Per assicurare il raggiungimento delle caratteristiche ambientali o sociali promosse, il Portafoglio non ha investito in imprese le cui attività violassero o non fossero coerenti con la Politica di Neuberger Berman in materia di armi controverse e la Politica di Neuberger Berman in materia di coinvolgimento nel carbone termico. Oltre all'applicazione della Politica di Neuberger Berman in materia di coinvolgimento nel carbone termico, il Subgestore degli investimenti ha vietato l'apertura di nuove posizioni di investimento in imprese che (i) abbiano ottenuto più del 25% dei ricavi dall'estrazione di carbone termico; o (ii) abbiano ampliato la produzione di energia da carbone termico. Inoltre, dal 6 aprile 2022 gli strumenti in Portafoglio non hanno investito in imprese le cui attività siano state identificate come in violazione della Politica di Neuberger Berman in materia di standard globali, che esclude i soggetti identificati come trasgressori di quanto segue: (i) i principi del Global Compact delle Nazioni Unite (“**Principi del Global Compact delle Nazioni Unite**”), (ii) le linee guida OCSE destinate alle imprese multinazionali (“**Linee guida dell'OCSE**”), (iii) i principi guida delle Nazioni Unite su imprese e diritti umani (“**Principi guida delle Nazioni Unite su imprese e diritti umani**”) e (iv) gli standard internazionali del lavoro (“**Standard OIL**”).

Solo le posizioni lunghe sono state coperte dalle politiche di esclusione ESG di NB sopra elencate.

Nell'applicare le esclusioni ESG al Portafoglio, il Subgestore degli investimenti ha usato dati di terzi per individuare le imprese che violano le esclusioni ESG sopra elencate. Laddove possibile, il Subgestore degli investimenti ha cercato di sovrapporre questi dati di terzi con le competenze qualitative dei propri analisti di ricerca per ottenere un quadro attuale e olistico dell'impresa. Il Subgestore degli

investimenti ha discusso e dibattuto le differenze tra i trasgressori individuati dai dati di terzi e quelli identificati a seguito della sua ricerca, che si è basata sui dati del Quoziente ESG di NB e sugli impegni diretti con l'impresa.

● **...e rispetto ai periodi precedenti?**

N.d.; questo è il primo periodo di riferimento.

● **Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario in parte ha realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?**

N.d.; il Portafoglio non si è impegnato a detenere investimenti sostenibili.

● **In che modo gli investimenti sostenibili che il prodotto finanziario in parte ha realizzato non hanno arrecato un danno significativo ad alcun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?**

N.d.; il Portafoglio non si è impegnato a detenere investimenti sostenibili.

— — **In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?**

N.d.; il Portafoglio non si è impegnato a detenere investimenti sostenibili.

— — **Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:**

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

La Tassonomia dell'UE stabilisce il principio «non arrecare un danno significativo», in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'Unione.

Il principio «non arrecare un danno significativo» si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri UE per le attività economiche ecosostenibili.

Neppure eventuali altri investimenti sostenibili devono arrecare un danno significativo ad obiettivi ambientali o sociali.

Benché il Portafoglio non si sia impegnato a detenere investimenti sostenibili, dal 6 aprile 2022 il Subgestore degli investimenti non ha investito in imprese le cui attività siano state individuate in violazione delle Linee guida dell'OCSE, dei Principi del Global Compact delle Nazioni Unite, degli Standard OIL e dei Principi guida delle Nazioni Unite su imprese e diritti umani, recepiti dalla Politica di Neuberger Berman in materia di standard globali.

N.d.; il Portafoglio non si è impegnato a detenere investimenti allineati alla tassonomia.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

N.d.; questo Portafoglio non si è impegnato a esaminare i principali effetti negativi.

Quali sono stati i principali investimenti di questo prodotto finanziario?

Il Subgestore degli investimenti ha usato la ripartizione per settori economici basata sulla classificazione statistica delle attività economiche dell'UE ("NACE") per identificare i settori economici dei 15 principali investimenti del Portafoglio. I dati seguenti sono aggiornati al 31 dicembre 2022.

Investimenti di maggiore entità	Settore	% di attivi	Paese
MICROSOFT CORP	J - Servizi di informazione e comunicazione	3,5%	Stati Uniti
APPLE INC	C - Attività manifatturiere	3,0%	Stati Uniti

L - Attività immobiliari	2,03%
N - Attività amministrative e di servizi di supporto	2,05%
O - Sanità e assistenza sociale	1,05%
R - Attività artistiche, di intrattenimento e divertimento	0,00%
S - Altre attività di servizi	0,19%
Nessuna	1,58%

In quale misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Gli obblighi di informativa e di analisi introdotti dalla tassonomia dell'UE sono molto dettagliati e la loro osservanza richiede la disponibilità di numerosi dati specifici per ogni investimento effettuato dal Portafoglio. Il Subgestore degli investimenti non può confermare che il Portafoglio abbia effettuato collocamenti in investimenti considerati ecosostenibili ai fini della tassonomia dell'UE. Le informative e la reportistica sull'allineamento alla tassonomia verranno sviluppate man mano che il quadro UE si evolverà e le imprese renderanno disponibili i dati. Il Subgestore degli investimenti terrà sotto controllo la misura in cui gli investimenti sostenibili con un obiettivo ambientale sono allineati alla tassonomia dell'UE, con il miglioramento della disponibilità e della qualità dei dati.

● **Il prodotto finanziario ha investito in attività connesse al gas fossile e/o all'energia nucleare che erano conformi alla tassonomia dell'UE¹?**

Si:

Gas fossile

Energia nucleare

No

Per conformarsi alla tassonomia dell'UE, i criteri per il **gas fossile** comprendono limitazioni delle emissioni e il passaggio all'energia da fonti totalmente rinnovabili o ai combustibili a basse emissioni di carbonio entro la fine del 2035. Per l'**energia nucleare**, i criteri comprendono norme complete in materia di sicurezza e gestione dei rifiuti.

Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale.

Le **attività transitorie** sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano, tra l'altro, livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

¹ Le attività connesse al gas fossile e/o all'energia nucleare sono conformi alla tassonomia dell'UE solo se contribuiscono all'azione di contenimento dei cambiamenti climatici ("mitigazione dei cambiamenti climatici") e non arrecano un danno significativo ad alcuno degli obiettivi della tassonomia dell'UE - cfr. nota esplicativa sul margine sinistro. I criteri completi riguardanti le attività economiche connesse al gas fossile e all'energia nucleare che sono conformi alla tassonomia dell'UE sono stabiliti nel regolamento delegato (UE) 2022/1214 della Commissione.

Le attività allineate alla tassonomia sono espresse in percentuale di:

- **fatturato**: quota di entrate da attività verdi delle imprese beneficiarie degli investimenti.
- **spese in conto capitale (CapEx)**: investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, ad esempio per la transizione verso un'economia verde.
- **spese operative (OpEx)**: attività operative verdi delle imprese beneficiarie degli investimenti.

I due grafici che seguono mostrano in verde la percentuale di investimenti che erano allineati alla tassonomia dell'UE. Poiché non esiste una metodologia adeguata per determinare l'allineamento delle obbligazioni sovrane alla tassonomia, il primo grafico mostra l'allineamento alla tassonomia in relazione a tutti gli investimenti del prodotto finanziario comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.*

*Ai fini dei grafici di cui sopra, per "obbligazioni sovrane" si intendono tutte le esposizioni sovrane.

● **Qual era la quota degli investimenti effettuati in attività di transizione e abilitanti?**

N.d.; il Portafoglio non si è impegnato a detenere investimenti allineati alla tassonomia.

● **Qual è l'esito del raffronto della percentuale di investimenti che erano allineati alla tassonomia dell'UE rispetto ai precedenti periodi di riferimento?**

N.d.; il Portafoglio non si è impegnato a detenere investimenti allineati alla tassonomia.

Qual era la quota minima di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?

N.d.; il Portafoglio non si è impegnato a detenere investimenti sostenibili.

Qual era la quota di investimenti socialmente sostenibili?

N.d.; il Portafoglio non si è impegnato a detenere investimenti sostenibili.

Quali investimenti erano compresi nella categoria "Altri", qual era il loro scopo ed esistevano garanzie minime di salvaguardia ambientale o sociale?

La categoria "Altri" comprendeva i restanti investimenti del Portafoglio (inclusi, a titolo esemplificativo ma non esaustivo, i derivati o i titoli garantiti da un pool di attività o crediti simili).

sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

elencati nel Supplemento al Portafoglio) che non erano allineati alle caratteristiche ambientali o sociali, né considerati investimenti sostenibili.

La sezione "Altri" del Portafoglio è stata detenuta per diversi motivi ritenuti dal Subgestore degli investimenti vantaggiosi per il Portafoglio quali, a titolo esemplificativo ma non esaustivo, la gestione del rischio, e/o per assicurare liquidità, copertura e garanzia adeguate.

Come indicato in precedenza, il Portafoglio è stato investito in conformità con le politiche di esclusione ESG, su base continuativa. In questo modo si è garantito che gli investimenti effettuati dal Portafoglio fossero in linea con le garanzie internazionali minime di salvaguardia ambientale o sociale, come i Principi del Global Compact delle Nazioni Unite, i Principi guida delle Nazioni Unite su imprese e diritti umani, le Linee guida dell'OCSE e gli Standard OIL.

Il Subgestore degli investimenti ritiene che queste politiche abbiano impedito l'investimento in imprese che hanno violato in modo più eclatante gli standard minimi ambientali e/o sociali e abbiano garantito al Portafoglio di promuovere con successo le sue caratteristiche ambientali e sociali.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Il Portafoglio è stato gestito in linea con l'obiettivo di investimento e sono state intraprese le seguenti azioni:

I. Integrazione dell'analisi ESG proprietaria:

I rating del Quoziente ESG di NB sono stati generati per le posizioni delle imprese in Portafoglio. Il Quoziente ESG di NB o il rating di terzi per le imprese è stato utilizzato per semplificare l'individuazione di rischi e opportunità nella valutazione complessiva.

Integrando l'analisi ESG proprietaria del team di investimento (il Quoziente ESG di NB e il rating di terzi) nella considerazione complessiva dell'impresa, si è creato un collegamento diretto tra l'analisi delle caratteristiche ESG sostanziali e le attività di costruzione del portafoglio nella strategia di investimento.

Le imprese con un Quoziente ESG di NB o un rating di terzi positivo o in via di miglioramento hanno avuto maggiori possibilità di essere incluse nel Portafoglio lungo. La probabilità di rimozione dall'universo di investimento lungo o dal Portafoglio lungo è stata maggiore per un'impresa con un basso Quoziente ESG di NB o rating di terzi, soprattutto se non affrontato dall'impresa stessa.

II. Impegno:

Il Subgestore degli investimenti si è impegnato nei confronti delle imprese. Hanno cercato di dare priorità agli impegni costruttivi e di impegnarsi su tematiche (comprese quelle ESG) a loro giudizio finanziariamente rilevanti per l'emittente pertinente. Il Subgestore degli investimenti ha considerato questo impegno con le imprese come una parte importante del suo processo di investimento sul lato lungo. I progressi in materia di impegno sono stati monitorati a livello centrale nello strumento di tracciamento dell'impegno del Subgestore degli investimenti.

III. Politiche di esclusione settoriale ESG:

Per assicurare il raggiungimento delle caratteristiche ambientali e sociali promosse, il lato lungo del Portafoglio ha applicato le politiche di esclusione ESG sopra menzionate, che hanno posto limitazioni all'universo investibile.

Come già menzionato, solo le posizioni lunghe sono state coperte dalle politiche di esclusione ESG di NB sopra elencate.

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?

N.d.; l'indice di riferimento del Portafoglio non è stato designato come indice di riferimento. Pertanto, non è coerente con le caratteristiche ambientali o sociali promosse dal Portafoglio.

Gli **indici di riferimento** sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

- ***In che modo l'indice di riferimento differisce da un indice generale di mercato?***
n.d.
- ***Qual è stata la prestazione di questo prodotto finanziario in relazione agli indicatori di sostenibilità per determinare l'allineamento dell'indice di riferimento con le caratteristiche ambientali o sociali promosse?***
n.d.
- ***Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?***
n.d.
- ***Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice generale di mercato?***
n.d.

Modello di informativa periodica per i prodotti finanziari di cui all'articolo 8, paragrafi 1, 2 e 2 bis, del regolamento (UE) 2019/2088 e all'articolo 6, primo comma, del regolamento (UE) 2020/852

Nome del prodotto: Neuberger Berman US Real Estate Securities Fund (il "Portafoglio")

Identificativo della persona giuridica: 549300T9PUOV1AK0OR82

Caratteristiche ambientali e/o sociali

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, a condizione che tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e l'impresa beneficiaria degli investimenti segua pratiche di buona governance.

La **tassonomia dell'UE** è un sistema di classificazione istituito dal Regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non comprende un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere allineati o no alla tassonomia.

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?

Sì

Ha effettuato **investimenti sostenibili con un obiettivo ambientale:** ___%

in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE

in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE

Ha effettuato **investimenti sostenibili con un obiettivo sociale:** ___%

No

Ha **promosso caratteristiche ambientali/sociali (A/S)** e pur non avendo come obiettivo un investimento sostenibile, aveva una quota del(lo) ___% di investimenti sostenibili

con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE

con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE

con un obiettivo sociale

Ha promosso caratteristiche A/S, ma **non ha effettuato alcun investimento sostenibile**

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Il Portafoglio ha promosso le seguenti caratteristiche ambientali e sociali:

- **Caratteristiche ambientali:** qualità dell'aria, biodiversità e uso del suolo, gestione dell'energia, esposizione al rischio ambientale, risparmio di carburante, emissioni di gas a effetto serra ("GHG"), opportunità nelle tecnologie pulite, emissioni tossiche e rifiuti, gestione idrica, gestione del ciclo di vita degli imballaggi, approvvigionamento dei materiali e gestione del ciclo di vita dei prodotti.
- **Caratteristiche sociali:** accesso ai finanziamenti; accesso alla sanità; relazioni con la comunità; riservatezza e sicurezza dei dati; incentivi per i dipendenti e assunzione di rischi; salute e nutrizione; salute e sicurezza; sviluppo del capitale umano; gestione del lavoro; sicurezza e integrità dei prodotti; standard lavorativi della catena di approvvigionamento; diversità e inclusione della forza lavoro; trasparenza dei prezzi e marketing responsabile.

La prestazione relativa a queste caratteristiche ambientali e sociali è stata misurata mediante il Quoziente ESG di NB ed è di seguito riportata in forma aggregata.

● Qual è stata la prestazione degli indicatori di sostenibilità?

Nell'ambito del processo di investimento, il Subgestore degli investimenti ha considerato diversi indicatori di sostenibilità per misurare le caratteristiche ambientali e/o sociali promosse dal Portafoglio. Gli indicatori di sostenibilità sono elencati di seguito:

1. Quoziente ESG di NB:

Il sistema proprietario di rating ESG di Neuberger Berman (il "Quoziente ESG di NB") è costruito intorno al concetto di rischio e opportunità ESG specifici del settore e produce un rating ESG complessivo per gli emittenti valutandoli rispetto a determinate metriche ESG.

Il Quoziente ESG di NB si basa sulla matrice di rilevanza proprietaria di Neuberger Berman ("NB"), focalizzata sulle caratteristiche ESG che sono state considerate come i più probabili fattori rilevanti del rischio e delle opportunità ESG per ogni settore. Ogni criterio settoriale è stato costruito usando dati ESG di terzi e ricavati internamente e integrati da un'analisi qualitativa interna, avvalendosi della significativa esperienza settoriale del team di analisti del pertinente Subgestore degli investimenti. La matrice di rilevanza di NB ha permesso al Subgestore degli investimenti di ricavare il rating del Quoziente ESG di NB, per confrontare le caratteristiche ambientali e sociali di settori ed emittenti.

Il Quoziente ESG di NB ha assegnato una ponderazione alle caratteristiche ambientali, sociali e di governance di ogni settore per ricavare il rating del Quoziente ESG di NB per gli emittenti. Gli emittenti con un Quoziente ESG di NB positivo e/o in via di miglioramento hanno avuto maggiori possibilità di essere incluse nel Portafoglio. La probabilità di rimozione dall'universo di investimento o dal Portafoglio è stata maggiore per un'impresa con un basso rating del Quoziente ESG di NB, soprattutto se non affrontato dall'impresa stessa. Il Subgestore degli investimenti ha inoltre cercato di dare priorità agli impegni costruttivi con gli emittenti che avevano un basso rating del Quoziente ESG di NB, al fine di valutare se i timori venivano affrontati in modo adeguato.

	Rating	Copertura combinata
31 dicembre 2022		
Quoziente ESG di NB	ES: B G: 1	100%
Dati di terzi	6,2	

Gli indicatori di sostenibilità misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

Per valutare il Quoziente ESG di NB, nel caso dei rating ambientali e sociali (ES) si usano i quartili da A a D, dove A è la valutazione massima (quartile superiore) e D quella minima (quartile inferiore). Per valutare la governance (G) si usano i quartili da 1 a 4, dove 1 è la valutazione massima e 4 quella minima. Questo Portafoglio non ha un rating minimo del Quoziente ESG di NB. Il rating medio del Quoziente ESG di NB è una media ponderata e non rappresenta un rating della strategia del Portafoglio in sé.

Per misurare le caratteristiche ambientali e sociali promosse dal Portafoglio sono stati usati anche dati di terzi. I rating dei dati di terzi vanno da 0 a 10, dove 0 è la valutazione minima e 10 quella massima.

2. Climate Value-at-Risk:

Nel periodo di riferimento, il Climate Value-at-Risk (“**CVaR**”) ha misurato l'esposizione ai rischi climatici fisici e di transizione. Il CVaR è uno strumento di analisi di scenario che valuta i rischi economici nel quadro di scenari di gradi diversi (ossia, l'entità di riscaldamento previsto) e potenziali contesti normativi in paesi differenti.

Il CVaR è un tipo di analisi di scenario che è definito come il valore attuale dei costi futuri aggregati dei rischi politici, dei profitti da opportunità tecnologiche, nonché dei costi e dei profitti di eventi meteorologici estremi espressi in percentuale del valore di mercato di un titolo o del portafoglio in funzione dello scenario climatico previsto.

Calcolando i rischi finanziari derivanti dai cambiamenti climatici per ciascun titolo e per ogni scenario, il CVaR fornisce un quadro che aiuta a quantificare e comprendere tali rischi. La metrica CVaR approfondisce l'analisi della stima in caso di stress climatico delle attività sulla base di scenari di gradi specifici, offrendo una valutazione di quanto un titolo potrebbe perdere o guadagnare a causa dell'impatto dei cambiamenti climatici.

Al 31 dicembre 2022 il CVaR aveva previsto la possibilità che uno scenario climatico di riscaldamento potesse causare un deprezzamento dell'9,79% delle attività in esame.

Questa analisi intende offrire una panoramica generale dello stile e del processo di investimento del team.

Su base globale, i risultati sono stati valutati dai gestori e analisti di portafoglio del Subgestore degli investimenti. L'analisi dello scenario è servita come punto di partenza per un'ulteriore analisi bottom-up e per individuare i potenziali rischi legati al clima da affrontare tramite l'impegno dell'emittente.

Considerate le limitazioni dei dati, il CVaR non è stato applicato a tutti gli emittenti in Portafoglio ma solo a coloro per i quali il Subgestore degli investimenti disponeva di dati sufficienti e affidabili. Il Portafoglio aveva una copertura CVaR del 93%.

L'analisi CVaR è rivista almeno una volta all'anno.

3. Politiche di esclusione ESG:

Per assicurare il raggiungimento delle caratteristiche ambientali o sociali promosse, il Portafoglio non ha investito in emittenti le cui attività violassero o non fossero coerenti con la Politica di Neuberger Berman in materia di armi controverse e la Politica di Neuberger Berman in materia di coinvolgimento nel carbone termico. Oltre all'applicazione della Politica di Neuberger Berman in materia di coinvolgimento nel carbone termico, il Subgestore degli investimenti ha vietato l'apertura di nuove posizioni di investimento in emittenti che (i) abbiano ottenuto più del 25% dei ricavi dall'estrazione di carbone termico; o (ii) abbiano ampliato la produzione di energia da carbone termico. Inoltre, dal 6 aprile 2022 gli strumenti in Portafoglio non hanno investito in emittenti le cui attività siano state identificate come in violazione della Politica di Neuberger Berman in materia di standard globali, che esclude i soggetti identificati come trasgressori di quanto segue: (i) i principi del Global Compact delle Nazioni Unite (“**Principi del Global Compact delle Nazioni Unite**”), (ii) le linee guida OCSE destinate alle imprese multinazionali (“**Linee guida**

dell'OCSE"), (iii) i principi guida delle Nazioni Unite su imprese e diritti umani ("Principi guida delle Nazioni Unite su imprese e diritti umani") e (iv) gli standard internazionali del lavoro ("Standard OIL"). Dal 28 novembre 2022, il Subgestore degli investimenti ha vietato gli acquisti di emittenti che possiedono, gestiscono o forniscono principalmente servizi integrali a carceri private, considerate le controversie sociali significative, i rischi di reputazione, e la dipendenza dalle politiche del Ministero di Giustizia competente e da strutture non facilmente riconfigurabili per usi alternativi.

Nell'applicare le esclusioni ESG al Portafoglio, il Subgestore degli investimenti ha usato dati di terzi per individuare gli emittenti che violano le esclusioni ESG elencate sopra. Laddove possibile, il Subgestore degli investimenti ha cercato di sovrapporre questi dati di terzi con le competenze qualitative dei propri analisti di ricerca per ottenere un quadro attuale e olistico dell'emittente. Il Subgestore degli investimenti ha discusso e dibattuto le differenze tra i trasgressori individuati dai dati di terzi e quelli identificati a seguito della sua ricerca, che si è basata sui dati del Quoziente ESG di NB e sugli impegni diretti con l'emittente.

● **...e rispetto ai periodi precedenti?**

N.d.; questo è il primo periodo di riferimento.

● **Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario in parte ha realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?**

N.d.; il Portafoglio non si è impegnato a detenere investimenti sostenibili.

● **In che modo gli investimenti sostenibili che il prodotto finanziario in parte ha realizzato non hanno arrecato un danno significativo ad alcun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?**

N.d.; il Portafoglio non si è impegnato a detenere investimenti sostenibili.

— **In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?**

N.d.; il Portafoglio non si è impegnato a detenere investimenti sostenibili.

