il quadro dell'analisi ESG, ed i relativi risultati, alimentano la politica di impegno di Candriam, e viceversa.

Per l'analisi degli emittenti sovrani, questi metodi comprendono:

1. Valutazione ESG su base geografica: la metodologia di ricerca e screening ESG considera e valuta i principali effetti negativi sulla sostenibilità sulla base di quattro tipi di capitale di sviluppo sostenibile:

- capitale naturale, in cui si valuta come un paese conserva e utilizza le proprie risorse naturali in modo sostenibile,
- capitale umano, in cui si misura la produttività economica e creativa valutando i livelli di istruzione e competenza, innovazione, salute, compresi gli aspetti della sostenibilità,
- capitale sociale, in cui si valutano la società civile e le istituzioni statali di ciascun paese, concentrandosi sulla trasparenza e la democrazia, l'efficacia dell'azione del governo, la corruzione, le ineguaglianze e la sicurezza della popolazione,
- capitale economico, in cui si valutano i fondamentali economici di un paese, al fine di determinare la capacità di ciascun governo di finanziare e promuovere a lungo termine politiche di sviluppo sostenibili.

2. Lo screening negativo dei paesi si basa in particolare sui seguenti elementi:

- Elenco dei regimi altamente oppressivi di Candriam - stati con violazioni gravi dei diritti umani.

L'integrazione dei principali impatti negativi sui fattori di sostenibilità è basata sulla rilevanza o possibile rilevanza di ciascun indicatore per ogni settore specifico a cui la società appartiene e per ogni paese, per garantire che il punteggio di un paese rifletta adeguatamente i problemi a breve, medio e lungo termine, le sfide e le opportunità che contano per lo sviluppo futuro. Ciò dipende da diversi fattori quali rendiconti il tipo di informazioni, la qualità e la portata dei dati, l'applicabilità, la pertinenza e la copertura geografica.

Gli investimenti sostenibili sono stati allineati con gli "Orientamenti OCSE per le imprese multinazionali" e con i Principi Guida delle Nazioni Unite su Imprese e Diritti Umani? Dettagli:

Gli investimenti sostenibili del comparto sono stati conformi agli Orientamenti OCSE per le imprese multinazionali e con i Principi Guida delle Nazioni Unite su Imprese e Diritti Umani.

Sono soggetti a un'analisi delle attività controverse su base normativa che considera la conformità a norme internazionali di carattere sociale, umano, ambientale e anticorruzione, secondo quanto definito dal Patto globale delle Nazioni Unite e dagli Orientamenti OCSE per le aziende multinazionali. L'Organizzazione internazionale del lavoro (OIL) e la Carta internazionale dei diritti umani sono parte dei numerosi riferimenti internazionali integrati nel nostro modello ESG e di analisi normativa.

Questa analisi è volta ad escludere le società che hanno significativamente ripetutamente violato uno qualsiasi di questi principi.

La Tassonomia UE definisce il principio di "non arrecare un danno significativo" secondo il quale gli investimenti allineati con la Tassonomia non dovrebbero produrre danni di rilievo agli obiettivi della Tassonomia UE e prevede specifici criteri dell'Unione europea.

Il principio di "non arrecare un danno significativo" si applica esclusivamente a quegli investimenti associati al prodotto finanziario che prendono in considerazione i criteri stabiliti dall'UE in materia di attività economiche ecosostenibili. Gli investimenti sottostanti della porzione rimanente di questo prodotto finanziario non prendono in considerazione i criteri dell'Unione europea in materia di attività economiche sostenibili sul piano ambientale.

Eventuali altri investimenti sostenibili non devono allo stesso modo arrecare danni significativi ad alcun obiettivo ambientale o sociale.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti avversi sui fattori sostenibili?

A livello di comparto, i principali impatti negativi (PAI) sui fattori di sostenibilità vengono considerati attraverso uno o più strumenti (si veda la dichiarazione PAI di Candriam: <https://www.candriam.com/en/private/sfdr/>):

- Impegno: al fine di evitare e/o ridurre l'impatto negativo sugli obiettivi di sostenibilità, il Comparto ha considerato anche gli impatti negativi nelle sue interazioni con le società, attraverso il dialogo. Candriam attribuisce la priorità alle sue attività di coinvolgimento in base a una valutazione delle sfide ESG più rilevanti e sostanziali, relative a settori ed emittenti, prendendo in considerazione gli impatti finanziari e societari e quelli sugli stakeholder. Pertanto, il livello di coinvolgimento in ciascuna società all'interno dello stesso prodotto può variare ed è soggetto alla metodologia di prioritizzazione di Candriam.
 - Dialogo:

Il clima (da PAI1 a PAI6) è ovviamente centrale nel nostro dialogo con le aziende. Le priorità dell'impegno per il clima da parte delle società sono identificate prendendo in considerazione:

- società che presentano un debole profilo di transizione (modello del rischio di transizione proprietario) e/o emissioni di carbonio ancora elevate (Ambito 1-2) o elevate emissioni di Ambito 3.
- emittenti dei settori finanziari ancora ampiamente esposti ai combustibili fossili e con un ruolo primario nel finanziamento della transizione
- relativa esposizione dei portafogli gestiti agli emittenti sopra citati.

Il nostro obiettivo è ovviamente incoraggiare le società a comunicare pubblicamente la loro strategia di allineamento alla traiettoria 1.5D e a sostenere questo allineamento. Oltre a qualsiasi impegno per l'obiettivo Net Zero e alla comunicazione delle emissioni assolute di Scope1-2-3, Candriam incoraggia le aziende a fornire indicazioni su come gli obiettivi a breve/medio termine siano allineati con la traiettoria 1.5D scientificamente riconosciuta. In particolare, chiediamo agli emittenti di spiegare in che modo la loro strategia e il loro piano di spesa in conto capitale vadano nel senso dell'impegno a favore della decarbonizzazione. Di norma, utilizziamo una combinazione di dialogo individuale e collaborativo. Come nell'anno precedente, continuiamo a sostenere e a prendere attivamente parte a diverse iniziative su base collaborativa come Climate Action 100+. Queste iniziative non solo contribuiscono ad aumentare il livello di trasparenza sulle emissioni di gas effetto serra e sulla relativa strategia ma anche a per acquisire una posizione di forza a favore del cambiamento strategico. I risultati di questo impegno sono riportati in dettaglio nella nostra relazione annuale su Impegno e processo di voto, disponibile sul nostro sito web pubblico (<https://www.candriam.com/en/professional/insight-overview/publications/#sri-publications>).

Dato il contesto geopolitico e la crescita delle disuguaglianze osservata, sono state intraprese diverse iniziative per la protezione dei diritti umani fondamentali a diversi livelli di rapporto di lavoro diretto o indiretto (due diligence della catena di approvvigionamento) (PAI10,PAI11). Abbiamo anche condotto una campagna di impegno diretto post-covid con la finalità di indagare gli effetti sulle relazioni con gli stakeholder e i cambiamenti ora entrati a far parte della "nuova normalità" dell'attività commerciale nelle società in cui Candriam investe. Nello stesso ambito, anche la gestione del capitale umano è un aspetto che trattiamo ampiamente nel dialogo con le società. Continuiamo a sostenere la Workforce Disclosure Initiative per un miglior accesso a dati affidabili, pertinenti e comparabili sui rapporti di lavoro diretti e indiretti delle società.

- Esclusione: selezione negativa di Candriam delle società o dei paesi volta a evitare investimenti in attività o pratiche pericolose che può condurre a esclusioni connesse all'impatto negativo di società o emittenti.
- Monitoraggio: calcolo e valutazione dei principali indicatori di impatto negativo, compreso il report a livello di Comparto. Alcuni di questi indicatori possono avere obiettivi espliciti e possono essere utilizzati per misurare il raggiungimento dell'obiettivo d'investimento sostenibile del Comparto. Di seguito sono riportati gli indicatori di questo Comparto:

Indicatori PAI	Valore
10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	3.09%*
14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0.00%
16 - Investee countries subject to social violations	0.00%

*Il fondo ha rispettato la politica di esclusione in conformità al prospetto informativo.

Quali sono stati i principali investimenti di questo prodotto finanziario?

L'elenco comprende gli investimenti che costituiscono la **proporzione maggiore degli investimenti** del prodotto finanziario durante il periodo di riferimento, ovvero: 31/12/2022

Principali investimenti	Settore	Proporzione	Paese
CANDRIAM BONDS EMERGING MARKETS CORPORATE Z C	Investments funds	4.72%	LU

A seguito del processo di arrotondamento delle cifre, possono essere presenti differenze minime tra i dati sopra riportati e quelli corrispondenti contenuti nella sezione "Portafoglio titoli" della relazione annuale.

Qual è stata la proporzione di investimenti associati alla sostenibilità?

Qual è stata l'allocazione delle attività?

L'allocazione delle attività descrive la quota di investimenti in una specifica classe di attività.

#1 Allineati con caratteristiche A/S comprende gli investimenti del prodotto finanziario utilizzati per realizzare le caratteristiche ambientali o sociali promosse da tale prodotto finanziario.

#2 Altro comprende i restanti investimenti del prodotto finanziario che non sono allineati alle caratteristiche ambientali o sociali, né sono qualificati come investimenti sostenibili.

La categoria **#1 Allineati con caratteristiche A/S** comprende:

- La sottocategoria **#1A Sostenibili** copre gli investimenti sostenibili da un punto di vista di tutela ambientale e sociale.
- La sottocategoria **#1B Altre caratteristiche A/S** copre gli investimenti allineati con le caratteristiche ambientali o sociali che non si qualificano come investimenti sostenibili.

● **In quali settori economici sono stati effettuati gli investimenti?**

Settore principale	Proporzione
Bonds of States. Provinces and municipalities	54.18%
Petroleum	9.79%
Investments funds	8.90%
Banks and other financial institutions	4.82%
Non Classifiable Institutions	4.43%
Utilities	2.66%
Chemicals	1.49%
Foods and non alcoholic drinks	1.14%
Building materials	1.11%
Transportation	1.04%
Aeronautic and astronautic Industry	0.98%
Various capital goods	0.95%
Miscellaneous services	0.69%

A seguito del processo di arrotondamento delle cifre, possono essere presenti differenze minime tra i dati sopra riportati e quelli corrispondenti contenuti nella sezione "Portafoglio titoli" della relazione annuale.

In quale misura gli investimenti sostenibili con l'obiettivo di tutela ambientale sono stati allineati con la Tassonomia UE?

Per la conformità con la Tassonomia UE, i criteri relativi al **gas fossile** comprendono limiti sulle emissioni e la transizione all'energia completamente rinnovabile o ai combustibili a basso tenore di carbonio entro la fine del 2035. Per quanto riguarda l'**energia nucleare**, i criteri comprendono la sicurezza totale e le regole di gestione dei rifiuti.

Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale ad un obiettivo ambientale.

Le **attività di transizione** sono attività per le quali le alternative a basse emissioni di carbonio non sono ancora disponibili e, tra gli altri, hanno livelli di emissioni di gas effetto-serra corrispondenti alle migliori performance.

Le attività allineate alla Tassonomia sono espresse come quota di:

- **giro d'affari** che riflette la quota di profitto risultante dalle attività green delle aziende oggetto dell'investimento.

- **spese in conto capitale** (CapEx) che rappresentano gli investimenti green effettuati dalle società oggetto dell'investimento, per esempio per la transizione ad un'economia green.

- **spese operative** (OpEx) che riflettono le attività operative green delle società oggetto dell'investimento.

Il prodotto finanziario ha investito in attività associate al gas fossile e/o all'energia nucleare conformi alla Tassonomia UE¹?

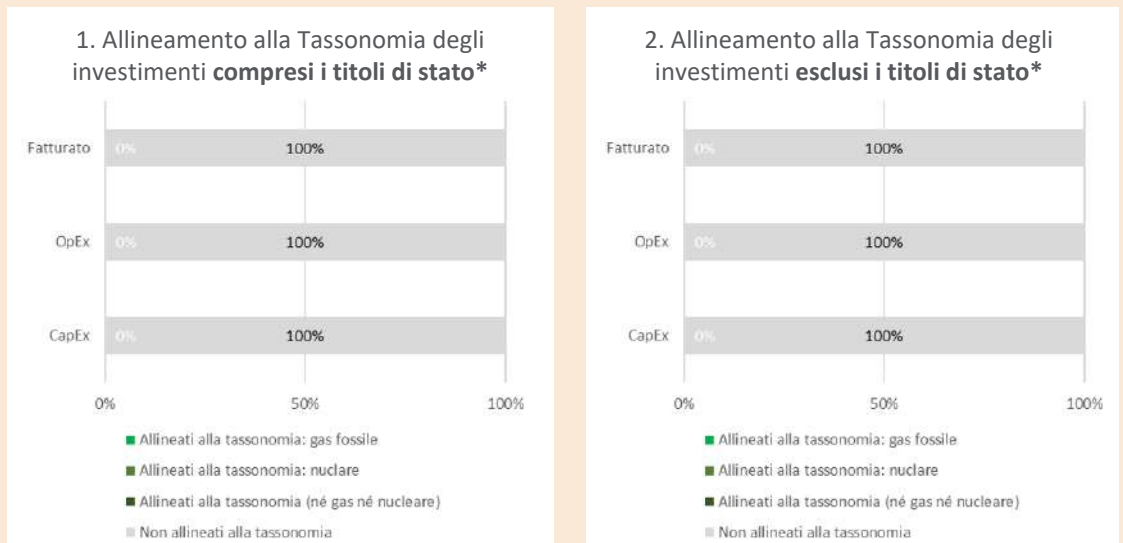

Sì

Nel gas fossile

Nell'energia nucleare

No

I due grafici riportati di seguito rappresentano in verde la percentuale minima di investimenti allineati con la Tassonomia UE. Non essendoci una metodologia appropriata per la determinazione dell'allineamento alla Tassonomia dei titoli di stato, il primo grafico mostra l'allineamento della Tassonomia in relazione a tutti gli investimenti del prodotto finanziario, comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla Tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane*

* Nell'ambito di questi grafici, per "titoli di stato" si intende l'esposizione a qualsiasi obbligazione sovrana

Qual è stata la quota di investimenti in attività abilitanti e di transizione?

Il Comparto non è in grado di pubblicare una percentuale di allineamento con la Tassonomia, né di attività di transizione e abilitanti, in quanto solo un piccolo numero di società a livello globale forniscono i dati necessari per una valutazione rigorosa del loro allineamento alla Tassonomia.

Qual è il rapporto con la percentuale di investimenti allineati con la Tassonomia UE effettuati nei precedenti periodi di riferimento?

Non applicabile in quanto non sono disponibili dati relativi al periodo precedente

Qual è la ripartizione della proporzione degli investimenti per ciascuna delle categorie della Tassonomia UE alla quale hanno contribuito questi investimenti?

¹ Le attività relative ai gas fossili e/o al nucleare sono conformi alla Tassonomia UE solo se contribuiscono alla limitazione del cambiamento climatico ("mitigazione dei cambiamenti climatici") e non recano alcun danno significativo agli obiettivi della Tassonomia UE. Si veda la nota esplicativa nel margine sinistro. L'insieme completo dei criteri per le attività associate al gas fossile e all'energia nucleare conformi alla Tassonomia UE è fornito nel regolamento delegato (UE) 2022/1214 della Commissione.

Il Comparto non è in grado di pubblicare una percentuale di allineamento con la Tassonomia, in quanto solo un piccolo numero di società a livello globale forniscono i dati necessari per una valutazione rigorosa del loro allineamento alla Tassonomia.

Pertanto la percentuale è considerata nulla.

Qual è stata la quota di investimenti ecosostenibili con un obiettivo di tutela ambientale non allineati con la Tassonomia UE?

Il Comparto ha registrato una quota del 28,18% di investimenti in attività sostenibili con un obiettivo ambientale non allineate con la tassonomia UE.

In effetti, ad oggi, solo due dei sei obiettivi sono stati implementati nel 2022 e un numero esiguo di società a livello globale forniscono i dati necessari per una valutazione rigorosa del loro allineamento alla Tassonomia.

Qual è stata la quota di investimenti socialmente sostenibili?

Il Comparto ha registrato una quota del 23,34% di investimenti con un obiettivo sociale

Quali investimenti sono stati inclusi nella voce "altro", qual era il loro scopo, ed esistevano delle salvaguardie ambientali o sociali minime?

Gli investimenti inclusi alla voce "Altri investimenti" sono presenti nel Comparto nella misura del 17.74% del valore del patrimonio netto totale.

Tali investimenti comprendono uno o più dei seguenti asset:

- Contanti: Contanti a vista, depositi in liquidità, accordi di riacquisto inverso (reverse repo) necessari per gestire la liquidità del Comparto in base alle sottoscrizioni/riscatti oppure risultanti dalla decisione di esposizione al mercato del Comparto;
- Investimenti su emittenti con caratteristiche ambientali/sociali al momento dell'investimento e non più completamente allineati ai criteri ambientali/sociali di investimento di Candriam. Tali investimenti sono pianificati per la vendita;
- Altri investimenti (compresi i derivati a titolo singolo) acquistati a fini di diversificazione e che possono non essere soggetti a filtri ESG o per i quali non sono disponibili dati ESG;
- Derivati non a titolo singolo utilizzati per la gestione efficiente del portafoglio e/o a fini di copertura e/o temporaneamente a seguito di sottoscrizioni/riscatti.

Quali misure sono state intraprese per soddisfare gli obiettivi ambientali e/o sociali durante il periodo di riferimento?

Per rispettare gli obiettivi ambientali e/o sociali durante il periodo di riferimento, abbiamo escluso dall'universo di investimento i seguenti investimenti, per i quali gli emittenti non prevedevano caratteristiche ambientali e/o sociali: Taiwan Cement Corp., esclusa dal nostro universo ESG a seguito del suo diretto coinvolgimento nel settore del carbone termico come descritto nella Politica di esclusioni di Candriam. Il fondo ha anche escluso la Bielorussia e la Russia (al di fuori dell'indice) sulla base di fattori ESG. Il comparto mira indirettamente a raggiungere un punteggio medio ESG Paese, basato sulla metodologia ESG proprietaria di Candriam, superiore al suo benchmark. Al 30/12/2022, il punteggio ESG Paese del comparto era 31.46, ovvero superiore al punteggio del benchmark.

Qual è stata la performance di questo prodotto finanziario rispetto al benchmark di riferimento?

Nessun indice è stato designato come benchmark di riferimento al fine di ottenere le caratteristiche sociali o ambientali promosse dal Comparto

rappresenta gli investimenti sostenibili con un obiettivo di tutela ambientale che **non prendono in considerazione i criteri** per le attività economiche ecosostenibili previsti dal Regolamento (EU) 2020/852.

I **benchmark di riferimento** sono indici volti a definire in quale misura il prodotto finanziario realizza gli obiettivi ambientali o sociale che promuove.

Caratteristiche ambientali e/o sociali

Investimento sostenibile significa un investimento in un'attività economica che contribuisca ad un obiettivo ambientale o sociale, ponendo la condizione che tale investimento non arrechi un danno significativo ad alcun obiettivo ambientale o sociale e che le società oggetto dell'investimento seguano pratiche di buona governance.

La **Tassonomia dell'UE** è una classificazione definita nel Regolamento (UE) 2020/852 che stabilisce un **elenco di attività economiche ecosostenibili**. Tale Regolamento non include un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere allineati con la **Tassonomia** o meno.

Questo prodotto finanziario ha avuto un obiettivo di investimento sostenibile?

●● <input type="checkbox"/> SÌ	●● <input checked="" type="checkbox"/> NO
<input type="checkbox"/> ha effettuato investimenti sostenibili con un obiettivo ambientale: ___%	<input checked="" type="checkbox"/> Ha promosso aspetti ambientali/sociali (A/S) e, pur non ponendosi come obiettivo un investimento sostenibile, ha compreso una proporzione del 56% di investimenti sostenibili.
<input type="checkbox"/> in attività economiche che si qualificano come ecosostenibili secondo la Tassonomia UE	<input type="checkbox"/> con un obiettivo ambientale in attività economiche che si qualificano come ecosostenibili secondo la Tassonomia UE
<input type="checkbox"/> in attività economiche che non si qualificano come ecosostenibili secondo la Tassonomia UE	<input checked="" type="checkbox"/> con un obiettivo ambientale in attività economiche che non si qualificano come ecosostenibili secondo la Tassonomia UE
<input type="checkbox"/> ha effettuato investimenti sostenibili con un obiettivo sociale: ___%	<input checked="" type="checkbox"/> con un obiettivo sociale
	<input type="checkbox"/> ha promosso caratteristiche A/S ma non ha effettuato alcun investimento sostenibile

In quale misura sono state implementate le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Gli **indicatori di sostenibilità** determinano in quale misura sono state realizzate le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

Gli obiettivi ambientali e sociali promossi dal comparto sono stati realizzati come segue:

- evitando l'esposizione a società che presentano rischi strutturali sostanziali e gravi e che violano gravemente i principi normativi, tenendo conto delle pratiche nelle questioni di carattere ambientale e sociali e della conformità alle norme quali il Patto globale delle Nazioni Unite (UNGC) e gli Orientamenti OCSE per le norme aziendali.
- evitando esposizione alle società significativamente esposte ad attività controverse, come l'estrazione, il trasporto o la distribuzione di carbone termico, la produzione o la vendita di tabacco e la produzione o la vendita di armi controverse (mine anti-uomo, bombe a grappolo, armi chimiche, biologiche, al fosforo bianco e all'uranio impoverito).
- realizzando un'impronta di carbonio inferiore a quella dell'indice di riferimento
- integrando le metodologie di ricerca ESG di Candriam nel processo di investimento ed investendo una quota del suo patrimonio in Investimenti sostenibili.

● Cosa hanno rilevato gli indicatori di sostenibilità?

Per la selezione degli investimenti sostenibili, il gestore del portafoglio ha preso in considerazione le valutazioni ESG degli emittenti prodotte dal team di analisti ESG di Candriam.

Per le società, queste valutazioni sono basate sull'analisi delle interazioni della società con i principali stakeholder e sull'analisi delle sue attività commerciali e del loro impatto, positivo o negativo, sulle sfide chiave della sostenibilità come il

cambiamento climatico e l'impoverimento delle risorse. Inoltre, l'analisi ESG di Candriam comprende i filtri di esclusione basati sulla conformità alle norme internazionali e il coinvolgimento in attività controverse.

Per gli emittenti sovrani, queste valutazioni sono fondate sull'analisi della gestione del paese delle proprie risorse naturali, umane, sociali ed economiche. Inoltre, i filtri di esclusione sono utilizzati per vagliare gli emittenti esterni che non si attengono a standard democratici e di governance.

L'analisi e ricerca ESG di Candriam di investimenti sostenibili valuta inoltre la conformità degli investimenti al principio secondo il quale non devono "arrecare danno" all'obiettivo di un investimento sostenibile e le pratiche di buona governance.

L'integrazione della metodologia di ricerca ESG di Candriam ha permesso al Fondo di rispettare la proporzione minima di investimenti sostenibili definiti nel prospetto (10% minimo). La proporzione di investimenti sostenibili nel Fondo è stata pertanto al di sopra della soglia minima, come indicato nella sezione "Qual è stata la proporzione di investimenti associati alla sostenibilità?"

Nome dell'indicatore KPI	Valore	Indice di riferimento
Carbon Footprint - Corporate - Scope 1&2 - Lower than bench	112.36	202.47

● **...E rispetto ai periodi precedenti?**

Non applicabile in quanto non sono disponibili dati relativi al periodo precedente.

● **Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha parzialmente conseguito e come ha contribuito l'investimento sostenibile a tale obiettivo?**

Gli investimenti sostenibili che il comparto intendeva realizzare per una quota del portafoglio erano volti a contribuire alla riduzione delle emissioni di gas a effetto serra tramite le esclusioni e l'uso di indicatori climatici nell'analisi delle società, e a produrre un impatto positivo a lungo termine in ambito ambientale e sociale.

La proporzione di investimenti sostenibili è stata superiore al minimo definito nel prospetto (10% minimo). Questo ha permesso al comparto di superare gli obiettivi stabiliti inizialmente.

In ogni caso, il comparto non è in grado di pubblicare una percentuale di allineamento alla Tassonomia in quanto solo un piccolo numero di società a livello globale forniscono i dati necessari per una valutazione rigorosa del loro allineamento alla Tassonomia.

● **In che modo gli investimenti sostenibili che il prodotto finanziario ha parzialmente realizzato non hanno arrecato un danno significativo all'obiettivo di investimento sostenibile sociale o ambientale?**

Candriam garantisce che i suoi investimenti sostenibili non hanno causato un danno significativo a qualsiasi obiettivo d'investimento sostenibile di carattere ambientale e/o sociale mediante la sua ricerca e analisi ESG degli emittenti societari e sovrani.

In base alle sue esclusive valutazioni e punteggi ESG, la metodologia ESG di Candriam definisce requisiti e soglie minime per identificare quegli emittenti che si qualificano come "investimento sostenibile" e, in particolare, non provocano danni significativi a qualsiasi obiettivo di investimento sostenibile ambientale e/o sociale.

In particolare, il principio di "non arrecare danno significativo", è stato valutato per le società tramite:

- la considerazione dei "principali impatti negativi"
- l'allineamento agli orientamenti OCSE per le società multinazionali e del Global Compact delle Nazioni Unite per garantire le tutele minime sociali e ambientali.

Per maggiori dettagli, fare riferimento alla sezione che segue sulla considerazione dei principali effetti avversi sui fattori della sostenibilità.

----- **In che modo sono stati presi in considerazione gli indicatori degli effetti avversi sui fattori di sostenibilità?**

I principali effetti avversi sono gli effetti negativi più rilevanti delle decisioni di investimento sui fattori di sostenibilità correlati ad aspetti ambientali e sociali, alle condizioni di lavoro, al rispetto dei diritti umani, all'anticorruzione e anticorruzione.

La considerazione degli impatti negativi è centrale per l'approccio agli investimenti sostenibili di Candriam. I principali impatti negativi sono presi in considerazione nell'intero processo di analisi e ricerca ESG e attraverso un'ampia gamma di metodi:

1. Valutazione ESG delle società: la metodologia di ricerca e screening ESG considera e valuta il principale impatto negativo sulla sostenibilità da due angolazioni distinte ma interconnesse:

- le attività economiche degli emittenti societari e come incidono, in termini positivi o negativi, sulle sfide chiave di sostenibilità come il cambiamento climatico e l'impoverimento delle risorse;
- le interazioni della società con i principali stakeholder.

2. Screening negativo delle società, che comprende un'esclusione su base normativa e un'esclusione delle società coinvolte in attività controverse.

3. Attività di coinvolgimento con società, attraverso attività di dialogo e di voto, che contribuiscono ad evitare o ridurre la portata degli impatti negativi. Il quadro dell'analisi ESG ed i suoi risultati alimentano il nostro processo di coinvolgimento, e viceversa.

L'integrazione dei principali impatti negativi sui fattori di sostenibilità è stata basata sulla rilevanza o possibile rilevanza di ciascun indicatore per ogni settore specifico a cui la società appartiene. La rilevanza dipende da diversi fattori quali: il tipo di informazioni, la qualità e la portata dei dati, l'applicabilità, la pertinenza e la copertura geografica.

Gli investimenti sostenibili sono stati allineati con gli "Orientamenti OCSE per le imprese multinazionali" e con i Principi Guida delle Nazioni Unite su Imprese e Diritti Umani? Dettagli:

Gli investimenti sostenibili del comparto sono stati conformi agli Orientamenti OCSE per le imprese multinazionali e con i Principi Guida delle Nazioni Unite su Imprese e Diritti Umani.

Sono soggetti a un'analisi delle attività controverse su base normativa che considera la conformità a norme internazionali di carattere sociale, umano, ambientale e anticorruzione, secondo quanto definito dal Patto globale delle Nazioni Unite e dagli Orientamenti OCSE per le aziende multinazionali. L'Organizzazione internazionale del lavoro (OIL) e la Carta internazionale dei diritti umani sono parte dei numerosi riferimenti internazionali integrati nel nostro modello ESG e di analisi normativa.

Questa analisi è volta ad escludere le società che hanno significativamente ripetutamente violato uno qualsiasi di questi principi.

La Tassonomia UE definisce il principio di "non arrecare un danno significativo" secondo il quale gli investimenti allineati con la Tassonomia non dovrebbero produrre danni di rilievo agli obiettivi della Tassonomia UE e prevede specifici criteri dell'Unione europea.

Il principio di "non arrecare un danno significativo" si applica esclusivamente a quegli investimenti associati al prodotto finanziario che prendono in considerazione i criteri stabiliti dall'UE in materia di attività economiche ecosostenibili. Gli investimenti sottostanti della porzione rimanente di questo prodotto finanziario non prendono in considerazione i criteri dell'Unione europea in materia di attività economiche sostenibili sul piano ambientale.

Eventuali altri investimenti sostenibili non devono allo stesso modo arrecare danni significativi ad alcun obiettivo ambientale o sociale.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti avversi sui fattori sostenibili?

A livello di comparto, i principali impatti negativi (PAI) sui fattori di sostenibilità vengono considerati attraverso uno o più strumenti (si veda la dichiarazione PAI di Candriam: <https://www.candriam.com/en/private/sfdr/>):

- Impegno: al fine di evitare e/o ridurre l'impatto negativo sugli obiettivi di sostenibilità, il Comparto ha considerato anche gli impatti negativi nelle sue interazioni con le società, attraverso il dialogo. Candriam attribuisce la priorità alle sue attività di coinvolgimento in base a una valutazione delle sfide ESG più rilevanti e sostanziali, relative a settori ed emittenti, prendendo in considerazione gli impatti finanziari e societari e quelli sugli stakeholder. Pertanto, il livello di coinvolgimento in ciascuna società all'interno dello stesso prodotto può variare ed è soggetto alla metodologia di prioritizzazione di Candriam.
 - Dialogo:

Il clima (da PAI1 a PAI6) è ovviamente centrale nel nostro dialogo con le aziende. Le priorità dell'impegno per il clima da parte delle società sono identificate prendendo in considerazione:

- società che presentano un debole profilo di transizione (modello del rischio di transizione proprietario) e/o emissioni di carbonio ancora elevate (Ambito 1-2) o elevate emissioni di Ambito 3.
- emittenti dei settori finanziari ancora ampiamente esposti ai combustibili fossili e con un ruolo primario nel finanziamento della transizione

- relativa esposizione dei comparti gestiti agli emittenti sopra citati.

Il nostro obiettivo è ovviamente incoraggiare le società a comunicare pubblicamente la loro strategia di allineamento alla traiettoria 1.5D e a sostenere questo allineamento. Oltre a qualsiasi impegno per l'obiettivo Net Zero e alla comunicazione delle emissioni assolute di Scope1-2-3, Candriam incoraggia le aziende a fornire indicazioni su come gli obiettivi a breve/medio termine siano allineati con la traiettoria 1.5D scientificamente riconosciuta. In particolare, chiediamo agli emittenti di spiegare in che modo la loro strategia e il loro piano di spesa in conto capitale vadano nel senso dell'impegno a favore della decarbonizzazione. Di norma, utilizziamo una combinazione di dialogo individuale e collaborativo. Come nell'anno precedente, continuiamo a sostenere e a prendere attivamente parte a diverse iniziative su base collaborativa come Climate Action 100+. Queste iniziative non solo contribuiscono ad aumentare il livello di trasparenza sulle emissioni di gas effetto serra e sulla relativa strategia ma anche a per acquisire una posizione di forza a favore del cambiamento strategico. I risultati di questo impegno sono riportati in dettaglio nella nostra relazione annuale su Impegno e processo di voto, disponibile sul nostro sito web pubblico (<https://www.candriam.com/en/professional/insight-overview/publications/#sri-publications>).

Dato il contesto geopolitico e la crescita delle disuguaglianze osservata, sono state intraprese diverse iniziative per la protezione dei diritti umani fondamentali a diversi livelli di rapporto di lavoro diretto o indiretto (due diligence della catena di approvvigionamento) (PAI10,PAI11). Abbiamo anche condotto una campagna di impegno diretto post-covid con la finalità di indagare gli effetti sulle relazioni con gli stakeholder e i cambiamenti ora entrati a far parte della "nuova normalità" dell'attività commerciale nelle società in cui Candriam investe. Nello stesso ambito, anche la gestione del capitale umano è un aspetto che trattiamo ampiamente nel dialogo con le società. Continuiamo a sostenere la Workforce Disclosure Initiative per un miglior accesso a dati affidabili, pertinenti e comparabili sui rapporti di lavoro diretti e indiretti delle società.

- **Esclusione:** selezione negativa di Candriam delle società o dei paesi volta a evitare investimenti in attività o pratiche pericolose che può condurre a esclusioni connesse all'impatto negativo di società o emittenti.
- **Monitoraggio:** calcolo e valutazione dei principali indicatori di impatto negativo, compreso il report a livello di Comparto. Alcuni di questi indicatori possono avere obiettivi espliciti e possono essere utilizzati per misurare il raggiungimento dell'obiettivo d'investimento sostenibile del Comparto. Di seguito sono riportati gli indicatori di questo Comparto:

Indicatori PAI	Valore
10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0.00%
14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0.00%

Quali sono stati i principali investimenti di questo prodotto finanziario?

L'elenco comprende gli investimenti che costituiscono la **proporzione maggiore degli investimenti** del prodotto finanziario durante il periodo di riferimento, ovvero: 31/12/2022

Principali investimenti	Settore	Proporzione	Paese
CANDRIAM MONÉTAIRE SICAV V C	Investments funds	7.98%	FR
VODAFONE GROUP 3.1 18-79 03/01A	Communication	3.82%	GB
TEVA PHARMACEUTICAL I 4.375 21-30 09/05S	Pharmaceuticals	3.54%	IL
OI EUROPEAN GROUP 3.125 16-24 15/11S	Transportation	2.84%	NL
LORCA TELECOM BONDCO 4 20-27 30/09S	Communication	2.66%	LU
RCI BANQUE SA 4.875 22-28 21/09A	Banks and other financial institutions	2.27%	FR
GRIFOLS ESCROW 3.8750 21-28 15/10S	Biotechnology	1.92%	ES
VMED O2 UK FINANCING 3.25 20-31 24/09S	Banks and other financial institutions	1.89%	GB

A seguito del processo di arrotondamento delle cifre, possono essere presenti differenze minime tra i dati sopra riportati e quelli corrispondenti contenuti nella sezione "Portafoglio titoli" della relazione annuale.

Qual è stata la proporzione di investimenti associati alla sostenibilità?

Qual è stata l'allocazione delle attività?

L'allocazione delle attività descrive la quota di investimenti in una specifica classe di attività.

#1 Allineati con caratteristiche A/S comprende gli investimenti del prodotto finanziario utilizzati per realizzare le caratteristiche ambientali o sociali promosse da tale prodotto finanziario.

#2 Altro comprende i restanti investimenti del prodotto finanziario che non sono allineati alle caratteristiche ambientali o sociali, né sono qualificati come investimenti sostenibili.

La categoria **#1 Allineati con caratteristiche A/S** comprende:

- La sottocategoria **#1A Sostenibili** copre gli investimenti sostenibili da un punto di vista di tutela ambientale e sociale.
- La sottocategoria **#1B Altre caratteristiche A/S** copre gli investimenti allineati con le caratteristiche ambientali o sociali che non si qualificano come investimenti sostenibili.

● **In quali settori economici sono stati effettuati gli investimenti?**

Settore principale	Proporzione
Banks and other financial institutions	32.84%
Communication	12.48%
Investments funds	8.74%
Transportation	6.94%
Internet and internet services	6.50%
Pharmaceuticals	4.74%
Utilities	4.18%
Packaging industries	2.81%
Biotechnology	2.40%
Healthcare	1.86%
Miscellaneous services	1.52%
Textiles and garments	1.17%
Foods and non alcoholic drinks	1.03%
Various capital goods	0.95%
Road vehicles	0.85%

A seguito del processo di arrotondamento delle cifre, possono essere presenti differenze minime tra i dati sopra riportati e quelli corrispondenti contenuti nella sezione "Portafoglio titoli" della relazione annuale.

In quale misura gli investimenti sostenibili con l'obiettivo di tutela ambientale sono stati allineati con la Tassonomia UE?

Per la conformità con la Tassonomia UE, i criteri relativi al **gas fossile** comprendono limiti sulle emissioni e la transizione all'energia completamente rinnovabile o ai combustibili a basso tenore di carbonio entro la fine del 2035. Per quanto riguarda l'**energia nucleare**, i criteri comprendono la sicurezza totale e le regole di gestione dei rifiuti.

Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale ad un obiettivo ambientale.

Le **attività di transizione** sono attività per le quali le alternative a basse emissioni di carbonio non sono ancora disponibili e, tra gli altri, hanno livelli di emissioni di gas effetto-serra corrispondenti alle migliori performance.

Le attività allineate alla Tassonomia sono espresse come quota di:

- **giro d'affari** che riflette la quota di profitto risultante dalle attività green delle aziende oggetto dell'investimento.

- **spese in conto capitale** (CapEx) che rappresentano gli investimenti green effettuati dalle società oggetto dell'investimento, per esempio per la transizione ad un'economia green.

- **spese operative** (OpEx) che riflettono le attività operative green delle società oggetto dell'investimento.

Il prodotto finanziario ha investito in attività associate al gas fossile e/o all'energia nucleare conformi alla Tassonomia UE¹?

Sì

Nel gas fossile

Nell'energia nucleare

No

I due grafici riportati di seguito rappresentano in verde la percentuale minima di investimenti allineati con la Tassonomia UE. Non essendoci una metodologia appropriata per la determinazione dell'allineamento alla Tassonomia dei titoli di stato, il primo grafico mostra l'allineamento della Tassonomia in relazione a tutti gli investimenti del prodotto finanziario, comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla Tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane*

* Nell'ambito di questi grafici, per "titoli di stato" si intende l'esposizione a qualsiasi obbligazione sovrana

Qual è stata la quota di investimenti in attività abilitanti e di transizione?

Il Comparto non è in grado di pubblicare una percentuale di allineamento con la Tassonomia, né di attività di transizione e abilitanti, in quanto solo un piccolo numero di società a livello globale forniscono i dati necessari per una valutazione rigorosa del loro allineamento alla Tassonomia.

Qual è il rapporto con la percentuale di investimenti allineati con la Tassonomia UE effettuati nei precedenti periodi di riferimento?

Non applicabile in quanto non sono disponibili dati relativi al periodo precedente

Qual è la ripartizione della proporzione degli investimenti per ciascuna delle categorie della Tassonomia UE alla quale hanno contribuito questi investimenti?

¹ Le attività relative ai gas fossili e/o al nucleare sono conformi alla Tassonomia UE solo se contribuiscono alla limitazione del cambiamento climatico ("mitigazione dei cambiamenti climatici") e non recano alcun danno significativo agli obiettivi della Tassonomia UE. Si veda la nota esplicativa nel margine sinistro. L'insieme completo dei criteri per le attività associate al gas fossile e all'energia nucleare conformi alla Tassonomia UE è fornito nel regolamento delegato (UE) 2022/1214 della Commissione.

Il Comparto non è in grado di pubblicare una percentuale di allineamento con la Tassonomia, in quanto solo un piccolo numero di società a livello globale forniscono i dati necessari per una valutazione rigorosa del loro allineamento alla Tassonomia.

Pertanto la percentuale è considerata nulla.

Qual è stata la quota di investimenti ecosostenibili con un obiettivo di tutela ambientale non allineati con la Tassonomia UE?

Il Comparto ha registrato una quota del 19,24% di investimenti in attività sostenibili sul piano ambientale non allineate con la tassonomia UE.

In effetti, ad oggi, solo due dei sei obiettivi sono stati implementati nel 2022 e un numero esiguo di società a livello globale forniscono i dati necessari per una valutazione rigorosa del loro allineamento alla Tassonomia.

rappresenta gli investimenti sostenibili con un obiettivo di tutela ambientale che **non prendono in considerazione i criteri** per le attività economiche ecosostenibili previsti dal Regolamento (EU) 2020/852.

Qual è stata la quota di investimenti socialmente sostenibili?

Il Comparto ha registrato una quota del 36,29% di investimenti con un obiettivo sociale

Quali investimenti sono stati inclusi nella voce "altro", qual era il loro scopo, ed esistevano delle salvaguardie ambientali o sociali minime?

Gli investimenti inclusi alla voce "Altri investimenti" sono presenti nel Comparto nella misura del 15.43% del valore del patrimonio netto totale.

Tali investimenti comprendono uno o più dei seguenti asset:

- Contanti: Contanti a vista, depositi in liquidità, accordi di riacquisto inverso (reverse repo) necessari per gestire la liquidità del Comparto in base alle sottoscrizioni/riscatti oppure risultanti dalla decisione di esposizione al mercato del Comparto;
- Investimenti su emittenti con caratteristiche ambientali/sociali al momento dell'investimento e non più completamente allineati ai criteri ambientali/sociali di investimento di Candriam. Tali investimenti sono pianificati per la vendita;
- Altri investimenti (compresi i derivati a titolo singolo) acquistati a fini di diversificazione e che possono non essere soggetti a filtri ESG o per i quali non sono disponibili dati ESG;
- Derivati non a titolo singolo utilizzati per la gestione efficiente del portafoglio e/o a fini di copertura e/o temporaneamente a seguito di sottoscrizioni/riscatti.

Quali misure sono state intraprese per soddisfare gli obiettivi ambientali e/o sociali durante il periodo di riferimento?

Per rispettare gli obiettivi ambientali e/o sociali durante il periodo di riferimento, abbiamo escluso dall'universo di investimento i seguenti investimenti, per i quali gli emittenti non prevedevano caratteristiche ambientali e/o sociali: ENN Natural Gas CO LTD., esclusa dal nostro universo ESG a seguito del suo diretto coinvolgimento nel settore del carbone termico come descritto nella Politica di esclusioni di Candriam. Il comparto si propone di realizzare un'impronta di carbonio inferiore al suo benchmark. Al 30/12/2022, l'impronta di carbonio del comparto era di 112.36 a fronte di un benchmark di 202.47. Questi dati si basano sulle emissioni Scope 1 e 2.

Qual è stata la performance di questo prodotto finanziario rispetto al benchmark di riferimento?

Nessun indice è stato designato come benchmark di riferimento al fine di ottenere le caratteristiche sociali o ambientali promosse dal Comparto

I **benchmark di riferimento** sono indici volti a definire in quale misura il prodotto finanziario realizza gli obiettivi ambientali o sociale che promuove.

Caratteristiche ambientali e/o sociali

Investimento sostenibile significa un investimento in un'attività economica che contribuisca ad un obiettivo ambientale o sociale, ponendo la condizione che tale investimento non arrechi un danno significativo ad alcun obiettivo ambientale o sociale e che le società oggetto dell'investimento seguano pratiche di buona governance.

La **Tassonomia dell'UE** è una classificazione definita nel Regolamento (UE) 2020/852 che stabilisce un **elenco di attività economiche ecosostenibili**. Tale Regolamento non include un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere allineati con la **Tassonomia** o meno.

Questo prodotto finanziario ha avuto un obiettivo di investimento sostenibile?

SÌ

ha effettuato **investimenti sostenibili con un obiettivo ambientale**: ____%

in attività economiche che si qualificano come ecosostenibili secondo la Tassonomia UE

in attività economiche che non si qualificano come ecosostenibili secondo la Tassonomia UE

ha effettuato **investimenti sostenibili con un obiettivo sociale**: ____%

NO

Ha **promosso aspetti ambientali/sociali (A/S)** e, pur non ponendosi come obiettivo un investimento sostenibile, ha compreso una proporzione del 90% di investimenti sostenibili.

con un obiettivo ambientale in attività economiche che si qualificano come ecosostenibili secondo la Tassonomia UE

con un obiettivo ambientale in attività economiche che non si qualificano come ecosostenibili secondo la Tassonomia UE

con un obiettivo sociale

ha promosso caratteristiche A/S ma **non ha effettuato alcun investimento sostenibile**

In quale misura sono state implementate le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Gli **indicatori di sostenibilità** determinano in quale misura sono state realizzate le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

Gli obiettivi ambientali e sociali promossi dal comparto sono stati realizzati come segue:

- evitando l'esposizione a società che presentano rischi strutturali sostanziali e gravi e che violano gravemente i principi normativi, tenendo conto delle pratiche nelle questioni di carattere ambientale e sociali e della conformità alle norme quali il Patto globale delle Nazioni Unite (UNGC) e gli Orientamenti OCSE per le norme aziendali.
- evitando esposizione alle società significativamente esposte ad attività controverse, come l'estrazione, il trasporto o la distribuzione di carbone termico, la produzione o la vendita di tabacco e la produzione o la vendita di armi controverse (mine anti-uomo, bombe a grappolo, armi chimiche, biologiche, al fosforo bianco e all'uranio impoverito).
- integrando le metodologie di ricerca ESG di Candriam nel processo di investimento ed investendo una quota del suo patrimonio in Investimenti sostenibili.

● Cosa hanno rilevato gli indicatori di sostenibilità?

Per la selezione degli investimenti sostenibili, il gestore del portafoglio ha preso in considerazione le valutazioni ESG degli emittenti prodotte dal team di analisti ESG di Candriam.

Per le società, queste valutazioni sono basate sull'analisi delle interazioni della società con i principali stakeholder e sull'analisi delle sue attività commerciali e del loro impatto, positivo o negativo, sulle sfide chiave della sostenibilità come il cambiamento climatico e l'impoverimento delle risorse. Inoltre, l'analisi ESG di Candriam comprende filtri di esclusione basati sulla conformità alle norme internazionali e sul coinvolgimento in attività controverse.

L'analisi e ricerca ESG di Candriam di investimenti sostenibili valuta inoltre la conformità degli investimenti al principio secondo il quale non devono "arrecare danno" all'obiettivo di un investimento sostenibile e le pratiche di buona governance.

L'integrazione della metodologia di ricerca ESG di Candriam ha permesso al Fondo di rispettare la proporzione minima di investimenti sostenibili definiti nel prospetto (33% minimo). La proporzione di investimenti sostenibili nel Fondo è stata pertanto al di sopra della soglia minima, come indicato nella sezione "Qual è stata la proporzione di investimenti associati alla sostenibilità?"

● **...E rispetto ai periodi precedenti?**

Non applicabile in quanto non sono disponibili dati relativi al periodo precedente.

● **Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha parzialmente conseguito e come ha contribuito l'investimento sostenibile a tale obiettivo?**

Gli investimenti sostenibili che il comparto intendeva realizzare per una quota del portafoglio erano volti a produrre un impatto positivo a lungo termine in ambito ambientale e sociale.

La proporzione di investimenti sostenibili è stata superiore al minimo definito nel prospetto (33% minimo). Questo ha permesso al comparto di superare gli obiettivi stabiliti inizialmente.

In ogni caso, il comparto non è in grado di pubblicare una percentuale di allineamento alla Tassonomia in quanto solo un piccolo numero di società a livello globale forniscono i dati necessari per una valutazione rigorosa del loro allineamento alla Tassonomia.

● **In che modo gli investimenti sostenibili che il prodotto finanziario ha parzialmente realizzato non hanno arrecato un danno significativo all'obiettivo di investimento sostenibile sociale o ambientale?**

Candriam garantisce che i suoi investimenti sostenibili non hanno causato un danno significativo a qualsiasi obiettivo d'investimento sostenibile di carattere ambientale e/o sociale mediante la sua ricerca e analisi ESG degli emittenti societari.

In base alle sue valutazioni e punteggi ESG proprietari, la metodologia ESG di Candriam definisce requisiti e soglie minime per identificare quegli emittenti che si qualificano come "investimento sostenibile" e, in particolare, non provocano danni significativi a qualsiasi obiettivo di investimento sostenibile ambientale e/o sociale.

In particolare, il principio di "non arrecare danno significativo", è stato valutato per le società tramite:

- la considerazione dei "principali impatti negativi"
- l'allineamento agli orientamenti OCSE per le società multinazionali e del Global Compact delle Nazioni Unite per garantire le tutele minime sociali e ambientali.

Per maggiori dettagli, fare riferimento alla sezione che segue sulla considerazione dei principali effetti avversi sui fattori della sostenibilità.

----- **In che modo sono stati presi in considerazione gli indicatori degli effetti avversi sui fattori di sostenibilità?**

I principali effetti avversi sono gli effetti negativi più rilevanti delle decisioni di investimento sui fattori di sostenibilità correlati ad aspetti ambientali e sociali, alle condizioni di lavoro, al rispetto dei diritti umani, all'anticorruzione e anticorruzione.

La considerazione degli impatti negativi è centrale per l'approccio agli investimenti sostenibili di Candriam. I principali impatti negativi sono presi in considerazione nell'intero processo di analisi e ricerca ESG e attraverso un'ampia gamma di metodi:

1. Valutazione ESG delle società: la metodologia di ricerca e screening ESG considera e valuta il principale impatto negativo sulla sostenibilità da due angolazioni distinte ma interconnesse:

- le attività economiche degli emittenti societari e come incidono, in termini positivi o negativi, sulle sfide chiave di sostenibilità come il cambiamento climatico e l'impoverimento delle risorse;
- le interazioni della società con i principali stakeholder.

2. Screening negativo delle società, che comprende un'esclusione su base normativa e un'esclusione delle società coinvolte in attività controverse.

3. Attività di coinvolgimento con società, attraverso attività di dialogo e di voto, che contribuiscono ad evitare o ridurre la portata degli impatti negativi. Il quadro dell'analisi ESG ed i suoi risultati alimentano il nostro processo di coinvolgimento, e viceversa.

L'integrazione dei principali impatti negativi sui fattori di sostenibilità è stata basata sulla rilevanza o possibile rilevanza di ciascun indicatore per ogni settore specifico a cui la società appartiene. La rilevanza dipende da diversi fattori quali: il tipo di informazioni, la qualità e la portata dei dati, l'applicabilità, la pertinenza e la copertura geografica.

Gli investimenti sostenibili sono stati allineati con gli "Orientamenti OCSE per le imprese multinazionali" e con i Principi Guida delle Nazioni Unite su Imprese e Diritti Umani? Dettagli:

Gli investimenti sostenibili del comparto sono stati conformi agli Orientamenti OCSE per le imprese multinazionali e con i Principi Guida delle Nazioni Unite su Imprese e Diritti Umani.

Sono soggetti a un'analisi delle attività controverse su base normativa che considera la conformità a norme internazionali di carattere sociale, umano, ambientale e anticorruzione, secondo quanto definito dal Patto globale delle Nazioni Unite e dagli Orientamenti OCSE per le aziende multinazionali. L'Organizzazione internazionale del lavoro (OIL) e la Carta internazionale dei diritti umani sono parte dei numerosi riferimenti internazionali integrati nel nostro modello ESG e di analisi normativa.

Questa analisi è volta ad escludere le società che hanno significativamente ripetutamente violato uno qualsiasi di questi principi.

La Tassonomia UE definisce il principio di "non arrecare un danno significativo" secondo il quale gli investimenti allineati con la Tassonomia non dovrebbero produrre danni di rilievo agli obiettivi della Tassonomia UE e prevede specifici criteri dell'Unione europea.

Il principio di "non arrecare un danno significativo" si applica esclusivamente a quegli investimenti associati al prodotto finanziario che prendono in considerazione i criteri stabiliti dall'UE in materia di attività economiche ecosostenibili. Gli investimenti sottostanti della porzione rimanente di questo prodotto finanziario non prendono in considerazione i criteri dell'Unione europea in materia di attività economiche sostenibili sul piano ambientale.

Eventuali altri investimenti sostenibili non devono allo stesso modo arrecare danni significativi ad alcun obiettivo ambientale o sociale.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti avversi sui fattori sostenibili?

A livello di comparto, i principali impatti negativi (PAI) sui fattori di sostenibilità vengono considerati attraverso uno o più strumenti (si veda la dichiarazione PAI di Candriam: <https://www.candriam.com/en/private/sfdr/>):

- Impegno e processo di voto: al fine di evitare e/o ridurre l'impatto negativo sugli obiettivi di sostenibilità, il Comparto ha considerato anche gli impatti negativi nelle sue interazioni con le società, attraverso il dialogo e il processo di voto. Candriam ha attribuito la priorità alle sue attività di coinvolgimento e voto in base a una valutazione delle sfide ESG più rilevanti e sostanziali, relative a settori ed emittenti, prendendo in considerazione gli impatti finanziari e societari e quelli sugli stakeholder. Pertanto, il livello di coinvolgimento in ciascuna società all'interno dello stesso prodotto può variare ed è soggetto alla metodologia di prioritizzazione di Candriam.
 - Dialogo:

Il clima (da PAI1 a PAI6) è ovviamente centrale nel nostro dialogo con le aziende. Le priorità dell'impegno per il clima da parte delle società sono identificate prendendo in considerazione:

- società che presentano un debole profilo di transizione (modello del rischio di transizione proprietario) e/o emissioni di carbonio ancora elevate (Scope 1-2) o elevate emissioni di Scope 3.
- emittenti dei settori finanziari ancora ampiamente esposti ai combustibili fossili e con un ruolo primario nel finanziamento della transizione

- relativa esposizione dei portafogli gestiti agli emittenti sopra citati.

Il nostro obiettivo è ovviamente incoraggiare le società a comunicare pubblicamente la loro strategia di allineamento alla traiettoria 1.5D e a sostenere questo allineamento. Oltre a qualsiasi impegno per l'obiettivo Net Zero e alla comunicazione delle emissioni assolute di Scope1-2-3, Candriam incoraggia le aziende a fornire indicazioni su come gli obiettivi a breve/medio termine siano allineati con la traiettoria 1.5D scientificamente riconosciuta. In particolare, chiediamo agli emittenti di spiegare in che modo la loro strategia e il loro piano di spesa in conto capitale vadano nel senso dell'impegno a favore della decarbonizzazione. Di norma, utilizziamo una combinazione di dialogo individuale e collaborativo. Come nell'anno precedente, continuiamo a sostenere e a prendere attivamente parte a diverse iniziative su base collaborativa come Climate Action 100+. Queste iniziative non solo contribuiscono ad aumentare il livello di trasparenza sulle emissioni di gas effetto serra e sulla relativa strategia ma anche a per acquisire una posizione di forza a favore del cambiamento strategico. I risultati di questo impegno sono riportati in dettaglio nella nostra relazione annuale su Impegno e processo di voto, disponibile sul nostro sito web pubblico (<https://www.candriam.com/en/professional/insight-overview/publications/#sri-publications>).

Dato il contesto geopolitico e la crescita delle disuguaglianze osservata, sono state intraprese diverse iniziative per la protezione dei diritti umani fondamentali a diversi livelli di rapporto di lavoro diretto o indiretto (due diligence della catena di approvvigionamento) (PAI10,PAI11). Abbiamo anche condotto una campagna di impegno diretto post-covid con la finalità di indagare gli effetti sulle relazioni con gli stakeholder e i cambiamenti ora entrati a far parte della "nuova normalità" dell'attività commerciale nelle società in cui Candriam investe. Nello stesso ambito, anche la gestione del capitale umano è un aspetto che trattiamo ampiamente nel dialogo con le società. Continuiamo a sostenere la Workforce Disclosure Initiative per un miglior accesso a dati affidabili, pertinenti e comparabili sui rapporti di lavoro diretti e indiretti delle società.

- Processo di voto:

L'approccio di Candriam alla Governance aziendale si fonda sulle norme riconosciute a livello internazionale, in particolare sui principi stabiliti dall'OCSE e sulla International Corporate Governance Network (ICGN).

A tal riguardo, Candriam ha esercitato i suoi diritti di voto quando disponibili per le posizioni del portafoglio. I diritti degli Azionisti, la parità di trattamento per gli azionisti, la responsabilità del consiglio di amministrazione, la trasparenza e l'integrità dei bilanci sono pilastri fondamentali della nostra politica di voto. La maggior parte dei nostri voti relativi al management si concentra sulla remunerazione e l'elezione degli amministratori. Infatti, richiediamo alle società di rispettare il principio di retribuzione della prestazione e manifesteremo il nostro disaccordo non appena riscontreremo un livello di remunerazione eccessivo o condizioni di attribuzione non sufficientemente trasparenti o stringenti. In modo analogo, pretendiamo dalle società il rispetto con i nostri requisiti minimi di indipendenza: in caso di consigli di amministrazione che non rispettino questo requisito, ci opponiamo all'elezione, o rielezione, di qualsiasi amministratore non indipendente, ad eccezione del CEO. Naturalmente, per la votazione sono anche presi in considerazione la diversità (PAI13) ed il livello di competenza del consiglio.

Inoltre, Candriam considera sempre la pertinenza, la coerenza e la fattibilità delle misure promosse da qualsiasi decisione in ambito ESG prima di esprimere il voto.

Nel miglior interesse dei suoi clienti, Candriam considera, nelle sue decisioni di voto, l'opinione ESG interna sulle società oggetto dell'investimento insieme agli eventuali risultati dell'impegno intrapreso con tale società.

Nel contesto della politica di voto di Candriam, sono applicate linee guida specifiche per una serie di decisioni degli azionisti e del management relative ad ambiente (per esempio il clima (da PAI1 a PAI6), biodiversità (PAI7)), sociale (per esempio, la diversità, il divario retributivo tra i sessi (PAI12), diritti umani (PAI10, PAI11)) e governance. Più specificamente, Candriam accoglie con favore l'introduzione di risoluzioni "Say-on-Climate" sponsorizzate dal management. Candriam ha costruito un modello dettagliato da applicare a ogni risoluzione Say-on-Climate, che valuta il rigore e l'allineamento della strategia di transizione della società con un percorso verso le emissioni zero nel 2050. Ne consegue, che molte di queste non hanno ottenuto il nostro supporto nel corso di questo periodo.

- Esclusione: selezione negativa di Candriam delle società o dei paesi volta a evitare investimenti in attività o pratiche pericolose che può condurre a esclusioni connesse all'impatto negativo di società o emittenti.
- Monitoraggio: calcolo e valutazione dei principali indicatori di impatto negativo, compreso il report a livello di Comparto. Alcuni di questi indicatori possono avere obiettivi espliciti e possono essere utilizzati per misurare il raggiungimento dell'obiettivo d'investimento sostenibile del Comparto. Di seguito sono riportati gli indicatori di questo Comparto:

Indicatori PAI	Valore
10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0.00%
14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0.00%

Quali sono stati i principali investimenti di questo prodotto finanziario?

L'elenco comprende gli investimenti che costituiscono la **proporzione maggiore degli investimenti** del prodotto finanziario durante il periodo di riferimento, ovvero: 31/12/2022

Principali investimenti	Settore	Proporzione	Paese
REGENERON PHARMACEUTICALS INC	Biotechnology	6.87%	US
GILEAD SCIENCES INC	Biotechnology	6.56%	US
AMGEN INC	Pharmaceuticals	5.85%	US
VERTEX PHARMACEUTICALS INC	Biotechnology	5.38%	US
BIOGEN IDEC INC	Pharmaceuticals	4.12%	US
ALNYLAM PHARMACEUTICALS INC	Pharmaceuticals	4.04%	US
MODERNA INC	Biotechnology	3.71%	US
SEAGEN INC	Biotechnology	2.73%	US
HORIZON THERAPEUTICS PLC	Pharmaceuticals	2.25%	IE
ASTRAZENECA PLC	Pharmaceuticals	2.13%	GB
ILLUMINA INC	Pharmaceuticals	1.84%	US
BIOMARIN PHARMACEUTICAL INC	Biotechnology	1.78%	US
GENMAB AS	Biotechnology	1.78%	DK
XENON PHARMA --- REGISTERED SHS	Pharmaceuticals	1.64%	CA
INCYTE CORP	Biotechnology	1.63%	US

A seguito del processo di arrotondamento delle cifre, possono essere presenti differenze minime tra i dati sopra riportati e quelli corrispondenti contenuti nella sezione "Portafoglio titoli" della relazione annuale.

Qual è stata la proporzione di investimenti associati alla sostenibilità?

Qual è stata l'allocazione delle attività?

L'allocazione delle attività descrive la quota di investimenti in una specifica classe di attività.

#1 Allineati con caratteristiche A/S comprende gli investimenti del prodotto finanziario utilizzati per realizzare le caratteristiche ambientali o sociali promosse da tale prodotto finanziario.

#2 Altro comprende i restanti investimenti del prodotto finanziario che non sono allineati alle caratteristiche ambientali o sociali, né sono qualificati come investimenti sostenibili.

La categoria **#1 Allineati con caratteristiche A/S** comprende:

- La sottocategoria **#1A Sostenibili** copre gli investimenti sostenibili da un punto di vista di tutela ambientale e sociale.
- La sottocategoria **#1B Altre caratteristiche A/S** copre gli investimenti allineati con le caratteristiche ambientali o sociali che non si qualificano come investimenti sostenibili.

● **In quali settori economici sono stati effettuati gli investimenti?**

Settore principale	Proporzione
Biotechnology	50.90%
Pharmaceuticals	40.66%
Banks and other financial institutions	2.51%
Electronics and semiconductors	1.46%
Machine and apparatus construction	1.34%
Miscellaneous services	0.78%
Healthcare	0.60%

A seguito del processo di arrotondamento delle cifre, possono essere presenti differenze minime tra i dati sopra riportati e quelli corrispondenti contenuti nella sezione "Portafoglio titoli" della relazione annuale.

In quale misura gli investimenti sostenibili con l'obiettivo di tutela ambientale sono stati allineati con la Tassonomia UE?

Per la conformità con la Tassonomia UE, i criteri relativi al **gas fossile** comprendono limiti sulle emissioni e la transizione all'energia completamente rinnovabile o ai combustibili a basso tenore di carbonio entro la fine del 2035. Per quanto riguarda l'**energia nucleare**, i criteri comprendono la sicurezza totale e le regole di gestione dei rifiuti.

Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale ad un obiettivo ambientale.

Le **attività di transizione** sono attività per le quali le alternative a basse emissioni di carbonio non sono ancora disponibili e, tra gli altri, hanno livelli di emissioni di gas effetto-serra corrispondenti alle migliori performance.

Le attività allineate alla Tassonomia sono espresse come quota di:

- **giro d'affari** che riflette la quota di profitto risultante dalle attività green delle aziende oggetto dell'investimento.

- **spese in conto capitale** (CapEx) che rappresentano gli investimenti green effettuati dalle società oggetto dell'investimento, per esempio per la transizione ad un'economia green.

- **spese operative** (OpEx) che riflettono le attività operative green delle società oggetto dell'investimento.

Il prodotto finanziario ha investito in attività associate al gas fossile e/o all'energia nucleare conformi alla Tassonomia UE¹?

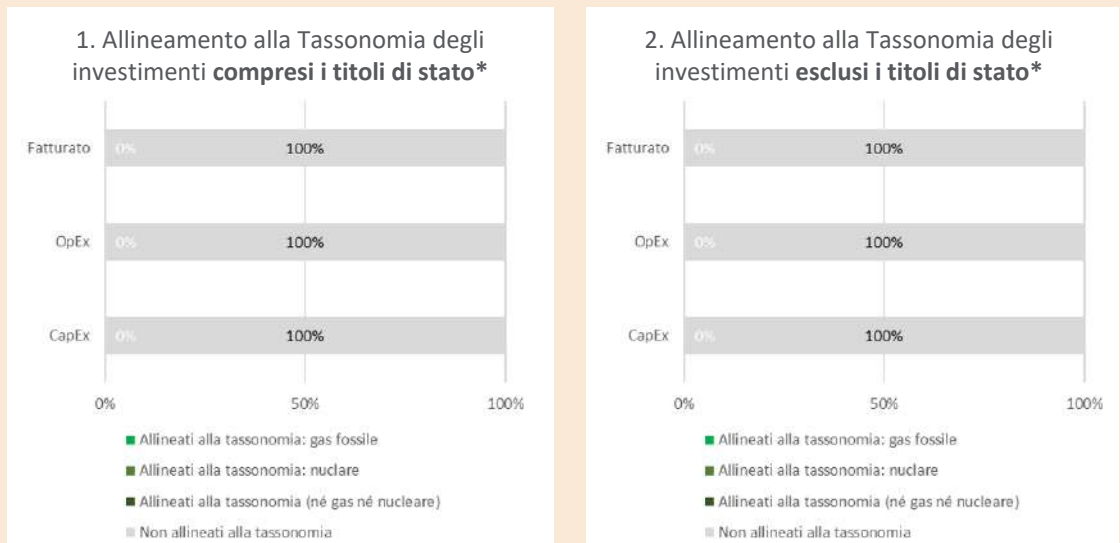

Sì

Nel gas fossile

Nell'energia nucleare

No

I due grafici riportati di seguito rappresentano in verde la percentuale minima di investimenti allineati con la Tassonomia UE. Non essendoci una metodologia appropriata per la determinazione dell'allineamento alla Tassonomia dei titoli di stato, il primo grafico mostra l'allineamento della Tassonomia in relazione a tutti gli investimenti del prodotto finanziario, comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla Tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane*

* Nell'ambito di questi grafici, per "titoli di stato" si intende l'esposizione a qualsiasi obbligazione sovrana

Qual è stata la quota di investimenti in attività abilitanti e di transizione?

Il Comparto non è in grado di pubblicare una percentuale di allineamento con la Tassonomia, né di attività di transizione e abilitanti, in quanto solo un piccolo numero di società a livello globale forniscono i dati necessari per una valutazione rigorosa del loro allineamento alla Tassonomia.

Qual è il rapporto con la percentuale di investimenti allineati con la Tassonomia UE effettuati nei precedenti periodi di riferimento?

Non applicabile in quanto non sono disponibili dati relativi al periodo precedente

Qual è la ripartizione della proporzione degli investimenti per ciascuna delle categorie della Tassonomia UE alla quale hanno contribuito questi investimenti?

¹ Le attività relative ai gas fossili e/o al nucleare sono conformi alla Tassonomia UE solo se contribuiscono alla limitazione del cambiamento climatico ("mitigazione dei cambiamenti climatici") e non recano alcun danno significativo agli obiettivi della Tassonomia UE. Si veda la nota esplicativa nel margine sinistro. L'insieme completo dei criteri per le attività associate al gas fossile e all'energia nucleare conformi alla Tassonomia UE è fornito nel regolamento delegato (UE) 2022/1214 della Commissione.