— **Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:**

Benché il Portafoglio non si sia impegnato a detenere investimenti sostenibili, dal 6 aprile 2022 il Subgestore degli investimenti non ha investito in emittenti le cui attività siano state individuate in violazione delle Linee guida dell'OCSE, dei Principi del Global Compact delle Nazioni Unite, degli Standard OIL e dei Principi guida delle Nazioni Unite su imprese e diritti umani, recepiti dalla Politica di Neuberger Berman in materia di standard globali.

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

La Tassonomia dell'UE stabilisce il principio «non arrecare un danno significativo», in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'Unione.

Il principio «non arrecare un danno significativo» si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri UE per le attività economiche ecosostenibili.

Neppure eventuali altri investimenti sostenibili devono arrecare un danno significativo ad obiettivi ambientali o sociali.

N.d.; il Portafoglio non si è impegnato a detenere investimenti allineati alla tassonomia.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

Una selezione dei principali indicatori di effetti negativi è stata considerata direttamente (ad es. tramite le politiche di esclusione ESG elencate sopra) e/o indirettamente (ad es. nell'ambito della valutazione degli emittenti da parte del Subgestore degli investimenti) per tutto il periodo di riferimento 2022.

Dal 28 novembre 2022, il Subgestore degli investimenti ha considerato i seguenti principali effetti negativi, vale a dire: emissioni di gas a effetto serra, impronta di carbonio, intensità dei gas a effetto serra, esposizione ai combustibili fossili, diversità di genere nel consiglio, violazioni dei Principi del Global Compact delle Nazioni Unite e delle Linee guida dell'OCSE e armi controverse (i **“PAI a livello di prodotto”**).

La considerazione dei PAI a livello di prodotto è stata limitata dalla disponibilità (secondo il parere soggettivo del Subgestore degli investimenti) di una copertura adeguata, affidabile e verificabile dei dati. Il Subgestore degli investimenti ha utilizzato dati di terzi e dati surrogati insieme alla ricerca interna per considerare i PAI a livello di prodotto.

Il Subgestore degli investimenti ha considerato i PAI a livello di prodotto mediante una combinazione di:

- Monitoraggio del Portafoglio, in particolare nel caso in cui sia sceso sotto le soglie di tolleranza quantitative e qualitative stabilite dal Subgestore degli investimenti per ogni PAI a livello di prodotto;
- Gestione e/o definizione di obiettivi di impegno nel caso in cui il Portafoglio sia sceso sotto le soglie di tolleranza quantitative e qualitative stabilite dal Subgestore degli investimenti per un PAI a livello di prodotto; e
- Applicazione delle politiche di esclusione ESG sopra menzionate, che ha compreso la considerazione di vari PAI a livello di prodotto.

Quali sono stati i principali investimenti di questo prodotto finanziario?

Il Subgestore degli investimenti ha usato la ripartizione per settori economici basata sulla classificazione statistica delle attività economiche dell'UE ("NACE") per identificare i settori economici dei 15 principali investimenti del Portafoglio. I dati seguenti sono aggiornati al 31 dicembre 2022.

L'elenco comprende gli investimenti che hanno costituito la **quota maggiore degli investimenti** del prodotto finanziario durante il periodo di riferimento, ossia: 1° gennaio 2022 - 31 dicembre 2022

Investimenti di maggiore entità	Settore	% di attivi	Paese
AMERICAN TOWER REIT CORP	L - Attività immobiliari	8,8%	Stati Uniti
PROLOGIS REIT INC	L - Attività immobiliari	8,0%	Stati Uniti
PUBLIC STORAGE REIT	L - Attività immobiliari	6,3%	Stati Uniti
CROWN CASTLE INC	N - Attività amministrative e di servizi di supporto	6,1%	Stati Uniti
REALTY INCOME REIT CORP	L - Attività immobiliari	4,2%	Stati Uniti
WELLTOWER	L - Attività immobiliari	4,1%	Stati Uniti
DIGITAL REALTY TRUST REIT INC	L - Attività immobiliari	3,5%	Stati Uniti
EQUINIX REIT INC	J - Servizi di informazione e comunicazione	3,3%	Stati Uniti
KIMCO REALTY REIT CORP	L - Attività immobiliari	3,0%	Stati Uniti
SIMON PROPERTY GROUP REIT INC	L - Attività immobiliari	3,0%	Stati Uniti
IRON MOUNTAIN INC	L - Attività immobiliari	3,0%	Stati Uniti
ESSEX PROPERTY TRUST REIT INC	L - Attività immobiliari	3,0%	Stati Uniti
SUN COMMUNITIES REIT INC	L - Attività immobiliari	2,8%	Stati Uniti
EQUITY RESIDENTIAL REIT	L - Attività immobiliari	2,8%	Stati Uniti
SBA COMMUNICATIONS REIT CORP CLASS	L - Attività immobiliari	2,8%	Stati Uniti

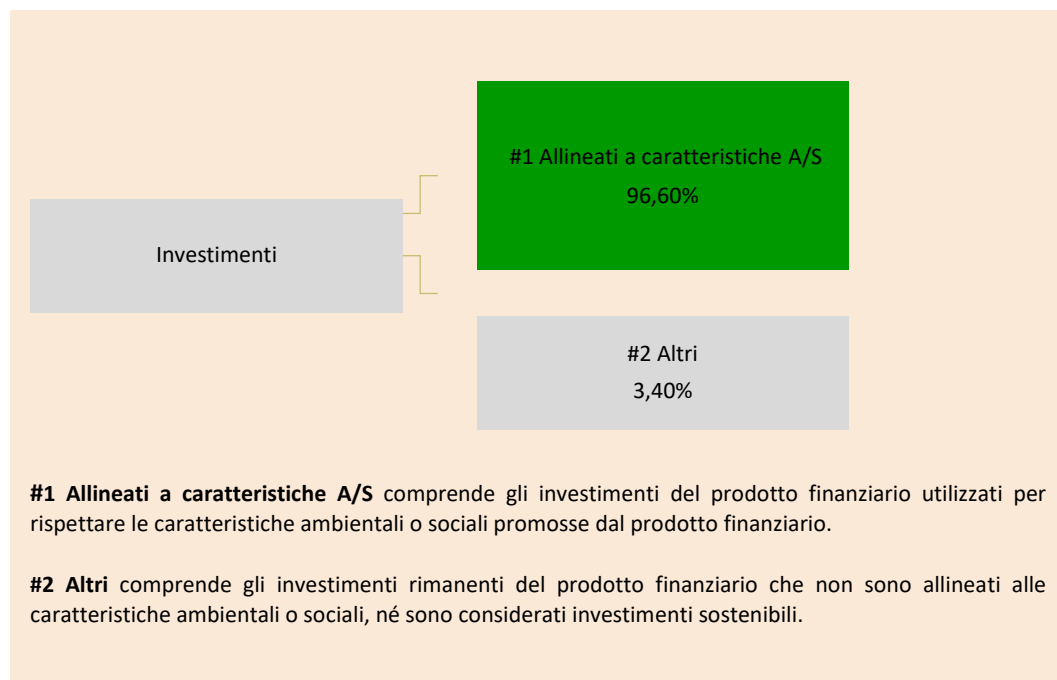

Qual è stata la quota degli investimenti in materia di sostenibilità?

L'**allocazione degli attivi** descrive la quota di investimenti in attivi specifici.

Qual è stata l'allocazione degli attivi?

Il Subgestore degli investimenti ha calcolato la percentuale di investimenti allineati alle caratteristiche ambientali e/o sociali promosse dal Portafoglio in riferimento alla percentuale di emittenti presenti nel Portafoglio: i) che abbiano ottenuto un rating del Quoziente ESG di NB o un rating di terzi equivalente all'ESG e usato nell'ambito del processo di costruzione del portafoglio e di gestione degli investimenti del Portafoglio; e/o ii) con cui il Subgestore degli investimenti si sia impegnato direttamente. Questo calcolo si è basato su una valutazione mark-to-market del Portafoglio e potrebbe avvalersi di dati incompleti o imprecisi dell'emittente o di terzi. Per il solo periodo di riferimento 2022, il calcolo si è basato sulle posizioni in Portafoglio al 31 dicembre 2022, essendo l'unica chiusura trimestrale del periodo di riferimento successiva alla pubblicazione dell'Allegato SFDR del Portafoglio che illustra la sua allocazione degli attivi pianificata. Per tutti i periodi di riferimento successivi, questo calcolo si baserà sulla media delle quattro chiusure trimestrali.

● ***In quali settori economici sono stati effettuati gli investimenti?***

Dati al 31 dicembre 2022	
Settore economico – NACE	% di attivi
C - Attività manifatturiere	2,03%
J - Servizi di informazione e comunicazione	3,37%
K - Attività finanziarie e assicurative	1,61%
L - Attività immobiliari	86,67%
N - Attività amministrative e di servizi di supporto	6,31%

Per conformarsi alla tassonomia dell'UE, i criteri per il **gas fossile** comprendono limitazioni delle emissioni e il passaggio all'energia da fonti totalmente rinnovabili o ai combustibili a basse emissioni di carbonio entro la fine del 2035. Per **l'energia nucleare**, i criteri comprendono norme complete in materia di sicurezza e gestione dei rifiuti.

Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale.

- Le **attività di transizione** sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano, tra l'altro, livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

In quale misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Gli obblighi di informativa e di analisi introdotti dalla tassonomia dell'UE sono molto dettagliati e la loro osservanza richiede la disponibilità di numerosi dati specifici per ogni investimento effettuato dal Portafoglio. Il Subgestore degli investimenti non può confermare che il Portafoglio abbia effettuato collocamenti in investimenti considerati ecosostenibili ai fini della tassonomia dell'UE. Le informative e la reportistica sull'allineamento della tassonomia verranno sviluppate man mano che il quadro UE si evolverà e gli emittenti renderanno disponibili i dati. Il Subgestore degli investimenti terrà sotto controllo la misura in cui gli investimenti sostenibili con un obiettivo ambientale sono allineati alla tassonomia dell'UE, con il miglioramento della disponibilità e della qualità dei dati.

● Il prodotto finanziario ha investito in attività connesse al gas fossile e/o all'energia nucleare che erano conformi alla tassonomia dell'UE¹?

Sì:

Gas fossile

Energia nucleare

No

¹ Le attività connesse al gas fossile e/o all'energia nucleare sono conformi alla tassonomia dell'UE solo se contribuiscono all'azione di contenimento dei cambiamenti climatici ("mitigazione dei cambiamenti climatici") e non arrecano un danno significativo ad alcuno degli obiettivi della tassonomia dell'UE - cfr. nota esplicativa sul margine sinistro. I criteri completi riguardanti le attività economiche connesse al gas fossile e all'energia nucleare che sono conformi alla tassonomia dell'UE sono stabiliti nel regolamento delegato (UE) 2022/1214 della Commissione.

I due grafici che seguono mostrano in verde la percentuale di investimenti che erano allineati alla tassonomia dell'UE. Poiché non esiste una metodologia adeguata per determinare l'allineamento delle obbligazioni sovrane alla tassonomia, il primo grafico mostra l'allineamento alla tassonomia in relazione a tutti gli investimenti del prodotto finanziario comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.*

*Ai fini dei grafici di cui sopra, per "obbligazioni sovrane" si intendono tutte le esposizioni sovrane.

Le attività allineate alla tassonomia sono espresse in percentuale di:

- **fatturato:** quota di entrate da attività verdi delle imprese beneficiarie degli investimenti.
- **spese in conto capitale (CapEx):** investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, ad esempio per la transizione verso un'economia verde.
- **spese operative (OpEx):** attività operative verdi delle imprese beneficiarie degli investimenti.

● **Qual era la quota degli investimenti effettuati in attività di transizione e abilitanti?**

N.d.; il Portafoglio non si è impegnato a detenere investimenti allineati alla tassonomia.

● **Qual è l'esito del raffronto della percentuale di investimenti che erano allineati alla tassonomia dell'UE rispetto ai precedenti periodi di riferimento?**

N.d.; il Portafoglio non si è impegnato a detenere investimenti allineati alla tassonomia.

sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

Qual era la quota minima di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?

N.d.; il Portafoglio non si è impegnato a detenere investimenti sostenibili.

Qual era la quota di investimenti socialmente sostenibili?

N.d.; il Portafoglio non si è impegnato a detenere investimenti sostenibili.

Quali investimenti erano compresi nella categoria "Altri", qual era il loro scopo ed esistevano garanzie minime di salvaguardia ambientale o sociale?

La categoria "Altri" comprendeva i restanti investimenti del Portafoglio (inclusi, a titolo esemplificativo ma non esaustivo, i derivati o i titoli garantiti da un pool di attività o crediti simili elencati nel Supplemento al Portafoglio) che non erano allineati alle caratteristiche ambientali o sociali, né considerati investimenti sostenibili.

La sezione "Altri" del Portafoglio è stata detenuta per diversi motivi ritenuti dal Subgestore degli investimenti vantaggiosi per il Portafoglio quali, a titolo esemplificativo ma non esaustivo, la gestione del rischio, e/o per assicurare liquidità, copertura e garanzia adeguate.

Come indicato in precedenza, il Portafoglio è stato investito in conformità con le politiche di esclusione ESG, su base continuativa. In questo modo si è garantito che gli investimenti effettuati dal Portafoglio fossero in linea con le garanzie internazionali minime di salvaguardia ambientale o sociale, come i Principi del Global Compact delle Nazioni Unite, i Principi guida delle Nazioni Unite su imprese e diritti umani, le Linee guida dell'OCSE e gli Standard OIL.

Il Subgestore degli investimenti ritiene che queste politiche abbiano impedito l'investimento negli emittenti che hanno violato in modo più eclatante gli standard minimi ambientali e/o sociali e abbiano garantito al Portafoglio di promuovere con successo le sue caratteristiche ambientali e sociali.

Le suddette misure hanno assicurato l'adozione di solide garanzie minime di salvaguardia ambientale e sociale.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Il Portafoglio è stato gestito in linea con l'obiettivo di investimento e sono state intraprese le seguenti azioni:

I. Integrazione dell'analisi ESG proprietaria:

I rating del Quoziente ESG di NB sono stati generati per le posizioni degli emittenti in Portafoglio. Il rating del Quoziente ESG di NB per gli emittenti è stato utilizzato per semplificare l'individuazione di rischi e opportunità nella valutazione complessiva.

Integrando l'analisi ESG proprietaria del team di investimento (il Quoziente ESG di NB) nella considerazione complessiva dell'emittente, si è creato un collegamento diretto tra l'analisi delle caratteristiche ESG sostanziali e le attività di costruzione del portafoglio nella strategia di investimento.

Gli emittenti con un Quoziente ESG di NB o un rating di terzi positivo e/o in via di miglioramento hanno avuto maggiori possibilità di essere incluse nel Portafoglio. La probabilità di rimozione dall'universo di investimento o dal Portafoglio è stata maggiore per un emittente con un basso rating del Quoziente ESG di NB, soprattutto se non affrontato dall'emittente stesso.

II. Impegno:

Il Subgestore degli investimenti si è impegnato con gli emittenti nel quadro di un solido programma di impegno ESG. Hanno cercato di dare priorità agli impegni costruttivi e di impegnarsi su tematiche (comprese quelle ESG) a loro giudizio finanziariamente rilevanti per l'emittente pertinente. Il Subgestore degli investimenti ha considerato questo impegno con gli emittenti una parte importante del suo processo di investimento. I progressi in materia di impegno sono stati monitorati a livello centrale nello strumento di tracciamento dell'impegno del Subgestore degli investimenti.

III. Politiche di esclusione settoriale ESG:

Per assicurare il raggiungimento delle caratteristiche ambientali e sociali promosse, il Portafoglio ha applicato le politiche di esclusione ESG sopra menzionate, che hanno posto limitazioni all'universo investibile.

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?

N.d.; l'indice di riferimento del Portafoglio non è stato designato come indice di riferimento. Pertanto, non è coerente con le caratteristiche ambientali e sociali promosse dal Portafoglio.

- ***In che modo l'indice di riferimento differisce da un indice generale di mercato?***
n.d.
- ***Qual è stata la prestazione di questo prodotto finanziario in relazione agli indicatori di sostenibilità per determinare l'allineamento dell'indice di riferimento con le caratteristiche ambientali o sociali promosse?***
n.d.
- ***Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?***
n.d.
- ***Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice generale di mercato?***
n.d.

Gli **indici di riferimento** sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: European Equity Fund

Legal entity identifier: 213800WYXNEU5CDV6M15

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes
 No

<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics : and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective <input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments
---	---

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Sub-Fund promotes environmental and social characteristics (i.e. maintaining a lower blended environmental intensity than its benchmark) by making investments in companies that meet the standards of the Investment Manager’s proprietary sustainability assessments and by excluding investments in certain sectors or business areas.

Given the Investment Manager’s focus on these characteristics, the Sub-Fund’s blended environmental intensity is lower than the broader market, which is expressed as the Sub-Fund’s benchmark. As such, the environmental characteristics promoted by this Sub-Fund have been met.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

	GHG (tonnes/€m)	Waste (tonnes/€m)	Water (m3/€m)
MSCI Europe weighted-average	239.8	4.6	381.9
Portfolio weighted-average	230.0	4.5	311.5
Relative difference	-4%	-3%	-18%
% of Sub-Fund lower than benchmark weighted-average	72.2%	80.3%	80.3%

As at year-end 2022 (31 December 2022), the Sub-Fund had a blended environmental intensity that was 8.6% lower than the broader market.

The blended environmental intensity is a proprietary metric representing an equally-weighted combination of greenhouse gas (GHG) emissions intensity*, landfill waste intensity, and water purchased intensity. The relative blended environmental intensity is an average of the percentage (%) differences in each the three weighted-average environmental intensities (GHG, waste and water) calculated for the Sub-Fund and its benchmark, where the weights represent the size of each holding.

For GHG, waste and water intensities, the percentage of the Sub-Fund invested in companies with an intensity lower than the benchmark’s weighted-average was 72.2%, 80.3% and 80.3% respectively.

*The Investment Manager has used Carbon Direct + First Tier indirect intensity which comprises of Scope 1 & 2 greenhouse gas intensity, plus a company’s first-tier upstream supply chain.

● **...and compared to previous periods? [include for financial products where at least one previous periodic report was provided]**

N/A

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

N/A

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

N/A

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

As part of the in-depth fundamental analysis on an individual company, the following principal adverse impact indicators are currently considered for the Sub-Fund’s investments:

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

PAI Indicator	Metric	Year	Value	Commentary
GHG intensity	Scope 1 & 2 GHG intensity of investee companies	2022	110.2	<p>Engie was the largest contributor to the Sub-Fund’s GHG intensity. Considering the sector, this was deemed not to be a material negative impact and in line with expectations.</p> <p>Engie is a company positioned to benefit from Europe’s push to become more energy sufficient through decarbonised sources. It has committed to a SBTi aligned plan to reduce emissions by 2030, while also announcing plans to achieve net zero carbon emissions by 2045. The plan includes rapidly phasing out coal power in Europe by 2025, and globally by 2027, while investing considerably in renewable energy sources, which will account for around 40-45% of growth capital expenditure going forward and should, along with networks, be the key driver of Engie’s future earnings growth. SBTi report significant progress at Engie which has achieved ~65% of planned 2030 emission reductions already (vs. 2017 base year).</p>

* All Carbon Metrics will include Scope 3 Carbon Emissions from 1 January 2023.

In addition, the Sub-Fund has not invested in companies in relation to the following principal adverse impacts:

- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises.

- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons).

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 2022

Largest investments	Sector	% Assets	Country
Novo Nordisk A/s	Health Care	3.6	Denmark
Bp Plc	Energy	3.5	United Kingdom
HSBC Holdings Plc	Financials	3.2	United Kingdom
Qiagen Nv	Health Care	3.1	Netherlands
Roche Holding Ag	Health Care	3.0	Switzerland
Merck KgaA	Health Care	2.8	Germany
Universal Music Group Nv	Communication Services	2.7	Netherlands
Eni Spa	Energy	2.7	Italy
LVMH Moet Hennessy Louis Vuitton	Consumer Discretionary	2.6	France
Deutsche Telekom Ag	Communication Services	2.4	Germany
Sanofi	Health Care	2.4	France
UBS Group Ag	Financials	2.2	Switzerland
Bank Of Ireland Group Plc	Financials	2.2	Ireland
Reckitt Benckiser Group Plc	Consumer Staples	2.1	United Kingdom
Siemens Ag	Industrials	2.0	Germany

What was the proportion of sustainability-related investments?

● *What was the asset allocation?*

Asset allocation describes the share of investments in specific assets.

Overall Asset Allocation	% of Total Sub-Fund Value
#1 Investments aligned with the Sub-Fund's promoted environmental or social characteristics	77.6%
#2 Other, i.e. investments neither aligned with environmental or social characteristics, nor qualified as sustainable investments within the meaning of Article 2(17) SFDR	22.4%
#1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments within the meaning of Article 2(17) SFDR	77.6%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- **In which economic sectors were the investments made?**
Communication services, consumer discretionary, consumer staples, energy, financials, health care, industrials, information technology, materials, utilities.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

Yes:

in fossil gas in nuclear energy

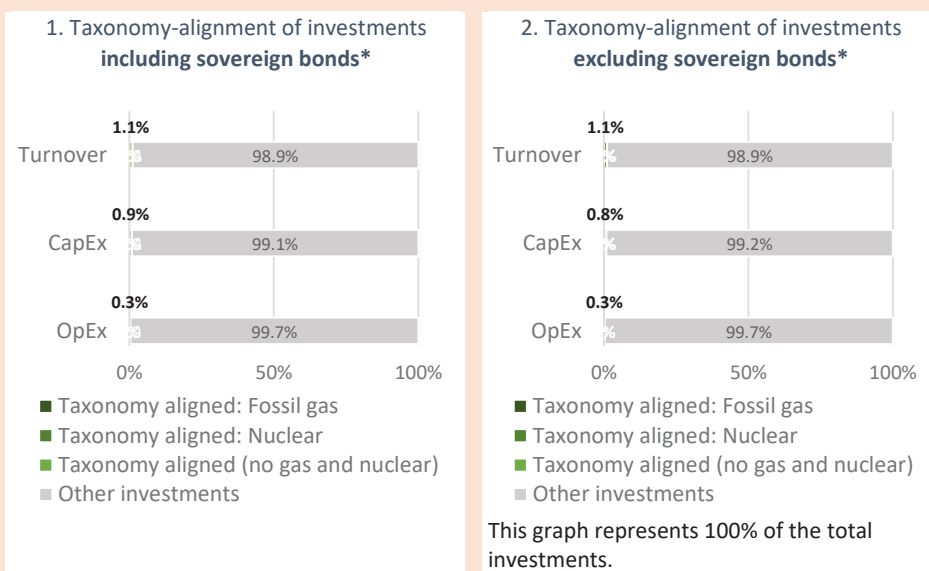

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflects the “greenness” of investee companies today.
- capital expenditure (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- operational expenditure (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

Taxonomy-aligned investments contributed to environmental objectives set out in Regulation (EU) 2020/852 as follows:

EU Taxonomy-alignment, weighted by Taxonomy-aligned revenue	% of Total Sub-Fund Value
Climate change mitigation	2%
Climate change adaptation	0%

● **What was the share of investments made in transitional and enabling activities?**

EU Taxonomy alignment, weighted by Taxonomy-aligned revenue	% of Total Sub-Fund Value
Transitional activities	0%
Enabling activities	0.2%

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A

The aforementioned investments have not been subject to an assurance by an auditor or a third party.