Il Comparto non è in grado di pubblicare una percentuale di allineamento con la Tassonomia, in quanto solo un piccolo numero di società a livello globale fornisce i dati necessari per una valutazione rigorosa del loro allineamento alla Tassonomia

Pertanto la percentuale è considerata nulla.

Qual è stata la quota di investimenti ecosostenibili con un obiettivo di tutela ambientale non allineati con la Tassonomia UE?

Il Comparto ha registrato una quota del 0% di investimenti in attività sostenibili sul piano ambientale non allineate con la tassonomia UE.

In effetti, ad oggi, solo due dei sei obiettivi sono stati implementati nel 2022 e un numero esiguo di società a livello globale forniscono i dati necessari per una valutazione rigorosa del loro allineamento alla Tassonomia.

Qual è stata la quota di investimenti socialmente sostenibili?

Il Comparto ha registrato una quota del 90% di investimenti con un obiettivo sociale

Quali investimenti sono stati inclusi nella voce "altro", qual era il loro scopo, ed esistevano delle salvaguardie ambientali o sociali minime?

Gli investimenti inclusi alla voce "Altri investimenti" sono presenti nel Comparto nella misura del 9.67% del valore del patrimonio netto totale.

Tali investimenti comprendono uno o più dei seguenti asset:

- Contanti: Contanti a vista, depositi in liquidità, accordi di riacquisto inverso (reverse repo) necessari per gestire la liquidità del Comparto in base alle sottoscrizioni/riscatti oppure risultanti dalla decisione di esposizione al mercato del Comparto;
- Investimenti su emittenti con caratteristiche ambientali/sociali al momento dell'investimento e non più completamente allineati ai criteri ambientali/sociali di investimento di Candriam. Tali investimenti sono pianificati per la vendita;
- Altri investimenti (compresi i derivati a titolo singolo) acquistati a fini di diversificazione e che possono non essere soggetti a filtri ESG o per i quali non sono disponibili dati ESG;
- Derivati non a titolo singolo utilizzati per la gestione efficiente del portafoglio e/o a fini di copertura e/o temporaneamente a seguito di sottoscrizioni/riscatti

Quali misure sono state intraprese per soddisfare gli obiettivi ambientali e/o sociali durante il periodo di riferimento?

Allo scopo di rispettare le caratteristiche ambientali e/o sociali durante il periodo di riferimento, il comparto ha iniziato posizioni in emittenti con un profilo ESG positivo, basato sulla valutazione ESG indipendente di Candriam. Esai e Zealand Pharmaceuticals, per i quali ci aspettiamo anche notizie cliniche positive, ne sono due esempi.

Allo scopo di rispettare gli obiettivi ambientali e/o sociali durante il periodo di riferimento, il comparto ha rafforzato le posizioni in emittenti con un profilo ESG positivo, basato sulla valutazione ESG indipendente di Candriam. Relay, che ha pubblicato buoni dati clinici, ne è un esempio, dato che il suo punteggio ESG interno è stato aumentato da 6 a 5 in Agosto (su una scala da 1 a 10, dove 1 è il migliore e 10 il peggiore).

Per dare un segnale che le sfide relative al cambiamento climatico sono state prese in considerazione, misuriamo l'impronta di carbonio delle società. Al 31/12/2022, l'impronta di carbonio del fondo è stata in media di 2,46 tCO₂-eq / milione di euro investito, rispetto a 3,25 tCO₂-eq / milione di euro investito del benchmark del fondo.

Qual è stata la performance di questo prodotto finanziario rispetto al benchmark di riferimento?

Nessun indice è stato designato come benchmark di riferimento al fine di ottenere le caratteristiche sociali o ambientali promosse dal Comparto

rappresenta gli investimenti sostenibili con un obiettivo di tutela ambientale che **non prendono in considerazione i criteri** per le attività economiche ecosostenibili previsti dal Regolamento (EU) 2020/852.

I **benchmark di riferimento** sono indici volti a definire in quale misura il prodotto finanziario realizza gli obiettivi ambientali o sociale che promuove.

Caratteristiche ambientali e/o sociali

Investimento sostenibile significa un investimento in un'attività economica che contribuisca ad un obiettivo ambientale o sociale, ponendo la condizione che tale investimento non arrechi un danno significativo ad alcun obiettivo ambientale o sociale e che le società oggetto dell'investimento seguano pratiche di buona governance.

La **Tassonomia dell'UE** è una classificazione definita nel Regolamento (UE) 2020/852 che stabilisce un elenco di attività economiche ecosostenibili. Tale Regolamento non include un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere allineati con la **Tassonomia** o meno.

Questo prodotto finanziario ha avuto un obiettivo di investimento sostenibile?

SÌ

ha effettuato investimenti sostenibili con un obiettivo ambientale: ___%

in attività economiche che si qualificano come ecosostenibili secondo la Tassonomia UE

in attività economiche che non si qualificano come ecosostenibili secondo la Tassonomia UE

ha effettuato investimenti sostenibili con un obiettivo sociale: ___%

NO

Ha promosso aspetti ambientali/sociali (A/S) e, pur non ponendosi come obiettivo un investimento sostenibile, ha compreso una proporzione del 72% di investimenti sostenibili.

con un obiettivo ambientale in attività economiche che si qualificano come ecosostenibili secondo la Tassonomia UE

con un obiettivo ambientale in attività economiche che non si qualificano come ecosostenibili secondo la Tassonomia UE

con un obiettivo sociale

ha promosso caratteristiche A/S ma non ha effettuato alcun investimento sostenibile

In quale misura sono state implementate le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Gli **indicatori di sostenibilità** determinano in quale misura sono state realizzate le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

Gli obiettivi ambientali e sociali promossi dal comparto sono stati realizzati come segue:

- evitando l'esposizione a società che presentano rischi strutturali sostanziali e gravi e che violano gravemente i principi normativi, tenendo conto delle pratiche nelle questioni di carattere ambientale e sociali e della conformità alle norme quali il Patto globale delle Nazioni Unite (UNGC) e gli Orientamenti OCSE per le norme aziendali.
- evitando esposizione alle società significativamente esposte ad attività controverse, come l'estrazione, il trasporto o la distribuzione di carbone termico, la produzione o la vendita di tabacco e la produzione o la vendita di armi controverse (mine anti-uomo, bombe a grappolo, armi chimiche, biologiche, al fosforo bianco e all'uranio impoverito).
- integrando le metodologie di ricerca ESG di Candriam nel processo di investimento ed investendo una quota del suo patrimonio in Investimenti sostenibili.

● Cosa hanno rilevato gli indicatori di sostenibilità?

Per la selezione degli investimenti sostenibili, il gestore del portafoglio ha preso in considerazione le valutazioni ESG degli emittenti prodotte dal team di analisti ESG di Candriam.

Per le società, queste valutazioni sono basate sull'analisi delle interazioni della società con i principali stakeholder e sull'analisi delle sue attività commerciali e del loro impatto, positivo o negativo, sulle sfide chiave della sostenibilità come il cambiamento climatico e l'impoverimento delle risorse. Inoltre, l'analisi ESG di Candriam comprende filtri di esclusione basati sulla conformità alle norme internazionali e sul coinvolgimento in attività controverse.

L'analisi e ricerca ESG di Candriam di investimenti sostenibili valuta inoltre la conformità degli investimenti al principio secondo il quale non devono "arrecare danno" all'obiettivo di un investimento sostenibile e le pratiche di buona governance.

L'integrazione della metodologia di ricerca ESG di Candriam ha permesso al Fondo di rispettare la proporzione minima di investimenti sostenibili definiti nel prospetto (20% minimo). La proporzione di investimenti sostenibili nel Fondo è stata pertanto al di sopra della soglia minima, come indicato nella sezione "Qual è stata la proporzione di investimenti associati alla sostenibilità?"

Nome dell'indicatore KPI	Valore	Indice di riferimento
Carbon Footprint - Corporate - Scope 1&2 - Lower than bench	30.40	51.74

● **...E rispetto ai periodi precedenti?**

Non applicabile in quanto non sono disponibili dati relativi al periodo precedente.

● **Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha parzialmente conseguito e come ha contribuito l'investimento sostenibile a tale obiettivo?**

Gli investimenti sostenibili che il comparto intendeva realizzare per una quota del portafoglio erano volti a contribuire alla riduzione delle emissioni di gas a effetto serra tramite le esclusioni e l'uso di indicatori climatici nell'analisi delle società, e a produrre un impatto positivo a lungo termine in ambito ambientale e sociale.

La proporzione di investimenti sostenibili è stata superiore al minimo definito nel prospetto (20% minimo). Questo ha permesso al comparto di superare gli obiettivi stabiliti inizialmente.

In ogni caso, il comparto non è in grado di pubblicare una percentuale di allineamento alla Tassonomia in quanto solo un piccolo numero di società a livello globale forniscono i dati necessari per una valutazione rigorosa del loro allineamento alla Tassonomia.

● **In che modo gli investimenti sostenibili che il prodotto finanziario ha parzialmente realizzato non hanno arrecato un danno significativo all'obiettivo di investimento sostenibile sociale o ambientale?**

Candriam garantisce che i suoi investimenti sostenibili non hanno causato un danno significativo a qualsiasi obiettivo d'investimento sostenibile di carattere ambientale e/o sociale mediante la sua ricerca e analisi ESG degli emittenti societari.

In base alle sue valutazioni e punteggi ESG proprietari, la metodologia ESG di Candriam definisce requisiti e soglie minime per identificare quegli emittenti che si qualificano come "investimento sostenibile" e, in particolare, non provocano danni significativi a qualsiasi obiettivo di investimento sostenibile ambientale e/o sociale.

In particolare, il principio di "non arrecare danno significativo", è stato valutato per le società tramite:

- la considerazione dei "principali impatti negativi"
- l'allineamento agli orientamenti OCSE per le società multinazionali e del Global Compact delle Nazioni Unite per garantire le tutele minime sociali e ambientali.

Per maggiori dettagli, fare riferimento alla sezione che segue sulla considerazione dei principali effetti avversi sui fattori della sostenibilità.

----- **In che modo sono stati presi in considerazione gli indicatori degli effetti avversi sui fattori di sostenibilità?**

I principali effetti avversi sono gli effetti negativi più rilevanti delle decisioni di investimento sui fattori di sostenibilità correlati ad aspetti ambientali e sociali, alle condizioni di lavoro, al rispetto dei diritti umani, all'anticorruzione e anticorruzione.

La considerazione degli impatti negativi è centrale per l'approccio agli investimenti sostenibili di Candriam. I principali impatti negativi sono presi in considerazione nell'intero processo di analisi e ricerca ESG e attraverso un'ampia gamma di metodi:

1. Valutazione ESG delle società: la metodologia di ricerca e screening ESG considera e valuta il principale impatto negativo sulla sostenibilità da due angolazioni distinte ma interconnesse:

- le attività economiche degli emittenti societari e come incidono, in termini positivi o negativi, sulle sfide chiave di sostenibilità come il cambiamento climatico e l'impoverimento delle risorse;
- le interazioni della società con i principali stakeholder.

2. Screening negativo delle società, che comprende un'esclusione su base normativa e un'esclusione delle società coinvolte in attività controverse.

3. Attività di coinvolgimento con società, attraverso attività di dialogo e di voto, che contribuiscono ad evitare o ridurre la portata degli impatti negativi. Il quadro dell'analisi ESG ed i suoi risultati alimentano il nostro processo di coinvolgimento, e viceversa.

L'integrazione dei principali impatti negativi sui fattori di sostenibilità è stata basata sulla rilevanza o possibile rilevanza di ciascun indicatore per ogni settore specifico a cui la società appartiene. La rilevanza dipende da diversi fattori quali: il tipo di informazioni, la qualità e la portata dei dati, l'applicabilità, la pertinenza e la copertura geografica.

Gli investimenti sostenibili sono stati allineati con gli "Orientamenti OCSE per le imprese multinazionali" e con i Principi Guida delle Nazioni Unite su Imprese e Diritti Umani? Dettagli:

Gli investimenti sostenibili del comparto sono stati conformi agli Orientamenti OCSE per le imprese multinazionali e con i Principi Guida delle Nazioni Unite su Imprese e Diritti Umani.

Sono soggetti a un'analisi delle attività controverse su base normativa che considera la conformità a norme internazionali di carattere sociale, umano, ambientale e anticorruzione, secondo quanto definito dal Patto globale delle Nazioni Unite e dagli Orientamenti OCSE per le aziende multinazionali. L'Organizzazione internazionale del lavoro (OIL) e la Carta internazionale dei diritti umani sono parte dei numerosi riferimenti internazionali integrati nel nostro modello ESG e di analisi normativa.

Questa analisi è volta ad escludere le società che hanno significativamente ripetutamente violato uno qualsiasi di questi principi.

La Tassonomia UE definisce il principio di "non arrecare un danno significativo" secondo il quale gli investimenti allineati con la Tassonomia non dovrebbero produrre danni di rilievo agli obiettivi della Tassonomia UE e prevede specifici criteri dell'Unione europea.

Il principio di "non arrecare un danno significativo" si applica esclusivamente a quegli investimenti associati al prodotto finanziario che prendono in considerazione i criteri stabiliti dall'UE in materia di attività economiche ecosostenibili. Gli investimenti sottostanti della porzione rimanente di questo prodotto finanziario non prendono in considerazione i criteri dell'Unione europea in materia di attività economiche sostenibili sul piano ambientale.

Eventuali altri investimenti sostenibili non devono allo stesso modo arrecare danni significativi ad alcun obiettivo ambientale o sociale.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti avversi sui fattori sostenibili?

A livello di comparto, i principali impatti negativi (PAI) sui fattori di sostenibilità vengono considerati attraverso uno o più strumenti (si veda la dichiarazione PAI di Candriam: <https://www.candriam.com/en/private/sfdr/>):

- Impegno e processo di voto: al fine di evitare e/o ridurre l'impatto negativo sugli obiettivi di sostenibilità, il Comparto ha considerato anche gli impatti negativi nelle sue interazioni con le società, attraverso il dialogo e il processo di voto. Candriam ha attribuito la priorità alle sue attività di coinvolgimento e voto in base a una valutazione delle sfide ESG più rilevanti e sostanziali, relative a settori ed emittenti, prendendo in considerazione gli impatti finanziari e societari e quelli sugli stakeholder. Pertanto, il livello di coinvolgimento in ciascuna società all'interno dello stesso prodotto può variare ed è soggetto alla metodologia di prioritizzazione di Candriam.
 - Dialogo:

Il clima (da PAI1 a PAI6) è ovviamente centrale nel nostro dialogo con le aziende. Le priorità dell'impegno per il clima da parte delle società sono identificate prendendo in considerazione:

- società che presentano un debole profilo di transizione (modello del rischio di transizione proprietario) e/o emissioni di carbonio ancora elevate (Scope 1-2) o elevate emissioni di Scope 3.
- emittenti dei settori finanziari ancora ampiamente esposti ai combustibili fossili e con un ruolo primario nel finanziamento della transizione

- relativa esposizione dei portafogli gestiti agli emittenti sopra citati.

Il nostro obiettivo è ovviamente incoraggiare le società a comunicare pubblicamente la loro strategia di allineamento alla traiettoria 1.5D e a sostenere questo allineamento. Oltre a qualsiasi impegno per l'obiettivo Net Zero e alla comunicazione delle emissioni assolute di Scope1-2-3, Candriam incoraggia le aziende a fornire indicazioni su come gli obiettivi a breve/medio termine siano allineati con la traiettoria 1.5D scientificamente riconosciuta. In particolare, chiediamo agli emittenti di spiegare in che modo la loro strategia e il loro piano di spesa in conto capitale vadano nel senso dell'impegno a favore della decarbonizzazione. Di norma, utilizziamo una combinazione di dialogo individuale e collaborativo. Come nell'anno precedente, continuiamo a sostenere e a prendere attivamente parte a diverse iniziative su base collaborativa come Climate Action 100+. Queste iniziative non solo contribuiscono ad aumentare il livello di trasparenza sulle emissioni di gas effetto serra e sulla relativa strategia ma anche a per acquisire una posizione di forza a favore del cambiamento strategico. I risultati di questo impegno sono riportati in dettaglio nella nostra relazione annuale su Impegno e processo di voto, disponibile sul nostro sito web pubblico (<https://www.candriam.com/en/professional/insight-overview/publications/#sri-publications>).

Dato il contesto geopolitico e la crescita delle disuguaglianze osservata, sono state intraprese diverse iniziative per la protezione dei diritti umani fondamentali a diversi livelli di rapporto di lavoro diretto o indiretto (due diligence della catena di approvvigionamento) (PAI10,PAI11). Abbiamo anche condotto una campagna di impegno diretto post-covid con la finalità di indagare gli effetti sulle relazioni con gli stakeholder e i cambiamenti ora entrati a far parte della "nuova normalità" dell'attività commerciale nelle società in cui Candriam investe. Nello stesso ambito, anche la gestione del capitale umano è un aspetto che trattiamo ampiamente nel dialogo con le società. Continuiamo a sostenere la Workforce Disclosure Initiative per un miglior accesso a dati affidabili, pertinenti e comparabili sui rapporti di lavoro diretti e indiretti delle società.

- Processo di voto:

L'approccio di Candriam alla Governance aziendale si fonda sulle norme riconosciute a livello internazionale, in particolare sui principi stabiliti dall'OCSE e sulla International Corporate Governance Network (ICGN).

A tal riguardo, Candriam ha esercitato i suoi diritti di voto quando disponibili per le posizioni del portafoglio. I diritti degli Azionisti, la parità di trattamento per gli azionisti, la responsabilità del consiglio di amministrazione, la trasparenza e l'integrità dei bilanci sono pilastri fondamentali della nostra politica di voto. La maggior parte dei nostri voti relativi al management si concentra sulla remunerazione e l'elezione degli amministratori. Infatti, richiediamo alle società di rispettare il principio di retribuzione della prestazione e manifesteremo il nostro disaccordo non appena riscontreremo un livello di remunerazione eccessivo o condizioni di attribuzione non sufficientemente trasparenti o stringenti. In modo analogo, pretendiamo dalle società il rispetto con i nostri requisiti minimi di indipendenza: in caso di consigli di amministrazione che non rispettino questo requisito, ci opponiamo all'elezione, o rielezione, di qualsiasi amministratore non indipendente, ad eccezione del CEO.

Naturalmente, per la votazione sono anche presi in considerazione la diversità (PAI13) ed il livello di competenza del consiglio.

Inoltre, Candriam considera sempre la pertinenza, la coerenza e la fattibilità delle misure promosse da qualsiasi decisione in ambito ESG prima di esprimere il voto.

Nel miglior interesse dei suoi clienti, Candriam considera, nelle sue decisioni di voto, l'opinione ESG interna sulle società oggetto dell'investimento insieme agli eventuali risultati dell'impegno intrapreso con tale società.

Nel contesto della politica di voto di Candriam, sono applicate linee guida specifiche per una serie di decisioni degli azionisti e del management relative ad ambiente (per esempio il clima (da PAI1 a PAI6), biodiversità (PAI7)), sociale (per esempio, la diversità, il divario retributivo tra i sessi (PAI12), diritti umani (PAI10, PAI11)) e governance. Più specificamente, Candriam accoglie con favore l'introduzione di risoluzioni "Say-on-Climate" sponsorizzate dal management. Candriam ha costruito un modello dettagliato da applicare a ogni risoluzione Say-on-Climate, che valuta il rigore e l'allineamento della strategia di transizione della società con un percorso verso le emissioni zero nel 2050. Ne consegue, che molte di queste non hanno ottenuto il nostro supporto nel corso di questo periodo.

- **Esclusione:** selezione negativa di Candriam delle società o dei paesi volta a evitare investimenti in attività o pratiche pericolose che può condurre a esclusioni connesse all'impatto negativo di società o emittenti.
- **Monitoraggio:** calcolo e valutazione dei principali indicatori di impatto negativo, compreso il report a livello di Comparto. Alcuni di questi indicatori possono avere obiettivi espliciti e possono essere utilizzati per misurare il raggiungimento dell'obiettivo d'investimento sostenibile del Comparto. Di seguito sono riportati gli indicatori di questo Comparto:

Indicatori PAI	Valore
10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0.00%
14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0.00%

Quali sono stati i principali investimenti di questo prodotto finanziario?

L'elenco comprende gli investimenti che costituiscono la **proporzione maggiore degli investimenti** del prodotto finanziario durante il periodo di riferimento, ovvero: 31/12/2022

Principali investimenti	Settore	Proporzione	Paese
MICROSOFT CORP	Internet and internet services	6.05%	US
ALPHABET INC -A-	Internet and internet services	3.57%	US
APPLE INC	Office supplies and computing	3.20%	US
PROCTER & GAMBLE CO	Miscellaneous consumer goods	3.13%	US
JOHNSON & JOHNSON	Pharmaceuticals	2.92%	US
VISA INC -A-	Miscellaneous services	2.27%	US
AMAZON.COM INC	Retail trade and department stores	2.15%	US
NESTLE SA REG SHS	Foods and non alcoholic drinks	2.08%	CH
MERCK & CO INC	Pharmaceuticals	2.02%	US
LVMH MOET HENNESSY LOUIS VUITTON SE	Textiles and garments	1.94%	FR
BANK OF AMERICA CORP	Banks and other financial institutions	1.85%	US
DANAHER CORP	Machine and apparatus construction	1.76%	US
UNITEDHEALTH GROUP INC	Healthcare	1.69%	US
MORGAN STANLEY	Banks and other financial institutions	1.63%	US
TOTALENERGIESSE	Petroleum	1.63%	FR

A seguito del processo di arrotondamento delle cifre, possono essere presenti differenze minime tra i dati sopra riportati e quelli corrispondenti contenuti nella sezione "Portafoglio titoli" della relazione annuale.

Qual è stata la proporzione di investimenti associati alla sostenibilità?

Qual è stata l'allocazione delle attività?

L'allocazione delle attività descrive la quota di investimenti in una specifica classe di attività.

#1 Allineati con caratteristiche A/S comprende gli investimenti del prodotto finanziario utilizzati per realizzare le caratteristiche ambientali o sociali promosse da tale prodotto finanziario.

#2 Altro comprende i restanti investimenti del prodotto finanziario che non sono allineati alle caratteristiche ambientali o sociali, né sono qualificati come investimenti sostenibili.

La categoria **#1 Allineati con caratteristiche A/S** comprende:

- La sottocategoria **#1A Sostenibili** copre gli investimenti sostenibili da un punto di vista di tutela ambientale e sociale.
- La sottocategoria **#1B Altre caratteristiche A/S** copre gli investimenti allineati con le caratteristiche ambientali o sociali che non si qualificano come investimenti sostenibili.

● **In quali settori economici sono stati effettuati gli investimenti?**

Settore principale	Proporzione
Pharmaceuticals	13.14%
Internet and internet services	10.95%
Banks and other financial institutions	8.68%
Machine and apparatus construction	5.82%
Foods and non alcoholic drinks	5.73%
Electronics and semiconductors	5.01%
Office supplies and computing	4.63%
Graphic art and publishing	3.90%
Petroleum	3.86%
Retail trade and department stores	3.86%
Insurance	3.78%
Miscellaneous consumer goods	3.62%
Miscellaneous services	3.08%
Hotels and restaurants	3.03%
Textiles and garments	2.85%

A seguito del processo di arrotondamento delle cifre, possono essere presenti differenze minime tra i dati sopra riportati e quelli corrispondenti contenuti nella sezione "Portafoglio titoli" della relazione annuale.

In quale misura gli investimenti sostenibili con l'obiettivo di tutela ambientale sono stati allineati con la Tassonomia UE?

Per la conformità con la Tassonomia UE, i criteri relativi al **gas fossile** comprendono limiti sulle emissioni e la transizione all'energia completamente rinnovabile o ai combustibili a basso tenore di carbonio entro la fine del 2035. Per quanto riguarda l'**energia nucleare**, i criteri comprendono la sicurezza totale e le regole di gestione dei rifiuti.

Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale ad un obiettivo ambientale.

Le **attività di transizione** sono attività per le quali le alternative a basse emissioni di carbonio non sono ancora disponibili e, tra gli altri, hanno livelli di emissioni di gas effetto-serra corrispondenti alle migliori performance.

Le attività allineate alla Tassonomia sono espresse come quota di:

- **giro d'affari** che riflette la quota di profitto risultante dalle attività green delle aziende oggetto dell'investimento.

- **spese in conto capitale** (CapEx) che rappresentano gli investimenti green effettuati dalle società oggetto dell'investimento, per esempio per la transizione ad un'economia green.

- **spese operative** (OpEx) che riflettono le attività operative green delle società oggetto dell'investimento.

Il prodotto finanziario ha investito in attività associate al gas fossile e/o all'energia nucleare conformi alla Tassonomia UE¹?

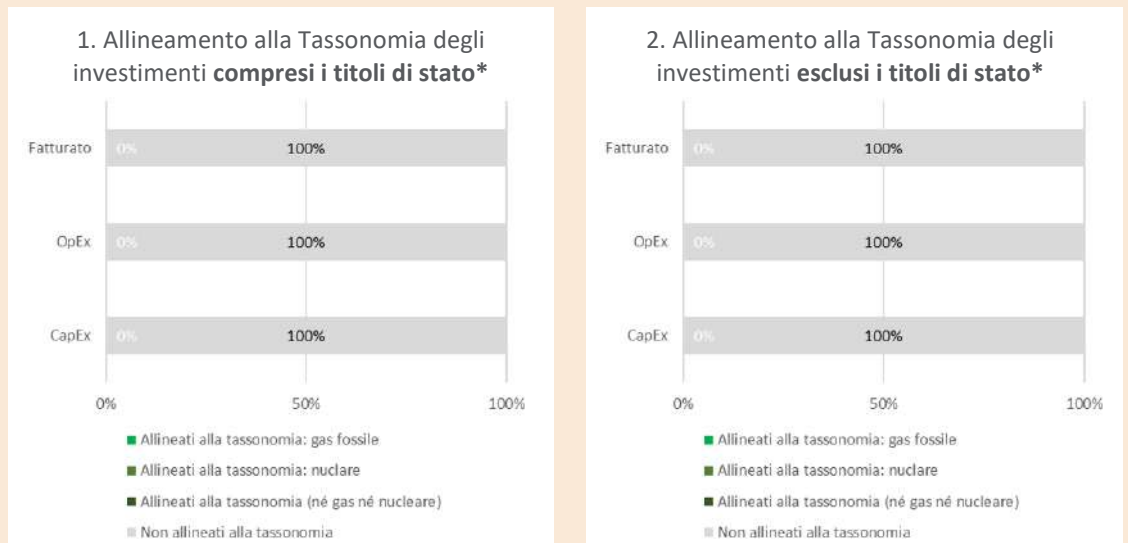

Sì

Nel gas fossile

Nell'energia nucleare

No

I due grafici riportati di seguito rappresentano in verde la percentuale minima di investimenti allineati con la Tassonomia UE. Non essendoci una metodologia appropriata per la determinazione dell'allineamento alla Tassonomia dei titoli di stato, il primo grafico mostra l'allineamento della Tassonomia in relazione a tutti gli investimenti del prodotto finanziario, comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla Tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane*

** Nell'ambito di questi grafici, per "titoli di stato" si intende l'esposizione a qualsiasi obbligazione sovrana*

Qual è stata la quota di investimenti in attività abilitanti e di transizione?

Il Comparto non è in grado di pubblicare una percentuale di allineamento con la Tassonomia, né di attività di transizione e abilitanti, in quanto solo un piccolo numero di società a livello globale forniscono i dati necessari per una valutazione rigorosa del loro allineamento alla Tassonomia.

Qual è il rapporto con la percentuale di investimenti allineati con la Tassonomia UE effettuati nei precedenti periodi di riferimento?

Non applicabile in quanto non sono disponibili dati relativi al periodo precedente

Qual è la ripartizione della proporzione degli investimenti per ciascuna delle categorie della Tassonomia UE alla quale hanno contribuito questi investimenti?

¹ Le attività relative ai gas fossili e/o al nucleare sono conformi alla Tassonomia UE solo se contribuiscono alla limitazione del cambiamento climatico ("mitigazione dei cambiamenti climatici") e non recano alcun danno significativo agli obiettivi della Tassonomia UE. Si veda la nota esplicativa nel margine sinistro. L'insieme completo dei criteri per le attività associate al gas fossile e all'energia nucleare conformi alla Tassonomia UE è fornito nel regolamento delegato (UE) 2022/1214 della Commissione.

Il Comparto non è in grado di pubblicare una percentuale di allineamento con la Tassonomia, in quanto solo un piccolo numero di società a livello globale fornisce i dati necessari per una valutazione rigorosa del loro allineamento alla Tassonomia

Pertanto la percentuale è considerata nulla.

 rappresenta gli investimenti sostenibili con un obiettivo di tutela ambientale che **non prendono in considerazione i criteri** per le attività economiche ecosostenibili previsti dal Regolamento (EU) 2020/852.

Qual è stata la quota di investimenti ecosostenibili con un obiettivo di tutela ambientale non allineati con la Tassonomia UE?

Il Comparto ha registrato una quota del 23,77% di investimenti in attività sostenibili sul piano ambientale non allineate con la tassonomia UE.

In effetti, ad oggi, solo due dei sei obiettivi sono stati implementati nel 2022 e un numero esiguo di società a livello globale forniscono i dati necessari per una valutazione rigorosa del loro allineamento alla Tassonomia.

Qual è stata la quota di investimenti socialmente sostenibili?

Il Comparto ha registrato una quota del 47,76% di investimenti con un obiettivo sociale

Quali investimenti sono stati inclusi nella voce "altro", qual era il loro scopo, ed esistevano delle salvaguardie ambientali o sociali minime?

Gli investimenti inclusi alla voce "Altri investimenti" sono presenti nel Comparto nella misura del 7.12% del valore del patrimonio netto totale.

Tali investimenti comprendono uno o più dei seguenti asset:

- Contanti: Contanti a vista, depositi in liquidità, accordi di riacquisto inverso (reverse repo) necessari per gestire la liquidità del Comparto in base alle sottoscrizioni/riscatti oppure risultanti dalla decisione di esposizione al mercato del Comparto;
- Investimenti su emittenti con caratteristiche ambientali/sociali al momento dell'investimento e non più completamente allineati ai criteri ambientali/sociali di investimento di Candriam. Tali investimenti sono pianificati per la vendita;
- Altri investimenti (compresi i derivati a titolo singolo) acquistati a fini di diversificazione e che possono non essere soggetti a filtri ESG o per i quali non sono disponibili dati ESG;
- Derivati non a titolo singolo utilizzati per la gestione efficiente del portafoglio e/o a fini di copertura e/o temporaneamente a seguito di sottoscrizioni/riscatti

Quali misure sono state intraprese per soddisfare gli obiettivi ambientali e/o sociali durante il periodo di riferimento?

Allo scopo di rispettare le caratteristiche ambientali e/o sociali durante il periodo di riferimento, il comparto ha iniziato posizioni in emittenti con un profilo ESG positivo, basato sulla valutazione ESG indipendente di Candriam. Iberdrola, il principale operatore di parchi eolici in Europa ne è un buon esempio.

Inoltre, per rispettare gli obiettivi ambientali e/o sociali durante il periodo di riferimento, abbiamo venduto i seguenti investimenti, per i quali gli emittenti non prevedevano caratteristiche ambientali e/o sociali:

Il punteggio Best-in-Universe di 8 di meta Platforms non è sufficiente perché possa far parte dell'universo di investimenti accettabili del fondo.

Per dare un segnale che le sfide relative al cambiamento climatico sono state prese in considerazione, misuriamo l'impronta di carbonio delle società. Al 31/12/2022, l'impronta di carbonio del fondo era di 30 tCO₂-eq / milione di euro investito, rispetto a 52 tCO₂-eq / milione di euro investito del benchmark del fondo.

Qual è stata la performance di questo prodotto finanziario rispetto al benchmark di riferimento?

I **benchmark di riferimento** sono indici volti a definire in quale misura il prodotto finanziario realizza gli obiettivi ambientali o sociale che promuove.

Nessun indice è stato designato come benchmark di riferimento al fine di ottenere le caratteristiche sociali o ambientali promosse dal Comparto

Caratteristiche ambientali e/o sociali

Investimento sostenibile significa un investimento in un'attività economica che contribuisca ad un obiettivo ambientale o sociale, ponendo la condizione che tale investimento non arrechi un danno significativo ad alcun obiettivo ambientale o sociale e che le società oggetto dell'investimento seguano pratiche di buona governance.

La **Tassonomia dell'UE** è una classificazione definita nel Regolamento (UE) 2020/852 che stabilisce un **elenco di attività economiche ecosostenibili**. Tale Regolamento non include un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere allineati con la **Tassonomia** o meno.

Questo prodotto finanziario ha avuto un obiettivo di investimento sostenibile?

●● <input type="checkbox"/> SÌ	●● <input checked="" type="checkbox"/> NO
<input type="checkbox"/> ha effettuato investimenti sostenibili con un obiettivo ambientale: ___%	<input checked="" type="checkbox"/> Ha promosso aspetti ambientali/sociali (A/S) e, pur non ponendosi come obiettivo un investimento sostenibile, ha compreso una proporzione del 79% di investimenti sostenibili.
<input type="checkbox"/> in attività economiche che si qualificano come ecosostenibili secondo la Tassonomia UE	<input type="checkbox"/> con un obiettivo ambientale in attività economiche che si qualificano come ecosostenibili secondo la Tassonomia UE
<input type="checkbox"/> in attività economiche che non si qualificano come ecosostenibili secondo la Tassonomia UE	<input checked="" type="checkbox"/> con un obiettivo ambientale in attività economiche che non si qualificano come ecosostenibili secondo la Tassonomia UE
<input type="checkbox"/> ha effettuato investimenti sostenibili con un obiettivo sociale: ___%	<input checked="" type="checkbox"/> con un obiettivo sociale
	<input type="checkbox"/> ha promosso caratteristiche A/S ma non ha effettuato alcun investimento sostenibile

In quale misura sono state implementate le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Gli **indicatori di sostenibilità** determinano in quale misura sono state realizzate le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

Gli obiettivi ambientali e sociali promossi dal comparto sono stati realizzati come segue:

- evitando l'esposizione a società che presentano rischi strutturali sostanziali e gravi e che violano gravemente i principi normativi, tenendo conto delle pratiche nelle questioni di carattere ambientale e sociali e della conformità alle norme quali il Patto globale delle Nazioni Unite (UNGC) e gli Orientamenti OCSE per le norme aziendali.
- evitando esposizione alle società significativamente esposte ad attività controverse, come l'estrazione, il trasporto o la distribuzione di carbone termico, la produzione o la vendita di tabacco e la produzione o la vendita di armi controverse (mine anti-uomo, bombe a grappolo, armi chimiche, biologiche, al fosforo bianco e all'uranio impoverito).
- evitando l'esposizione a paesi considerati regimi oppressivi
- realizzando un'impronta di carbonio inferiore a quella dell'indice di riferimento
- integrando le metodologie di ricerca ESG di Candriam nel processo di investimento ed investendo una quota del suo patrimonio in Investimenti sostenibili.

● Cosa hanno rilevato gli indicatori di sostenibilità?

Per la selezione degli investimenti sostenibili, il gestore del portafoglio ha preso in considerazione le valutazioni ESG degli emittenti prodotte dal team di analisti ESG di Candriam.

Per le società, queste valutazioni sono basate sull'analisi delle interazioni della società con i principali stakeholder e sull'analisi delle sue attività commerciali e del loro impatto, positivo o negativo, sulle sfide chiave della sostenibilità come il

cambiamento climatico e l'impoverimento delle risorse. Inoltre, l'analisi ESG di Candriam comprende i filtri di esclusione basati sulla conformità alle norme internazionali e il coinvolgimento in attività controverse.

Per gli emittenti sovrani, queste valutazioni sono fondate sull'analisi della gestione del paese delle proprie risorse naturali, umane, sociali ed economiche. Inoltre, i filtri di esclusione sono utilizzati per vagliare gli emittenti esterni che non si attengono a standard democratici e di governance.

L'analisi e ricerca ESG di Candriam di investimenti sostenibili valuta inoltre la conformità degli investimenti al principio secondo il quale non devono "arrecare danno" all'obiettivo di un investimento sostenibile e le pratiche di buona governance.

L'integrazione della metodologia di ricerca ESG di Candriam ha permesso al Fondo di rispettare la proporzione minima di investimenti sostenibili definiti nel prospetto (20% minimo). La proporzione di investimenti sostenibili nel Fondo è stata pertanto al di sopra della soglia minima, come indicato nella sezione "Qual è stata la proporzione di investimenti associati alla sostenibilità?"

Nome dell'indicatore KPI	Valore	Indice di riferimento
Carbon Footprint - Corporate - Scope 1&2 - Lower than absolute threshold (currently 140)	64.12	

● **...E rispetto ai periodi precedenti?**

Non applicabile in quanto non sono disponibili dati relativi al periodo precedente.

● **Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha parzialmente conseguito e come ha contribuito l'investimento sostenibile a tale obiettivo?**

Gli investimenti sostenibili che il comparto intendeva realizzare per una quota del portafoglio erano volti a contribuire alla riduzione delle emissioni di gas a effetto serra tramite le esclusioni e l'uso di indicatori climatici nell'analisi delle società, e a produrre un impatto positivo a lungo termine in ambito ambientale e sociale.

La proporzione di investimenti sostenibili è stata superiore al minimo definito nel prospetto (20% minimo). Questo ha permesso al comparto di superare gli obiettivi stabiliti inizialmente.

In ogni caso, il comparto non è in grado di pubblicare una percentuale di allineamento alla Tassonomia in quanto solo un piccolo numero di società a livello globale forniscono i dati necessari per una valutazione rigorosa del loro allineamento alla Tassonomia.

● **In che modo gli investimenti sostenibili che il prodotto finanziario ha parzialmente realizzato non hanno arrecato un danno significativo all'obiettivo di investimento sostenibile sociale o ambientale?**

Candriam garantisce che i suoi investimenti sostenibili non hanno causato un danno significativo a qualsiasi obiettivo d'investimento sostenibile di carattere ambientale e/o sociale mediante la sua ricerca e analisi ESG degli emittenti societari e sovrani.

In base alle sue valutazioni e punteggi ESG, la metodologia ESG di Candriam definisce requisiti e soglie minime per identificare quegli emittenti che si qualificano come "investimento sostenibile" e, in particolare, non provocano danni significativi a qualsiasi obiettivo di investimento sostenibile ambientale e/o sociale.

In particolare, il principio di "non arrecare danno significativo", è stato valutato per le società tramite:

- la considerazione dei "principali impatti negativi"
- l'allineamento agli orientamenti OCSE per le società multinazionali e del Global Compact delle Nazioni Unite per garantire le tutele minime sociali e ambientali.

Per maggiori dettagli, fare riferimento alla sezione che segue sulla considerazione dei principali effetti avversi sui fattori della sostenibilità.

----- **In che modo sono stati presi in considerazione gli indicatori degli effetti avversi sui fattori di sostenibilità?**

I principali effetti avversi sono gli effetti negativi più rilevanti delle decisioni di investimento sui fattori di sostenibilità correlati ad aspetti ambientali e sociali, alle condizioni di lavoro, al rispetto dei diritti umani, all'anticorruzione e anticorruzione.

La considerazione dei principali effetti avversi costituisce una parte essenziale dell'approccio di Candriam all'investimento sostenibile. I principali effetti avversi sono stati presi in considerazione nell'ambito dell'intero processo di analisi e ricerca ESG e tramite

diversi metodi.

Per quanto riguarda l'analisi delle società, questi metodi comprendono:

1. Valutazione ESG delle società: la metodologia di ricerca e screening ESG considera e valuta i principali effetti negativi sulla sostenibilità da due angolazioni distinte ma correlate:

- e attività commerciali degli emittenti societari e l'impatto, positivo o negativo, sulle sfide chiave di sostenibilità come il cambiamento climatico e l'impoverimento delle risorse;

le interazioni della società con i principali stakeholder.

2. Screening negativo delle società, costituito da un'esclusione su base normativa e un'esclusione delle società coinvolte in attività controverse.

3. Attività di coinvolgimento con le società basate sul dialogo, rivolto ad evitare o mitigare l'impatto avverso. Il quadro dell'analisi ESG, ed i relativi risultati, alimentano la politica di impegno di Candriam, e viceversa.

Per l'analisi degli emittenti sovrani, questi metodi comprendono:

1. Valutazione ESG su base geografica: la metodologia di ricerca e screening ESG considera e valuta i principali effetti negativi sulla sostenibilità sulla base di quattro tipi di capitale di sviluppo sostenibile:

- capitale naturale, in cui si valuta come un paese conserva e utilizza le proprie risorse naturali in modo sostenibile,
- capitale umano, in cui si misura la produttività economica e creativa valutando i livelli di istruzione e competenza, innovazione, salute, compresi gli aspetti della sostenibilità,
- capitale sociale, in cui si valutano la società civile e le istituzioni statali di ciascun paese, concentrandosi sulla trasparenza e la democrazia, l'efficacia dell'azione del governo, la corruzione, le ineguaglianze e la sicurezza della popolazione,
- capitale economico, in cui si valutano i fondamentali economici di un paese, al fine di determinare la capacità di ciascun governo di finanziare e promuovere a lungo termine politiche di sviluppo sostenibili.

2. Lo screening negativo dei paesi si basa in particolare sui seguenti elementi:

- Elenco dei regimi altamente oppressivi di Candriam - stati con violazioni gravi dei diritti umani.

L'integrazione dei principali impatti negativi sui fattori di sostenibilità è basata sulla rilevanza o possibile rilevanza di ciascun indicatore per ogni settore specifico a cui la società appartiene e per ogni paese, per garantire che il punteggio di un paese rifletta adeguatamente i problemi a breve, medio e lungo termine, le sfide e le opportunità che contano per lo sviluppo futuro. Ciò dipende da diversi fattori quali rendiconti il tipo di informazioni, la qualità e la portata dei dati, l'applicabilità, la pertinenza e la copertura geografica.

Gli investimenti sostenibili sono stati allineati con gli "Orientamenti OCSE per le imprese multinazionali" e con i Principi Guida delle Nazioni Unite su Imprese e Diritti Umani? Dettagli:

Gli investimenti sostenibili del comparto sono stati conformi agli Orientamenti OCSE per le imprese multinazionali e con i Principi Guida delle Nazioni Unite su Imprese e Diritti Umani.

Sono soggetti a un'analisi delle attività controverse su base normativa che considera la conformità a norme internazionali di carattere sociale, umano, ambientale e anticorruzione, secondo quanto definito dal Patto globale delle Nazioni Unite e dagli Orientamenti OCSE per le aziende multinazionali. L'Organizzazione internazionale del lavoro (OIL) e la Carta internazionale dei diritti umani sono parte dei numerosi riferimenti internazionali integrati nel nostro modello ESG e di analisi normativa.

Questa analisi è volta ad escludere le società che hanno significativamente ripetutamente violato uno qualsiasi di questi principi.

La Tassonomia UE definisce il principio di "non arrecare un danno significativo" secondo il quale gli investimenti allineati con la Tassonomia non dovrebbero produrre danni di rilievo agli obiettivi della Tassonomia UE e prevede specifici criteri dell'Unione europea.

Il principio di "non arrecare un danno significativo" si applica esclusivamente a quegli investimenti associati al prodotto finanziario che prendono in considerazione i criteri stabiliti dall'UE in materia di attività economiche ecosostenibili. Gli investimenti sottostanti della porzione rimanente di questo prodotto finanziario non prendono in considerazione i criteri dell'Unione europea in materia di attività economiche sostenibili sul piano ambientale.

Eventuali altri investimenti sostenibili non devono allo stesso modo arrecare danni significativi ad alcun obiettivo ambientale o sociale.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti avversi sui fattori sostenibili?

A livello di comparto, i principali impatti negativi (PAI) sui fattori di sostenibilità vengono considerati attraverso uno o più strumenti (si veda la dichiarazione PAI di Candriam: <https://www.candriam.com/en/private/sfdr/>):

- Impegno: al fine di evitare e/o ridurre l'impatto negativo sugli obiettivi di sostenibilità, il Comparto ha considerato anche gli impatti negativi nelle sue interazioni con le società, attraverso il dialogo. Candriam attribuisce la priorità alle sue attività di coinvolgimento in base a una valutazione delle sfide ESG più rilevanti e sostanziali, relative a settori ed emittenti, prendendo in considerazione gli impatti finanziari e societari e quelli sugli stakeholder. Pertanto, il livello di coinvolgimento in ciascuna società all'interno dello stesso prodotto può variare ed è soggetto alla metodologia di prioritizzazione di Candriam.
 - Dialogo:

Il clima (da PAI1 a PAI6) è ovviamente centrale nel nostro dialogo con le aziende. Le priorità dell'impegno per il clima da parte delle società sono identificate prendendo in considerazione:

- società che presentano un debole profilo di transizione (modello del rischio di transizione proprietario) e/o emissioni di carbonio ancora elevate (Ambito 1-2) o elevate emissioni di Ambito 3.
- emittenti dei settori finanziari ancora ampiamente esposti ai combustibili fossili e con un ruolo primario nel finanziamento della transizione
- relativa esposizione dei comparti gestiti agli emittenti sopra citati.

Il nostro obiettivo è ovviamente incoraggiare le società a comunicare pubblicamente la loro strategia di allineamento alla traiettoria 1.5D e a sostenere questo allineamento. Oltre a qualsiasi impegno per l'obiettivo Net Zero e alla comunicazione delle emissioni assolute di Scope1-2-3, Candriam incoraggia le aziende a fornire indicazioni su come gli obiettivi a breve/medio termine siano allineati con la traiettoria 1.5D scientificamente riconosciuta. In particolare, chiediamo agli emittenti di spiegare in che modo la loro strategia e il loro piano di spesa in conto capitale vadano nel senso dell'impegno a favore della decarbonizzazione. Di norma, utilizziamo una combinazione di dialogo individuale e collaborativo. Come nell'anno precedente, continuiamo a sostenere e a prendere attivamente parte a diverse iniziative su base collaborativa come Climate Action 100+. Queste iniziative non solo contribuiscono ad aumentare il livello di trasparenza sulle emissioni di gas effetto serra e sulla relativa strategia ma anche a per acquisire una posizione di forza a favore del cambiamento strategico. I risultati di questo impegno sono riportati in dettaglio nella nostra relazione annuale su Impegno e processo di voto, disponibile sul nostro sito web pubblico (<https://www.candriam.com/en/professional/insight-overview/publications/#sri-publications>).

Dato il contesto geopolitico e la crescita delle disuguaglianze osservata, sono state intraprese diverse iniziative per la protezione dei diritti umani fondamentali a diversi livelli di rapporto di lavoro diretto o indiretto (due diligence della catena di approvvigionamento) (PAI10,PAI11). Abbiamo anche condotto una campagna di impegno diretto post-covid con la finalità di indagare gli effetti sulle relazioni con gli stakeholder e i cambiamenti ora entrati a far parte della "nuova normalità" dell'attività commerciale nelle società in cui Candriam investe. Nello stesso ambito, anche la gestione del capitale umano è un aspetto che trattiamo ampiamente nel dialogo con le società. Continuiamo a sostenere la Workforce Disclosure Initiative per un miglior accesso a dati affidabili, pertinenti e comparabili sui rapporti di lavoro diretti e indiretti delle società.

- Esclusione: selezione negativa di Candriam delle società o dei paesi volta a evitare investimenti in attività o pratiche pericolose che può condurre a esclusioni connesse all'impatto negativo di società o emittenti.
- Monitoraggio: calcolo e valutazione dei principali indicatori di impatto negativo, compreso il report a livello di Comparto. Alcuni di questi indicatori possono avere obiettivi espliciti e possono essere utilizzati per misurare il raggiungimento dell'obiettivo d'investimento sostenibile del Comparto. Di seguito sono riportati gli indicatori di questo Comparto:

Indicatori PAI	Valore
10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0.00%
14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0.00%
16 - Investee countries subject to social violations	0.00%

Quali sono stati i principali investimenti di questo prodotto finanziario?

L'elenco comprende gli investimenti che costituiscono la **proporzione maggiore degli investimenti** del prodotto finanziario durante il periodo di riferimento, ovvero: 31/12/2022

Principali investimenti	Settore	Proporzione	Paese
JAPA TREA DISC BIL ZCP 20-02-23	Bonds of States. Provinces and municipalities	9.64%	JP

A seguito del processo di arrotondamento delle cifre, possono essere presenti differenze minime tra i dati sopra riportati e quelli corrispondenti contenuti nella sezione "Portafoglio titoli" della relazione annuale.

Qual è stata la proporzione di investimenti associati alla sostenibilità?

Qual è stata l'allocazione delle attività?

L'allocazione delle attività descrive la quota di investimenti in una specifica classe di attività.

#1 Allineati con caratteristiche A/S comprende gli investimenti del prodotto finanziario utilizzati per realizzare le caratteristiche ambientali o sociali promosse da tale prodotto finanziario.

#2 Altro comprende i restanti investimenti del prodotto finanziario che non sono allineati alle caratteristiche ambientali o sociali, né sono qualificati come investimenti sostenibili.

La categoria **#1 Allineati con caratteristiche A/S** comprende:

- La sottocategoria **#1A Sostenibili** copre gli investimenti sostenibili da un punto di vista di tutela ambientale e sociale.
- La sottocategoria **#1B Altre caratteristiche A/S** copre gli investimenti allineati con le caratteristiche ambientali o sociali che non si qualificano come investimenti sostenibili.

● **In quali settori economici sono stati effettuati gli investimenti?**

Settore principale	Proporzione
Banks and other financial institutions	41.28%
Investments funds	13.64%
Bonds of States, Provinces and municipalities	12.70%
Internet and internet services	4.90%
Machine and apparatus construction	3.57%
Electrical engineering	2.94%
Utilities	2.93%
Real estate	2.42%
Communication	1.87%
Transportation	1.50%
Road vehicles	1.47%
Non Classifiable Institutions	0.98%
Chemicals	0.69%
Office supplies and computing	0.62%
Building materials	0.45%

A seguito del processo di arrotondamento delle cifre, possono essere presenti differenze minime tra i dati sopra riportati e quelli corrispondenti contenuti nella sezione "Portafoglio titoli" della relazione annuale.

In quale misura gli investimenti sostenibili con l'obiettivo di tutela ambientale sono stati allineati con la Tassonomia UE?

Per la conformità con la Tassonomia UE, i criteri relativi al **gas fossile** comprendono limiti sulle emissioni e la transizione all'energia completamente rinnovabile o ai combustibili a basso tenore di carbonio entro la fine del 2035. Per quanto riguarda l'**energia nucleare**, i criteri comprendono la sicurezza totale e le regole di gestione dei rifiuti.

Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale ad un obiettivo ambientale.

Le **attività di transizione** sono attività per le quali le alternative a basse emissioni di carbonio non sono ancora disponibili e, tra gli altri, hanno livelli di emissioni di gas effetto-serra corrispondenti alle migliori performance.

Le attività allineate alla Tassonomia sono espresse come quota di:

- **giro d'affari** che riflette la quota di profitto risultante dalle attività green delle aziende oggetto dell'investimento.

- **spese in conto capitale** (CapEx) che rappresentano gli investimenti green effettuati dalle società oggetto dell'investimento, per esempio per la transizione ad un'economia green.

- **spese operative** (OpEx) che riflettono le attività operative green delle società oggetto dell'investimento.

Il prodotto finanziario ha investito in attività associate al gas fossile e/o all'energia nucleare conformi alla Tassonomia UE¹?

Sì

Nel gas fossile

Nell'energia nucleare

No

I due grafici riportati di seguito rappresentano in verde la percentuale minima di investimenti allineati con la Tassonomia UE. Non essendoci una metodologia appropriata per la determinazione dell'allineamento alla Tassonomia dei titoli di stato, il primo grafico mostra l'allineamento della Tassonomia in relazione a tutti gli investimenti del prodotto finanziario, comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla Tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane*

** Nell'ambito di questi grafici, per "titoli di stato" si intende l'esposizione a qualsiasi obbligazione sovrana*

Qual è stata la quota di investimenti in attività abilitanti e di transizione?

Il Comparto non è in grado di pubblicare una percentuale di allineamento con la Tassonomia, né di attività di transizione e abilitanti, in quanto solo un piccolo numero di società a livello globale forniscono i dati necessari per una valutazione rigorosa del loro allineamento alla Tassonomia.

Qual è il rapporto con la percentuale di investimenti allineati con la Tassonomia UE effettuati nei precedenti periodi di riferimento?

Non applicabile in quanto non sono disponibili dati relativi al periodo precedente

Qual è la ripartizione della proporzione degli investimenti per ciascuna delle categorie della Tassonomia UE alla quale hanno contribuito questi investimenti?

¹ Le attività relative ai gas fossili e/o al nucleare sono conformi alla Tassonomia UE solo se contribuiscono alla limitazione del cambiamento climatico ("mitigazione dei cambiamenti climatici") e non recano alcun danno significativo agli obiettivi della Tassonomia UE. Si veda la nota esplicativa nel margine sinistro. L'insieme completo dei criteri per le attività associate al gas fossile e all'energia nucleare conformi alla Tassonomia UE è fornito nel regolamento delegato (UE) 2022/1214 della Commissione.

Il Comparto non è in grado di pubblicare una percentuale di allineamento con la Tassonomia, in quanto solo un piccolo numero di società a livello globale fornisce i dati necessari per una valutazione rigorosa del loro allineamento alla Tassonomia

Pertanto la percentuale è considerata nulla.

 rappresenta gli investimenti sostenibili con un obiettivo di tutela ambientale che **non prendono in considerazione i criteri** per le attività economiche ecosostenibili previsti dal Regolamento (EU) 2020/852.

Qual è stata la quota di investimenti ecosostenibili con un obiettivo di tutela ambientale non allineati con la Tassonomia UE?

Il Comparto ha registrato una quota del 47,28% di investimenti in attività sostenibili sul piano ambientale non allineate con la tassonomia UE.

In effetti, ad oggi, solo due dei sei obiettivi sono stati implementati nel 2022 e un numero esiguo di società a livello globale forniscono i dati necessari per una valutazione rigorosa del loro allineamento alla Tassonomia.

Qual è stata la quota di investimenti socialmente sostenibili?

Il Comparto ha registrato una quota del 31,73% di investimenti con un obiettivo sociale

Quali investimenti sono stati inclusi nella voce "altro", qual era il loro scopo, ed esistevano delle salvaguardie ambientali o sociali minime?

Gli investimenti inclusi alla voce "Altri investimenti" sono presenti nel Comparto nella misura del 9.8% del valore del patrimonio netto totale.

Tali investimenti comprendono uno o più dei seguenti asset:

- Contanti: Contanti a vista, depositi in liquidità, accordi di riacquisto inverso (reverse repo) necessari per gestire la liquidità del Comparto in base alle sottoscrizioni/riscatti oppure risultanti dalla decisione di esposizione al mercato del Comparto;
- Investimenti su emittenti con caratteristiche ambientali/sociali al momento dell'investimento e non più completamente allineati ai criteri ambientali/sociali di investimento di Candriam. Tali investimenti sono pianificati per la vendita;
- Altri investimenti (compresi i derivati a titolo singolo) acquistati a fini di diversificazione e che possono non essere soggetti a filtri ESG o per i quali non sono disponibili dati ESG;
- Derivati non a titolo singolo utilizzati per la gestione efficiente del portafoglio e/o a fini di copertura e/o temporaneamente a seguito di sottoscrizioni/riscatti.

Quali misure sono state intraprese per soddisfare gli obiettivi ambientali e/o sociali durante il periodo di riferimento?

Allo scopo di rispettare le caratteristiche ambientali e/o sociali durante il periodo di riferimento, il comparto ha iniziato / rafforzato posizioni in emittenti con un profilo ESG positivo, basato sulla valutazione ESG indipendente di Candriam.

Nonostante la nostra sottoponderazione nel settore dei servizi pubblici, abbiamo mantenuto delle posizioni nei seguenti marchi, grazie all'attenzione dimostrata nella transizione energetica verso un ambiente a basso tenore di carbonio: Iberdrola e Enel. Nell'ambito del settore automotive, abbiamo mantenuto l'esposizione ai seguenti marchi: Volkswagen e Mercedes, entrambe orientate alla transizione dai veicoli a combustione a quelli elettrici (EV), hanno lanciato l'anno scorso diversi modelli concorrenziali rispetto a Tesla (attuale leader mondiale nel settore dei veicoli elettrici). Abbiamo anche mantenuto una posizione in Toyota la quale, nonostante i ritardi nel settore EV, è tuttora molto ben posizionata nel settore delle auto elettriche, grazie alle quali hanno un tasso di emissioni per auto in circolazione inferiore a quello degli altri costruttori. Il fondo ha venduto i seguenti investimenti per i quali gli emittenti non avevano definito obiettivi ambientali e/o sociali: Berkshire Hathaway: la holding è stata esclusa a seguito di un rischio legato alla sua potenziale esposizione agli armamenti.

Il Comparto ha realizzato un'impronta di carbonio di 64.12 alla fine di dicembre 2022, migliore dell'obiettivo di un massimo di 140 tonnellate di CO2 equivalente per milione di euro investiti.

Qual è stata la performance di questo prodotto finanziario rispetto al benchmark di riferimento?

Nessun indice è stato designato come benchmark di riferimento al fine di ottenere le caratteristiche sociali o ambientali promosse dal Comparto

I benchmark di riferimento sono indici volti a definire in quale misura il prodotto finanziario realizza gli obiettivi ambientali o sociale che promuove.

ALLEGATO V

Modello di informativa periodica per i prodotti finanziari di cui all'articolo 9, paragrafi da 1 a 4 bis, del regolamento (UE) 2019/2088 e all'articolo 5, primo comma, del regolamento (UE) 2020/852

Nome del prodotto: CARMIGNAC INVESTISSEMENT
Identificativo della persona giuridica: 96950039YSR2SSH77885

Obiettivo di investimento sostenibile

Questo prodotto finanziario ha un obiettivo di investimento sostenibile?

Sì

No

Ha effettuato investimenti sostenibili con un obiettivo ambientale: 5%

in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE

in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE

Ha effettuato investimenti sostenibili con un obiettivo sociale: 15%

Ha promosso caratteristiche ambientali/sociali (A/S) e, pur non avendo come obiettivo un investimento sostenibile, aveva una quota del(lo) % di

investimenti sostenibili

con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE

con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE

con un obiettivo sociale

Ha promosso caratteristiche A/S, ma non ha effettuato alcun investimento sostenibile

Nel 2022 la percentuale minima di investimenti sostenibili era pari al 50% e resterà pari al 50% del patrimonio netto nel 2023. I livelli minimi di investimenti sostenibili con obiettivi ambientali e sociali (come precedentemente descritti) sono rispettivamente pari al 5% e al 15% del patrimonio netto del fondo; tale limite sarà applicato a partire dal 1° gennaio 2023. L'obiettivo di emissioni di carbonio rimarrà il seguente: 30% in meno del benchmark.

In che misura è stato conseguito l'obiettivo di investimento sostenibile di questo prodotto finanziario?

L'obiettivo di investimento sostenibile del fondo consiste nell'investire almeno il 50% del patrimonio netto in società che generano almeno il 50% dei ricavi da beni e servizi legati ad attività commerciali che si allineano positivamente ad almeno uno dei 9 obiettivi di investimento sostenibile ("SDG") delle Nazioni Unite, su un totale di 17, selezionati per questo fondo: (1) sconfiggere la povertà; (2) sconfiggere la fame; (3) salute e benessere; (4) istruzione di qualità; (6) acqua pulita e servizi igienico-sanitari; (7) energia pulita e accessibile; (9) imprese, innovazione e infrastrutture; (11) città e comunità sostenibili; (12) consumo e produzione responsabili. Per maggiori informazioni sugli Obiettivi di sviluppo sostenibile delle Nazioni Unite, si consiglia di visitare il sito: <https://sdgs.un.org/goals>.

Un'impresa è considerata "allineata" quando genera il 50% o più dei suoi ricavi da attività che si ritiene contribuiscano a uno dei nove SDG summenzionati. Tali soglie del 50% rappresentano un'intenzionalità significativa dell'impresa rispetto all'attività contributrice e ai suoi progetti di crescita.

Al fine di determinare quali imprese sono allineate, la società di gestione ha identificato un solido sistema di classificazione delle imprese e ha mappato 1700 attività commerciali diverse. Inoltre, la società di gestione utilizza l'"SDG Compass", una risorsa creata dal GRI ("Global Reporting Initiative"), dal Global Compact delle Nazioni Unite e dal World Business Council for Sustainable Development, al fine di identificare le attività commerciali che contribuiscono a ciascun SDG. Inoltre, Carmignac ha creato dei "temi investibili" in funzione delle attività commerciali. Sulla base di tali temi, la società di gestione vaglia ciascuna attività commerciale nel sistema di classificazione, allineando le attività commerciali adatte ai "temi investibili" di Carmignac e utilizzando gli obiettivi SDG per verificare la loro adeguatezza. Una volta raggiunta la soglia del 50% di ricavi o di investimenti per un dato emittente, la ponderazione totale della partecipazione è considerata allineata.

Per quanto concerne il regolamento (UE) 2020/852 sulla Tassonomia, il fondo contribuisce, attraverso i suoi investimenti, ai seguenti obiettivi ambientali: mitigazione dei cambiamenti climatici e adattamento ai cambiamenti climatici. Il fondo non è finalizzato a una riduzione della sua impronta di carbonio allineata con l'Accordo di Parigi, bensì mira a raggiungere un'intensità di carbonio (tonnellate di CO2 per milione di USD di ricavi convertiti in euro; aggregato a livello di portafoglio (Scope 1 e 2 del GHG Protocol)) inferiore del 30% rispetto a quella del rispettivo indice di riferimento, l'MSCI AC World NR (USD) (con dividendi netti reinvestiti), convertito in EUR.

Nel corso dell'anno non sono state riscontrate carenze nel raggiungimento dell'obiettivo sostenibile.

● Qual è stata la prestazione degli indicatori di sostenibilità?

Il fondo utilizza gli indicatori di sostenibilità seguenti nel suo approccio a quattro pilastri per misurare il rispetto di ciascuna delle caratteristiche ambientali o sociali che promuove:

- 1) Tasso di copertura dell'analisi ESG:** L'integrazione ESG, attraverso il rating ESG effettuato tramite la piattaforma ESG proprietaria "START" (*System for Tracking and Analysis of a Responsible Trajectory*) di Carmignac, si applica ad almeno il 90% dei titoli. Al 30 dicembre 2022 il tasso di copertura dell'analisi ESG includeva il 100% dei titoli (esclusi liquidità e prodotti derivati).
- 2) Riduzione dell'universo d'investimento** (minimo 20% della componente azionaria del portafoglio): uno screening negativo e delle esclusioni di attività e di prassi non sostenibili, rispecchiate dai bassi punteggi ESG di START, MSCI e ISS ("Institutional Shareholder Services") ESG, che sono effettuati sulla base degli indicatori seguenti: (a) prassi che arrecano danno alla società e all'ambiente, (b) controversie riguardanti le linee guida OCSE e i principi del Global Compact delle Nazioni Unite, (c) armi controverse, (d) produzione di carbone termico, (e) produttori di energia che non hanno previsto alcun obiettivo d'allineamento all'Accordo di Parigi, (f) imprese coinvolte nella produzione di tabacco, (g) imprese coinvolte nell'intrattenimento per adulti. Al 30 dicembre 2022, la componente azionaria è stata ridotta del 21,17% rispetto all'universo di investimento originale.
- 3) Allineamento con gli Obiettivi di sviluppo sostenibile:** almeno il 50% del patrimonio netto del fondo (ossia ad esclusione della liquidità e dei prodotti derivati utilizzati con finalità di copertura) è stato investito in azioni di società che generano almeno il 50% dei ricavi da beni e servizi legati ad attività commerciali che si allineano positivamente ad almeno uno dei 9 obiettivi di investimento sostenibile delle Nazioni Unite su 17. Per maggiori informazioni sugli

Gli indicatori di sostenibilità misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse del prodotto finanziario.

Obiettivi di sviluppo sostenibile delle Nazioni Unite, si consiglia di visitare il sito: <https://sdgs.un.org/goals>. Al 30 dicembre 2022, il 66,8% del patrimonio netto del fondo era investito in azioni di società allineate positivamente a uno dei 9 SDG descritti sopra.

- 4) Responsabilità degli azionisti:** gli impegni ambientali e sociali delle imprese che determinano il miglioramento delle politiche di sviluppo sostenibile delle imprese sono misurati dagli indicatori seguenti: (a) livello di impegno attivo e politiche di voto, (b) numero di attività di impegno, (c) percentuale di voto, e (d) partecipazione alle assemblee degli azionisti (o di detentori di obbligazioni). Nel 2022 Carmignac ha partecipato a iniziative di engagement con 81 imprese, e 19 società per quanto riguarda il fondo Carmignac Investissement. Abbiamo esercitato i nostri diritti di azionisti in quasi il 100% delle assemblee in cui detenevamo azioni (98%).

Il fondo mira inoltre a conseguire emissioni di carbonio inferiori del 30% rispetto al suo indice di riferimento, l'MSCI AC World NR (USD) (con dividendi netti reinvestiti), convertito in EUR, misurate dall'intensità di carbonio (tonnellate di CO2 per milione di USD di ricavi convertiti in euro, aggregati a livello di portafoglio (Scope 1 e 2 del GHG Protocol)). Al 30 dicembre 2022 le emissioni di carbonio del fondo Carmignac Investissement erano inferiori del 72,3% rispetto a quelle dell'indice di riferimento.

Inoltre, per quanto riguarda il monitoraggio dei principali effetti negativi (*principal adverse impacts*– "PAI"), e conformemente all'allegato 1 del regolamento delegato (UE) 2022/1288, il fondo segue 14 indicatori ambientali e sociali obbligatori, e 2 indicatori facoltativi per dimostrare l'impatto degli investimenti sostenibili rispetto a questi indicatori: emissioni di gas a effetto serra (GHG), impronta di carbonio, intensità di GHG delle imprese beneficiarie degli investimenti, esposizione a imprese attive nel settore dei combustibili fossili, quota di consumo e produzione di energia non rinnovabile, intensità di consumo energetico per settore ad alto impatto climatico, attività che incidono negativamente sulle aree sensibili sotto il profilo della biodiversità, emissioni in acqua, rapporto tra rifiuti pericolosi e rifiuti radioattivi, uso e riciclaggio dell'acqua (scelta facoltativa), violazioni dei principi del Global Compact delle Nazioni Unite e delle linee guida dell'OCSE per le imprese multinazionali, mancanza di procedure e di meccanismi di conformità per monitorare la conformità ai principi del Global Compact delle Nazioni Unite e alle linee guida OCSE destinate alle imprese multinazionali, divario retributivo di genere non corretto, diversità di genere nel consiglio, esposizione ad armi controverse, eccesso di divario retributivo a favore dell'amministratore delegato (scelta facoltativa). Gli emittenti sovrani sono soggetti a un monitoraggio delle violazioni sociali della loro intensità di GHG.

Di seguito si riporta l'andamento degli indicatori dei principali effetti negativi per il 2022, sulla base della media dei dati di fine trimestre, per le componenti azionaria e obbligazioni societarie del portafoglio:

Indicatori PAI	Sulla base dei dati forniti dalla società	Fondo	Copertura
Scope 1 del protocollo GHG	Emissioni di GHG Scope 1	45522,5	99%
Scope 2 del protocollo GHG	Emissioni di GHG Scope 2	21020	99%
Scope 3 del protocollo GHG	A decorrere dal 1° gennaio 2023, emissioni di GHG Scope 3	1306192,5	99%
Totale GHG	Emissioni totali di GHG	1372737,5	99%
Impronta di carbonio	Impronta di carbonio	457,0275	99%
Livello di intensità di GHG	Intensità di GHG delle società	754,59	99%
Esposizione a imprese attive nel settore dei combustibili fossili	Quota degli investimenti in imprese attive nel settore dei combustibili fossili	7%	99%
Quota di consumo di energia non rinnovabile	Quota di consumo di energia non rinnovabile delle imprese, proveniente da fonti di energia non rinnovabile	70%	99%

	rispetto a fonti di energia rinnovabile, espressa in percentuale		
Quota di produzione di energia non rinnovabile	Quota di produzione di energia non rinnovabile delle imprese, proveniente da fonti di energia non rinnovabile rispetto a fonti di energia rinnovabile, espressa in percentuale	22%	99%
Intensità di consumo energetico per settore ad alto impatto climatico - Totale	Consumo energetico in GWh per milione di EUR di entrate delle imprese, per settore ad alto impatto climatico - Totale	0,15	99%
Intensità di consumo energetico per settore ad alto impatto climatico - NACE: settore A	Consumo energetico in GWh per milione di EUR di entrate delle imprese, per settore ad alto impatto climatico - NACE: settore A (Agricoltura, silvicoltura e pesca)	N/A	99%
Intensità di consumo energetico per settore ad alto impatto climatico - NACE: settore B	Consumo energetico in GWh per milione di EUR di entrate delle imprese, per settore ad alto impatto climatico - NACE: settore B (Attività estrattiva)	0,8125	99%
Intensità di consumo energetico per settore ad alto impatto climatico - NACE: settore C	Consumo energetico in GWh per milione di EUR di entrate delle imprese, per settore ad alto impatto climatico - NACE: settore C (Attività manifatturiere)	0,1575	99%
Intensità di consumo energetico per settore ad alto impatto climatico - NACE: settore D	Consumo energetico in GWh per milione di EUR di entrate delle imprese, per settore ad alto impatto climatico - NACE: settore D (Fornitura di energia elettrica, gas, vapore e aria condizionata)	1,32	99%
Intensità di consumo energetico per settore ad alto impatto climatico - NACE: settore E	Consumo energetico in GWh per milione di EUR di entrate delle imprese, per settore ad alto impatto climatico - NACE: settore E (Fornitura di acqua; reti fognarie, attività di trattamento dei rifiuti e risanamento)	N/A	99%
Intensità di consumo energetico per settore ad alto impatto climatico - NACE: settore F	Consumo energetico in GWh per milione di EUR di entrate delle imprese, per settore ad alto impatto climatico - NACE: settore F (Costruzioni)	N/A	99%
Intensità di consumo energetico per settore ad alto impatto climatico - NACE: settore G	Consumo energetico in GWh per milione di EUR di entrate delle imprese, per settore ad alto impatto climatico - NACE: settore G (Commercio all'ingrosso e al dettaglio; riparazione di autoveicoli e motocicli)	0,0275	99%
Intensità di consumo energetico per settore ad alto impatto climatico - NACE: settore H	Consumo energetico in GWh per milione di EUR di entrate delle imprese, per settore ad alto impatto climatico - NACE: settore H (Trasporto e magazzinaggio)	4,52	99%
Intensità di consumo energetico per settore ad alto impatto climatico - NACE: settore L	Consumo energetico in GWh per milione di EUR di entrate delle imprese, per settore ad alto impatto climatico - NACE: settore L (Attività immobiliari)	0,01	99%
Biodiversità	Quota di investimenti effettuati in imprese i cui siti/operazioni sono situati in aree sensibili dal punto di vista della biodiversità e le cui attività hanno un impatto negativo su tali aree	0%	99%
Emissioni legate all'acqua	Tonnellate di emissioni in acqua generate dalle imprese per milione di EUR investito (valore espresso come media ponderata)	69,195	99%
Rifiuti pericolosi	Tonnellate di rifiuti pericolosi generati dalle imprese per milione di EUR investito (valore espresso come media ponderata)	54,665	99%
Uso e riciclo dell'acqua	Quantità media di acqua consumata e recuperata dalle imprese (in metri cubi) per milione di EUR di entrate	565,7475	99%
Violazioni dei principi del Global Compact delle Nazioni Unite e delle linee guida dell'Organizzazione per la cooperazione e lo sviluppo economico (OCSE) destinate alle imprese multinazionali	Quota di investimenti nelle imprese che sono state coinvolte in violazioni dei principi del Global Compact delle Nazioni Unite o delle linee guida OCSE destinate alle imprese multinazionali	0%	99%

Mancanza di procedure e di meccanismi di conformità per monitorare la conformità ai principi del Global Compact delle Nazioni Unite e alle linee guida OCSE destinate alle imprese multinazionali	Quota di investimenti nelle imprese che non dispongono di politiche per controllare il rispetto dei principi del Global Compact delle Nazioni Unite o delle linee guida OCSE destinate alle imprese multinazionali, o di meccanismi di trattamento dei reclami/delle denunce di violazioni dei principi del Global Compact delle Nazioni Unite o delle linee guida OCSE destinate alle imprese multinazionali	45%	99%
Divario retributivo di genere non corretto	Divario retributivo di genere medio non corretto nelle imprese	85%	99%
Diversità di genere nel consiglio di amministrazione	Rapporto medio tra donne e uomini nei consigli di amministrazione delle società	32%	99%
Esposizione ad armi controverse	Quota di investimenti nelle imprese coinvolte nella fabbricazione o nella vendita di armi controverse	0%	99%
Eccesso di divario retributivo a favore degli amministratori delegati	Rapporto medio, all'interno delle imprese beneficiarie degli investimenti, tra la retribuzione totale annua della persona meglio remunerata e la retribuzione totale annua mediana di tutti i dipendenti (esclusa la persona meglio remunerata).	101,4	99%

...e rispetto ai periodi precedenti?

Non pertinente.

In che modo gli investimenti sostenibili non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile?

Tutti gli investimenti del fondo (non solo gli investimenti sostenibili) sono esaminati per accertare la loro conformità alle norme globali in materia di protezione dell'ambiente, diritti umani, standard lavorativi e lotta alla corruzione, tramite uno screening delle controversie. In particolare, gli investimenti sono sottoposti a uno screening basato su salvaguardie minime, volto ad assicurare che le loro attività commerciali siano coerenti con le Linee guida dell'OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani.

Inoltre, il fondo assicura che tali attività non pregiudichino in misura significativa l'obiettivo ambientale e sociale.

L'attività di impegno in materia di comportamenti controversi mira a eliminare la violazione da parte di un'impresa dei Principi guida del Global Compact delle Nazioni Unite e/o dell'OCSE destinati alle imprese multinazionali e a predisporre dei sistemi di gestione adatti per impedire che una tale violazione si ripeta. Se l'attività di impegno non ha esito positivo, l'impresa è considerata esclusa. I casi di impegno rafforzato sono selezionati con cadenza trimestrale in base alla necessità di monitoraggio. L'enfasi posta sull'impegno può variare a seconda delle diverse esposizioni d'investimento.

In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?

Gli indicatori degli effetti negativi sono monitorati con cadenza trimestrale. Gli effetti negativi sono identificati secondo il loro grado di gravità. Previa discussione con il team di investimento interessato, viene stabilito un piano d'azione che comprende un calendario d'esecuzione.

Il dialogo con l'impresa rappresenta generalmente il piano d'azione privilegiato per influenzare la mitigazione degli effetti negativi da parte dell'impresa interessata, nel qual caso l'impegno dell'impresa viene incluso nel piano di impegno trimestrale di Carmignac, conformemente alla politica di impegno di Carmignac. È possibile prospettare un disinvestimento con una strategia di uscita predeterminata entro i limiti di tale politica.

Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:

La società di gestione applica un processo di screening delle controversie relative alle Linee guida dell'OCSE destinate alle imprese multinazionali e ai Principi guida delle Nazioni Unite su imprese e diritti umani per tutti gli investimenti nel fondo.

La società di gestione agisce conformemente ai principi del Global Compact delle Nazioni Unite (UNGC), alla Dichiarazione dell'Organizzazione internazionale del lavoro (OIL) sui principi e i diritti fondamentali sul luogo di lavoro e alle Linee guida dell'Organizzazione per la cooperazione e lo sviluppo economico (OCSE) che permettono alle imprese multinazionali di valutare le norme a loro applicabili, inclusi a titolo esemplificativo le violazioni dei diritti umani, il diritto del lavoro e le prassi standard legate al clima.

Il fondo applica un processo di screening delle controversie per tutti i suoi investimenti. Sono escluse le imprese colpevoli di controversie importanti contro l'ambiente, i diritti umani e il diritto internazionale del lavoro, per citare le principali violazioni. Tale processo di screening fonda l'identificazione delle controversie sulle Linee guida dell'OCSE per le imprese e sui principi del Global Compact delle Nazioni Unite ed è comunemente denominato "screening normativo e include uno screening restrittivo controllato e misurato tramite il sistema ESG proprietario di Carmignac "START".

Si applicano un rating e una ricerca delle controversie societarie utilizzando i dati estratti da ISS ESG come database di ricerca.

La tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'UE.

Il principio "non arrecare un danno significativo" si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante del presente prodotto finanziario non tengono conto dei criteri dell'UE per le attività economiche ecosostenibili.

I **principali effetti negativi** sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

La società di gestione si è impegnata ad applicare le norme tecniche di regolamentazione (denominate "NTR") di cui all'allegato 1 del regolamento delegato (UE) 2022/1288 che qualificano 14 indicatori ambientali e sociali obbligatori, e 2 indicatori facoltativi per dimostrare l'impatto degli investimenti sostenibili rispetto a questi indicatori: emissioni di gas a effetto serra (GHG), impronta di carbonio, intensità di GHG delle imprese beneficiarie degli investimenti, esposizione a imprese attive nel settore dei combustibili fossili, quota di consumo e produzione di energia non rinnovabile, intensità di consumo energetico per settore ad alto impatto climatico, attività che incidono negativamente sulle aree sensibili sotto il profilo della biodiversità, emissioni in acqua, rapporto tra rifiuti pericolosi e rifiuti radioattivi, uso e riciclaggio dell'acqua (scelta facoltativa), violazioni dei principi del Global Compact delle Nazioni Unite e delle linee guida dell'OCSE per le imprese multinazionali, mancanza di procedure e di meccanismi di conformità per monitorare la conformità ai principi del Global Compact delle Nazioni Unite e alle linee guida OCSE destinate alle imprese multinazionali, divario retributivo di genere non corretto, diversità di genere nel consiglio, esposizione ad armi controverse, eccesso di divario retributivo a favore dell'amministratore delegato (scelta facoltativa). Gli emittenti sovrani sono soggetti a un monitoraggio delle violazioni sociali della loro intensità di GHG.

Nell'ambito della sua strategia PAI, Carmignac identifica le società che hanno sottoperformato il benchmark in termini di indicatori PAI. Il nostro fornitore di dati terzo, Impact Cubed, ci permette di monitorare l'impatto dei nostri fondi per ogni indicatore PAI.

L'identificazione delle aziende che hanno sottoperformato l'indice in termini di PAI ci permette di instaurare un dialogo per garantire che si impegnino a ridurre il proprio impatto. Abbiamo identificato Total Energies come uno dei principali responsabili della sottoperformance di Carmignac Investissement per quanto riguarda l'indicatore di performance relativo ai rifiuti pericolosi. Nel 2022 abbiamo incontrato Total Energies SA in seguito al nostro voto contro il piano di sviluppo sostenibile e di transizione climatica della società durante l'assemblea generale del 2022. A giugno abbiamo contattato l'azienda per condividere le nostre opinioni e le aree di miglioramento individuate. Tra queste figuravano:

- 1) un modalità più chiara di indicazione degli obiettivi di riduzione delle emissioni di CO₂ per gli ambiti 1 e 2
- 2) una revisione delle previsioni di allocazione del CAPEX della società a favore delle energie rinnovabili e dell'energia verde nel medio termine.

Questo dialogo è stato anche un'occasione per affrontare le controversie ambientali e sociali in cui l'azienda è coinvolta. Visti gli impegni assunti dall'azienda in materia di rispetto delle comunità e della biodiversità, abbiamo chiesto maggiore chiarezza su come essa intenda esercitare una supervisione sufficiente e garantire che agirà in conformità con i suoi impegni a lungo termine, informando al contempo gli investitori sul rispetto di tali impegni. Continueremo a dialogare con Total Energies per monitorare questo PAI in particolare e faremo in modo che vengano attuate misure adeguate.

Quali sono stati i principali investimenti di questo prodotto finanziario?

Di seguito si riportano i 15 investimenti principali del 2022, sulla base della media dei dati di fine mese:

Investimenti di maggiore entità	Settore	% di attivi	Paese
HERMES INTERNATIONAL	Beni voluttuari	3.54%	Francia
MICROSOFT CORP	Informatica	3.24%	USA
SCHLUMBERGER	Energia	3.07%	USA
AMAZON.COM INC	Beni voluttuari	2.69%	USA
JD.COM INC	Beni voluttuari	2.68%	Cina
NOVO NORDISK AS	Salute	2.61%	Danimarca

L'elenco comprende gli investimenti che costituiscono la quota maggiore di investimenti del prodotto finanziario durante il periodo di riferimento, ossia:

ELI LILLY & CO.	Salute	2.56%	USA
T-MOBILE US INC	Telecomunicazioni	2.45%	USA
DANAHER CORP	Salute	2.24%	USA
INTERCONTINENTAL EXCHANGE	Finanza	2.22%	USA
PALO ALTO NETWORKS INC	Informatica	2.18%	USA
UBER TECHNOLOGIES INC	Industria	2.12%	USA
ESSILOR INTL	Beni voluttuari	2.09%	Francia
AIRBUS GROUP	Industria	1.99%	Francia
ORACLE	Informatica	1.90%	USA

Qual è stata la quota degli investimenti in materia di sostenibilità?

Al 30 dicembre 2022, il 66,8% del patrimonio netto del fondo era investito in società sostenibili, in base alla definizione precedentemente fornita.

● Qual è stata l'allocazione degli attivi?

Il fondo effettua investimenti sostenibili dal momento che investe almeno il 50% del patrimonio netto in azioni di società che generano almeno il 50% dei ricavi da beni e servizi legati ad attività commerciali che si allineano positivamente ad almeno uno dei 9 obiettivi di investimento sostenibile ("SDG") delle Nazioni Unite, su un totale di 17. Al di fuori di tale minimo di investimenti sostenibili del 50% del patrimonio netto, il fondo potrà prendere in considerazione imprese in cui meno del 50% dei ricavi è allineato agli SDG delle Nazioni Unite o anche imprese in cui nessun ricavo soddisfa tale criterio. Al 30 dicembre 2022, il 66,8% del patrimonio netto del fondo è stato utilizzato per raggiungere il suo obiettivo sostenibile.

A partire da 1° gennaio 2023, i livelli minimi di investimenti sostenibili con obiettivi ambientali e sociali (come descritti nel seguente grafico) sono rispettivamente pari al 5% e al 15% del patrimonio netto del Comparto. Al 30 dicembre 2022, tali quote erano pari rispettivamente al 24,7% e al 42,1% del patrimonio netto del Fondo.

Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale. Le **attività di transizione** sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano, tra gli altri, livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

La catégorie **#1 Durables** couvre les Investissements durables ayant des objectifs environnementaux ou sociaux.

La catégorie **#2 Non durables** inclut les investissements qui ne peuvent être qualifiés d'investissements durables qui ne sont pas

● In quali settori economici sono stati effettuati gli investimenti?

Di seguito si riportano i principali settori economici in cui abbiamo realizzato investimenti nel 2022, sulla base della media dei dati di fine mese:

Settori economici	% di attivi
Beni voluttuari	22.2%
Salute	21.3%
Informatica	16.7%
Industria	9.2%
Beni di consumo non ciclici	8.5%
Finanza	7.5%
Telecomunicazioni	7.2%
Energia	4.7%
Impianti e servizi legati al settore Petrolio e gas	3.34%
Società integrate nel settore Petrolio e gas	1.36%
Esplorazione e produzione di petrolio e gas	0.04%
Materiali	1.4%
Servizi di pubblica utilità	1.1%
Immobiliare	0.09%

In quale misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Il prodotto finanziario ha investito in attività connesse al gas fossile e/o all'energia nucleare che erano conformi alla tassonomia dell'UE1?

Sì:

 Gas fossile

 Energia nucleare

 No:

Le attività allineate alla tassonomia sono espresse in percentuale di:

- **fatturato**: quota di entrate da attività verdi delle imprese beneficiarie degli investimenti;
- **spese in conto capitale (CapEx)**: investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, ad es. per la transizione verso un'economia verde
- **spese operative (OpEx)**: attività operative verdi delle imprese beneficiarie degli investimenti

I grafici che seguono mostrano in verde la percentuale di investimenti che erano allineati alla tassonomia dell'UE. Poiché non esiste una metodologia adeguata per determinare l'allineamento delle obbligazioni sovrane alla tassonomia, il primo grafico mostra l'allineamento alla tassonomia in relazione a tutti gli investimenti del prodotto finanziario comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.*

* Ai fini dei grafici di cui sopra, per "obbligazioni sovrane" si intendono tutte le esposizioni sovrane.

¹ Le attività connesse al gas fossile e/o all'energia nucleare sono conformi alla tassonomia dell'UE solo se contribuiscono all'azione di contenimento dei cambiamenti climatici ("mitigazione dei cambiamenti climatici") e non arrecano un danno significativo a nessuno degli obiettivi della tassonomia dell'UE - cfr. nota esplicativa sul margine sinistro. I criteri completi riguardanti le attività economiche connesse al gas fossile e all'energia nucleare che sono conformi alla tassonomia dell'UE sono stabiliti nel regolamento delegato (UE) 2022/1214 della Commissione.

Sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili conformemente alla tassonomia dell'UE.

● **Qual era la quota degli investimenti effettuati in attività di transizione e abilitanti?**

Non pertinente.

● **Come si rapporta la percentuale di investimenti allineati alla tassonomia dell'UE con i precedenti periodi di riferimento?**

Non pertinente.

● **Qual era la quota di investimenti sostenibili con un obiettivo ambientale che non erano allineati alla tassonomia dell'UE?**

Il livello di investimenti sostenibili con un obiettivo ambientale ma non allineati alla tassonomia dell'UE era pari al 24,7% del patrimonio netto.

● **Qual era la quota di investimenti socialmente sostenibili?**

Il livello di investimenti sostenibili con un obiettivo sociale era pari al 42,1% del patrimonio netto.

Quali investimenti erano compresi nella categoria "Non sostenibili" e qual era il loro scopo? Esistevano garanzie minime di salvaguardia ambientale o sociale?

Oltre agli investimenti sostenibili, il fondo può investire in liquidità (e strumenti equivalenti) con finalità di gestione della liquidità. Il fondo può altresì investire in strumenti derivati con finalità di copertura.

Nella misura in cui il fondo assume posizioni corte utilizzando strumenti derivati su sottostante unico, si applicano le esclusioni definite a livello di società di gestione. Tali prodotti derivati sono esaminati per assicurarsi che rispettino le norme globali in materia di protezione dell'ambiente, diritti umani, standard lavorativi e lotta alla corruzione, tramite uno screening delle controversie (approccio "basato su norme"). Questi investimenti sono sottoposti a uno screening basato su salvaguardie minime, volto ad assicurare che le loro attività commerciali siano coerenti con le Linee guida dell'OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani.

● **Quali azioni sono state adottate per raggiungere l'obiettivo di investimento sostenibile durante il periodo di riferimento?**

Nel 2022 Carmignac ha adottato le seguenti azioni per sostenere il processo di investimento nel rispetto delle caratteristiche ambientali e sociali:

Pilastro 1: Integrazione ESG:

- Aggiunta di ulteriori indicatori sociali (dati sulla soddisfazione dei dipendenti e dei consumatori) al processo di rating ESG esclusivo di START, per informare gli analisti sugli aspetti rilevanti che possono influire sulla tesi d'investimento.
- Miglioramento della capacità di monitoraggio di green bond, social bond, sustainable bond e obbligazioni legate alla sostenibilità per facilitare il monitoraggio e la redazione di relazioni future all'interno del sistema Global Portfolio Monitoring tramite un dashboard dei gestori di portafoglio sulle posizioni dei fondi.
- Sviluppo di modelli di rating ESG proprietari per il debito sovrano (Impact e Global) nell'interfaccia START, per migliorare l'efficienza e le conoscenze del team di gestione del portafoglio.

- Integrazione del monitoraggio dei principali effetti negativi e definizione di una politica volta ad integrare queste informazioni sugli indicatori ambientali, sociali e dei diritti umani nella logica di investimento.
- Maggiore trasparenza e monitoraggio automatizzato del processo di riduzione dell'universo.
- Aggiunta al sistema ESG proprietario di START di una mappatura dell'allineamento agli Obiettivi di sviluppo sostenibile delle Nazioni Unite, misurata in % del fatturato per ogni società in cui sono presenti collegamenti tra le attività commerciali direttamente correlate ai nove SDG da noi selezionati e in cui è possibile investire.
- Condivisione del monitoraggio settimanale della percentuale minima di investimenti sostenibili con i team di investimento nell'ambito del monitoraggio ESG interno.

Pilastro 2: Esclusioni

- Automatizzazione del processo di revisione trimestrale dell'elenco per identificare le società legate a controversie o che potrebbero essere soggette a esclusioni settoriali rigide e al processo di riduzione dell'universo, se applicabile.

Pilastro 3: Voto ed engagement

- Introduzione di un approccio di "voto chiave" al fine di dare la priorità alle società identificate con l'obiettivo di fornire raccomandazioni di voto più mirate e avviare potenziali attività di engagement legate alla decisione di voto, in particolare i voti "Say on climate".
- Redazione di bollettini informativi trimestrali sulla gestione responsabile per dimostrare pubblicamente ai clienti come promuoviamo l'azionariato attivo.
- Proseguimento del nostro piano trimestrale di engagement con le aziende, di cui quasi il 58% ha riguardato questioni ambientali, sociali o di governance.

Per quanto riguarda più specificamente le attività di engagement, la nostra responsabilità fiduciaria implica il pieno esercizio dei nostri diritti di azionisti e l'engagement con le società in cui investiamo. Il dialogo è condotto dagli analisti finanziari, dai gestori di portafoglio e dal team ESG. Crediamo che le nostre attività di engagement permettano di comprendere meglio come le società gestiscono i rischi extrafinanziari e migliorano notevolmente il loro profilo ESG, garantendo al contempo una creazione di valore a lungo termine per i nostri clienti, la società e l'ambiente. Le nostre iniziative di engagement possono riguardare una delle cinque considerazioni seguenti: 1) rischi ESG, 2) un tema ESG, 3) un impatto desiderato, 4) un comportamento controverso o 5) una decisione di voto a un'assemblea generale. Carmignac può collaborare con altri azionisti e detentori di obbligazioni quando ciò permette di influenzare le azioni e la governance delle società presenti in portafoglio. Al fine di assicurare che l'azienda identifichi, preveda e gestisca adeguatamente qualsiasi situazione di conflitto di interessi potenziale o confermato, Carmignac ha implementato e mantiene aggiornate politiche e direttive.

Nel 2022, abbiamo svolto attività di engagement con 81 società in merito a temi ESG specifici a livello di Carmignac e con 19 società in questo particolare fondo.

Abbiamo ad esempio ripreso il dialogo con Amazon, dopo il nostro incontro nel marzo 2021, dato che la società continua ad essere oggetto di controversie riguardanti la gestione delle esternalità ambientali e sociali generate dalle sue attività. La riunione si è tenuta in aprile e l'attività di engagement si è concentrata sui seguenti temi:

- il ruolo del fondatore (Jeff Bezos) nell'azienda;
- la struttura di governance in atto per gestire le questioni ambientali, sociali ed etiche;
- il trattamento dei dipendenti e il rapporto dell'azienda con i sindacati;
- l'approccio dell'azienda alle questioni fiscali;
- le performance ambientali.

Inoltre, abbiamo chiesto maggiore trasparenza sulle informazioni relative all'economia circolare dell'azienda, compreso il modo in cui gestisce i resi dei clienti, l'impronta di carbonio di tali resi e le iniziative relative alle donazioni.

Abbiamo indicato all'azienda la necessità di migliorare la trasparenza generale sulle varie iniziative ambientali e sociali intraprese per ottimizzare le sue prassi e risolvere il suo problema di reputazione. L'analista settoriale ci ha informati che quest'attività di engagement non ha comportato alcuna modifica all'interno del nostro sistema di rating proprietario START. Ciononostante, porteremo avanti il nostro engagement con la società e continueremo a monitorare le sue prassi ambientali, sociali e di governance (ESG).

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento sostenibile?

Non pertinente.

- **Per quali aspetti l'indice di riferimento differisce da un indice generale di mercato?**

Non pertinente.

Qual è stata la prestazione di questo prodotto finanziario in relazione agli indicatori di sostenibilità volti a determinare l'allineamento dell'indice di riferimento all'obiettivo di investimento sostenibile?

Non pertinente.

- **Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?**

Non pertinente.

- **Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice generale di mercato?**

Non pertinente.

Gli **indici di riferimento** sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

ALLEGATO IV

Modello di informativa periodica per i prodotti finanziari di cui all'articolo 8, paragrafi 1, 2 e 2 bis, del regolamento (UE) 2019/2088 e all'articolo 6, primo comma, del regolamento (UE) 2020/852

Nome del prodotto: CARMIGNAC PATRIMOINE
Identificativo della persona giuridica: 969500YXGX7FIV0U3F31

Caratteristiche ambientali e/o sociali

Questo prodotto finanziario ha un obiettivo di investimento sostenibile?

Sì

No

Ha effettuato investimenti sostenibili con un obiettivo ambientale: _____ %

in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE

in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE

Ha effettuato investimenti sostenibili con un obiettivo sociale: ___ %

Ha promosso caratteristiche ambientali/sociali (A/S) e, pur non avendo come obiettivo un investimento sostenibile, aveva una quota del 10% di investimenti sostenibili

con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE

con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE

con un obiettivo sociale

Ha promosso caratteristiche A/S, ma non ha effettuato alcun investimento sostenibile

Nel 2022 la percentuale minima di investimenti che promuovono caratteristiche A/S era pari al 10% e resterà tale nel 2023. I livelli minimi di investimenti che promuovono caratteristiche A/S, con obiettivi ambientali e sociali sono rispettivamente pari all'1% e al 3% del patrimonio netto del fondo; tale limite sarà applicato a partire dal 1° gennaio 2023.

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Il fondo applica approcci "best-in-universe" (identificazione delle società che offrono attività sostenibili) e "best-effort" (approccio che consiste nel prediligere gli emittenti che danno prova di un miglioramento o di buone prospettive per le loro prassi e performance ESG nel tempo) al fine di investire in modo sostenibile coniugando una strategia basata su quattro pilastri: 1) integrazione ESG, 2) screening negativo, 3) screening positivo, e 4) responsabilità degli azionisti per promuovere le caratteristiche ambientali e sociali. Inoltre, contribuisce positivamente all'ambiente grazie a investimenti che si traducono nella mitigazione e nell'adattamento ai cambiamenti climatici e, in parte, contribuisce positivamente all'ambiente e alla società attraverso un approccio basato sugli obiettivi di investimento sostenibile delle Nazioni Unite.

Nel corso dell'anno non sono state riscontrate carenze relative alle caratteristiche ambientali e sociali promosse.

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, a condizione che tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e che l'impresa beneficiaria degli investimenti rispetti prassi di buona governance.

La **tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non comprende un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero non risultare allineati alla tassonomia.

Gli indicatori di sostenibilità misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse del prodotto finanziario.

● Qual è stata la prestazione degli indicatori di sostenibilità?

Il fondo utilizza gli indicatori di sostenibilità seguenti nel suo approccio a quattro pilastri per misurare il rispetto di ciascuna delle caratteristiche ambientali o sociali che promuove:

- 1) Tasso di copertura dell'analisi ESG:** L'integrazione ESG, attraverso il rating ESG effettuato tramite la piattaforma ESG proprietaria "START" (*System for Tracking and Analysis of a Responsible Trajectory*) di Carmignac, si applica ad almeno il 90% dei titoli. Al 30/12/2022, il tasso di copertura dell'analisi ESG era del 99,43% dei titoli in portafogli (liquidità e prodotti derivati esclusi).
- 2) Riduzione dell'universo d'investimento** (minimo 20% della componente azionaria e della componente di obbligazioni societarie del portafoglio): uno screening negativo e delle esclusioni di attività e di prassi non sostenibili, rispecchiate dai bassi punteggi ESG di START, MSCI e ISS ("Institutional Shareholder Services") ESG, che sono effettuati sulla base degli indicatori seguenti: (a) prassi che arrecano danno alla società e all'ambiente, (b) controversie riguardanti le linee guida OCSE e i principi del Global Compact delle Nazioni Unite, (c) armi controverse, (d) produzione di carbone termico, (e) produttori di energia che non hanno previsto alcun obiettivo d'allineamento all'Accordo di Parigi, (f) imprese coinvolte nella produzione di tabacco, (g) imprese coinvolte nell'intrattenimento per adulti. Al 30/12/2022, l'universo di investimento del portafoglio era stato ridotto del 21,17% per la componente azionaria e del 21,77% per la componente obbligazionaria.
- 3) Screening positivo:** almeno il 10% del patrimonio netto del fondo (ossia il suo patrimonio netto, ad esclusione della liquidità, dei prodotti derivati utilizzati con finalità di copertura e degli OICR utilizzati per la gestione della liquidità) è investito in azioni di società che generano almeno il 50% dei ricavi da beni e servizi legati ad attività commerciali che si allineano positivamente ad almeno uno dei 9 obiettivi di investimento sostenibile delle Nazioni Unite su 17. Per maggiori informazioni sugli Obiettivi di sviluppo sostenibile delle Nazioni Unite, si consiglia di visitare il sito: <https://sdgs.un.org/goals>. Al 30/12/2022, il 24,7% del patrimonio netto del fondo era investito in azioni di società allineate positivamente a uno dei 9 SDG descritti sopra.
- 4) Responsabilità degli azionisti:** gli impegni ambientali e sociali delle imprese che determinano il miglioramento delle politiche di sviluppo sostenibile delle imprese sono misurati dagli indicatori seguenti: (a) livello di impegno attivo e politiche di voto, (b) numero di attività di impegno, (c) percentuale di voto, e (d) partecipazione alle assemblee degli azionisti (o di detentori di obbligazioni).

Nell'anno 2022, abbiamo interagito con 81 società a livello di Carmignac e 19 società a livello di Carmignac Patrimoine. Pertanto, abbiamo esercitato quasi il 100% dei voti per le società in cui detenevamo partecipazioni (98,21%).

Inoltre, per quanto riguarda il monitoraggio dei principali effetti negativi (*principal adverse impacts*– "PAI"), e conformemente all'allegato 1 del regolamento delegato (UE) 2022/1288, il fondo segue 16 indicatori ambientali e sociali obbligatori, e 2 indicatori facoltativi per dimostrare l'impatto degli investimenti sostenibili rispetto a questi indicatori: emissioni di gas a effetto serra (GHG), impronta di carbonio, intensità di GHG delle imprese beneficiarie degli investimenti, esposizione a imprese attive nel settore dei combustibili fossili, quota di consumo e produzione di energia non rinnovabile, intensità di consumo energetico per settore ad alto impatto climatico, attività che incidono negativamente sulle aree sensibili sotto il profilo della biodiversità, emissioni in acqua, rapporto tra rifiuti pericolosi e rifiuti radioattivi, uso e riciclaggio dell'acqua (scelta facoltativa), violazioni dei principi del Global Compact delle Nazioni Unite e delle linee guida dell'OCSE per le imprese multinazionali, mancanza di procedure e di meccanismi di conformità per monitorare la conformità ai principi del Global Compact delle Nazioni Unite e alle linee guida OCSE destinate alle imprese multinazionali, divario retributivo di genere non corretto, diversità di genere nel consiglio, esposizione ad armi controverse, eccesso di divario retributivo

a favore dell'amministratore delegato (scelta facoltativa). Gli emittenti sovrani sono soggetti a un monitoraggio delle violazioni sociali della loro intensità di GHG.

Di seguito si riporta l'andamento degli indicatori dei principali effetti negativi per il 2022, sulla base della media dei dati di fine trimestre, per le componenti azionaria e obbligazioni societarie del portafoglio:

Indicatori PAI	Sulla base dei dati forniti dalla società	Fondo	Copertura
Scope 1 del protocollo GHG	Emissioni di GHG Scope 1	345252,5	58%
Scope 2 del protocollo GHG	Emissioni di GHG Scope 2	59752,5	58%
Scope 3 del protocollo GHG	A decorrere dal 1° gennaio 2023, emissioni di GHG Scope 3	2762720	58%
Totale GHG	Emissioni totali di GHG	3167727,5	58%
Impronta di carbonio	Impronta di carbonio	399,07	58%
Livello di intensità di GHG	Intensità di GHG delle società	968,4025	58%
Esposizione a imprese attive nel settore dei combustibili fossili	Quota degli investimenti in imprese attive nel settore dei combustibili fossili	8%	58%
Quota di consumo di energia non rinnovabile	Quota di consumo di energia non rinnovabile delle imprese, proveniente da fonti di energia non rinnovabile rispetto a fonti di energia rinnovabile, espressa in percentuale	68%	58%
Quota di produzione di energia non rinnovabile	Quota di produzione di energia non rinnovabile delle imprese, proveniente da fonti di energia non rinnovabile rispetto a fonti di energia rinnovabile, espressa in percentuale	22%	58%
Intensità di consumo energetico per settore ad alto impatto climatico - Totale	Consumo energetico in GWh per milione di EUR di entrate delle imprese, per settore ad alto impatto climatico - Totale	0,345	58%
Intensità di consumo energetico per settore ad alto impatto climatico - NACE: settore A	Consumo energetico in GWh per milione di EUR di entrate delle imprese, per settore ad alto impatto climatico - NACE: settore A (Agricoltura, silvicoltura e pesca)	N/A	58%
Intensità di consumo energetico per settore ad alto impatto climatico - NACE: settore B	Consumo energetico in GWh per milione di EUR di entrate delle imprese, per settore ad alto impatto climatico - NACE: settore B (Attività estrattiva)	0,89	58%
Intensità di consumo energetico per settore ad alto impatto climatico - NACE: settore C	Consumo energetico in GWh per milione di EUR di entrate delle imprese, per settore ad alto impatto climatico - NACE: settore C (Attività manifatturiere)	0,2375	58%
Intensità di consumo energetico per settore ad alto impatto climatico - NACE: settore D	Consumo energetico in GWh per milione di EUR di entrate delle imprese, per settore ad alto impatto climatico - NACE: settore D (Fornitura di energia elettrica, gas, vapore e aria condizionata)	5,8075	58%
Intensità di consumo energetico per settore ad alto impatto climatico - NACE: settore E	Consumo energetico in GWh per milione di EUR di entrate delle imprese, per settore ad alto impatto climatico - NACE: settore E (Fornitura di acqua; reti fognarie, attività di trattamento dei rifiuti e risanamento)	N/A	58%
Intensità di consumo energetico per settore ad alto impatto climatico - NACE: settore F	Consumo energetico in GWh per milione di EUR di entrate delle imprese, per settore ad alto impatto climatico - NACE: settore F (Costruzioni)	N/A	58%
Intensità di consumo energetico per settore ad alto impatto climatico - NACE: settore G	Consumo energetico in GWh per milione di EUR di entrate delle imprese, per settore ad alto impatto climatico - NACE: settore G (Commercio all'ingrosso e al dettaglio; riparazione di autoveicoli e motocicli)	0,03	58%
Intensità di consumo energetico per settore ad alto impatto climatico - NACE: settore H	Consumo energetico in GWh per milione di EUR di entrate delle imprese, per settore ad alto impatto climatico - NACE: settore F (Trasporto e magazzinaggio)	1,7675	58%
Intensità di consumo energetico per settore ad alto impatto climatico - NACE: settore L	Consumo energetico in GWh per milione di EUR di entrate delle imprese, per settore ad alto impatto climatico - NACE: settore L (Attività immobiliari)	0,505	58%
Biodiversità	Quota di investimenti effettuati in imprese i cui siti/operazioni sono situati in aree sensibili dal punto di vista	1%	58%

	della biodiversità e le cui attività hanno un impatto negativo su tali aree		
Emissioni legate all'acqua	Tonnellate di emissioni in acqua generate dalle imprese per milione di EUR investito (valore espresso come media ponderata)	201,57	58%
Rifiuti pericolosi	Tonnellate di rifiuti pericolosi generati dalle imprese per milione di EUR investito (valore espresso come media ponderata)	118,265	58%
Uso e riciclo dell'acqua	Quantità media di acqua consumata e recuperata dalle imprese (in metri cubi) per milione di EUR di entrate	2982,885	58%
Violazioni dei principi del Global Compact delle Nazioni Unite e delle linee guida dell'Organizzazione per la cooperazione e lo sviluppo economico (OCSE) destinate alle imprese multinazionali	Quota di investimenti nelle imprese che sono state coinvolte in violazioni dei principi del Global Compact delle Nazioni Unite o delle linee guida OCSE destinate alle imprese multinazionali	1%	58%
Manca di procedure e di meccanismi di conformità per monitorare la conformità ai principi del Global Compact delle Nazioni Unite e alle linee guida OCSE destinate alle imprese multinazionali	Quota di investimenti nelle imprese che non dispongono di politiche per controllare il rispetto dei principi del Global Compact delle Nazioni Unite o delle linee guida OCSE destinate alle imprese multinazionali, o di meccanismi di trattamento dei reclami/delle denunce di violazioni dei principi del Global Compact delle Nazioni Unite o delle linee guida OCSE destinate alle imprese multinazionali	24%	58%
Divario retributivo di genere non corretto	Divario retributivo di genere medio non corretto nelle imprese	85%	58%
Diversità di genere nel consiglio di amministrazione	Rapporto medio tra donne e uomini nei consigli di amministrazione delle società	33%	58%
Esposizione ad armi controverse	Quota di investimenti nelle imprese coinvolte nella fabbricazione o nella vendita di armi controverse	0	58%
Eccesso di divario retributivo a favore degli amministratori delegati	Rapporto medio, all'interno delle imprese beneficiarie degli investimenti, tra la retribuzione totale annua della persona meglio remunerata e la retribuzione totale annua mediana di tutti i dipendenti (esclusa la persona meglio remunerata).	90,3	58%

● **...e rispetto ai periodi precedenti?**

Non pertinente.

● **Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha in parte realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?**

Il fondo investe almeno il 10% del patrimonio netto in azioni di società che generano almeno il 50% dei ricavi da beni e servizi legati ad attività commerciali che si allineano positivamente ad almeno uno dei 9 obiettivi di investimento sostenibile ("SDG") delle Nazioni Unite, su un totale di 17, selezionati per questo fondo: (1) sconfiggere la povertà; (2) sconfiggere la fame; (3) salute e benessere; (4) istruzione di qualità; (6) acqua pulita e servizi igienico-sanitari; (7) energia pulita e accessibile; (9) imprese, innovazione e infrastrutture; (11) città e comunità sostenibili; (12) consumo e produzione responsabili.

Un'impresa è considerata "allineata" quando genera il 50% o più dei suoi ricavi da attività che si ritiene contribuiscano a uno dei nove SDG summenzionati. Tali soglie del 50% rappresentano un'intenzionalità significativa dell'impresa rispetto all'attività contributrice e ai suoi progetti di crescita.

Al fine di determinare quali imprese sono allineate, la società di gestione ha identificato un solido sistema di classificazione delle imprese e ha mappato 1700 attività commerciali diverse. Inoltre, la società di gestione utilizza l'"SDG Compass", una risorsa creata dal GRI ("Global Reporting Initiative"), dal Global Compact delle Nazioni Unite e dal World Business Council for Sustainable Development, al fine di identificare le attività commerciali che contribuiscono a ciascun SDG. Inoltre, Carmignac ha creato dei "temi investibili" in funzione delle attività commerciali. Sulla base di tali temi, la società di gestione vaglia ciascuna attività commerciale nel sistema di classificazione, allineando le attività commerciali adatte ai "temi investibili" di Carmignac e utilizzando gli obiettivi SDG per verificare la loro adeguatezza. Una volta raggiunta la soglia del 50% di ricavi o di investimenti per un dato emittente, la ponderazione totale della partecipazione è considerata allineata.

In che modo gli investimenti sostenibili che il prodotto finanziario ha in parte realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?

Tutti gli investimenti del fondo (non solo gli investimenti sostenibili) sono esaminati per accertare la loro conformità alle norme globali in materia di protezione dell'ambiente, diritti umani, standard lavorativi e lotta alla corruzione, tramite uno screening delle controversie. In particolare, gli investimenti sono sottoposti a uno screening basato su salvaguardie minime, volto ad assicurare che le loro attività commerciali siano coerenti con le Linee guida dell'OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani.

Inoltre, il fondo assicura che tali attività non pregiudichino in misura significativa gli obiettivi ambientali.

L'attività di impegno in materia di comportamenti controversi mira a eliminare la violazione da parte di un'impresa dei Principi guida del Global Compact delle Nazioni Unite e/o dell'OCSE destinati alle imprese multinazionali e a predisporre dei sistemi di gestione adatti per impedire che una tale violazione si ripeta. Se l'attività di impegno non ha esito positivo, l'impresa è considerata esclusa. I casi di impegno rafforzato sono selezionati con cadenza trimestrale in base alla necessità di monitoraggio. L'enfasi posta sull'impegno può variare a seconda delle diverse esposizioni d'investimento.

In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?

Gli indicatori degli effetti negativi sono monitorati con cadenza trimestrale. Gli effetti negativi sono identificati secondo il loro grado di gravità. Previa discussione con il team di investimento interessato, viene stabilito un piano d'azione che comprende un calendario d'esecuzione.

Il dialogo con l'impresa rappresenta generalmente il piano d'azione privilegiato per influenzare la mitigazione degli effetti negativi da parte dell'impresa interessata, nel qual caso l'impegno dell'impresa viene incluso nel piano di impegno trimestrale di Carmignac, conformemente alla politica di impegno di Carmignac. È possibile prospettare un disinvestimento con una strategia di uscita predeterminata entro i limiti di tale politica.

Gli investimenti sostenibili sono allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:

La società di gestione applica un processo di screening delle controversie relative alle Linee guida dell'OCSE destinate alle imprese multinazionali e ai Principi guida delle Nazioni Unite su imprese e diritti umani per tutti gli investimenti nel fondo.

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

La società di gestione agisce conformemente ai principi del Global Compact delle Nazioni Unite (UNGC), alla Dichiarazione dell'Organizzazione internazionale del lavoro (OIL) sui principi e i diritti fondamentali sul luogo di lavoro e alle Linee guida dell'Organizzazione per la cooperazione e lo sviluppo economico (OCSE) che permettono alle imprese multinazionali di valutare le norme a loro applicabili, inclusi a titolo esemplificativo le violazioni dei diritti umani, il diritto del lavoro e le prassi standard legate al clima.

Il fondo applica un processo di screening delle controversie per tutti i suoi investimenti. Sono escluse le imprese colpevoli di controversie importanti contro l'ambiente, i diritti umani e il diritto internazionale del lavoro, per citare le principali violazioni. Tale processo di screening fonda l'identificazione delle controversie sulle Linee guida dell'OCSE per le imprese e sui principi del Global Compact delle Nazioni Unite ed è comunemente denominato "screening normativo e include uno screening restrittivo controllato e misurato tramite il sistema ESG proprietario di Carmignac "START". Si applicano un rating e una ricerca delle controversie societarie utilizzando i dati estratti da ISS ESG come database di ricerca.

La tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'UE.

Il principio "non arrecare un danno significativo" si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante del presente prodotto finanziario non tengono conto dei criteri dell'UE per le attività economiche ecosostenibili.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

La società di gestione si è impegnata ad applicare le norme tecniche di regolamentazione (denominate "NTR") di cui all'allegato 1 del regolamento delegato (UE) 2022/1288 che qualificano 16 indicatori ambientali e sociali obbligatori, e 2 indicatori facoltativi per dimostrare l'impatto degli investimenti sostenibili rispetto a questi indicatori: emissioni di gas a effetto serra (GHG), impronta di carbonio, intensità di GHG delle imprese beneficiarie degli investimenti, esposizione a imprese attive nel settore dei combustibili fossili, quota di consumo e produzione di energia non rinnovabile, intensità di consumo energetico per settore ad alto impatto climatico, attività che incidono negativamente sulle aree sensibili sotto il profilo della biodiversità, emissioni in acqua, rapporto tra rifiuti pericolosi e rifiuti radioattivi, uso e riciclaggio dell'acqua (scelta facoltativa), violazioni dei principi del Global Compact delle Nazioni Unite e delle linee guida dell'OCSE per le imprese multinazionali, mancanza di procedure e di meccanismi di conformità per monitorare la conformità ai principi del Global Compact delle Nazioni Unite e alle linee guida OCSE destinate alle imprese multinazionali, divario retributivo di genere non corretto, diversità di genere nel consiglio, esposizione ad armi controverse, eccesso di divario retributivo a favore dell'amministratore delegato (scelta facoltativa). Gli emittenti sovrani sono soggetti a un monitoraggio delle violazioni sociali della loro intensità di GHG.

Nell'ambito della sua strategia PAI, Carmignac identifica le società che hanno sottoperformato il benchmark in termini di indicatori PAI. Il nostro fornitore di dati terzo, Impact Cubed, ci permette di monitorare l'impatto dei nostri fondi per ogni indicatore PAI.

L'identificazione delle aziende che hanno sottoperformato l'indice in termini di PAI ci permette di avviare un dialogo con le imprese per garantire che si impegnino a ridurre il proprio impatto. Abbiamo identificato Ryanair come uno dei principali responsabili della sottoperformance di

Carmignac Patrimoine per quanto riguarda l'intensità del consumo di energia. Di conseguenza, abbiamo incontrato la società nel 2022. Poiché Ryanair è un'azienda ad alta intensità di carbonio, era importante ricollegarsi agli impegni in ambito climatico, ma anche a qualsiasi altro sviluppo in campo ESG. La compagnia aerea ha recentemente annunciato il suo piano d'azione per l'azzeramento delle emissioni entro il 2050 che, dopo la nostra discussione, sembra particolarmente concreto. Le iniziative di decarbonizzazione dell'azienda saranno graduali, ma i piani a breve e medio termine sono in linea con le nostre aspettative.

Continueremo a dialogare con Ryanair per monitorare questo PAI in particolare e faremo in modo che vengano attuate misure adeguate.

Quali sono stati i principali investimenti di questo prodotto finanziario?

Di seguito si riportano i 15 investimenti principali del 2022, sulla base della media dei dati di fine mese per le componenti azionaria e obbligazionaria del portafoglio:

Investimenti di maggiore entità	Settore	% di attivi	Paese
HERMES INTERNATIONAL	Beni voluttuari	1.77%	Francia
UNITED STATES 1.88% 15/11/2051	Titoli di Stato	1.62%	USA
SCHLUMBERGER	Energia	1.58%	USA
MICROSOFT CORP	Informatica	1.45%	USA
NOVO NORDISK AS	Salute	1.31%	Danimarca
ELI LILLY & CO.	Salute	1.29%	USA
AMAZON.COM INC	Beni voluttuari	1.19%	USA
T-MOBILE US INC	Telecomunicazioni	1.13%	USA
DANAHER CORP	Salute	1.12%	USA
ESSILOR INTL	Beni voluttuari	1.05%	Francia
PALO ALTO NETWORKS INC	Informatica	0.99%	USA
INTERCONTINENTAL EXCHANGE	Finanza	0.99%	USA
JD.COM INC	Beni voluttuari Industria	0.97%	Cina
AIRBUS GROUP	Materiali	0.96%	Francia
AGNICO EAGLE MINES		0.92%	Canada

Qual è stata la quota degli investimenti in materia di sostenibilità?

Al 30 dicembre 2022, il 24,7% del patrimonio netto del fondo era dedicato ad investimenti sostenibili (allineati con obiettivi di sviluppo sostenibile).

Qual è stata l'allocazione degli attivi?

Almeno il 90% degli investimenti del fondo è concepito per soddisfare le caratteristiche ambientali o sociali che promuove, conformemente agli elementi vincolanti della strategia di investimento. Al 30/12/2022, il tasso di copertura dell'analisi ESG era pari al 99,4% del portafoglio (esclusi liquidità e derivati).

Quota minima di investimenti sostenibili:

Il fondo effettua investimenti sostenibili dal momento che investe almeno il 10% del patrimonio netto in azioni di società che generano almeno il 50% dei ricavi da beni e servizi legati ad attività commerciali che si allineano positivamente ad almeno uno dei 9 obiettivi di investimento sostenibile ("SDG") delle Nazioni Unite, su un totale di 17. Al di fuori di tale minimo di investimenti sostenibili del 10% del patrimonio netto, il fondo potrà prendere in considerazione imprese in cui meno del 50% dei ricavi è allineato agli SDG delle Nazioni Unite o anche imprese in cui nessun ricavo soddisfa tale criterio. Al 30 dicembre 2022, il 24,7% del patrimonio netto del fondo era dedicato ad investimenti sostenibili (allineati con obiettivi di sviluppo sostenibile).

A partire dal 1° gennaio 2023, i livelli minimi di investimenti che promuovono caratteristiche A/S, con obiettivi ambientali e sociali sono rispettivamente pari all'1% e al 3% del patrimonio netto del Fondo. Al 30 dicembre 2022, tali quote erano pari rispettivamente all'8,5% e al 16,1% del patrimonio netto del Fondo.

L'elenco comprende gli investimenti che costituiscono la quota maggiore di investimenti del prodotto finanziario durante il periodo di riferimento, ossia:

L'allocazione degli attivi descrive la quota di investimenti in attivi specifici.

Quota di #2 Altri investimenti:

Nel momento in cui gli investimenti si collocano al di fuori del limite minimo del 90% che integra le caratteristiche ambientali e sociali, è possibile che l'analisi ESG non sia stata effettuata. Al 30/12/2022, tale quota era pari allo 0,6% del patrimonio netto del Fondo.

Le attività allineate alla tassonomia sono espresse in percentuale di:

- **fatturato**: quota di entrate da attività verdi delle imprese beneficiarie degli investimenti;
- **spese in conto capitale (CapEx)**: investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, ad es. per la transizione verso un'economia verde
- **spese operative (OpEx)**: attività operative verdi delle imprese beneficiarie degli investimenti

#1 Allineati a caratteristiche A/S: comprende gli investimenti del prodotto finanziario utilizzati per rispettare le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

#2 Altri: comprende gli investimenti rimanenti del prodotto finanziario che non sono allineati alle caratteristiche ambientali o sociali, né sono considerati investimenti sostenibili.

La categoria **#1 Allineati a caratteristiche A/S** comprende:

- La sottocategoria **#1A Sostenibili**, che contempla gli investimenti sostenibili dal punto di vista ambientale e sociale.
- La sottocategoria **#1B Altre caratteristiche A/S**, che contempla gli investimenti allineati alle caratteristiche ambientali o sociali che non sono considerati investimenti sostenibili.

● In quali settori economici sono stati effettuati gli investimenti?

Di seguito si riportano i principali settori economici in cui abbiamo realizzato investimenti nel 2022, sulla base della media dei dati di fine mese, per la componente azionaria del portafoglio:

Settore economico	% di attivi
Salute	22.2%
Beni voluttuari	20.4%
Informatica	13.1%
Materiali	9.0%
Industria	7.4%
Beni di consumo non ciclici	7.3%
Telecomunicazioni	6.9%
Finanza	6.7%
Energia	5.7%
Impianti e servizi legati al settore Petrolio e gas	4.04%
Società integrate nel settore Petrolio e gas	1.66%
Servizi di pubblica utilità	1.3%
Immobiliare	0.10%

*Fonti: Carmignac, al 30/12/2022

Di seguito si riportano i principali settori economici in cui abbiamo realizzato investimenti nel 2022, sulla base della media dei dati di fine mese, per la componente obbligazionaria del portafoglio:

Settore economico	% di attivi
Energia	31.59%
Impianti e servizi legati al settore Petrolio e gas	21.50%
Esplorazione e produzione di petrolio e gas	5.18%
Società integrate nel settore Petrolio e gas	2.69%
Raffinazione e commercializzazione di petrolio e gas	1.62%
Trivellazione di petrolio e gas	0.61%
Finanza	30.83%
Telecomunicazioni	10.28%
Beni voluttuari	6.59%
Immobiliare	6.20%
Salute	5.88%
Industria	3.60%
Informatica	2.47%
Materiali	1.24%
Servizi di pubblica utilità	1.14%
Beni di consumo non ciclici	0.17%

*Fonti: Carmignac, al 30/12/2022

In quale misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Il fondo ha un obiettivo ambientale legato agli Obiettivi di sviluppo sostenibile e non alla Tassonomia europea. Al 30/12/2022, il suo allineamento alla Tassonomia UE era del 2,51%.

Il prodotto finanziario ha investito in attività connesse al gas fossile e/o all'energia nucleare che erano conformi alla tassonomia dell'UE1?

Sì:

Gas fossile

Energia nucleare

No:

I grafici che seguono mostrano in verde la percentuale di investimenti che erano allineati alla tassonomia dell'UE. Poiché non esiste una metodologia adeguata per determinare l'allineamento delle obbligazioni sovrane alla tassonomia, il primo grafico mostra l'allineamento alla tassonomia in relazione a tutti gli investimenti del prodotto finanziario comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.*

* Ai fini dei grafici di cui sopra, per "obbligazioni sovrane" si intendono tutte le esposizioni sovrane.

¹ Le attività connesse al gas fossile e/o all'energia nucleare sono conformi alla tassonomia dell'UE solo se contribuiscono all'azione di contenimento dei cambiamenti climatici ("mitigazione dei cambiamenti climatici") e non arrecano un danno significativo a nessuno degli obiettivi della tassonomia dell'UE - cfr. nota esplicativa sul margine sinistro. I criteri completi riguardanti le attività economiche connesse al gas fossile e all'energia nucleare che sono conformi alla tassonomia dell'UE sono stabiliti nel regolamento delegato (UE) 2022/1214 della Commissione.

● **Qual era la quota degli investimenti effettuati in attività di transizione e abilitanti?**

Non pertinente.

● **Come si rapporta la percentuale di investimenti allineati alla tassonomia dell'UE con i precedenti periodi di riferimento?**

Non pertinente.

● **Qual era la quota di investimenti sostenibili con un obiettivo ambientale che non erano allineati alla tassonomia dell'UE?**

Il livello di investimenti sostenibili con un obiettivo ambientale ma non allineati alla tassonomia dell'UE era pari all'8,5% del patrimonio netto.

● **Qual era la quota di investimenti socialmente sostenibili?**

Al 30/12/2022 il livello di investimenti sostenibili con un obiettivo sociale era pari al 16,1% del patrimonio netto.

● **Quali investimenti erano compresi nella categoria "Altri" e qual era il loro scopo? Esistevano garanzie minime di salvaguardia ambientale o sociale?**

La quota restante del portafoglio (ossia quella al di fuori della quota minima del 90%) può anch'essa promuovere caratteristiche ambientali e sociali, ma non è sistematicamente coperta dall'analisi ESG. Tali attivi possono comprendere strumenti derivati o titoli che sono stati oggetto di un'introduzione in borsa e la cui analisi ESG può essere effettuata successivamente all'acquisizione del suddetto strumento finanziario da parte del fondo. La liquidità (e strumenti equivalenti) e i derivati (utilizzati con finalità di copertura o di esposizione) sono anch'essi inclusi in "#2 Altri".

L'insieme degli attivi del fondo (esclusi liquidità e strumenti derivati) prevede l'applicazione di esclusioni e filtri settoriali e normativi negativi che garantiscono un minimo di garanzie ambientali e sociali.

Inoltre, all'insieme degli attivi del fondo si applicano il processo di esclusione che assicura il rispetto del principio di non causare danni significativi, l'assenza di danni significativi e il monitoraggio degli effetti negativi.

A livello di emittenti (azioni e obbligazioni societarie), gli investimenti che non si configurano come investimenti sostenibili vengono esaminati per assicurarsi che rispettino le norme globali in materia di protezione dell'ambiente, diritti umani, standard lavorativi e lotta alla corruzione, tramite uno screening delle controversie (approccio "basato su norme"). Questi investimenti sono sottoposti a uno screening basato su salvaguardie minime, volto ad assicurare che le loro attività commerciali siano coerenti con le Linee guida dell'OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani.

 Sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili conformemente alla tassonomia dell'UE.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Nel 2022 Carmignac ha adottato le seguenti azioni per sostenere il processo di investimento nel rispetto delle caratteristiche ambientali e sociali:

Pilastro 1: Integrazione ESG:

- Aggiunta di ulteriori indicatori sociali (dati sulla soddisfazione dei dipendenti e dei consumatori) al processo di rating ESG esclusivo di START, per informare gli analisti sugli aspetti rilevanti che possono influire sulla tesi d'investimento.
- Miglioramento della capacità di monitoraggio di green bond, social bond, sustainable bond e obbligazioni legate alla sostenibilità per facilitare il monitoraggio e la redazione di relazioni future all'interno del sistema Global Portfolio Monitoring tramite un dashboard dei gestori di portafoglio sulle posizioni dei fondi.
- Sviluppo di modelli di rating ESG proprietari per il debito sovrano (Impact e Global) nell'interfaccia START, migliorando l'efficienza e il database ESG a disposizione dei team di gestione.
- Integrazione del monitoraggio dei principali effetti negativi e definizione di una politica volta ad integrare queste informazioni sugli indicatori ambientali, sociali e dei diritti umani nella logica di investimento.
- Maggiore trasparenza e monitoraggio automatizzato del processo di riduzione dell'universo.
- Aggiunta al sistema ESG proprietario di START di una mappatura dell'allineamento agli Obiettivi di sviluppo sostenibile delle Nazioni Unite, misurata in % del fatturato per ogni società in cui sono presenti collegamenti tra le attività commerciali direttamente correlate ai nove SDG da noi selezionati e in cui è possibile investire.
- Condivisione del monitoraggio settimanale della percentuale minima di investimenti sostenibili con i team di investimento nell'ambito del monitoraggio ESG interno.

Pilastro 2: Esclusioni

- Automatizzazione del processo di revisione trimestrale dell'elenco per identificare le società legate a controversie o che potrebbero essere soggette a esclusioni settoriali rigide e al processo di riduzione dell'universo, se applicabile.

Pilastro 3: Voto ed engagement

- Introduzione di un approccio di "voto chiave" al fine di dare la priorità alle società identificate con l'obiettivo di fornire raccomandazioni di voto più mirate e avviare potenziali attività di engagement legate alla decisione di voto, in particolare i voti "Say on climate".
- Redazione di bollettini informativi trimestrali sulla gestione responsabile per dimostrare pubblicamente ai clienti come promuoviamo l'azionariato attivo.
- Proseguimento del nostro piano trimestrale di engagement con le aziende, di cui quasi il 58% ha riguardato questioni ambientali, sociali o di governance.

Per quanto riguarda più specificamente le attività di engagement, la nostra responsabilità fiduciaria implica il pieno esercizio dei nostri diritti di azionisti e l'engagement con le società in cui investiamo. Il dialogo è condotto dagli analisti finanziari, dai gestori di portafoglio e dal team ESG. Crediamo che le nostre attività di engagement permettano di comprendere meglio come le società gestiscono i rischi extrafinanziari e migliorano notevolmente il loro profilo ESG, garantendo al contempo una creazione di valore a lungo termine per i nostri clienti, la società e l'ambiente. Le nostre iniziative di engagement possono riguardare una delle cinque considerazioni seguenti: 1) rischi ESG, 2) un tema ESG, 3) un impatto desiderato, 4) un comportamento controverso o 5) una decisione di voto a un'assemblea generale. Carmignac può collaborare con altri azionisti e detentori di obbligazioni quando ciò permette di influenzare le azioni e la governance delle società presenti in portafoglio. Al fine di assicurare che l'azienda identifichi, preveda e gestisca adeguatamente qualsiasi situazione di conflitto di interessi

potenziale o confermato, Carmignac ha implementato e mantiene aggiornate politiche e direttive.

La nostra responsabilità fiduciaria implica il pieno esercizio dei nostri diritti di azionisti e l'engagement con le società in cui investiamo. Il dialogo è assicurato dagli analisti finanziari, dai gestori di portafoglio e dal team ESG. Crediamo che le nostre attività di engagement portino a una migliore comprensione di come le società gestiscono i rischi extrafinanziari e migliorano in misura significativa il loro profilo ESG, offrendo al contempo una creazione di valore a lungo termine per i nostri clienti, la società e l'ambiente. Le nostre attività di engagement possono essere di 5 tipi: 1) legate ai rischi ESG, 2) legate a un tema ESG, 3) legate a un impatto desiderato, 4) dovute a un comportamento controverso o 5) associate a una decisione di voto a un'Assemblea generale. Carmignac può collaborare con altri azionisti e detentori di obbligazioni quando ciò può essere vantaggioso ai fini di engagement per influenzare le azioni e la governance delle società presenti in portafoglio. Al fine di assicurare che l'azienda identifichi, anticipi e gestisca adeguatamente qualsiasi situazione di conflitto di interessi potenziale o confermato, Carmignac ha implementato e mantiene aggiornate politiche e linee guida. Per ulteriori informazioni sulle nostre politiche di engagement si rimanda al nostro sito web.

Nell'anno 2022, abbiamo interagito con 81 società a livello di Carmignac e 19 società a livello di Carmignac Portfolio Patrimoine. Ad esempio, ci siamo confrontati con diverse imprese, in particolare Essilor, L'Oreal e TEVA Pharmaceuticals.

Dal 2020 intratteniamo un dialogo regolare con TEVA PHARMACEUTICALS, in particolare in ragione del suo coinvolgimento in controversie a livello settoriale. Nell'ottobre 2022 abbiamo discusso del recente accordo dell'emittente, in relazione alla crisi degli oppioidi con cui è alle prese l'intero settore, in base al quale dovrà pagare un importo di oltre 4 miliardi di dollari su un periodo di 13 anni.

L'accordo sulla questione degli oppioidi è stato raggiunto, ma altre controversie sono ancora in corso. Pertanto, ci aspettiamo che l'emittente rimanga coinvolto in contenziosi in futuro. Notiamo inoltre che i suoi farmaci a basso costo apportano benefici sociali, il che li rende più accessibili.

A seguito della discussione con l'emittente, l'analista ESG ha ritenuto che il suo rating ESG Start (B) rimanesse appropriato e non sono state apportate modifiche. Continuiamo a monitorare le risposte dell'emittente alle controversie in corso e il nostro engagement con la società in qualità di investitori obbligazionari.

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento sostenibile?

Non pertinente.

Per quali aspetti l'indice di riferimento differisce da un indice generale di mercato?

Non pertinente.

Qual è stata la prestazione di questo prodotto finanziario in relazione agli indicatori di sostenibilità volti a determinare l'allineamento dell'indice di riferimento all'obiettivo di investimento sostenibile?

Non pertinente.

Gli **indici di riferimento** sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

- **Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?**

Non pertinente.

- **Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice generale di mercato?**

Non pertinente.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: **CARMIGNAC PORTFOLIO EMERGING PATRIMOINE** Legal entity identifier: **5493009DHKYYWDKLT418**

Environmental and/or social characteristics

1. Did this financial product have a sustainable investment objective?

Yes

No

It made a minimum of **sustainable investments with an environmental objective**: ___%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ___%

2. It **promoted Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it had a proportion of 10 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Sub-Fund has promoted environmental and social characteristics by applying best-in-universe and best-efforts approaches to invest in a sustainable manner by combining a four-pillar strategy: 1) ESG integration, 2) Negative screening, 3) Positive Screening 4) Active Stewardship... Secondly, it has partially contributed positively to the environment and society through a UN SDGs approach.

No breach of environmental and social characteristics promoted have been identified during the year.

● How did the sustainability indicators perform?