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Sub-Fund does not currently commit to invest in any sustainable investments within the meaning of Article 2(17) SFDR or the EU Taxonomy Regulation.

What was the share of socially sustainable investments?

N/A

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

‘#2 Other’ includes investments that support the financial objective and other management activities of the Sub-Fund such as:

- equities that are considered not aligned with E/S characteristics;
and
- cash held for liquidity purposes as an ancillary asset, deposits, and money market instruments

No minimum environmental or social safeguards are applied. Such investments will not usually represent a material proportion of the Sub-Fund’s.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

All new investments have been selected in line with the Investment Manager’s sustainability framework. Existing investments are monitored against the same framework.

The Investment Manager implements active stewardship and its right as a shareholder to preserve and grow its clients' assets, including engagement with the companies in which it invests. The extent of engagement activities will vary depending on the materiality of any adverse impacts, ability to exert influence, and the nature and severity of the potential issue.

In addition, where significant adverse impacts are identified or there is potential non-compliance with good governance requirements, the Investment Manager will identify the materiality of these and the potential need for engagement to address these issues. Further information on the Investment Manager’s approach to engagement is available on its website:

<https://ninetyone.com/-/media/documents/sustainability/91-sustainability-and-stewardship-report-2022-en.pdf>

<https://ninetyone.com/-/media/documents/stewardship/91-esg-ownership-policy-and-proxy-guidelines-en.pdf>

During the reporting period (12 months to end of December 2022), the European Equity team was involved with seven company-specific engagements. These engagements covered a range of issues covering sustainability reporting, governance, remuneration, diversity and inclusion, health and safety and carbon emissions.

The Investment Manager has voted all proxies.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-Fund.

● ***How does the reference benchmark differ from a broad market index?***

N/A

● ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

N/A

● ***How did this financial product perform compared with the reference benchmark?***

N/A

● ***How did this financial product perform compared with the broad market index?***

N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Global Franchise Fund

Legal entity identifier: 213800ENHEQTIA6IRV12

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

It made **sustainable investments with an environmental objective:** ___%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** ___%

No

It **promoted Environmental/Social (E/S) characteristics:** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Sub-Fund promotes better carbon outcomes (i.e. maintaining a carbon profile lower than the Sub-Fund's benchmark) by making investments in companies that meet the standards of the Investment Manager's proprietary sustainability assessments and by excluding investments in certain sectors or business areas (deemed incompatible with a net zero future).

Given the Investment Manager's consistent focus on high-quality, capital-light sustainable businesses, with zero exposure to heavily capital intensive, high-emission sectors such as energy, utilities and resources, the Sub-Fund's carbon profile remains far superior relative to the broader market. As such, the environmental characteristics promoted by this product have been met.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Sustainability indicator	Metric	Year	Fund	Benchmark	Fund carbon profile vs benchmark
Carbon profile	Tons of CO2e / US\$m invested	2022	80.7	442.1	-85%
		2021	53.3	284.7	-84%

The Sub-Fund has maintained a carbon profile that is 85 % lower than the broader market. The biggest contributors to the increase in absolute emissions at the Sub-Fund level (in line with the benchmark) were Samsung Electronics, Nestle and Microsoft.

The 5 largest contributors to the Sub-Fund’s carbon profile were, in order of magnitude (position izes are shown in brackets):

- Samsung Electronics (1.7%)
- St. James’s Place (1.7%)
- Nestle (4.4%)
- Beiersdorf (3.8%)
- Booking Holdings (4.8%)

● **...and compared to previous periods? [include for financial products where at least one previous periodic report was provided]**

N/A

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

N/A

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

N/A

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

As part of the in-depth fundamental analysis of an individual company, the following principal adverse impacts have been considered as part of the Sub-Fund’s investments:

PAI indicator	Metric	Year	Value	Commentary
GHG emissions	Scope 1 & 2 GHG Emissions Contribution (EVIC) tCO2e	2022	23,024.1	Samsung Electronics was the largest contributor to the Sub-Fund’s GHG emissions and carbon footprint. Considering the sector, this was deemed not to be a material negative impact and in line with expectations.
Carbon footprint	Scope 1 & 2 Carbon Footprint Contribution tCO2e/m € invested	2022	3.2	
GHG intensity	Scope 1 & 2 GHG intensity of investee companies tCO2e/m € revenue	2022	13.0	Nestle was the largest contributor to the Sub-Fund’s GHG intensity, primarily due to the size of the company and its position size in the Sub-Fund. This was deemed not to be a material negative impact, as Nestle has made significant climate-related commitments, including reducing GHG emissions by 50% by 2030.

* All Carbon Metrics will include Scope 3 Carbon Emissions from 1 January 2023.

In addition, the Sub-Fund has not invested in companies in relation to the following principle adverse impacts:

- Exposure to companies active in the fossil fuel sector.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons).

Where material adverse impacts are identified, the Investment Manager will engage directly with company management or sovereign stakeholders and/or exercise proxy voting rights in an effort to catalyse change.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 2022

Largest investments	Sector	% Assets	Country
Visa Inc	Information Technology	8.6	United States
Microsoft Corp	Information Technology	5.9	United States
ASML Holding Nv	Information Technology	5.8	Netherlands

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

● What was the asset allocation?

Overall Asset Allocation	% of Total Sub-Fund Value
#1 Investments aligned with the Sub-Fund's promoted environmental or social characteristics	97.6%
#2 Other, i.e. investments neither aligned with environmental or social characteristics, nor qualified as sustainable investments within the meaning of Article 2(17) SFDR	2.4%
#1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments within the meaning of Article 2(17) SFDR	97.6%

● ***In which economic sectors were the investments made?***

Communication services, consumer discretionary, consumer staples, financials, health care, information technology.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

● ***Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?***

- Yes:
- in fossil gas in nuclear energy
- No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

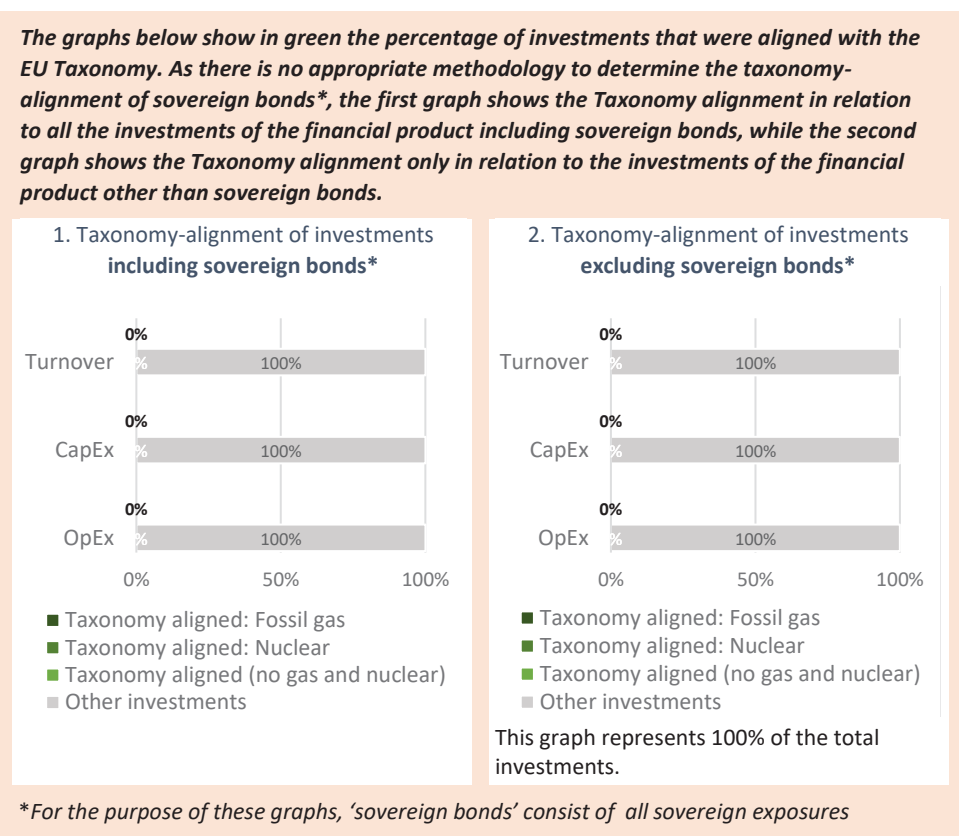

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure** (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflects the green operational activities of investee companies.

Taxonomy-aligned investments contributed to environmental objectives set out in Regulation (EU) 2020/852 as follows:

EU Taxonomy-alignment, weighted by Taxonomy-aligned revenue	% of Total Sub-Fund Value
Climate change mitigation	0%
Climate change adaptation	0%

● **What was the share of investments made in transitional and enabling activities?**

EU Taxonomy-alignment, weighted by Taxonomy-aligned revenue	% of Total Sub-Fund Value
Transitional activities	0%
Enabling activities	0%

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Sub-Fund does not currently commit to invest in any sustainable investments within the meaning of Article 2(17) SFDR or the EU Taxonomy Regulation, accordingly the minimum share of sustainable investments with an environmental objective that was not aligned with the EU Taxonomy is 0%.

What was the share of socially sustainable investments?

N/A

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

‘#2 Other’ includes investments that support the financial objective and other management activities of the Sub-Fund, such as:

- equities that are considered not aligned with E/S characteristics;
and
- cash held for liquidity purposes as an ancillary asset, deposits and money market instruments.

No minimum environmental or social safeguards are applied.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

All new investments have been selected in line with the Investment Manager’s sustainability framework. Existing investments are monitored against the same framework.

The Investment Manager implements active stewardship and its right as a shareholder to preserve and grow its clients' assets, including engagement with the companies in which it invests. The extent of engagement activities will vary depending on the materiality of any adverse impacts, ability to exert influence, and the nature and severity of the potential issue.

In addition, where significant adverse impacts are identified or there is potential non-compliance with good governance requirements the Investment Manager will identify the materiality of these and the potential need for engagement to address these issues. Further information on the Investment Manager’s approach to engagement is available on its website.

<https://ninetyone.com/-/media/documents/sustainability/91-sustainability-and-stewardship-report-2022-en.pdf>

<https://ninetyone.com/-/media/documents/stewardship/91-esg-ownership-policy-and-proxy-guidelines-en.pdf>

Over the last 12 months, the Investment Manager has made good progress further developing its proprietary tools and methodologies to enhance the integration of carbon analysis into its research process and valuation analysis. The Investment Manager has developed and completed a proprietary Climate Strategy Assessment for all existing holdings, as well as new ideas, which evaluates companies across fifteen criteria, including: net zero commitments, short- and long-term quantitative targets for reducing emissions and whether these are SBTi certified, CDP

disclosure, executive remuneration linked to climate change performance, and the appointment of a board member or committee with responsibility for the company's climate change strategy.

The output of this analysis helps the Investment Manager prioritise engagement with those companies identified as having little or no carbon emissions disclosure, and/or do not yet have credible net zero targets and transition pathways in place that are aligned with the Paris Agreement. During the period, the Investment Manager proactively engaged with the lowest scoring companies, according to its proprietary Climate Strategy Assessment. Whilst acknowledging that many of these holdings do not have inherently carbon intensive business models, formal letters were sent to six Sub-Fund companies urging them to take the lead on decarbonisation and take more affirmative steps on climate change. The Investment Manager also continued its engagement with other companies where this had already been initiated.

Examples of positive steps subsequent to engagement include:

Company	Sector	Outcome
Samsung Electronics	Information Technology	Announced a new environmental strategy, which included a commitment to achieve net zero emissions by 2050.
FactSet	Financials	Announced commitment to set a near-term, company-wide emission reduction target in line with the SBTi, as well as pledging to achieve net zero emissions by 2040.
EA	Communication Services	Committed to publishing Scope 1 & 2 emissions by year-end and disclosing targets in due course, which will likely be aligned with the SBTi.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-Fund.

● ***How does the reference benchmark differ from a broad market index?***

N/A

● ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

N/A

● ***How did this financial product perform compared with the reference benchmark?***

N/A

● ***How did this financial product perform compared with the broad market index?***

N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Global Multi-Asset Income Fund

Legal entity identifier: 213800ATCFTXLMWF1N08

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** ___%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** ___%

It **promoted Environmental/Social (E/S) characteristics:** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Sub-Fund promotes environmental and/or social characteristics by investing in companies and countries considered by the Investment Manager as having policies, operations and/or business models that aim to manage their harmful effects on society and the environment, or whose products and/or services benefit society and the environment. Additionally, the Investment Manager excludes investments in certain business groups and activities.

The Investment Manager uses a proprietary sustainability framework to analyse the material harmful and/or beneficial effects that a company or country has on society or the environment.

In accordance with the proprietary sustainability framework, the Investment Manager has appraised that over 51% of the assets held in the Sub-Fund are deemed to promote environmental and social

characteristics. As such, the environmental and/or social characteristics promoted by this product have been met.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Company investments

Indicator	Metric	Year*	Value	Commentary
Scope 1, 2 & 3 carbon footprint	in tonnes of CO2e per US\$m invested	2022	169.5	These values are based on the aggregate weightings of the companies within the overall Sub-Fund. The biggest individual company contributors include a mining company (Rio Tinto), which has a carbon intensive business, and a car manufacturer (Volkswagen) which has the majority of its carbon emissions categorised as Scope 3. Rio Tinto's activities are important in enabling the energy transition. Volkswagen is focusing its future growth on electric vehicles. Both have carbon emission reduction plans in place, with VW's being Science-Based Target Initiative ("SBTi") approved.
Scope 1, 2 & 3 – weighted average carbon intensity	in tonnes per CO2e per US\$m or revenue	2022	281.9	
Proportion of companies in the Sub-Fund which disclose carbon emissions figures	%	2022	Scope 1 & 2 = 63.5% All Scope 3 categories = 8.4%	Over time the Investment Manager has seen improvement in the Sub-Fund's public companies' reporting of carbon data and will continue to engage with companies to improve Scope 1 & 2, and all Scope 3 categories' disclosure. These values are skewed downwards due to the presence of several corporate bonds issued by private companies, which in general are not as advanced in reporting this data.
Percentage of direct equity holdings with credible net zero plans in place**	%	2022	38.5%	There has been growth in the adoption of SBTi approved net zero plans. The Investment Manager will continue to engage with companies to set credible net zero plans
Percentage of companies invested in the	% of equity	2022	0.0%	There is no exposure to companies invested in the business groups or activities

business groups or activities prohibited under the Sub-Fund's exclusions criteria				prohibited under the Sub-Fund's exclusions criteria
---	--	--	--	---

*The above carbon disclosure is based on data from companies as at the end of financial year 2020 where available. This data has been applied to Sub-Fund position weightings as at the end of financial year 2022. While carbon reporting is improving significantly, it is still subject to a significant time lag. Where company reported emissions data is not available, estimates from MSCI have been used. Carbon data can be subject to significant variation depending on the data provider used.

**For the purposes of this reporting, the Investment Manager has defined "companies with credible net zero plans" as those companies with plans approved by the Science-Based Target Initiative ("SBTi"). This is therefore a conservative assessment as the Sub-Fund additionally includes companies with net zero plans that are not yet SBTi approved.

Country investments

Country carbon emissions (Emissions intensity per GDP basis) – the following table shows the top 10 country exposures by Sub-Fund weighting:

Country	Emissions intensity per GDP basis (tCO2e/million \$ GDP)*
United States	270.1
Australia	437.2
Canada	445.5
Mexico	528.5
New Zealand	340.1
South Africa	1449.2
Brazil	774.9
Indonesia	1751.2
Colombia	837.3
Peru	835.0

*Given the complexities of calculating the emissions data for countries, there is a significant time lag. This data relates to 2019.

- ***...and compared to previous periods? [include for financial products where at least one previous periodic report was provided]***

N/A

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

N/A

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

N/A

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The investment process implemented by the Investment Manager allows it to identify and prioritise the potential adverse sustainability impacts of investment decisions (particularly as part of the fundamental analysis stage) and to demonstrate that each investment decision made by the Investment Manager does not significantly harm other environmental or social objectives.

PAI Indicator	Metric	Year*	Value	Commentary
GHG Emissions	Scope 1 & 2 GHG Emissions Contribution (EVIC) tCO2e	2022	26,255.0	These values are based on the aggregate weightings of the companies within the overall Sub-Fund. A mining company

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Carbon Footprint	Scope 1 & 2 Carbon Footprint Contribution (EVIC) tCO2e/m € invested	2022	15.2	(Rio Tinto) and an energy infrastructure company (Kinder Morgan) are responsible for a reasonable proportion of these measures given the carbon intensive nature of their businesses. Their activities are important in enabling the energy transition and therefore exposure to these companies is deemed not to result in material negative impacts.
GHG intensity	Scope 1 & 2 GHG intensity of investee companies tCO2e/m € revenue	2022	46.4	

*The above carbon disclosure is based on data from companies as at the end of financial year 2020 where available. This data has been applied to Sub-Fund position weightings as at the end of financial year 2022. While carbon reporting is improving significantly, it is still subject to a significant time lag. Where company reported emissions data is not available, estimates from MSCI have been used. Carbon data can be subject to significant variation depending on the data provider used.

These carbon metrics will include Scope 3 Carbon Emissions from 1 January 2023.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 2022

Largest investments	Sector	% Assets	Country
United States Treasury Note/bo 2.75 Nov 15 42	Developed Market Sovereign	4.5	United States

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

● *What was the asset allocation?*

Overall Asset Allocation	% of Total Sub-Fund Value
#1 Investments aligned with the Sub-Fund's promoted environmental or social characteristics	91.7%
#2 Other, i.e. investments neither aligned with environmental or social characteristics, nor qualified as sustainable investments within the meaning of Article 2(17) SFDR	8.3%
#1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments within the meaning of Article 2(17) SFDR	91.7%

● *In which economic sectors were the investments made?*

Equity, Developed Market Sovereign, Emerging Market Hard Currency Debt, Emerging Market Local Currency Debt, Investment Trust, Collective Investment Scheme, High Yield Corporate, Investment Grade Corporate.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

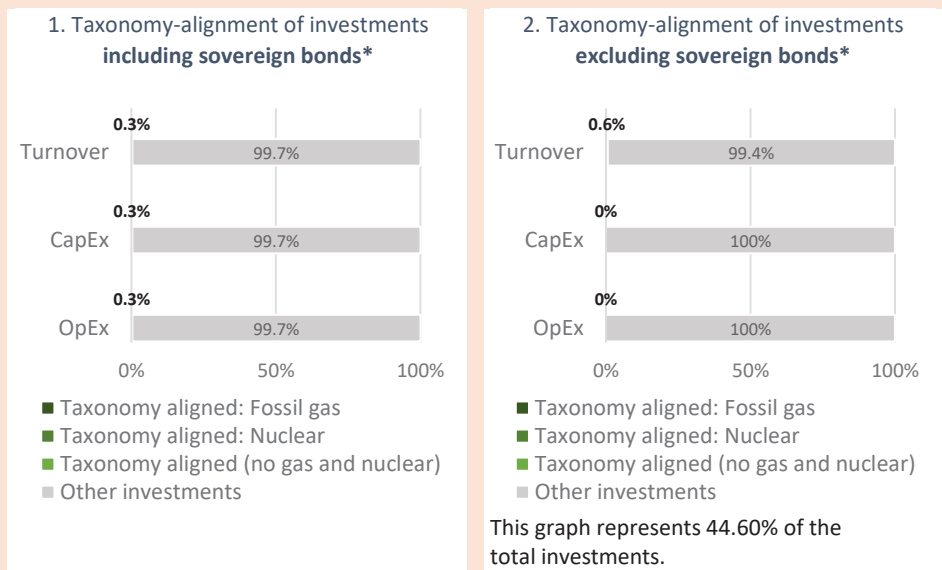

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

Yes:

in fossil gas in nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

Sovereign exposure accounts for 55.4% of the total Sub-Fund value.

The EU Taxonomy regulation does not currently provide an appropriate methodology to calculate to what extent exposures to central governments, central banks and supranational issuers ('sovereign exposures') are exposed to environmentally sustainable economic activities.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned investments contributed to environmental objectives set out in Regulation (EU) 2020/852 as follows:

EU Taxonomy-alignment, weighted by Taxonomy-aligned revenue	% of Total Sub-Fund Value
Climate change mitigation	0.3%
Climate change adaptation	0%

● **What was the share of investments made in transitional and enabling activities?**

EU Taxonomy-alignment, weighted by Taxonomy-aligned revenue	% of Total Sub-Fund Value
Transitional activities	0%
Enabling activities	0.3%

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A

The Taxonomy-alignment figure is determined using vendor data which only includes alignment based on reported data, therefore this may represent a more conservative figure.

The aforementioned investments have not been subject to an assurance by an auditor or a third party.

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Sub-Fund does not currently commit to invest in any sustainable investments within the meaning of Article 2(17) SFDR or the EU Taxonomy Regulation.

What was the share of socially sustainable investments?

N/A

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

'#2 Other' includes (1) investments previously '#1 aligned with E/S characteristics' which are under the Investment Manager's review due to an unforeseen event (e.g. a controversy); and (2) investments that support the financial objective and other management activities of the Sub-Fund, such as:

- Cash held for liquidity purposes as an ancillary asset or overnight deposits; and
- derivatives used for hedging, efficient portfolio management and/or investment purposes

No minimum environmental or social safeguards are applied to investments held for liquidity purposes (e.g. cash or deposits).

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

All new investments have been selected in line with the Investment Manager's sustainability framework. Existing investments are monitored against the same framework.

The Investment Manager implements active stewardship and its right as a shareholder to preserve and grow its clients' assets, including engagement with the companies in which it invests. The extent of engagement activities will vary depending on the materiality of any adverse impacts, ability to exert influence, and the nature and severity of the potential issue.