This Sub-Fund has used the following sustainability indicators of its four pillar approach to measure the attainment of each of the environmental or social characteristics promoted :

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

1) **The coverage rate of ESG analysis:** ESG integration through ESG scoring using Carmignac’s proprietary ESG platform “START” (System for Tracking and Analysis of a Responsible Trajectory) has been applied to more than 90% of issuers. As of 30/12/2022, the coverage rate of ESG analysis was of 100% of issuers.

2) **Amount the universe is reduced by** (minimum 20% of the equities and corporate bonds section of the portfolio): Negative screening and exclusions of unsustainable activities and practices reflected in low ESG scores from START, MSCI or ISS ESG scores have been performed based on the following indicators : (a) practices that are harmful to society and the environment, (b) controversies against the OECD business guidelines and UN Global compact principles, (c) controversial weapons (d) coal mining activity, (d) power companies that have not Paris alignment objectives in place, (f) companies involved in tobacco production, (g) companies involved in adult entertainment. As of 30/12/2022, the universe was reduced by 67.61% (for the equity section) and 41.03% (for the corporate bonds section) of the portfolio.

3) **Positive screening** using an SDG Approach: the Sub-Fund has invested through the year in companies that derive more than 50% of their revenue from business activities that are positively aligned to one of the nine SDGs selected by Carmignac. As of 30/12/2022, the Sub-Fund had 30.86% of the portfolio invested in sustainable investments as per our definition above mentioned.

4) **Active stewardship:** Environmental and social related company engagements leading to improvement in companies sustainability policies have been measured by the following indicators: (a) level of active engagement and voting policies, (b) number of engagements, (c) rate of voting and (d) participation at shareholder and bondholder meetings). In 2022, we engaged with 81 companies at Carmignac level, and 8 companies at the Sub-Fund level. At Sub-Fund level, we voted for close to 100% of the meetings where we have shareholder or bondholder rights to exercise (98%).

In addition, Principal Adverse Impact (PAI) monitoring : the Sub-Fund has applied the SFDR level II 2019/2088 Regulatory Technical Standards (RTS) annex 1 whereby 16 mandatory and 2 optional environmental and social indicators have been monitored to show the impact of such sustainable investments against these indicators : Greenhouse gas emissions, Carbon footprint, GHG intensity (investee companies), Exposure to companies in fossil fuel sector, Non-renewable energy consumption and production, Energy consumption intensity per high-impact climate sector, Activities negatively affecting biodiversity-sensitive areas, Emissions to water, Hazardous waste ratio, Water usage and recycling (optional choice), Violations of UN Global Compact principles or OECD Guidelines for Multinational Enterprises, Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact and OECD Guidelines for Multinational Enterprises, Unadjusted gender pay gap (optional choice), Board gender diversity, Exposure to controversial weapons, Excessive CEO pay ratio. Sovereign bond issuers are monitored for Social violations and GHG intensity indicators.

Please find below the performance of the principal adverse impacts indicators for the year 2022, based on average quarter-end data, for the equity and corporate bond portions of the portfolio:

PAI Indicators	Based on company reported	Sub-Fund	Coverage
GHG Scope 1	Scope 1 GHG emissions	7100	48%
GHG Scope 2	Scope 2 GHG emissions	3252,5	48%
GHG Scope 3	From 1 January 2023, Scope 3 GHG emissions	66257,5	48%
Total GHG	Total GHG emissions	76610	48%
Carbon footprint	Carbon footprint	205,0175	48%
GHG intensity	GHG intensity of investee companies	594,9325	48%
Exposure to fossil fuels	Share of investments in companies active in the fossil fuel sector	3%	48%
Non-renewable energy consumption	Share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage	66%	48%
Non-renewable energy production	Share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage	100%	48%
Energy consumptionintensity - Total	Energy consumption in GWh per million EUR of revenue of investee companies - Total	0,315	48%

Energy consumption intensity - NACE SectorA	Energy consumption in GWh per million EUR of revenue of investee companies - NACE Sector A(Agriculture, forestry and fishing)	N/A	48%
Energy consumption intensity - NACE SectorB	Energy consumption in GWh per million EUR of revenue of investee companies - NACE Sector B (Mining and quarrying)	1,37	48%
Energy consumption intensity - NACE SectorC	Energy consumption in GWh per million EUR of revenue of investee companies - NACE Sector C (Manufacturing)	1,035	48%
Energy consumption intensity - NACE Sector D	Energy consumption in GWh per million EUR of revenue of investee companies - NACE Sector D (Electricity, gas, steam and air conditioning supply)	1,56	48%
Energy consumption intensity - NACE Sector E	Energy consumption in GWh per million EUR of revenue of investee companies - NACE Sector E (Water supply; sewerage; waste management and remediation activities)	N/A	48%
Energy consumption intensity - NACE Sector F	Energy consumption in GWh per million EUR of revenue of investee companies - NACE Sector F (Construction)	N/A	48%
Energy consumption intensity - NACE Sector G	Energy consumption in GWh per million EUR of revenue of investee companies - NACE Sector G (Wholesale and retail trade; repair of motor vehicles and motorcycles)	0,0275	48%
Energy consumption intensity - NACE SectorH	Energy consumption in GWh per million EUR of revenue of investee companies - NACE Sector H (Transporting and storage)	0,1825	48%
Energy consumption intensity - NACE Sector L	Energy consumption in GWh per million EUR of revenue of investee companies - NACE Sector L (Real estate activities)	0,0275	48%
Biodiversity	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those areas	6%	48%
Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	1105,475	48%
Hazardous waste	Tonnes of hazardous waste generated by investee companies per million EUR invested, expressed as a weighted average	11,455	48%
Water usage and recycling	Average amount of water consumed and reclaimed by the investee companies (in cubic meters) per million EUR of revenue of investee companies	8833,46	48%
Violations of UNGC/OECD	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	1%	48%
Processes to monitor UNGC / OECD compliance	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance /complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	30%	48%
Gender pay gap	Average unadjusted gender pay gap of investee companies	82%	48%
Board gender diversity	Average ratio of female to male board members in investee companies	18%	48%
Controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0%	48%
Excessive CEO pay ratio	Average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest-compensated individual)	67,3575	48%

● **...and compared to previous periods?**

Not applicable.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The Sub-Fund makes sustainable investments whereby a minimum of 10% of the Sub-Fund's net assets are invested in shares of companies that derive at least 50% of their revenue from goods and services in relation to business activities which align positively with one of the following 9 out of 17 United Nations Sustainable Development Goals ("the Sustainable Development Goals") selected for this Sub-Fund: (1) No Poverty, (2) No Hunger, (3) Good Health and Well Being, (4) Quality Education, (6) Clean Water, (7) Affordable and Clean Energy, (9) Industry, Innovation and Infrastructure, (11) Sustainable Cities and Communities (12) Responsible Consumption and Production. For further information on the United Nations Sustainable Development Goals, please refer to <https://sdgs.un.org/goals>.

A company is considered 'aligned' when over 50% of their revenues come from activities which are deemed to contribute to one of the aforementioned nine UN SDGs. These 50% thresholds represent a significant intentionality of the company in regards to the contributing activity and its plans for growth.

In order to determine which companies are aligned, we have identified a robust business classification system and mapped 1700 different business activities. In addition, we have used the SDG Compass, a resource created by GRI, the UN Global Compact and the World Business Council for Sustainable Development to identify business activities which contributed to each SDG. In addition, we created Carmignac 'investable themes' based upon the business activities. Based on these themes, we have filtered through each business activity in the classification system, aligning the appropriate business activities with Carmignac's 'investable themes' and using the SDG targets to verify suitability. This was reviewed by members of the Responsible Investment (RI) and Investment team. Once the the 50% revenue threshold is met, the full weight of the holding is considered aligned.

As of 30/12/2022, the Sub-Fund had 30.86% of the portfolio's net assets invested in sustainable investments as per our definition above mentioned.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

All of the the Sub-Fund's investments (not only the sustainable investments) were examined for adherence to global norms on environmental protection, human rights, labor standards and anti-corruption, through controversy screening. More precisely, the investments have been subject to a screening of minimum safeguards to ensure that their business activities are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

Additionally, the Sub-Fund ensured that such activities did not significantly harm the environmental objectives.

Controversial behaviours engagement aimed at eliminating a company's breach of the UNGC and/ or OECD Guidelines for Multinational Enterprises and installing proper management systems to prevent such a breach from recurring. If engagement was unsuccessful, the company has been considered for exclusion. Enhanced engagement cases have been selected quarterly depending on the need for a follow-up. Engagement focus can differ between various investment exposures.

How were the indicators for adverse impacts on sustainability factors taken into account?

According to Carmignac approach defined, the Principal Adverse Impact indicators were monitored on a quarterly basis. Adverse impacts are identified for their degree of severity. After internal discussion an action plan is established including a timeline for execution. Company dialogue is usually the preferred course of action to influence the company's mitigation of adverse impacts, in which case the company engagement is included in the quarterly Carmignac Engagement plan according to the Carmignac Shareholder Engagement policy. Disinvestment may be considered with a predetermined exit strategy within the confines of this aforementioned policy.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Carmignac applies a controversy screening process on OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights for all its investments across all Sub-funds.

Carmignac acts in accordance with the United Nations Global Compact (UNGC) principles, the International Labour Organization (ILO) Declaration on Fundamental Principles and Rights at Work, and the Organisation for Economic Co-operation and Development (OECD) guidelines for multinational enterprises to assess companies' norms, including but not limited to human rights abuses, labour laws and standard climate related practices.

This Sub-Fund applies a controversy screening process for all of its investments. Companies that have committed significant controversies against the environment, human rights and international labour laws to name the key infractions are excluded. This screening process bases the identification of controversies on the OECD Business Guidelines and UN Global compact principles and is commonly called norms-based screening, integrating a restrictive screening monitored and measured through Carmignac's proprietary ESG system START. A company controversy scoring and research is applied using data extracted from ISS ESG as the research data base.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Carmignac has committed to apply the SFDR level II 2019/2088 Regulatory Technical Standards (RTS) annex 1 whereby 16 mandatory and 2 optional environmental and social indicators will be monitored to show the impact of such sustainable investments against these indicators: Greenhouse gas emissions, Carbon footprint, GHG intensity (investee companies), Exposure to companies in fossil fuel sector, Non-renewable energy consumption and production, Energy consumption intensity per high-impact climate sector, Activities negatively affecting biodiversity-sensitive areas, Emissions to water, Hazardous waste ratio, Water usage and recycling, Violations of UN Global Compact principles or OECD Guidelines for Multinational Enterprises, Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact and OECD Guidelines for Multinational Enterprises, Unadjusted gender pay gap, Board gender diversity, Exposure to controversial weapons, Excessive CEO pay ratio. In addition and where applicable, sovereign bond indicators: social violence and GHG intensity can also be monitored.

As part of its PAI strategy Carmignac identifies companies that underperform the benchmark in terms of PAI Indicators. Our third party data provider Impact Cubed enables us to monitor the impact of our funds for each PAI.

Identifying outliers for each PAI indicator enables us to engage with companies in order to ensure they are committed to reducing their impact. We identified that ENI was one of the main contributors to the underperformance of Carmignac Portfolio Emerging Patrimoine for the Water Usage and Recycling PAI Indicator. More generally, as one of our largest holdings in our FI books, we felt it was important

to organise a call with ENI. The points of discussion were the controversy relating to oil spills in Nigeria, their renewable rollout, and their progress towards their Net Zero 2050 target. Given that this engagement was not specifically focused on the Water Usage and Recycling PAI Indicator we will consider a follow-up engagement with ENI on this PAI in 2023 and make sure that appropriate measures are being implemented.

What were the top investments of this financial product?

Please find below the average top investments based on 12 month end data for 2022 for the equity and bonds sections of the portfolio :

Larger investments	Sector	% Assets	Country
SAMSUNG ELECTRONICS	Information Technology	6.43%	South Korea
PEMEX 4.75% 26/02/2029	Energy	5.60%	Mexico
CHILE 6.0% 01/01/2043	Government bonds	2.61%	Chile
ROMANIA 4.63% 03/04/2049	Government bonds	2.54%	Romania
DOMINICAN REP 5.88% 30/01/2060	Government bonds	2.36%	Dominican Republic
CZECH REPUBLI 1.50% 24/04/2040	Government bonds	2.23%	Czech Republic
BENIN 4.88% 19/01/2032	Government bonds	1.90%	Benin
HUNGARY 3.00% 25/04/2041	Government bonds	1.79%	Hungary
TAIWAN SEMICONDUCTOR	Information Technology	1.66%	Taiwan
BANQUE OUEST 2.75% 22/01/2033	Government bonds	1.63%	Sovereign
ROMANIA 2.88% 13/04/2042	Government Bonds	1.60%	Romania
PETROLEOS MEXICANOS 6.95% 28/07/2059	Energy	1.40%	Mexico
LG CHEM	Matériaux	1.31%	South Korea
HYUNDAI MOTOR	Consumer Discretionary	1.27%	South Korea
GRUPO BANORTE	Financials	1.27%	Mexico

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:

What was the proportion of sustainability-related investments?

As of 30/12/2022, the Sub-Fund had 30.86% of the portfolio's net assets invested in sustainable investments as per our definition above mentioned.

● What was the asset allocation?

A minimum proportion of 90% of the investments of this Sub-Fund is used to meet the environmental or social characteristics promoted by the financial product in accordance with the binding elements of the investment strategy. As of 30/12/2022, 100% of issuers have been covered by ESG analysis thus 100% of issuers were aligned with this E/S characteristics.

The minimum proportion of sustainable investment was 10%, a limit which was respected. As of 30/12/2022, the Sub-Fund had 30.86% of the portfolio invested in sustainable investments as per our definition above mentioned.

In addition, the minimum levels of sustainable investments with environmental and social objectives will be respectively 1% and 3% of the Sub-Fund's net assets and applied from 1 January 2023. On the 30/12/2022, 12.9% of the Sub-Fund's net assets are invested in sustainable investments with environmental objectives, and 18% in sustainable investment with social objectives.

The #2 Other investments (in additional to cash and derivatives which may be used for hedging purposes, if applicable) include equity, corporate bonds or sovereign bonds investments which are made strictly in accordance with the Sub-Fund's investment strategy. These instruments are not used to achieve the environmental or social characteristics promoted by the Sub-Fund and may not have been covered by ESG analysis.

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **In which economic sectors were the investments made?**

Please find below the average top sectors based on 12 month end data for 2022, for the corporate bonds section of the portfolio :

Larger economic sectors	% Assets
Energy	45.05%
<i>Oil & Gas - Equipment & Services</i>	30.82%
<i>Oil & Gas - Exploration&Product.</i>	10.55%
<i>Oil & Gas- Refining & Marketing</i>	2.36%
<i>Integrated Oil & Gas</i>	1.31%
Financials	31.50%
Communication Services	10.81%
Consumer Discretionary	7.79%
Consumer Staples	2.41%
Materials	0.66%
Utilities	0.64%
Real Estate	0.60%
Information Technology	0.53%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

As of 30/12/2022, 0,20% of the sustainable investments with an environmental objective were aligned with the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy⁵?

Yes:

In fossil gas In nuclear energy

No:

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 53% of the total investments.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

⁵ Fossil gas and / or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The share of investments made in transitional and enabling activities are :
0,19% of enabling activities investments : portion of companies' aligned revenue from activities that enable other activities to reduce their CO2 emissions.
0,00% of transition activities investments : portion of companies' aligned revenue from activities that contribute to the transition towards a net zero carbon economy by 2050.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

Although a minimum percentage of sustainable investments with an environmental objective was not in place in 2022, as of 30/12/2022, 12.9% of the portfolio's net assets was invested in companies aligned with environmentally oriented SDGs.

● **What was the share of socially sustainable investments?**

Although a minimum percentage of sustainable investments with a social objective was not in place in 2022, as of 30/12/2022, 18.0% of the portfolio's net assets was invested in companies aligned with socially oriented SDGs.

● **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The remaining portion of the portfolio (outside the minimum proportion of 90%) may also promote environmental and social characteristics but are not systematically covered by ESG analysis. Such assets may include derivatives or securities that have been subject to an initial public offering, the ESG analysis of which may be carried out after the acquisition of said financial instrument by the Sub-Fund.

At issuer level (for equities and corporate bonds), non sustainable assets are examined for adherence to global norms on environmental protection, human rights, labor standards and anti-corruption, through controversy ("norms-based") screening. The investments are subject to a screening of minimum safeguards to ensure that their business activities are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

● **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

The below listed actions were conducted at Carmignac in 2022 in order to support the investment process in meeting environmental /social characteristics :

Pillar 1: ESG Integration

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

- Addition of supplementary Social indicators (employee and consumer satisfaction data) in the proprietary START ESG scoring process informing analysts of material aspects that can affect the investment rationale.
- Improved tracking capacity of Green, Social, Sustainability, and Sustainability linked bonds to help monitor and produce future reporting in the Global Portfolio Monitoring system, a portfolio managers dashboard of the funds positions.
- The addition of the proprietary sovereign ESG scoring models (Impact and Global) into the START interface enhancing the efficiency and knowledge base for the portfolio management team.
- Integration of Principal Adverse Impacts monitoring and initiation of a policy to integrate this information of Environmental, Social and Human rights indicators into the investment rationale.
- Increased automated monitoring of the universe reduction process.
- Addition into the START proprietary ESG system of UN Sustainable Development Goals alignment mapping measured in % revenues for each company where there are ties of business activities directly related to the nine SDGs we chose and being investable.
- Weekly monitoring of the minimum % of Sustainable Investments by Investment Teams

Pillar 2: Exclusions

- Automation of the quarterly review process of the list to identify companies that would be subject to the sector or controversy hard exclusions and the universe reduction process if relevant.

Pillar 3: Voting and Engagement

- Introduction of a 'key vote' approach to prioritise companies that are identified for more focused voting recommendations and potential engagements related to vote decision, in particular "Say on climate" votes.
- Launch of quarterly Stewardship newsletters to showcase publicly how we promote active ownership.
- Continuation of our quarterly corporate engagement plan for which close to 58% were related to either Environmental or Social or Governance thematic-related issues.

More specifically regarding engagements, our fiduciary responsibility involves the full exercise of our rights as shareholders and engagement with the companies in which we are invested. Dialogue is maintained by financial analysts, portfolio managers and ESG team. We believe that our engagement leads to a better understanding of how companies manage their extra-financial risks and significantly improve their ESG profile while delivering long-term value creation for our clients, society and the environment. Our engagement may concern one of five considerations: 1) ESG risks, 2) an ESG theme, 3) a desired impact, 4) controversial behaviour, or 5) a voting decision at a General Meeting. Carmignac may collaborate with other shareholders and bondholders when doing so would help influence the actions and governance of companies held in the portfolio. In order to ensure that the company correctly identifies, foresees and manages any potential or confirmed conflict of interest situation, Carmignac has put in place and maintains policies and guidelines. For more information on our engagement policies, please visit the website.

In 2022, we engaged with 81 companies on ESG specific topics at Carmignac level, and with 8 companies in this particular Sub-Fund.

For example, we engaged with Dabur India in August 2022, before casting our vote at its Annual General Meeting (AGM). We reached out to the company to seek clarifications on its executive remuneration plan. The company's explanation led to a vote of support for the two remuneration resolutions on the agenda of the AGM. However, we cast a vote against one family representative sitting on the board of the company to signal our concerns around the low level of board independence. Following our vote, we engaged with the company in September 2022 to provide feedback on these two topics.

Regarding executive remuneration, we asked for more transparency on the long-term incentive grants as well as more clarity around the various elements of the pay package. We highlighted to the company our expectation to see a clear link between the remuneration levels and the performance. On board independence, the slow refreshment of the board means that only 29% of the board was considered independent at the date of the AGM. The company acknowledged our comments and explained that

it is in the process of refreshing the board but that these changes take time. Lastly, while we welcomed their ambitious carbon neutrality target by 2040, we asked for a roadmap in next year's reporting. Following the call and after reviewing the case with the lead investment analyst, we decided to downgrade the company's governance rating as well as its overall rating in our internal proprietary ESG scoring tool, START. We will continue to monitor the evolution of the company's practices, especially around transparency and reporting.

How did this financial product perform compared to the reference benchmark?

Not applicable

- ***How does the reference benchmark differ from a broad market index?***

Not applicable

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

Not applicable

- ***How did this financial product perform compared with the reference benchmark?***

Not applicable

- ***How did this financial product perform compared with the broad market index?***

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: **CARMIGNAC PORTFOLIO PATRIMOINE EUROPE** Legal entity identifier:
549300RXB1M2U1XEC704

Environmental and/or social characteristics

1. Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ____%

2. It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 10 % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

During the 2022 period, the minimum proportion of sustainable investment was 10% and will remain at 10% in 2023. Then, the minimum levels of sustainable investments with environmental and social objectives will respectively be 1% and 3% of the Sub-Fund's net assets, a limit which will be applied in regulation from 1 January 2023.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Sub-Fund has promoted environmental and social characteristics by applying a best-in-universe approach to invest in a sustainable manner, combining a four-pillar strategy: 1) ESG integration, 2) Negative screening, 3) Positive screening, 4) Active Stewardship. Secondly, it has contributed positively to the environment through investments leading to climate change mitigation and adaptation in addition to specific carbon emissions targets and partially contributes positively to the environment and society through a UN SDGs approach.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

In addition, the Sub-fund has aimed in the equity and corporate bond part of the portfolio to achieve carbon emissions 30% lower than its designated composite reference indicator (STOXX 600 Europe, reinvested net dividends, and ICE BofA All Maturity All Euro Government, with the exclusion of ESTR capitalised), general market index, measured monthly by carbon intensity (tCO₂/ mUSD revenue converted to Euros; aggregated at portfolio level (Scope 1 and 2 of GHG Protocol).

No breach of environmental and social characteristics promoted have been identified during the year.

● **How did the sustainability indicators perform?**

This Sub-Fund has used the following sustainability indicators of its four pillar approach to measure the attainment of each of the environmental or social characteristics promoted :

1) The coverage rate of ESG analysis: ESG integration through ESG scoring using Carmignac's proprietary ESG platform "START" (System for Tracking and Analysis of a Responsible Trajectory) is applied to at least 90% of issuers. As of 30/12/2022, the coverage rate of ESG analysis was 96.13% of issuers.

2) The amount the universe is reduced by (minimum 20% for the equities and corporate bonds section of the portfolio): Negative screening and exclusions of unsustainable activities and practices reflected in low ESG scores from START, MSCI and or ISS scores have been performed based on following indicators: (a) practices that are harmful to society and the environment, (b) controversies against the OECD business guidelines and UN Global compact principles, (c) controversial weapons (d) coal mining activity, (d) power companies that have not Paris alignment objectives in place, (e) companies involved in tobacco production, (f) companies involved in adult entertainment. Extended exclusions include the oil and gas, conventional weapons, gambling and alcohol sectors. As of 30/12/2022, the universe was reduced by 71.52% (for the equity section) and 28.75% (for the corporate bonds section) of the portfolio.

3) Positive screening: the Sub-Fund makes sustainable investments whereby a minimum of 10% of the Sub-Fund's net assets are invested in shares of companies that derive at least 50% of their revenue from goods and services in relation to business activities which align positively with one of the 9 out of 17 United Nations Sustainable Development Goals. As of 30/12/2022, 36.7% of the Sub-Fund's net assets were invested according to this positive screening.

4) Active stewardship: Environmental and social related company engagements leading to improvement in companies sustainability policies have been measured by following indicators: (a) level of active engagement and voting policies, (b) number of engagements, (c) rate of voting and (d) participation at shareholder and bondholder meetings). In 2022, we engaged with 81 companies at Carmignac level, and 9 companies at Carmignac Portfolio Patrimoine Europe level.

The Sub-Fund's equity and corporate bonds' part of the portfolio aims to have a carbon footprint (measured by carbon intensity) at least 30% lower than its reference indicator's. At 30 December 2022, the carbon dioxide emissions of the Carmignac Portfolio Patrimoine Europe portfolio (measured tCO₂/ mUSD revenue converted to Euros; aggregated at portfolio level (Scope 1 and 2 of GHG Protocol) was 73.4% lower than those of its reference indicator (STOXX 600 Europe, reinvested net dividends, and ICE BofA All Maturity All Euro Government, with the exclusion of ESTR capitalised).

In addition, Principal Adverse Impact (PAI) monitoring : Sub-Fund has applied the SFDR level II 2019/2088 Regulatory Technical Standards (RTS) annex 1 whereby 16 mandatory and 2 optional environmental and social indicators have been monitored to show the impact of such sustainable investments against these indicators : Greenhouse gas emissions, Carbon footprint, GHG intensity (investee companies), Exposure to companies in fossil fuel sector, Non-renewable energy consumption and production, Energy consumption intensity per high-impact climate sector, Activities negatively affecting biodiversity-sensitive areas, Emissions to water, Hazardous waste ratio, Water usage and recycling (optional choice), Violations of UN Global Compact principles or OECD Guidelines for Multinational Enterprises, Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact and OECD Guidelines for Multinational Enterprises, Unadjusted gender pay gap

(optional choice), Board gender diversity, Exposure to controversial weapons, Excessive CEO pay ratio. Sovereign bond issuers are monitored for Social violations and GHG intensity indicators.

Please find below the performance of the principal adverse impacts indicators for the year 2022, based on average quarter-end data, for the equity and corporate bond portions of the portfolio:

PAI Indicators	Based on company reported	Sub-Fund	Coverage
GHG Scope 1	Scope 1 GHG emissions	1752,5	44%
GHG Scope 2	Scope 2 GHG emissions	1777,5	44%
GHG Scope 3	From 1 January 2023, Scope 3 GHG emissions	88480	44%
Total GHG	Total GHG emissions	92010	44%
Carbon footprint	Carbon footprint	120,5825	44%
GHG intensity	GHG intensity of investee companies	720,9475	44%
Exposure to fossil fuels	Share of investments in companies active in the fossil fuel sector	1%	44%
Non-renewable energy consumption	Share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage	58%	44%
Non-renewable energy production	Share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage	20%	44%
Energy consumptionintensity - Total	Energy consumption in GWh per million EUR of revenue of investee companies - Total	0,13	44%
Energy consumption intensity - NACE SectorA	Energy consumption in GWh per million EUR of revenue of investee companies - NACE Sector A(Agriculture, forestry and fishing)	N/A	44%
Energy consumption intensity - NACE SectorB	Energy consumption in GWh per million EUR of revenue of investee companies - NACE Sector B (Mining and quarrying)	N/A	44%
Energy consumption intensity - NACE SectorC	Energy consumption in GWh per million EUR of revenue of investee companies - NACE Sector C (Manufacturing)	0,1425	44%
Energy consumption intensity - NACE Sector D	Energy consumption in GWh per million EUR of revenue of investee companies - NACE Sector D (Electricity, gas, steam and air conditioning supply)	1,6225	44%
Energy consumption intensity - NACE Sector E	Energy consumption in GWh per million EUR of revenue of investee companies - NACE Sector E (Water supply; sewerage; waste management and remediation activities)	N/A	44%
Energy consumption intensity - NACE Sector F	Energy consumption in GWh per million EUR of revenue of investee companies - NACE Sector F (Construction)	N/A	44%
Energy consumption intensity - NACE Sector G	Energy consumption in GWh per million EUR of revenue of investee companies - NACE Sector G (Wholesale and retail trade; repair of motor vehicles and motorcycles)	0,06	44%
Energy consumption intensity - NACE SectorH	Energy consumption in GWh per million EUR of revenue of investee companies - NACE Sector H (Transporting and storage)	0,12	44%
Energy consumption intensity - NACE Sector L	Energy consumption in GWh per million EUR of revenue of investee companies - NACE Sector L (Real estate activities)	N/A	44%
Biodiversity	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those areas	0%	44%
Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	25,28	44%
Hazardous waste	Tonnes of hazardous waste generated by investee companies per million EUR invested, expressed as a weighted average	0,17	44%
Water usage and recycling	Average amount of water consumed and reclaimed by the investee companies (in cubic meters) per million EUR of revenue of investee companies	415,865	44%
Violations of UNGC/OECD	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0%	44%
Processes to monitor UNGC / OECD compliance	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance /complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	11%	44%

Gender pay gap	Average unadjusted gender pay gap of investee companies	87%	44%
Board gender diversity	Average ratio of female to male board members in investee companies	37%	44%
Controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0%	44%
Excessive CEO pay ratio	Average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest-compensated individual)	63,6	44%

● **...and compared to previous periods?**

N/A

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The Sub-Fund makes sustainable investments whereby a minimum of 10% of the Sub-Fund's net assets are invested in shares of companies that derive at least 50% of their revenue from goods and services in relation to business activities which align positively with one of the following 9 out of 17 United Nations Sustainable Development Goals ("the Sustainable Development Goals") selected for this Sub-Fund: (1) No Poverty, (2) No Hunger, (3) Good Health and Well Being, (4) Quality Education, (6) Clean Water, (7) Affordable and Clean Energy, (9) Industry, Innovation and Infrastructure, (11) Sustainable Cities and Communities (12) Responsible Consumption and Production. For further information on the United Nations Sustainable Development Goals, please refer to <https://sdgs.un.org/goals>.

A company is considered 'aligned' when over 50% of their revenues come from activities which are deemed to contribute to one of the aforementioned nine UN SDGs. These 50% thresholds represent a significant intentionality of the company in regards to the contributing activity and its plans for growth.

In order to determine which companies are aligned, we have identified a robust business classification system and mapped 1700 different business activities. In addition, we have used the SDG Compass, a resource created by GRI, the UN Global Compact and the World Business Council for Sustainable Development to identify business activities which contributed to each SDG. In addition, we created Carmignac 'investable themes' based upon the business activities. Based on these themes, we have filtered through each business activity in the classification system, aligning the appropriate business activities with Carmignac's 'investable themes' and using the SDG targets to verify suitability. This was reviewed by members of the Responsible Investment (RI) and Investment team. Once the 50% revenue threshold is met, the full weight of the holding is considered aligned.

As of 30/12/2022, the Sub-Fund had 36.7% of the portfolio's net assets invested in sustainable investments as per our definition above mentioned.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

All of the Sub-Fund's investments (not only the sustainable investments) were examined for adherence to global norms on environmental protection, human rights, labor standards and anti-corruption, through controversy screening. More precisely, the investments are subject to a screening of minimum safeguards to ensure that their business activities are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Additionally, the Sub-Fund ensures that such activities do not significantly harm the environmental objectives.

Controversial behaviours engagement is aimed at eliminating a company's breach of the UNGC and/ or OECD Guidelines for Multinational Enterprises and installing proper management systems to prevent such a breach from recurring. If engagement is unsuccessful, the company is considered for exclusion. Enhanced engagement cases are selected quarterly depending on the need for a follow-up. Engagement focus can differ between various investment exposures.

How were the indicators for adverse impacts on sustainability factors taken into account?

According to Carmignac approach defined, the Principal Adverse Impacts indicators have been monitored on a quarterly basis. Adverse impacts are identified for their degree of severity. After internal discussion an action plan is established including a timeline for execution. Company dialogue is usually the preferred course of action to influence the company's mitigation of adverse impacts, in which case the company engagement is included in the quarterly Carmignac Engagement plan according to the Carmignac Shareholder Engagement policy. Disinvestment may be considered with a predetermined exit strategy within the confines of this aforementioned policy.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Carmignac applies a controversy screening process on OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights for all its investments across all Sub-funds.

Carmignac acts in accordance with the United Nations Global Compact (UNGC) principles, the International Labour Organization (ILO) Declaration on Fundamental Principles and Rights at Work, and the Organisation for Economic Co-operation and Development (OECD) guidelines for multinational enterprises to assess companies' norms, including but not limited to human rights abuses, labour laws and standard climate related practices.

This Sub-Fund applies a controversy screening process for all of its investments. Companies that have committed significant controversies against the environment, human rights and international labour laws to name the key infractions are excluded. This screening process bases the identification of controversies on the OECD Business Guidelines and UN Global compact principles and is commonly called norms-based screening, integrating a restrictive screening monitored and measured through Carmignac's proprietary ESG system START. A company controversy scoring and research is applied using data extracted from ISS ESG as the research data base.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Carmignac has committed to apply the SFDR level II 2019/2088 Regulatory Technical Standards (RTS) annex 1 whereby 16 mandatory and 2 optional environmental and social indicators will be monitored to show the impact of such sustainable investments against these indicators: Greenhouse gas emissions, Carbon footprint, GHG intensity (investee companies), Exposure to companies in fossil fuel sector, Non-renewable energy consumption and production, Energy consumption intensity per high-impact climate sector, Activities negatively affecting biodiversity-sensitive areas, Emissions to water, Hazardous waste ratio, Water usage and recycling, Violations of UN Global Compact principles or OECD Guidelines for Multinational Enterprises, Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact and OECD Guidelines for Multinational Enterprises, Unadjusted gender pay gap, Board gender diversity, Exposure to controversial weapons, Excessive CEO pay ratio. In addition and where applicable, sovereign bond indicators: social violence and GHG intensity can also be monitored.

As part of its PAI strategy, Carmignac identifies companies that underperform the benchmark in terms of PAI Indicators. Our third party data provider Impact Cubed enables us to monitor the impact of Carmignac Portfolio Patrimoine Europe for each PAI.

Identifying outliers for each PAI indicator enables us to engage with companies in order to ensure they are committed to reducing their impact. We identified that Teva Pharmaceutical is one of the main contributors to the underperformance of Carmignac Portfolio Patrimoine Europe for the board gender diversity PAI indicator.

We have regularly engaged with Teva Pharmaceutical in 2022, especially given their involvement in industry-wide controversies. In October 2022, we discussed the Company's recent settlement in relation to the industry-wide opioid issue for an amount of over USD 4 billion to be paid over a 13-year period. Regarding its involvement in controversies, we discussed the material impact these issues have on the Company's reputation and financials as well as our expectations around the management of controversies. We also encouraged the company to engage with third party ESG rating agencies to ensure the agencies' assessment and analysis correctly reflect the nature of the controversies and the Company's actions to resolve them.

The identification of this outlier will enable us to engage with the company on the PAI identified in order to make sure that appropriate measure are being implemented.

What were the top investments of this financial product?

Please find below the average top investments based on 12 month end data for 2022, for the equity and corporate bonds sections of the portfolio :

Larger investments	Sector	% Assets	Country
NOVO NORDISK AS	Health Care	2.84%	Denmark
SAP SE	Information Technology	2.04%	Germany
PROSUS NV 2.78% 19/10/2033	Communication Services	2.03%	Netherlands
GERMANY I/L 0.10% 15/04/2026	Government Bonds	1.85%	Germany
BELGIUM ZC 22/10/2031	Government Bonds	1.67%	Belgium
ARGENX SE	Health Care	1.46%	Belgium
ASML HOLDINGS	Information Technology	1.36%	Netherlands
ROCHE HOLDING	Health Care	1.28%	Switzerland
SCHNEIDER ELECTRIC SA	Industrials	1.27%	France
FRANCE I/L 0.10% 01/03/2025	Government Bonds	1.25%	France

AMADEUS IT HLDG SA	Information Technology	1.20%	Spain
GENMAB AS	Health Care	1.05%	Denmark
ASSA ABLOY	Industrials	1.04%	Sweden

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is:

What was the proportion of sustainability-related investments?

As of 30/12/2022, the Sub-Fund had 36.7% of the portfolio's net assets invested in sustainable investments as per our definition above mentioned.

● **What was the asset allocation?**

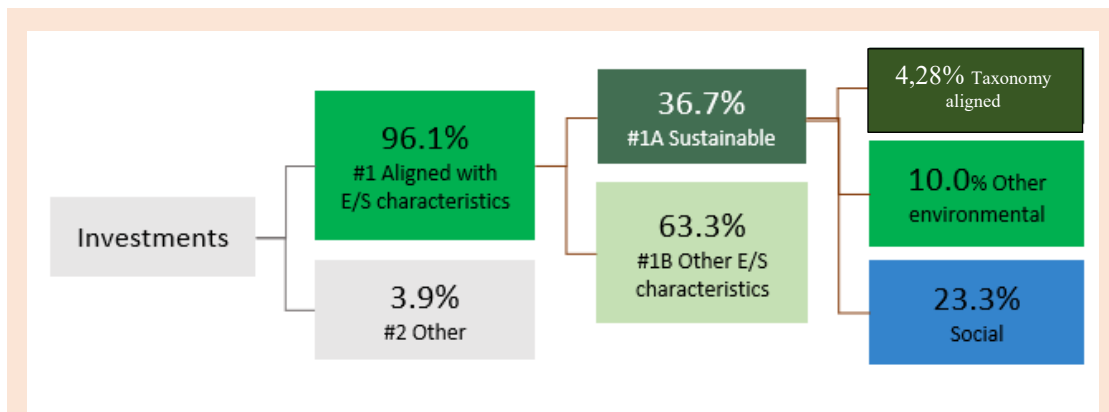

A minimum proportion of 90% of the investments of this Sub-Fund is used to meet the environmental or social characteristics promoted by the financial product in accordance with the binding elements of the investment strategy. As of 30/12/2022, 96.1% of issuers have been covered by the ESG analysis thus 96.1% of issuers were aligned with these E/S characteristics.

The Sub-Fund makes sustainable investments whereby a minimum of 10% of the Sub-Fund's net assets are invested in shares of companies that derive at least 50% of their revenue from goods and services in relation to business activities which align positively with one of the 9 out of 17 United Nations Sustainable Development Goals ("the Sustainable Development Goals"). Outside the 50% minimum sustainable investments, investments may be made in companies that have less than 50% revenue alignment or no alignment with the one of the UN SDGs. As of 30/12/2022, this positive screening has been applied and 36.7% of the Sub-Fund's net assets were invested in shares of companies that derive at least 50% of their revenue from goods and services in relation to business activities which align positively with one of the 9 out of 17 United Nations Sustainable Development Goals.

In addition, the minimum levels of sustainable investments with environmental and social objectives will be respectively 1% and 3% of the Sub-Fund's net assets and applied from 1 January 2023. As of 30/12/2022, 10.0% of the Sub-Fund's net assets were invested in sustainable investments with environmental objectives, and 23.3% in sustainable investment with social objectives.

The #2 Other investment (in addition to cash and derivatives which may be used for hedging purposes, if applicable) are equity, corporate bonds or sovereign bonds investments which are made strictly in accordance with the Sub-Fund's investment strategy. These instruments are not used to achieve the environmental or social characteristics promoted by the Sub-Fund and may not have been covered by ESG analysis.

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **In which economic sectors were the investments made?**

Please find below the average top sectors based on 12 month end data for 2022 for the equity section of the portfolio :

Larger economic sectors	% Assets
Health Care	33.1%
Industry	18.1%
Information Technology	16.6%
Consumer Discretionary	12.4%
Communication Services	7.7%
Consumer Staples	6.4%
Finance	3.7%
Utilities	3.5%
Materials	1.0%

Please find below the average top sectors based on 12 month end data for 2022 for the corporate bonds section of the portfolio :

Larger economic sectors	% Assets
Communication Services	29.74%
Health Care	29.41%
Financials	14.23%
Consumer Discretionary	10.40%
Real Estate	6.60%
Industrials	5.16%
Information Technology	2.72%
Utilities	1.75%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

As of 30/12/2022, 4,28% of the sustainable investments with an environmental objective were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹²?

Yes:

In fossil gas

In nuclear energy

No:

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

¹² Fossil gas and / or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **What was the share of investments made in transitional and enabling activities?**

Not Applicable

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not Applicable

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

As of 30/12/2022, 10.0% of the Sub-Fund's net assets were invested in sustainable investments with environmental objectives not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

In addition, the minimum levels of sustainable investments with social objectives will be 3% of the Sub-Fund's net assets and applied from 1 January 2023. On the 30/12/2022, 23.3% of the Sub-Fund's net assets were invested in sustainable investments with social objectives.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining portion of the portfolio (outside the minimum proportion of 90%) may also promote environmental and social characteristics but are not systematically covered by ESG analysis. Such assets may include derivatives instruments or securities that have been subject to an initial public offering, the ESG analysis of which may be carried out after the acquisition of said financial instrument by the Sub-Fund.

At issuer level (for equities and corporate bonds), non sustainable assets are examined for adherence to global norms on environmental protection, human rights, labor standards and anti-corruption, through controversy ("norms-based") screening. The investments are subject to a screening of minimum safeguards to ensure that their business activities are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The below listed actions were conducted at Carmignac in 2022 in order to support the investment process in meeting environmental /social characteristics :

Pillar 1: ESG Integration

- Addition of supplementary Social indicators (employee and consumer satisfaction data) in the proprietary START ESG scoring process informing analysts of material aspects that can affect the investment rationale.
- Improved tracking capacity of Green, Social, Sustainability, and Sustainability linked bonds to help monitor and produce future reporting in the Global Portfolio Monitoring system, a portfolio managers dashboard of the funds positions.
- The addition of the proprietary sovereign ESG scoring models (Impact and Global) into the START interface enhancing the efficiency and knowledge base for the portfolio management team.

- Integration of Principal Adverse Impacts monitoring and initiation of a policy to integrate this information of Environmental, Social and Human rights indicators into the investment rational.
- Increased automated monitoring of the universe reduction process.
- Addition into the START proprietary ESG system of UN Sustainable Development Goals alignment mapping measured in % revenues for each company where there are ties of business activities directly related to the nine SDGs we chose and being investable.
- Weekly monitoring of the minimum % of Sustainable Investments shared by Investment Teams.

Pillar 2: Exclusions

- Automation of the quarterly review process of the list to identify companies that would be subject to the sector or controversy hard exclusions and the universe reduction process if relevant.

Pillar 3: Voting and Engagement

- Introduction of a 'key vote' approach to prioritise companies that are identified for more focused voting recommendations and potential engagements related to vote decision, in particular "Say on climate" votes.
- Launch of quarterly Stewardship newsletters to showcase publicly how we promote active ownership.
- Continuation of our quarterly corporate engagement plan for which close to 58% were related to either Environmental or Social or Governance thematic-related issues.

More specifically regarding engagements, our fiduciary responsibility involves the full exercise of our rights as shareholders and engagement with the companies in which we are invested. Dialogue is maintained by financial analysts, portfolio managers and ESG team. We believe that our engagement leads to a better understanding of how companies manage their extra-financial risks and significantly improve their ESG profile while delivering long-term value creation for our clients, society and the environment. Our engagement may concern one of five considerations: 1) ESG risks, 2) an ESG theme, 3) a desired impact, 4) controversial behaviour, or 5) a voting decision at a General Meeting. Carmignac may collaborate with other shareholders and bondholders when doing so would help influence the actions and governance of companies held in the portfolio. In order to ensure that the company correctly identifies, foresees and manages any potential or confirmed conflict of interest situation, Carmignac has put in place and maintains policies and guidelines. For more information on our engagement policies, please visit the website.

In 2022, we engaged with 81 companies on ESG specific topics at Carmignac level, and with 9 companies in this particular Sub-Fund.

For example, we engaged with Experian. In line with our engagement policy, we noted the Company's involvement in important controversies on the topic of cybersecurity. We were also interested in the Company's approach to data accuracy as this constitutes a material risk given its activity as a credit bureau. In November 2022, we held a meeting with the Company's investor relations representatives to discuss about these two main subjects. This engagement call gave us an insight into the Company's practices as well as a better understanding of the policies and processes it has put in place to manage and mitigate those material risks. We will keep monitoring the Company's actions on these two topics. We decided not to change the Company's rating under our proprietary ESG assessment system START as we deemed the overall rating remains appropriate.

How did this financial product perform compared to the reference benchmark?

Not Applicable

How does the reference benchmark differ from a broad market index?

Not Applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

ALLEGATO IV

Modello di informativa periodica per i prodotti finanziari di cui all'articolo 8, paragrafi 1, 2 e 2 bis, del regolamento (UE) 2019/2088 e all'articolo 6, primo comma, del regolamento (UE) 2020/852

Nome del prodotto: CARMIGNAC SÉCURITÉ
Identificativo della persona giuridica: 969500EBHLOT9UB25E97

Caratteristiche ambientali e/o sociali

Questo prodotto finanziario ha un obiettivo di investimento sostenibile?

Sì

No

Ha effettuato investimenti sostenibili con un obiettivo ambientale: _____%

in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE

in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE

Ha effettuato investimenti sostenibili con un obiettivo sociale: ____%

Ha promosso caratteristiche ambientali/sociali (A/S) e, pur non avendo come obiettivo un investimento sostenibile, aveva una quota del(lo) _____% di investimenti sostenibili

con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE

con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE

con un obiettivo sociale

Ha promosso caratteristiche A/S, ma non ha effettuato alcun investimento sostenibile

Nel 2022 la percentuale minima di investimenti che promuovono caratteristiche A/S era pari allo 0% e raggiungerà il 10% nel 2023. I livelli minimi di investimenti che promuovono caratteristiche A/S, con obiettivi ambientali e sociali sono rispettivamente pari all'1% e al 3% del patrimonio netto del fondo; tale limite sarà applicato a partire dal 1° gennaio 2023.

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Il fondo applica approcci "best-in-universe" (identificazione delle società che offrono attività sostenibili) e "best-effort" (approccio che consiste nel prediligere gli emittenti che danno prova di un miglioramento o di buone prospettive per le loro prassi e performance ESG nel tempo) al fine di investire in modo sostenibile coniugando una strategia basata su quattro pilastri: 1) integrazione ESG, 2) screening negativo e 3) responsabilità e impegno dei detentori di obbligazioni per promuovere le caratteristiche ambientali e sociali.

Nel corso dell'anno non sono state riscontrate carenze relative alle caratteristiche ambientali e sociali promosse.

Gli indicatori di sostenibilità misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse del prodotto finanziario.

● Qual è stata la prestazione degli indicatori di sostenibilità?

Il fondo utilizza gli indicatori di sostenibilità seguenti nel suo approccio a quattro pilastri per misurare il rispetto di ciascuna delle caratteristiche ambientali o sociali che promuove:

- 1) Tasso di copertura dell'analisi ESG:** L'integrazione ESG, attraverso il rating ESG effettuato tramite la piattaforma ESG proprietaria "START" (*System for Tracking and Analysis of a Responsible Trajectory*) di Carmignac, si applica ad almeno il 90% dei titoli. Al 30/12/2022, il tasso di copertura dell'analisi ESG era pari al 94,71% del portafoglio (esclusi liquidità e derivati).
- 2) Riduzione dell'universo d'investimento:** uno screening negativo e delle esclusioni di attività e di prassi non sostenibili, rispecchiate dai bassi punteggi ESG di START, MSCI e ISS ("Institutional Shareholder Services") ESG, che sono effettuati sulla base degli indicatori seguenti: (a) prassi che arrecano danno alla società e all'ambiente, (b) controversie riguardanti le linee guida OCSE e i principi del Global Compact delle Nazioni Unite, (c) armi controverse, (d) produzione di carbone termico, (e) produttori di energia che non hanno previsto alcun obiettivo d'allineamento all'Accordo di Parigi, (f) imprese coinvolte nella produzione di tabacco, (g) imprese coinvolte nell'intrattenimento per adulti. Al 30/12/2022, l'universo di investimento del portafoglio era stato ridotto del 21,77%.
- 3) Responsabilità e impegno dei detentori di obbligazioni:** gli impegni ambientali e sociali delle imprese che determinano il miglioramento delle politiche di sviluppo sostenibile delle imprese sono misurati dagli indicatori seguenti: (a) livello di impegno attivo e politiche di voto, (b) numero di attività di impegno, (c) percentuale di voto, e (d) partecipazione alle assemblee degli azionisti (o di detentori di obbligazioni). Per l'anno 2022, abbiamo interagito con 81 società a livello di Carmignac e 12 società a livello di Carmignac Sécurité.

Inoltre, per quanto riguarda il monitoraggio dei principali effetti negativi (*principal adverse impacts* - "PAI"), e conformemente all'allegato 1 del regolamento delegato (UE) 2022/1288, il fondo segue 16 indicatori ambientali e sociali obbligatori, e 2 indicatori facoltativi per dimostrare l'impatto degli investimenti sostenibili rispetto a questi indicatori: emissioni di gas a effetto serra (GHG), impronta di carbonio, intensità di GHG delle imprese beneficiarie degli investimenti, esposizione a imprese attive nel settore dei combustibili fossili, quota di consumo e produzione di energia non rinnovabile, intensità di consumo energetico per settore ad alto impatto climatico, attività che incidono negativamente sulle aree sensibili sotto il profilo della biodiversità, emissioni in acqua, rapporto tra rifiuti pericolosi e rifiuti radioattivi, uso e riciclaggio dell'acqua (scelta facoltativa), violazioni dei principi del Global Compact delle Nazioni Unite e delle linee guida dell'OCSE per le imprese multinazionali, mancanza di procedure e di meccanismi di conformità per monitorare la conformità ai principi del Global Compact delle Nazioni Unite e alle linee guida OCSE destinate alle imprese multinazionali, divario retributivo di genere non corretto, diversità di genere nel consiglio, esposizione ad armi controverse, eccesso di divario retributivo a favore dell'amministratore delegato (scelta facoltativa). Gli emittenti sovrani sono soggetti a un monitoraggio delle violazioni sociali della loro intensità di GHG.

Di seguito si riporta l'andamento degli indicatori dei principali effetti negativi per il 2022, sulla base della media dei dati di fine trimestre, per le componenti azionaria e obbligazioni societarie del portafoglio:

Indicatori PAI	Sulla base dei dati forniti dalla società	Fondo	Copertura
Scope 1 del protocollo GHG	Emissioni di GHG Scope 1	663.505	34%
Scope 2 del protocollo GHG	Emissioni di GHG Scope 2	60.335	34%
Scope 3 del protocollo GHG	A decorrere dal 1° gennaio 2023, emissioni di GHG Scope 3	2.563.660	34%
Totale GHG	Emissioni totali di GHG	3.287.500	34%
Impronta di carbonio	Impronta di carbonio	541,6375	34%

Livello di intensità di GHG	Intensità di GHG delle società	1169,14	34%
Esposizione a imprese attive nel settore dei combustibili fossili	Quota degli investimenti in imprese attive nel settore dei combustibili fossili	11%	34%
Quota di consumo di energia non rinnovabile	Quota di consumo di energia non rinnovabile delle imprese, proveniente da fonti di energia non rinnovabile rispetto a fonti di energia rinnovabile, espressa in percentuale	67%	34%
Quota di produzione di energia non rinnovabile	Quota di produzione di energia non rinnovabile delle imprese, proveniente da fonti di energia non rinnovabile rispetto a fonti di energia rinnovabile, espressa in percentuale	55%	0%
Intensità di consumo energetico per settore ad alto impatto climatico - Totale	Consumo energetico in GWh per milione di EUR di entrate delle imprese, per settore ad alto impatto climatico - Totale	1,41	34%
Intensità di consumo energetico per settore ad alto impatto climatico - NACE: settore A	Consumo energetico in GWh per milione di EUR di entrate delle imprese, per settore ad alto impatto climatico - NACE: settore A (Agricoltura, silvicoltura e pesca)	N/A	0%
Intensità di consumo energetico per settore ad alto impatto climatico - NACE: settore B	Consumo energetico in GWh per milione di EUR di entrate delle imprese, per settore ad alto impatto climatico - NACE: settore B (Attività estrattiva)	1,5025	34%
Intensità di consumo energetico per settore ad alto impatto climatico - NACE: settore C	Consumo energetico in GWh per milione di EUR di entrate delle imprese, per settore ad alto impatto climatico - NACE: settore C (Attività manifatturiere)	0,465	34%
Intensità di consumo energetico per settore ad alto impatto climatico - NACE: settore D	Consumo energetico in GWh per milione di EUR di entrate delle imprese, per settore ad alto impatto climatico - NACE: settore D (Fornitura di energia elettrica, gas, vapore e aria condizionata)	10,9625	34%
Intensità di consumo energetico per settore ad alto impatto climatico - NACE: settore E	Consumo energetico in GWh per milione di EUR di entrate delle imprese, per settore ad alto impatto climatico - NACE: settore E (Fornitura di acqua; reti fognarie, attività di trattamento dei rifiuti e risanamento)	N/A	0%
Intensità di consumo energetico per settore ad alto impatto climatico - NACE: settore F	Consumo energetico in GWh per milione di EUR di entrate delle imprese, per settore ad alto impatto climatico - NACE: settore F (Costruzioni)	0,45	34%
Intensità di consumo energetico per settore ad alto impatto climatico - NACE: settore G	Consumo energetico in GWh per milione di EUR di entrate delle imprese, per settore ad alto impatto climatico - NACE: settore G (Commercio all'ingrosso e al dettaglio; riparazione di autoveicoli e motocicli)	0,0175	34%
Intensità di consumo energetico per settore ad alto impatto climatico - NACE: settore H	Consumo energetico in GWh per milione di EUR di entrate delle imprese, per settore ad alto impatto climatico - NACE: settore H (Trasporto e magazzinaggio)	1,515	34%
Intensità di consumo energetico per settore ad alto impatto climatico - NACE: settore L	Consumo energetico in GWh per milione di EUR di entrate delle imprese, per settore ad alto impatto climatico - NACE: settore L (Attività immobiliari)	0,63	34%
Biodiversità	Quota di investimenti effettuati in imprese i cui siti/operazioni sono situati in aree sensibili dal punto di vista della biodiversità e le cui attività hanno un impatto negativo su tali aree	0%	34%
Emissioni legate all'acqua	Tonnellate di emissioni in acqua generate dalle imprese per milione di EUR investito (valore espresso come media ponderata)	536,4	34%
Rifiuti pericolosi	Tonnellate di rifiuti pericolosi generati dalle imprese per milione di EUR investito (valore espresso come media ponderata)	1,2425	34%
Uso e riciclo dell'acqua	Quantità media di acqua consumata e recuperata dalle imprese (in metri cubi) per milione di EUR di entrate	8098,2225	34%
Violazioni dei principi del Global Compact delle Nazioni Unite e delle linee guida dell'Organizzazione per la cooperazione e lo sviluppo	Quota di investimenti nelle imprese che sono state coinvolte in violazioni dei principi del Global Compact delle Nazioni Unite o delle linee guida OCSE destinate alle imprese multinazionali	2%	34%

economico (OCSE) destinate alle imprese multinazionali			
Mancanza di procedure e di meccanismi di conformità per monitorare la conformità ai principi del Global Compact delle Nazioni Unite e alle linee guida OCSE destinate alle imprese multinazionali	Quota di investimenti nelle imprese che non dispongono di politiche per controllare il rispetto dei principi del Global Compact delle Nazioni Unite o delle linee guida OCSE destinate alle imprese multinazionali, o di meccanismi di trattamento dei reclami/delle denunce di violazioni dei principi del Global Compact delle Nazioni Unite o delle linee guida OCSE destinate alle imprese multinazionali	12%	34%
Divario retributivo di genere non corretto	Divario retributivo di genere medio non corretto nelle imprese	86%	34%
Diversità di genere nel consiglio di amministrazione	Rapporto medio tra donne e uomini nei consigli di amministrazione delle società	35%	34%
Esposizione ad armi controverse	Quota di investimenti nelle imprese coinvolte nella fabbricazione o nella vendita di armi controverse	0%	34%
Eccesso di divario retributivo a favore degli amministratori delegati	Rapporto medio, all'interno delle imprese beneficiarie degli investimenti, tra la retribuzione totale annua della persona meglio remunerata e la retribuzione totale annua mediana di tutti i dipendenti (esclusa la persona meglio remunerata).	72,4	34%

● **...e rispetto ai periodi precedenti?**

Non pertinente.

● **Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha in parte realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?**

Non pertinente.

● **In che modo gli investimenti sostenibili che il prodotto finanziario ha in parte realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?**

Non pertinente.

— **In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?**

Non pertinente.

— **Gli investimenti sostenibili sono allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:**

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

Non pertinente

La tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'UE.

Il principio "non arrecare un danno significativo" si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante del presente prodotto finanziario non tengono conto dei criteri dell'UE per le attività economiche ecosostenibili.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

La società di gestione si è impegnata ad applicare le norme tecniche di regolamentazione (denominate "NTR") di cui all'allegato 1 del regolamento delegato (UE) 2022/1288 che qualificano 16 indicatori ambientali e sociali obbligatori, e 2 indicatori facoltativi per dimostrare l'impatto degli investimenti sostenibili rispetto a questi indicatori: emissioni di gas a effetto serra (GHG), impronta di carbonio, intensità di GHG delle imprese beneficiarie degli investimenti, esposizione a imprese attive nel settore dei combustibili fossili, quota di consumo e produzione di energia non rinnovabile, intensità di consumo energetico per settore ad alto impatto climatico, attività che incidono negativamente sulle aree sensibili sotto il profilo della biodiversità, emissioni in acqua, rapporto tra rifiuti pericolosi e rifiuti radioattivi, uso e riciclaggio dell'acqua (scelta facoltativa), violazioni dei principi del Global Compact delle Nazioni Unite e delle linee guida dell'OCSE per le imprese multinazionali, mancanza di procedure e di meccanismi di conformità per monitorare la conformità ai principi del Global Compact delle Nazioni Unite e alle linee guida OCSE destinate alle imprese multinazionali, divario retributivo di genere non corretto, diversità di genere nel consiglio, esposizione ad armi controverse, eccesso di divario retributivo a favore dell'amministratore delegato (scelta facoltativa). Gli emittenti sovrani sono soggetti a un monitoraggio delle violazioni sociali della loro intensità di GHG.

Nell'ambito della sua strategia PAI, Carmignac identifica le società che hanno sottoperformato il benchmark in termini di indicatori PAI. Il nostro fornitore di dati terzo, Impact Cubed, ci permette di monitorare l'impatto dei nostri fondi per ogni indicatore PAI.

L'identificazione delle aziende che hanno sottoperformato l'indice in termini di PAI ci permette di instaurare un dialogo per garantire che si impegnino a ridurre il proprio impatto. Abbiamo identificato Ryanair come uno dei principali responsabili della sottoperformance di Carmignac Sécurité per

quanto riguarda l'intensità del consumo di energia. Di conseguenza, abbiamo incontrato la società nel 2022. Poiché Ryanair è una delle aziende maggiormente inquinanti all'interno del nostro portafoglio, era importante parlare degli impegni in ambito climatico, ma anche di qualsiasi altro sviluppo in campo ESG. La compagnia aerea ha recentemente annunciato il suo piano d'azione per l'azzeramento delle emissioni entro il 2050 che, dopo la nostra discussione, sembra particolarmente concreto. Le iniziative di decarbonizzazione dell'azienda saranno graduali, ma i piani a breve e medio termine sono in linea con le nostre aspettative.

Continueremo a dialogare con Ryanair per monitorare questo PAI in particolare e faremo in modo che vengano attuate misure adeguate.

Quali sono stati i principali investimenti di questo prodotto finanziario?

Di seguito si riportano i 15 investimenti principali del 2022, sulla base della media dei dati di fine mese, per la componente obbligazionaria del portafoglio:

Investimenti di maggiore entità	Settore	% di attivi	Paese
ITALY TV 15/04/2025	Titoli di Stato	1,21%	Italia
ATLANTIA SPA 1.88% 12/11/2027	Titoli di Stato	0,73%	Italia
GREECE 3.45% 02/04/2024	Titoli di Stato	0,68%	Grecia
ITALY TV 28/06/2026	Titoli di Stato	0,59%	Italia

Qual è stata la quota degli investimenti in materia di sostenibilità?

Qual è stata l'allocazione degli attivi?

Almeno il 90% degli investimenti del fondo è concepito per soddisfare le caratteristiche ambientali o sociali che promuove, conformemente agli elementi vincolanti della strategia di investimento. Al 30/12/2022, il tasso di copertura dell'analisi ESG era pari al 94,7% del portafoglio (esclusi liquidità e derivati).

Quota minima di investimenti sostenibili:

Nel 2022 la quota minima di investimenti che promuovono caratteristiche A/S era dello 0% e nel 2023 raggiungerà il 10% del patrimonio netto tramite l'investimento in azioni di società (che generano almeno il 50% dei ricavi da beni e servizi legati ad attività commerciali che si allineano positivamente ad almeno uno dei 9 obiettivi di investimento sostenibile ("SDG") delle Nazioni Unite, su un totale di 17). Al 30 dicembre 2022, il 12,9% del patrimonio netto del fondo era costituito da investimenti sostenibili.

A partire dal 1° gennaio 2023, i livelli minimi di investimenti che promuovono caratteristiche A/S, con obiettivi ambientali e sociali sono rispettivamente pari all'1% e al 3% del patrimonio netto del fondo. Al 30 dicembre 2022, tali quote erano pari rispettivamente al 5,4% e al 7,4% del patrimonio netto del fondo.

L'elenco comprende gli investimenti che costituiscono la quota maggiore di investimenti del prodotto finanziario durante il periodo di riferimento, ossia:

L'allocazione degli attivi descrive la quota di investimenti in attivi specifici.

Quota di #2 Altri investimenti:

Oltre alla liquidità e ai derivati (che possono essere utilizzati con finalità di gestione efficace del portafoglio e/o di copertura e/o esposizione, a seconda dei casi), questa categoria comprende gli investimenti in obbligazioni societarie o in obbligazioni sovrane che non sono classificati come investimenti sostenibili. Si tratta di investimenti effettuati in stretta conformità con la strategia di investimento del fondo e sono finalizzati ad attuare la strategia di investimento del fondo. Tutti questi investimenti sono sottoposti a un'analisi ESG (anche attraverso il nostro modello proprietario ESG sovrano per le obbligazioni sovrane) e, per le obbligazioni societarie, a un esame delle salvaguardie minime per assicurare che le loro attività commerciali siano coerenti con le Linee guida dell'OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani. Questi strumenti non sono utilizzati per soddisfare le caratteristiche ambientali o sociali promosse dal fondo. Al 30 dicembre 2022, tale quota era pari al 5,3% del patrimonio del fondo.

Le attività allineate alla tassonomia sono espresse in percentuale di:

- **fatturato**: quota di entrate da attività verdi delle imprese beneficiarie degli investimenti;
- **spese in conto capitale (CapEx)**: investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, ad es. per la transizione verso un'economia verde
- **spese operative (OpEx)**: attività operative verdi delle imprese beneficiarie degli investimenti

#1 Allineati a caratteristiche A/S: comprende gli investimenti del prodotto finanziario utilizzati per rispettare le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

#2 Altri: comprende gli investimenti rimanenti del prodotto finanziario che non sono allineati alle caratteristiche ambientali o sociali, né sono considerati investimenti sostenibili.

La categoria **#1 Allineati a caratteristiche A/S** comprende:

- - La sottocategoria **#1A Sostenibili**, che contempla gli investimenti sostenibili dal punto di vista ambientale e sociale.
- - La sottocategoria **#1B Altre caratteristiche A/S**, che contempla gli investimenti allineati alle caratteristiche ambientali o sociali che non sono considerati investimenti sostenibili

● **In quali settori economici sono stati effettuati gli investimenti?**

Di seguito si riportano i principali settori economici in cui abbiamo realizzato investimenti nel 2022, sulla base della media dei dati di fine mese, per la componente di obbligazioni societarie del portafoglio:

Settore economico	% di attivi
Finanza	29,8%
Energia	15,6%
Impianti e servizi legati al settore Petrolio e gas	12,85%
Società integrate nel settore Petrolio e gas	2,78%
Beni voluttuari	12,6%
Industria	9,3%
Immobiliare	8,4%
Telecomunicazioni	6,8%
Servizi di pubblica utilità	5,2%
Salute	4,9%
Materiali	3,3%
Informatica	2,7%
Beni di consumo non ciclici	1,5%

*Fonti: Carmignac, al 30/12/2022

In quale misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Il fondo ha un obiettivo ambientale legato agli Obiettivi di sviluppo sostenibile e non alla Tassonomia europea. Al 30/12/2022, il suo allineamento alla Tassonomia UE era del 5,30%.

● **Il prodotto finanziario ha investito in attività connesse al gas fossile e/o all'energia nucleare che erano conformi alla tassonomia dell'UE¹?**

Si:

Gas fossile

Energia nucleare

No:

¹ Le attività connesse al gas fossile e/o all'energia nucleare sono conformi alla tassonomia dell'UE solo se contribuiscono all'azione di contenimento dei cambiamenti climatici ("mitigazione dei cambiamenti climatici") e non arrecano un danno significativo a nessuno degli obiettivi della tassonomia dell'UE - cfr. nota esplicativa sul margine sinistro. I criteri completi riguardanti le attività economiche connesse al gas fossile e all'energia nucleare che sono conformi alla tassonomia dell'UE sono stabiliti nel regolamento delegato (UE) 2022/1214 della Commissione.

Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale. Le **attività di transizione** sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano, tra gli altri, livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

I grafici che seguono mostrano in verde la percentuale di investimenti che erano allineati alla tassonomia dell'UE. Poiché non esiste una metodologia adeguata per determinare l'allineamento delle obbligazioni sovrane* alla tassonomia, il primo grafico mostra l'allineamento alla tassonomia in relazione a tutti gli investimenti del prodotto finanziario comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

* Ai fini dei grafici di cui sopra, per "obbligazioni sovrane" si intendono tutte le esposizioni sovrane.

* Ai fini dei grafici di cui sopra, per "obbligazioni sovrane" si intendono tutte le esposizioni sovrane.

Qual era la quota degli investimenti effettuati in attività di transizione e abilitanti?

La quota degli investimenti effettuati in attività di transizione e abilitanti è pari:

- allo 0,23% degli investimenti in attività abilitanti: parte dei ricavi allineati delle imprese provenienti da attività che consentono ad altre attività di ridurre le proprie emissioni di CO².
- allo 0,00% degli investimenti in attività di transizione: parte dei ricavi allineati delle imprese provenienti da attività che contribuiscono alla transizione verso un'economia a zero emissioni di carbonio entro il 2050.

Come si rapporta la percentuale di investimenti allineati alla tassonomia dell'UE con i precedenti periodi di riferimento?

In attesa

Qual era la quota di investimenti sostenibili con un obiettivo ambientale che non erano allineati alla tassonomia dell'UE?

Il livello di investimenti sostenibili con un obiettivo ambientale ma non allineati alla tassonomia dell'UE era pari al 5,4% del patrimonio netto.