In addition, where significant adverse impacts are identified or there is potential non-compliance with good governance requirements the Investment Manager will identify the materiality of these and the potential need for engagement to address these issues. Further information on the Investment Manager's approach to engagement is available on its website:

<https://ninetyone.com/-/media/documents/sustainability/91-sustainability-and-stewardship-report-2022-en.pdf>

<https://ninetyone.com/-/media/documents/stewardship/91-esg-ownership-policy-and-proxy-guidelines-en.pdf>

Over the period, the Investment Manager has engaged with companies on a broad range of topics including climate change, corporate culture and board effectiveness. One such engagement was with Samsung Electronics, a global producer of consumer and industry electronics, who the Investment Manager encouraged to adopt net zero targets and to ensure these were science-based and include tangible milestones. The Investment Manager also had a meeting with the chairman of Rio Tinto, a global leader in metals and mining, to raise concerns about board effectiveness and experience. The Investment Manager expressed a desire to see higher calibre individuals elected to the board, namely those with operational mining experience. Finally, the Investment Manager engaged with Partners Group, a Swiss private equity company, to discuss its efforts to build a diverse and inclusive work environment. The Investment Manager shared its bespoke framework for corporate culture assessment and insights it had accumulated related to driving higher levels of inclusion and diversity.

The Investment Manager has voted all proxies.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-Fund.

N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How did this financial product perform compared with the broad market index?***

N/A

Per **investimento sostenibile** si intende un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, purché tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e l'impresa beneficiaria degli investimenti segua prassi di buona governance.

La **tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non stabilisce un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere allineati o meno alla tassonomia.

Gli **indicatori di sostenibilità** misurano il rispetto delle caratteristiche ambientali o sociali promosse dal prodotto finanziario.

Nome del prodotto: NN (L) Global Bond Opportunities

Identificativo della persona giuridica:
T2ZOQHM6GGM8113ON397

Caratteristiche ambientali e/o sociali

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?

Sì

No

Ha effettuato **investimenti sostenibili con un obiettivo ambientale: __%**

in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE

in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE

Ha effettuato **investimenti sostenibili con un obiettivo sociale: __%**

Ha **promosso caratteristiche ambientali/sociali (A/S)** e pur non avendo come obiettivo un investimento sostenibile, aveva una quota del(lo) __% di investimenti sostenibili

con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE

con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE

con un obiettivo sociale

Ha promosso caratteristiche A/S, ma **non ha effettuato alcun investimento sostenibile**

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Nel periodo di riferimento, le norme tecniche di regolamentazione (RTS) dell'SFDR non erano ancora applicabili e il modello di informativa precontrattuale incluso nelle RTS dell'SFDR (Allegato II) non era ancora disponibile per questo Comparto. Nel periodo di riferimento, il prospetto informativo non conteneva alcun impegno esplicito a effettuare Investimenti sostenibili come definiti nell'SFDR. Gli indicatori di sostenibilità scelti riflettono le caratteristiche ambientali e sociali promosse dal Comparto, ma non sono stati inclusi nel prospetto informativo applicabile nel periodo di riferimento.

Nel periodo di riferimento, il Comparto ha promosso caratteristiche ambientali e sociali adottando una politica di esclusione e tenendo in considerazione i fattori ESG di ciascun Paese nel processo decisionale di investimento al fine di identificare i rischi o le opportunità ESG di ogni Paese. Più precisamente:

1. Paesi esclusi

Nel periodo di riferimento, non sono stati effettuati investimenti in paesi soggetti a misure di embargo sulle armi imposte dal Consiglio di sicurezza delle Nazioni Unite. Analogamente, non vengono effettuati investimenti nei paesi inclusi nell'elenco della Financial Action Task Force perché soggetti a un "Invito all'azione". Nel periodo di riferimento, i paesi esclusi in base a tali motivazioni sono stati: Repubblica Centrafricana, Cuba, Corea del Nord, Iran, Libia, Somalia, Sud Sudan, Sudan e Siria. La prestazione di questa caratteristica è stata misurata con l'indicatore "Esclusione degli investimenti in paesi soggetti a misure di embargo sulle armi a livello nazionale imposte dal Consiglio di sicurezza delle Nazioni Unite e in paesi inclusi nell'elenco della Financial Action Task Force, che sono soggetti a un "Invito all'azione".

2. Integrazione ESG

Nella selezione delle obbligazioni dei vari Paesi sono stati utilizzati un punteggio ESG calcolato internamente e un punteggio CCPI (Climate Change Performance Index). Questi punteggi fanno parte della Rates View Score Card, che viene riesaminata mensilmente. Il punteggio ESG e il punteggio CCPI, sommati insieme, determinano un punteggio di sostenibilità. Oltre a questo punteggio, la Rates View Score Card contiene un punteggio per la politica monetaria e un punteggio per altri fattori. Questi punteggi determinano un punteggio totale che riflette l'attrattività di un determinato Paese a livello di investimenti. Le decisioni d'investimento (posizione sovrappesata o sottopesata in un Paese rispetto all'indice di riferimento) sono state in linea con questa visione nel periodo di riferimento.

Il punteggio CCPI e il punteggio ESG contribuiscono rispettivamente nella misura del 25% e del 75% alla determinazione del punteggio di sostenibilità. Per il punteggio ESG dei Paesi vengono utilizzati due punteggi sottostanti: Il punteggio di sviluppo ESG e il punteggio di stabilità ESG. Il punteggio di sviluppo ESG è costituito da 3 pilastri: E (ambientale), S (sociale) e G (di governance). Al pilastro della governance viene attribuita una ponderazione del 50%, mentre ai pilastri ambientali e sociali è attribuita una ponderazione del 25% ciascuno. La maggiore ponderazione dei dati di governance riflette le conclusioni della letteratura accademica secondo cui una governance efficace è una condizione essenziale per il conseguimento di buoni risultati in termini ambientali e sociali e non viceversa. Nell'ambito dei pilastri E, S e G, tutti i dati non elaborati vengono ponderati in modo uguale. Esempi di questi punteggi sono la qualità e l'offerta di istruzione e assistenza sanitaria, la stabilità politica e le fonti energetiche da cui dipende un Paese. Nel periodo di riferimento il punteggio di stabilità è stato determinato sulla base delle tematiche seguenti:

- Violenza e terrorismo
- Frazionalizzazione (livello di frazionalizzazione etnica e linguistica di un Paese, tenendo anche conto della capacità del governo di bilanciare equamente gli interessi dei diversi gruppi o della sua propensione ad alimentare e sfruttare tali differenze).
- Tensioni socio-economiche
- Disordini politici
- Catastrofi naturali

Il punteggio CCPI viene calcolato da una società di ricerca indipendente che misura le prestazioni dei Paesi in termini di mitigazione dei cambiamenti climatici e adattamento ai medesimi.

● **Qual è stata la prestazione degli indicatori di sostenibilità?**

Indicatore	Portafoglio	Indice di riferimento
Esclusione degli investimenti in paesi soggetti a misure di embargo sulle armi a livello nazionale imposte dal Consiglio di sicurezza delle Nazioni Unite e in paesi inclusi nell'elenco della Financial Action Task Force, che sono soggetti a un "Invito all'azione"	Tali investimenti sono stati esclusi in linea con la descrizione fornita nella domanda precedente	Non disponibile

● **...e rispetto ai periodi precedenti?**

Indicatore	2022		2021	
	Portafoglio	Indice di riferimento	Portafoglio	Indice di riferimento
Esclusione degli investimenti in paesi soggetti a misure di embargo sulle armi a livello nazionale imposte dal Consiglio di sicurezza delle Nazioni Unite e in paesi inclusi nell'elenco della Financial Action Task Force, che sono soggetti a un "Invito all'azione"	Tali investimenti sono stati esclusi in linea con la descrizione fornita nella domanda precedente	Non disponibile		

● **Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha in parte realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?**

Non applicabile. Il Comparto non si è impegnato esplicitamente a effettuare investimenti sostenibili allineati all'SFDR durante il periodo di riferimento.

● **In che modo gli investimenti sostenibili che il prodotto finanziario in parte ha realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?**

Non applicabile. Il Comparto non si è impegnato esplicitamente a effettuare investimenti sostenibili allineati all'SFDR durante il periodo di riferimento.

In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?

Non applicabile. Il Comparto non si è impegnato esplicitamente a effettuare investimenti sostenibili allineati all'SFDR durante il periodo di riferimento.

Gli investimenti sostenibili erano allineati alle linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Dettagli:

Non applicabile. Il Comparto non si è impegnato esplicitamente a effettuare investimenti sostenibili allineati all'SFDR durante il periodo di riferimento.

I principali effetti

negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

La tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'Unione.

Il principio “non arrecare un danno significativo” si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell’Unione per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri dell’Unione per le attività economiche ecosostenibili.

Nessun altro investimento sostenibile deve arrecare un danno significativo agli obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

Durante il periodo di riferimento, gli indicatori dei principali effetti negativi (PAI) non erano ancora in vigore. Tuttavia, durante il periodo di riferimento, nell’ambito del processo d’investimento del Comparto si è tenuto conto di elementi relativi ai PAI. Ciò è avvenuto tramite i criteri di restrizione per gli investimenti responsabili e la proprietà attiva, nonché tramite le politiche della Società di gestione. In questo processo, si è tenuto conto del PAI seguente:

- PAI 16: Paesi beneficiari degli investimenti coinvolti in violazioni di carattere sociale (tramite criteri di restrizione)

Quali sono stati i principali investimenti di questo prodotto finanziario?

L'elenco comprende gli investimenti che hanno rappresentato la quota maggiore degli investimenti del prodotto finanziario durante il periodo di riferimento, ossia: 30/09/2022

Investimenti di maggiore entità	Settore	% di attivi	Paese

L'allocazione degli attivi descrive la quota di investimenti in attivi specifici.

Qual è stata la quota degli investimenti in materia di sostenibilità?

#1 Allineati alle caratteristiche A/S comprende gli investimenti del prodotto finanziario utilizzati per rispettare le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

#2 Altri comprende gli investimenti rimanenti del prodotto finanziario che non sono allineati alle caratteristiche ambientali o sociali, né sono considerati investimenti sostenibili.

La categoria **#1 Allineati alle caratteristiche A/S** comprende:

- La sottocategoria **#1B Altri investimenti allineati alle caratteristiche A/S** contempla gli investimenti allineati alle caratteristiche ambientali o sociali che non sono considerati investimenti sostenibili.

● In quali settori economici sono stati effettuati gli investimenti?

Settore	% di attivi
Treasury	47,59
Liquidità	23,01
Contanti sintetici	11,63
Agenzie	6,63
Industriale	5,89
Finanziari	5,06
Servizi di pubblica utilità	0,20

Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale.

Le **attività di transizione** sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano, tra l'altro, livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

In quale misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

0% Il Comparto non si è impegnato esplicitamente a effettuare investimenti sostenibili allineati all'SFDR durante il periodo di riferimento. Durante il periodo di riferimento, la Società di gestione non disponeva di dati relativi all'allineamento alla tassonomia.

I due grafici che seguono mostrano in verde la percentuale di investimenti allineati alla tassonomia dell'UE. Poiché non esiste una metodologia adeguata per determinare l'allineamento alla tassonomia delle obbligazioni sovrane, il primo grafico mostra l'allineamento alla tassonomia in relazione a tutti gli investimenti del prodotto finanziario, comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.*

1. Allineamento degli investimenti alla tassonomia **comprese le obbligazioni sovrane***

2. Allineamento degli investimenti alla tassonomia **escluse le obbligazioni sovrane***

* Ai fini dei grafici di cui sopra, per "obbligazioni sovrane" si intendono tutte le esposizioni sovrane

Qual era la quota degli investimenti effettuati in attività di transizione e abilitanti?

0

Qual era la quota di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?

Non applicabile. Il Comparto non si è impegnato esplicitamente a effettuare investimenti sostenibili allineati all'SFDR durante il periodo di riferimento.

Qual era la quota di investimenti socialmente sostenibili?

Non applicabile. Il Comparto non si è impegnato esplicitamente a effettuare investimenti sostenibili allineati all'SFDR durante il periodo di riferimento.

Quali investimenti erano compresi nella categoria "#2 Altri", qual era il loro scopo ed esistevano garanzie minime di salvaguardia ambientale o sociale?

Gli investimenti inclusi nella voce "Altro" erano disponibilità liquide utilizzate a fini di liquidità e strumenti derivati utilizzati per la gestione efficiente del portafoglio e a scopo di investimento. Tali investimenti non erano soggetti a garanzie minime di salvaguardia ambientale o sociale.

sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Come menzionato nella risposta alla domanda 1, durante il periodo di riferimento il Comparto ha promosso caratteristiche ambientali e sociali tramite le seguenti azioni:

1. Paesi esclusi;
2. Integrazione ESG

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?

Non applicabile. Questo Comparto era gestito attivamente e pertanto non aveva un indice specifico designato come indice di riferimento per determinare se questo prodotto finanziario fosse allineato alle caratteristiche ambientali o sociali che promuoveva.

Gli **indici di riferimento** sono indici atti a misurare se il prodotto finanziario soddisfa le caratteristiche ambientali o sociali che promuove.

● *In che modo l'indice di riferimento differisce da un indice generale di mercato?*

Non applicabile. Questo Comparto era gestito attivamente e pertanto non aveva un indice specifico designato come indice di riferimento per determinare se questo prodotto finanziario fosse allineato alle caratteristiche ambientali o sociali che promuoveva.

● *Qual è stata la prestazione di questo prodotto finanziario in relazione agli indicatori di sostenibilità per determinare l'allineamento dell'indice di riferimento con le caratteristiche ambientali o sociali promosse?*

Non applicabile. Questo Comparto era gestito attivamente e pertanto non aveva un indice specifico designato come indice di riferimento per determinare se questo prodotto finanziario fosse allineato alle caratteristiche ambientali o sociali che promuoveva.

● *Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?*

Non applicabile. Questo Comparto era gestito attivamente e pertanto non aveva un indice specifico designato come indice di riferimento per determinare se questo prodotto finanziario fosse allineato alle caratteristiche ambientali o sociali che promuoveva.

● *Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice generale di mercato?*

Non applicabile. Questo Comparto era gestito attivamente e pertanto non aveva un indice specifico designato come indice di riferimento per determinare se questo prodotto finanziario fosse allineato alle caratteristiche ambientali o sociali che promuoveva.

Informativa periodica per i prodotti finanziari di cui all'articolo 8, paragrafi 1, 2 e 2 bis, del regolamento (UE) 2019/2088 e all'articolo 6, primo comma, del regolamento (UE) 2020/852

Per **investimento sostenibile** si intende un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, purché tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e l'impresa beneficiaria degli investimenti segua prassi di buona governance.

La **tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non stabilisce un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere allineati o meno alla tassonomia.

Gli **indicatori di sostenibilità** misurano il rispetto delle caratteristiche ambientali o sociali promosse dal prodotto finanziario.

Nome del prodotto: NN (L) Emerging Markets Debt (Hard Currency)

Identificativo della persona giuridica: 5493000PS4D9LNWGNX55

Caratteristiche ambientali e/o sociali

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?

Sì

No

Ha effettuato **investimenti sostenibili con un obiettivo ambientale: __%**

in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE

in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE

Ha effettuato **investimenti sostenibili con un obiettivo sociale: __%**

Ha **promosso caratteristiche ambientali/sociali (A/S)** e pur non avendo come obiettivo un investimento sostenibile, aveva una quota del(lo) __% di investimenti sostenibili

con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE

con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE

con un obiettivo sociale

Ha promosso caratteristiche A/S, ma **non ha effettuato alcun investimento sostenibile**

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Nel periodo di riferimento, le norme tecniche di regolamentazione (RTS) dell'SFDR non erano ancora applicabili e il modello di informativa precontrattuale incluso nelle RTS dell'SFDR (Allegato II) non era ancora disponibile per questo Comparto. Nel periodo di riferimento, il prospetto informativo non conteneva alcun impegno esplicito a effettuare Investimenti sostenibili come definiti nell'SFDR. Gli indicatori di sostenibilità scelti riflettono le caratteristiche ambientali e sociali promosse dal Comparto, ma non sono stati inclusi nel prospetto informativo applicabile nel periodo di riferimento.

Nel periodo di riferimento, il Comparto ha promosso caratteristiche ambientali e sociali. Più precisamente:

1. Investimenti limitati in società coinvolte in attività controverse e in società coinvolte in comportamenti controversi.

Il Comparto ha soddisfatto questa caratteristica applicando i criteri di investimento responsabile basato su

norme della Società di gestione, come stabilito nella Politica d'investimento responsabile della Società di gestione. Nel periodo di riferimento, il Comparto non ha investito in emittenti che, conformemente alle soglie stabilite nella Politica d'investimento responsabile della Società di gestione e nel Quadro di riferimento per l'investimento responsabile della Società di gestione, hanno realizzato una determinata percentuale del proprio fatturato da attività correlate a:

- sviluppo, produzione, manutenzione o commercio di armi controverse (0%);
- fornitura controversa di armi (0%);
- produzione di tabacco ($\geq 50\%$);
- produzione di sabbie bituminose e condotte controverse ($\geq 20\%$);
- estrazione di carbone termico ($\geq 20\%$).

Questi criteri sono stati verificati quotidianamente nel sistema di gestione del portafoglio Aladdin. All'interno della Società di gestione, la responsabilità di tali controlli giornalieri sulle restrizioni agli investimenti spetta alla divisione Gestione del rischio. Per stabilire se le società svolgono le suddette attività si è fatto affidamento sulle informazioni esterne di fornitori di dati ESG.

La prestazione di questa caratteristica è stata misurata con l'indicatore "Esclusione degli investimenti in emittenti coinvolti in attività controverse e in emittenti coinvolti in comportamenti controversi".

2. Paesi esclusi.

Nel periodo di riferimento, non sono stati effettuati investimenti in paesi soggetti a misure di embargo sulle armi imposte dal Consiglio di sicurezza delle Nazioni Unite. Analogamente, non vengono effettuati investimenti nei paesi inclusi nell'elenco della Financial Action Task Force perché soggetti a un "Invito all'azione". Nel periodo di riferimento, i paesi esclusi in base a tali motivazioni sono stati: Repubblica Centrafricana, Cuba, Corea del Nord, Iran, Libia, Somalia, Sud Sudan, Sudan e Siria.

La prestazione di questa caratteristica è stata misurata con l'indicatore "Esclusione degli investimenti in paesi soggetti a misure di embargo sulle armi a livello nazionale imposte dal Consiglio di sicurezza delle Nazioni Unite e in paesi inclusi nell'elenco della Financial Action Task Force, che sono soggetti a un "Invito all'azione".

3. Il Comparto ha soddisfatto questa caratteristica applicando l'approccio del Gestore all'integrazione ESG.

L'intento iniziale era di utilizzare le informazioni ESG nella valutazione delle società per identificare rischi o opportunità in ambito ESG. L'obiettivo si focalizza pertanto sul processo d'investimento e non sulla realizzazione di determinati risultati. Durante il periodo di riferimento, in conformità con l'obiettivo, i rischi e le opportunità ambientali, sociali e di governance (ESG) per la maggior parte degli investimenti sono stati (1) identificati in base alla rilevanza, (2) valutati coerentemente nell'intero processo di investimento e (3) documentati sistematicamente. Le informazioni aggiuntive fornite dai dati ESG sono state utilizzate per mitigare i rischi e sfruttare le nuove opportunità d'investimento.

1. Il sistema Materiality Framework di NN IP stabilisce per quali società sono rilevanti (sostanziali) i fattori ESG nei vari settori. La struttura è composta da 4 pilastri: modello di business, governance, fattori ambientali e fattori sociali. I fattori di governance, sociali e ambientali sono ulteriormente suddivisi in argomenti specifici.

2. La valutazione iniziale si traduce in numerosi dati che determinano un punteggio ESG complessivo. Tale punteggio ESG e/o i dati sottostanti influenzano la valutazione interna di una società. A parità di tutte le altre circostanze, un punteggio ESG migliore influisce positivamente sulla valutazione di una società.

3. Il punteggio ESG e l'analisi delle informazioni sottostanti influenzano la valutazione di una società e confluiscono in una tesi di investimento.

4. Ha adottato prassi di buona governance, rispettato i diritti umani e dei lavoratori e assunto impegni di tutela dell'ambiente e prevenzione della corruzione attiva e passiva.

Il Comparto ha soddisfatto questa caratteristica valutando in che misura le imprese beneficiarie degli investimenti agiscono in conformità alla legislazione pertinente e agli standard riconosciuti a livello internazionale, ovvero le linee guida OCSE destinate alle imprese multinazionali, i Principi guida delle Nazioni Unite su imprese e diritti umani e il Global Compact delle Nazioni Unite.

Ogni società viene costantemente monitorata per assicurarsi che non violi gli "Standard globali". Le

società “non conformi” agli Standard globali sono state valutate dal Controversy & Engagement Council di NN IP, che ha eseguito ulteriori indagini per verificare eventuali violazioni degli Standard globali. Laddove sono emerse violazioni, è stato avviato un dialogo con le società interessate allo scopo di porre fine alle stesse e/o di mitigarne l’impatto. Nel caso in cui tale esito sia stato considerato improbabile, le società sono state escluse. Un elenco delle società escluse sulla base delle violazioni di Standard globali è stato pubblicato sul sito web dell’amministratore nel periodo di riferimento. L’elenco è disponibile all’indirizzo: <https://www.nnip.com/en-INT/professional/themes/responsible-investing-policy-documents>.

La prestazione di questa caratteristica è stata misurata con l’indicatore “Limitazione degli investimenti in emittenti che violano in modo sostanziale standard riconosciuti a livello internazionale, come ad esempio: le linee guida OCSE destinate alle imprese multinazionali, i Principi guida delle Nazioni Unite su imprese e diritti umani e il Global Compact delle Nazioni Unite”.

5. Ha preferito l’inclusione rispetto all’esclusione attraverso l’impegno

- Impegno basato su norme: In conformità alla Politica d’investimento responsabile basata su norme della Società di gestione, il Comparto escluderà l’investimento in emittenti coinvolti in attività quali, a titolo esemplificativo ma non esaustivo, sviluppo, produzione, manutenzione o commercio di armi controverse, produzione di prodotti del tabacco, estrazione di carbone termico e/o estrazione di sabbie bituminose. La conformità ai criteri d’investimento responsabile basato su norme dipende da soglie di ricavi prestabilite, come indicato nella Politica d’investimento responsabile di NN IP, e fa affidamento su dati di terze parti. In presenza di segnali evidenti secondo cui un emittente potrebbe non aver soddisfatto i requisiti minimi della Società di gestione in fatto di investimento responsabile basato su norme, va stabilito se tale comportamento costituisce una violazione di detti criteri. Se si ritiene possibile porre rimedio al comportamento e alle prassi delle imprese beneficiarie degli investimenti tramite iniziative di impegno, si preferirà tale approccio rispetto al disinvestimento. Per informazioni aggiornate sulle soglie e sulle attività, si rimanda alla Politica d’investimento responsabile di NN IP disponibile sul sito web.