Qual era la quota di investimenti socialmente sostenibili?

Il livello di investimenti sostenibili con un obiettivo sociale era pari al 7,4% del patrimonio netto.

Quali investimenti erano compresi nella categoria "Altri" e qual era il loro scopo? Esistevano garanzie minime di salvaguardia ambientale o sociale?

La quota restante del portafoglio (ossia quella al di fuori della quota minima del 90%) può anch'essa promuovere caratteristiche ambientali e sociali, ma non è sistematicamente coperta dall'analisi ESG. Tali attivi possono comprendere titoli la cui analisi ESG può essere effettuata successivamente all'acquisizione del suddetto strumento finanziario da parte del fondo. La liquidità (e strumenti equivalenti) e i derivati (utilizzati con finalità di copertura o di esposizione) sono anch'essi inclusi in "#2 Altri".

A livello di emittenti privati, gli investimenti che non si configurano come investimenti sostenibili vengono esaminati per assicurarsi che rispettino le norme globali in materia di protezione dell'ambiente, diritti umani, standard lavorativi e lotta alla corruzione, tramite uno screening delle controversie (approccio "basato su norme"). Questi investimenti sono sottoposti a uno screening basato su salvaguardie minime, volto ad assicurare che le loro attività commerciali siano coerenti con le Linee guida dell'OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Nel 2022 Carmignac ha adottato le seguenti azioni per sostenere il processo di investimento nel rispetto delle caratteristiche ambientali e sociali:

Pilastro 1: Integrazione ESG:

- Aggiunta di ulteriori indicatori sociali (dati sulla soddisfazione dei dipendenti e dei consumatori) al processo di rating ESG esclusivo di START, per informare gli analisti sugli aspetti rilevanti che possono influire sulla tesi d'investimento.
- Miglioramento della capacità di monitoraggio di green bond, social bond, sustainable bond e obbligazioni legate alla sostenibilità per facilitare il monitoraggio e la redazione di relazioni future all'interno del sistema Global Portfolio Monitoring tramite un dashboard dei gestori di portafoglio sulle posizioni dei fondi.
- Sviluppo di modelli di rating ESG proprietari per il debito sovrano (Impact e Global) nell'interfaccia START, per migliorare l'efficienza e le conoscenze del team di gestione del portafoglio.
- Integrazione del monitoraggio dei principali effetti negativi e definizione di una politica volta ad integrare queste informazioni sugli indicatori ambientali, sociali e dei diritti umani nella logica di investimento.
- Maggiore trasparenza e monitoraggio automatizzato del processo di riduzione dell'universo.

Pilastro 2: Esclusioni

- Automatizzazione del processo di revisione trimestrale dell'elenco per identificare le società legate a controversie o che potrebbero essere soggette a esclusioni settoriali rigide e al processo di riduzione dell'universo, se applicabile.

Pilastro 3: Voto ed engagement

- Introduzione di un approccio di "voto chiave" al fine di dare la priorità alle società identificate con l'obiettivo di fornire raccomandazioni di voto più mirate e avviare potenziali attività di engagement legate alla decisione di voto, in particolare i voti "Say on climate".
- Redazione di bollettini informativi trimestrali sulla gestione responsabile per dimostrare pubblicamente ai clienti come promuoviamo l'azionariato attivo.
- Proseguimento del nostro piano trimestrale di engagement con le aziende, di cui quasi il 58% ha riguardato questioni ambientali, sociali o di governance.

Per quanto riguarda più specificamente le attività di engagement, la nostra responsabilità fiduciaria implica il pieno esercizio dei nostri diritti di azionisti e l'engagement con le società in cui investiamo. Il dialogo è condotto dagli analisti finanziari, dai gestori di portafoglio e dal team ESG. Crediamo che le nostre attività di engagement permettano di comprendere meglio come le società gestiscono i rischi extrafinanziari e migliorano notevolmente il loro profilo ESG, garantendo al contempo una creazione di valore a lungo termine per i nostri clienti, la società e l'ambiente. Le nostre iniziative di engagement possono riguardare una delle cinque considerazioni seguenti: 1) rischi ESG, 2) un tema ESG, 3) un impatto desiderato, 4) un comportamento controverso o 5) una decisione di voto a un'assemblea generale. Carmignac può collaborare con altri azionisti e detentori di obbligazioni quando ciò permette di influenzare le azioni e la governance delle società presenti in portafoglio. Al fine di assicurare che l'azienda identifichi, preveda e gestisca adeguatamente qualsiasi situazione di conflitto di interessi potenziale o confermato, Carmignac ha implementato e mantiene aggiornate politiche e direttive. Per ulteriori informazioni sulle nostre politiche di engagement si rimanda al nostro sito web.

La nostra responsabilità fiduciaria implica il pieno esercizio dei nostri diritti di azionisti e l'engagement con le società in cui investiamo. Il dialogo è assicurato dagli analisti finanziari, dai gestori di portafoglio e dal team ESG. Crediamo che le nostre attività di engagement portino a una migliore comprensione di come le società gestiscono i rischi extrafinanziari e migliorano in misura significativa il loro profilo ESG, offrendo al contempo una creazione di valore a lungo termine per i nostri clienti, la società e l'ambiente. Le nostre attività di engagement possono essere di 5 tipi: 1) legate ai rischi ESG, 2) legate a un tema ESG, 3) legate a un impatto desiderato, 4) dovute a un comportamento controverso o 5) associate a una decisione di voto a un'Assemblea generale. Carmignac può collaborare con altri azionisti e detentori di obbligazioni quando ciò può essere vantaggioso ai fini di engagement per influenzare le azioni e la governance delle società presenti in portafoglio. Al fine di assicurare che l'azienda identifichi, anticipi e gestisca adeguatamente qualsiasi situazione di conflitto di interessi potenziale o confermato, Carmignac ha implementato e mantiene aggiornate politiche e linee guida. Per ulteriori informazioni sulle nostre politiche di engagement si rimanda al nostro sito web.

Per l'anno 2022, abbiamo interagito con 81 società a livello di Carmignac e 12 società a livello di Carmignac Sécurité.

Ad esempio, abbiamo avviato un dialogo regolare con Teva Pharmaceuticals, in particolare in ragione del suo coinvolgimento in controversie a livello settoriale. L'obiettivo del dialogo era valutare i progressi dell'azienda nella risoluzione delle controversie e trasmettere determinati messaggi. Nell'ottobre 2022 abbiamo discusso del recente accordo della società relativo al problema degli oppioidi con cui è alle prese l'intero settore, in base al quale dovrà pagare oltre 4 miliardi di dollari su un periodo di 13 anni. Abbiamo inoltre discusso l'impatto materiale di questi problemi sulla reputazione e sulle finanze dell'azienda, nonché le nostre aspettative per quanto riguarda la gestione delle controversie. Abbiamo altresì incoraggiato la società a dialogare con le agenzie di rating ESG per garantire che la valutazione rifletta accuratamente la natura delle controversie e le azioni da essa intraprese per porvi rimedio. A seguito della nostra attività di engagement l'analista di settore ha valutato il rating ESG START della società, pari a B (su una scala da A a E), ritenendolo ancora appropriato al momento attuale, pertanto non sono state apportate modifiche. Continueremo a monitorare le risposte della società alle controversie in corso e il nostro engagement con essa in qualità di investitori obbligazionari.

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento sostenibile?

Non pertinente.

Gli **indici di riferimento** sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

- **Per quali aspetti l'indice di riferimento differisce da un indice generale di mercato?**

Non pertinente.

- **Qual è stata la prestazione di questo prodotto finanziario in relazione agli indicatori di sostenibilità volti a determinare l'allineamento dell'indice di riferimento all'obiettivo di investimento sostenibile?**

Non pertinente.

- **Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?**

Non pertinente.

- **Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice generale di mercato?**

Non pertinente.

ANNEX IV (continued)

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

	Product name:	Comgest Growth Global	Legal entity identifier:	635400B8AYYSRLTWLG15	
<p>Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.</p> <p>The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.</p>	Environmental and/or social characteristics				
	Did this financial product have a sustainable investment objective?				
	●● <input type="checkbox"/> Yes	● <input checked="" type="checkbox"/> No			
	<input type="checkbox"/>	It made sustainable investments with an environmental objective: ___%	<input checked="" type="checkbox"/>	It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 40.83% of sustainable investments	
	<input type="checkbox"/>	in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/>	with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy	
<input type="checkbox"/>	in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/>	with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy		
<input type="checkbox"/>	It made sustainable investments with a social objective: ___%	<input checked="" type="checkbox"/>	with a social objective		
<input type="checkbox"/>	It promoted E/S characteristics , but did not make any sustainable investments	<input type="checkbox"/>			
	To what extent were the environmental and/or social characteristics promoted by this financial product met?				

<p>Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.</p>	<p>The environmental and/or social characteristics promoted by the Fund were met by targeting and investing in companies with positive overall ESG quality.</p> <p>To assist in selecting companies with positive overall ESG quality, the Investment Manager performed an ESG review of the market to identify and exclude companies with the poorest ESG credentials from the Fund's investable market. This resulted in a reduction of the investable market by at least 20%. The ESG review was applied to at least 90% of the Fund's investee companies.</p> <p>In addition, throughout the period, the Investment Manager also applied an exclusion policy to exclude investment in: (i) companies with negative social characteristics including companies (a) manufacturing anti-personnel mines, cluster bombs, biological/chemical weapons, depleted uranium, nuclear weapons, white phosphorus, non-detectable fragments and blinding lasers (>0% of revenue), (b) producing and/or distributing conventional weapons (>10% of revenue), (c) directly manufacturing and/or distributing tobacco (>5% of revenue), and (d) with severe violations of the UN Global Compact without prospect for improvement; and (ii) companies with negative environmental characteristics including operators of thermal coal mines (>0% of revenue) and electricity producers with an energy mix exposed to coal exceeding defined relative or absolute thresholds (production or revenue based on coal equal to or exceeding 20% or electricity producers with installed capacity based on coal equal to or exceeding 5 GW), without a coal exit strategy.</p> <p><i>In respect of sustainable investment held by the Fund, please find below the list of environmental objectives (set out in Article 9 of Regulation (EU) 202/852) and the list of social objectives to which the Fund's sustainable investments contributed:</i></p> <p>1. Environmental objectives:</p> <p>The Fund invested in sustainable investments with environmental objectives that contributed to the below objectives:</p> <ul style="list-style-type: none"> (i) climate change mitigation, and (ii) transition to a circular economy. <p>2. Social objectives:</p> <p>The Fund invested in sustainable investments with social objectives that contributed to the below objectives:</p> <ul style="list-style-type: none"> (i) the provision of decent working conditions (including for value chain workers), (ii) the promotion of adequate living standards and wellbeing for end users, and (iii) inclusive and sustainable communities and societies.
	<p>● <i>How did the sustainability indicators perform?</i></p>
	<p>As at end December 2022, the Fund had attained the environmental and social characteristics promoted, including:</p> <ul style="list-style-type: none"> (i) at least 90% of the Fund's investee companies had an ESG score in the top 80% of companies rated by the Investment Manager; (ii) none of the Fund's investee companies were engaged in excluded activities; and (iii) 40.83% of assets qualified, in the opinion of the Investment Manager, as sustainable investments.

	<ul style="list-style-type: none"> ● What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?
	<p>The Fund invested 40.83% of its assets in sustainable investments which contributed to the environmental objectives and social objectives listed above.</p> <p>Description of how the sustainable investments contributed to the sustainable investment objective</p> <p>The sustainable investments’ contribution to the environmental and/or social objectives listed above is measured by the Investment Manager using proprietary analysis.</p> <p>For the social objectives:</p> <ul style="list-style-type: none"> - at least 25% of the investee company’s revenue was generated from business activities which contributed to one or more of the United Nations’ Sustainable Development Goals (SDGs number 2, 3, 4, 6, 7, 8, 9, 11, 12 and 16)⁴⁷. <p>For the environmental objectives:</p> <ul style="list-style-type: none"> - at least 25% of the investee company’s revenue was generated from economic activities that are Taxonomy eligible; or - at least 5% of the investee company’s revenue was generated from economic activities that are potentially⁴⁸ aligned to the Taxonomy.
<p>Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.</p>	<ul style="list-style-type: none"> ● How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?
	<p>An assessment was performed to ensure that investments identified as contributing to one or more of the above environmental and/or social objectives did not significantly harm any of those objectives. This was done by assessing and monitoring the 14 mandatory principal adverse impact indicators and where possible relevant optional indicators referenced in Annex 1 of the SFDR Delegated Regulation (EU 2022/1288) and by seeking to ensure that such investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.</p> <p>The Fund committed to invest in sustainable investments starting from 2 November 2022. The Investment Manager will continue to review additional optional relevant indicators for assessing adverse impacts and will further detail its assessment methodology in the Fund’s financial statements covering the year 2023.</p>
	<p>How were the indicators for adverse impacts on sustainability factors taken into account?</p>

⁴⁷ SDG 2 – Zero Hunger, SDG 3 – Good Health and Well-being, SDG 4 – Quality Education, SDG 6 – Clean Water and Sanitation, SDG 7 – Affordable and Clean Energy, SDG 8 – Decent Work and Economic Growth, SDG 9 – Industry, Innovation and Infrastructure, SDG 11 – Sustainable Cities and Communities, SDG 12 – Responsible Consumption and Production and SDG 16 – Peace Justice and Strong Institutions.

⁴⁸ This assessment is based on estimation and is not relying on company reported data.

	<p>The 14 mandatory principal adverse impact indicators have been reviewed by the Investment Manager as part of its ESG assessment for sustainable investments. The Investment Manager used external data where available and also relied on a qualitative assessment using information directly from the company or its own research where quantitative data was not available.</p>
	<p>--- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:</p>
	<p>To ascertain if companies were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights ('Guidelines and Principles'), the Investment Manager reviewed and assessed the results obtained from PAIs 10 (Violations of the Guidelines and Principles) and 11 (Lack of processes and compliance mechanisms to monitor compliance with Guidelines and Principles) to ensure that the Fund's sustainable investments were not in violation of the UN Guiding Principles during the reference period and to ensure they have put in place processes and compliance mechanisms to help meet the Guidelines and Principles. Where data was missing the investment teams performed their own qualitative assessment by reviewing additional information which may include the investee companies' policies and procedures, controversies flagged by third party providers, investee companies' membership of the UN Global Compact or NGO reports.</p>
	<p><i>The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.</i></p> <p>The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.</p> <p><i>Any other sustainable investments must also not significantly harm any environmental or social objectives.</i></p>
	<p>How did this financial product consider principal adverse impacts on sustainability factors?</p>
	<p>Starting from 2 November 2022, the Fund considered principal adverse impacts ("PAI") on sustainability factors by assessing and monitoring the 14 mandatory principal adverse impact indicators (PAIs) referenced in Annex 1 of the delegated regulation (EU) 2022/1288. The Investment Manager used external data where available and relied on information directly from the company or its own research and knowledge of the relevant industry or sector to assess the 14 mandatory principal adverse impacts.</p> <p>In order to collect and share PAI related data and information more efficiently, the Investment Manager developed an internal tool, the "PAI Dashboard", with the main purpose of providing the investment teams with instant access to all PAI related data and information on investee companies as well as information on the top 5 contributors for each PAI (aggregated at fund level) so as to enable the investment teams to easily identify companies that should be considered for engagement. The quantitative and qualitative data aggregated at Fund level guide the Investment Manager's assessment of the principal adverse impacts identified and allow it to measure and set engagement priorities and other mitigation efforts such as voting and advocacy.</p>

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:

Largest investments	Sector	% of assets	Country
Microsoft Corporation	Information Technology	5.82%	United States
Eli Lilly and Company	Health Care	5.82%	United States
Alphabet Inc. Class A	Communication Services	4.63%	United States
Intuit Inc.	Information Technology	4.20%	United States
Taiwan Semiconductor Manufacturing Co.	Information Technology	3.74%	Taiwan
Johnson & Johnson	Health Care	3.63%	United States
Inner Mongolia Yili Industrial Group Co., Ltd. Class A	Consumer Staples	3.37%	China
Housing Development Finance Corporation Limited	Financials	3.27%	India
LVMH Moet Hennessy Louis Vuitton SE	Consumer Discretionary	3.22%	France
ASML Holding NV	Information Technology	3.05%	Netherlands
HOYA CORPORATION	Health Care	3.01%	Japan
L'Oreal S.A.	Consumer Staples	2.93%	France
Experian PLC	Industrials	2.82%	United Kingdom
Verisk Analytics Inc	Industrials	2.79%	United States

The top investments represent the greatest proportion of investments over the course of the period covered, calculated at appropriate intervals to be representative of that period.

What was the proportion of sustainability-related investments?

The proportion of sustainable investment was 40.83% and included 16.83% of sustainable investments with a social objective and 24% of sustainable investment with an environmental objective. Please see below the breakdown:

Breakdown of the proportion of the sustainable investments per each of environmental objectives set out in Article 9 of Regulation (EU) 2020/852 to which those investments contributed	
Environmental objective	% of assets
Climate change mitigation	16.83%
Climate change mitigation & transition to a circular economy	7.17%

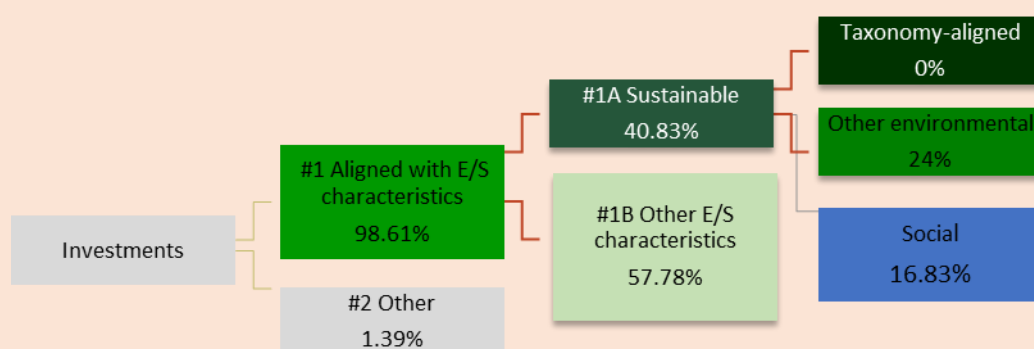

Breakdown of the proportion of the sustainable investments per each of social objectives to which those investments contributed	
Social objective	% of assets
Provision of decent working conditions (including for value chain workers)	5.42%
Promotion of adequate living standards and wellbeing for end users	4.92%
Inclusive and sustainable communities and societies	2.83%
Promotion of adequate living standards and wellbeing for end users & inclusive and sustainable communities and societies	3.66%

Asset allocation describes the share of investments in specific assets.

● **What was the asset allocation?**

As at end of December 2022, 98.61% of the assets of the financial product were used to meet the environmental and social characteristics promoted. This included 40.83% of sustainable investments. 1.39% of assets were not aligned with the environmental or social characteristics.

The Fund was primarily invested in direct holdings of listed equities. 98.61% of the investments in listed equities were aligned with the environmental and/or social characteristics.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **In which economic sectors were the investments made?**

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The percentage of investments of the Fund aligned with the EU Taxonomy is 0% of the net assets of the Fund.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁴⁹?

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

⁴⁹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

<p>Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.</p> <p>Taxonomy-aligned activities are expressed as a share of:</p> <ul style="list-style-type: none"> – turnover reflects the “greenness” of investee companies today. – capital expenditure (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy. – operational expenditure (OpEx) reflects the green operational activities of investee companies. 	<p><input type="checkbox"/> Yes</p> <p><input type="checkbox"/> In fossil gas <input type="checkbox"/> In nuclear energy</p> <p><input checked="" type="checkbox"/> No</p>

ANNEX IV (continued)

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

	Product name: Comgest Growth Europe	Legal entity identifier: 635400JYB1RHBTRDH390
<p>Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.</p>	Environmental and/or social characteristics	
<p>The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.</p>	Did this financial product have a sustainable investment objective?	
	<input checked="" type="checkbox"/> <input checked="" type="checkbox"/> Yes	<input type="checkbox"/> <input checked="" type="checkbox"/> No
	<input type="checkbox"/> It made sustainable investments with an environmental objective: ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 33.05% of sustainable investments
	<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
	<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	<input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments
	To what extent were the environmental and/or social characteristics promoted by this financial product met?	

<p>Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.</p>	<p>The environmental and/or social characteristics promoted by the Fund were met by targeting and investing in companies with positive overall ESG quality.</p> <p>To assist in selecting companies with positive overall ESG quality, the Investment Manager performed an ESG review of the market to identify and exclude companies with the poorest ESG credentials from the Fund's investable market. This resulted in a reduction of the investable market by at least 20%. The ESG review was applied to at least 90% of the Fund's investee companies.</p> <p>In addition, throughout the period, the Investment Manager also applied an exclusion policy to exclude investment in: (i) companies with negative social characteristics including companies (a) manufacturing anti-personnel mines, cluster bombs, biological/chemical weapons, depleted uranium, nuclear weapons, white phosphorus, non-detectable fragments and blinding lasers (>0% of revenue), (b) producing and/or distributing conventional weapons (>10% of revenue), (c) directly manufacturing and/or distributing tobacco (>5% of revenue), and (d) with severe violations of the UN Global Compact without prospect for improvement; and (ii) companies with negative environmental characteristics including operators of thermal coal mines (>0% of revenue) and electricity producers with an energy mix exposed to coal exceeding defined relative or absolute thresholds (production or revenue based on coal equal to or exceeding 20% or electricity producers with installed capacity based on coal equal to or exceeding 5 GW), without a coal exit strategy.</p>
	<p><i>In respect of sustainable investment held by the Fund, please find below the list of environmental objectives (set out in Article 9 of Regulation (EU) 202/852) and the list of social objectives to which the Fund's sustainable investments contributed:</i></p>
	<p>1. Environmental objectives:</p>
	<p>The Fund invested in sustainable investments with environmental objectives that contributed to the below objectives:</p>
	<ul style="list-style-type: none"> (i) climate change mitigation, and (ii) transition to a circular economy.
	<p>2. Social objectives:</p>
	<p>The Fund invested in sustainable investments with social objectives that contributed to the below objectives:</p>
	<ul style="list-style-type: none"> (i) the promotion of adequate living standards and wellbeing for end users, and (ii) inclusive and sustainable communities and societies.
	<p>● How did the sustainability indicators perform?</p>
	<p>As at end December 2022, the Fund had attained the environmental and social characteristics promoted, including:</p> <ul style="list-style-type: none"> (i) at least 90% of the Fund's investee companies had an ESG score in the top 80% of companies rated by the Investment Manager; (ii) none of the Fund's investee companies were engaged in excluded activities; and (iii) 33.05% of assets qualified, in the opinion of the Investment Manager, as sustainable investments.

	<ul style="list-style-type: none"> ● What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?
	<p>The Fund invested 33.05% of its assets in sustainable investments which contributed to the environmental objectives and social objectives listed above.</p> <p>Description of how the sustainable investments contributed to the sustainable investment objective</p> <p>The sustainable investments’ contribution to the environmental and/or social objectives listed above is measured by the Investment Manager using proprietary analysis.</p> <p>For the social objectives:</p> <ul style="list-style-type: none"> - at least 25% of the investee company’s revenue was generated from business activities which contributed to one or more of the United Nations’ Sustainable Development Goals (SDGs number 2, 3, 4, 6, 7, 8, 9, 11, 12 and 16)²⁰. <p>For the environmental objectives:</p> <ul style="list-style-type: none"> - at least 25% of the investee company’s revenue was generated from economic activities that are Taxonomy eligible; or - at least 5% of the investee company’s revenue was generated from economic activities that are potentially²¹ aligned to the Taxonomy.
<p>Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters.</p>	<ul style="list-style-type: none"> ● How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?
	<p>An assessment was performed to ensure that investments identified as contributing to one or more of the above environmental and/or social objectives did not significantly harm any of those objectives. This was done by assessing and monitoring the 14 mandatory principal adverse impact indicators and where possible relevant optional indicators referenced in Annex 1 of the SFDR Delegated Regulation (EU 2022/1288) and by seeking to ensure that such investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.</p> <p>The Fund committed to invest in sustainable investments starting from 2 November 2022. The Investment Manager will continue to review additional optional relevant indicators for assessing adverse impacts and will further detail its assessment methodology in the Fund’s financial statements covering the year 2023.</p>
	<p>How were the indicators for adverse impacts on sustainability factors taken into account?</p>

²⁰ SDG 2 – Zero Hunger, SDG 3 – Good Health and Well-being, SDG 4 – Quality Education, SDG 6 – Clean Water and Sanitation, SDG 7 – Affordable and Clean Energy, SDG 8 – Decent Work and Economic Growth, SDG 9 – Industry, Innovation and Infrastructure, SDG 11 – Sustainable Cities and Communities, SDG 12 – Responsible Consumption and Production and SDG 16 – Peace Justice and Strong Institutions.

²¹ This assessment is based on estimation and is not relying on company reported data.

	<p>The 14 mandatory principal adverse impact indicators have been reviewed by the Investment Manager as part of its ESG assessment for sustainable investments. The Investment Manager used external data where available and also relied on a qualitative assessment using information directly from the company or its own research where quantitative data was not available.</p>
	<p><i>Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:</i></p>
	<p>To ascertain if companies were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights ('Guidelines and Principles'), the Investment Manager reviewed and assessed the results obtained from PAIs 10 (Violations of the Guidelines and Principles) and 11 (Lack of processes and compliance mechanisms to monitor compliance with Guidelines and Principles) to ensure that the Fund's sustainable investments were not in violation of the UN Guiding Principles during the reference period and to ensure they have put in place processes and compliance mechanisms to help meet the Guidelines and Principles. Where data was missing the investment teams performed their own qualitative assessment by reviewing additional information which may include the investee companies' policies and procedures, controversies flagged by third party providers, investee companies' membership of the UN Global Compact or NGO reports.</p>
	<p><i>The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.</i></p> <p>The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.</p> <p><i>Any other sustainable investments must also not significantly harm any environmental or social objectives.</i></p>
	<p>How did this financial product consider principal adverse impacts on sustainability factors?</p>
	<p>Starting from 2 November 2022, the Fund considered principal adverse impacts (“PAI”) on sustainability factors by assessing and monitoring the 14 mandatory principal adverse impact indicators (PAIs) referenced in Annex 1 of the delegated regulation (EU) 2022/1288. The Investment Manager used external data where available and relied on information directly from the company or its own research and knowledge of the relevant industry or sector to assess the 14 mandatory principal adverse impacts.</p> <p>In order to collect and share PAI related data and information more efficiently, the Investment Manager developed an internal tool, the “PAI Dashboard”, with the main purpose of providing the investment teams with instant access to all PAI related data and information on investee companies as well as information on the top 5 contributors for each PAI (aggregated at fund level) so as to enable the investment teams to easily identify companies that should be considered for engagement. The quantitative and qualitative data aggregated at Fund level guide the Investment Manager’s assessment of the principal adverse impacts identified and allow it to measure and set engagement priorities and other mitigation efforts such as voting and advocacy.</p>

	<p>What were the top investments of this financial product?</p>																																																
<p>The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is:</p>	<table border="1"> <thead> <tr> <th>Largest investments</th> <th>Sector</th> <th>% of assets</th> <th>Country</th> </tr> </thead> <tbody> <tr> <td>Novo Nordisk A/S Class B</td> <td>Health Care</td> <td>7.60%</td> <td>Denmark</td> </tr> <tr> <td>ASML Holding NV</td> <td>Information Technology</td> <td>7.10%</td> <td>Netherlands</td> </tr> <tr> <td>EssilorLuxottica SA</td> <td>Consumer Discretionary</td> <td>5.53%</td> <td>France</td> </tr> <tr> <td>LVMH Moet Hennessy Louis Vuitton SE</td> <td>Consumer Discretionary</td> <td>5.04%</td> <td>France</td> </tr> <tr> <td>Linde plc</td> <td>Materials</td> <td>4.50%</td> <td>United Kingdom</td> </tr> <tr> <td>Accenture Plc Class A</td> <td>Information Technology</td> <td>4.41%</td> <td>Ireland</td> </tr> <tr> <td>Alcon AG</td> <td>Health Care</td> <td>3.54%</td> <td>Switzerland</td> </tr> <tr> <td>Experian PLC</td> <td>Industrials</td> <td>3.54%</td> <td>United Kingdom</td> </tr> <tr> <td>Jeronimo Martins, SGPS S.A.</td> <td>Consumer Staples</td> <td>3.19%</td> <td>Portugal</td> </tr> <tr> <td>ICON Plc</td> <td>Health Care</td> <td>2.93%</td> <td>Ireland</td> </tr> <tr> <td>Heineken NV</td> <td>Consumer Staples</td> <td>2.91%</td> <td>Netherlands</td> </tr> </tbody> </table> <p><i>The top investments represent the greatest proportion of investments over the course of the period covered, calculated at appropriate intervals to be representative of that period.</i></p>	Largest investments	Sector	% of assets	Country	Novo Nordisk A/S Class B	Health Care	7.60%	Denmark	ASML Holding NV	Information Technology	7.10%	Netherlands	EssilorLuxottica SA	Consumer Discretionary	5.53%	France	LVMH Moet Hennessy Louis Vuitton SE	Consumer Discretionary	5.04%	France	Linde plc	Materials	4.50%	United Kingdom	Accenture Plc Class A	Information Technology	4.41%	Ireland	Alcon AG	Health Care	3.54%	Switzerland	Experian PLC	Industrials	3.54%	United Kingdom	Jeronimo Martins, SGPS S.A. <p>Asset allocation describes the share of investments in specific assets.</p>	<p>● What was the asset allocation?</p> <p>As at end of December 2022, 96.26% of the assets of the financial product were used to meet the environmental and social characteristics promoted. This included 33.05% of sustainable investments. 3.74% of assets were not aligned with the environmental or social characteristics.</p> <p>The Fund was primarily invested in direct holdings of listed equities. 96.26% of the investments in listed equities were aligned with the environmental and/or social characteristics.</p>																																																

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **In which economic sectors were the investments made?**

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The percentage of investments of the Fund aligned with the EU Taxonomy is 0% of the net assets of the Fund.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy²²?

Yes

In fossil gas

In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

²² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure (CapEx)** shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure (OpEx)** reflects the green operational activities of investee companies.

*For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The percentage of investments in enabling or transitional activities is 0% of the net assets of the Fund.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy is 14.61%. The Investment Manager has assessed the taxonomy eligibility and potential taxonomy alignment of the sustainable investments with an environmental objective and believes these companies are demonstrating positive advancement toward Taxonomy alignment and contribute to the environmental objectives identified.

 **What was the share of socially sustainable investments?**

The share of socially sustainable investments is 18.44%.

 **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

	<p>As at end of December 2022, the Fund held cash for the purpose of meeting short-term cash commitments. The Fund also held derivatives for currency hedging purposes.</p>												
	<p>What actions have been taken to meet the environmental and/or social characteristics during the reference period?</p>

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: CPR Invest - Hydrogen

Legal entity identifier:
213800GFB2R6MO25UX94

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**:

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective**: _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **51.03%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **INDICE CPR EQT HYDROGEN**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **0.65 (C)**.
- The weighted average ESG rating of the ESG investment universe is **0.18 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

The above sustainability indicators were not compared to previous periods as the regulation was not yet in force

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial

data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our

proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- **Exclusion :** Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- **ESG factors integration :** Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- **Engagement :** Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- **Vote :** Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- **Controversies monitoring :** Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: **From 01/08/2022 to 31/07/2023**

Largest Investments	Sector	% Assets	Country
BAKER HUGHES A GE CO	Energy	3.88%	USA
AIR PRODUCTS & CHEMI	Materials	3.75%	USA
LINDE PLC	Materials	3.67%	USA
EMERSON ELECTRIC	Industrials	3.48%	USA
MICHELIN (CGDE)	Consumer discretionary	3.33%	FRA
AIR LIQUIDE SA	Materials	3.21%	FRA
SCHLUMBERGER LTD	Energy	2.77%	USA
A-F CASH USD - Z USD	Mutual Funds	2.74%	LUX
NEXTERA ENERGY INC	Utilities	2.73%	USA
ENGIE	Utilities	2.72%	FRA
AMUNDI MMST (USD)-OV	Mutual Funds	2.71%	LUX
CHART INDUSTRIES	Industrials	2.64%	USA
SIEMENS AG-REG	Industrials	2.59%	DEU
EDP-ENERGIAS DE PORTUGAL SA	Utilities	2.14%	PRT
SEMPRA ENERGY	Utilities	2.11%	USA

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share

of investments in specific assets.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:
 - The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
 -The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **In which economic sectors were the investments made ?**

<i>Sector</i>	<i>% Assets</i>
<i>Industrials</i>	<i>36.67%</i>
<i>Utilities</i>	<i>19.71%</i>
<i>Materials</i>	<i>14.39%</i>
<i>Consumer discretionary</i>	<i>10.88%</i>
<i>Energy</i>	<i>9.50%</i>
<i>Mutual Funds</i>	<i>5.45%</i>
<i>Information Technology</i>	<i>2.47%</i>
<i>Forex</i>	<i>-0.05%</i>
<i>Cash</i>	<i>0.97%</i>

Taxonomy-aligned activities are expressed as a share of:
-turnover reflecting the share of revenue from green activities of investee companies

 **To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?**

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 1.87% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change obligation or climate change mitigation objectives of the EU Taxonomy.

-capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
 - operational expenditure (OpEx) reflecting green operational activities of investee companies.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:
 In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

● **What was the share of investments in transitional and enabling activities ?**

As of 31/07/2023, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 0.10%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

In previous periods the regulation was not yet in force.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The share of sustainable investments with environmental objective not aligned to taxonomy was **34.43%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

What was the share of socially sustainable investments ?

This product did not commit to have social sustainable investments over the period.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

This product does not have an ESG Benchmark.

- ***How does the reference benchmark differ from a broad market index ?***

This product does not have an ESG Benchmark

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: CPR Invest - Global Disruptive Opportunities

Legal entity identifier: 222100LU67GQT03SEE74

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

X

It made **sustainable investments with an environmental objective:**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a **sustainable investments with a social objective:** _____

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **51.68%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the financial year, the product continuously promoted environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of its investment universe **MSCI WORLD**. In determining the ESG score of the Product and the ESG investment universe, ESG /performance was continuously assessed by comparing the average performance of a security against the security issuer's industry, in respect of each of the three environmental, social and governance characteristics.

The investment universe is a broad market universe that does not evaluate or include components based on environmental and/or social characteristics and is therefore not intended to be consistent with the characteristics promoted by the fund. No ESG benchmark has been designated.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period:

- The weighted average ESG rating of the portfolio is **0.15 (D)**.
- The weighted average ESG rating of the ESG investment universe is **-0.11 (D)**.

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

The above sustainability indicators were not compared to previous periods as the regulation was not yet in force

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial

data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our

proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called “Community Involvement & Human Rights” which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- **Exclusion :** Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- **ESG factors integration :** Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- **Engagement :** Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- **Vote :** Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- **Controversies monitoring :** Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: **From 01/08/2022 to 31/07/2023**

Largest Investments	Sector	% Assets	Country
MICROSOFT CORP	Information Technology	4.60%	USA
PALO ALTO NETWORKS INC	Information Technology	3.16%	USA

What was the proportion of sustainability-related investments?

● **What was the asset allocation?**

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **In which economic sectors were the investments made ?**

Sector	% Assets
<i>Information Technology</i>	<i>50.08%</i>
<i>Health care</i>	<i>16.28%</i>
<i>Industrials</i>	<i>13.11%</i>
<i>Consumer discretionary</i>	<i>6.66%</i>
<i>Financials</i>	<i>5.97%</i>
<i>Communication Services</i>	<i>4.09%</i>
<i>Mutual Funds</i>	<i>1.50%</i>

<i>Real estate</i>	<i>1.38%</i>
<i>Forex</i>	<i>0.37%</i>
<i>Cash</i>	<i>0.56%</i>

Taxonomy-aligned activities are expressed as a share of:

- turnover** reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.62% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change obligation or climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:

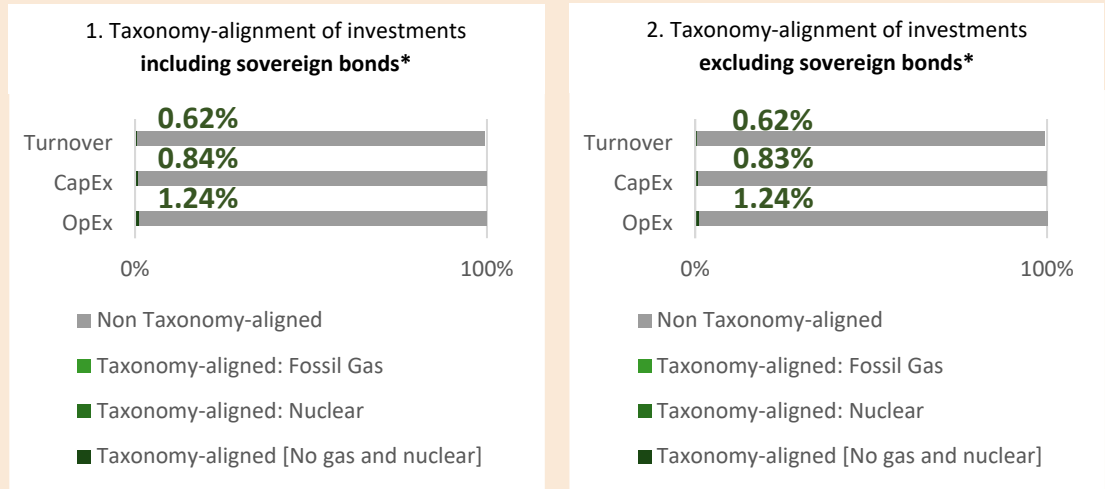

In fossil gas In nuclear energy

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities

● **What was the share of investments in transitional and enabling activities ?**

As of 31/07/2023, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 0.39%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

In previous periods the regulation was not yet in force.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?**

The share of sustainable investments with environmental objective not aligned to taxonomy was **39.66%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

 **What was the share of socially sustainable investments ?**

under the EU Taxonomy.

This product did not commit to have social sustainable investments over the period.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

This product does not have an ESG Benchmark.

- ***How does the reference benchmark differ from a broad market index ?***

This product does not have an ESG Benchmark

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Credit Suisse (Lux) Robotics Equity Fund

Legal entity identifier: 549300IXGN09NFGX1E64

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes	No
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 19.57% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Management Company and the Investment Manager applied the Credit Suisse Asset Management (CSAM) Sustainable Investing Policy to this Subfund. This Subfund promoted the following environmental and social characteristics:

- to invest into companies that comply with international treaties on controversial weapons (norms-based exclusions on direct investments)
- not to invest into companies that derive more than 5% of their revenue from conventional weapons and firearms, tobacco production, gambling, or adult entertainment (values-based exclusions on direct investments)

- not to invest into companies that derive more than 20% of their revenue from tobacco distribution, conventional weapons support systems or coal (i.e., coal mining and coal-based electricity generation) (values-based exclusions on direct investments).
- adherence to, and conducting business activities in accordance with, international norms such as the "United Nations Global Compact Principles" (UNGC) (business-conduct exclusions on direct investments)
- higher exposure to investments that have better ESG profile and fewer ESG controversies over their investment cycle (ESG Integration)
- contribution to good governance and sustainable practices through proxy voting and engagement with investee companies in line with Credit Suisse Asset Management's Sustainable Investing Policy (Active Ownership)

The extent to which the environmental and/or social characteristics were met is measured by the sustainability indicators shown below. Derivatives were not used to attain the environmental or social characteristics.

Please find further information on ESG Integration, ESG Exclusions and Active Ownership below in the question "What actions have been taken to meet the environmental and/or social characteristics during the reference period?" and online at www.credit-suisse.com/esg.

● **How did the sustainability indicators perform?**

The table below shows the output of the Sustainability Indicators applicable to this Subfund as of 31.05.2023. While the sustainability indicators have been monitored continuously during the reference period, the data below does not represent an average for the reference period.

More information about the data sources and applied methodologies for each Sustainability Indicator can be found online at: www.credit-suisse.com/esg.

Sustainability Indicator*	Portfolio	Indicator Output
ESG Rating	AAA: 10.08%, AA: 44.96%, A: 19.17%, BBB: 14.52%, BB: 3.98%, B: 0.00%, CCC: 0.00%, Not ratable**: 2.07%, No data coverage**: 5.23%	Investment exposure by ESG Rating: AAA (highest): 0–100% AA: 0–100% A: 0–100% BBB: 0–100% BB: 0–100% B: 0–100% CCC (lowest): 0–100%

Social pillar score	5.50	Portfolio aggregate social pillar score: 1 (lowest) – 10 (highest)
Governance pillar score	6.25	Portfolio aggregate governance pillar score: 1 (lowest) – 10 (highest)
ESG controversy flag	Green: 88.06%, Yellow: 2.58%, Orange: 2.06%, Red: 0.00%, Not ratable**: 2.07%, No data coverage**: 5.23%	Investment exposure by ESG controversy flag: Green: 0–100% Yellow: 0–100% Orange: 0–100% Red: 0–100%
CSAM ESG exclusions***	Pre- and post-trade checks are in place to detect investments that breach the ESG exclusions. Any detected breach is escalated and remedied.	This indicator reflects that the portfolio complied with the applicable ESG exclusions as described in the exclusion section of the website (during the entire reference period, CSAM adhered to ESG exclusion criteria, as stated in the CSAM Sustainable Investing Policy)

* None of the Sustainability Indicators were subject to an assurance provided by an auditor or a review by a third party.

** These categories can show a negative value. This can be caused by negative committed cash positions and the use of certain types of derivatives (such as FX or OTC Collateral) due to trade settlement timing.

*** Note that the amount of investments that were restricted due to the ESG exclusions depend on the investable universe of the Subfund.

● **...and compared to previous periods?**

A comparison of the portfolio's performance of the sustainability indicators compared to previous periods will be available as of the next reference period.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

At the end of the reference period, the sustainable investments contributed to the Environmental and Social objectives below:

- Investments that generated at least 50% of their revenues from products and services that contributed to an environmental objective (e.g. alternative energy, carbon & energy efficiency, green building, sustainable water, pollution prevention, sustainable agriculture etc.)
- Investments that generated at least 50% of their revenues from products and services that contributed to a social objective (e.g. nutrition, disease treatments, sanitation, affordable real estate, SME finance, education, connectivity etc.).
- Investments that have an approved commitment to science-based emission targets and an average reduction in carbon emissions intensity of 7% over the last three years.

The above criteria were assessed using a quantitative methodology. If there had not been an output from the quantitative assessment (e.g. in the case of missing quantitative ESG data), investments were submitted for confirmation in a case-by-case approach based on a proprietary assessment of the criteria. A central Credit Suisse Group committee approved such submissions.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

Credit Suisse Asset Management (CSAM) considered various indicators linked to principal adverse impacts on sustainability factors (PAI Indicators) and further indicators from its exclusion framework to assess whether sustainable investments caused significant harm to any environmental or social investment objective.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

— — *How were the indicators for adverse impacts on sustainability factors taken into account?*

During the Reference Period, the PAI Indicators applied by CSAM to identify investments which qualify as SFDR Sustainable Investments in line with CS SFDR Sustainable Investment Methodology included a set of criteria and thresholds to determine if an investment passed the DNSH condition as follows:

Investments must not:

1. have a significant negative contribution to climate change. This criterion makes use of an indicator that flags the biggest emitters of greenhouse gas globally and relates to PAI 1, 2, 3 and 15.
2. be subject to norms, values and business conduct exclusions and other investment restrictions which address PAI 4, 10, 14 and 16.
3. be subject to severe ESG controversies which address PAI 7 and 10 where applicable.
4. be strongly lagging its industry peers in overall ESG performance. This criterion has been applied to cover the remainder of the PAI to the extent possible.

— — *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Sustainable Investments were aligned with the 'OECD Guidelines for Multinational Enterprises' and the 'UN Guiding Principles on Business and Human Rights'. The alignment was assessed through the CS business conduct framework as part of the CS ESG Exclusion framework.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The following table provides the exposure to all mandatory PAI from the Commission Delegated Regulation (EU) 2022/1288. The Adverse Sustainability Indicator/Metric values are calculated as an average based on quarterly data representing the reference period from 01.06.2022 - 31.05.2023.

Please note that CSAM may choose or may not be able to consider and/or mitigate all of the herein reported PAI given the Subfund's investment strategy, asset class or the availability of reliable data. Consideration of PAI may be subject to change given evolving data availability and quality. Please refer to the EET for the most recent overview of which PAI are considered at Subfund level.

Please find further information on CSAM PAI Framework online at www.credit-suisse.com/esg. reference period

* Look-through enabled where possible, excl. cash and derivatives. Portfolio Exposure as of 31.05.2023. It does not represent an average for the reference period.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

● *What was the asset allocation?*

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. #2 Other includes the remaining investments of the financial product which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments. Please refer to the section "What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?" for further information. The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers environmentally and socially sustainable investments.
- The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that did not qualify as sustainable investments.

The proportion of investments used to meet the environmental or social characteristics promoted by this Subfund (category #1 above) was 92.71% of its total net assets. Within this category the Subfund held a proportion of 19.57% of its total net assets in sustainable investments (category #1A above). The data is valid as of 31.05.2023. It does not represent an average for the reference period.

● *In which economic sectors were the investments made?*

Subfund Sectoral Exposure

NACE Sector Code *	Portfolio Exposure **
C. Manufacturing	56.54%
G. Wholesale and retail trade; repair of motor vehicles and motorcycles	1.88%
J. Information and communication	39.51%
Others	2.07%

* Please note that the NACE sector allocation is not used in the Subfund's investment strategy. It is provided for disclosure purposes only. For example, the Subfund's investment strategy makes use of company's revenue exposure in accordance with CSAM's ESG Exclusion framework and does not exclude companies based on their NACE sector allocation.

** Portfolio Exposure as of 31.05.2023. It does not represent an average for the reference period. The "Other" category can show a negative value. This can be caused by negative committed cash positions and the use of certain types of derivatives (such as FX or OTC Collateral) due to trade settlement timing.

Subfund Exposure to Fossil Fuels Sub-Sectors

NACE Sector Code *	NACE name	Portfolio Exposure **
B5.1.0	Mining of hard coal	0.00%
B5.2.0	Mining of lignite	0.00%
B6.1.0	Extraction of crude petroleum	0.00%
B6.2.0	Extraction of natural gas	0.00%

B9.1.0	Support activities for petroleum and natural gas extraction	0.00%
C19.2.0	Manufacture of refined petroleum products	0.00%
D35.2.1	Manufacture of gas	0.00%
D35.2.2	Distribution of gaseous fuels through mains	0.00%
D35.2.3	Trade of gas through mains	0.00%
G46.7.1	Wholesale of solid, liquid and gaseous fuels and related products	0.00%

* Please note that the NACE sector allocation is not used in the Subfund's investment strategy. It is provided for disclosure purposes only. For example, the Subfund's investment strategy makes use of company's revenue exposure in accordance with CSAM's ESG Exclusion framework and does not exclude companies based on their NACE sector allocation.

** Portfolio Exposure as of 31.05.2023. It does not represent an average for the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

During the Reference Period, the Subfund reports 0% exposure to sustainable investments with an environmental objective aligned with the EU Taxonomy.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

Yes

In fossil gas

In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

The Subfund's reported EU Taxonomy alignment was not subject to assurance or review by a third party.

● ***What was the share of investments made in transitional and enabling activities?***

Of the 0% of sustainable investments with an environmental objective aligned with the EU Taxonomy during the Reference Period, 0% were made in transitional activities and 0% in enabling activities.

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

A comparison of the portfolio's investments that were aligned with the EU Taxonomy compared to previous periods will be available as of the next reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

During the Reference Period, 17.98% of the Subfund's investments were made into sustainable investments with an environmental objective that was not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

During the Reference Period, 1.60% of the Subfund's investments were made into socially sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

During the Reference Period, 7.29% of the Subfund's investments were made into "other".

Investments such as cash, derivatives and structured products may have fallen under "other" since such instruments did not contribute to the E/S characteristics of this Subfund. More information about the portfolio exposure to such investments can be found in the financial section of this annual report. Such investments did not have minimum environmental or social safeguards. They may have been used as efficient portfolio management tools, for cash management, for hedging purposes, or as an additional source of return.

Additionally, investments may have fallen under "other" if insufficient ESG-related information was available. This applied in particular to asset classes for which ESG Factors were insufficiently defined or insufficient ESG related information was available. Where possible, minimum environmental or social safeguards have been applied to these underlying securities by ensuring that CSAM ESG exclusions were adhered to.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To attain the environmental or social characteristics promoted by this Subfund, this Subfund applied ESG Exclusions, ESG Integration and Active Ownership.

This Subfund excluded investments in companies of the following categories:

- Norms-based Exclusions

This Subfund excluded companies that failed to comply with international treaties on controversial weapons such as the Convention on Cluster Munitions, the Chemical Weapons Convention, the Biological Weapons Convention, the Treaty on the Non-Proliferation of Nuclear Weapons (NPT). In addition, it excluded companies that are recommended for exclusions by the Swiss Association for Responsible Investments (SVVK-ASIR) in respect to APM (anti-personnel mines), cluster munitions and nuclear weapons (outside of NPT).

- Values-based Exclusions

This Subfund excluded companies that derived more than 5% of their revenue from conventional weapons and firearms, tobacco production, gambling, or adult entertainment. It excluded companies that derived more than 20% of their revenue from tobacco distribution and conventional weapons support systems and services. In addition, a revenue limit of 20% applied to investments in coal (coal mining and coal-based electricity generation).

- Business-conduct Exclusions

Companies found to systematically violate international norms, where the breaches were particularly severe, or where management was not open to implement necessary reforms, were placed on a watch list, and may have been excluded

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

from the Credit Suisse-wide investment universe. This process was governed by a dedicated committee that maintained the list of excluded companies and was responsible for ensuring that the list is communicated to investment teams in a timely manner.

- Restrictions related to LuxFLAG ESG label

To comply with the LuxFLAG ESG label, this Subfund excluded additionally the following companies from the investment universe:

- Tobacco, tobacco-related products and supporting services: Companies that derive more than 5% of their annual revenue from production and all companies that derive more than 15% of their annual revenue from sales and distribution are excluded.

ESG Factors were integrated into the investment process in the following four main steps:

- Identification of material ESG Factors

First, the Investment Manager used materiality frameworks to identify those ESG Factors that are relevant to the investment strategy. Materiality frameworks are concepts that help to identify sustainability-related issues and opportunities that are likely to affect the financial condition or operating performance of companies within an industry. Material factors have been furthermore assessed based on the Subfund's sector and geographical exposure. Second, the Investment Manager prioritized the material factors that were most relevant to the subsequent investment decisions based on the portfolio's current market exposure.

- ESG security analysis

Based on the identified material ESG Factors, the Investment Manager performed security research across the Subfund's investment universe. The Investment Manager made use of ESG ratings from third-party service providers and combined them with CSAM's proprietary analyses and information. These included, e.g. ESG related news, ESG ratings and scores, ESG-related controversies, and ESG trends.

The ESG data are fully integrated in the portfolio management software. The CSAM sustainable investing team may offer additional support, where needed, and advise on access to other ESG data providers.

The outcome of the ESG analysis of individual securities, combined with financial research, enabled the Investment Managers to make ESG-adjusted risk/return assessments. This enabled the Investment Manager to compare securities on an ESG-adjusted basis and to evaluate whether to keep certain securities in the portfolio or to sell them during the security selection and portfolio implementation stage. The ESG security analysis has been updated periodically.

- Security selection and portfolio implementation

Based on the identified material ESG Factors and the ESG-adjusted security analysis, the Investment Manager constructed a portfolio in accordance with the Subfund's investment process and principles. The ESG-adjusted security analysis combined with portfolio construction considerations has been used to determine appropriate portfolio weights that reflected the ESG-adjusted risk/return profile of the analyzed securities.

The research process might make use of dedicated ESG questionnaires with potential follow-up meetings with investee companies in case incomplete data is available from third-party ESG data providers.

- Portfolio monitoring

The Investment Manager monitored the ESG Factors periodically to detect significant changes in the ESG Factors of the underlying securities. They regularly reassessed the portfolio, taking into consideration financial and ESG metrics, and consequently decided whether to increase or decrease positions in the portfolio.

- Engagement

CSAM engaged with investee companies with the aim of increasing its impact on sustainability issues. Selected companies that were able and willing to take action were subject to engagement and CSAM sought to preserve and/or enhance the value of the companies they invested in, through engagement with issuers. The Active Ownership team defined the topics and issues CSAM wanted to discuss with investee companies. The resulting engagement activities for the reference period of this SFDR annex to the annual report were defined using certain criteria and aimed at companies in which CSAM held considerable investments through its funds. More information about the engagement activities and the most current active ownership report of CSAM can be found online at: www.credit-suisse.com/esg.

- Proxy Voting

Voting rights have been exercised for investee companies which have met the criteria for proxy voting as explained at www.credit-suisse.com/esg.

How did this financial product perform compared to the reference benchmark?

The Subfund did not use a reference benchmark for the purpose of attaining the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

● ***How does the reference benchmark differ from a broad market index?***

Not applicable.

● ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

Not applicable.

● ***How did this financial product perform compared with the reference benchmark?***

Not applicable.

● ***How did this financial product perform compared with the broad market index?***

Not applicable.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Credit Suisse (Lux) Security Equity Fund

Legal entity identifier: 549300XRZKN86MHX7E55

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="checkbox"/> <input type="checkbox"/> Yes	<input type="checkbox"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 21.86% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Management Company and the Investment Manager applied the Credit Suisse Asset Management (CSAM) Sustainable Investing Policy to this Subfund. This Subfund promoted the following environmental and social characteristics:

- to invest into companies that comply with international treaties on controversial weapons (norms-based exclusions on direct investments)
- not to invest into companies that derive more than 5% of their revenue from conventional weapons and firearms, tobacco production, gambling, or adult entertainment (values-based exclusions on direct investments)

- not to invest into companies that derive more than 20% of their revenue from tobacco distribution, conventional weapons support systems or coal (i.e., coal mining and coal-based electricity generation) (values-based exclusions on direct investments).
- adherence to, and conducting business activities in accordance with, international norms such as the "United Nations Global Compact Principles" (UNGC) (business-conduct exclusions on direct investments)
- higher exposure to investments that have better ESG profile and fewer ESG controversies over their investment cycle (ESG Integration)
- contribution to good governance and sustainable practices through proxy voting and engagement with investee companies in line with Credit Suisse Asset Management's Sustainable Investing Policy (Active Ownership)

The extent to which the environmental and/or social characteristics were met is measured by the sustainability indicators shown below. Derivatives were not used to attain the environmental or social characteristics.

Please find further information on ESG Integration, ESG Exclusions and Active Ownership below in the question "What actions have been taken to meet the environmental and/or social characteristics during the reference period?" and online at www.credit-suisse.com/esg.

● **How did the sustainability indicators perform?**

The table below shows the output of the Sustainability Indicators applicable to this Subfund as of 31.05.2023. While the sustainability indicators have been monitored continuously during the reference period, the data below does not represent an average for the reference period.

More information about the data sources and applied methodologies for each Sustainability Indicator can be found online at: www.credit-suisse.com/esg.

Sustainability Indicator*	Portfolio	Indicator Output
ESG Rating	AAA: 5.65%, AA: 35.84%, A: 21.05%, BBB: 28.48%, BB: 6.29%, B: 0.98%, CCC: 0.44%, Not ratable**: 0.97%, No data coverage**: 0.29%	Investment exposure by ESG Rating: AAA (highest): 0–100% AA: 0–100% A: 0–100% BBB: 0–100% BB: 0–100% B: 0–100% CCC (lowest): 0–100%
Environmental pillar score	5.58	Portfolio aggregate environmental pillar score: 1 (lowest) – 10 (highest)
Social pillar score	4.95	Portfolio aggregate social pillar score: 1 (lowest) – 10 (highest)
Governance pillar score	6.21	Portfolio aggregate governance pillar score: 1 (lowest) – 10 (highest)
ESG controversy flag	Green: 82.54%, Yellow: 6.57%, Orange: 9.93%, Red: 0.00%, Not ratable**: 0.97%, No data coverage**: 0.00%	Investment exposure by ESG controversy flag: Green: 0–100% Yellow: 0–100% Orange: 0–100% Red: 0–100%
CSAM ESG exclusions***	Pre- and post-trade checks are in place to detect investments that breach the ESG exclusions. Any detected breach is escalated and remedied.	This indicator reflects that the portfolio complied with the applicable ESG exclusions as described in the exclusion section of the website (during the entire reference period, CSAM adhered to ESG exclusion criteria, as stated in the CSAM Sustainable Investing Policy)

* None of the Sustainability Indicators were subject to an assurance provided by an auditor or a review by a third party.

** These categories can show a negative value. This can be caused by negative committed cash positions and the use of certain types of derivatives (such as FX or OTC Collateral) due to trade settlement timing.

*** Note that the amount of investments that were restricted due to the ESG exclusions depend on the investable universe of the Subfund.

● **...and compared to previous periods?**

A comparison of the portfolio's performance of the sustainability indicators compared to previous periods will be available as of the next reference period.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

At the end of the reference period, the sustainable investments contributed to the Environmental and Social objectives below:

- Investments that generated at least 50% of their revenues from products and services that contribute to a social objective (e.g. nutrition, disease treatments, sanitation, affordable real estate, SME finance, education, connectivity etc.).
- Investments that generated at least 50% of their revenues from products and services that contribute to a social objective (e.g. nutrition, disease treatments, sanitation, affordable real estate, SME finance, education, connectivity etc.)
- Investments that have an approved commitment to science-based emission targets and an average reduction in carbon emissions intensity of 7% over the last three years.

The above criteria were assessed using a quantitative methodology. If there had not been an output from the quantitative assessment (e.g. in the case of missing quantitative ESG data), investments were submitted for confirmation in a case-by-case approach based on a proprietary assessment of the criteria. A central Credit Suisse Group committee approved such submissions.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

Credit Suisse Asset Management (CSAM) considered various indicators linked to principal adverse impacts on sustainability factors (PAI Indicators) and further indicators from its exclusion framework to assess whether sustainable investments caused significant harm to any environmental or social investment objective.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

— *How were the indicators for adverse impacts on sustainability factors taken into account?*

During the Reference Period, the PAI Indicators applied by CSAM to identify investments which qualify as SFDR Sustainable Investments in line with CS SFDR Sustainable Investment Methodology included a set of criteria and thresholds to determine if an investment passed the DNSH condition as follows:

Investments must not:

1. have a significant negative contribution to climate change. This criterion makes use of an indicator that flags the biggest emitters of greenhouse gas globally and relates to PAI 1, 2, 3 and 15.
2. be subject to norms-, value and business conduct exclusions and other investment restrictions which address PAI 4, 10, 14 and 16.
3. be subject to severe ESG controversies which address PAI 7 and 10 where applicable.
4. be strongly lagging its industry peers in overall ESG performance. This criterion has been applied to cover the remainder of the PAI to the extent possible.

— *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Sustainable Investments were aligned with the 'OECD Guidelines for Multinational Enterprises' and the 'UN Guiding Principles on Business and Human Rights'. The alignment was assessed through the CS business conduct framework as part of the CS ESG Exclusion framework.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The following table provides the exposure to all mandatory PAI from the Commission Delegated Regulation (EU) 2022/1288. The Adverse Sustainability Indicator/Metric values are calculated as an average based on quarterly data representing the reference period from 01.06.2022 - 31.05.2023.

Please note that CSAM may choose or may not be able to consider and/or mitigate all of the herein reported PAI given the Subfund's investment strategy, asset class or the availability of reliable data. Consideration of PAI may be subject to change given evolving data availability and quality. Please refer to the EET for the most recent overview of which PAI are considered at Subfund level.

Please refer to the CSAM ESG website (www.credit-suisse.com/esg) to get further information on the CSAM PAI framework including potential limitations in the methodology to consider PAI.

* Look-through enabled where possible, excl. cash and derivatives. Portfolio Exposure as of 31.05.2023. It does not represent an average for the reference period.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

● *What was the asset allocation?*

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

Please refer to the section “What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?” for further information. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that did not qualify as sustainable investments.

The proportion of investments used to meet the environmental or social characteristics promoted by this Subfund (category #1 above) was 98.74% of its total net assets. Within this category the Subfund held a proportion of 21.86% of its total net assets in sustainable investments (category #1A above). The data is valid as of 31.05.2023. It does not represent an average for the reference period.

● *In which economic sectors were the investments made?*

Subfund Sectoral Exposure

NACE Sector Code *	Portfolio Exposure **
C. Manufacturing	36.11%
E. Water supply; sewerage, waste management and remediation activities	3.27%
G. Wholesale and retail trade; repair of motor vehicles and motorcycles	2.41%
J. Information and communication	37.28%
K. Financial and insurance activities	2.98%
M. Professional, scientific and technical activities	10.85%
N. Administrative and support service activities	6.14%
Others	0.97%

* Please note that the NACE sector allocation is not used in the Subfund's investment strategy. It is provided for disclosure purposes only. For example, the Subfund's investment strategy makes use of company's revenue exposure in accordance with CSAM's ESG Exclusion framework and does not exclude companies based on their NACE sector allocation.

** Portfolio Exposure as of 31.05.2023. It does not represent an average for the reference period. The “Other” category can show a negative value. This can be caused by negative committed cash positions and the use of certain types of derivatives (such as FX or OTC Collateral) due to trade settlement timing.

Subfund Exposure to Fossil Fuels Sub-Sectors

NACE Sector Code *	NACE name	Portfolio Exposure **
B5.1.0	Mining of hard coal	0.00%
B5.2.0	Mining of lignite	0.00%
B6.1.0	Extraction of crude petroleum	0.00%
B6.2.0	Extraction of natural gas	0.00%
B9.1.0	Support activities for petroleum and natural gas extraction	0.00%
C19.2.0	Manufacture of refined petroleum products	0.00%
D35.2.1	Manufacture of gas	0.00%
D35.2.2	Distribution of gaseous fuels through mains	0.00%
D35.2.3	Trade of gas through mains	0.00%
G46.7.1	Wholesale of solid, liquid and gaseous fuels and related products	0.00%

* Please note that the NACE sector allocation is not used in the Subfund's investment strategy. It is provided for disclosure purposes only. For example, the Subfund's investment strategy makes use of company's revenue exposure in accordance with CSAM's ESG Exclusion framework and does not exclude companies based on their NACE sector allocation.

** Portfolio Exposure as of 31.05.2023. It does not represent an average for the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

As of 31.05.2023, 0% of the Subfund's investments were made into sustainable investments with an environmental objective aligned with the EU Taxonomy.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

Yes

In fossil gas

In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

The Subfund's reported EU Taxonomy alignment was not subject to assurance or review by a third party.

● ***What was the share of investments made in transitional and enabling activities?***

Of the 0% of sustainable investments with an environmental objective aligned with the EU Taxonomy during the Reference Period, 0% were made in transitional activities and 0% in enabling activities.

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

A comparison of the portfolio's investments that were aligned with the EU Taxonomy compared to previous periods will be available as of the next reference period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

As of 31.05.2023, 17.29% of the Subfund's investments were made into sustainable investments with an environmental objective that was not aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

As of 31.05.2023, 4.56% of the Subfund's investments were made into socially sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

As of 31.05.2023, 1.26% of the Subfund's investments were made into "other".

Investments such as cash, derivatives and structured products may have fallen under "other" since such instruments did not contribute to the E/S characteristics of this Subfund. More information about the portfolio exposure to such investments can be found in the financial section of this annual report. Such investments did not have minimum environmental or social safeguards. They may have been used as efficient portfolio management tools, for cash management, for hedging purposes, or as an additional source of return.

Additionally, investments may have fallen under "other" if insufficient ESG-related information was available. This applied in particular to asset classes for which ESG Factors were insufficiently defined or insufficient ESG related information was available. Where possible, minimum environmental or social safeguards have been applied to these underlying securities by ensuring that CSAM ESG exclusions were adhered to.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To attain the environmental or social characteristics promoted by this Subfund, this Subfund applied ESG Exclusions, ESG Integration and Active Ownership.

This Subfund excluded investments in companies of the following categories:

- Norms-based Exclusions

This Subfund excluded companies that failed to comply with international treaties on controversial weapons such as the Convention on Cluster Munitions, the Chemical Weapons Convention, the Biological Weapons Convention, the Treaty on the Non-Proliferation of Nuclear Weapons (NPT). In addition, it excluded companies that are recommended for exclusions by the Swiss Association for Responsible Investments (SVVK-ASIR) in respect to APM (anti-personnel mines), cluster munitions and nuclear weapons (outside of NPT).

- Values-based Exclusions

This Subfund excluded companies that derived more than 5% of their revenue from conventional weapons and firearms, tobacco production, gambling, or adult entertainment. It excluded companies that derived more than 20% of their revenue from tobacco distribution and conventional weapons support systems and services. In addition, a revenue limit of 20% applied to investments in coal (coal mining and coal-based electricity generation).

- Business-conduct Exclusions

Companies found to systematically violate international norms, where the breaches were particularly severe, or where management was not open to implement necessary reforms, were placed on a watch list, and may have been excluded from the Credit Suisse-wide investment universe. This process was governed by a dedicated committee that maintained the list of excluded companies and was responsible for ensuring that the list is communicated to investment teams in a timely manner.

- Restrictions related to LuxFLAG ESG label

To comply with the LuxFLAG ESG label, this Subfund excluded additionally the following companies from the investment universe:

- Tobacco, tobacco-related products and supporting services: Companies that derive more than 5% of their annual revenue from production and all companies that derive more than 15% of their annual revenue from sales and distribution are excluded.

ESG Factors were integrated into the investment process in the following four main steps:

- Identification of material ESG Factors

First, the Investment Manager used materiality frameworks to identify those ESG Factors that are relevant to the investment strategy. Materiality frameworks are concepts that help to identify sustainability-related issues and opportunities that are likely to affect the financial condition or operating performance of companies within an industry. Material factors have been furthermore assessed based on the Subfund's sector and geographical exposure. Second, the Investment Manager prioritized the material factors that were most relevant to the subsequent investment decisions based on the portfolio's current market exposure.

- ESG security analysis

Based on the identified material ESG Factors, the Investment Manager performed security research across the Subfund's investment universe. The Investment Manager made use of ESG ratings from third-party service providers and combined them with CSAM's proprietary analyses and information. These included, e.g. ESG related news, ESG ratings and scores, ESG-related controversies, and ESG trends. The ESG data are fully integrated in the portfolio management software. The CSAM sustainable investing team may offer additional support, where needed, and advise on access to other ESG data providers. The outcome of the ESG analysis of individual securities, combined with financial research, enabled the Investment Managers to make ESG-adjusted risk/return assessments. This enabled the Investment Manager to compare securities on an ESG-adjusted basis and to evaluate whether to keep certain securities in the portfolio or to sell them during the security selection and portfolio implementation stage. The ESG security analysis has been updated periodically.

- Security selection and portfolio implementation

Based on the identified material ESG Factors and the ESG-adjusted security analysis, the Investment Manager constructed a portfolio in accordance with the Subfund's investment process and principles. The ESG-adjusted security analysis combined with portfolio construction considerations has been used to determine appropriate portfolio weights that reflected the ESG-adjusted risk/return profile of the analyzed securities. The research process might make use of dedicated ESG questionnaires with potential follow-up meetings with investee companies in case incomplete data is available from third-party ESG data providers.

- Portfolio monitoring

The Investment Manager monitored the ESG Factors periodically to detect significant changes in the ESG Factors of the underlying securities. They regularly reassessed the portfolio, taking into consideration financial and ESG metrics, and consequently decided whether to increase or decrease positions in the portfolio.

- Engagement

CSAM engaged with investee companies with the aim of increasing its impact on sustainability issues. Selected companies that were able and willing to take action were subject to engagement and CSAM sought to preserve and/or enhance the value of the companies they invested in, through engagement with issuers. The Active Ownership team defined the topics and issues CSAM wanted to discuss with investee companies. The resulting engagement activities for the reference period of this SFDR annex to the annual report were defined using certain criteria and aimed at companies in which CSAM held considerable investments through its funds. More information about the engagement activities and the most current active ownership report of CSAM can be found online at: www.credit-suisse.com/esg.

- Proxy Voting

Voting rights have been exercised for investee companies which have met the criteria for proxy voting as explained at www.credit-suisse.com/esg.

How did this financial product perform compared to the reference benchmark?

The Subfund did not use a reference benchmark for the purpose of attaining the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***

Not applicable.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

Not applicable.

- ***How did this financial product perform compared with the reference benchmark?***

Not applicable.

- ***How did this financial product perform compared with the broad market index?***

Not applicable.

Annex III

ANNEX IV

Template periodic disclosure for financial products referred to in Article 8(1) of Regulation (EU) 2019/2088 and Article 6 of Regulation (EU) 2020/852

Product name: CT (Lux) Responsible Euro Corporate Bond **Legal entity identifier:** 2138007PU8621E722925

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system, establishing a list of **environmentally sustainable economic activities**. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

It made **sustainable investments with an environmental objective:** ____%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** ____%

No

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 83.79% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The overarching philosophy of the Portfolio is to:

- Avoid companies with environmentally or socially damaging products, or unsustainable business or governance practices
- Additionally invest in companies that make a positive contribution to society and/or the environment
- Improve management of ESG issues, using our influence as an investor to encourage best practice through engagement

The fund, while it does not have a sustainable objective, aims to hold a minimum of 25% of the fund in sustainable investments.

Over the period, screens were applied to all fund assets other than Cash, Forward FX, Exchange Traded Futures, OTC Derivatives with the result that companies who fail to meet minimum environmental, or social standards were excluded from the fund. Over the year, there have been no changes to the screening criteria applied by the fund and no companies held have subsequently failed the screening criteria (for example, owing to new controversies). The fund invests in companies providing sustainability solutions and/or companies making a positive contribution to society and/or the environment. This investment is primarily achieved through investment in green, sustainable or sustainability-linked bonds issued by companies (so called "Labelled bonds"). All Labelled bonds must be individually assessed by the Investment Manager's Responsible Investment team, which considers the impact to society and/or the environment or the materiality of the sustainability target before they are Approved for investment. Over the period, the fund increased the percentage it holds Labelled bonds from 28% of NAV to 35% of NAV.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The fund continued to engage with investee companies over the period. A breakdown of engagement activity is presented as a sustainability indicator below.

● **How did the sustainability indicators perform?**

The Investment Manager uses the following indicators to measure the attainment of the environmental and social characteristics promoted by the Portfolio:

1. *The number of companies determined to be in breach of the Portfolio's exclusion criteria and/or global norms*

The fund did not invest in bonds which breached its standards. Pre-investment each holding was screened by the Responsible Investment team and approved for purchase with ongoing monitoring.

2. *Held companies' revenue alignment with the targets which underpin the Sustainable Development Goals (SDGs)*

As at 30/09/2022, 48.51% of the portfolio was invested in companies with greater than 50% of net revenues positively aligned with the Sustainable Development Goals¹.

3. *The percentage of the Portfolio which constitutes labelled bonds, including Sustainability-Linked Bonds and Green Bonds*

As at 30/09/2022, 35.27% of the portfolio was invested in labelled bonds.

4. *The number of environmental- and social-linked engagement objectives and/or milestones that are achieved*

During the year 144 engagements were undertaken with 53 companies. This resulted in 16 milestones, meaning a company made a tangible improvement in its policies and practices in alignment with our engagement objective(s).

¹ This figure excludes investments made in labelled bonds to avoid double counting.

² Measured as holdings where revenue is greater than 50% positively aligned to the SDGs – excluding any labelled bonds

● *...and compared to previous periods?*

Indicator	2022	2021
The number of companies determined to be in breach of the Portfolio's exclusion criteria and/or global norms	0	2
Held companies' revenue alignment with the targets which underpin the Sustainable Development Goals (SDGs) ²	48.51%	n/a
The percentage of the Portfolio which constitutes labelled bonds, including Sustainability-Linked Bonds and Green Bonds	35.27%	28%
The number of environmental- and social-linked engagement objectives and/or milestones achieved	16	36

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

As at 30/09/2022 the fund had 34.42% of holdings invested in labelled bonds that substantially contributes to sustainable objectives. We require the proceeds to be used in key environmental project categories such as:

1. Renewable energy and transmission
2. Alternative fuels
3. Energy efficiency
4. Clean transport
5. Biodiversity conservation
6. Sustainable waste management
7. Water
8. Green buildings
9. Sustainable land use (forestry and agriculture)

The bond should also comply with IMCA's Green Bond Principles (GBP), Social Bond Principles (SBP), Sustainability Bond Guidelines (SBG) or Sustainability-Linked Bond Principles.

A further 49.37% of the portfolio was in bond's issued by companies which generate greater than net 50% of their revenue positively aligned to the Sustainable Development Goals.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

The Portfolio's investment approach assesses that the sustainable investments made by the Portfolio do not significantly harm other sustainable investment objectives in the following ways:

- The Portfolio screens out investments that are contrary to the goals of making positive contributions to the environment and/or society. These criteria are product- and conduct-based, covering topics such as fossil fuels and weapons, and United Nations Global Compact breaches.
- Through the Investment Manager's investment research, Sustainability Risks and ESG factors are considered throughout the investment cycle, which serves to mitigate the risks of significant harm. Companies are identified which the Investment Manager thinks could benefit from active engagement to address material ESG issues which exist but are not considered significantly harmful.

- For labelled bonds, each bond is reviewed and approved by the responsible investment team to ensure it does not significantly harm sustainability objectives.

We exclude labelled bonds with:

- Very poor overall ESG management that presents a serious risk to the integrity of the Portfolio
- Severe environmental or financial management issues that undermine our confidence in the issuer's ability to fulfil its Green Bond commitments (e.g. major controversies related to the management of environmental projects such as renewables; major controversies in environmental lending means we are not confident in their green projects abilities).

How were the indicators for adverse impacts on sustainability factors taken into account?

Investments which are reported as sustainable investments have been assessed to ensure they do not significantly harm (DNSH) sustainability objectives using an in-house data driven model and investment team due diligence. The Investment Manager identifies harm by using quantitative thresholds against a selection of principal adverse impact indicators, including all mandatory indicators from Table 1 and certain indicators from Tables 2 and 3 of Annex I of the The Investment Manager identifies harm by using quantitative thresholds against a selection of principal adverse impact indicators, including all mandatory indicators from Table 1 and certain indicators from Tables 2 and 3 of Annex I of the Regulatory Technical Standards (RTS)³.

Issuers which fall below these thresholds are flagged as potentially harmful and a review is then undertaken to determine whether significant harm is being caused by the issuer. Where quantitative data is not available, the investment teams endeavour to satisfy that no significant harm has taken place through desk-based qualitative research or issuer engagement. Depending on the materiality of the principal adverse impact indicator, the investment manager will either exclude the issuer or, in limited cases, seek to engage with the issuer to address the harmful practices by taking appropriate action

During 2022 the investment team reviewed all portfolio holdings against the model and discussed the outcomes with the responsible investment team. It was agreed that no significant adverse impacts were identified for the fund.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

³ The Regulatory Technical Standards set out three tables detailing principal adverse indicators which have been defined by the European Commission. The tables cover a range of harmful activities across environmental, social and governance areas.

Yes. The Fund explicitly prohibits investment in companies which breach UN Global Compact (UNGC) principles. In addition, the sustainable investments are assessed under the DNSH due diligence against factors which align with UNGC and OECD guidelines to identify any significant harmful practices.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The fund considered PAIs in several ways:

- 1) Through alignment with the fund exclusion policy and screening criteria which relate to the PAIs, including: fossil fuels, biodiversity, deforestation, human rights, global norms, hazardous waste and controversial weapons.
- 2) Utilising the PAI framework to review issuers against PAIs as per Table 1 in the RTS. This allows us to monitor harmful practices which may arise. No instances of significant harmful practices were identified for the positions held in the portfolio.
- 3) PAIs align with stewardship activities undertaken by the fund. For example, more than a quarter of engagements undertaken by the fund related to climate change topics. For further details please see question 9.

What were the top investments of this financial product?

Distribution & Wholesale	0.08

⁴ Pipelines includes companies that generate revenue from the transport of natural gas

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sustainable investments with an environmental objective made by the fund do not have a commitment to align with the EU criteria for environmentally sustainable economic activities as defined by the EU Taxonomy Regulation.

Based on reliable data that has made available to date, the fund is reporting 0% of its investments are in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

Note that for this period no investments have been assessed against the taxonomy.

** For the purpose of these graphs, 'sovereign bonds' consists of all sovereign exposures*

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **What was the share of investments made in transitional and enabling activities?**

0% of the investments made by the fund are in transitional and enabling activities as defined by the EU Taxonomy Regulation.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The fund has not reported there being any alignment of its investments with the EU criteria for environmentally sustainable economic activities as defined by the EU Taxonomy Regulation to date

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

38.14% of the portfolio was invested in sustainable investments which predominantly contribute to an environmental objective. These holdings have not been assessed for taxonomy alignment.

What was the share of socially sustainable investments?

45.65% of the portfolio was invested in sustainable investments which predominantly contribute to a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Holdings classified as other refer to investments which contribute to the E/S characteristics of the fund, but are not considered sustainable investments. All investments must contribute to the E/S characteristics of the fund and comply with the fund level exclusions and screening criteria, including good governance. It also includes investment in bonds which do not constitute sustainable investments, cash or cash equivalents. We do not apply minimum safeguards to cash positions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In Q4 2021, we committed to aligning the fund with net zero emissions by 2050 or sooner. This builds on the existing climate change commitments for the fund, which include the exclusions of companies with fossil fuel reserves and engagement on climate opportunities and risks.

During the year there were 144 engagements with companies held in the portfolio. These covered 53 companies across 11 countries across a range of themes.

One example of engagement in 2022 is with the company Mondelez regarding their net zero strategy. As part of our participation in FAIRR we spoke with senior executives in the sustainability, procurement, and nutrition departments jointly with other investors on the company's progress on protein diversification, sustainability, and strategy. Its net-zero roadmap is being developed with a new emissions baseline for science-based targets and maintaining focus on cocoa and wheat as those are responsible for the majority of emissions. However, as dairy still makes up a significant part of emissions it is reviewing mitigation technologies for feed, animal-generated methane, and manure management. The product transition remains consumer-driven but the company recognises that it would support its broader sustainability agenda. While this recognition is positive, we would prefer that both perspectives are represented in the corporate strategy and board oversight for the protein transition. We sought more details on sales figures for the plant-based products, but this is not yet tracked. We emphasised the need for more detailed metrics on products and climate impact, especially for dairy.

Our engagements are structured in line with the firm's engagement themes which align with the PAIs. Below we provide a breakdown of the engagements undertaken and which PAI categories these typically address. We are updating our engagement tracking and reporting to enable PAI reporting at indicator

level. We note that an engagement may correlate with a number of PAI indicators.

Engagements by Theme	Alignment with PAIs ⁵	Proportion of engagements	Milestones Achieved by Theme
Climate Change	GHG Emissions and Energy Performance	28.00%	31.25%
Environmental Stewardship	Biodiversity, Water, Waste	16.40%	12.50%
Business Conduct	Social and Employee Matters	4.40%	0.00%
Human Rights		7.20%	0.00%
Labour Standards		21.60%	37.50%
Public Health		6.80%	6.25%
Corporate Governance		15.60%	12.50%

Annex III

ANNEX IV

Template periodic disclosure for financial products referred to in Article 8(1) of Regulation (EU) 2019/2088 and Article 6 of Regulation (EU) 2020/852

Product name: CT (Lux) Responsible Global Emerging Markets Equity

Legal entity identifier: 213800BICB11V5TYV922

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system, establishing a list of **environmentally sustainable economic activities**. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes	No
<input type="checkbox"/> It made sustainable investments with an environmental objective : ____% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of <u>77.03%</u> of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective : ____%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The overarching philosophy of the Portfolio is to:

- Avoid companies with environmentally or socially damaging products, or unsustainable business or governance practices
- Invest in companies that make a positive contribution to society and/or the environment

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- Improve management of ESG issues, using our influence as an investor to encourage best practice through engagement and voting

The fund, while it does not have a sustainable objective, aims to hold a minimum of 75% of the fund in sustainable investments.

● **How did the sustainability indicators perform?**

The Investment Manager uses the following indicators to measure the attainment of the environmental and social characteristics promoted by the Portfolio:

1. *The number of companies determined to be in breach of the Portfolio's exclusion criteria and/or global norms.*

The fund did not invest in companies which breached its standards. Pre-investment each holding was screened by the Responsible Investment team and approved for purchase with ongoing monitoring.

2. *The percentage of the Portfolio which aligns to its key sustainability themes*

Theme:	Portfolio Weight as at 30/09/22:
Food and nutrition	7.67%
Health and well-being	20.09%
Responsible finance	18.33%
Sustainable infrastructure	5.08%
Technological innovation	46.08%
Total:	97.24%

3. Held companies' revenue alignment with the targets which underpin the Sustainable Development Goals (SDGs)

77.03% of the portfolio as at 30/09/2022 was invested in companies with greater than 50% of net revenues positively aligned with the Sustainable Development Goals.

4. The number of environmental- and social-linked engagement objectives and/or milestones achieved

During the year 58 engagements were undertaken with 21 companies. This resulted in 12 milestones, meaning a company made a tangible improvement in its policies and practices in alignment with our engagement objective.

● *...and compared to previous periods?*

Indicator	2022	2021
The number of companies determined to be in breach of the Portfolio's exclusion criteria and/or global norms	0	1
The percentage of the Portfolio which aligns to its key sustainability themes	97.24%	97%
Held companies' revenue alignment with the targets which underpin the Sustainable Development Goals (SDGs) ¹	77.03%	n/a
The number of environmental- and social-linked engagement objectives and/or milestones achieved	12	22

¹ Measured as holdings where revenue is greater than 50% net positively aligned to the SDGs

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

As at 30/09/2022, the fund had 77.03% of holdings invested in companies which align to the Sustainable Development Goals, and are considered sustainable investments.

These investments contribute to a sustainable objective through their contribution to key sustainability themes which have an environmental or social focus, most notably:

1. Health and well-being – Supporting the provision of services to improve personal long-term well-being, e.g. education, health and sanitation
2. Food and nutrition – Helping advance sustainable production and consumption patterns
3. Technological innovation – Delivering technological and connectivity solutions to advance sustainable development
4. Energy transition – Fueling the economy with efficient and affordable energy from both conventional and alternative sources
5. Sustainable infrastructure – Helping build resilient infrastructure in transport, energy, water, communications and other sectors
6. Responsible finance – Providing financial services to advance financial inclusion, small and medium-sized enterprise (SME) development, green finance and sustainable financial markets

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

The Portfolio's investment approach assesses that the sustainable investments made by the Portfolio do not significantly harm other sustainable investment objectives in the following ways:

- The Portfolio screens out investments that are contrary to the goals of making positive contributions to the environment and/or society. These criteria are product- and conduct-based, covering topics such as fossil fuels and weapons, and United Nations Global Compact breaches.
- Through the Investment Manager's investment research, Sustainability Risks and ESG factors are considered throughout the investment cycle, which serves to mitigate the risks of significant harm. Companies are identified which the Investment Manager thinks could benefit from active engagement to address material ESG issues which exist but are not considered significantly harmful.

How were the indicators for adverse impacts on sustainability factors taken into account?

Investments which are reported as sustainable investments have been assessed to ensure they do not significantly harm (DNSH) sustainability objectives using an in-house data driven model and investment team due diligence.

The Investment Manager identifies harm by using quantitative thresholds against a selection of principal adverse impact indicators, including all mandatory indicators from Table 1 and certain indicators from Tables 2 and 3 of Annex I of the Regulatory Technical Standards (RTS)². Issuers which fall below these thresholds are flagged as potentially harmful and a review is then undertaken to determine whether significant harm is being caused by the issuer. Where quantitative data is not available, the investment teams endeavor to satisfy that no significant harm has taken place through desk-based qualitative research or issuer engagement.

Depending on the materiality of the principal adverse impact indicator, the investment manager will either exclude the issuer or, in limited cases, seek to engage with the issuer to address the harmful practices by taking appropriate action

During 2022 the investment team reviewed all portfolio holdings against the model and discussed the outcomes with the Responsible Investment team. It was agreed that no significant adverse impacts were identified for the fund.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes. The Fund explicitly prohibits investment in companies which breach UN Global Compact (UNGC) principles. In addition, the sustainable investments are assessed under the DNSH due diligence against factors which align with UNGC and OECD guidelines to identify any significant harmful practices.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

² The Regulatory Technical Standards set out three tables detailing principal adverse indicators which have been defined by the European Commission. The tables cover a range of harmful activities across environmental, social and governance areas.

How did this financial product consider principal adverse impacts on sustainability factors?

The fund considered PAIs in three ways:

- 1) Through alignment with the fund's exclusion policy and screening criteria which relate to the PAIs, including: fossil fuels, biodiversity, deforestation, human rights, global norms, hazardous waste and controversial weapons.

- 2) Utilising the PAI framework to review issuers against PAIs as per Table 1 in the RTS. This allows us to monitor harmful practices which may arise. No instances of significant harmful practices were identified for the positions held in the portfolio.

- 3) PAIs align with stewardship activities undertaken by the fund. For example, the fund took voting action against management at six AGMs during the year due to issues related to diversity. Nearly a quarter of engagements undertaken by the fund related to labour standards, and more than 35% related to climate change or environmental stewardship topics. For further details please see question 9.

What were the top investments of this financial product?

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sustainable investments with an environmental objective made by the fund do not have a commitment to align with the EU criteria for environmentally sustainable economic activities as defined by the EU Taxonomy Regulation.

Based on reliable data that has made available to date, the fund is reporting 0% of its investments are in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

Note that for this period no investments have been assessed against the taxonomy.

* For the purpose of these graphs, 'sovereign bonds' consists of all sovereign exposures

Enabling activities

directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are

activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **What was the share of investments made in transitional and enabling activities?**

0% of the investments made by the fund are in transitional and enabling activities as defined by the EU Taxonomy Regulation.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The fund has not reported there being any alignment of its investments with the EU criteria for environmentally sustainable economic activities as defined by the EU Taxonomy Regulation to date

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

9.85% of the portfolio was invested in sustainable investments which predominantly contribute to an environmental objective.

What was the share of socially sustainable investments?

67.18% of the portfolio was invested in sustainable investments which predominantly contribute to a social objective

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Holdings classified as other refer to investments which do not constitute sustainable investments but contribute to E/S characteristics, cash or cash equivalents. We do not apply minimum safeguards to cash positions. All other investments must contribute to the E/S characteristics of the fund and comply with the fund-level exclusions and screening criteria, including good governance.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In Q4 2021, we committed to align the fund with net zero emissions by 2050 or sooner. This builds on the existing climate change commitments for the fund, which include the exclusion of companies with fossil fuel reserves and engagement on climate opportunities and risks reinforced by our voting policy.

During the year there were 58 engagements with companies held in the portfolio. These covered 21 companies in 11 countries across a range of themes.

Our engagements are structured in line with the firm’s engagement themes which align with the PAIs. Below we provide a breakdown of the engagements undertaken and which PAI categories are typically addressed. We are updating our engagement tracking and reporting to enable PAI reporting at the indicator-level. We note that an engagement may correlate with a number of PAI indicators.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Engagements by Theme	Alignment with PAIs ³	Proportion of engagements	Milestones Achieved by Theme
Climate Change	GHG Emissions and Energy Performance	20.74%	33.33%
Environmental Stewardship	Biodiversity, Water, Waste	15.56%	16.67%
Business Conduct	Social and Employee Matters	5.19%	8.33%
Human Rights		8.15%	0.00%
Labour Standards		24.44%	8.33%
Public Health		3.70%	0.00%
Corporate Governance		22.22%	33.33%
Diversity – Voting Action		Took voting action against management at two AGMs due to poor board gender diversity	

How did this financial product perform compared to the reference benchmark?

Annex III

ANNEX IV

Template periodic disclosure for financial products referred to in Article 8(1) of Regulation (EU) 2019/2088 and Article 6 of Regulation (EU) 2020/852

Product name: CT (Lux) Responsible Global Equity

Legal entity identifier: 213800QUBFOSM6S1V262

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system, establishing a list of **environmentally sustainable economic activities**. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

It made **sustainable investments with an environmental objective**: ____%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ____%

No

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 92.54% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The overarching philosophy of the Portfolio is to:

- Avoid companies with environmentally or socially damaging products, or unsustainable business or governance practices
- Invest in companies that make a positive contribution to society and/or the environment
- Improve management of ESG issues, using our influence as an investor to encourage best practice through engagement and voting

The fund, while it does not have a sustainable objective, aims to hold a minimum of 75% of the fund in sustainable investments.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The CT (Lux) Responsible Global Equity Fund allocated to companies in line with its investment policy during the period. The Fund focuses on 7 sustainability themes, which in turn link well to the UN's Sustainable Development Goals. During the period, the Fund comfortably held more than the minimum 75% in sustainable investments, according to our definition of sustainable investment (see question 4 for further details), as at 30/09/2022 92.54% was held in sustainable investments.

During Q4 2021, we made some amendments to our Responsible Funds' criteria – the exclusionary thresholds that are applied to the Fund. This included enhanced criteria for fossil fuels, electricity generation, nuclear energy, tobacco and weapons.

● **How did the sustainability indicators perform?**

The Investment Manager uses the following indicators to measure the attainment of the environmental and social characteristics promoted by the Portfolio:

1) *The number of companies determined to be in breach of the Portfolio's exclusion criteria and/or global norms.*

The fund did not invest in companies which breached its standards. Pre-investment each holding was screened by the Responsible Investment team and approved for purchase with ongoing monitoring.

2) *The percentage of the Portfolio which aligns to its key sustainability themes*

97.8% of the portfolio was aligned to its key sustainability themes as at 30/09.2022:

Sustainability theme	% of portfolio aligned
Energy Transition	11.4%
Resource Efficiency	7.2%
Sustainable Cities	8.2%
Health & Wellbeing	23.9%
Connect & Protect	15.9%
Digital Empowerment	17.4%
Sustainable Finance	13.8%
No Theme / Cash	2.2%
Total	100.0%

3) *Held companies' revenue alignment with the targets which underpin the Sustainable Development Goals (SDGs)*

92.54%, as at 30/09/2022, of the portfolio was invested in companies with greater than 50% of net revenues positively aligned with the Sustainable Development Goals.

4) *The number of environmental- and social-linked engagement objectives and/or milestones achieved*

During the year 80 engagements were undertaken with 33 companies. This resulted

in 16 milestones, meaning a company made a tangible improvement in its policies and practices in alignment with our engagement objective.

● *...and compared to previous periods?*

Indicator	2022	2021
The number of companies determined to be in breach of the Portfolio's exclusion criteria and/or global norms	0	0
The percentage of the Portfolio which aligns to its key sustainability themes	97.8%	98.1%
Held companies' revenue alignment with the targets which underpin the Sustainable Development Goals (SDGs)	92.54%	73%
The number of environmental- and social-linked engagement objectives and/or milestones achieved	16	23

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

As a result of the Portfolio's sustainability philosophy, the Portfolio will invest a minimum proportion of 75% (excluding cash, cash equivalents or hedging instruments) in sustainable investments. As at 30/09/2022, the fund had 92.54% of holdings invested in companies with greater than 50% net revenue positively contributing to the Sustainable Development Goals, and which are considered sustainable investments. These investments also align with the fund's sustainable themes as described below.

These investments contribute to a sustainable objective through their contribution to key sustainability themes which have an environmental or social focus, including: energy transition, health and well-being and resource efficiency.

The Investment Manager uses a proprietary framework to assess the extent to which companies prioritise sustainability:

- **Additionality:** Is the company a leader in its industry, making a real difference to the positive direction of the industry? Here the Investment Manager focuses on and evidences the Portfolio's exposure through our view of high quality, wide most businesses.
- **Intentionality:** How core is sustainability to the company's strategy and overall raison d'être? Here the Investment Manager leverages our extensive engagement capability to assess the company's transparency and communication around strategic goals, which will evidence the management team's and Board's intentions in prioritising these issues/opportunities.
- **Materiality:** How material are sustainability opportunities for the company? In addition to assessing revenue alignment to the Sustainable Development Goals, the Investment Manager makes an assessment of the company's revenue alignment to seven sustainability themes: Environmental Stewardship, Climate Change, Human Rights, Labour Standards, Public Health, Business Ethics and Corporate Governance.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

The Portfolio's investment approach assesses that the sustainable investments made by the Portfolio do not significantly harm other sustainable investment objectives in the following ways:

- The Portfolio screens out investments that are contrary to the goals of making positive contributions to the environment and/or society through the fund's exclusion policy. These criteria are product- and conduct-based, covering topics such as fossil fuels and weapons, and United Nations Global Compact breaches.

- Through the Investment Manager's investment research, Sustainability Risks and ESG factors are considered throughout the investment cycle, which serves to mitigate the risks of significant harm. Companies are identified which the Investment Manager thinks could benefit from active engagement to address material ESG issues which exist but are not considered significantly harmful.

How were the indicators for adverse impacts on sustainability factors taken into account?

Investments which are reported as sustainable investments have been assessed to ensure they do not significantly harm (DNSH) sustainability objectives using an in-house data driven model and investment team due diligence.

The Investment Manager identifies harm by using quantitative thresholds against a selection of principal adverse impact indicators, including all mandatory indicators from Table 1 and certain indicators from Tables 2 and 3 of Annex I of the Regulatory Technical Standards (RTS)¹.

Issuers which fall below these thresholds are flagged as potentially harmful and a review is then undertaken to determine whether significant harm is being caused by the issuer. Where quantitative data is not available, the investment teams endeavour to satisfy that no significant harm has taken place through desk-based qualitative research or issuer engagement.

Depending on the materiality of the principal adverse impact indicator, the investment manager will either exclude the issuer or, in limited cases, seek to engage with the issuer to address the harmful practices by taking appropriate action

During 2022 the investment team reviewed all portfolio holdings against the model and discussed the outcomes with the responsible investment team. It was agreed that no significant adverse impacts were identified for the fund. Details of PAI engagement are detailed later in this report.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes. The Fund explicitly prohibits investment in companies which breach UN Global Compact (UNGC) principles. In addition, the sustainable investments are assessed under the DNSH due diligence against factors which align with UNGC and OECD guidelines to identify any significant harmful practices.

¹ The Regulatory Technical Standards set out three tables detailing principal adverse indicators which have been defined by the European Commission. The tables cover a range of harmful activities across environmental, social and governance areas.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The fund considered PAIs in several ways:

- Through alignment with the fund’s exclusion policy and screening criteria which relate to the PAIs, including: fossil fuels, biodiversity, deforestation, human rights, global norms, hazardous waste and controversial weapons.
- Utilising the PAI framework to review issuers against PAIs as per Table 1 in the RTS. This allows us to monitor harmful practices which may arise. No instances of significant harmful practices were identified for the positions held in the portfolio.
- PAIs align with stewardship activities undertaken by the fund. For example, the fund took voting action against management at six AGMs during the year due to issues related to diversity. More than a quarter of engagements undertaken by the fund related to labour standards, and more than 35% related to climate change or environmental stewardship topics. For further details please see question 9.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is:

Company	Sector	% of portfolio	Country
Apple	Information Technology	6.55	United States
Linde	Materials	4.45	United States
Thermo Fisher Scientific	Health Care	4.18	United States
Accenture	Information Technology	3.43	United States

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sustainable investments with an environmental objective made by the fund do not have a commitment to align with the EU criteria for environmentally sustainable economic activities as defined by the EU Taxonomy Regulation.

Based on reliable data that has made available to date, the fund is reporting 0% of its investments are in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

Note that for this period no investments have been assessed against the taxonomy.

** For the purpose of these graphs, 'sovereign bonds' consists of all sovereign exposures*

Enabling activities

directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are

activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● What was the share of investments made in transitional and enabling activities?

0% of the investments made by the fund are in transitional and enabling activities as defined by the EU Taxonomy Regulation.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The fund has not reported there being any alignment of its investments with the EU criteria for environmentally sustainable economic activities as defined by the EU Taxonomy Regulation to date

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

19.35% of the portfolio was invested in sustainable investments which predominantly contribute to an environmental objective and have not been assessed against the taxonomy.

What was the share of socially sustainable investments?

73.19% of the portfolio was invested in sustainable investments which predominantly contribute to a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Holdings classified as other refer to investments which do not constitute sustainable investments but contribute to E/S characteristics, cash or cash equivalents. We do not apply minimum safeguards to cash positions. All other investments must contribute to the E/S characteristics of the fund and comply with the fund-level exclusions and screening criteria, including good governance.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In Q4 2021, we committed to align the fund with net zero emissions by 2050 or sooner. This builds on the existing climate change commitments for the fund, which include the exclusion of companies with fossil fuel reserves and engagement on climate opportunities and risks reinforced by our voting policy.

During the year there were 80 engagements with companies held in the portfolio. These covered 33 companies in 10 countries across a range of themes.

Our engagements are structured in line with the firm's engagement themes which align with the PAIs. Below we provide a breakdown of the engagements undertaken and which PAI categories are typically addressed. We are updating our engagement tracking and reporting to enable PAI reporting at the indicator-level. We note that an engagement may correlate with a number of PAI indicators.

Engagements by Theme	Alignment with PAIs ²	Proportion of engagements	Milestones Achieved by Theme
Climate Change	GHG Emissions and Energy Performance	18.02%	25.00%
Environmental Stewardship	Biodiversity, Water, Waste	17.44%	25.00%
Business Conduct	Social and Employee Matters	4.07%	6.25%
Human Rights		6.40%	0.00%
Labour Standards		26.16%	12.50%
Public Health		8.72%	6.25%
Corporate Governance		19.19%	25.00%
Diversity – Voting Action		Took voting action against management at six AGMs due to poor board gender diversity or failure to implement appropriate workforce diversity audits	

During the period, we sold a name from the Fund on the basis of ESG concerns. While the company did not breach the Fund's ESG criteria, we had sufficient concerns about the standard of their overseas operations that we ultimately disinvested. We engaged with the company several times (in June 2021, February 2022 and April 2022) but could not gain sufficient comfort on this topic. We referred the issue up to our Responsible Investment Advisory Council, and they decided the best thing to do was to exit the position unless the company was prepared to commit to exit the country in question. The company was

² Note that themes may align with multiple PAIs. We will update engagement tracking and reporting capabilities to break down engagements by PAIs from 2023.

not prepared to commit to this in any reasonable timeframe, and so we sold out in July 2022.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund further promoted a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

No derivatives were used to attain the environmental or social characteristics promoted by the sub-fund.

How did the sustainability indicators perform?

Please see the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?” for detailed descriptions of the binding elements of the investment strategy used to select the investments for attaining the environmental and/or social characteristics promoted and the assessment methodology for determining whether and to what extent assets and indicators met the defined ESG standards.

The ESG ratios are calculated based on the valuation prices for the assets, which are recorded in the front office system. This can lead to slight variations from the other market prices presented in the annual report, which are taken from the fund accounting system.

PAII - 14. Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0 % of assets

As of: December 30, 2022

The Principal Adverse Impact Indicators (PAII) are calculated on the basis of information available within DWS back-office and front-office systems, that are amongst others based on information sourced from external ESG data vendors. In case individual securities or issuers related to such securities do not have information related to an individual PAII, either through a lack of data availability or through the non-applicability of the PAII to that individual issuer or security, the PAII calculation methodology for individual indicators may consider such securities or issuers with a value of 0. For Target Fund investments, a “look-through” into target fund holdings is performed subject to data availability, amongst others related to reasonable actual information of target fund holdings as well as the related security or issuer information. The calculation methodology for the individual PAII indicators may change in subsequent reporting periods as a consequence of evolving market standards, a change of treatment of securities of specific instrument types (such as derivatives), an increase in data coverage or through regulatory clarifications.

DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with “A” being the best score and “F” being the worst score

Criteria	Involvement in controversial sectors ¹	Involvement in controversial weapons	Norm Assessment ²	ESG Quality Assessment	SDG-Assessment	Climate & Transition Risk Assessment
A	Non-involvement	Confirmed non-involvement	Confirmed no issues	True leader in ESG (≥ 87.5 DWS ESG score)	True SDG contributor (≥ 87.5 SDG score)	True climate leader (≥ 87.5 score)
B	Remote involvement	Alleged		ESG leader (75–87.5 DWS ESG score)	SDG contributor (75–87.5 SDG score)	Climate solution provider (75–87.5 score)
C	0% – 5%	Dual-Purpose ²	Violations of lesser degree	ESG upper midfield (50–75 DWS ESG score)	SDG upper midfield (50–75 SDG score)	Low transition risk (50–75 score)
D	5% – 10% (coal: 5% -15%)	Owning ³ /Owned ⁴		ESG lower midfield (25–50 DWS ESG score)	SDG lower midfield (25–50 SDG score)	Mod. transition risk (25–50 score)
E	10% – 25% (coal: 15% - 25%)	Component ⁵ producer	High severity or re-assessed highest severity ⁷	ESG laggard (12.5–25 DWS ESG score)	SDG obstructor (12.5–25 SDG score)	High transition risk (12.5–25 score)
F	≥ 25%	Weapon producer	Highest severity/global compact violation ⁸	True laggard in ESG (0–12.5 DWS ESG score)	Significant SDG obstructor (0–12.5 SDG score)	Excessive transition risk (0–12.5 score)

(1) Revenue share thresholds as per standard scheme. Sub-Granularity available: Thresholds can be individually set.

(2) Encompasses e.g. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones

(3) Owning more than 20% equity.

(4) Being owned by more than 50% of company involved in grade E or F.

(5) Single purpose key component.

(6) Includes ILO controversies as well as corporate governance and product issues.

(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund invested partially in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs varied based on the actual investments in the portfolio.

DWS measured the contribution to the UN SDGs via its sustainability investment assessment which evaluated potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluated (1) whether an economic activity contributed to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harmed any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such was in line with the DWS safeguard assessment.

The sustainability investment assessment used data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity was sustainable. Activities that contributed positively to the UN SDGs were measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution was determined, the activity was considered sustainable if the company passed the DNSH assessment and complied with the DWS safeguard assessment (as detailed in the section “Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.)

The sub-fund did not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was integral part of the sustainability investment assessment and evaluated whether an economic activity with a contribution to an UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the economic activity failed the DNSH assessment and could not be considered as sustainable economic activity.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrated all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS established quantitative thresholds and/or qualitative values to determine if an investment significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its safeguard assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms were considered as non-compliant to the safeguards and their economic activities could not be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund management considered the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts were considered at product level through the exclusion strategy for the sub-fund's assets that were aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?".

For sustainable investments, the principal adverse impacts were further considered in the DNSH assessment as described above in section "How were the indicators for adverse impacts on sustainability factors taken into account?".

What were the top investments of this financial product?

DWS Concept Kaldemorgen

Largest investments	Breakdown by sector / issuer	in % of average portfolio volume	Breakdown by country

for the period from January 01, 2022, through December 30, 2022

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
for the period from January 01, 2022, through December 31, 2022

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund invested 85.82% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 19.2% of the sub-fund's assets qualified as sustainable investments (#1A Sustainable).

14.24% of the investments were not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Concept Kaldemorgen

Breakdown by sector / issuer

in % of portfolio volume

Information Technology	6.56 %
Telecommunication Services	5.87 %
Consumer Discretionaries	13.77 %
Consumer Staples	0.66 %
Financials	8.32 %
Basic Materials	1.23 %

Central governments	14.56 %
Bond funds	4.75 %
Equity funds	9.62 %
Other funds	1.09 %
Exposure to companies active in the fossil fuel sector	3.63 %

As of: December 31, 2022

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

Yes:

In fossil gas

In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities

Directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

■ Taxonomy-aligned 0.00%
 ■ Non Taxonomy-aligned 100.00%

2. Taxonomy-alignment of investments excluding sovereign bonds*

■ Taxonomy-aligned 0.00%
 ■ Non Taxonomy-aligned 100.00%

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, there may have been instances in which part of the investments' underlying economic activities were aligned with the EU Taxonomy.

What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional and enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/85.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy

The sub-fund did not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the share of environmentally and socially sustainable investments in total was 19.2% of the net assets of the sub-fund.

What was the share of socially sustainable investments?

The sub-fund did not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the share of environmentally and socially sustainable investments in total was 19.2% of the net assets of the sub-fund.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund invested into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments could include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments was to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments could be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund did not consider any minimum environmental or social safeguards on these remaining investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on multiple asset classes as main investment strategy. The sub-fund might invest up to 100% of the sub-fund's assets globally in equities, bonds, certificates and money market instruments, deposits with credit institutions, including, but not limited to, equity certificates, index certificates, convertible bonds, inflation-linked bonds, warrant-linked bonds whose underlying warrants are for securities, warrants for securities, dividend-right and participation certificates as well as interest-bearing debt securities, short-term deposits, regularly traded money market instruments and liquid assets. In addition the fund might invest in derivatives for hedging and investment purposes. Up to 20% might be invested into asset backed securities. Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus. The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics was integral part of the ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

ESG assessment methodology

The portfolio management of this sub-fund sought to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology was based on the ESG database, which used data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database was therefore constituted by data and figures as well as on internal assessments that took into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derived "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers received one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category was deemed insufficient, the portfolio management was prohibited from investing in that issuer, even if it was eligible according to other categories. For exclusion purposes, each letter score in a category was considered individually and may result might have resulted in exclusion of an issuer.

The ESG database used a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluated issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to such risks received better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") were excluded as an investment.

• DWS Norm Assessment

The DWS Norm Assessment evaluated the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") were excluded as an investment.

• DWS Sovereign Assessment

The DWS Sovereign Assessment evaluated the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") were excluded as an investment.

• Exposure to controversial sectors

The ESG database defined certain business areas and business activities as relevant. Business areas and business activities were defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors were defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors were defined as relevant. Other relevant sectors were, for example, coal mining and coal-based power generation. Issuers were evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") were excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") were excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") were excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assessed a company's involvement in the business of controversial weapons. Controversial weapons included for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers were assessed based on their degree of involvement (production of controversial weapons, component production, etc.) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") were excluded as an investment.

To the extent that the sub-fund sought to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter had to meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

No derivatives were used to attain the environmental or social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers may have only been acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its sustainability investment assessment which evaluated potential investments in relation to different criteria to conclude that an economic activity could be considered as sustainable as further detailed in section "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?"

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The procedure to assess the good governance practices of the investee companies was based on the DWS Norm Assessment. Accordingly, the assessed investee companies followed good governance practices.

Further, the management company considered active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership meant using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity could have been initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity could have been undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund had not designated a reference benchmark to determine whether it was aligned with the environmental and/or social characteristics that it promoted.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Unaudited information (continued)

Annex 4 RTS SFDR / Template periodic disclosure for the financial products referred to in Article 8

Product name: DNCA Invest Convertibles

Legal entity identifier: 213800Y2A55IZ622EN50

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 38,71% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy for 26,02% <input checked="" type="checkbox"/> with a social objective for 12,69% <input type="checkbox"/> It promoted E/S characteristics but did not make any sustainable investments.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The characteristics promoted by the Sub-Fund were governance, environment, social and societal criteria.

The management of the Sub-Fund relied on the proprietary analysis tool on environment, social and governance: ABA (Above and Beyond Analysis).

As part of the promotion of such characteristics, the Sub-Fund principally considered the following ESG matters:

- o Environment: GHG emissions, airborne pollution, waterborne pollution, water consumption, land use
- o Social: Excessive CEO Compensation, gender inequality, health and safety issues, child labor
- o Governance: Monitoring corruption and bribery, tax avoidance
- o Global ESG quality rating

In this way, the investment process and resulting stock picking used internal scoring with respect to both corporate responsibility and sustainability of companies based on an extra-financial analysis through a proprietary tool developed internally by the Management Company, using the "best in universe" method (screening of the investment universe based on the corporate responsibility criteria, regardless of the sectorial activity). The sub-fund excluded any issuer with an ABA score inferior to 2/10. There may have been a sector bias.

Unaudited information (continued)

In addition, the sub-fund applied the exclusion policy of the asset management company.

The Sub-Fund did not use a benchmark for the purpose of attaining the ESG Characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

• **How did the sustainability indicators perform?**

The sustainability indicators of the Sub-Fund were:

- The "Above and Beyond Analysis" ("ABA", the proprietary tool) Corporate Responsibility Score: the main sustainability indicator used by the Sub-Fund is the ABA scoring based on the Corporate Responsibility and divided into four pillars: shareholder responsibility, environmental responsibility, employer responsibility, societal responsibility.
- The Transition to a Sustainable Economy exposure: the asset manager completes this analysis by an assessment of companies' exposure to "Transition to a Sustainable Economy". This exposure is calculated among five pillars: demographic transition, healthcare transition, economic transition, lifestyle transition and ecologic transition.
- Exposure to UN Sustainable Development Goals: the Management Company assesses for each company the part of revenues linked to one of the 17 Sustainable Development Goals of the United Nations.
- Carbon data: carbon footprint (t CO2/m\$ invested) of the Sub-Fund's portfolio.
- Carbon intensity (t CO2/m\$ revenues) of the Sub-Funds' portfolio.
- The proportion of the Sub-Fund's portfolio in the "worst offenders" list of the Management Company; this list is consisted of the issuers most at risk from a social responsibility point of view. This list is established based on major controversies, after analysis by members of the SRI team, and after validation by the Sustainable Investment Monitoring Committee.

Performance of sustainability indicators as of 12/30/2022	
Sustainability indicators	Performance of the sustainability indicators
ABA Corporate Responsibility score	5,24/10
Transition to a Sustainable Economy exposure	19,81% of revenues
% Exposure to the SDGs	19,81% of revenues
Carbon footprint	163,03
Carbon intensity	139,81
% "worst offenders" list	0%

• **...and compared to previous periods?**

Not applicable

• **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the sustainable investments of the Sub-Fund were the contributions of the investee companies to the United Nations Sustainable Development Goals (SDG).

These companies are required to comply with the following eligibility conditions which are based on a "pass-fail" approach:

- minimum 5% revenues exposed to SDGs, according to the internal sustainability framework based on Sustainable Transition Activities (demographic transition and/or healthcare transition and/or economic transition and/or lifestyle transition and/or ecologic transition).

Unaudited information (continued)

- minimum rating of 2 out of 10 on Corporate Responsibility Rating (ABA) (taking into account controversies and PAI, Principal Adverse Impacts), integrating the Do Not Significantly Harm on any environmental or social objective (see below)
- minimum rating of 2 out of 10 on Governance (Corporate Governance Practices)

The minimum rate of 2 of 10 (Corporate Responsibility in the proprietary tool ABA) is in line with the objective to Do No Significant Harm to the social or environmental objectives.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The adverse impacts of the companies' activities on environment and social objectives were directly integrated into the ABA Corporate Responsibility Rating (which integrates the indicators for adverse impacts on sustainability factors in Table 1 of Annex 1 of the SFDR RTS and may lead to a downgrading of the ABA scoring under the minimum rating).

In this background, the Asset Manager implemented in accordance with its Exclusion Policy the following exclusions:

- thermal coal and unconventional oil and gas: the Asset Manager gradually excluded companies involved in thermal coal and unconventional oil and gas business
- controversy weapons: issuers were excluded from all the Asset Manager's portfolios
- non-compliance with UN Global Compact: issuers with severe breaches to the UN Global Compact principles were integrated in the Asset Manager's "Worst Offenders" list and excluded from all the portfolios.

On December 30th, 2022, no breaches have been identified and no companies involved in thermal coal and unconventional oil and gas business were included in the asset managers' portfolio.

- *How were the indicators for adverse impacts on sustainability factors taken into account?*

The integration of the 14 mandatory PAI plus 3 optional PAI aimed to build a Corporate Responsibility Rating out of 10. A minimum rating of 2 out of 10 is thus consistent to the DNSH approach (Do No Significant Harm to the social or environmental objectives) in addition to two binding PAI (PAI 10- Violation UNGC and PAI 14- Controversial weapons).

- *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Issuers that did not comply with the principles of the United Nations Global Compact were unfavorably rated for Corporate Responsibility in the ABA tool. Issuers with controversies or in severe breach to UN Global Compact Principles (example: human rights or fight against corruption) were excluded from the portfolio through the worst offenders list after internal analysis.

The "internal approach" as described below allowed the Asset Manager to define a list of issuers identified as being in breach of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and which have been qualified as having committed a "severe breach" by the Management Company's Ethics Committee. These issuers were therefore included in an exclusion list of the "worst offenders" and which are prohibited from investing.

To perform this analysis, the Management Company used an external data provider's database to:

- 1) Extract issuers with "norms based" alerts
- 2) Filter out irrelevant issuers
- 3) Qualitative analysis of the infringements by the Management Company's Ethics Committee
- 4) Include issuers identified as having committed a "severe breach" in the list of worst offenders

Hence, the sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

Unaudited information (continued)

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Sub-Fund took into account the principal adverse impacts on sustainability factors.

- The Principal Adverse Impact analysis was part of the Corporate Responsibility Rating
- The Asset Manager has implemented an Adverse Impact on Sustainability Policy, measuring the PAI. The Policy first intended to monitor the contributions to climate change (CO2 emissions, CO2 intensity, implied temperature) in the context of the "Climate Trajectory" objectives

Further information may be found in the annual report in respect of the Sub-Fund.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period (2022).

Top investments of the portfolio, as of December 30th, 2022:

Largest investments	Sector	% Assets under management	Country
Cellnex Telecom SA	Telecommunications	4,5%	Spain
Nexi SpA	Industrial Goods and Services	4,0%	Italy
Deutsche Post AG	Industrial Goods and Services	3,6%	Germany
Accor SA	Travel and Leisure	3,4%	France
Safran SA	Industrial Goods and Services	3,3%	France
Pirelli & C SpA	Automobiles and Parts	3,3%	Italy
BNP Paribas SA	Banks	3,3%	France
STMicroelectronics NV	Technology	3,3%	Netherlands
Edenred	Industrial Goods and Services	3,1%	France
Prysmian SpA	Industrial Goods and Services	3,0%	Italy
Fnac Darty SA	Retail	3,0%	France
Atos SE	Technology	2,9%	France
Amadeus IT Group SA	Technology	2,8%	Spain
Schneider Electric SE	Industrial Goods and Services	2,8%	France
International Consolidated Airlines Group SA	Travel and Leisure	2,7%	Spain

The above Sector classification can differ from the one used in the financial periodic report.

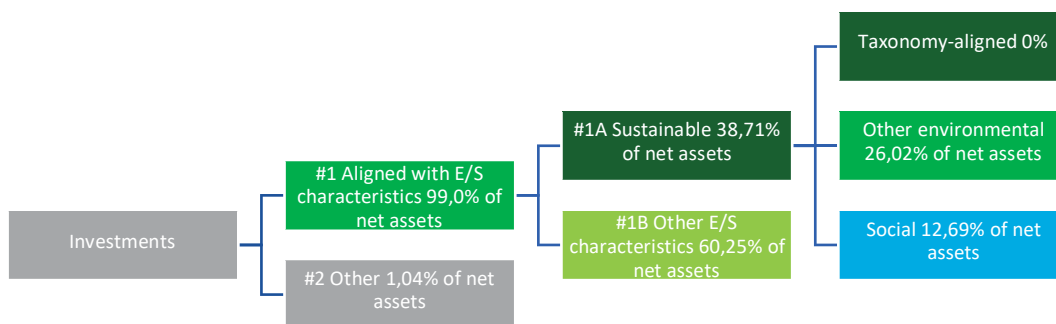

Unaudited information (continued)

What was the proportion of sustainability-related investments?

As of December 30th, 2022, the Sub-Fund invested 99,0% minimum of its net assets in investments aligned with the environmental and social characteristics it promotes and 38,71% of those were directly invested in sustainable investments. The remaining portion of the Sub-Fund’s net assets (#2 Other) consisted of financial derivative instruments, deposits at sight, money market funds, money market instruments and other deposits used for hedging and efficient portfolio management purposes and to manage the liquidity of the portfolio or to reduce any specific financial risk.

- **What was the asset allocation?**

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- **In which economic sectors were the investments made?**

The investments were made in the following economic sectors:

Sectors	% of assets
Automobiles and Parts	6,09%
Banks	3,32%
Basic Resources	1,30%
Construction and Materials	1,98%
Consumer Products and Services	1,33%
Energy	1,98%
Financial Services	3,01%
Health Care	2,58%
Industrial Goods and Services	26,12%
Personal Care, Drug and Grocery Stores	1,27%
Real Estate	1,96%
Retail	7,18%
Technology	17,30%
Telecommunications	6,29%
Travel and Leisure	11,51%
Utilities	4,04%

The above Sector classification can differ from the one used in the financial periodic report.

Unaudited information (continued)

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The data available as of today, issued from the companies, are not yet complete, exhaustive, and reliable. DNCA Finance will disclose the sustainable investments with an environmental objective aligned with the EU Taxonomy as soon as those data are available with the appropriate level of quality.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

- Yes
 - In fossil gas
 - In nuclear energy
- No

Not applicable

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies.

- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- operational expenditure (OpEx) reflecting green operational activities of investee companies.

For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

- **What was the share of investments made in transitional and enabling activities?**

Not applicable

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Unaudited information (continued)

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 26,02%.

What was the share of socially sustainable investments?

The share of socially sustainable investments was 12,69%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The investments included under “other” could consist of financial derivative instruments, deposits at sight, money market funds, money market instruments and other deposits used for hedging and efficient portfolio management purposes and to manage the liquidity of the portfolio or to reduce any specific financial risk.

These investments did not have specific environmental or social safeguards.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In line with the fundamental approach of the management team, the investment process was based on the selection of the investment universe combining a financial (quantitative and micro-economic) and extra-financial (qualitative) approach with two steps:

- The selection of issuers pursuant to the financial approach, and
- The exclusion of issuers which have a high-risk profile in terms of corporate responsibility (rating below 2/10 in the ESG proprietary tool, ABA Scoring) or exposed to major controversies. This extra-financial filter excludes a minimum of 20% of issuers based on the extra-financial analysis described before.

The ABA scoring is the proprietary tool of analysis and Corporate Responsibility Rating Corporate responsibility used to anticipate companies' risks especially looking at the relationship with their stakeholders: employees, supply chains, clients, local communities, and shareholders..., regardless of the sector of activities.

The ABA analysis of corporate responsibility is broken down into four pillars:

- Shareholders responsibility (board of directors and general management, accounting practices and financial risks, etc.),
- Environmental responsibility (environmental footprint of the production chain and product life cycle or responsible supply, energy consumption and Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti- corruption and anti- bribery matters. The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance. water consumption, company CO2 emissions and management of waste, etc.)
- Responsibility towards workers ethics and working conditions of the production chain, treatment of employees – safety, well-being, diversity, employee representation, wages, quality of products or services sold, etc.) and,
- Societal responsibility (Product quality, safety and traceability, respect of local communities and human rights, etc.)

Unaudited information (continued)

This in-depth analysis, combining qualitative and quantitative research, leads to a rating out of 10. Issuers with a rating under 2/10 are excluded from the investment universe.

Furthermore, the DNCA Finance Team is implementing an engagement policy with many companies, focusing especially on companies with an unfavourable or strongly diminishing Responsibility score, or with an accumulation of controversies, or with an unfavourable policy and actions regarding the climate change.

The engagement process, which aims to serve the ESG objectives of the product, is carried out in several steps:

1. Identify targets for proactive and reactive engagement among issuers in DNCA Finance's investments, following on from the alert system set up as part of sustainability risk and negative impact management
2. Implement an engagement plan for the identified engagement targets, monitor the engagement process and measure the results
3. Integrate the results of engagement actions into investment decisions

DNCA Finance's **proactive engagement** aims to encourage companies to develop better transparency and management of their ESG issues, through an ongoing dialogue. The **reactive engagement** process is an escalation process that relies on the alert mechanism in place for sustainability risk and negative impact management. The engagement actions can include requests for corrective actions and the possible decision to disinvest ("worst offenders"). DNCA Finance also participates in **collective initiatives** for coordinated and/or collaborative actions to promote best practices on systemic or transversal topics, concerning certain issuers, ESG issues likely to generate sustainability risks and/or negative sustainability impacts, and compliance with the principles of the Task Force on Climate related Financial Disclosure (TCFD) and the Task Force on Nature related Financial Disclosure (TNFD).

The engagement report of DNCA can be accessed [here](#).

The ESG processes used within the framework of the fund's management strategy (ABA scoring, management of exclusions, management of sustainability risks, management of negative impacts, etc.) are included in the asset management company's internal control plan, and as such are subject to effective control of their application, both at the first level (operational) and at the second level (Internal Control and Compliance).

How did this financial product perform compared to the reference benchmark?

Not applicable

- *How does the reference benchmark differ from a broad market index?*

Not applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

Not applicable

Unaudited information (continued)

Annex 4 RTS SFDR / Template periodic disclosure for the financial products referred to in Article 8

Product name: DNCA Invest Eurose

Legal entity identifier: 2138006QOV1H1QGA5J08

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 45,88% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy for 25,08% <input checked="" type="checkbox"/> with a social objective for 20,81% <input type="checkbox"/> It promoted E/S characteristics but did not make any sustainable investments.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The characteristics promoted by the Sub-Fund were governance, environment, social and societal criteria.

The management of the Sub-Fund relied on the proprietary analysis tool on environment, social and governance: ABA (Above and Beyond Analysis).

As part of the promotion of such characteristics, the Sub-Fund principally considered the following ESG matters:

- o Environment: GHG emissions, airborne pollution, waterborne pollution, water consumption, land use
- o Social: Excessive CEO Compensation, gender inequality, health and safety issues, child labor
- o Governance: Monitoring corruption and bribery, tax avoidance
- o Global ESG quality rating

In this way, for private issuers, the investment process based on stock picking took into account an internal Corporate Responsibility rating thanks to an extra-financial analysis through the ABA tool, with a "best in universe" approach (selection of the investment universe independently of the sectoral activity).

The investment process and resulting stock and bond picking used internal scoring with respect to responsibility of public issuers such as country based on an extra-financial analysis through a proprietary tool developed internally by the

Unaudited information (continued)

Management Company, with a minimum rating approach method. The sub-fund excluded any issuer with an ABA score inferior to 2/10.

In addition, the sub-fund has applied the asset management company's exclusion policy.

The Sub-Fund did not use a benchmark for the purpose of attaining the ESG Characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

The Sub-Fund includes both private issuers and public issuers.

The sustainability indicators of the Sub-Fund for private issuers were:

- The "Above and Beyond Analysis" ("ABA", the proprietary tool) Corporate Responsibility Score: the main sustainability indicator used by the Sub-Fund is the ABA scoring based on the Corporate Responsibility and divided into four pillars: shareholder responsibility, environmental responsibility, employer responsibility, societal responsibility.
- The Transition to a Sustainable Economy exposure: the asset manager completes this analysis by an assessment of companies' exposure to "Transition to a Sustainable Economy". This exposure is calculated among five pillars: demographic transition, healthcare transition, economic transition, lifestyle transition and ecologic transition.
- Exposure to UN Sustainable Development Goals: the Management Company assesses for each company the part of revenues linked to one of the 17 Sustainable Development Goals of the United Nations.
- Carbon data: carbon footprint (t CO₂/m\$ invested) of the Sub-Fund's portfolio.
- Carbon intensity (t CO₂/m\$ revenues) of the Sub-Funds' portfolio.
- The proportion of the Sub-Fund's portfolio in the "worst offenders" list of the Management Company; this list is consisted of the issuers most at risk from a social responsibility point of view. This list is established based on major controversies, after analysis by members of the SRI team, and after validation by the Sustainable Investment Monitoring Committee.

Performance of sustainability indicators for private issuers as of 12/30/2022	
Sustainability indicators	Performance of the sustainability indicators
ABA Corporate Responsibility score	5,12/10
Transition to a Sustainable Economy exposure	18,26% of revenues
% Exposure to the SDGs	18,26% of revenues
Carbon footprint	206,17
Carbon intensity	96,12
% "worst offenders" list	0%

The sustainability indicators of the Sub-Fund for public issuers were:

- The "Above and Beyond Analysis" ("ABA", the proprietary tool): a dedicated model to rate public issuers based on four pillars: governance, environment, social and society.
- The Climate Profile: the Management Company completes this analysis by an assessment of issuers' Climate Profile based on energy mix and evolution, carbon intensity and resources stock.
- Carbon data: carbon footprint (t CO₂/m\$ debt) of the Sub-Fund's portfolio.
- Carbon intensity (t CO₂/m\$ GDP) of the Sub-Funds' portfolio.

Unaudited information (continued)

- The proportion of the Sub-Fund's portfolio in the international standards offense based on several criteria such as: respect of freedom, child labour, human rights, torture practices, money laundering, etc.

Performance of sustainability indicators for public issuers as of 12/30/2022		
Sustainability indicators	Performance of the sustainability indicators	
ABA public score		5,28/10
Climate Profile / Energetic Mix	Bio & waste	8,98%
	Coal	3,42%
	Oil and LNG	36,21%
	Geothermal	2,22%
	Hydraulic	2,50%
	Natural Gas	36,56%
	Nuclear	5,06%
	Peat	0,00%
	Renewable	5,06%
Carbon footprint		Carbon footprint and carbon intensity data will be readily available via customer reporting, as this information will be included in all reports published on a monthly basis.
Carbon intensity		17,80
% in international standards offense		0,00%

- ...and compared to previous periods?

Not applicable

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the sustainable investments of the Sub-Fund were the contributions of the investee companies to the United Nations Sustainable Development Goals (SDG).

These companies are required to comply with the following eligibility conditions which are based on a "pass-fail" approach:

- minimum 5% revenues exposed to SDGs, according to the internal sustainability framework based on Sustainable Transition Activities (demographic transition and/or healthcare transition and/or economic transition and/or lifestyle transition and/or ecologic transition).
- minimum rating of 2 out of 10 on Corporate Responsibility Rating (ABA) (taking into account controversies and PAI, Principal Adverse Impacts) combined with the exclusion policy, integrating the Do Not Significantly Harm on any environmental or social objective (see below)
- minimum rating of 2 out of 10 on Governance (Corporate Governance Practices)

The minimum rate of 2 of 10 (Corporate Responsibility in the proprietary tool ABA) is in line with the objective to Do No Significant Harm to the social or environmental objectives.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Unaudited information (continued)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The adverse impacts of the companies' activities on environment and social objectives were directly integrated into the ABA Corporate Responsibility Rating (which integrates the indicators for adverse impacts on sustainability factors in Table 1 of Annex 1 of the SFDR RTS and may lead to a downgrading of the ABA scoring under the minimum rating).

In this background, the Asset Manager has implemented in accordance with its Exclusion Policy the following exclusions:

- thermal coal and unconventional oil and gas: the Asset Manager gradually excluded companies involved in thermal coal and unconventional oil and gas business
- controversy weapons: issuers were excluded from all the Asset Manager's portfolios
- non-compliance with UN Global Compact: issuers with severe breaches to the UN Global Compact principles were integrated in the Asset Manager's "Worst Offenders" list and excluded from all the portfolios.

On December 30th, 2022, no breaches have been identified and no companies involved in thermal coal and unconventional oil and gas business were included in the asset managers' portfolio.

- *How were the indicators for adverse impacts on sustainability factors taken into account?*

The integration of the 14 mandatory PAI plus 3 optional PAI aimed to build a Corporate Responsibility Rating out of 10. A minimum rating of 2 out of 10 is thus consistent to the DNSH approach (Do No Significant Harm to the social or environmental objectives) in addition to two binding PAI (PAI 10- Violation UNGC and PAI 14- Controversial weapons).

- *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Issuers that did not comply with the principles of the United Nations Global Compact were unfavorably rated for Corporate Responsibility in the ABA tool. Issuers with controversies or in severe breach to UN Global Compact Principles (example: human rights or fight against corruption) based on the internal approach were excluded from the portfolio through the worst offenders list after internal analysis.

The "internal approach" as described below allowed the Asset Manager to define a list of issuers identified as being in breach of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and which have been qualified as having committed a "severe breach" by the Management Company's Ethics Committee. These issuers were therefore included in an exclusion list of the "worst offenders" and which are prohibited from investing.

To perform this analysis, the Management Company used an external data provider's database to:

- 1) Extract issuers with "norms based" alerts
- 2) Filter out irrelevant issuers
- 3) Qualitative analysis of the infringements by the Management Company's Ethics Committee
- 4) Include issuers identified as having committed a "severe breach" in the list of worst offenders

Hence, the sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Unaudited information (continued)

How did this financial product consider principal adverse impacts on sustainability factors?

For Private issuers, The Sub-Fund took into account the principal adverse impacts on sustainability factors.

- The Principal Adverse Impact analysis was part of the Corporate Responsibility Rating
- The Asset Manager has implemented an Adverse Impact on Sustainability Policy, measuring the PAI. The Policy first intended to monitor the contributions to climate change (CO2 emissions, CO2 intensity, implied temperature) in the context of the "Climate Trajectory" objectives

For public issuers, the Sub-Fund took into account the principal adverse impacts on sustainability factors.

- The Principal Adverse Impact analysis was part of the Country Rating
- The Management Company has implemented an Adverse Impact on Sustainability Policy, measuring the PAI. The Policy first intended to monitor the contributions to climate change (CO2 intensity) and social issues (Country submitted to social violation, average income inequality score) and corruption (average corruption score)

Further information may be found in the annual report in respect of the Sub-Fund.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period (2022).

Top investments of the portfolio, as of December 30th, 2022:

Largest investments	Sector	% Assets under management	Country
Italy Buoni Poliennali Del Tesoro	Govies	5,8%	Italy
TotalEnergies SE	Energy	4,4%	France
Spain Government Inflation Linked Bond	Govies	3,7%	Spain
Sanofi	Health Care	2,2%	France
Credit Agricole SA	Banks	2,2%	France
Cie de Saint-Gobain	Construction and Materials	2,1%	France
Electricite de France SA	Utilities	2,1%	France
Orange SA	Telecommunications	2,0%	France
Societe Generale SA	Banks	1,9%	France
STMicroelectronics NV	Technology	1,9%	Netherlands
Bouygues SA	Construction and Materials	1,9%	France
BNP Paribas SA	Banks	1,8%	France
Thales SA	Industrial Goods and Services	1,6%	France
Dassault Aviation SA	Industrial Goods and Services	1,5%	France
Intesa Sanpaolo SpA	Banks	1,5%	Italy

The above sector classification can differ from the one used in the financial periodic report.

Unaudited information (continued)

What was the proportion of sustainability-related investments?

As of December 30th, 2022, the Sub-Fund invested 94,18% minimum of its net assets in investments aligned with the environmental and social characteristics it promotes and 45,88% of those were directly invested in sustainable investments. The remaining portion of the Sub-Fund’s net assets (#2 Other) consisted of financial derivative instruments, deposits at sight, money market funds, money market instruments and other deposits used for hedging and efficient portfolio management purposes and to manage the liquidity of the portfolio or to reduce any specific financial risk.

- **What was the asset allocation?**

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- **In which economic sectors were the investments made?**

The investments were made in the following economic sectors:

Sectors	% of assets
Automobiles and Parts	6,75%
Banks	14,30%
Basic Resources	1,39%
Chemicals	2,01%
Construction and Materials	6,01%
Consumer Products and Services	3,34%
Energy	6,28%
Financial Services	2,33%
Food, Beverage and Tobacco	1,01%
Health Care	4,80%
Industrial Goods and Services	8,65%
Insurance	0,79%
Media	2,72%
Personal Care, Drug and Grocery Stores	0,47%
Real Estate	0,94%
Retail	0,85%

Unaudited information (continued)

Sectors	% of assets
Technology	4,74%
Telecommunications	7,27%
Travel and Leisure	0,49%
Utilities	5,49%

The above sector classification can differ from the one used in the financial periodic report.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies.

- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The data available as of today, issued from the companies, are not yet complete, exhaustive, and reliable. DNCA Finance will disclose sustainable investments with an environmental objective aligned with the EU Taxonomy as soon as such data are available with the appropriate level of quality.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

Yes

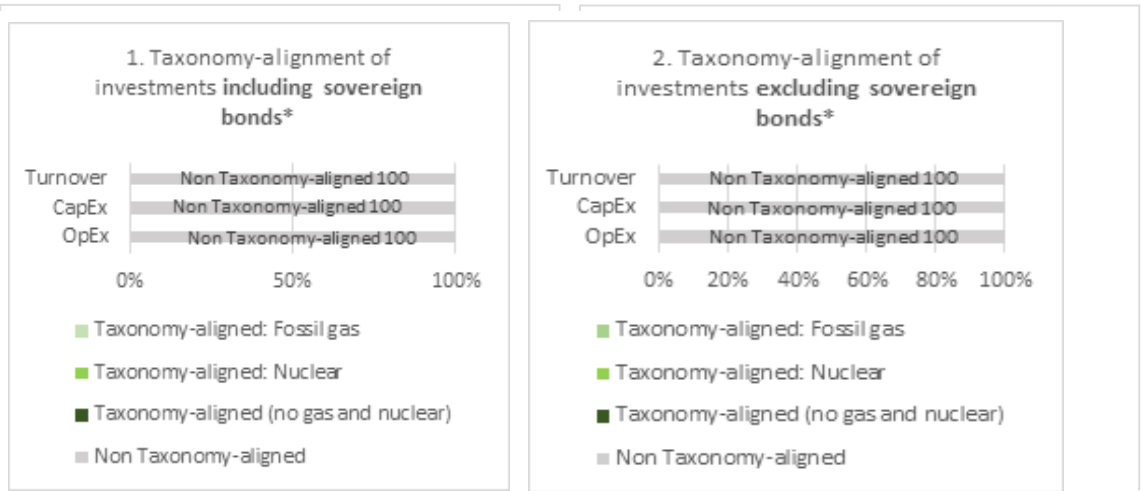

In fossil gas

In nuclear energy

No

Not applicable

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**

Not applicable

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Unaudited information (continued)

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 25,08%.

What was the share of socially sustainable investments?

The share of socially sustainable investments was 20,81%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The investments included under “other” could consist of financial derivative instruments, deposits at sight, money market funds, money market instruments and other deposits used for hedging and efficient portfolio management purposes and to manage the liquidity of the portfolio or to reduce any specific financial risk.

These investments did not have specific environmental or social safeguards.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The investment process was based on the following three stages:

- Selection of the investment universe combining a financial and extra-financial approach in particular by excluding issuers which do not comply with our minimum standards for inclusion (rating below 2/10 in the ESG proprietary tool) or exposed to major controversies;
- Calibration of the modified duration and the overall credit risk of the Sub-Fund and the level of cash depending on the analysis of the interest rate and macroeconomic environment;
- Selection of securities based on a fundamental analysis, taking into account ESG criteria and the valuation of instruments.

The ABA scoring is the proprietary tool of analysis and Corporate Responsibility Rating used to anticipate companies' risks especially looking at the relationship with their stakeholders: employees, supply chains, clients, local communities, and shareholders..., regardless of the sector of activities.

The ABA analysis of corporate responsibility is broken down into four pillars:

- Shareholders responsibility (board of directors and general management, accounting practices and financial risks, etc.),
- Environmental responsibility (environmental footprint of the production chain and product life cycle or responsible supply, energy consumption and water consumption, company CO2 emissions and management of waste, etc.)
- Responsibility towards workers ethics and working conditions of the production chain, treatment of employees – safety, well-being, diversity, employee representation, wages, quality of products or services sold, etc.) and,

Unaudited information (continued)

- Societal responsibility (Product quality, safety and traceability, respect of local communities and human rights, etc.)

This in-depth analysis, combining qualitative and quantitative research, leads to a rating out of 10. Issuers with a rating under 2/10 are excluded from the investment universe.

Furthermore, the DNCA Finance Team is implementing an engagement policy with many companies, focusing especially on companies with an unfavourable or strongly diminishing Responsibility score, or with an accumulation of controversies, or with an unfavourable policy and actions regarding the climate change.

The engagement process, which aims to serve the ESG objectives of the product, is carried out in several steps:

1. Identify targets for proactive and reactive engagement among issuers in DNCA Finance's investments, following on from the alert system set up as part of sustainability risk and negative impact management
2. Implement an engagement plan for the identified engagement targets, monitor the engagement process and measure the results
3. Integrate the results of engagement actions into investment decisions

DNCA Finance's **proactive engagement** aims to encourage companies to develop better transparency and management of their ESG issues, through an ongoing dialogue. The **reactive engagement** process is an escalation process that relies on the alert mechanism in place for sustainability risk and negative impact management. The engagement actions can include requests for corrective actions and the possible decision to disinvest ("worst offenders"). DNCA Finance also participates in **collective initiatives** for coordinated and/or collaborative actions to promote best practices on systemic or transversal topics, concerning certain issuers, ESG issues likely to generate sustainability risks and/or negative sustainability impacts, and compliance with the principles of the Task Force on Climate related Financial Disclosure (TCFD) and the Task Force on Nature related Financial Disclosure (TNFD).

The engagement report of DNCA can be accessed [here](#).

The ESG processes used within the framework of the fund's management strategy (ABA scoring, management of exclusions, management of sustainability risks, management of negative impacts, etc.) are included in the asset management company's internal control plan, and as such are subject to effective control of their application, both at the first level (operational) and at the second level (Internal Control and Compliance).

Annex 4 RTS SFDR / Template periodic disclosure for the financial products referred to in Article 8

Product name: DNCA Invest Evolutif

Legal entity identifier: 213800R1A3RW3ITPQ283

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 44,24% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy for 28,83% <input checked="" type="checkbox"/> with a social objective for 15,41% <input type="checkbox"/> It promoted E/S characteristics but did not make any sustainable investments.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The characteristics promoted by the Sub-Fund were governance, environment, social and societal criteria.

The management of the Sub-Fund relied on the proprietary analysis tool on environment, social and governance: ABA (Above and Beyond Analysis).

As part of the promotion of such characteristics, the Sub-Fund principally considered the following ESG matters:

- o Environment: GHG emissions, airborne pollution, waterborne pollution, water consumption, land use
- o Social: Excessive CEO Compensation, gender inequality, health and safety issues, child labor
- o Governance: Monitoring corruption and bribery, tax avoidance
- o Global ESG quality rating

In this way, for private issuers, the investment process based on stock picking took into account an internal Corporate Responsibility rating thanks to an extra-financial analysis through the ABA tool, with a "best in universe" approach (selection of the investment universe independently of the sectoral activity).

The investment process and resulting stock and bond picking used internal scoring with respect to responsibility of public issuers such as country based on an extra-financial analysis through a proprietary tool developed internally by the

Unaudited information (continued)

Management Company, with a minimum rating approach method. The sub-fund excluded any issuer with an ABA score inferior to 2/10.

In addition, the sub-fund has applied the asset management company's exclusion policy.

The Sub-Fund did not use a benchmark for the purpose of attaining the ESG Characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

The Sub-Fund includes both private issuers and public issuers.

The sustainability indicators of the Sub-Fund for private issuers were:

- The "Above and Beyond Analysis" ("ABA", the proprietary tool) Corporate Responsibility Score: the main sustainability indicator used by the Sub-Fund is the ABA scoring based on the Corporate Responsibility and divided into four pillars: shareholder responsibility, environmental responsibility, employer responsibility, societal responsibility.
- The Transition to a Sustainable Economy exposure: the asset manager completes this analysis by an assessment of companies' exposure to "Transition to a Sustainable Economy". This exposure is calculated among five pillars: demographic transition, healthcare transition, economic transition, lifestyle transition and ecologic transition.
- Exposure to UN Sustainable Development Goals: the Management Company assesses for each company the part of revenues linked to one of the 17 Sustainable Development Goals of the United Nations.
- Carbon data: carbon footprint (t CO₂/m\$ invested) of the Sub-Fund's portfolio.
- Carbon intensity (t CO₂/m\$ revenues) of the Sub-Funds' portfolio.
- The proportion of the Sub-Fund's portfolio in the "worst offenders" list of the Management Company; this list is consisted of the issuers most at risk from a social responsibility point of view. This list is established based on major controversies, after analysis by members of the SRI team, and after validation by the Sustainable Investment Monitoring Committee.

Performance of sustainability indicators for private issuers as of 12/30/2022	
Sustainability indicators	Performance of the sustainability indicators
ABA Corporate Responsibility score	5,46/10
Transition to a Sustainable Economy exposure	25,62% of revenues
% Exposure to the SDGs	25,62% of revenues
Carbon footprint	166,08
Carbon intensity	190,17
% "worst offenders" list	0%

The sustainability indicators of the Sub-Fund for public issuers were:

- The "Above and Beyond Analysis" ("ABA", the proprietary tool): a dedicated model to rate public issuers based on four pillars: governance, environment, social and society.
- The Climate Profile: the Management Company completes this analysis by an assessment of issuers' Climate Profile based on energy mix and evolution, carbon intensity and resources stock.
- Carbon data: carbon footprint (t CO₂/m\$ debt) of the Sub-Fund's portfolio.
- Carbon intensity (t CO₂/m\$ GDP) of the Sub-Funds' portfolio.

Unaudited information (continued)

- The proportion of the Sub-Fund's portfolio in the international standards offense based on several criteria such as: respect of freedom, child labour, human rights, torture practices, money laundering, etc.

Performance of sustainability indicators for public issuers as of 12/30/2022		
Sustainability indicators	Performance of the sustainability indicators	
ABA public score		4,45/10
Climate Profile / Energetic Mix	Bio & waste	5,68%
	Coal	9,75%
	Oil and LNG	35,87%
	Geothermal	0,97%
	Hydraulic	1,47%
	Natural Gas	34,70%
	Nuclear	8,54%
	Peat	0,00%
	Renewable	3,02%
Carbon footprint		Carbon footprint and carbon intensity data will be readily available via customer reporting, as this information will be included in all reports published on a monthly basis.
Carbon intensity		40,30
% in international standards offense		72,52%

- ...and compared to previous periods?

Not applicable

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the sustainable investments of the Sub-Fund were the contributions of the investee companies to the United Nations Sustainable Development Goals (SDG).

These companies are required to comply with the following eligibility conditions which are based on a "pass-fail" approach:

- minimum 5% revenues exposed to SDGs, according to the internal sustainability framework based on Sustainable Transition Activities (demographic transition and/or healthcare transition and/or economic transition and/or lifestyle transition and/or ecologic transition).
- minimum rating of 2 out of 10 on Corporate Responsibility Rating (ABA) (taking into account controversies and PAI, Principal Adverse Impacts) combined with the exclusion policy, integrating the Do Not Significantly Harm on any environmental or social objective (see below)
- minimum rating of 2 out of 10 on Governance (Corporate Governance Practices)

The minimum rate of 2 of 10 (Corporate Responsibility in the proprietary tool ABA) is in line with the objective to Do No Significant Harm to the social or environmental objectives.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Unaudited information (continued)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The adverse impacts of the companies' activities on environment and social objectives were directly integrated into the ABA Corporate Responsibility Rating (which integrates the indicators for adverse impacts on sustainability factors in Table 1 of Annex 1 of the SFDR RTS and may lead to a downgrading of the ABA scoring under the minimum rating).

In this background, the Asset Manager has implemented in accordance with its Exclusion Policy the following exclusions:

- thermal coal and unconventional oil and gas: the Asset Manager gradually excluded companies involved in thermal coal and unconventional oil and gas business
- controversy weapons: issuers were excluded from all the Asset Manager's portfolios
- non-compliance with UN Global Compact: issuers with severe breaches to the UN Global Compact principles were integrated in the Asset Manager's "Worst Offenders" list and excluded from all the portfolios.

On December 30th, 2022, no breaches have been identified and no companies involved in thermal coal and unconventional oil and gas business were included in the asset managers' portfolio.

- *How were the indicators for adverse impacts on sustainability factors taken into account?*

The integration of the 14 mandatory PAI plus 3 optional PAI aimed to build a Corporate Responsibility Rating out of 10. A minimum rating of 2 out of 10 is thus consistent to the DNSH approach (Do No Significant Harm to the social or environmental objectives) in addition to two binding PAI (PAI 10- Violation UNGC and PAI 14- Controversial weapons).

- *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Issuers that did not comply with the principles of the United Nations Global Compact were unfavorably rated for Corporate Responsibility in the ABA tool. Issuers with controversies or in severe breach to UN Global Compact Principles (example: human rights or fight against corruption) based on the internal approach were excluded from the portfolio through the worst offenders list after internal analysis.

The "internal approach" as described below allowed the Asset Manager to define a list of issuers identified as being in breach of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and which have been qualified as having committed a "severe breach" by the Management Company's Ethics Committee. These issuers were therefore included in an exclusion list of the "worst offenders" and which are prohibited from investing.

To perform this analysis, the Management Company used an external data provider's database to:

- 1) Extract issuers with "norms based" alerts
- 2) Filter out irrelevant issuers
- 3) Qualitative analysis of the infringements by the Management Company's Ethics Committee
- 4) Include issuers identified as having committed a "severe breach" in the list of worst offenders

Hence, the sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Unaudited information (continued)

How did this financial product consider principal adverse impacts on sustainability factors?

For Private issuers, The Sub-Fund took into account the principal adverse impacts on sustainability factors.

- The Principal Adverse Impact analysis was part of the Corporate Responsibility Rating
- The Asset Manager has implemented an Adverse Impact on Sustainability Policy, measuring the PAI. The Policy first intended to monitor the contributions to climate change (CO₂ emissions, CO₂ intensity, implied temperature) in the context of the "Climate Trajectory" objectives

For public issuers, the Sub-Fund took into account the principal adverse impacts on sustainability factors.

- The Principal Adverse Impact analysis was part of the Country Rating
- The Management Company has implemented an Adverse Impact on Sustainability Policy, measuring the PAI. The Policy first intended to monitor the contributions to climate change (CO₂ intensity) and social issues (Country submitted to social violation, average income inequality score) and corruption (average corruption score)

Further information may be found in the annual report in respect of the Sub-Fund.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period (2022).

Top investments of the portfolio, as of December 30th, 2022:

Largest investments	Sector	% Assets under management	Country
United States Treasury Note/Bond	Govies	16,0%	United States of America
Shell PLC	Energy	5,2%	Netherlands
Christian Dior SE	Consumer Products and Services	4,4%	France
Air Liquide SA	Chemicals	4,0%	France
Cie de Saint-Gobain	Construction and Materials	4,0%	France
Italy Buoni Poliennali Del Tesoro	Govies	4,0%	Italy
BNP Paribas SA	Banks	3,8%	France
Capgemini SE	Technology	3,3%	France
Deutsche Telekom AG	Telecommunications	3,0%	Germany
ASML Holding NV	Technology	2,8%	Netherlands
Microsoft Corp	Technology	2,6%	United States of America
Novo Nordisk A/S	Health Care	2,5%	Denmark
Schneider Electric SE	Industrial Goods and Services	2,5%	France
Nestle SA	Food, Beverage and Tobacco	2,5%	Switzerland
Faurecia SE	Automobiles and Parts	2,3%	France

The above sector classification can differ from the one used in the financial periodic report.

Unaudited information (continued)

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

As of December 30th, 2022, the Sub-Fund invested 97,57% minimum of its net assets in investments aligned with the environmental and social characteristics it promotes and 44,24% of those were directly invested in sustainable investments. The remaining portion of the Sub-Fund’s net assets (#2 Other) consisted of financial derivative instruments, deposits at sight, money market funds, money market instruments and other deposits used for hedging and efficient portfolio management purposes and to manage the liquidity of the portfolio or to reduce any specific financial risk.

- **What was the asset allocation?**

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- **In which economic sectors were the investments made?**

The investments were made in the following economic sectors:

Sectors	% of assets
Automobiles and Parts	7,92%
Banks	8,49%
Basic Resources	1,06%
Chemicals	4,65%
Construction and Materials	4,15%
Consumer Products and Services	6,69%
Energy	7,18%
Financial Services	2,87%
Food, Beverage and Tobacco	3,46%
Health Care	4,01%
Industrial Goods and Services	7,71%
Media	0,08%
Retail	0,22%
Technology	10,79%
Telecommunications	3,59%
Travel and Leisure	1,82%

Unaudited information (continued)

The above sector classification can differ from the one used in the financial periodic report.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies.

- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- operational expenditure (OpEx) reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

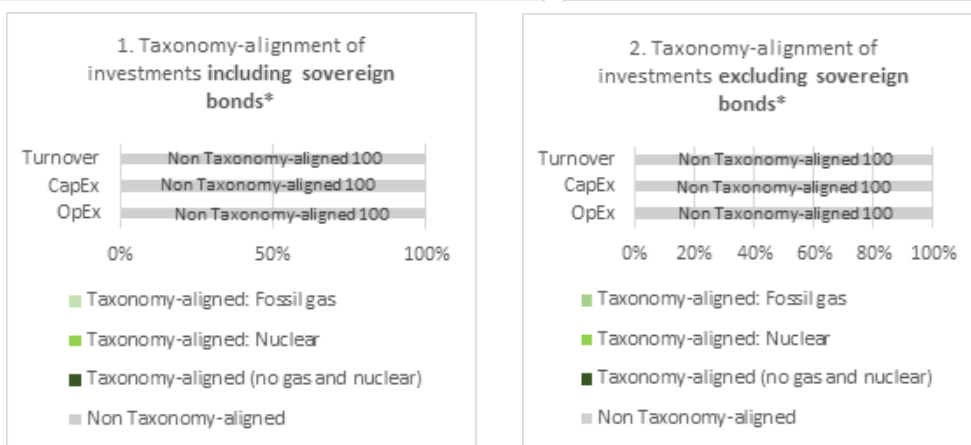

The data available as of today, issued from the companies, are not yet complete, exhaustive, and reliable. DNCA Finance will disclose sustainable investments with an environmental objective aligned with the EU Taxonomy as soon as such data are available with the appropriate level of quality.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

- Yes
 - In fossil gas
 - In nuclear energy
- No

Not applicable

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**

Not applicable

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Unaudited information (continued)

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 28,83%.

What was the share of socially sustainable investments?

The share of socially sustainable investments was 15,41%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The investments included under “other” could consist of financial derivative instruments, deposits at sight, money market funds, money market instruments and other deposits used for hedging and efficient portfolio management purposes and to manage the liquidity of the portfolio or to reduce any specific financial risk.

These investments did not have specific environmental or social safeguards.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The investment process was based on the following three stages:

- Selection of the investment universe combining a financial and extra-financial approach in particular by excluding issuers which do not comply with our minimum standards for inclusion (rating below 2/10 in the ESG proprietary tool) or exposed to major controversies;
- Calibration of the modified duration and the overall credit risk of the Sub-Fund and the level of cash depending on the analysis of the interest rate and macroeconomic environment;
- Selection of securities based on a fundamental analysis, taking into account ESG criteria and the valuation of instruments.

The ABA scoring is the proprietary tool of analysis and Corporate Responsibility Rating used to anticipate companies' risks especially looking at the relationship with their stakeholders: employees, supply chains, clients, local communities, and shareholders..., regardless of the sector of activities.

The ABA analysis of corporate responsibility is broken down into four pillars:

- Shareholders responsibility (board of directors and general management, accounting practices and financial risks, etc.),
- Environmental responsibility (environmental footprint of the production chain and product life cycle or responsible supply, energy consumption and water consumption, company CO2 emissions and management of waste, etc.)
- Responsibility towards workers ethics and working conditions of the production chain, treatment of employees – safety, well-being, diversity, employee representation, wages, quality of products or services sold, etc.) and,
- Societal responsibility (Product quality, safety and traceability, respect of local communities and human rights, etc.)

Unaudited information (continued)

This in-depth analysis, combining qualitative and quantitative research, leads to a rating out of 10. Issuers with a rating under 2/10 are excluded from the investment universe.

Furthermore, the DNCA Finance Team is implementing an engagement policy with many companies, focusing especially on companies with an unfavourable or strongly diminishing Responsibility score, or with an accumulation of controversies, or with an unfavourable policy and actions regarding the climate change.

The engagement process, which aims to serve the ESG objectives of the product, is carried out in several steps:

1. Identify targets for proactive and reactive engagement among issuers in DNCA Finance's investments, following on from the alert system set up as part of sustainability risk and negative impact management
2. Implement an engagement plan for the identified engagement targets, monitor the engagement process and measure the results
3. Integrate the results of engagement actions into investment decisions

DNCA Finance's **proactive engagement** aims to encourage companies to develop better transparency and management of their ESG issues, through an ongoing dialogue. The **reactive engagement** process is an escalation process that relies on the alert mechanism in place for sustainability risk and negative impact management. The engagement actions can include requests for corrective actions and the possible decision to disinvest ("worst offenders"). DNCA Finance also participates in **collective initiatives** for coordinated and/or collaborative actions to promote best practices on systemic or transversal topics, concerning certain issuers, ESG issues likely to generate sustainability risks and/or negative sustainability impacts, and compliance with the principles of the Task Force on Climate related Financial Disclosure (TCFD) and the Task Force on Nature related Financial Disclosure (TNFD).

The engagement report of DNCA can be accessed [here](#).

The ESG processes used within the framework of the fund's management strategy (ABA scoring, management of exclusions, management of sustainability risks, management of negative impacts, etc.) are included in the asset management company's internal control plan, and as such are subject to effective control of their application, both at the first level (operational) and at the second level (Internal Control and Compliance).

Annex 4 RTS SFDR / Template periodic disclosure for the financial products referred to in Article 8

Product name: DNCA Invest Miuri

Legal entity identifier: 213800PM97Z52BYY9A41

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective <input checked="" type="checkbox"/> It promoted E/S characteristics but did not make any sustainable investments.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The characteristics promoted by the Sub-Fund were governance, environment, social and societal criteria. The management of the Sub-Fund relied on the proprietary analysis tool on environment, social and governance: ABA (Above and Beyond Analysis).

As part of the promotion of such characteristics, the Sub-Fund principally considered the following ESG matters:

- o Environment: GHG emissions, air borne pollution, water borne pollution, water consumption, land use
- o Social: Excessive CEO Compensation, gender inequality, health and safety issues, child labour
- o Governance: Monitoring corruption and bribery, tax avoidance
- o Global ESG quality rating

Unaudited information (continued)

In this way, the investment process and resulting stock picking used internal scoring with respect to both corporate responsibility and sustainability of companies based on an extra-financial analysis through a proprietary tool developed internally by the asset management company, using the "best in universe" method (screening of the investment universe based on the corporate responsibility criteria, regardless of the sectorial activity). The sub-fund excluded any issuer with an ABA score inferior to 2/10. There may have been a sector bias.

In addition, the sub-fund has applied the asset management company's exclusion policy.

The Sub-Fund did not use a benchmark for the purpose of attaining the ESG Characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

• **How did the sustainability indicators perform?**

The sustainability indicators of the Sub-Fund were:

- The "Above and Beyond Analysis" ("ABA", the proprietary tool) Corporate Responsibility Score: the main sustainability indicator used by the Sub-Fund is the ABA scoring based on the Corporate Responsibility and divided into four pillars: shareholder responsibility, environmental responsibility, employer responsibility, societal responsibility.
- The Transition to a Sustainable Economy exposure: the Management Company completes this analysis by an assessment of companies' exposure to "Transition to a Sustainable Economy". This exposure is calculated among five pillars: demographic transition, healthcare transition, economic transition, lifestyle transition and ecologic transition.
- Exposure to UN Sustainable Development Goals: the Management Company assesses for each company the part of revenues linked to one of the 17 Sustainable Development Goals of the United Nations.
- Carbon data: carbon footprint (t CO2/m\$ invested) of the Sub-Fund's portfolio.
- Carbon intensity (t CO2/m\$ revenues) of the Sub-Funds' portfolio.
- The proportion of the Sub-Fund's portfolio in the "worst offenders" list of the Management Company; this list is consisted of the issuers most at risk from a social responsibility point of view. This list is established based on major controversies, after analysis by members of the SRI team, and after validation by the Sustainable Investment Monitoring Committee.

Performance of sustainability indicators as of 12/30/2022

Not Applicable

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

How did this financial product consider principal adverse impacts on sustainability factors?

The Sub-Fund took into account the principal adverse impacts on sustainability factors.

- The Principal Adverse Impact analysis was part of the Corporate Responsibility Rating
- The Management Company has implemented an Adverse Impact on Sustainability Policy, measuring the PAI. The Policy first intended to monitor the contributions to climate change (CO2 emissions, CO2 intensity, implied temperature) in the context of the "Climate Trajectory" objectives.

Further information may be found in the annual report in respect of the Sub-Fund.

Unaudited information (continued)

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period (2022).

Top investments of the portfolio, as of December 30th, 2022:

Unaudited information (continued)

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

As of December 30th, 2022, the Sub-Fund invested 86.48% of its net assets in investments aligned with the environmental and social characteristics it promotes. The remaining portion of the Sub-Fund’s investment portfolio (#2 Other) consisted of financial derivative instruments for hedging and/or efficient portfolio management purposes as well as deposits at sight, money market funds, money market instruments and other deposits for liquidity purposes.

- What was the asset allocation?**

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?**

The investments were made in the following economic sectors:

Sectors	% of assets
Automobiles and Parts	8,86%
Banks	1,95%
Chemicals	0,04%
Construction and Materials	17,96%
Consumer Products and Services	8,42%
Energy	1,63%
Financial Services	0,03%
Food, Beverage and Tobacco	2,75%
Health Care	0,60%
Industrial Goods and Services	8,50%
Insurance	1,18%
Media	9,37%
Retail	0,01%
Technology	8,17%
Telecommunications	1,44%

The above sector classification can differ from the one used in the financial periodic report.

Unaudited information (continued)

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies.

- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- operational expenditure (OpEx) reflecting green operational activities of investee companies.

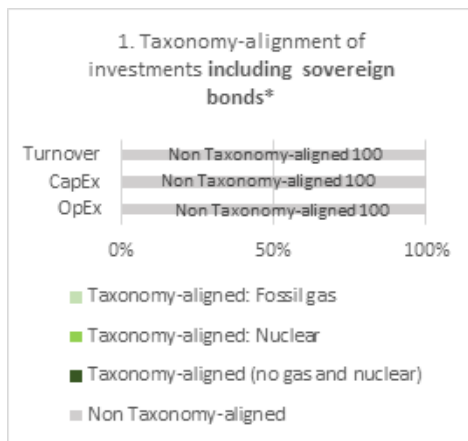

Not Applicable

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

- Yes
 - In fossil gas
 - In nuclear energy
- No

Not applicable

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereignbonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

- **What was the share of investments made in transitional and enabling activities?**

Not Applicable

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Unaudited information (continued)

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not Applicable

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not Applicable

What was the share of socially sustainable investments?

Not Applicable

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The investments included under “other” could consist of financial derivative instruments for hedging and/or efficient portfolio management purposes as well as deposits at sight, money market funds, money market instruments and other deposits for liquidity purposes.

These investments did not have specific environmental or social safeguards.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In line with the fundamental approach of the management team, the investment process was based on the following three stages:

- Selection of the investment universe combining a financial (quantitative and micro-economic) and extra-financial (qualitative) approach with two successive steps:
 - o The selection of issuers pursuant to the financial approach described above,
 - o The exclusion of issuers which have a high-risk profile in terms of corporate responsibility (rating below 2/10 in the ESG proprietary tool) or exposed to major controversies. This extra-financial filter excludes a minimum of 20% of issuers based on the extra-financial analysis describes before
- Structuration of the portfolio with a macroeconomic approach.
- Build the portfolio taking into consideration the regulatory constraints and the investment process in order to establish the final selection

The ABA scoring: proprietary tool of analysis and Corporate Responsibility Rating Corporate responsibility is a useful information’s pool used to anticipate companies’ risks especially looking at the interplay with their stakeholders: employees, supply chains, clients, local communities, and shareholders..., regardless of the sector of activities.

The ABA analysis of corporate responsibility is broken down into four pillars:

- Shareholders responsibility (board of directors and general management, accounting practices and financial risks, etc.),

Unaudited information (continued)

- Environmental responsibility (environmental footprint of the production chain and product life cycle or responsible supply, energy consumption and water consumption, company CO2 emissions and management of waste, etc.),
- Responsibility towards workers ethics and working conditions of the production chain, treatment of employees – safety, well-being, diversity, employee representation, wages, quality of products or services sold, etc.) and,
- Societal responsibility (Product quality, safety and traceability, respect of local communities and human rights, etc.

This in-depth analysis, combining qualitative and quantitative research, leads to a rating out of 10.

Furthermore, the DNCA Finance Team is implementing an engagement policy with many companies, focusing especially on companies with an unfavourable or strongly diminishing Responsibility score, or with an accumulation of controversies, or with an unfavourable policy and actions regarding the climate change.

The engagement process, which aims to serve the ESG objectives of the product, is carried out in several steps:

1. Identify targets for proactive and reactive engagement among issuers in DNCA Finance's investments, following on from the alert system set up as part of sustainability risk and negative impact management
2. Implement an engagement plan for the identified engagement targets, monitor the engagement process and measure the results
3. Integrate the results of engagement actions into investment decisions

DNCA Finance's **proactive engagement** aims to encourage companies to develop better transparency and management of their ESG issues, through an ongoing dialogue. The **reactive engagement** process is an escalation process that relies on the alert mechanism in place for sustainability risk and negative impact management. The engagement actions can include requests for corrective actions and the possible decision to disinvest (“worst offenders”). DNCA Finance also participates in **collective initiatives** for coordinated and/or collaborative actions to promote best practices on systemic or transversal topics, concerning certain issuers, ESG issues likely to generate sustainability risks and/or negative sustainability impacts, and compliance with the principles of the Task Force on Climate related Financial Disclosure (TCFD) and the Task Force on Nature related Financial Disclosure (TNFD).

The engagement report of DNCA can be accessed [here](#).

The ESG processes used within the framework of the fund's management strategy (ABA scoring, management of exclusions, management of sustainability risks, management of negative impacts, etc.) are included in the asset management company's internal control plan, and as such are subject to effective control of their application, both at the first level (operational) and at the second level (Internal Control and Compliance).

ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:
DPAM B Equities NewGems Sustainable

Legal entity identifier:
54930001NHP87EW0JE18

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

No

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 89.46% of sustainable investments
- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
 - with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
 - with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the Reference Period, the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviors that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices and best efforts.

The sub-fund has not designated any benchmark index to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the "SFDR 2019/2088").

Derivative financial products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting environmental and/or social characteristics.

● *How did the sustainability indicators perform?*

During the Reference Period, the Sub-fund achieved the following sustainability indicators:

- a. The Sub-fund has not been exposed to companies considered to be non-compliant with Global Standards;
- b. The Sub-fund has not been exposed to companies involved in controversial activities according to the definitions and thresholds stipulated by DPAM's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM_policy_Controversial_activities.pdf);
- c. The Sub-fund has no exposure to companies facing ESG controversies of maximum severity;
- d. Over the reference period, the sub-fund was not exposed to issuers in the bottom quintile for at least 2 of the 4 ESG risks identified for the issuer's activity and geographical area of activity; this sustainability indicator as currently drafted in the prospectus can be considered to have been breached. However, due to a clerical error in the wording of this sustainability indicator, it has not been correctly reflected in the prospectus and should in fact read as follows: "Zero exposure to companies in the bottom 20% on more than 2 of its 4 main environmental, social or governance risks, specific to the company's activity and geographical scope." For the reference period, the Sub-fund had zero exposure to companies in the bottom 20% on more than 2 of its 4 main environmental, social or governance risks, specific to the company's activity and geographical scope and that, on this basis, there was no breach.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- e. The greenhouse gas (GHG) emissions intensity of the Sub-fund was lower than the average GHG emissions intensity of the benchmark prior to the application of the ESG and sustainable investment selection methodology: 436.60 tCO₂e/M revenue compared to 1113.06 tCO₂e/mn revenue (as at 31/12/2022).

● **...and compared to previous periods?**

Not applicable

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

For the Reference Period, the Sub-fund would aim to have at least 50% sustainable investments i.e. investments aimed at:

- companies aligned with one of the first two objectives of the EU taxonomy (climate change mitigation and adaptation);
- companies aiming to make a net positive contribution to the United Nations (UN) Sustainable Development Goals ("SDGs"), which are environmental in nature;
- companies aiming to make a net positive contribution to the social SDGs; and
- at the level of the overall portfolio, a minimum of 20% of companies making a net positive¹ contribution to all SDGs.

For the Reference Period, the Sub-fund had 89.46% sustainable investments. These sustainable investments have contributed to the Sub-fund's partial sustainable investment objective in the following ways:

- 0.82% of the Sub-fund's portfolio contributed to the achievement of the environmental objectives defined by the EU Taxonomy (climate change mitigation and adaptation);
- 65.89% of the Sub-fund's portfolio contributed to the achievement of environmental objectives not aligned with the EU Taxonomy;
- 88.12% of the Sub-fund's portfolio contributed to the achievement of social objectives.
- 85.44% of the Sub-fund's portfolio was invested in companies making a net positive contribution to the SDGs (including impact bonds).

¹ The net positive contribution is the difference between the positive and negative impact contributions and is calculated at the level of the invested company and the overall portfolio. Based on the SDGs framework, the net positive contribution takes into account on the one hand (1) the extent to which the invested company's products and services contribute to the achievement of the SDGs and on the other hand (2) the negative impacts of their activities along the value chain.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

DPAM ensures that the Sub-fund's sustainable investments during the Reference Period do not materially undermine an environmentally or socially sustainable investment objective by:

Issuer level:

- Consideration of the principal adverse impacts on the mandatory sustainability factors (hereinafter "PAIs") listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 which allows for the reduction of the negative impacts of the investment, including:
 - o by incorporating several elements to avoid and/or reduce its exposure to activities or behaviours that could affect another environmental or social objective (such as the Global Standards compliance filter and the exclusion of ESG controversies of maximum severity or activities most harmful to other environmental and/or social objectives);
 - o via an engagement process with investee companies, in accordance with its Engagement Policy, which can be accessed at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006835/DPAM_policy_engagement.pdf. The commitments made by DPAM are also the subject of an annual report available at (https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006835/DPAM_report_engagement_activity.pdf).
- An impact calculation methodology which takes into account the positive and negative contribution of the company's products and services to the SDGs in order to optimise the net positive (resulting) contribution.

Overall portfolio level:

- A rule of minimum 20% of assets aligned with the EU Taxonomy or in net positive contribution on all 17 SDGs. During the Reference Period, a minimum 85.44% of assets aligned with the EU Taxonomy or making a net positive contribution to all 17 SDGs.

How were the indicators for adverse impacts on sustainability factors taken into account?

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAI") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviors that

may significantly hinder sustainable and inclusive growth. This commitment is incorporated into the entire research and investment process.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

1) Firstly, with regard to environmental PAIs:

- a) they have been analyzed and monitored at the level of the invested issuers, particularly with respect to PAI related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD).

Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.

- b) After that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with global standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.
- c) the exclusion filter for companies involved in controversial activities (in accordance with DPAM's Controversial Activities Policy (accessible at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM_policy_Controversial_activities.pdf)). has been applied. The exclusion of companies involved in thermal coal production, for example, allows for better coverage of indicators such as biodiversity and greenhouse gas emissions.
- d) The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).
- e) Similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impact their scorecard.

2) Second, the social PAIs were systematically analyzed according to the stages of the research and investment process:

- a) the Global Standards compliance filter is structured around human rights, labor rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines

for Multinational Enterprises have been de facto excluded from the investment universe.

- b) the exclusion filter for companies involved in controversial activities (definitions and thresholds in accordance with DPAM's Controversial Activities Policy (available at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM_policy_Controversial_activities.pdf). In this way, companies involved in controversial armaments were directly excluded from the investment universe.
- c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.
- d) The issue of gender diversity within the board of directors has been addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet a minimum of 30% gender diversity on their boards. DPAM participated in 706 general and extraordinary meetings on behalf of 651 companies in 2022.
- e) Similarly, social indicators have been included in the analysis of the ESG profile of companies and impact their scorecard.

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006836/DPAM_policy_Sustainable_and_Responsible_Investment.pdf and [DPAM report TCFD.pdf](https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006836/DPAM_report_TCFD.pdf) (cloudinary.com).

— *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The first stage of the Sub-fund's investment is based on a normative screening, which includes compliance with Global Standards based on human rights, labour rights and the prevention of corruption. These include the OECD Guidelines for Multinational Enterprises and the UN Guidelines on Business and Human Rights. Companies that do not meet these criteria are excluded from the eligible investment universe. The Sub-fund has therefore not been invested during the Reference Period in any company that is deemed not to comply with these principles.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAI") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM’s commitment to reduce the negative impact of the Sub-fund’s investments by avoiding activities or behaviors that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its incorporation.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

- 1) Firstly, with regard to environmental PAIs:
 - a) they have been analyzed and monitored at the level of the invested issuers, particularly with respect to PAI related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD). Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.
 - b) After that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with global standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.

- c) the exclusion filter for companies involved in controversial activities (in accordance with DPAM's Controversial Activities Policy (accessible at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM_policy_Controversial_activities.pdf)). has been applied. The exclusion of companies involved in thermal coal production, for example, allows for better coverage of indicators such as biodiversity and greenhouse gas emissions. The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).
 - d) Similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impact their scorecard.
- 2) Second, the social PAIs were systematically analyzed according to the stages of the research and investment process:
- a) the Global Standards compliance filter is structured around human rights, labor rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.
 - b) the exclusion filter for companies involved in controversial activities (definitions and thresholds in accordance with DPAM's Controversial Activities Policy (available at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM_policy_Controversial_activities.pdf)). In this way, companies involved in controversial armaments were directly excluded from the investment universe.
 - c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.
 - d) The issue of board gender diversity is addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet a minimum of 30% gender diversity on their boards. DPAM participated in 706 general and extraordinary meetings on behalf of 651 companies in 2022.
 - e) Similarly, social indicators are included in the analysis of the ESG profile of companies and impact their scorecard.

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006836/DPAM_policy_Sustainable_and_Responsible_Investment.pdf and [DPAM_report_TCFD.pdf](https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006836/DPAM_report_TCFD.pdf) (cloudinary.com).

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 31/12/2022

Largest investments	Sector	% Assets	Country
MICROSOFT	INFORMATION AND COMMUNICATION	4.99 %	United States
ALPHABET A	INFORMATION AND COMMUNICATION	3.51 %	United States
AMAZON COM	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	3.37 %	United States
NVIDIA CORP	MANUFACTURING	2.93 %	United States
APPLE	MANUFACTURING	2.57 %	United States
ABBOTT LABORATORIES	MANUFACTURING	2.56 %	United States
UNITEDHEALTH GROUP	FINANCIAL AND INSURANCE ACTIVITIES	2.54 %	United States
ASTRAZENECA	MANUFACTURING	2.17 %	United Kingdom
DANAHER CORPORATION	MANUFACTURING	2.15 %	United States
ADOBE SYSTEMS INCORPORATED	INFORMATION AND COMMUNICATION	2.15 %	United States
ADVANCED MICRO DEVICES INC.	MANUFACTURING	2.12 %	United States
ACCENTURE A	INFORMATION AND COMMUNICATION	2.03 %	United States
ILLUMINA (ORD)	MANUFACTURING	1.92 %	United States
EDWARDS LIFESCIENCES CORPORATION	MANUFACTURING	1.83 %	United States
ASM INTERNATIONAL	MANUFACTURING	1.77 %	Netherlands

What was the proportion of sustainability-related investments?

● *What was the asset allocation?*

During the Reference Period, by applying the investment strategy, the Sub-fund invested 98.25% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as “#1 Aligned with E/S characteristics”).

The Sub-fund invests at least 89.46% of its assets in sustainable investments with environmental or social objectives (in the table referred to as “#1A Sustainable”).

The percentage of the portfolio invested in sustainable investments that meet an environmental and/or social objective (#1A Sustainable) is calculated using the cascade methodology described in the prospectus (section “What are the sustainable investment objectives that the financial product intends to partially achieve and how does the sustainable investment contribute to these objectives?”), which excludes double counting at the cascade level: an investment qualifying as sustainable at the level of a first element of the cascade is not then taken into account at the level of subsequent elements of the cascade.

Asset allocation describes the share of investments in specific assets.

In contrast, the percentages of the two sub-categories of sustainable investments (#1A Sustainable) in the portfolio invested in environmental investments other than those aligned with the taxonomy and social investments may involve some double counting. All portfolio companies are analysed against both (i) the environmental SDGs (and therefore may fall into the sub-category 'other environmental investments' even if they are also considered to be aligned with the taxonomy and/or as a social sustainable investment) and (ii) the social SDGs (and therefore may fall into the sub-category 'social investments' even if they are also considered to be aligned with the taxonomy and/or as an other environmental investment).

● **In which economic sectors were the investments made?**

Sector	Sub-sector	% of assets
Information and communication	Publishing activities	18.62 %
Manufacturing	Manufacture of computer, electronic and optical products	18.31 %
Manufacturing	Manufacture of basic pharmaceutical products and pharmaceutical preparations	7.08 %
Manufacturing	Manufacture of machinery and equipment n.e.c.	6.86 %
Manufacturing	Other manufacturing	6.73 %
Wholesale and retail trade; repair of motor vehicles and motorcycles	Retail trade, except of motor vehicles and motorcycles	5.69 %
Information and communication	Computer programming, consultancy and related activities	5.57 %
Financial and insurance activities	Insurance, reinsurance and pension funding, except compulsory social security	5.11 %
Information and communication	Information service activities	4.55 %
Manufacturing	Manufacture of chemicals and chemical products	2.49 %

Administrative and support service activities	Office administrative, office support and other business support activities	2.16	%
Manufacturing	Manufacture of food products	1.84	%
Professional, scientific and technical activities	Scientific research and development	1.75	%
Manufacturing	Manufacture of electrical equipment	1.65	%
Administrative and support service activities	Travel agency, tour operator reservation service and related activities	1.65	%
Human health and social work activities	Human health activities	1.61	%
Professional, scientific and technical activities	Other professional, scientific and technical activities	1.41	%
Agriculture, forestry and fishing	Fishing and aquaculture	1.05	%
Information and communication	Telecommunications	1.00	%
Manufacturing	Manufacture of basic metals	0.89	%
Manufacturing	Manufacture of wood and of products of wood and cork, straw and plaiting	0.80	%
Financial and insurance activities	Activities auxiliary to financial services and insurance activities	0.76	%
Human health and social work activities	Residential care activities	0.67	%
Transportation and storage	Warehousing and support activities for transportation	0.02	%
Cash	Cash	1.75	%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Sustainable investments that are aligned with the EU Taxonomy (referred to in the table as “EU Taxonomy aligned”) consist of investments in companies whose economic activities substantially contribute to the environmental objectives of climate change mitigation and/or adaptation as defined by the EU Taxonomy in accordance with the eligibility and technical selection criteria (“EU Taxonomy Technical Selection Criteria”).

DPAM’s methodology for assessing the EU Taxonomy alignment of investee companies is based on data provided either by the investee companies or by third party providers. The latter use a mixed approach:

- Firstly, a direct mapping between the business activities in their own sectoral classification system and the economic activities covered by the Technical Selection Criteria of the EU Taxonomy.
- Secondly, any business activity that could not be directly mapped is examined through a bottom-up assessment of its alignment with the EU Taxonomy’s Technical Selection Criteria.
- Any economic activity remaining after the first and second steps is considered not to be aligned with the EU Taxonomy.

In principle, the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is assessed by means of turnover (based on performance data provided by third-party suppliers).

Where information on the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy cannot be readily obtained from information published by the invested issuers, DPAM shall rely on equivalent information obtained by third-party providers from the invested issuers.

Applying this methodology, over the Reference Period, the Sub-fund is aligned for 0.82% with the first two objectives of the Taxonomy (environmental objectives of climate change mitigation and/or adaptation).

The compliance of these investments with the requirements set out in Article 3 of the EU Taxonomy is not subject to a guarantee provided by one or more auditors or a review by one or more auditors or a review by one or more third parties.

Commission Delegated Regulation (EU) 2023/363 of 31 October 2022 amending and correcting the technical regulatory standards set out in Delegated Regulation (EU) 2022/1288 as regards the content and format of information to be published in pre-contractual documents and periodic reports relating to financial products that invest in environmentally sustainable economic activities entered into force on 20 February 2023. In particular, it amends the format of the information to be published in the periodic reports in order to declare whether, and graphically demonstrate the extent to which, a sub-fund invests in fossil gas and/or nuclear energy related activities, which are in line with the EU Taxonomy ('climate change mitigation'). DPAM does not have sufficient data at this stage to publish this information in the periodic report for the Reporting Period. DPAM will make every effort to obtain this data in 2023.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure (CapEx)** shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure (OpEx)** reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

- **What was the share of investments made in transitional and enabling activities?**

Not applicable

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Based on the approach described below, the Sub-fund invested 65.89% of its portfolio in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy over the Reference Period.

Only two of the six environmental objectives defined by the EU Taxonomy are currently covered by the regulatory framework of the EU Taxonomy Technical Selection Criteria that determine alignment with the EU Taxonomy (adaptation and climate change mitigation). Similar criteria for the other four environmental objectives have yet to be developed. In the meantime, DPAM wishes to continue to make sustainable investments that contribute to environmental objectives not covered by the current EU Taxonomy Technical Selection Criteria, including key environmental objectives such as the sustainable use and protection of water and marine resources, the prevention and control of pollution and the protection and restoration of biodiversity and ecosystems.

To this end, DPAM has adopted and defined a specific framework for identifying the environmental objectives of these sustainable investments and assessing their contribution to these objectives.

This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the UN Sustainable Development Goals (SDGs) that can be attributed to environmental objectives.

DPAM will review and reassess this framework when the EU Taxonomy Technical Selection Criteria have been implemented for the other four environmental objectives defined by the EU Taxonomy.

What was the share of socially sustainable investments?

Based on the approach described below, the Sub-fund invested 88.12% of its portfolio in sustainable investments with a social objective over the Reference Period. A European Taxonomy for social sustainability goals has yet to be developed. In the meantime, DPAM wishes to continue to make sustainable investments that contribute to the achievement of key social goals such as zero hunger, quality education and peace, justice and strong institutions.

To this end, DPAM has adopted and defined a specific framework for identifying the social objectives of these sustainable investments and assessing their contribution to these objectives. This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the UN Sustainable Development Goals (SDGs) that can be attributed to social objectives.

DPAM will review and reassess this framework when the EU Taxonomy Technical Selection Criteria have been implemented for the social objectives under the EU Taxonomy.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole sub-fund, excluding the:

- Liquid assets
- Derivative instruments
- Undertakings for collective investments
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics.

The Sub-fund may invest or hold these types of assets for the purpose of achieving investment objectives, portfolio diversification, liquidity management and risk hedging.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 1.75% cash. There are no minimum environmental or social guarantees on this allocation.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e:

On a quarterly basis, a normative screening has been established based on compliance with Global Standards.

Subsequently, companies meeting the thresholds as defined in the activities excluded by DPAM's controversial activities policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

DPAM supplemented the various ESG exclusion filters using ESG risk and opportunities scorecards for each issuer in the portfolio. The scorecards were updated on an annual basis or ad hoc if an event should require a revision of the issuer's scorecard.

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector. In addition, this qualitative analysis also includes consideration of the sustainability theme and the issuer's total contribution to the UN Sustainable Development Goals.

The stages of the investment process are outlined below:

How did this financial product perform compared to the reference benchmark?

Not applicable

- **How does the reference benchmark differ from a broad market index?**

Not applicable

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

Not applicable

- **How did this financial product perform compared with the reference benchmark?**

Not applicable

- **How did this financial product perform compared with the broad market index?**

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

APPENDIX IV

Periodic information for financial products referred to in Article 8(1), (2) and (2a) of Regulation (EU) 2019/2088 and in the first paragraph of Article 6 of Regulation (EU) 2020/852

Product name:
 DPAM L BONDS EUR HIGH YIELD SHORT TERM

Legal entity identifier:
 549300U2IHEFSZPGWH97

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes **No**

<p><input type="checkbox"/> It has made sustainable investments with an environmental objective: ___%</p> <p><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p>	<p><input type="checkbox"/> It promoted environmental and/or social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments</p> <p><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> with a social objective</p>
<p><input type="checkbox"/> It has made sustainable investments with a social objective: ___%</p>	<p><input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments</p>

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the Reference Period (01/01/2022-31/12/2022), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviors that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices.

Derivative products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting environmental and/or social characteristics.

The Sub-fund has not designated any benchmark index to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the “SFDR 2019/2088”).

● **How did the sustainability indicators perform?**

Over the Reference Period, the Sub-fund achieved the following sustainability indicators:

1) At the level of direct line investments (corporate bonds):

- a) The Sub-fund was not exposed to companies considered to be below Global Standards during the reporting period;
- b) The Sub-fund was not exposed to companies involved in excluded controversial activities as defined by the Manager’s Controversial Activities Policy (accessible via www.dpamfunds.com (Controversial Activities Policy));
- c) The Sub-fund has not been exposed to companies facing extremely serious controversies around environmental or social issues.

2) At the level of direct line investments (sovereign bonds):

The Sub-fund has not been exposed to issuers that do not meet minimum democratic requirements.

● **...and in comparison to previous periods?**

Not applicable

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Not applicable

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Not applicable

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

- **For investments in corporate bonds:**

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAI") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to the Manager's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth.

This commitment is incorporated throughout the research and investment process from its inception. In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

1) Firstly, with regard to environmental PAIs:

- a) They have been analyzed and monitored at the level of the invested issuers, particularly with regard to PAI related to greenhouse gas emissions and energy performance, notably through the Manager's research in the framework of the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD). Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute the most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.
- b) After that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not meet global standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity are thus excluded from the portfolio in advance.
- c) In addition, the filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).

2) Second, the social PAIs were systematically analyzed according to the stages of the research and investment process:

- a) the Global Standards compliance filter is structured around human rights, labor rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises are de facto excluded from the investment universe.
- b) the exclusion filter for companies involved in controversial activities (in accordance with the Manager's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM_policy_Controversial_activities.pdf)). In this way, companies involved in controversial armaments are directly excluded from the investment universe.
- c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

What were the top investments of this financial product?

The list includes the investments that constitute the **greatest proportion of investments** of the financial product during the reference period which is: 31/12/2022

Largest investments	Sector	% Assets	Country
6 1/2 PARTS EUROPE JUL25 16.07.2025	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	3.56%	France

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation

describes the share of investments in specific assets.

Through the application of the investment strategy described above, the Sub-fund has invested 96.16% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as “#1 Aligned with E/S Characteristics”).

● In which economic sectors were the investments made?

Sector	Sub-sector	% of assets
Financial and insurance activities	Financial service activities, except insurance and pension funding	22.64%
Information and communication	Telecommunications	14.17%
Manufacturing	Manufacture of motor vehicles, trailers and semi-trailers	10.11%
Wholesale and retail trade; repair of motor vehicles and motorcycles	Wholesale and retail trade and repair of motor vehicles and motorcycles	4.61%
Manufacturing	Manufacture of food products	3.60%
Other service activities	Other personal service activities	3.44%
Information and communication	Information service activities	3.25%
Manufacturing	Manufacture of chemicals and chemical products	2.89%
Transportation and storage	Warehousing and support activities for transportation	2.79%
Professional, scientific and technical activities	Architectural and engineering activities; technical testing and analysis	2.51%

Wholesale and retail trade; repair of motor vehicles and motorcycles	Retail trade, except of motor vehicles and motorcycles	2.28%
Manufacturing	Manufacture of computer, electronic and optical products	1.87%
Electricity, gas, steam and air conditioning supply	Electricity, gas, steam and air conditioning supply	1.79%
Information and communication	Motion picture, video and sound production and distribution	1.69%
Manufacturing	Manufacture of other non-metallic mineral products	1.62%
Manufacturing	Manufacture of textiles	1.52%
Administrative and support service activities	Rental and leasing activities	1.47%
Accommodation and food service activities	Accommodation	1.32%
Mining and quarrying	Mining of metal ores	1.29%
Manufacturing	Manufacture of fabricated metal products, except machinery and equipment	1.26%
Manufacturing	Manufacture of rubber and plastic products	1.11%
Transportation and storage	Water transport	1.11%
Manufacturing	Manufacture of electrical equipment	1.01%
Professional, scientific and technical activities	Activities of head offices; management consultancy activities	0.96%
Administrative and support service activities	Security and investigation activities	0.96%
Manufacturing	Manufacture of basic pharmaceutical products and pharmaceutical preparations	0.96%
Transportation and storage	Land transport and transport via pipelines	0.84%
Information and communication	Publishing activities	0.83%
Administrative and support service activities	Office administrative, office support and other business support activities	0.55%
Accommodation and food service activities	Food and beverage service activities	0.40%
Professional, scientific and technical activities	Advertising and market research	0.39%
Manufacturing	Manufacture of other transport equipment	0.37%
Manufacturing	Other manufacturing	0.26%
Real estate activities	Real estate activities	0.19%
Financial and insurance activities	Activities auxiliary to financial services and insurance activities	0.12%
Cash	Cash	3.84%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

- Has the financial product invested in fossil gas and/or nuclear energy activities in line with the EU Taxonomy?¹

Yes: [specify below, and detail in the graphics in the box].

In fossil gas

In nuclear energy

No

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflects the “greenness” of investee companies today.

- **capital expenditure** (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.

- **operational expenditure** (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

¹ Fossil gas and/or nuclear activities will only be compliant with the EU Taxonomy if they contribute to mitigating climate change (‘climate change mitigation’) and do not significantly undermine an objective of the EU Taxonomy - see explanatory note in the left margin. The full criteria for fossil gas and nuclear energy economic activities that are in line with the EU Taxonomy are defined in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available.

● **What was the share of investments made in transitional and enabling activities?**

Not applicable

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable

What was the share of socially sustainable investments?

Not applicable

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding the:

- Liquid assets (excluding treasury bonds)
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics

The Sub-fund may invest or hold these types of assets in order to achieve its investment objectives, to diversify its portfolio, to manage liquidity and to hedge its risks.

There are no minimum environmental or social guarantees.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 3.84% cash. There are no minimum environmental or social guarantees on these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e.:

- **For direct line investments (corporate bonds):**

On a quarterly basis, a normative screening has been established based on compliance with global standards.

Secondly, companies meeting the thresholds as defined in the activities excluded by the responsible investment policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

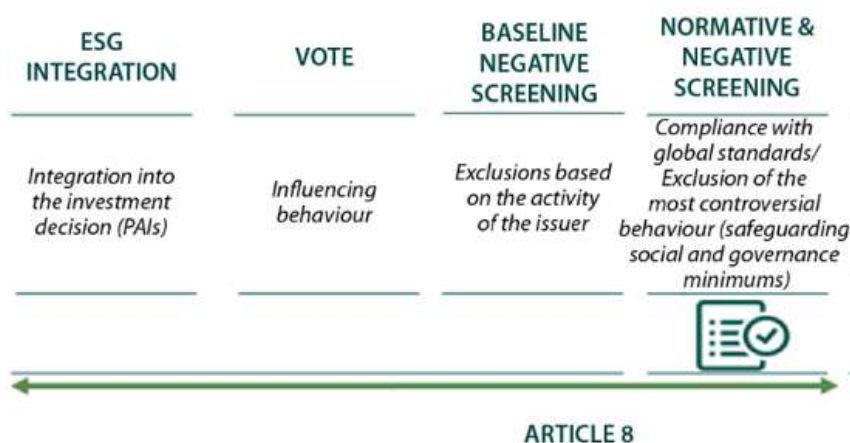

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector.

- **For investments in sovereign bonds:**

The Sub-fund did not invest in countries considered not to meet minimum democratic requirements. To determine whether a country does not meet this minimum requirement the Manager applied a methodology that is based primarily on the classifications of the International NGO Freedom House (“not free”) and The Economist Intelligence Unit (“authoritarian regime”).

The list of countries was reviewed on a semi-annual basis and provided to management via the management systems so that it could not give transaction orders on papers issued by these excluded countries.

The stages of the investment process are outlined below:

How did this financial product perform compared to the reference benchmark?

Not applicable

- *How does the reference benchmark differ from a broad market index?*

Not applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

Not applicable

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not set out a list socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

It has made **sustainable investments with an environmental objective:** ___%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It has made **sustainable investments with a social objective:** ___%

No

It **promoted environmental and/or social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the Reference Period (01/01/2022-31/12/2022), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviors that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices.

Derivative products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting environmental and/or social characteristics.

The Sub-fund has not designated any benchmark index to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the “SFDR 2019/2088”).

● ***How did the sustainability indicators perform?***

Over the Reference Period, the Sub-fund achieved the following sustainability indicators:

1) At the level of direct line investments (corporate bonds):

- a) The Sub-fund was not exposed to companies considered to be below Global Standards during the reporting period;
- b) The Sub-fund was not exposed to companies involved in excluded controversial activities as defined by the Manager’s Controversial Activities Policy (accessible via www.dpamfunds.com (Controversial Activities Policy));
- c) The Sub-fund has not been exposed to companies facing extremely serious controversies around environmental or social issues.

2) At the level of direct line investments (sovereign bonds):

The Sub-fund has not been exposed to issuers that do not meet minimum democratic requirements.

● ***...and in comparison to previous periods?***

Not applicable

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

Not applicable

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Not applicable

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

- **For investments in corporate bonds:**

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAI") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to the Manager's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth.

This commitment is incorporated throughout the research and investment process from its inception. In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

1) Firstly, with regard to environmental PAIs:

- a) They have been analyzed and monitored at the level of the invested issuers, particularly with regard to PAI related to greenhouse gas emissions and energy performance, notably through the Manager's research in the framework of the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD). Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute the most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.
- b) After that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not meet global standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity are thus excluded from the portfolio in advance.
- c) In addition, the filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).

2) Second, the social PAIs were systematically analyzed according to the stages of the research and investment process:

- a) the Global Standards compliance filter is structured around human rights, labor rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises are de facto excluded from the investment universe.
- b) the exclusion filter for companies involved in controversial activities (in accordance with the Manager's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM_policy_Controversial_activities.pdf)). In this way, companies involved in controversial armaments are directly excluded from the investment universe.
- c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

• **For investments in sovereign bonds:**

During the Reference Period, the Sub-fund took into consideration the environmental and social PAI listed in table 1 of appendix I of the Delegated Regulation (EU) 2022/1288.

The first PAI relates to environmental issues and focuses on the greenhouse gas emission intensity of the investee countries. The indicator is an integral component of the country sustainability model that the Manager developed for its sovereign bond strategies. Consequently, it is included in the country's sustainability score and can influence it positively or negatively depending on its level and development compared to other issuer countries.

The second PAI relates to social issues and focuses on issues of social breaches. Our country sustainability model monitors a number of indicators on this issue, such as respect for civil liberties and political rights, respect for human rights and the level of violence within the country, commitment to key labour law conventions, the issue of equal opportunities and distribution of wealth, etc. These different indicators are included in the country's sustainability score and may influence it positively or negatively depending on its level and evolution compared to other emitting countries.

During the Reference Period, a dialogue was initiated on the results of the sustainability scores with some countries according to DPAM's engagement policy via the link https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006835/DPAM_policy_engagement.pdf.

Over the Reference Period, the management teams conducted 37 dialogues with the various participants in sovereign debt issues. These dialogues allowed us to verify with the stakeholders the points of attention of the governmental policies, notably in environmental and/or social matters.

Details of the dialogues with countries and companies will be published in an annual report in the first quarter of 2023 on the Manager's website (<https://www.dpamfunds.com>).

The Manager's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006836/DPAM_policy_Sustainable_and_Responsible_Investment.pdf and DPAM_report_TCFD.pdf (cloudinary.com).

What were the top investments of this financial product?

The list includes the investments that constitute **the greatest proportion of investments** of the financial product during the reference period which is: 31/12/2022

Largest investments	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

Through the application of the investment strategy described above, the Sub-fund has invested 97.64% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as “#1 Aligned with E/S Characteristics”).

● ***In which economic sectors were the investments made?***

Sector	Sub-sector	% of assets
Public administration and defence; compulsory social security	Public administration and defence; compulsory social security	50.69%
Financial and insurance activities	Financial service activities, except insurance and pension funding	22.40%
Activities of extraterritorial organisations and bodies	Activities of extraterritorial organisations and bodies	4.93%
Electricity, gas, steam and air conditioning supply	Electricity, gas, steam and air conditioning supply	2.46%
Information and communication	Telecommunications	2.42%
Manufacturing	Manufacture of computer, electronic and optical products	2.37%

Information and communication	Information service activities	0.10%
Derivatives	Derivatives	0.14%
Cash	Cash	2.22%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

- Has the financial product invested in fossil gas and/or nuclear energy activities in line with the EU Taxonomy?¹

Yes: [specify below, and detail in the graphics in the box].

In fossil gas

In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure (CapEx)** shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure (OpEx)** reflects the green operational activities of investee companies.

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

¹ Fossil gas and/or nuclear activities will only be compliant with the EU Taxonomy if they contribute to mitigating climate change (‘climate change mitigation’) and do not significantly undermine an objective of the EU Taxonomy - see explanatory note in the left margin. The full criteria for fossil gas and nuclear energy economic activities that are in line with the EU Taxonomy are defined in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available.

● **What was the share of investments made in transitional and enabling activities?**

Not applicable

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable

What was the share of socially sustainable investments?

Not applicable

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding the:

- Liquid assets (excluding treasury bonds)
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics

The Sub-fund may invest or hold these types of assets in order to achieve its investment objectives, to diversify its portfolio, to manage liquidity and to hedge its risks.

There are no minimum environmental or social guarantees.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 2.22% cash. There are no minimum environmental or social guarantees on these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e.:

- **For direct line investments (corporate bonds):**

On a quarterly basis, a normative screening has been established based on compliance with global standards.

Secondly, companies meeting the thresholds as defined in the activities excluded by the responsible investment policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector.

- **For investments in sovereign bonds:**

The Sub-fund did not invest in countries considered not to meet minimum democratic requirements. To determine whether a country does not meet this minimum requirement the Manager applied a methodology that is based primarily on the classifications of the International NGO Freedom House (“not free”) and The Economist Intelligence Unit (“authoritarian regime”).

The list of countries was reviewed on a semi-annual basis and provided to management via the management systems so that it could not give transaction orders on papers issued by these excluded countries.

The stages of the investment process are outlined below:

How did this financial product perform compared to the reference benchmark?

Not applicable

- *How does the reference benchmark differ from a broad market index?*

Not applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics being promoted?*

Not applicable

- *How did this financial product perform compared with the reference benchmark?*

Not applicable

- *How did this financial product perform compared with the broad market index?*

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics they promote.

APPENDIX IV

Periodic information for financial products referred to in Article 8(1), (2) and (2a) of Regulation (EU) 2019/2088 and in the first paragraph of Article 6 of Regulation (EU) 2020/852

Product name:
 DPAM L PATRIMONIAL FUND

Legal entity identifier:
 549300W5350LFNV3J760

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

It has made **sustainable investments with an environmental objective:** ___%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It has made **sustainable investments with a social objective:** ___%

No

It **promoted environmental and/or social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the Reference Period (01/01/2022-31/12/2022), the Sub-fund promoted environmental and social characteristics through a rigorous methodology aimed at:

- defending fundamental rights (human rights, labour rights, anti-corruption and environmental protection).
- not funding controversial activities and behaviors that could affect the long-term reputation of the investments.
- promoting environmental, social and governance (ESG) best practices.
- excluding countries that do not respect a minimum of democratic requirements.

Derivative products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting environmental and/or social characteristics.

The Sub-fund has not designated any benchmark index to achieve the environmental and social characteristics it promotes within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability reporting in the financial services sector (the “SFDR 2019/2088”).

● ***How did the sustainability indicators perform?***

Over the Reference Period, the Sub-fund achieved the following sustainability indicators:

At the level of direct line investments (shares or corporate bonds):

- a) The Sub-fund was not exposed to companies considered to be below Global Standards during the reporting period;
- b) The Sub-fund was not exposed to companies involved in excluded controversial activities as defined by the Sub-fund Manager’s Controversial Activities Policy;
- c) The Sub-fund has not been exposed to companies facing extremely serious controversies around environmental or social issues.

At the level of direct line investments (sovereign bonds):

The Sub-fund has not been exposed to issuers that do not meet minimum democratic requirements.

● ***...and in comparison to previous periods?***

Not applicable

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Not applicable

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Not applicable

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investment must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

- **For investments in shares or corporate bonds:**

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAI") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to the Manager's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth.

This commitment is incorporated throughout the research and investment process from its inception. In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

- 1) Firstly, with regard to environmental PAIs:
 - a) they have been analyzed and monitored at the level of the invested issuers, particularly with respect to PAI related to greenhouse gas emissions and energy performance, including through the Manager's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD). Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.
 - b) After that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not meet global standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity are thus excluded from the portfolio in advance.
 - c) In addition, the filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).
- 2) Second, the social PAIs were systematically analyzed according to the stages of the research and investment process:
 - a) the Global Standards compliance filter is structured around human rights, labor rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises are de facto excluded from the investment universe.
 - b) the exclusion filter for companies involved in controversial activities (in accordance with the Manager's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM_policy_Controversial_activities.pdf)). In this way, companies involved in controversial armaments are directly excluded from the investment universe.
 - c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

- **For investments in sovereign bonds:**

During the Reference Period, the Sub-fund took into consideration the environmental and social PAI listed in table 1 of appendix I of the Delegated Regulation (EU) 2022/1288.

The first PAI relates to environmental issues and focuses on the greenhouse gas emission intensity of the investee countries. The indicator is an integral component of the country sustainability model that the Manager developed for its sovereign bond strategies. Consequently, it is included in the country's sustainability score and can influence it positively or negatively depending on its level and development compared to other issuer countries.