- Impegno in caso di controversie: ogni società è stata costantemente monitorata per stabilire se fosse coinvolta in controversie ESG. Le controversie ESG sono valutate da un fornitore di dati indipendente tramite l’assegnazione di un punteggio (1 = punteggio minimo, 5 = punteggio massimo). Le società con un punteggio legato alle controversie pari a 4 o 5 sono state valutate dal Controversy & Engagement Council di NN IP, che ha eseguito ulteriori indagini per verificare eventuali violazioni dei criteri di investimento responsabile basato su norme della Società di gestione. Sulla base di quanto emerso da tali indagini, si è deciso se avviare iniziative di impegno con la società o se inserirla nell’elenco di esclusione. Un elenco delle società escluse perché coinvolte in tali controversie è stato pubblicato sul sito web dell’amministratore nel periodo di riferimento. L’elenco è disponibile all’indirizzo: <https://www.nnip.com/en-INT/professional/themes/responsible-investing-policy-documents>.

La prestazione di questa caratteristica è stata misurata con l’indicatore “Numero di emittenti coinvolti in iniziative di impegno in caso di controversie”.

● **Qual è stata la prestazione degli indicatori di sostenibilità?**

Indicatore	Portafoglio	Indice di riferimento
Numero di emittenti coinvolti in iniziative di impegno in caso di controversie	11	Non disponibile
Limitazione degli investimenti in emittenti che violano in modo sostanziale standard riconosciuti a livello internazionale, come ad esempio: le linee guida OCSE destinate alle imprese multinazionali, i Principi guida delle Nazioni Unite su imprese e diritti umani e il Global Compact delle Nazioni Unite	Tali investimenti sono stati evitati in linea con la descrizione fornita nella domanda precedente	Non disponibile
Esclusione degli investimenti in società coinvolte in attività controverse e in società coinvolte in comportamenti controversi	Tali investimenti sono stati esclusi in linea con la descrizione fornita nella domanda precedente	Non disponibile
Esclusione degli investimenti in paesi soggetti a misure di embargo sulle armi a livello nazionale imposte dal Consiglio di sicurezza delle Nazioni Unite e in paesi inclusi nell'elenco della Financial Action Task Force, che sono soggetti a un "Invito all'azione"	Tali investimenti sono stati esclusi in linea con la descrizione fornita nella domanda precedente	Non disponibile

● **...e rispetto ai periodi precedenti?**

● **Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario ha in parte realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?**

Non applicabile. Il Comparto non si è impegnato esplicitamente a effettuare investimenti sostenibili allineati all'SFDR durante il periodo di riferimento.

● **In che modo gli investimenti sostenibili che il prodotto finanziario in parte ha realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?**

Non applicabile. Il Comparto non si è impegnato esplicitamente a effettuare investimenti sostenibili allineati all'SFDR durante il periodo di riferimento.

In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?

Non applicabile. Il Comparto non si è impegnato esplicitamente a effettuare investimenti sostenibili

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale,

il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

allineati all'SFDR durante il periodo di riferimento.

Gli investimenti sostenibili erano allineati alle linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Dettagli:

Non applicabile. Il Comparto non si è impegnato esplicitamente a effettuare investimenti sostenibili allineati all'SFDR durante il periodo di riferimento.

La tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'Unione.

Il principio "non arrecare un danno significativo" si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'Unione per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri dell'Unione per le attività economiche ecosostenibili.

Nessun altro investimento sostenibile deve arrecare un danno significativo agli obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

Durante il periodo di riferimento, gli indicatori dei principali effetti negativi (PAI) non erano ancora in vigore. Tuttavia, durante il periodo di riferimento, nell'ambito del processo d'investimento del Comparto si è tenuto conto di elementi relativi ai PAI. Ciò è avvenuto tramite i criteri di restrizione per gli investimenti responsabili e la proprietà attiva, nonché tramite le politiche della Società di gestione. In questo processo, si è tenuto conto dei seguenti PAI:

- PAI 4: esposizione a imprese attive nel settore dei combustibili fossili (tramite criteri di restrizione, impegno tematico e in caso di controversie ed esercizio del diritto di voto);
- PAI 7: attività che incidono negativamente sulle aree sensibili sotto il profilo della biodiversità (tramite coinvolgimento tematico);
- PAI 10: violazioni dei principi del Global Compact delle Nazioni Unite e delle linee guida dell'Organizzazione per la cooperazione e lo sviluppo economico (OCSE) destinate alle imprese multinazionali (tramite criteri di restrizione, esercizio del diritto di voto e impegno in caso di controversie);
- PAI 11: mancanza di procedure e di meccanismi di conformità per monitorare la conformità ai principi del Global Compact delle Nazioni Unite e alle linee guida OCSE destinate alle imprese multinazionali (tramite impegno in caso di controversie);
- PAI 13: diversità di genere nel Consiglio (tramite esercizio del diritto di voto e impegno tematico);
- PAI 14: esposizione ad armi controverse (tramite criteri di restrizione);
- PAI 16 Paesi beneficiari degli investimenti coinvolti in violazioni di carattere sociale (tramite criteri di restrizione).

Quali sono stati i principali investimenti di questo prodotto finanziario?

L'elenco comprende gli investimenti che hanno rappresentato la quota maggiore degli investimenti del prodotto finanziario durante il periodo di riferimento, ossia: 30/09/2022

Qual era la quota degli investimenti effettuati in attività di transizione e abilitanti?

0

Qual era la quota di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?

Non applicabile. Il Comparto non si è impegnato esplicitamente a effettuare investimenti sostenibili allineati all'SFDR durante il periodo di riferimento.

Qual era la quota di investimenti socialmente sostenibili?

Non applicabile. Il Comparto non si è impegnato esplicitamente a effettuare investimenti sostenibili allineati all'SFDR durante il periodo di riferimento.

Quali investimenti erano compresi nella categoria "#2 Altri", qual era il loro scopo ed esistevano garanzie minime di salvaguardia ambientale o sociale?

Gli investimenti inclusi nella voce "Altri" erano disponibilità liquide utilizzate a fini di liquidità, strumenti derivati per la gestione efficiente del portafoglio/a scopo d'investimento e investimenti in OICVM e OIC necessari per conseguire l'obiettivo d'investimento del Comparto. Tali investimenti non erano soggetti a garanzie minime di salvaguardia ambientale o sociale.

sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Come menzionato nella risposta alla domanda 1, durante il periodo di riferimento il Comparto ha promosso caratteristiche ambientali e sociali tramite le seguenti azioni:

1. Limitazione degli investimenti in emittenti coinvolti in attività controverse e in emittenti coinvolti in comportamenti controversi.
2. Paesi esclusi;
3. Nel processo decisionale relativo agli investimenti, ha tenuto conto dei fattori ESG di ciascun emittente.
4. Ha adottato prassi di buona governance, rispettato i diritti umani e dei lavoratori, e assunto impegni di tutela dell'ambiente e prevenzione della corruzione attiva e passiva.
5. Ha preferito l'inclusione rispetto all'esclusione attraverso l'impegno.

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?

Non applicabile. Questo Comparto era gestito attivamente e pertanto non aveva un indice specifico designato come indice di riferimento per determinare se questo prodotto finanziario fosse allineato alle caratteristiche ambientali o sociali che promuoveva.

Gli **indici di riferimento** sono indici atti a misurare se il prodotto finanziario soddisfa le caratteristiche ambientali o sociali che promuove.

● *In che modo l'indice di riferimento differisce da un indice generale di mercato?*

Non applicabile. Questo Comparto era gestito attivamente e pertanto non aveva un indice specifico designato come indice di riferimento per determinare se questo prodotto finanziario fosse allineato alle caratteristiche ambientali o sociali che promuoveva.

● *Qual è stata la prestazione di questo prodotto finanziario in relazione agli indicatori di sostenibilità per determinare l'allineamento dell'indice di riferimento con le caratteristiche ambientali o sociali promosse?*

Non applicabile. Questo Comparto era gestito attivamente e pertanto non aveva un indice specifico designato come indice di riferimento per determinare se questo prodotto finanziario fosse allineato alle caratteristiche ambientali o sociali che promuoveva.

● *Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?*

ALLEGATO IV

Modello di informativa periodica per i prodotti finanziari di cui all'articolo 8, paragrafi 1, 2 e 2 bis, del regolamento (UE) 2019/2088 e all'articolo 6, primo comma, del regolamento (UE) 2020/852

Nome del prodotto: Nordea 1 - Emerging Stars Equity Fund
Identificativo della persona giuridica: 549300UFJQR77N3UYE48

Caratteristiche ambientali e/o sociali

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, purché tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e l'impresa beneficiaria degli investimenti segua prassi di buona governance.

La **tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non stabilisce un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere allineati o no alla tassonomia.

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?

Sì

No

- Ha effettuato **investimenti sostenibili con un obiettivo ambientale:** ____%
- in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE
- in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE
- Ha effettuato **investimenti sostenibili con un obiettivo sociale:** ____%

- Ha **promosso caratteristiche ambientali/sociali (A/S)** e, pur non avendo come obiettivo un investimento sostenibile, aveva una quota del 66% di investimenti sostenibili
- con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE
- con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE
- con un obiettivo sociale
- Ha promosso caratteristiche A/S, ma **non ha effettuato alcun investimento sostenibile**

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Gli indicatori di sostenibilità misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse del prodotto finanziario.

Le caratteristiche A/S di questo fondo includevano:

Quota minima di investimenti sostenibili Il fondo ha investito parzialmente in investimenti sostenibili, ossia in società ed emittenti coinvolti in attività che contribuiscono a un obiettivo ambientale o sociale come indicato nei 17 Obiettivi di sviluppo sostenibile (SDG) delle Nazioni Unite e/o nella tassonomia dell'UE, senza arrecare un danno significativo ad altri obiettivi ambientali o sociali.

Punteggio ESG Il fondo ha investito in titoli di emittenti i cui profili ESG sono stati valutati da Nordea Asset Management (NAM), o da un fornitore di dati esterno e quindi analizzati da NAM, per assicurare che soltanto i titoli emessi da soggetti che soddisfano il punteggio ESG minimo richiesto dal fondo fossero idonei all'inclusione.

Esclusioni settoriali e basate sul valore Al processo di costruzione del portafoglio sono stati applicati filtri di esclusione in modo da limitare gli investimenti in società ed emittenti con un'esposizione significativa ad alcune attività considerate nocive per l'ambiente o per la società in senso lato, ad esempio in società operanti nel settore del tabacco o in quello dei combustibili fossili.

La Politica di Nordea Asset Management sui combustibili fossili allineata all'accordo di Parigi, in base alla quale il fondo non ha investito in società con un'esposizione significativa ai combustibili fossili, salvo che in presenza di una strategia di transizione credibile.

Il fondo ha utilizzato un parametro di riferimento che non è allineato alle caratteristiche A/S del fondo.

● Qual è stata la prestazione degli indicatori di sostenibilità?

Indicatore di sostenibilità	Metrica	Valore metrica	Idoneità	Copertura
Impronta di carbonio	Impronta di carbonio	15 tCO ₂ e / m€ investito	97,66%	97,49%
Violazioni dei principi del Global Compact delle Nazioni Unite	Quota di investimenti nelle imprese beneficiarie degli investimenti che sono state coinvolte in violazioni dei principi del Global Compact delle Nazioni Unite o delle linee guida OCSE destinate alle imprese multinazionali	0,00% coinvolti in violazioni	97,66%	97,61%

Idoneità: La percentuale delle attività del prodotto finanziario (rispetto al NAV) che rientra nell'ambito di applicazione dell'indicatore.

Copertura: La percentuale delle attività del prodotto finanziario (rispetto al NAV) per cui sono disponibili dati per presentare l'indicatore.

● **...e rispetto ai periodi precedenti?**

Indicatore di sostenibilità	Metrica	Periodo di riferimento	Valore metrica	Idoneità	Copertura
Impronta di carbonio	Impronta di carbonio	2022	15 tCO2e / m€ investito	97,66%	97,49%
Violazioni dei principi del Global Compact delle Nazioni Unite	Quota di investimenti nelle imprese beneficiarie degli investimenti che sono state coinvolte in violazioni dei principi del Global Compact delle Nazioni Unite o delle linee guida OCSE destinate alle imprese multinazionali	2022	0,00% coinvolti in violazioni	97,66%	97,61%

Idoneità: La percentuale delle attività del prodotto finanziario (rispetto al NAV) che rientra nell'ambito di applicazione dell'indicatore.

Copertura: La percentuale delle attività del prodotto finanziario (rispetto al NAV) per cui sono disponibili dati per presentare l'indicatore.

Poiché non sono disponibili rapporti relativi a periodi precedenti, questa sezione fornisce informazioni solo per il periodo di riferimento attuale.

● **Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario in parte ha realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?**

Gli obiettivi degli investimenti sostenibili che il fondo ha in parte realizzato consistevano nel contribuire a uno o più degli SDG delle Nazioni Unite o, in alternativa, nel partecipare ad attività allineate alla tassonomia. Gli investimenti sostenibili hanno contribuito agli obiettivi attraverso gli investimenti del fondo in società che promuovevano gli SDG delle Nazioni Unite o le attività allineate alla tassonomia, superando una soglia minima di allineamento dei ricavi agli SDG delle Nazioni Unite o alla tassonomia dell'UE.

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

● ***In che modo gli investimenti sostenibili che il prodotto finanziario in parte ha realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?***

Gli investimenti sostenibili sono stati analizzati per garantire che non arrecassero un danno significativo ad altri obiettivi sociali o ambientali (test DNSH, "Do no significant harm") secondo la definizione riportata dalla tassonomia dell'UE o in base a SDG adottati dalle Nazioni Unite.

- ***In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?***

Nordea Asset Management (NAM) ha sviluppato una metodologia quantitativa proprietaria che valuta l'impatto ambientale e sociale del proprio universo d'investimento (in particolare degli investimenti diretti) utilizzando molteplici indicatori dei principali effetti negativi ("PAI", Principal Adverse Impact) tratti dalla Tabella 1 e/o dalla Tabella 2 e/o dalla Tabella 3 dell'Allegato 1 degli RTS SFDR (lo "strumento PAI"). La metodologia ha utilizzato una gamma diversificata di fonti di dati per assicurare che le performance delle imprese beneficiarie degli investimenti fossero analizzate in modo appropriato. Gli indicatori PAI sono stati valutati nello strumento PAI di NAM e i risultati hanno rappresentato una parte significativa del test DNSH.

- ***Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:***

L'allineamento degli Investimenti sostenibili con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani è stato confermato nell'ambito del processo volto ad identificare gli investimenti sostenibili utilizzando lo strumento PAI di Nordea Asset Management.

La tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'UE.

Il principio "non arrecare un danno significativo" si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri dell'UE per le attività economiche ecosostenibili.

Neppure eventuali altri investimenti sostenibili devono arrecare un danno significativo ad obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

Gli indicatori PAI specifici che sono stati presi in considerazione per questo fondo erano:

CLIMA E ALTRI INDICATORI CONNESSI ALL'AMBIENTE

Indicatore degli effetti negativi sulla sostenibilità	Metrica	Valore metrica	Idoneità	Copertura

Itau Unibanco Holding	Finanza	2,50%	Brasile
East Money Information	Comunicazioni	2,41%	Cina

Qual è stata la quota degli investimenti in materia di sostenibilità?

L'allocazione degli **attivi** descrive la quota di investimenti in attivi specifici.

● Qual è stata l'allocazione degli attivi?

#1 Allineati a caratteristiche A/S comprende gli investimenti del prodotto finanziario utilizzati per rispettare le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

#2 Altri comprende gli investimenti rimanenti del prodotto finanziario che non sono allineati alle caratteristiche ambientali o sociali, né sono considerati investimenti sostenibili.

La categoria **#1 Allineati a caratteristiche A/S** comprende:

- la sottocategoria **#1A Sostenibili**, che contempla gli investimenti sostenibili dal punto di vista ambientale e sociale;
- la sottocategoria **#1B Altre caratteristiche A/S**, che contempla gli investimenti allineati alle caratteristiche ambientali o sociali che non sono considerati investimenti sostenibili.
-

Il prodotto include investimenti con obiettivi sia ambientali che sociali. Un singolo investimento può contribuire sia a un obiettivo ambientale che a un obiettivo sociale, il che si traduce in un'allocazione totale superiore al 100%. Non esiste una priorità per quanto riguarda gli obiettivi ambientali e sociali e la strategia non prevede un'allocazione specifica o una percentuale minima per queste categorie. Il processo d'investimento consente una combinazione degli obiettivi ambientali e sociali, conferendo al gestore degli investimenti la flessibilità di effettuare allocazioni in linea con tali obiettivi in base alla disponibilità e all'attrattiva delle opportunità d'investimento.

● **In quali settori economici sono stati effettuati gli investimenti?**

Settore	Attività
Comunicazioni	24,64%
Finanza	23,98%
Tecnologia	23,45%
Consumi non ciclici	8,91%
Industria	6,30%
Consumi ciclici	5,91%
Liquidità	2,51%
Energia	2,43%
Materiali di base	1,87%
Totale	100,00%

sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

Qual era la quota di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?

La quota di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE era del 59%.

Qual era la quota di investimenti socialmente sostenibili?

La quota di investimenti socialmente sostenibili era del 51%.

Quali investimenti erano compresi nella categoria "Altri", qual era il loro scopo ed esistevano garanzie minime di salvaguardia ambientale o sociale?

La liquidità può essere stata detenuta come liquidità accessoria o a fini di bilanciamento del rischio. Il fondo può aver utilizzato derivati e altre tecniche per le finalità descritte nella sezione "Descrizioni dei fondi" del prospetto informativo. Questa categoria può anche aver incluso titoli per i quali non sono disponibili dati rilevanti.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Gli elementi vincolanti della strategia di investimento usata per selezionare gli investimenti al fine di rispettare ciascuna delle caratteristiche ambientali o sociali promosse da questo fondo sono stati monitorati e documentati su base continuativa.

ALLEGATO IV

Modello di informativa periodica per i prodotti finanziari di cui all'articolo 8, paragrafi 1, 2 e 2 bis, del regolamento (UE) 2019/2088 e all'articolo 6, primo comma, del regolamento (UE) 2020/852

Nome del prodotto: Nordea 1 - European Covered Bond Fund
Identificativo della persona giuridica: 549300ODKXRG76EIFH77

Caratteristiche ambientali e/o sociali

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, purché tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e l'impresa beneficiaria degli investimenti segua prassi di buona governance.

La **tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non stabilisce un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere allineati o no alla tassonomia.

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?

Sì

No

- Ha effettuato **investimenti sostenibili con un obiettivo ambientale:** ____%
- in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE
- in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE
- Ha effettuato **investimenti sostenibili con un obiettivo sociale:** ____%

- Ha **promosso caratteristiche ambientali/sociali (A/S)** e, pur non avendo come obiettivo un investimento sostenibile, aveva una quota del 13% di investimenti sostenibili
- con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE
- con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE
- con un obiettivo sociale
- Ha promosso caratteristiche A/S, ma **non ha effettuato alcun investimento sostenibile**

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Gli indicatori di sostenibilità misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse del prodotto finanziario.

Le caratteristiche A/S di questo fondo includevano:

Investimenti sostenibili Benché non si sia impegnato a effettuare investimenti sostenibili, il fondo ha investito parzialmente in investimenti sostenibili, ossia in società ed emittenti coinvolti in attività che contribuiscono a un obiettivo ambientale o sociale come indicato nei 17 Obiettivi di sviluppo sostenibile (SDG) delle Nazioni Unite e/o nella tassonomia dell'UE, senza arrecare un danno significativo ad altri obiettivi ambientali o sociali.

Esclusioni settoriali e basate sul valore Al processo di costruzione del portafoglio sono stati applicati filtri di esclusione in modo da limitare gli investimenti in società ed emittenti con un'esposizione significativa ad alcune attività considerate nocive per l'ambiente o per la società in senso lato, ad esempio in società operanti nel settore del tabacco o in quello dei combustibili fossili.

La Politica di Nordea Asset Management sui combustibili fossili allineata all'accordo di Parigi, in base alla quale il fondo non ha investito in società con un'esposizione significativa ai combustibili fossili, salvo che in presenza di una strategia di transizione credibile.

Il fondo ha utilizzato un parametro di riferimento che non è allineato alle caratteristiche A/S del fondo.

● Qual è stata la prestazione degli indicatori di sostenibilità?

Copertura: La percentuale delle attività del prodotto finanziario (rispetto al NAV) per cui sono disponibili dati per presentare l'indicatore.

Poiché non sono disponibili rapporti relativi a periodi precedenti, questa sezione fornisce informazioni solo per il periodo di riferimento attuale.

● **Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario in parte ha realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?**

Gli obiettivi degli investimenti sostenibili che il fondo ha in parte realizzato consistevano nel contribuire a uno o più degli SDG delle Nazioni Unite o, in alternativa, nel partecipare ad attività allineate alla tassonomia. Gli investimenti sostenibili hanno contribuito agli obiettivi attraverso gli investimenti del fondo in società che promuovono gli SDG delle Nazioni Unite o le attività allineate alla tassonomia, superando una soglia minima di allineamento dei ricavi agli SDG delle Nazioni Unite o alla tassonomia dell'UE.

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

● ***In che modo gli investimenti sostenibili che il prodotto finanziario in parte ha realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?***

Gli investimenti sostenibili sono stati analizzati per garantire che non arrecassero un danno significativo ad altri obiettivi sociali o ambientali (test DNSH, "Do no significant harm") secondo la definizione riportata dalla tassonomia dell'UE o in base a SDG adottati dalle Nazioni Unite.

- ***In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?***

Nordea Asset Management (NAM) ha sviluppato una metodologia quantitativa proprietaria che valuta l'impatto ambientale e sociale del proprio universo d'investimento (in particolare degli investimenti diretti) utilizzando molteplici indicatori dei principali effetti negativi ("PAI", Principal Adverse Impact) tratti dalla Tabella 1 e/o dalla Tabella 2 e/o dalla Tabella 3 dell'Allegato 1 degli RTS SFDR (lo "strumento PAI"). La metodologia ha utilizzato una gamma diversificata di fonti di dati per assicurare che le performance delle imprese beneficiarie degli investimenti fossero analizzate in modo appropriato. Gli indicatori PAI sono stati valutati nello strumento PAI di NAM e i risultati hanno rappresentato una parte significativa del test DNSH.

- ***Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:***

L'allineamento degli Investimenti sostenibili con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani è stato confermato nell'ambito del processo volto ad identificare gli investimenti sostenibili utilizzando lo strumento PAI di Nordea Asset Management.

La tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'UE.

Il principio "non arrecare un danno significativo" si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri dell'UE per le attività economiche ecosostenibili.

Neppure eventuali altri investimenti sostenibili devono arrecare un danno significativo ad obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

Gli indicatori PAI specifici che sono stati presi in considerazione per questo fondo erano:

CLIMA E ALTRI INDICATORI CONNESSI ALL'AMBIENTE

Indicatore degli effetti negativi sulla sostenibilità	Metrica	Valore metrica	Idoneità	Copertura	
Emissioni di gas a effetto serra (GHG)	Emissioni di GHG di ambito 1	685 tCO ₂ e	85,43%	75,44%

Qual è stata la quota degli investimenti in materia di sostenibilità?

L'allocazione degli **attivi** descrive la quota di investimenti in attivi specifici.

Qual è stata l'allocazione degli attivi?

#1 Allineati a caratteristiche A/S comprende gli investimenti del prodotto finanziario utilizzati per rispettare le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

#2 Altri comprende gli investimenti rimanenti del prodotto finanziario che non sono allineati alle caratteristiche ambientali o sociali, né sono considerati investimenti sostenibili.

La categoria **#1 Allineati a caratteristiche A/S** comprende:

- la sottocategoria **#1A Sostenibili**, che contempla gli investimenti sostenibili dal punto di vista ambientale e sociale;
- la sottocategoria **#1B Altre caratteristiche A/S**, che contempla gli investimenti allineati alle caratteristiche ambientali o sociali che non sono considerati investimenti sostenibili.

Il prodotto include investimenti con obiettivi sia ambientali che sociali. Un singolo investimento può contribuire sia a un obiettivo ambientale che a un obiettivo sociale, il che si traduce in un'allocazione totale superiore al 100%. Non esiste una priorità per quanto riguarda gli obiettivi ambientali e sociali e la strategia non prevede un'allocazione specifica o una percentuale minima per queste categorie. Il processo d'investimento consente una combinazione degli obiettivi ambientali e sociali, conferendo al gestore degli investimenti la flessibilità di effettuare allocazioni in linea con tali obiettivi in base alla disponibilità e all'attrattiva delle opportunità d'investimento.

In quali settori economici sono stati effettuati gli investimenti?

Settore	Attività
Finanza	80,82%
Titoli di Stato	16,33%
Liquidità	3,07%
Contratti a termine su valute	-0,04%
Derivati	-0,19%
Totale	100,00%

sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

Qual era la quota di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?

La quota di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE era del 13%.

Qual era la quota di investimenti socialmente sostenibili?

La quota di investimenti socialmente sostenibili era del 12%.

Quali investimenti erano compresi nella categoria "Altri", qual era il loro scopo ed esistevano garanzie minime di salvaguardia ambientale o sociale?

La liquidità può essere stata detenuta come liquidità accessoria o a fini di bilanciamento del rischio. Il fondo può aver utilizzato derivati e altre tecniche per le finalità descritte nella sezione "Descrizioni dei fondi" del prospetto informativo. Questa categoria può anche aver incluso titoli per i quali non sono disponibili dati rilevanti.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Gli elementi vincolanti della strategia di investimento usata per selezionare gli investimenti al fine di rispettare ciascuna delle caratteristiche ambientali o sociali promosse da questo fondo sono stati monitorati e documentati su base continuativa.

ALLEGATO IV

Modello di informativa periodica per i prodotti finanziari di cui all'articolo 8, paragrafi 1, 2 e 2 bis, del regolamento (UE) 2019/2088 e all'articolo 6, primo comma, del regolamento (UE) 2020/852

Nome del prodotto: Nordea 1 - European Cross Credit Fund
Identificativo della persona giuridica: 549300HQ4F0MHYF7TI45

Caratteristiche ambientali e/o sociali

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, purché tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e l'impresa beneficiaria degli investimenti segua prassi di buona governance.

La **tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non stabilisce un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere allineati o no alla tassonomia.

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?

Sì

No

- Ha effettuato **investimenti sostenibili con un obiettivo ambientale:** ____%
- in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE
- in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE
- Ha effettuato **investimenti sostenibili con un obiettivo sociale:** ____%

- Ha **promosso caratteristiche ambientali/sociali (A/S)** e, pur non avendo come obiettivo un investimento sostenibile, aveva una quota del 54% di investimenti sostenibili
- con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE
- con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE
- con un obiettivo sociale
- Ha promosso caratteristiche A/S, ma **non ha effettuato alcun investimento sostenibile**

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Gli indicatori di sostenibilità misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse del prodotto finanziario.

Le caratteristiche A/S di questo fondo includevano:

Investimenti sostenibili Benché non si sia impegnato a effettuare investimenti sostenibili, il fondo ha investito parzialmente in investimenti sostenibili, ossia in società ed emittenti coinvolti in attività che contribuiscono a un obiettivo ambientale o sociale come indicato nei 17 Obiettivi di sviluppo sostenibile (SDG) delle Nazioni Unite e/o nella tassonomia dell'UE, senza arrecare un danno significativo ad altri obiettivi ambientali o sociali.

Esclusioni settoriali e basate sul valore Al processo di costruzione del portafoglio sono stati applicati filtri di esclusione in modo da limitare gli investimenti in società ed emittenti con un'esposizione significativa ad alcune attività considerate nocive per l'ambiente o per la società in senso lato, ad esempio in società operanti nel settore del tabacco o in quello dei combustibili fossili.

La Politica di Nordea Asset Management sui combustibili fossili allineata all'accordo di Parigi, in base alla quale il fondo non ha investito in società con un'esposizione significativa ai combustibili fossili, salvo che in presenza di una strategia di transizione credibile.

Il fondo ha utilizzato un parametro di riferimento che non è allineato alle caratteristiche A/S del fondo.

● Qual è stata la prestazione degli indicatori di sostenibilità?

Indicatore di sostenibilità	Metrica	Valore metrica	Idoneità	Copertura
Impronta di carbonio	Impronta di carbonio	113 tCO ₂ e / m€ investito	98,66%	76,02%
Violazioni dei principi del Global Compact delle Nazioni Unite	Quota di investimenti nelle imprese beneficiarie degli investimenti che sono state coinvolte in violazioni dei principi del Global Compact delle Nazioni Unite o delle linee guida OCSE destinate alle imprese multinazionali	0,22% coinvolti in violazioni	98,66%	83,22%

Idoneità: La percentuale delle attività del prodotto finanziario (rispetto al NAV) che rientra nell'ambito di applicazione dell'indicatore.

Copertura: La percentuale delle attività del prodotto finanziario (rispetto al NAV) per cui sono disponibili dati per presentare l'indicatore.

● **...e rispetto ai periodi precedenti?**

Indicatore di sostenibilità	Metrica	Periodo di riferimento	Valore metrica	Idoneità	Copertura
Impronta di carbonio	Impronta di carbonio	2022	113 tCO ₂ e / m€ investito	98,66%	76,02%
Violazioni dei principi del Global Compact delle Nazioni Unite	Quota di investimenti nelle imprese beneficiarie degli investimenti che sono state coinvolte in violazioni dei principi del Global Compact delle Nazioni Unite o delle linee guida OCSE destinate alle imprese multinazionali	2022	0,22% coinvolti in violazioni	98,66%	83,22%

Idoneità: La percentuale delle attività del prodotto finanziario (rispetto al NAV) che rientra nell'ambito di applicazione dell'indicatore.

Copertura: La percentuale delle attività del prodotto finanziario (rispetto al NAV) per cui sono disponibili dati per presentare l'indicatore.

Poiché non sono disponibili rapporti relativi a periodi precedenti, questa sezione fornisce informazioni solo per il periodo di riferimento attuale.

● **Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario in parte ha realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?**

Gli obiettivi degli investimenti sostenibili che il fondo ha in parte realizzato consistevano nel contribuire a uno o più degli SDG delle Nazioni Unite o, in alternativa, nel partecipare ad attività allineate alla tassonomia. Gli investimenti sostenibili hanno contribuito agli obiettivi attraverso gli investimenti del fondo in società che promuovono gli SDG delle Nazioni Unite o le attività allineate alla tassonomia, superando una soglia minima di allineamento dei ricavi agli SDG delle Nazioni Unite o alla tassonomia dell'UE.

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

● ***In che modo gli investimenti sostenibili che il prodotto finanziario in parte ha realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?***

Gli investimenti sostenibili sono stati analizzati per garantire che non arrecassero un danno significativo ad altri obiettivi sociali o ambientali (test DNSH, "Do no significant harm") secondo la definizione riportata dalla tassonomia dell'UE o in base a SDG adottati dalle Nazioni Unite.

- ***In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?***

Nordea Asset Management (NAM) ha sviluppato una metodologia quantitativa proprietaria che valuta l'impatto ambientale e sociale del proprio universo d'investimento (in particolare degli investimenti diretti) utilizzando molteplici indicatori dei principali effetti negativi ("PAI", Principal Adverse Impact) tratti dalla Tabella 1 e/o dalla Tabella 2 e/o dalla Tabella 3 dell'Allegato 1 degli RTS SFDR (lo "strumento PAI"). La metodologia ha utilizzato una gamma diversificata di fonti di dati per assicurare che le performance delle imprese beneficiarie degli investimenti fossero analizzate in modo appropriato. Gli indicatori PAI sono stati valutati nello strumento PAI di NAM e i risultati hanno rappresentato una parte significativa del test DNSH.

- ***Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:***

L'allineamento degli Investimenti sostenibili con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani è stato confermato nell'ambito del processo volto ad identificare gli investimenti sostenibili utilizzando lo strumento PAI di Nordea Asset Management.

La tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'UE.

Il principio "non arrecare un danno significativo" si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri dell'UE per le attività economiche ecosostenibili.

Neppure eventuali altri investimenti sostenibili devono arrecare un danno significativo ad obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

Gli indicatori PAI specifici che sono stati presi in considerazione per questo fondo erano:

Qual è stata la quota degli investimenti in materia di sostenibilità?

L'allocazione degli **attivi** descrive la quota di investimenti in attivi specifici.

Qual è stata l'allocazione degli attivi?

#1 Allineati a caratteristiche A/S comprende gli investimenti del prodotto finanziario utilizzati per rispettare le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

#2 Altri comprende gli investimenti rimanenti del prodotto finanziario che non sono allineati alle caratteristiche ambientali o sociali, né sono considerati investimenti sostenibili.

La categoria **#1 Allineati a caratteristiche A/S** comprende:

- la sottocategoria **#1A Sostenibili**, che contempla gli investimenti sostenibili dal punto di vista ambientale e sociale;
- la sottocategoria **#1B Altre caratteristiche A/S**, che contempla gli investimenti allineati alle caratteristiche ambientali o sociali che non sono considerati investimenti sostenibili.

Il prodotto include investimenti con obiettivi sia ambientali che sociali. Un singolo investimento può contribuire sia a un obiettivo ambientale che a un obiettivo sociale, il che si traduce in un'allocazione totale superiore al 100%. Non esiste una priorità per quanto riguarda gli obiettivi ambientali e sociali e la strategia non prevede un'allocazione specifica o una percentuale minima per queste categorie. Il processo d'investimento consente una combinazione degli obiettivi ambientali e sociali, conferendo al gestore degli investimenti la flessibilità di effettuare allocazioni in linea con tali obiettivi in base alla disponibilità e all'attrattiva delle opportunità d'investimento.

● **In quali settori economici sono stati effettuati gli investimenti?**

Settore	Attività
Consumi non ciclici	23,62%
Consumi ciclici	22,56%
Comunicazioni	21,69%
Industria	14,43%
Servizi di pubblica utilità	7,85%
Finanza	5,06%

Contratti a termine su valute	0,03%
Totale	100,00%

sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

Qual era la quota di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?

La quota di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE era del 49%.

Qual era la quota di investimenti socialmente sostenibili?

La quota di investimenti socialmente sostenibili era del 45%.

Quali investimenti erano compresi nella categoria "Altri", qual era il loro scopo ed esistevano garanzie minime di salvaguardia ambientale o sociale?

La liquidità può essere stata detenuta come liquidità accessoria o a fini di bilanciamento del rischio. Il fondo può aver utilizzato derivati e altre tecniche per le finalità descritte nella sezione "Descrizioni dei fondi" del prospetto informativo. Questa categoria può anche aver incluso titoli per i quali non sono disponibili dati rilevanti.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Gli elementi vincolanti della strategia di investimento usata per selezionare gli investimenti al fine di rispettare ciascuna delle caratteristiche ambientali o sociali promosse da questo fondo sono stati monitorati e documentati su base continuativa.

ALLEGATO IV

Modello di informativa periodica per i prodotti finanziari di cui all'articolo 8, paragrafi 1, 2 e 2 bis, del regolamento (UE) 2019/2088 e all'articolo 6, primo comma, del regolamento (UE) 2020/852

Nome del prodotto: Nordea 1 - Stable Return Fund
Identificativo della persona giuridica: 549300J9YLZQT0W3Z531

Caratteristiche ambientali e/o sociali

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, purché tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e l'impresa beneficiaria degli investimenti segua prassi di buona governance.

La **tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non stabilisce un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere allineati o no alla tassonomia.

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?

Sì

No

- Ha effettuato **investimenti sostenibili con un obiettivo ambientale:** ____%
- in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE
- in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE
- Ha effettuato **investimenti sostenibili con un obiettivo sociale:** ____%

- Ha **promosso caratteristiche ambientali/sociali (A/S)** e, pur non avendo come obiettivo un investimento sostenibile, aveva una quota del 63% di investimenti sostenibili
- con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE
- con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE
- con un obiettivo sociale
- Ha promosso caratteristiche A/S, ma **non ha effettuato alcun investimento sostenibile**

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Gli indicatori di sostenibilità misurano in che modo sono rispettate le caratteristiche ambientali o sociali promosse del prodotto finanziario.

Le caratteristiche A/S di questo fondo includevano:

Investimenti sostenibili Benché non si sia impegnato a effettuare investimenti sostenibili, il fondo ha investito parzialmente in investimenti sostenibili, ossia in società ed emittenti coinvolti in attività che contribuiscono a un obiettivo ambientale o sociale come indicato nei 17 Obiettivi di sviluppo sostenibile (SDG) delle Nazioni Unite e/o nella tassonomia dell'UE, senza arrecare un danno significativo ad altri obiettivi ambientali o sociali.

Esclusioni settoriali e basate sul valore Al processo di costruzione del portafoglio sono stati applicati filtri di esclusione in modo da limitare gli investimenti in società ed emittenti con un'esposizione significativa ad alcune attività considerate nocive per l'ambiente o per la società in senso lato, ad esempio in società operanti nel settore del tabacco o in quello dei combustibili fossili.

La Politica di Nordea Asset Management sui combustibili fossili allineata all'accordo di Parigi, in base alla quale il fondo non ha investito in società con un'esposizione significativa ai combustibili fossili, salvo che in presenza di una strategia di transizione credibile.

Il fondo ha utilizzato un parametro di riferimento che non è allineato alle caratteristiche A/S del fondo.

Qual è stata la prestazione degli indicatori di sostenibilità?

Indicatore di sostenibilità	Metrica	Valore metrica	Idoneità	Copertura
Impronta di carbonio	Impronta di carbonio	15 tCO ₂ e / m€ investito	91,49%	91,10%
Violazioni sociali	Numero di paesi che beneficiano degli investimenti e sono soggetti a violazioni sociali (numero assoluto e numero relativo divisi per tutti i paesi che beneficiano degli investimenti), ai sensi dei trattati e delle convenzioni internazionali, dei principi delle Nazioni Unite e, se del caso, della normativa nazionale	0 paesi che beneficiano degli investimenti soggetti a violazioni	2,48%	2,48%
		0,00% paesi che beneficiano degli investimenti soggetti a violazioni	2,48%	2,48%
Violazioni dei principi del Global Compact delle Nazioni Unite	Quota di investimenti nelle imprese beneficiarie degli investimenti che sono state coinvolte in violazioni dei principi del Global Compact delle Nazioni Unite o delle linee guida OCSE destinate alle imprese multinazionali	0,01% coinvolti in violazioni	91,49%	90,99%
Intensità delle emissioni di gas a effetto serra per gli emittenti sovrani	Intensità di GHG dei paesi che beneficiano degli investimenti	343,50 tCO ₂ e / m€ di PIL detenuto	2,48%	2,48%

Idoneità: La percentuale delle attività del prodotto finanziario (rispetto al NAV) che rientra nell'ambito di applicazione dell'indicatore.

Copertura: La percentuale delle attività del prodotto finanziario (rispetto al NAV) per cui sono disponibili dati per presentare l'indicatore.

● **...e rispetto ai periodi precedenti?**

Copertura: La percentuale delle attività del prodotto finanziario (rispetto al NAV) per cui sono disponibili dati per presentare l'indicatore.

Poiché non sono disponibili rapporti relativi a periodi precedenti, questa sezione fornisce informazioni solo per il periodo di riferimento attuale.

● **Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario in parte ha realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?**

Gli obiettivi degli investimenti sostenibili che il fondo ha in parte realizzato consistevano nel contribuire a uno o più degli SDG delle Nazioni Unite o, in alternativa, nel partecipare ad attività allineate alla tassonomia. Gli investimenti sostenibili hanno contribuito agli obiettivi attraverso gli investimenti del fondo in società che promuovono gli SDG delle Nazioni Unite o le attività allineate alla tassonomia, superando una soglia minima di allineamento dei ricavi agli SDG delle Nazioni Unite o alla tassonomia dell'UE.

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

● ***In che modo gli investimenti sostenibili che il prodotto finanziario in parte ha realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?***

Gli investimenti sostenibili sono stati analizzati per garantire che non arrecassero un danno significativo ad altri obiettivi sociali o ambientali (test DNSH, "Do no significant harm") secondo la definizione riportata dalla tassonomia dell'UE o in base a SDG adottati dalle Nazioni Unite.

- ***In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?***

Nordea Asset Management (NAM) ha sviluppato una metodologia quantitativa proprietaria che valuta l'impatto ambientale e sociale del proprio universo d'investimento (in particolare degli investimenti diretti) utilizzando molteplici indicatori dei principali effetti negativi ("PAI", Principal Adverse Impact) tratti dalla Tabella 1 e/o dalla Tabella 2 e/o dalla Tabella 3 dell'Allegato 1 degli RTS SFDR (lo "strumento PAI"). La metodologia ha utilizzato una gamma diversificata di fonti di dati per assicurare che le performance delle imprese beneficiarie degli investimenti fossero analizzate in modo appropriato. Gli indicatori PAI sono stati valutati nello strumento PAI di NAM e i risultati hanno rappresentato una parte significativa del test DNSH.

- ***Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:***

L'allineamento degli Investimenti sostenibili con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani è stato confermato nell'ambito del processo volto ad identificare gli investimenti sostenibili utilizzando lo strumento PAI di Nordea Asset Management.

La tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'UE.

Il principio "non arrecare un danno significativo" si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri dell'UE per le attività economiche ecosostenibili.

Neppure eventuali altri investimenti sostenibili devono arrecare un danno significativo ad obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

Gli indicatori PAI specifici che sono stati presi in considerazione per questo fondo erano:

CLIMA E ALTRI INDICATORI CONNESSI ALL'AMBIENTE

Indicatore degli effetti negativi sulla sostenibilità	Metrica	Valore metrica	Idoneità	Copertura	
Emissioni di gas a effetto serra (GHG)	Emissioni di GHG di ambito 1	55.699 tCO ₂ e	91,49%	91,10%

Poiché non sono disponibili rapporti relativi a periodi precedenti, questa sezione fornisce informazioni solo per il periodo di riferimento attuale.

● **Quali erano gli obiettivi degli investimenti sostenibili che il prodotto finanziario in parte ha realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?**

Gli obiettivi degli investimenti sostenibili che il fondo ha in parte realizzato consistevano nel contribuire a uno o più degli SDG delle Nazioni Unite o, in alternativa, nel partecipare ad attività allineate alla tassonomia. Gli investimenti sostenibili hanno contribuito agli obiettivi attraverso gli investimenti del fondo in società che promuovono gli SDG delle Nazioni Unite o le attività allineate alla tassonomia, superando una soglia minima di allineamento dei ricavi agli SDG delle Nazioni Unite o alla tassonomia dell'UE.

I principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

● ***In che modo gli investimenti sostenibili che il prodotto finanziario in parte ha realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?***

Gli investimenti sostenibili sono stati analizzati per garantire che non arrecassero un danno significativo ad altri obiettivi sociali o ambientali (test DNSH, "Do no significant harm") secondo la definizione riportata dalla tassonomia dell'UE o in base a SDG adottati dalle Nazioni Unite.

- ***In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?***

Nordea Asset Management (NAM) ha sviluppato una metodologia quantitativa proprietaria che valuta l'impatto ambientale e sociale del proprio universo d'investimento (in particolare degli investimenti diretti) utilizzando molteplici indicatori dei principali effetti negativi ("PAI", Principal Adverse Impact) tratti dalla Tabella 1 e/o dalla Tabella 2 e/o dalla Tabella 3 dell'Allegato 1 degli RTS SFDR (lo "strumento PAI"). La metodologia ha utilizzato una gamma diversificata di fonti di dati per assicurare che le performance delle imprese beneficiarie degli investimenti fossero analizzate in modo appropriato. Gli indicatori PAI sono stati valutati nello strumento PAI di NAM e i risultati hanno rappresentato una parte significativa del test DNSH.

- ***Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:***

L'allineamento degli Investimenti sostenibili con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani è stato confermato nell'ambito del processo volto ad identificare gli investimenti sostenibili utilizzando lo strumento PAI di Nordea Asset Management.

La tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'UE.

Il principio "non arrecare un danno significativo" si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'UE per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri dell'UE per le attività economiche ecosostenibili.

Neppure eventuali altri investimenti sostenibili devono arrecare un danno significativo ad obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

Gli indicatori PAI specifici che sono stati presi in considerazione per questo fondo erano:

Qual è stata la quota degli investimenti in materia di sostenibilità?