The second PAI relates to social issues and focuses on issues of social breaches. Our country sustainability model monitors a number of indicators on this issue, such as respect for civil liberties and political rights, respect for human rights and the level of violence within the country, commitment to key labour law conventions, the issue of equal opportunities and distribution of wealth, etc. These different indicators are included in the country's sustainability score and may influence it positively or negatively depending on its level and evolution compared to other emitting countries.

During the Reference Period, a dialogue was initiated on the results of the sustainability scores with some countries according to the Manager's engagement policy via the link https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006835/DPAM_policy_engagement.pdf.

Over the Reference Period, the management teams conducted 37 dialogues with the various participants in sovereign debt issues. These dialogues allowed us to verify with the stakeholders the points of attention of the governmental policies, notably in environmental and/or social matters.

Details of the dialogues with countries and companies will be published in an annual report in the first quarter of 2023 on the Manager's website (<https://www.dpamfunds.com>).

The Manager's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006836/DPAM_policy_Sustainable_and_Responsible_Investment.pdf and [DPAM_report_TCFD.pdf](https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006836/DPAM_report_TCFD.pdf) (cloudinary.com).

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

Through the application of the investment strategy described above, the Sub-fund has invested 92.65% of its assets in securities that meet the environmental and social characteristics it promotes (in the table referred to as “#1 Aligned with E/S Characteristics”).

● *In which economic sectors were the investments made?*

Sector	Sub-sector	% of assets
Public administration and defence; compulsory social security	Public administration and defence; compulsory social security	34.91%
Financial and insurance activities	Financial service activities, except insurance and pension funding	20.57%
Manufacturing	Manufacture of computer, electronic and optical products	6.46%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

- Has the financial product invested in fossil gas and/or nuclear energy activities in line with the EU Taxonomy?¹

Yes: [specify below, and detail in the graphics in the box].

In fossil gas

In nuclear energy

No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure (CapEx)** shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure (OpEx)** reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

¹ Fossil gas and/or nuclear activities will only be compliant with the EU Taxonomy if they contribute to mitigating climate change (‘climate change mitigation’) and do not significantly undermine an objective of the EU Taxonomy - see explanatory note in the left margin. The full criteria for fossil gas and nuclear energy economic activities that are in line with the EU Taxonomy are defined in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available.

● **What was the share of investments made in transitional and enabling activities?**

Not applicable

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable

What was the share of socially sustainable investments?

Not applicable

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding the:

- Liquid assets
- Derivative instruments
- Collective investment schemes
- Issuers that do not report sufficient information or are insufficiently covered by ESG research to judge their environmental and/or social characteristics.

The Sub-fund may invest or hold these types of assets in order to achieve its investment objectives, to diversify its portfolio, to manage liquidity and to hedge its risks.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 3.5% cash.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e.:

- **For direct investments (shares or corporate bonds):**

On a quarterly basis, a normative screening has been established based on compliance with global standards.

Secondly, companies meeting the thresholds as defined in the activities excluded by the responsible investment policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

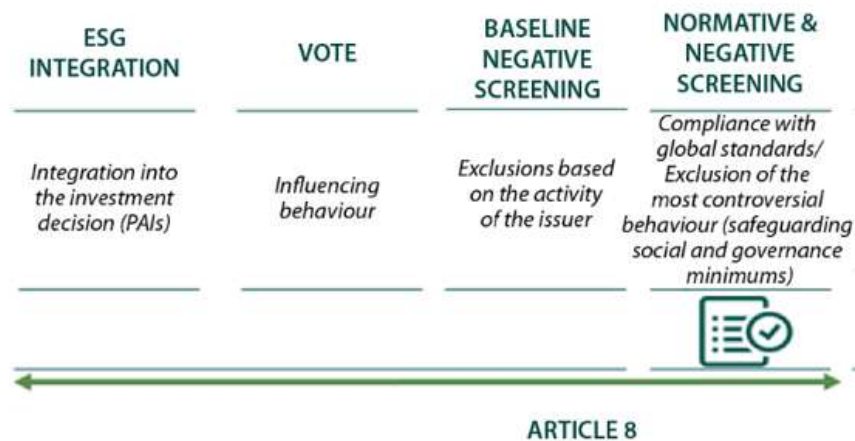

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector.

- **For investments in sovereign bonds:**

The Sub-fund did not invest in countries considered not to meet minimum democratic requirements. To determine whether a country does not meet this minimum requirement the Manager applied a methodology that is based primarily on the classifications of the International NGO Freedom House (“not free”) and The Economist Intelligence Unit (“authoritarian regime”).

The list of countries was reviewed on a semi-annual basis and provided to management via the management systems so that it could not give transaction orders on papers issued by these excluded countries.

The stages of the investment process are outlined below:

How did this financial product perform compared to the reference benchmark?

Not applicable

- *How does the reference benchmark differ from a broad market index?*

Not applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

Not applicable

- *How did this financial product perform compared with the reference benchmark?*

Not applicable

- *How did this financial product performed compared with the broad market index?*

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest German Equities

Legal entity identifier: 5493007TJOUS8TQOIU47

ISIN: LU0740822621

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> Yes	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> it made sustainable investments with an environmental objective: ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 11.86 % of sustainable investments.
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund further promoted a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

No derivatives were used to attain the environmental or social characteristics promoted by the sub-fund.

How did the sustainability indicators perform?

Please see the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?” for detailed descriptions of the binding elements of the investment strategy used to select the investments for attaining the environmental and/or social characteristics promoted and the assessment methodology for determining whether and to what extent assets and indicators met the defined ESG standards.

The ESG ratios are calculated based on the valuation prices for the assets, which are recorded in the front office system. This can lead to slight variations from the other market prices presented in the annual report, which are taken from the fund accounting system.

Principal Adverse Impact

Indicators	Description	Performance
PAII - 02. Carbon Footprint - EUR	The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC)	955.41
PAII - 03. Carbon Intensity	Weighted average carbon intensity scope 1+2+3	935.65
PAII - 04. Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	11.19 %
PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0 % of assets
PAII - 14. Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0 % of assets

As of: December 30, 2022

The Principal Adverse Impact Indicators (PAII) are calculated on the basis of information available within DWS back-office and front-office systems, that are amongst others based on information sourced from external ESG data vendors. In case individual securities or issuers related to such securities do not have information related to an individual PAII, either through a lack of data availability or through the non-applicability of the PAII to that individual issuer or security, the PAII calculation methodology for individual indicators may consider such securities or issuers with a value of 0. For Target Fund investments, a “look-through” into target fund holdings is performed subject to data availability, amongst others related to reasonable actual information of target fund holdings as well as the related security or issuer information. The calculation methodology for the individual PAII indicators may change in subsequent reporting periods as a consequence of evolving market standards, a change of treatment of securities of specific instrument types (such as derivatives), an increase in data coverage or through regulatory clarifications.

DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with “A” being the best score and “F” being the worst score

Criteria	Involvement in controversial sectors ¹	Involvement in controversial weapons	Norm Assessment ²	ESG Quality Assessment	SDG-Assessment	Climate & Transition Risk Assessment
A	Non-involvement	Confirmed non-involvement	Confirmed no issues	True leader in ESG (≥ 87.5 DWS ESG score)	True SDG contributor (≥ 87.5 SDG score)	True climate leader (≥ 87.5 score)
B	Remote involvement	Alleged		ESG leader (75–87.5 DWS ESG score)	SDG contributor (75–87.5 SDG score)	Climate solution provider (75–87.5 score)
C	0% – 5%	Dual-Purpose ²	Violations of lesser degree	ESG upper midfield (50–75 DWS ESG score)	SDG upper midfield (50–75 SDG score)	Low transition risk (50–75 score)
D	5% – 10% (coal: 5% -15%)	Owning ³ /Owned ⁴		ESG lower midfield (25–50 DWS ESG score)	SDG lower midfield (25–50 SDG score)	Mod. transition risk (25–50 score)
E	10% – 25% (coal: 15% - 25%)	Component ⁵ producer	High severity or re-assessed highest severity ⁷	ESG laggard (12.5–25 DWS ESG score)	SDG obstructer (12.5–25 SDG score)	High transition risk (12.5–25 score)
F	≥ 25%	Weapon producer	Highest severity/global compact violation ⁸	True laggard in ESG (0–12.5 DWS ESG score)	Significant SDG obstructer (0–12.5 SDG score)	Excessive transition risk (0–12.5 score)

(1) Revenue share thresholds as per standard scheme. Sub-Granularity available: Thresholds can be individually set.
 (2) Encompasses e.g. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones
 (3) Owning more than 20% equity
 (4) Being owned by more than 50% of company involved in grade E or F.
 (5) Single purpose key component.
 (6) Includes ILO controversies as well as corporate governance and product issues.
 (7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.
 (8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund invested partially in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs varied based on the actual investments in the portfolio.

DWS measured the contribution to the UN SDGs via its sustainability investment assessment which evaluated potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluated (1) whether an economic activity contributed to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harmed any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such was in line with the DWS safeguard assessment.

The sustainability investment assessment used data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity was sustainable. Activities that contributed positively to the UN SDGs were measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution was determined, the activity was considered sustainable if the company passed the DNSH assessment and complied with the DWS safeguard assessment (as detailed in the section "Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?".)

The sub-fund did not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was integral part of the sustainability investment assessment and evaluated whether an economic activity with a contribution to an UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the economic activity failed the DNSH assessment and could not be considered as sustainable economic activity.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrated all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS established quantitative thresholds and/or qualitative values to determine if an investment significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its safeguard assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms were considered as non-compliant to the safeguards and their economic activities could not be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund management considered the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts were considered at product level through the exclusion strategy for the sub-fund's assets that were aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?".

For sustainable investments, the principal adverse impacts were further considered in the DNSH assessment as described above in section "How were the indicators for adverse impacts on sustainability factors taken into account?".

What were the top investments of this financial product?

DWS Invest German Equities

Largest investments	Breakdown by sector / issuer	in % of average portfolio volume	Breakdown by country
Siemens Reg.	Industrial Goods & Services	8.9 %	Germany
Allianz	Insurance	7.7 %	Germany
Mercedes-Benz Group	Automobiles & Parts	6.7 %	Germany

for the period from January 01, 2022, through December 30, 2022

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
for the period from January 01, 2022, through December 31, 2022

What was the proportion of sustainability-related investments?

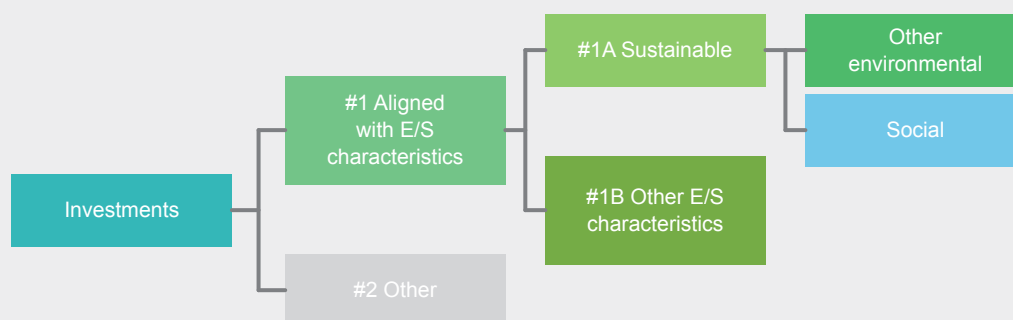

Asset allocation

describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund invested 99.83% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 11.86% of the sub-fund's assets qualified as sustainable investments (#1A Sustainable).

0.17% of the investments were not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest German Equities

Breakdown by sector / issuer

in % of portfolio volume

Information Technology	14.87 %
Telecommunication Services	2.95 %
Consumer Discretionaries	11.13 %
Consumer Staples	17.30%
Financials	18.45 %
Basic Materials	12.20 %
Industrials	19.86 %
Utilities	3.23 %

Exposure to companies active in the fossil fuel sector

As of: December 31, 2022

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities

Directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

Yes:

In fossil gas

In nuclear energy

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

■ Taxonomy-aligned 0.00%
 ■ Non Taxonomy-aligned 100.00%

2. Taxonomy-alignment of investments excluding sovereign bonds*

■ Taxonomy-aligned 0.00%
 ■ Non Taxonomy-aligned 100.00%

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, there may have been instances in which part of the investments' underlying economic activities were aligned with the EU Taxonomy.

What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional and enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/85.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy

The sub-fund did not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the share of environmentally and socially sustainable investments in total was 11.86% of the net assets of the sub-fund.

What was the share of socially sustainable investments?

The sub-fund did not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the share of environmentally and socially sustainable investments in total was 11.86% of the net assets of the sub-fund.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund invested into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments could include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments was to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments could be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund did not consider any minimum environmental or social safeguards on these remaining investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as main investment strategy. At least 75% of the sub-fund's assets were invested in equities, investment certificates, equity warrants, equity-linked warrants and subscription rights of German issuers. German issuers were defined as companies headquartered in Germany.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics was integral part of the ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

ESG assessment methodology

The portfolio management of this sub-fund sought to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology was based on the ESG database, which used data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database was therefore constituted by data and figures as well as on internal assessments that took into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derived "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers received one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category was deemed insufficient, the portfolio management was prohibited from investing in that issuer, even if it was eligible according to other categories. For exclusion purposes, each letter score in a category was considered individually and may result might have resulted in exclusion of an issuer.

The ESG database used a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluated issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to such risks received better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") were excluded as an investment.

• DWS Norm Assessment

The DWS Norm Assessment evaluated the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") were excluded as an investment.

• DWS Sovereign Assessment

The DWS Sovereign Assessment evaluated the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") were excluded as an investment.

• Exposure to controversial sectors

The ESG database defined certain business areas and business activities as relevant. Business areas and business activities were defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors were defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors were defined as relevant. Other relevant sectors were, for example, coal mining and coal-based power generation. Issuers were evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a

moderate, high or excessive exposure (i.e. a letter score of “D”, “E” or “F”) were excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of “E” or “F”) were excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score “F”) were excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assessed a company’s involvement in the business of controversial weapons.

Controversial weapons included for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers were assessed based on their degree of involvement (production of controversial weapons, component production, etc.) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") were excluded as an investment.

To the extent that the sub-fund sought to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives were not used to attain the environmental or social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers could only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its sustainability investment assessment which evaluated potential investments in relation to different criteria to conclude that an economic activity could be considered as sustainable as further detailed in section “What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?”

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The procedure to assess the good governance practices of the investee companies was based on the DWS Norm Assessment. Accordingly, the assessed investee companies followed good governance practices.

Further, the management company considered active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership meant using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity could have been initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity could have been undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund had not designated a reference benchmark to determine whether it was aligned with the environmental and/or social characteristics that it promoted.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: DWS Invest Global Agribusiness

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund further promoted a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

No derivatives were used to attain the environmental or social characteristics promoted by the sub-fund.

How did the sustainability indicators perform?

Please see the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?” for detailed descriptions of the binding elements of the investment strategy used to select the investments for attaining the environmental and/or social characteristics promoted and the assessment methodology for determining whether and to what extent assets and indicators met the defined ESG standards.

The ESG ratios are calculated based on the valuation prices for the assets, which are recorded in the front office system. This can lead to slight variations from the other market prices presented in the annual report, which are taken from the fund accounting system.

Principal Adverse Impact

Indicators	Description	Performance
PAII - 02. Carbon Footprint - EUR	The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC)	1246.47
PAII - 03. Carbon Intensity	Weighted average carbon intensity scope 1+2+3	1891.17
PAII - 04. Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	14.48 %
PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0 % of assets
PAII - 14. Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0 % of assets

As of: December 30, 2022

The Principal Adverse Impact Indicators (PAII) are calculated on the basis of information available within DWS back-office and front-office systems, that are amongst others based on information sourced from external ESG data vendors. In case individual securities or issuers related to such securities do not have information related to an individual PAII, either through a lack of data availability or through the non-applicability of the PAII to that individual issuer or security, the PAII calculation methodology for individual indicators may consider such securities or issuers with a value of 0. For Target Fund investments, a “look-through” into target fund holdings is performed subject to data availability, amongst others related to reasonable actual information of target fund holdings as well as the related security or issuer information. The calculation methodology for the individual PAII indicators may change in subsequent reporting periods as a consequence of evolving market standards, a change of treatment of securities of specific instrument types (such as derivatives), an increase in data coverage or through regulatory clarifications.

DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with “A” being the best score and “F” being the worst score

Criteria	Involvement in controversial sectors ¹	Involvement in controversial weapons	Norm Assessment ²	ESG Quality Assessment	SDG-Assessment	Climate & Transition Risk Assessment
A	Non-involvement	Confirmed non-involvement	Confirmed no issues	True leader in ESG (≥ 87.5 DWS ESG score)	True SDG contributor (≥ 87.5 SDG score)	True climate leader (≥ 87.5 score)
B	Remote involvement	Alleged		ESG leader (75–87.5 DWS ESG score)	SDG contributor (75–87.5 SDG score)	Climate solution provider (75–87.5 score)
C	0% – 5%	Dual-Purpose ²	Violations of lesser degree	ESG upper midfield (50–75 DWS ESG score)	SDG upper midfield (50–75 SDG score)	Low transition risk (50–75 score)
D	5% – 10% (coal: 5% -15%)	Owning ³ /Owned ⁴		ESG lower midfield (25–50 DWS ESG score)	SDG lower midfield (25–50 SDG score)	Mod. transition risk (25–50 score)
E	10% – 25% (coal: 15% - 25%)	Component ⁵ producer	High severity or re-assessed highest severity ⁷	ESG laggard (12.5–25 DWS ESG score)	SDG obstructer (12.5–25 SDG score)	High transition risk (12.5–25 score)
F	≥ 25%	Weapon producer	Highest severity/global compact violation ⁸	True laggard in ESG (0–12.5 DWS ESG score)	Significant SDG obstructer (0–12.5 SDG score)	Excessive transition risk (0–12.5 score)

(1) Revenue share thresholds as per standard scheme. Sub-Granularity available: Thresholds can be individually set.
 (2) Encompasses e.g. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones
 (3) Owning more than 20% equity
 (4) Being owned by more than 50% of company involved in grade E or F.
 (5) Single purpose key component.
 (6) Includes ILO controversies as well as corporate governance and product issues.
 (7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.
 (8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund invested partially in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs varied based on the actual investments in the portfolio.

DWS measured the contribution to the UN SDGs via its sustainability investment assessment which evaluated potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluated (1) whether an economic activity contributed to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harmed any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such was in line with the DWS safeguard assessment.

The sustainability investment assessment used data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity was sustainable. Activities that contributed positively to the UN SDGs were measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution was determined, the activity was considered sustainable if the company passed the DNSH assessment and complied with the DWS safeguard assessment (as detailed in the section “Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.)

The sub-fund did not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was integral part of the sustainability investment assessment and evaluated whether an economic activity with a contribution to an UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the economic activity failed the DNSH assessment and could not be considered as sustainable economic activity.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrated all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS established quantitative thresholds and/or qualitative values to determine if an investment significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its safeguard assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms were considered as non-compliant to the safeguards and their economic activities could not be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund management considered the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts were considered at product level through the exclusion strategy for the sub-fund's assets that were aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?".

For sustainable investments, the principal adverse impacts were further considered in the DNSH assessment as described above in section "How were the indicators for adverse impacts on sustainability factors taken into account?".

What were the top investments of this financial product?

DWS Invest Global Agribusiness

Largest investments	Breakdown by sector / issuer	in % of average portfolio volume	Breakdown by country
Nutrien	Chemicals	5.6 %	Canada
Corteva	Food, Beverage & Tobacco	5.1 %	United States
FMC Corp.	Chemicals	5.0 %	United States
CF Industries Holdings	Chemicals	4.3 %	United States
K+S Reg.	Chemicals	3.7 %	Germany
Archer Daniels Midland	Food, Beverage & Tobacco	3.5 %	United States
The Mosaic	Chemicals	3.4 %	United States
AGCO Corp.	Industrial Goods & Services	3.1 %	United States

Canadian Pacific Railway Ltd.	Industrial Goods & Services	2.6 %	Canada
Nestlé Reg.	Food, Beverage & Tobacco	2.6 %	Switzerland
SLC Agricola	Food, Beverage & Tobacco	2.4 %	Brazil
BASF Reg.	Chemicals	2.2 %	Germany
Koninklijke DSM	Food, Beverage & Tobacco	2.2 %	Netherlands
Neste Oyj	Energy	2.1 %	Finland

for the period from January 01, 2022, through December 30, 2022

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
for the period from January 01, 2022, through December 31, 2022

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund invested 96.42% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 4.84% of the sub-fund's assets qualified as sustainable investments (#1A Sustainable).

3.58% of the investments were not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest Global Agribusiness

Breakdown by sector / issuer

in % of portfolio volume

Consumer Discretionaries	41.83 %
Energy	4.11 %
Consumer Staples	4.15 %
Basic Materials	27.77 %
Industrials	18.59 %
Exposure to companies active in the fossil fuel sector	14.48 %

As of: December 31, 2022

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

Yes:

In fossil gas

In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities

Directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

■ Taxonomy-aligned 0.00%
 ■ Non Taxonomy-aligned 100.00%

2. Taxonomy-alignment of investments excluding sovereign bonds*

■ Taxonomy-aligned 0.00%
 ■ Non Taxonomy-aligned 100.00%

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, there may have been instances in which part of the investments' underlying economic activities were aligned with the EU Taxonomy.

What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional and enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/85.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy

The sub-fund did not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the share of environmentally and socially sustainable investments in total was 4.84% of the net assets of the sub-fund.

What was the share of socially sustainable investments?

The sub-fund did not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the share of environmentally and socially sustainable investments in total was 4.84% of the net assets of the sub-fund.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund invested into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments could include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments was to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments could be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund did not consider any minimum environmental or social safeguards on these remaining investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as main investment strategy. At least 70% of the sub-fund's assets were invested in shares, stock certificates, convertible bonds and warrant-linked bonds whose underlying warrants were for securities, participation and dividend-right certificates, and equity warrants of foreign and domestic issuers having their principal business activity in or profiting from the agricultural industry. The relevant companies operated within the multi-layered food value chain. Up to 30% of the sub-fund's assets might be invested in short-term deposits, money market instruments and bank balances. A maximum of 20% of the sub-fund's assets might be invested in securities such as A-Shares, B-Shares, bonds and other securities listed and traded in Mainland China.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics was integral part of the ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

ESG assessment methodology

The portfolio management of this sub-fund sought to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology was based on the ESG database, which used data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database was therefore constituted by data and figures as well as on internal assessments that took into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derived "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers received one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category was deemed insufficient, the portfolio management was prohibited from investing in that issuer, even if it was eligible according to other categories. For exclusion purposes, each letter score in a category was considered individually and may result might have resulted in exclusion of an issuer.

The ESG database used a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluated issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to such risks received better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") were excluded as an investment.

• DWS Norm Assessment

The DWS Norm Assessment evaluated the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") were excluded as an investment.

• DWS Sovereign Assessment

The DWS Sovereign Assessment evaluated the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") were excluded as an investment.

• Exposure to controversial sectors

The ESG database defined certain business areas and business activities as relevant. Business areas and business activities were defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors were defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors were defined as

relevant. Other relevant sectors were, for example, coal mining and coal-based power generation. Issuers were evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") were excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") were excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") were excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assessed a company's involvement in the business of controversial weapons. Controversial weapons included for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers were assessed based on their degree of involvement (production of controversial weapons, component production, etc.) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") were excluded as an investment.

To the extent that the sub-fund sought to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives were not used to attain the environmental or social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers could only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its sustainability investment assessment which evaluated potential investments in relation to different criteria to conclude that an economic activity could be considered as sustainable as further detailed in section "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?"

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The procedure to assess the good governance practices of the investee companies was based on the DWS Norm Assessment. Accordingly, the assessed investee companies followed good governance practices.

Further, the management company considered active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership meant using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity could have been initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity could have been undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund had not designated a reference benchmark to determine whether it was aligned with the environmental and/or social characteristics that it promoted.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance and social norms as well as sovereign matters through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) issuers exposed to highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) sovereign issuers with high or excessive controversies regarding political and civil liberties, (4) issuers moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) issuers involved in controversial weapons.

This sub-fund further promoted a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs). This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

No derivatives were used to attain the environmental or social characteristics promoted by the sub-fund.

How did the sustainability indicators perform?

Please see the section entitled “What actions have been taken to meet the environmental and/or social characteristics during the reference period?” for detailed descriptions of the binding elements of the investment strategy used to select the investments for attaining the environmental and/or social characteristics promoted and the assessment methodology for determining whether and to what extent assets and indicators met the defined ESG standards.

The ESG ratios are calculated based on the valuation prices for the assets, which are recorded in the front office system. This can lead to slight variations from the other market prices presented in the annual report, which are taken from the fund accounting system.

PAII - 14. Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0 % of assets

As of: December 30, 2022

The Principal Adverse Impact Indicators (PAII) are calculated on the basis of information available within DWS back-office and front-office systems, that are amongst others based on information sourced from external ESG data vendors. In case individual securities or issuers related to such securities do not have information related to an individual PAII, either through a lack of data availability or through the non-applicability of the PAII to that individual issuer or security, the PAII calculation methodology for individual indicators may consider such securities or issuers with a value of 0. For Target Fund investments, a “look-through” into target fund holdings is performed subject to data availability, amongst others related to reasonable actual information of target fund holdings as well as the related security or issuer information. The calculation methodology for the individual PAII indicators may change in subsequent reporting periods as a consequence of evolving market standards, a change of treatment of securities of specific instrument types (such as derivatives), an increase in data coverage or through regulatory clarifications.

DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with “A” being the best score and “F” being the worst score

Criteria	Involvement in controversial sectors ¹	Involvement in controversial weapons	Norm Assessment ⁶	ESG Quality Assessment	SDG-Assessment	Climate & Transition Risk Assessment
A	Non-involvement	Confirmed non-involvement	Confirmed no issues	True leader in ESG (≥ 87.5 DWS ESG score)	True SDG contributor (≥ 87.5 SDG score)	True climate leader (≥ 87.5 score)
B	Remote involvement	Alleged		ESG leader (75–87.5 DWS ESG score)	SDG contributor (75–87.5 SDG score)	Climate solution provider (75–87.5 score)
C	0% – 5%	Dual-Purpose ²	Violations of lesser degree	ESG upper midfield (50–75 DWS ESG score)	SDG upper midfield (50–75 SDG score)	Low transition risk (50–75 score)
D	5% – 10% (coal: 5% -15%)	Owning ³ /Owned ⁴		ESG lower midfield (25–50 DWS ESG score)	SDG lower midfield (25–50 SDG score)	Mod. transition risk (25–50 score)
E	10% – 25% (coal: 15% - 25%)	Component ⁵ producer	High severity or re-assessed highest severity ⁷	ESG laggard (12.5–25 DWS ESG score)	SDG obstructer (12.5–25 SDG score)	High transition risk (12.5–25 score)
F	≥ 25%	Weapon producer	Highest severity/global compact violation ⁸	True laggard in ESG (0–12.5 DWS ESG score)	Significant SDG obstructer (0–12.5 SDG score)	Excessive transition risk (0–12.5 score)

(1) Revenue share thresholds as per standard scheme. Sub-Granularity available: Thresholds can be individually set.

(2) Encompasses e.g. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones

(3) Owning more than 20% equity

(4) Being owned by more than 50% of company involved in grade E or F.

(5) Single purpose key component.

(6) Includes ILO controversies as well as corporate governance and product issues.

(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund invested partially in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and Sanitation
- Goal 7: Affordable and clean energy
- Goal 10: Reduced inequality
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs varied based on the actual investments in the portfolio.

DWS measured the contribution to the UN SDGs via its sustainability investment assessment which evaluated potential investments in relation to different criteria to conclude that an economic activity can be considered as sustainable. Via this assessment, the sub-fund management evaluated (1) whether an economic activity contributed to one or several of the UN SDGs, (2) whether the economic activity or other economic activities of that company significantly harmed any of these objectives (Do Not Significantly Harm (DNSH) assessment) and (3) whether the company as such was in line with the DWS safeguard assessment.

The sustainability investment assessment used data from multiple data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to determine if an activity was sustainable. Activities that contributed positively to the UN SDGs were measured in terms of revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx). If a positive contribution was determined, the activity was considered sustainable if the company passed the DNSH assessment and complied with the DWS safeguard assessment (as detailed in the section “Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?”.)

The sub-fund did not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was integral part of the sustainability investment assessment and evaluated whether an economic activity with a contribution to an UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the economic activity failed the DNSH assessment and could not be considered as sustainable economic activity.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the sustainability investment assessment systematically integrated all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS established quantitative thresholds and/or qualitative values to determine if an investment significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its safeguard assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms were considered as non-compliant to the safeguards and their economic activities could not be considered sustainable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund management considered the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

The above principal adverse impacts were considered at product level through the exclusion strategy for the sub-fund's assets that were aligned with environmental and social characteristics via the proprietary ESG assessment methodology as detailed in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?".

For sustainable investments, the principal adverse impacts were further considered in the DNSH assessment as described above in section "How were the indicators for adverse impacts on sustainability factors taken into account?".

What were the top investments of this financial product?

DWS Invest Top Dividend

Largest investments	Breakdown by sector / issuer	in % of average portfolio volume	Breakdown by country
Newmont	Basic Resources	2.7 %	United States
Johnson & Johnson	Health Care	2.6 %	United States

for the period from January 01, 2022, through December 30, 2022

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
for the period from January 01, 2022, through December 31, 2022

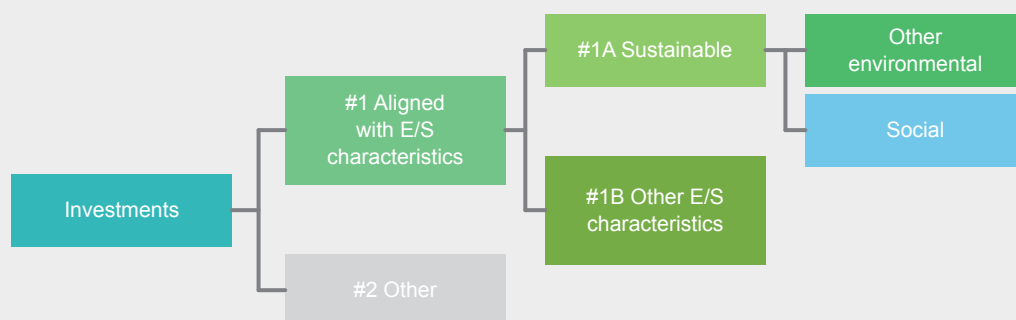

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund invested 100% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 19.43% of the sub-fund's assets qualified as sustainable investments (#1A Sustainable).

0% of the investments were not aligned with these characteristics (#2 Other). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest Top Dividend

Breakdown by sector / issuer

in % of portfolio volume

Information Technology	3.72 %
Telecommunication Services	6.87 %
Consumer Discretionaries	22.11 %
Energy	13.38 %

Central governments	7.41 %
Equity funds	2.98 %
Exposure to companies active in the fossil fuel sector	26.91 %

As of: December 31, 2022

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

Yes:

In fossil gas

In nuclear energy

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities

Directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

■ Taxonomy-aligned 0.00%
 ■ Non Taxonomy-aligned 100.00%

2. Taxonomy-alignment of investments excluding sovereign bonds*

■ Taxonomy-aligned 0.00%
 ■ Non Taxonomy-aligned 100.00%

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, there may have been instances in which part of the investments' underlying economic activities were aligned with the EU Taxonomy.

What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional and enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/85.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy

The sub-fund did not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the share of environmentally and socially sustainable investments in total was 19.43 % of the net assets of the sub-fund.

What was the share of socially sustainable investments?

The sub-fund did not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. However, the share of environmentally and socially sustainable investments in total was 19.43 % of the net assets of the sub-fund.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, and on an ancillary basis, this sub-fund invested into investments that are not considered aligned with the promoted characteristics (#2 Other). These remaining investments could include all asset classes as foreseen in the specific investment policy including cash and derivatives.

In line with the market positioning of this sub-fund, the purpose of these remaining investments was to provide investors with an exposure to non-ESG aligned investments while at the same time ensuring a predominant exposure to environmentally and socially aligned investments. Remaining investments could be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

This sub-fund did not consider any minimum environmental or social safeguards on these remaining investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as main investment strategy. At least 70% of the sub-fund's assets were invested in equities of international issuers that were expected to deliver an above-average dividend yield. When selecting equities, the following criteria should be of decisive importance: dividend yield above the market average, sustainability of dividend yield and growth, historical and future earnings growth as well as price/earnings ratio.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics was integral part of the ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

ESG assessment methodology

The portfolio management of this sub-fund sought to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology was based on the ESG database, which used data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database was therefore constituted by data and figures as well as on internal assessments that took into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions.

The ESG database derived "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers received one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category was deemed insufficient, the portfolio management was prohibited from investing in that issuer, even if it was eligible according to other categories. For exclusion purposes, each letter score in a category was considered individually and may result might have resulted in exclusion of an issuer.

The ESG database used a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

• DWS Climate and Transition Risk Assessment

The DWS Climate and Transition Risk Assessment evaluated issuers in relation to climate change and environmental changes, e.g. in respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to such risks received better evaluations. Issuers with excessive climate risk profile (i.e. a letter score of "F") were excluded as an investment.

• DWS Norm Assessment

The DWS Norm Assessment evaluated the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") were excluded as an investment.

• DWS Sovereign Assessment

The DWS Sovereign Assessment evaluated the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") were excluded as an investment.

• Exposure to controversial sectors

The ESG database defined certain business areas and business activities as relevant. Business areas and business activities were defined as relevant if they involve the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors were defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affect the production or distribution of products in other sectors were defined as relevant. Other relevant sectors were, for example, coal mining and coal-based power generation. Issuers were evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the

controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") were excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") were excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") were excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assessed a company's involvement in the business of controversial weapons. Controversial weapons included for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers were assessed based on their degree of involvement (production of controversial weapons, component production, etc.) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") were excluded as an investment.

To the extent that the sub-fund sought to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter must meet the DWS standards on Climate and Transition Risk- and Norm Assessment outlined above.

Derivatives were not used to attain the environmental or social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers could only be acquired for the sub-fund if the issuers of the underlying comply with the ESG assessment methodology.

Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its sustainability investment assessment which evaluated potential investments in relation to different criteria to conclude that an economic activity could be considered as sustainable as further detailed in section "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?"

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The procedure to assess the good governance practices of the investee companies was based on the DWS Norm Assessment. Accordingly, the assessed investee companies followed good governance practices.

Further, the management company considered active ownership as a strong driver to improve governance, policies and practices, and thus for a better long-term performance of investee companies. Active ownership meant using the position as shareholders to influence the activities or behaviour of the investee companies. An engagement activity could have been initiated with the investee companies regarding matters such as strategy, financial and non-financial performance, risk, capital structure, social and environmental impact as well as corporate governance including topics like disclosure, culture and remuneration. The engagement activity could have been undertaken via, e.g., issuer meetings or engagement letters. Furthermore, for equity investments it could also be an interaction with the company resulting from proxy voting activities or participation at general meetings.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund had not designated a reference benchmark to determine whether it was aligned with the environmental and/or social characteristics that it promoted.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

ALLEGATO IV

Informativa periodica per i prodotti finanziari di cui all'articolo 8, paragrafi 1, 2 e 2bis, del regolamento (UE) 2019/2088 e all'articolo 6, primo comma del regolamento (UE) 2020/852

Nome del prodotto: Ethna-AKTIV

Identificativo della persona giuridica: 529900GYLM0Z95YA0Y09

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, purché tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e l'impresa beneficiaria degli investimenti segua prassi di buona governance.

La **tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non stabilisce un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere allineati o no alla tassonomia.

Caratteristiche ambientali e/o sociali

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?

Sì

No

Ha effettuato **investimenti sostenibili con un obiettivo ambientale:** %

in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE

in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE

Ha effettuato **investimenti sostenibili con un obiettivo sociale:** %

Ha promosso **caratteristiche ambientali/sociali (A/S)** e, pur non avendo come obiettivo un investimento sostenibile, aveva una quota minima del(lo) 0,00% di investimenti sostenibili

con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE

con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE

con un obiettivo sociale

Sono state promosse caratteristiche ambientali/sociali, ma **non è stato effettuato alcun investimento sostenibile**

41

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Nei suoi investimenti obbligazionari e azionari, il Fondo preferisce imprese che dimostrano già una bassa esposizione a rischi ESG essenziali, o che con la loro attività gestiscono attivamente gli inevitabili rischi ESG e pertanto li riducono.

Per giudicare i rischi ESG rilevanti per le singole imprese nonché valutare la gestione attiva dei rischi ESG all'interno delle imprese, si utilizzano le analisi dell'agenzia di rating esterna Sustainalytics. Il Punteggio del rischio ESG calcolato da Sustainalytics analizza tre fattori, che sono determinanti per giudicare il rischio:

- Governo d'impresa
- Rischi ESG sostanziali a livello settoriale nonché contromisure individuali delle imprese
- Rischi idiosincratici (controversie nelle quali sono coinvolte le imprese)

Il giudizio relativo al governo d'impresa è una caratteristica importante per valutare i rischi ESG e finanziari collegati a un investimento. Nel caso di caratteristiche ambientali e sociali, l'analisi mira ai rischi rilevanti per il settore. Nelle aziende di produzione, oltre ai fattori sociali rappresenta un fattore di rischio anche l'uso delle risorse. L'analisi riguarda pertanto anche caratteristiche ambientali, quali ad esempio:

- Emissione e intensità di gas serra,
- Protezione delle risorse naturali, in particolare dell'acqua,
- Contrasto all'impermeabilizzazione del suolo,
- Protezione delle biodiversità

Le attività delle imprese di servizi hanno effetti nettamente inferiori sull'ambiente, mentre sono in primo piano caratteristiche sociali, che comprendono, ad esempio,

- Condizioni di lavoro eque e retribuzione adeguata,
- Salute e sicurezza sul posto di lavoro,
- Prevenzione della corruzione,
- Prevenzione delle frodi,
- Controllo della qualità dei prodotti

Al centro dell'attenzione del Fondo vi è pertanto la considerazione dei rischi ambientali e sociali rilevanti, che possono variare da un'impresa all'altra. In questo modo il Fondo cerca non solo di evitare i rischi ambientali investendo in imprese i cui rischi ambientali sono già bassi in base all'attività svolta, bensì considera anche imprese che limitano e riducono i rischi ambientali legati al modello di attività tramite una politica di gestione idonea.

Inoltre vi sono esclusioni esaustive che vietano al Fondo numerosi investimenti considerati in generale come critici. Concretamente, sono vietati investimenti in imprese con un'attività fondamentale nei settori degli armamenti, del tabacco, della pornografia, della speculazione su sostanze alimentari essenziali e/o della produzione/distribuzione di carbone. Sono inoltre vietati investimenti in imprese per le quali sono state accertate gravi violazioni dei Principi del Global Compact ONU e che non offrono alcuna prospettiva convincente di rimediare alla situazione. Nel caso di titoli sovrani, sono vietati investimenti in titoli emessi da paesi che nell'analisi annuale della Freedom House (www.freedomhouse.org) sono stati dichiarati come "non liberi".

Qual è stata la prestazione degli indicatori di sostenibilità?

Per giudicare i rischi ESG rilevanti per le singole imprese nonché valutare la gestione attiva dei rischi ESG all'interno delle imprese, si utilizzano le analisi dell'agenzia di rating esterna Sustainalytics.

Sustainalytics riunisce i risultati delle sue analisi in un unico punteggio del rischio ESG che va da 0 a 100, laddove: con un punteggio inferiore a 10 si indicano rischi trascurabili, da 10 a 19,99 si indicano rischi bassi, da 20 a 29,99 si indicano rischi medi, da 30 a 39,99 si indicano rischi elevati e a partire da un punteggio pari a 40 si indicano rischi molto gravi.

In base a questo punteggio di rischi ESG il Fondo deve raggiungere mediamente come minimo un profilo di rischio ESG medio (punteggio di rischio ESG inferiore a 30). Quest'obiettivo è stato raggiunto. Nel periodo interessato dalla relazione periodica il punteggio di rischio ESG del fondo è stato costantemente inferiore a 30. Nel periodo interessato dalla relazione periodica il punteggio di rischio ESG medio è stato 21,9. Al 31 dicembre 2022 il punteggio di rischio ESG è stato 21,6. Singoli titoli con rischi decisamente molto gravi (punteggio di rischio ESG superiore a 50) sono considerati come investimenti nel Fondo solo in casi eccezionali giustificati e devono essere accompagnati da un processo di impegno attivo per migliorare il profilo di rischio ESG dell'investimento. Nel periodo interessato dalla relazione periodica non vi sono stati investimenti nel fondo valutati con un punteggio di rischio ESG corrispondente elevato.

Gli indicatori di sostenibilità misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse del prodotto finanziario.

Al 31 dicembre 2022 la distribuzione delle categorie di rischio ESG (in %) del fondo era la seguente:

Nel fondo si escludono investimenti in imprese o prodotti fabbricati dalle imprese che violano le convenzioni delle Nazioni Unite in merito alle munizioni a grappolo, armi chimiche e altre armi destinate a stermini di massa o finanziano tali imprese/prodotti. Altre esclusioni relative a prodotti subentrano quando il fatturato delle imprese dalla fabbricazione e/o distribuzione di determinati beni supera le seguenti dimensioni: carbone (25%), armamenti (10%), armi leggere (10%), intrattenimento per adulti (10%), tabacco (5%).

Sono inoltre vietati investimenti in imprese per le quali sono state accertate gravi violazioni dei Principi del Global Compact ONU e che non offrono alcuna prospettiva convincente di rimediare alla situazione. Nel caso di titoli sovrani, sono vietati investimenti in titoli emessi da paesi che nell'analisi annuale della Freedom House (www.freedomhouse.org) sono stati dichiarati come "non liberi".

Nel periodo interessato dalla relazione periodica sono stati rispettati tutti i criteri di esclusione elencati.

● **... e rispetto ai periodi precedenti?**

n.d.

● **Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario in parte ha realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?**

Il prodotto finanziario promuove caratteristiche ambientali/sociali, ma non effettua alcun investimento sostenibile.

● **In che modo gli investimenti sostenibili che il prodotto finanziario in parte ha realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?**

Il prodotto finanziario promuove caratteristiche ambientali/sociali, ma non effettua alcun investimento sostenibile.

----- In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?

Il prodotto finanziario promuove caratteristiche ambientali/sociali, ma non effettua alcun investimento sostenibile.

----- In che modo gli investimenti sostenibili sono allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani?

Il prodotto finanziario promuove caratteristiche ambientali/sociali, ma non effettua alcun investimento sostenibile.

La tassonomia dell'UE stabilisce il principio “non arrecare un danno significativo”, in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'UE.

Il principio “non arrecare un danno significativo” si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri dell'UE per le attività economiche ecosostenibili.

Nessun altro investimento sostenibile deve arrecare un danno significativo agli obiettivi ambientali o sociali.

44

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

Nel fondo si tiene conto dei principali impatti negativi delle decisioni di investimento sui fattori di sostenibilità, come definito nei seguenti gruppi di temi riportati nell'Allegato 1 della Tabella I del Regolamento (UE) 2022/1288 del Parlamento europeo e del Consiglio del 6 aprile 2022: emissioni di gas serra, biodiversità, acqua, rifiuti nonché problematiche sociali e concernenti il personale.

I gestori del portafoglio si affidano per l'identificazione, la misurazione e la valutazione degli effetti negativi sulla sostenibilità alle analisi esterne delle agenzie di ESG, i documenti pubblici delle imprese nonché a notizie comunicate in dialoghi diretti con i dirigenti delle rispettive imprese. Gli effetti negativi sulla sostenibilità possono essere così analizzati esaurientemente e considerati nelle decisioni di investimento.

Sostanzialmente nella valutazione della sostenibilità degli investimenti si ponderano diversi aspetti della sostenibilità in funzione della loro rilevanza per il rispettivo modello di business. Ad esempio, la rilevanza di emissioni di gas serra in settori ad alta intensità di CO2 è decisamente superiore rispetto a settori con intensità di CO2 minore.

Il reporting periodico dei fattori di sostenibilità avviene in base ai dati non elaborati forniti dall'agenzia di rating Sustainalytics.

Quali sono stati i principali investimenti di questo prodotto finanziario?

Quadro medio di quattro scadenze (31.03.2022; 30.06.2022; 30.09.2022 e 31.12.2022):

L'elenco comprende i seguenti investimenti che hanno costituito la quota maggiore degli investimenti del prodotto finanziario durante periodo di riferimento, ossia tra il 01.01.2022 e il 31.12.2022:

Investimenti di maggiore entità	Settore	in % di attivi	Paese
JAB Consumer Partners SCA SICAR - Global Consumer Brands	ATTIVITÀ FINANZIARIE E ASSICURATIVE	3,4175	Lussemburgo

Qual è stata la quota degli investimenti in materia di sostenibilità?

L'**allocazione degli attivi** descrive la quota di investimenti in attivi specifici.

Le attività allineate alla tassonomia sono espresse in percentuale di:

- **fatturato**: riflette il carattere ecologico attuale delle imprese beneficiarie degli investimenti;
- **spese in conto capitale** (CapEx): rivelano gli investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, utili per la transizione verso un’economia verde;
- **spese operative** (OpEx): illustrano le attività operative verdi delle imprese beneficiarie degli investimenti.

Qual è stata l’allocazione degli attivi?

In quali settori economici sono stati effettuati gli investimenti?

Quadro medio di quattro scadenze (31.03.2022; 30.06.2022; 30.09.2022 e 31.12.2022):

Settore	% di attivi
Titoli di Stato	47,21%
Altro	5,70%
Software e servizi	3,70%

Farmaceutica, biotecnologie e scienze biologiche	3,49%
Servizi di pubblica utilità	3,18%
Alimenti, bevande e tabacco	2,85%
Banche	2,45%
Tecnologia hardware e apparecchiature	2,44%
Mezzi di comunicazione e intrattenimento	2,40%
Vendita al dettaglio	2,20%
Servizi sanitari: attrezzature e servizi	1,95%
Automezzi e componenti	1,47%
Prodotti e servizi finanziari diversificati	1,42%
Beni strumentali	1,42%
Servizi al consumatore	1,42%
Semiconduttori e apparecchiature per la produzione di semiconduttori	1,40%
Energia	1,29%
Materiali	1,23%
Assicurazioni	1,07%
Investimento immobiliare	1,05%
Servizi di telecomunicazione	1,01%
Prodotti per la casa e l'igiene personale	0,91%
Vendita al dettaglio di alimentari e beni di prima necessità	0,71%
Trasporto	0,57%
Prodotti durevoli e tessuti	0,56%
Servizi commerciali e materiali operativi	0,05%

Per quanto attinente alla conformità alla tassonomia dell'UE, i criteri per i gas fossili comprendono la limitazione delle emissioni e il passaggio a energia rinnovabile o combustibili a basse emissioni di CO2 entro la fine del 2035. Questi criteri per l'energia nucleare comprendono norme esaustive per la sicurezza e lo smaltimento dei rifiuti.

In quale misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

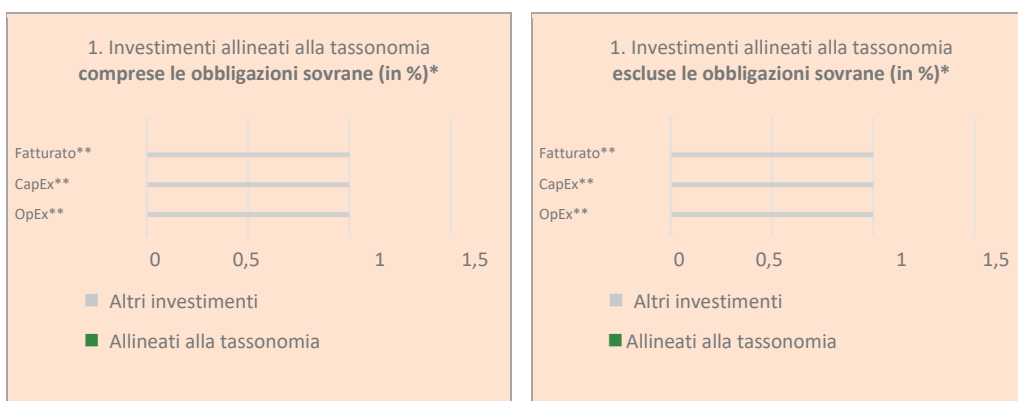

Lo scopo principale di questo Fondo consiste nel perseguire le caratteristiche ambientali/sociali. Il Fondo pertanto non si impegna attualmente a investire una quota minima del suo patrimonio complessivo in attività economiche ecosostenibili conformemente all'articolo 3 del regolamento sulla tassonomia dell'UE (2020/852). Ciò riguarda eventualmente dati relativi a investimenti in attività economiche classificate conformemente all'articolo 16 o 10 paragrafo 2 del regolamento sulla tassonomia dell'UE (2020/852) come attività abilitanti o attività di transizione.

● Il prodotto finanziario investe in attività di gas fossile e/o energia nucleare¹ conformi alla tassonomia dell'UE?

- Sì:
 in gas fossili in energia nucleare
- No

I due grafici che seguono mostrano in verde la percentuale minima di investimenti allineati alla tassonomia dell'UE. Poiché non esiste una metodologia adeguata per determinare l'allineamento delle obbligazioni sovrane* alla tassonomia, il primo grafico mostra l'allineamento alla tassonomia in relazione a tutti gli investimenti del prodotto finanziario comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

47

* Ai fini dei grafici di cui sopra, per «obbligazioni sovrane» si intendono tutte le esposizioni sovrane.
 ** La quota degli investimenti conformi alla tassonomia misurata per ricavi, CapEx e OpEx non può essere misurata sulla base dei dati disponibili nel mercato al momento attuale.
 In questo grafico rientra l'identificazione per il settore di gas fossili ed energia nucleare. Gli investimenti effettuati in questi settori ammontano rispettivamente allo 0,00%.

Le attività abilitanti consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale.

Le attività di transizione sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano, tra l'altro, livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

● Qual è la quota minima di investimenti in attività transitorie e abilitanti?

Attività transitorie: 0%
 Attività abilitanti: 0%

La quota degli investimenti conformi alla tassonomia confluiti in attività di transizione e abilitanti non può essere misurata sulla base dei dati disponibili nel mercato al momento attuale. Si presuppone che questi dati saranno disponibili in occasione della prossima chiusura dell'esercizio.

¹ Le attività nel settore dei gas fossili e/o dell'energia nucleare sono conformi alla tassonomia dell'UE solo se contribuiscono alla mitigazione del cambiamento climatico ("Protezione del clima") e non danneggiano seriamente alcun obiettivo della tassonomia dell'UE; vedasi spiegazioni nel margine a sinistra. I criteri completi per attività economiche conformi alla tassonomia dell'UE nel settore dei gas fossili e dell'energia nucleare sono stabiliti nel regolamento delegato (UE) 2022/1214 della Commissione.

- **Qual è l'esito del raffronto della percentuale di investimenti che erano allineati alla tassonomia dell'UE rispetto ai precedenti periodi di riferimento?**

n.d.

Qual è la quota minima di investimenti sostenibili con un obiettivo ambientale che non sono allineati alla tassonomia dell'UE?

Il prodotto finanziario promuove caratteristiche ambientali/sociali, ma non effettuerà alcun investimento sostenibile

La quota minima di investimenti sostenibili con un obiettivo ambientale che non sono allineati alla tassonomia dell'UE ammonta allo 0%

Qual è la quota minima di investimenti socialmente sostenibili?

Il prodotto finanziario promuove caratteristiche ambientali/sociali, ma non effettuerà alcun investimento sostenibile

La quota minima di investimenti sostenibili con un obiettivo ambientale che non sono allineati alla tassonomia dell'UE ammonta allo 0%

48

Quali investimenti sono compresi nella categoria "#2 Altri", qual è il loro scopo ed esistono garanzie minime di salvaguardia ambientale o sociale?

Sono compresi strumenti di copertura, investimenti a scopo di diversificazione (ad esempio materie grezze e altri fondi d'investimento), investimenti per i quali non sono disponibili dati e mezzi liquidi.

"#2 Altri" sono gli investimenti intesi particolarmente alla diversificazione del Fondo e alla destinazione della liquidità per la realizzazione degli scopi descritti nella politica d'investimento.

Gli indicatori di sostenibilità utilizzati per misurare il raggiungimento delle singole caratteristiche ambientali o sociali di cui al punto "#1 Investimenti orientati a caratteristiche ambientali o sociali", non sono applicati sistematicamente riguardo al "#2 Altri". Per "#2 Altri" non esiste alcuna protezione minima.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Una misura essenziale riguardava la considerazione delle esclusioni esaustive che vietano permanentemente al fondo numerosi investimenti considerati in generale come critici. Nel fondo si sono esclusi concretamente nel periodo di riferimento investimenti in imprese o prodotti fabbricati dalle imprese che violano le convenzioni delle Nazioni Unite in merito alle munizioni a grappolo, armi chimiche e altre armi destinate a stermini di massa o finanziano tali imprese/prodotti. Altre esclusioni relative a prodotti subentrano quando il fatturato delle imprese dalla fabbricazione e/o distribuzione di determinati beni avevano superato le seguenti dimensioni: carbone (25%), armamenti (10%), armi leggere (10%), intrattenimento per adulti (10%), tabacco (5%). Sono stati inoltre vietati investimenti in imprese per le quali sono state accertate gravi violazioni dei Principi del Global Compact ONU e che non offrivano alcuna prospettiva convincente di rimediare alla situazione. Nel caso di titoli sovrani, erano vietati investimenti in titoli emessi da paesi che nell'analisi annuale della Freedom House (www.freedomhouse.org) erano stati dichiarati come "non liberi".

Un'altra misura essenziale era il processo sostanziale di selezione degli investimenti azionari e obbligazionari per il fondo. A tale proposito il focus resta su imprese che dimostrano già una bassa esposizione a rischi ESG essenziali, o che con la loro attività gestiscono attivamente gli inevitabili rischi ESG e pertanto li riducono.

Per giudicare i rischi ESG rilevanti per le singole imprese nonché valutare la gestione attiva dei rischi ESG all'interno delle imprese, si utilizzano le analisi dell'agenzia di rating esterna Sustainalytics.

Il Punteggio del rischio ESG calcolato da Sustainalytics analizza tre fattori, che sono determinanti per giudicare il rischio: la direzione delle società, i rischi ESG concreti a livello di settore e le specifiche contromisure adottate dalle società e rischi idiosincratici (controversie nelle quali sono coinvolte le società). Il giudizio relativo al governo d'impresa è una caratteristica importante per valutare i rischi ESG e finanziari collegati a un investimento. Nel caso di caratteristiche ambientali e sociali, l'analisi mira ai rischi rilevanti per il settore. Nelle aziende di produzione, oltre ai fattori sociali rappresenta un fattore di rischio anche l'uso delle risorse. L'analisi riguarda pertanto caratteristiche ambientali, quali ad esempio le emissioni e l'intensità dei gas serra, la protezione delle risorse naturali, in particolare dell'acqua, il contrasto all'impermeabilizzazione del suolo e la protezione della biodiversità. Le attività delle imprese di servizi hanno effetti nettamente inferiori sull'ambiente, mentre sono in primo piano caratteristiche sociali, che comprendono, ad esempio, condizioni di lavoro eque e remunerazione adeguata, salute e sicurezza sul posto di lavoro, prevenzione della corruzione, delle frodi e controlli sulla qualità del prodotto.

Al centro dell'attenzione del fondo vi è pertanto la considerazione dei rischi ambientali e sociali rilevanti, che possono variare da un'impresa all'altra. Il fondo non ha cercato così solo di evitare rischi ambientali investendo in società i cui rischi ambientali sono già bassi in base alla loro attività, bensì ha considerato anche società che con una politica di gestione adeguata hanno limitato e ridotto i rischi ambientali legati al loro

modello di attività.

Un'altra misura riguardava l'impegno con le società partecipate del fondo. Oltre ai colloqui con i rappresentanti delle imprese nonché prese di posizione per iscritto, ad esempio la richiesta di un controllo migliore sulle catene di fornitura per prevenire violazioni dei diritti dell'uomo, è stato utilizzato come importante mezzo di comunicazione soprattutto il diritto al voto nelle assemblee generali annuali. Mentre i colloqui consentono uno scambio di opinioni, di regola non hanno alcun carattere formalmente vincolante. L'esercizio del diritto di voto in un'assemblea generale annuale ha invece anche queste caratteristiche. È pertanto uno strumento efficace per influire sulla direzione delle imprese. Altri dettagli per l'applicazione di queste misure sono disponibili sia nelle Linee guida per l'esercizio del diritto di voto sia nella Relazione per l'esercizio del diritto di voto sul sito web della società di gestione del fondo (<https://www.ethenea.com/dokumente-zu-esg/>).

Gli indici di riferimento sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?

Non è stato designato alcun indice di riferimento per determinare se il Fondo sia allineato o no alle caratteristiche ambientali e/o sociali che promuove.

49

- ***In che modo l'indice di riferimento differisce da un indice generale di mercato?***

Non è stato designato alcun indice di riferimento per determinare se il Fondo sia allineato o no alle caratteristiche ambientali e/o sociali che promuove.

- ***Qual è stata la prestazione di questo prodotto finanziario in relazione agli indicatori di sostenibilità per determinare l'allineamento dell'indice di riferimento con le caratteristiche ambientali o sociali promosse?***

Non è stato designato alcun indice di riferimento per determinare se il Fondo sia allineato o no alle caratteristiche ambientali e/o sociali che promuove.

- ***Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?***

Non è stato designato alcun indice di riferimento per determinare se il Fondo sia allineato o no alle caratteristiche ambientali e/o sociali che promuove.

- ***Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice generale di mercato?***

Non è stato designato alcun indice di riferimento per determinare se il Fondo sia allineato o no alle caratteristiche ambientali e/o sociali che promuove.

ALLEGATO IV

Informativa periodica per i prodotti finanziari di cui all'articolo 8, paragrafi 1, 2 e 2bis, del regolamento (UE) 2019/2088 e all'articolo 6, primo comma del regolamento (UE) 2020/852

Nome del prodotto: Ethna-DYNAMISCH

Identificativo della persona giuridica: 5299009YF07LKR4ADA63

Caratteristiche ambientali e/o sociali

34

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, purché tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e l'impresa beneficiaria degli investimenti segua prassi di buona governance.

La **tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non stabilisce un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere allineati o no alla tassonomia.

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?

Sì **No**

<p><input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo ambientale: %</p> <ul style="list-style-type: none"> <input type="checkbox"/> in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE <p><input type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo sociale: %</p>	<p><input type="checkbox"/> Ha promosso caratteristiche ambientali/sociali (A/S) e, pur non avendo come obiettivo un investimento sostenibile, aveva una quota minima del(lo) 0,00% di investimenti sostenibili</p> <ul style="list-style-type: none"> <input type="checkbox"/> con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE <input type="checkbox"/> con un obiettivo sociale <p><input checked="" type="checkbox"/> Sono state promosse caratteristiche ambientali/sociali, ma non è stato effettuato alcun investimento sostenibile</p>
--	--

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Nei suoi investimenti obbligazionari e azionari, il fondo preferisce imprese che dimostrano già una bassa esposizione a rischi ESG essenziali, o che con la loro attività gestiscono attivamente gli inevitabili rischi ESG e pertanto li riducono.

Per giudicare i rischi ESG rilevanti per le singole imprese nonché valutare la gestione attiva dei rischi ESG all'interno delle imprese, si utilizzano le analisi dell'agenzia di rating esterna Sustainalytics. Il Punteggio del rischio ESG calcolato da Sustainalytics analizza tre fattori, che sono determinanti per giudicare il rischio:

- Governo d'impresa
- Rischi ESG sostanziali a livello settoriale nonché contromisure individuali delle imprese
- Rischi idiosincratici (controversie nelle quali sono coinvolte le imprese)

Il giudizio relativo al governo d'impresa è una caratteristica importante per valutare i rischi ESG e finanziari collegati a un investimento. Nel caso di caratteristiche ambientali e sociali, l'analisi mira ai rischi rilevanti per il settore. Nelle aziende di produzione, oltre ai fattori sociali rappresenta un fattore di rischio anche l'uso delle risorse. L'analisi riguarda pertanto anche caratteristiche ambientali, quali ad esempio:

- Emissione e intensità di gas serra,
- Protezione delle risorse naturali, in particolare dell'acqua,
- Contrasto all'impermeabilizzazione del suolo,
- Protezione delle biodiversità

Le attività delle imprese di servizi hanno effetti nettamente inferiori sull'ambiente, mentre sono in primo piano caratteristiche sociali, che comprendono, ad esempio,

- Condizioni di lavoro eque e retribuzione adeguata,
- Salute e sicurezza sul posto di lavoro,
- Prevenzione della corruzione,
- Prevenzione delle frodi,
- Controllo della qualità dei prodotti

Al centro dell'attenzione del fondo vi è pertanto la considerazione dei rischi ambientali e sociali rilevanti, che possono variare da un'impresa all'altra. In questo modo il fondo cerca non solo di evitare i rischi ambientali investendo in imprese i cui rischi ambientali sono già bassi in base all'attività svolta, bensì considera anche imprese che limitano e riducono i rischi ambientali legati al modello di attività tramite una politica di gestione idonea.

Inoltre vi sono esclusioni esaustive che vietano al fondo numerosi investimenti considerati in generale come critici. Concretamente, sono vietati investimenti in imprese con un'attività fondamentale nei settori degli armamenti, del tabacco, della pornografia, della speculazione su sostanze alimentari essenziali e/o della produzione/distribuzione di carbone. Sono inoltre vietati investimenti in imprese per le quali sono state accertate gravi violazioni dei Principi del Global Compact ONU e che non offrono alcuna prospettiva convincente di rimediare alla situazione. Nel caso di titoli sovrani, sono vietati investimenti in titoli emessi da paesi che nell'analisi annuale della Freedom House (www.freedomhouse.org) sono stati dichiarati come "non liberi".

Gli indicatori di sostenibilità misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse del prodotto finanziario.

● **Qual è stata la prestazione degli indicatori di sostenibilità?**

Per giudicare i rischi ESG rilevanti per le singole imprese nonché valutare la gestione attiva dei rischi ESG all'interno delle imprese, si utilizzano le analisi dell'agenzia di rating esterna Sustainalytics.

Sustainalytics riunisce i risultati delle sue analisi in un unico punteggio del rischio ESG che va da 0 a 100, laddove: con un punteggio inferiore a 10 si indicano rischi trascurabili,

da 10 a 19,99 si indicano rischi bassi,

da 20 a 29,99 si indicano rischi medi,

da 30 a 39,99 si indicano rischi elevati e

a partire da un punteggio pari a 40 si indicano rischi molto gravi.

In base a questo punteggio di rischi ESG il fondo deve raggiungere mediamente come minimo un profilo di rischio ESG medio (punteggio di rischio ESG inferiore a 25). Quest'obiettivo è stato raggiunto. Nel periodo interessato dalla relazione periodica il punteggio di rischio ESG del fondo è stato costantemente inferiore a 25. Nel periodo interessato dalla relazione periodica il punteggio di rischio ESG medio è stato 17,3. Al 31 dicembre 2022 il punteggio di rischio ESG era 17,1.

Singoli titoli con rischi decisamente molto pesanti (punteggio di rischio ESG superiore a 40) sono considerati come investimenti nel fondo sono in casi eccezionali giustificati e devono essere accompagnati da un processo di impegno attivo per migliorare il profilo di rischio ESG dell'investimento. Nel periodo interessato dalla relazione periodica non vi sono stati investimenti nel fondo valutati con un punteggio di rischio ESG corrispondente elevato.

Al 31 dicembre 2022 la distribuzione delle categorie di rischio ESG (in %) del fondo era la seguente:

36

Nel fondo si escludono investimenti in imprese o prodotti fabbricati dalle imprese che violano le convenzioni delle Nazioni Unite in merito alle munizioni a grappolo, armi chimiche e altre armi destinate a stermini di massa o finanziano tali imprese/prodotti. Altre esclusioni relative a prodotti subentrano quando il fatturato delle imprese dalla fabbricazione e/o distribuzione di determinati beni supera le seguenti dimensioni: carbone (25%), armamenti (10%), armi leggere (10%), intrattenimento per adulti (10%), tabacco (5%).

Sono inoltre vietati investimenti in imprese per le quali sono state accertate gravi violazioni dei Principi del Global Compact ONU e che non offrono alcuna prospettiva convincente di rimediare alla situazione.

Nel caso di titoli sovrani, sono vietati investimenti in titoli emessi da paesi che nell'analisi annuale della Freedom House (www.freedomhouse.org) sono stati dichiarati come "non liberi".

Nel periodo interessato dalla relazione periodica sono stati rispettati tutti i criteri di esclusione elencati.

● **... e rispetto ai periodi precedenti?**

n.d.

● **Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario in parte ha realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?**

Il prodotto finanziario promuove caratteristiche ambientali/sociali, ma non effettua alcun investimento sostenibile.

● **In che modo gli investimenti sostenibili che il prodotto finanziario in parte ha realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?**

Il prodotto finanziario promuove caratteristiche ambientali/sociali, ma non effettua alcun investimento sostenibile.

----- In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?

Il prodotto finanziario promuove caratteristiche ambientali/sociali, ma non effettua alcun investimento sostenibile.

----- In che modo gli investimenti sostenibili sono allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani?

Il prodotto finanziario promuove caratteristiche ambientali/sociali, ma non effettua alcun investimento sostenibile.

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

La tassonomia dell'UE stabilisce il principio “non arrecare un danno significativo”, in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'UE.

Il principio “non arrecare un danno significativo” si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri dell'UE per le attività economiche ecosostenibili.

Nessun altro investimento sostenibile deve arrecare un danno significativo agli obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?