L'allocazione degli **attivi** descrive la quota di investimenti in attivi specifici.

Qual è stata l'allocazione degli attivi?

#1 Allineati a caratteristiche A/S comprende gli investimenti del prodotto finanziario utilizzati per rispettare le caratteristiche ambientali o sociali promosse dal prodotto finanziario.

#2 Altri comprende gli investimenti rimanenti del prodotto finanziario che non sono allineati alle caratteristiche ambientali o sociali, né sono considerati investimenti sostenibili.

La categoria **#1 Allineati a caratteristiche A/S** comprende:

- la sottocategoria **#1A Sostenibili**, che contempla gli investimenti sostenibili dal punto di vista ambientale e sociale;
- la sottocategoria **#1B Altre caratteristiche A/S**, che contempla gli investimenti allineati alle caratteristiche ambientali o sociali che non sono considerati investimenti sostenibili.

Il prodotto include investimenti con obiettivi sia ambientali che sociali. Un singolo investimento può contribuire sia a un obiettivo ambientale che a un obiettivo sociale, il che si traduce in un'allocazione totale superiore al 100%. Non esiste una priorità per quanto riguarda gli obiettivi ambientali e sociali e la strategia non prevede un'allocazione specifica o una percentuale minima per queste categorie. Il processo d'investimento consente una combinazione degli obiettivi ambientali e sociali, conferendo al gestore degli investimenti la flessibilità di effettuare allocazioni in linea con tali obiettivi in base alla disponibilità e all'attrattiva delle opportunità d'investimento.

In quali settori economici sono stati effettuati gli investimenti?

Settore	Attività
Titoli ipotecari	76,73%
Titoli di Stato	11,32%
Asset-backed securities	9,34%
Liquidità	2,19%
Materiali di base	0,26%
Consumi ciclici	0,17%
Totale	100,00%

sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

Qual era la quota di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?

La quota di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE era del 15%.

Qual era la quota di investimenti socialmente sostenibili?

La quota di investimenti socialmente sostenibili era del 22%.

Quali investimenti erano compresi nella categoria "Altri", qual era il loro scopo ed esistevano garanzie minime di salvaguardia ambientale o sociale?

La liquidità può essere stata detenuta come liquidità accessoria o a fini di bilanciamento del rischio. Il fondo può aver utilizzato derivati e altre tecniche per le finalità descritte nella sezione "Descrizioni dei fondi" del prospetto informativo. Questa categoria può anche aver incluso titoli per i quali non sono disponibili dati rilevanti.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Gli elementi vincolanti della strategia di investimento usata per selezionare gli investimenti al fine di rispettare ciascuna delle caratteristiche ambientali o sociali promosse da questo fondo sono stati monitorati e documentati su base continuativa.

01.10.2022 - 30.09.2023

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: **Pictet - Digital**

Legal entity identifier: **549300JWHWRPWFUMF97**

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good Governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

DID THIS FINANCIAL PRODUCT HAVE A SUSTAINABLE INVESTMENT OBJECTIVE?	
<input checked="" type="radio"/> <input checked="" type="radio"/> Yes	<input checked="" type="checkbox"/> <input type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 40.17% of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Note: Sustainable investments were calculated on a pass/fail basis including labelled bonds (where relevant to the asset class) and securities from issuers with minimum 20% exposure (as measured by revenue, EBIT, enterprise value or similar metrics) to economic activities that contributed to at least one environmental or social objective.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and social characteristics of this financial product were promoted using:

- **Positive tilt:**
The fund increased the weight of securities with low sustainability risks and/or decreased the weight of securities with high sustainability risks and, as a result, had a better environmental, social and governance (ESG) profile than the reference index. The MSCI AC World index was used to measure the positive tilt; however, no reference index has been designated for the purpose of attaining the environmental or social characteristics promoted by the fund.
- **Norms- and values-based exclusions:**
The fund excluded issuers that have significant activities with adverse impacts on society or the environment or are in severe breach of international norms as detailed below:

Company Exclusions based on Controversial Activities and Revenue Thresholds

Activity	Revenue Thresholds
Fossil Fuels and Nuclear Energy	
Thermal Coal Extraction	>25%
Thermal Coal Power Generation	>25%
Oil & Gas Production	>25%

Company Exclusions based on Controversial Activities and Revenue Thresholds

Oil Sands Extraction	>10%
Shale Energy Extraction	>10%
Off-shore Arctic Oil & Gas Exploration	>10%
Nuclear Power Generation	>50%
Weapons	
Production of controversial weapons[1]	>0%
Military Contracting Weapons	>10%
Military Contracting Weapon-Related Products and/or Services	>50%
Small Arms Civilian Customers (Assault Weapons)	>10%
Small Arms Civilian Customers (Non-Assault Weapons)	>10%
Small Arms Military/Law Enforcement Customers	>25%
Small Arms Key Components	>25%
Other Controversial Activities	
Adult Entertainment Production	>10%
Gambling Operations	>10%
Genetically Modified Plants and Seeds Development	>25%
Genetically Modified Plants and Seeds Growth	>25%
Pesticides Production	>10%
Pesticides Retail	>10%
Tobacco Products Production	>10%
Company Exclusions based on Breaches of International Norms	
Companies in severe breach of UN Global Compact Principles on human rights, labour standards, environmental protection and anti-corruption	Excluded
Country Exclusions	
Countries (i) listed as State Sponsors of Terrorism as defined by the Office of Foreign Assets Control[2] or (ii) subject to EU financial sanctions targeting central banks and/or State-Owned enterprises (SOEs)	Excluded
Countries (i) classified as very high or high risk in the Fragile State Index or (ii) affected by violent conflict as defined by the World Bank	Excluded
Countries (i) listed under "alert" on the Fragile State Index or (ii) subject to export related sanctions by the EU	Watchlist[3]

[1] Controversial weapons include anti-personnel mines, cluster munitions, biological & chemical weapons (including white phosphorous) and nuclear weapons from countries not signatory to the Treaty on the Non-Proliferation of Nuclear Weapons (NPT).

[2] "State Sponsors of Terrorism" is a designation applied by the United States Department of State to countries that repeatedly provided support to acts of international terrorism.

[3] In addition to hard exclusions, Pictet Asset Management maintains a watchlist including countries that require additional due diligence by investment teams prior to investment.

For further details please refer to Pictet Asset Management's Responsible Investment policy (Appendix B).

In addition to the above exclusions based on Pictet Asset Management's Responsible Investment policy, the strategy applied stricter exclusion limits based on internal guidelines.

- **Active ownership:**

The fund methodically exercised its voting rights and engaged with the management of companies on material ESG issues.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Over the reporting period the sustainability indicators performed as follows:

● **Overall ESG profile**

The fund increased the weight of securities with low sustainability risks and/or decreased the weight of securities with high sustainability risks.

As a result the fund has achieved a better environmental, social and governance (ESG) profile than the reference index.

● **Principle Adverse Impact (PAI)**

The fund used a combination of approaches to consider and, where possible, mitigate material adverse impacts of our investments on society and the environment, such as GHG emissions, air pollution, biodiversity loss, emissions to water, hazardous/radioactive waste, human rights, labour standards, corruption and bribery and public health.

The degree and the way these impacts were considered depended on factors such as the specific context of the investment that is causing the adverse impact, or the availability of reliable data.

In line with Pictet Asset Management’s exclusion policy outlined in the firm’s Responsible Investment policy (see table above for excluded activities and applied exclusion thresholds), the fund did not have any exposure to companies that derived a significant portion of their revenue from activities detrimental to society or the environment:

Controversial activities (weighted-average company revenues, in %)*:

	Fund (%)	Reference Index (%)
Fossil fuels and nuclear energy	0.00	4.15
Weapons	0.05	0.99
Other controversial activities	0.00	1.02
Not applicable:	0.88	0.00
Not covered:	0.04	0.02

**Fossil fuels and nuclear energy include thermal coal extraction and power generation, oil & gas production and extraction, shale energy extraction, off-shore arctic oil & gas exploration, and nuclear power generation. Weapons include military contracting (weapon and weapon related services), and small arms (civilian customers (assault/ non-assault weapons, military law enforcement, key components). Other controversial activities include tobacco production, adult entertainment production, gambling operation, GMS development or growth, pesticides production or retail. Exposures are based on third-party data and may not reflect our internal view. Pictet Asset Management retains full discretion over the implementation of exclusion criteria and reserves the right to deviate from third-party information on a case-by-case basis in instances where it is deemed incorrect or incomplete.*

Source: Pictet Asset Management, Sustainalytics.

In addition, the fund excluded issuers that had exposure to:

(i) PAI 10: Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises.

(ii) PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons).

● **Voting rights**

During the reference period, the fund voted at 36 general assembly meetings out of 36 votable meetings (100.00%). We voted “against” (incl. “abstained” or “withhold”) at least one resolution at 69.44% of meetings.

Out of 361 management resolutions, we voted against management on 45 items (12.47%) and abstained on 24 items (6.65%).

We supported 50 (69.44%) shareholder resolutions out of 72 proposals.

In respect to Environmental and/or Social issues we voted for 0 out of 0 management resolutions and for 43 out of 56 shareholder resolutions.

Source: Pictet Asset Management, ISS ESG.

● **Engagement**

The fund engaged with 13 companies on ESG topics (data as of 30.09.2023). This includes in-house-led dialogues, collaborative investor initiatives, and third-party engagement services. To be considered an engagement, a dialogue with a targeted company must have a clear and measurable objective within a pre-defined time horizon. It is important to note that not all routine or monitoring interactions, even if they involve senior management or Board of Directors, are regarded as engagements in our assessment.

Source: Pictet Asset Management, Sustainalytics.

● **...and compared to previous periods?**

This question will be addressed in future annual reports due to lack of a track record.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The fund did not commit to a minimum proportion of sustainable investments.

However, ex-post, the fund invested in securities financing economic activities that substantially contributed to environmental and/or social objectives such as:

Environmental

- climate change mitigation or adaptation
- sustainable use and protection of water and marine resources
- transition to a circular economy
- pollution prevention and control, or
- protection and restoration of biodiversity and ecosystems

Social

- inclusive and sustainable communities
- adequate living standards and well-being for end users, or
- decent work

Pictet Asset Management used a proprietary reference framework as well as the objectives of the EU Taxonomy to define sustainable investments.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To prevent sustainable investments from causing significant harm to any other environmental or social objective, the fund applied the following screening criteria on a best effort basis:

(i) Exclusions of issuers that have significant activities with adverse impacts on society or the environment (see description of RI exclusion framework).

(ii) Issuers associated with high and severe controversies were not counted as Sustainable Investments.

Information were obtained from third-part providers and/or internal research. ESG information from third-party data providers may have been incomplete, inaccurate or unavailable. As a result, there was a risk that the Investment Manager may incorrectly assessed a security or issuer, resulting in the incorrect inclusion or exclusion of a security in the fund. Incomplete, inaccurate or unavailable ESG data may also acted as a methodological limitation to a non-financial investment strategy (such as the application of ESG criteria or similar). Where identified, the Investment Manager sought to mitigate this risk through its own assessment. In the event that the ESG characteristics of a security held by the fund changed, resulting in the security being sold, the Investment Manager does not accept liability in relation to such change.

● *How were the indicators for adverse impacts on sustainability factors taken into account?*

Pictet Asset Management monitors all mandatory Principal Adverse Impact indicators (included in Annex 1 of the Commission Delegated Regulation (EU) 22 / 1288) where we have robust data available. The quality of available data is expected to improve over time.

The fund considered and, where possible, mitigated adverse impacts of its investments on society and the environment that are deemed material to the investment strategy through a combination of portfolio management decisions, active ownership activities, and exclusion of issuers associated with controversial conduct or activities. More information is disclosed in the PAI entity report available under:

<https://documents.am.pictet/?cat=marketing-permalink&dtyp=PAI&dla=en&bl=PAM>

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

- *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?*

To ensure that sustainable investment did not cause significant harm to any sustainable investment objective, the fund excluded companies with high and severe violations of (i) the UN Global Compact principles on human rights, labour standards, environmental protection and anti-corruption or (ii) OECD Guidelines for Multinationals, including severe social and employee issues.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The fund considered and, where possible, mitigated adverse impacts that were deemed material to the investment strategy. Such adverse impacts included but were not limited to GHG emissions, air pollution, biodiversity loss, emissions to water, hazardous/radioactive waste, social and employee matters and corruption and bribery and were addressed through a combination of:

(i) portfolio management decisions

The investment team scored holdings according to an assessment of Environmental, Social & Governance risks and opportunities as part of the fund’s scoring framework. Scores are determined on a qualitative basis by the investment managers, informed by fundamental research and quantitative ESG data - including data on Principle Adverse Impact, ESG data provided by the companies and data provided by third-party ESG data providers. The investment team’s scoring process was a key component of the compartment’s portfolio construction process, determining target weights in the portfolio.

(ii) proxy voting

The fund followed Pictet Asset Management’s voting guidelines which are designed to support a strong culture of corporate governance, effective management of environmental and social issues and comprehensive reporting according to credible standards. These guidelines also seek to support recognized global governing bodies promoting sustainable business practices advocating for stewardship of environment, fair labour practices, non-discrimination, and the protection of human rights. All voting activities of the fund were logged and can be shared upon request.

(iii) engagement

Interaction with issuers took the form of one-to-one discussions, shareholder/bondholder meetings, investor roadshows and/or conference calls. The objectives of these interactions were to assess an organisation, monitor that their strategy was implemented in line with our expectations and ensure that issuers were on track to meet their goals and objectives.

Where appropriate, we engaged issuers on material ESG issues such as GHG reduction targets, governance improvements and on a range of environmental, social or governance controversies, to satisfy ourselves that they fully understood and addressed them effectively over the short, medium and long term. Our engagement activities included a combination of targeted in-house-led discussions, collaborative institutional investor initiatives, and third-party engagement services.

(iv) exclusion of issuers associated with controversial conduct or activities

The fund did not have any exposure to (i) companies that derived a significant portion of their revenue from activities detrimental to society or the environment as defined in Pictet Asset Management’s Responsible Investment policy and/or (ii) companies that severely violated the UN Global Compact principles on human rights, labour standards, environmental protection and anti-corruption and controversial weapons.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01.10.2022 - 30.09.2023

LARGEST INVESTMENTS	SECTOR	% ASSETS	COUNTRY

What was the proportion of sustainability-related investments?

40.17%

Asset allocation describes the share of investments in specific assets.

● What was the asset allocation?

The fund was 96.84% aligned with E/S characteristics (#1 Aligned with E/S characteristics) and had 3.16% invested in Other (#2 Other). 40.17% were allocated to Sustainable Investments (#1A Sustainable Investments) and the remainder was invested in investments aligned with other environmental and/or social characteristics (#1B Other E/S characteristics).

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Notes:

- "#1A Sustainable", "Other Environmental" and "Social" investments were calculated on a pass/fail basis. They include labelled bonds (where relevant to the asset class) and securities from issuers with minimum 20% exposure to economic activities that contributed to at least one environmental or social objective.
- EU taxonomy-aligned investments were calculated on a revenue-weighted basis (ie security weights are multiplied by the proportion of revenues from economic activities that contribute to climate mitigation and climate adaptation) and cannot be consolidated with other numbers following a pass/fail approach.
- In the absence of an EU social taxonomy, Pictet has developed a proprietary social taxonomy framework. The framework is based on the Report on Social Taxonomy published by the EU Platform on Sustainable Finance in 2022. Eligible activities are defined as socially beneficial goods and services that substantially contribute to one of the following three social objectives: (1) inclusive and sustainable communities, (2) adequate living standards and well-being for end users and (3) decent work.

Source: Pictet Asset Management, Sustainanalytics, FTSE Green Revenues, Factset RBICS.

● In which economic sectors were the investments made?

Source: Pictet Asset Management, GICS/MSCI.

We are evaluating the availability and the quality of data that would allow us to disclose more granular information in future reports on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The fund made investments in economic activities that contributed to the first two environmental objectives (climate change adaption and climate change mitigation) as set out in the Article 9 of Regulation (EU) 2020/852.

EU taxonomy-aligned investments were calculated on a revenue-weighted basis (ie security weights are multiplied by the proportion of revenues from economic activities that contribute to relevant environmental objectives) and cannot be consolidated with other numbers following a pass/fail approach.

EU Green Taxonomy alignment data were sourced from publicly available reports. Calculations may also include estimates in a limited number of cases when EU Green Taxonomy alignment reported data were not available. Estimates were performed on a best effort basis and following a conservative approach so as to produce a prudent outcome.

The monitoring procedures have been implemented to verify at all times compliance with Article 3 of the EU taxonomy regulation.

Data provided have not been verified by an external auditor or reviewed by an independent third-party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

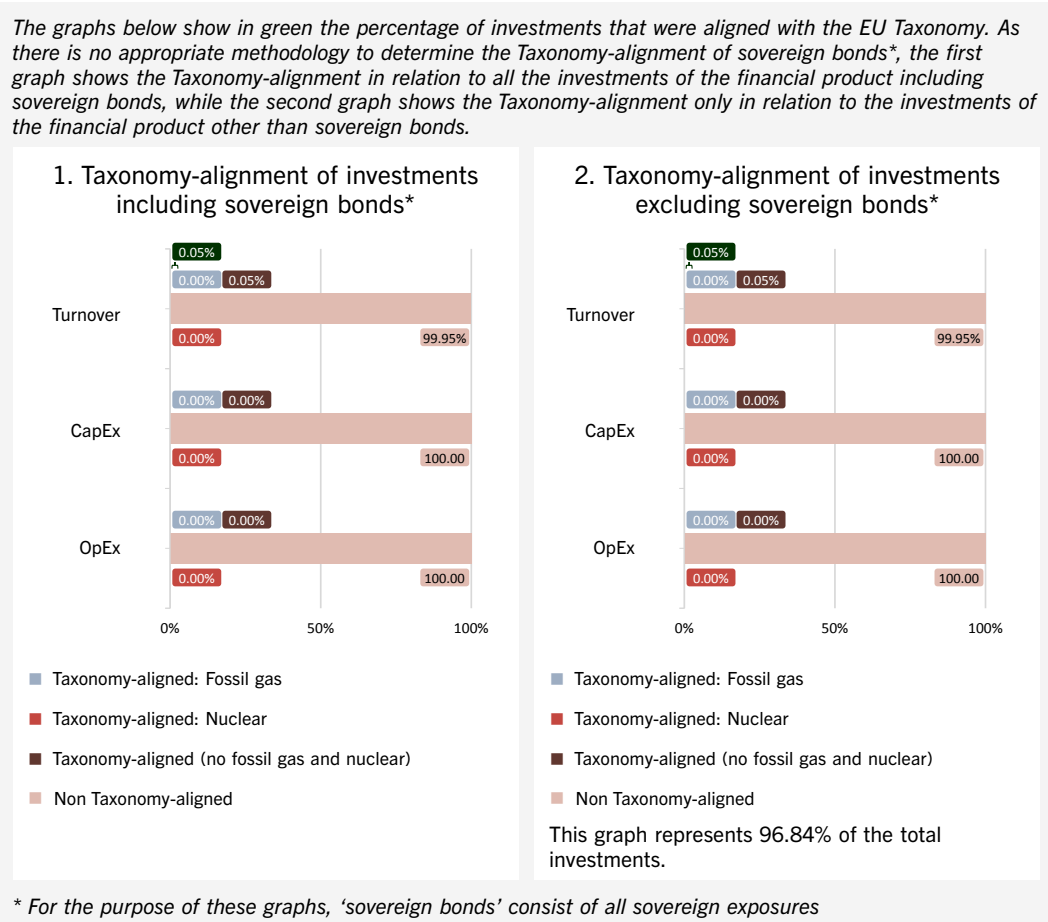

Taxonomy-aligned activities are expressed as a share of:
 - **turnover** reflects the “greenness” of investee companies today.
 - **capital expenditure (CapEx)** shows the green investments made by investee companies, relevant for a transition to a green economy.
 - **operational expenditure (OpEx)** reflects the green operational activities of investee companies.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

- Yes:
 In fossil gas In nuclear energy

No

The insufficient quality and availability of the data currently available on the market does not allow to provide such breakdown. We are working with data providers to increase quality and availability over time.

Note:

- We use revenues as the key metric for setting target allocation to, and actual alignment with, the EU taxonomy due to limited availability and lack of reliable data for OpEx and CapEX.

Source: Pictet Asset Management.

● **What was the share of investments made in transitional and enabling activities?**

The share of investments made in:

- Transitional activities: Not applicable*
- Enabling activities: Not applicable*

*The insufficient quality and availability of the data currently available on the market does not allow to provide such breakdown. We are working with data providers to increase quality and availability over time.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

11.14%

These Sustainable Investments are not aligned with the EU Taxonomy because their economic activities either (i) are not covered by the EU Taxonomy, or (ii) do not comply with the technical screening criteria to achieve substantial contribution in the sense of the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

29.02%

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The fund’s “other” investments included cash positions primarily held for meeting daily liquidity and risk management purposes as allowed and foreseen by the fund’s investment policy. Where relevant, minimum environmental or social safeguards apply to the underlying securities.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the attainment of the sustainable investment objective was met by following the investment strategy and adhering to the binding elements.

The fund’s binding elements include:

- exclusion of issuers that:
 - are involved in the production of controversial weapons including anti-personnel mines, cluster munitions, biological and chemical weapons, nuclear weapons and depleted uranium
 - derive a significant portion of their revenue from activities detrimental to society or the environment, such as thermal coal extraction and power generation, unconventional oil and gas exploration and production, conventional oil and gas production, nuclear power generation, conventional weapons and small arms, military contracting weapons and weapon-related products and services, tobacco production, adult entertainment production, gambling operations, genetically modified organisms development/growth, pesticides product/retail. Please refer to Pictet Asset Management's Responsible Investment policy for further details on exclusion thresholds applicable to the above activities
 - severely violate international norms including the UN Global Compact principles on human rights, labour standards, environmental protection and anti-corruption
- a better ESG profile than the reference index
- ESG criteria analysis of eligible securities that covers at least 90% of net assets or the number of issuers in the portfolio

Furthermore, the fund engaged with 13 companies as of 30.09.2023.

How did this financial product perform compared to the reference benchmark?

No reference index has been designated for the purpose of attaining the environmental or social characteristics promoted by the fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How did the reference benchmark differ from a broad market index?**
Not applicable.
- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**
Not applicable.
- **How did this financial product perform compared with the reference benchmark?**
Not applicable.
- **How did this financial product perform compared with the broad market index?**
Not applicable.

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good Governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

DID THIS FINANCIAL PRODUCT HAVE A SUSTAINABLE INVESTMENT OBJECTIVE?	
<input checked="" type="radio"/> <input checked="" type="radio"/> Yes	<input checked="" type="checkbox"/> <input type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 5.42% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Note: Sustainable investments were calculated on a pass/fail basis including labelled bonds (where relevant to the asset class) and securities from issuers with minimum 20% exposure (as measured by revenue, EBIT, enterprise value or similar metrics) to economic activities that contributed to at least one environmental or social objective.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and social characteristics of this financial product were promoted using:

- **Best-in-class / best effort:**
The fund invested in securities of issuers with low and/or decreasing sustainability risks while avoiding those with high and/or increasing sustainability risk, reducing the investment universe by at least 20%. The investment universe is composed of sovereign and corporate bonds from emerging countries. No reference index has been designated for the purpose of attaining the environmental or social characteristics promoted by the fund.
- **Labelled bonds:**
The fund partially invested in environmental and/or social labelled bonds.
- **Norms- and values-based exclusions:**
The fund excluded issuers that have significant activities with adverse impacts on society or the environment or are in severe breach of international norms as detailed below:

Company Exclusions based on Controversial Activities and Revenue Thresholds

Activity	Revenue Thresholds
Fossil Fuels and Nuclear Energy	
Thermal Coal Extraction	>25%

Company Exclusions based on Controversial Activities and Revenue Thresholds

Thermal Coal Power Generation	>25%
Oil & Gas Production	>25%
Oil Sands Extraction	>10%
Shale Energy Extraction	>10%
Off-shore Arctic Oil & Gas Exploration	>10%
Nuclear Power Generation	>50%
Weapons	
Production of controversial weapons[1]	>0%
Military Contracting Weapons	>10%
Military Contracting Weapon-Related Products and/or Services	>50%
Small Arms Civilian Customers (Assault Weapons)	>10%
Small Arms Civilian Customers (Non-Assault Weapons)	>10%
Small Arms Military/Law Enforcement Customers	>25%
Small Arms Key Components	>25%
Other Controversial Activities	
Adult Entertainment Production	>10%
Gambling Operations	>10%
Genetically Modified Plants and Seeds Development	>25%
Genetically Modified Plants and Seeds Growth	>25%
Pesticides Production	>10%
Pesticides Retail	>10%
Tobacco Products Production	>10%
Company Exclusions based on Breaches of International Norms	
Companies in severe breach of UN Global Compact Principles on human rights, labour standards, environmental protection and anti-corruption	Excluded
Country Exclusions	
Countries (i) listed as State Sponsors of Terrorism as defined by the Office of Foreign Assets Control[2] or (ii) subject to EU financial sanctions targeting central banks and/or State-Owned enterprises (SOEs)	Excluded
Countries (i) classified as very high or high risk in the Fragile State Index or (ii) affected by violent conflict as defined by the World Bank	Yes
Countries (i) listed under "alert" on the Fragile State Index or (ii) subject to export related sanctions by the EU	Watchlist[3]

[1] Controversial weapons include anti-personnel mines, cluster munitions, biological & chemical weapons (including white phosphorous) and nuclear weapons from countries not signatory to the Treaty on the Non-Proliferation of Nuclear Weapons (NPT).

[2] "State Sponsors of Terrorism" is a designation applied by the United States Department of State to countries that repeatedly provided support to acts of international terrorism.

[3] In addition to hard exclusions, Pictet Asset Management maintains a watchlist including countries that require additional due diligence by investment teams prior to investment.

For further details please refer to Pictet Asset Management's Responsible Investment policy (Appendix B).

- Active ownership:

The fund engaged with selected sovereigns on ESG topics over the reference period.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Over the reporting period the sustainability indicators performed as follows:

- **Exposure to companies that derive a significant proportion of revenue, EBIT, enterprise value or similar metrics from economic activities that contribute to environmental or social objectives, and labelled bonds where relevant to the asset class (sustainable investments):**

5.42%

Additional information on specific environmental and/or social objectives will be available in next year's report.

- **Exposure to green and/or social labelled bond**

During the reference period, the fund had 5.42% exposure to labelled bonds.

Labelled bonds include environmental, social and sustainability bonds. Classification of labelled bonds is provided by the bond issuer and may not reflect our internal view

- **Reduction of the investment universe based on ESG factors**

The fund reduced its investment universe by removing at least 20% of issuers with the highest sustainability risks and/or principle adverse impacts on society or the environment.

Sustainability risks are ESG related risk or conditions that could cause a material negative impact on the value of investments if they were to occur. Sustainability risks included but were not limited to the following: climate transition risk, climate physical risk, environmental risk, social risk, governance risk. Periodic reviews and risk controls are in place to monitor implementation.

Principal adverse impacts are negative, material, or likely to be material effects on sustainability factors that are caused, compounded by, or directly linked to investment decisions and advices. Such principle adverse impacts included among others, GHG emissions, air pollution, biodiversity loss, emissions to water, hazardous/ radioactive waste, social & employee matters and corruption & bribery.

- **Principle Adverse Impact (PAI)**

The fund used a combination of approaches to consider and, where possible, mitigate material adverse impacts of our investments on society and the environment, such as GHG emissions, air pollution, biodiversity loss, emissions to water, hazardous/ radioactive waste, human rights, labour standards, corruption and bribery and public health.

The degree and the way these impacts were considered depended on factors such as the specific context of the investment that is causing the adverse impact, or the availability of reliable data.

The fund mainly invests in government bonds during the reference period. In case of investments in non-sovereign bonds and in line with Pictet Asset Management's exclusion policy outlined in the firm's Responsible Investment Policy (see table above for excluded activities and applied exclusion thresholds), the fund did not have any exposure to companies that derived a significant portion of their revenue from activities detrimental to society or the environment:

Controversial activities (weighted-average company revenues, in %)*:

	Fund (%)	Reference Index (%)
Fossil fuels and nuclear energy	0.00	0.00
Weapons	0.00	0.00
Other controversial activities	0.00	0.00
Not applicable:	98.67	100.00
Not covered:	0.03	0.00

*Fossil fuels and nuclear energy include thermal coal extraction and power generation, oil & gas production and extraction, shale energy extraction, off-shore arctic oil & gas exploration, and nuclear power generation. Weapons include military contracting (weapon and weapon related services), and small arms (civilian customers (assault/ non-assault weapons, military law enforcement, key components). Other controversial activities include tobacco production, adult entertainment production, gambling operation, GMS development or growth, pesticides production or retail. Exposures are based on third-party data and may not reflect our internal view. Pictet Asset Management retains full discretion over the implementation of exclusion criteria and reserves the right to deviate from third-party information on a case-by-case basis in instances where it is deemed incorrect or incomplete.

Source: Pictet Asset Management, Sustainalytics.

In addition, the fund excluded issuers that had exposure to:

(i) PAI 10: Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises.

(ii) PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons).

- **Engagement**

The fund engaged with 6 sovereigns on ESG topics (data as of 30.09.2023).

Source: *Pictet Asset Management*.

- **...and compared to previous periods?**

This question will be addressed in future annual reports due to lack of a track record.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Pictet Asset Management used a proprietary reference frameworks as well as the objectives of the EU Taxonomy to define sustainable investments.

The fund invested in securities financing economic activities that substantially contributed to environmental and/or social objectives such as:

Environmental

- climate change mitigation or adaptation
- sustainable use and protection of water and marine resources
- transition to a circular economy
- pollution prevention and control, or
- protection and restoration of biodiversity and ecosystems

Social

- inclusive and sustainable communities
- adequate living standards and well-being for end users, or
- decent work

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To prevent sustainable investments from causing significant harm to any other environmental or social objective, the fund applied the following screening criteria on a best effort basis:

(i) Exclusions of issuers that have significant activities with adverse impacts on society or the environment (see description of RI exclusion framework).

(ii) Issuers associated with high and severe controversies were not counted as Sustainable Investments.

Information were obtained from third-part providers and/or internal research. ESG information from third-party data providers may have been incomplete, inaccurate or unavailable. As a result, there was a risk that the Investment Manager may incorrectly assessed a security or issuer, resulting in the incorrect inclusion or exclusion of a security in the fund. Incomplete, inaccurate or unavailable ESG data may also acted as a methodological limitation to a non-financial investment strategy (such as the application of ESG criteria or similar). Where identified, the Investment Manager sought to mitigate this risk through its own assessment. In the event that the ESG characteristics of a security held by the fund changed, resulting in the security being sold, the Investment Manager does not accept liability in relation to such change.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

Pictet Asset Management monitors all mandatory Principal Adverse Impact indicators (included in Annex 1 of the Commission Delegated Regulation (EU) 22 / 1288) where we have robust data available. The quality of available data is expected to improve over time.

The fund considered and, where possible, mitigated adverse impacts of its investments on society and the environment that are deemed material to the investment strategy through a combination of portfolio management decisions, active ownership activities, and exclusion of issuers associated with controversial conduct or activities. More information is disclosed in the PAI entity report available under:

<https://documents.am.pictet/?cat=marketing-permalink&dtyp=PAI&dla=en&bl=PAM>

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

- *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?*

To ensure that sustainable investment did not cause significant harm to any sustainable investment objective, the fund excluded companies with high and severe violations of (i) the UN Global Compact principles on human rights, labour standards, environmental protection and anti-corruption or (ii) OECD Guidelines for Multinationals, including severe social and employee issues.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The fund considered and, where possible, mitigated adverse impacts that were deemed material to the investment strategy. Such adverse impacts included but were not limited to GHG emissions, air pollution, biodiversity loss, emissions to water, hazardous/radioactive waste, social and employee matters and corruption and bribery and were addressed through a combination of:

(i) portfolio management decisions

The investment team scored holdings according to an assessment of Environmental, Social & Governance risks as part of the fund’s scoring framework. Scores are determined on a qualitative basis by the investment managers, informed by fundamental research and quantitative ESG data - including data on Principle Adverse Impact, ESG data provided by the companies and data provided by third-party ESG data providers. The investment team’s scoring process was a key component of the compartment’s portfolio construction process, determining target weights in the portfolio.

(ii) engagement

Interaction with issuers took the form of one-to-one discussions, shareholder/bondholder meetings, investor roadshows and/or conference calls.

Where appropriate, we engaged issuers on material ESG issues such as GHG reduction targets, governance improvements and on a range of environmental, social or governance controversies, to satisfy ourselves that they fully understood and addressed them effectively over the short, medium and long term. Our engagement activities included a combination of targeted in-house-led discussions and collaborative institutional investor initiatives.

(iii) exclusion of issuers associated with controversial conduct or activities

The fund did not have any exposure to (i) companies that derived a significant portion of their revenue from activities detrimental to society or the environment as defined in Pictet Asset Management’s Responsible Investment policy and/or (ii) companies that severely violated the UN Global Compact principles on human rights, labour standards, environmental protection and anti-corruption and controversial weapons or (iii) countries subject to international sanctions see also detailed information on exclusions in Pictet Asset Management’s responsible investment policy.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01.10.2022 - 30.09.2023

Source: Pictet Asset Management, Merrill Lynch.

What was the proportion of sustainability-related investments?

5.42%

● What was the asset allocation?

The fund was 97.17% aligned with E/S characteristics (#1 Aligned with E/S characteristics) and had 2.83% invested in Other (#2 Other). 5.42% were allocated to Sustainable Investments (#1A Sustainable Investments) and the remainder was invested in investments aligned with other environmental and/or social characteristics (#1B Other E/S characteristics).

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Notes:

- "#1A Sustainable", "Other Environmental" and "Social" investments were calculated on a pass/fail basis. They include labelled bonds (where relevant to the asset class) and securities from issuers with minimum 20% exposure to economic activities that contributed to at least one environmental or social objective.
- In the absence of an EU social taxonomy, Pictet has developed a proprietary social taxonomy framework. The framework is based on the Report on Social Taxonomy published by the EU Platform on Sustainable Finance in 2022. Eligible activities are defined as socially beneficial goods and

services that substantially contribute to one of the following three social objectives: (1) inclusive and sustainable communities, (2) adequate living standards and well-being for end users and (3) decent work.

Source: Pictet Asset Management, Sustainalytics, FTSE Green Revenues, Factset RBICS.

● In which economic sectors were the investments made?

Source: Pictet Asset Management, Merrill Lynch.

We are evaluating the availability and the quality of data that would allow us to disclose more granular information in future reports on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

- Yes:
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure (CapEx)** shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure (OpEx)** reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

- **What was the share of investments made in transitional and enabling activities?**
Not applicable.
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**
Not applicable.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

3.00%

These Sustainable Investments are not aligned with the EU Taxonomy because their economic activities either (i) are not covered by the EU Taxonomy, or (ii) do not comply with the technical screening criteria to achieve substantial contribution in the sense of the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

2.42%

What investments were included under “other”, what was their purpose and were there any

minimum environmental or social safeguards?

The fund's "other" investments included cash positions primarily held for meeting daily liquidity and risk management purposes as allowed and foreseen by the fund's investment policy. Where relevant, minimum environmental or social safeguards apply to the underlying securities.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the attainment of the sustainable investment objective was met by following the investment strategy and adhering to the binding elements.

The fund's binding elements include:

- exclusion of issuers that:
 - are involved with nuclear weapons from countries that are not signatories to the Treaty on the Non-Proliferation of Nuclear Weapons (NPT) and other controversial weapons
 - derive a significant portion of their revenue from activities detrimental to society or the environment, such as thermal coal extraction and power generation, unconventional oil and gas exploration and production, conventional oil and gas production, nuclear power generation, conventional weapons and small arms, military contracting weapons and weapon-related products and services, tobacco production, adult entertainment production, gambling operations, genetically modified organisms development/growth, pesticides product/retail. Please refer to Pictet Asset Management's Responsible Investment policy for further details on exclusion thresholds applicable to the above activities
 - severely violate the UN Global Compact principles on human rights, labour standards, environmental protection and anti-corruption
- exclusions of countries subject to international sanctions
- ESG criteria analysis of eligible securities that covers at least 90% of net assets or the number of issuers in the portfolio

The fund engaged with 6 sovereigns on ESG topics (data as 30.09.2023).

How did this financial product perform compared to the reference benchmark?

No reference index has been designated for the purpose of attaining the environmental or social characteristics promoted by the fund.

- **How did the reference benchmark differ from a broad market index?**

Not applicable.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

Not applicable.

- **How did this financial product perform compared with the reference benchmark?**

Not applicable.

- **How did this financial product perform compared with the broad market index?**

Not applicable.

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good Governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

DID THIS FINANCIAL PRODUCT HAVE A SUSTAINABLE INVESTMENT OBJECTIVE?	
<input checked="" type="radio"/> <input checked="" type="radio"/> Yes	<input checked="" type="checkbox"/> <input type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 25.31% of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Note: Sustainable investments were calculated on a pass/fail basis including labelled bonds (where relevant to the asset class) and securities from issuers with minimum 20% exposure (as measured by revenue, EBIT, enterprise value or similar metrics) to economic activities that contributed to at least one environmental or social objective.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and social characteristics of this financial product were promoted using:

- **Positive tilt:**
The fund increased the weight of securities with low sustainability risks and/or decreased the weight of securities with high sustainability risks and, as a result, had a better environmental, social and governance (ESG) profile than the investment index. The ICE BofA Euro High Yield Ex Financial BB-B 1-3 Years Constrained index was used to measure the positive tilt; however, no reference index has been designated for the purpose of attaining the environmental or social characteristics promoted by the fund.
- **Norms- and values-based exclusions:**
The fund excluded issuers that have significant activities with adverse impacts on society or the environment or are in severe breach of international norms as detailed below:

Company Exclusions based on Controversial Activities and Revenue Thresholds

Activity	Revenue Thresholds
Fossil Fuels and Nuclear Energy	
Thermal Coal Extraction	>25%
Thermal Coal Power Generation	>25%
Oil Sands Extraction	>25%

Company Exclusions based on Controversial Activities and Revenue Thresholds

Shale Energy Extraction	>25%
Off-shore Arctic Oil & Gas Exploration	>10%
Weapons	
Production of controversial weapons[1]	>0%
Military Contracting Weapons	>10%
Small Arms Civilian Customers (Assault Weapons)	>10%
Small Arms Civilian Customers (Non-Assault Weapons)	>10%
Small Arms Military/Law Enforcement Customers	>25%
Small Arms Key Components	>25%
Other Controversial Activities	
Adult Entertainment Production	>10%
Gambling Operations	>10%
Tobacco Products Production	>10%
Company Exclusions based on Breaches of International Norms	Excluded
Companies in severe breach of UN Global Compact Principles on human rights, labour standards, environmental protection and anti-corruption	Yes
Country Exclusions	Excluded
Countries (i) listed as State Sponsors of Terrorism as defined by the Office of Foreign Assets Control[2] or (ii) subject to EU financial sanctions targeting central banks and/or State-Owned enterprises (SOEs)	Yes
Countries (i) classified as very high or high risk in the Fragile State Index or (ii) affected by violent conflict as defined by the World Bank	Yes
Countries (i) listed under "alert" on the Fragile State Index or (ii) subject to export related sanctions by the EU	Watchlist[3]

[1] Controversial weapons include anti-personnel mines, cluster munitions, biological & chemical weapons (including white phosphorous) and nuclear weapons from countries not signatory to the Treaty on the Non-Proliferation of Nuclear Weapons (NPT).

[2] "State Sponsors of Terrorism" is a designation applied by the United States Department of State to countries that repeatedly provided support to acts of international terrorism.

[3] In addition to hard exclusions, Pictet Asset Management maintains a watchlist including countries that require additional due diligence by investment teams prior to investment.

For further details please refer to Pictet Asset Management's Responsible Investment policy (Appendix B).

- Active ownership:

The fund engaged with the management of companies on material ESG issues.

● How did the sustainability indicators perform?

Over the reporting period the sustainability indicators performed as follows:

• Overall ESG profile

The fund increased the weight of securities with low sustainability risks and/or decreased the weight of securities with high sustainability risks.

As a result the fund has achieved a better environmental, social and governance (ESG) profile than the reference index.

• Principle Adverse Impact (PAI)

The fund used a combination of approaches to consider and, where possible, mitigate material adverse impacts of our investments on society and the environment, such as GHG emissions, air pollution, biodiversity loss, emissions to water, hazardous/radioactive waste, human rights, labour standards, corruption and bribery and public health.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The degree and the way these impacts were considered depended on factors such as the specific context of the investment that is causing the adverse impact, or the availability of reliable data. In line with Pictet Asset Management's exclusion policy outlined in the firm's Responsible Investment policy (see table above for excluded activities and applied exclusion thresholds), the fund did not have any exposure to companies that derived a significant portion of their revenue from activities detrimental to society or the environment:

Controversial activities (weighted-average company revenues, in %)*:

	Fund (%)	Reference Index (%)
Fossil fuels and nuclear energy	0.45	3.21
Weapons	0.10	1.09
Other controversial activities	0.05	2.17
Not applicable:	1.38	0.00
Not covered:	21.61	12.58

**Fossil fuels and nuclear energy include thermal coal extraction and power generation, oil & gas production and extraction, shale energy extraction, off-shore arctic oil & gas exploration, and nuclear power generation. Weapons include military contracting (weapon and weapon related services), and small arms (civilian customers (assault/ non-assault weapons, military law enforcement, key components). Other controversial activities include tobacco production, adult entertainment production, gambling operation, GMS development or growth, pesticides production or retail. Exposures are based on third-party data and may not reflect our internal view. Pictet Asset Management retains full discretion over the implementation of exclusion criteria and reserves the right to deviate from third-party information on a case-by-case basis in instances where it is deemed incorrect or incomplete.*

Source: Pictet Asset Management, Sustainalytics.

In addition, the fund excluded issuers that had exposure to:

- (i) PAI 10: Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises.
- (ii) PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons).

● Engagement

The fund engaged with 7 companies on ESG topics (data as of 30.09.2023). This includes in-house-led dialogues, collaborative investor initiatives, and third-party engagement services. To be considered an engagement, a dialogue with a targeted company must have a clear and measurable objective within a pre-defined time horizon. It is important to note that not all routine or monitoring interactions, even if they involve senior management or Board of Directors, are regarded as engagements in our assessment.

Source: Pictet Asset Management, Sustainalytics.

● ...and compared to previous periods?

This question will be addressed in future annual reports due to lack of a track record.

● What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The fund did not commit to a minimum proportion of sustainable investments.

However, ex-post, the fund invested in securities financing economic activities that substantially contributed to environmental and/or social objectives such as:

Environmental

- climate change mitigation or adaptation
- sustainable use and protection of water and marine resources
- transition to a circular economy
- pollution prevention and control, or
- protection and restoration of biodiversity and ecosystems

Social

- inclusive and sustainable communities

- adequate living standards and well-being for end users, or
- decent work

Pictet Asset Management used a proprietary reference framework as well as the objectives of the EU Taxonomy to define sustainable investments.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To prevent sustainable investments from causing significant harm to any other environmental or social objective, the fund applied the following screening criteria on a best effort basis:

- (i) Exclusions of issuers that have significant activities with adverse impacts on society or the environment (see description of RI exclusion framework).
- (ii) Issuers associated with high and severe controversies were not counted as Sustainable Investments.

Information were obtained from third-part providers and/or internal research. ESG information from third-party data providers may have been incomplete, inaccurate or unavailable. As a result, there was a risk that the Investment Manager may incorrectly assessed a security or issuer, resulting in the incorrect inclusion or exclusion of a security in the fund. Incomplete, inaccurate or unavailable ESG data may also acted as a methodological limitation to a non-financial investment strategy (such as the application of ESG criteria or similar). Where identified, the Investment Manager sought to mitigate this risk through its own assessment. In the event that the ESG characteristics of a security held by the fund changed, resulting in the security being sold, the Investment Manager does not accept liability in relation to such change.

● *How were the indicators for adverse impacts on sustainability factors taken into account?*

Pictet Asset Management monitors all mandatory Principal Adverse Impact indicators (included in Annex 1 of the Commission Delegated Regulation (EU) 22 / 1288) where we have robust data available. The quality of available data is expected to improve over time.

The fund considered and, where possible, mitigated adverse impacts of its investments on society and the environment that are deemed material to the investment strategy through a combination of portfolio management decisions, active ownership activities, and exclusion of issuers associated with controversial conduct or activities. More information is disclosed in the PAI entity report available under:

<https://documents.am.pictet/?cat=marketing-permalink&dtyp=PAI&dla=en&bl=PAM>

● *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?*

To ensure that sustainable investment did not cause significant harm to any sustainable investment objective, the fund excluded companies with high and severe violations of (i) the UN Global Compact principles on human rights, labour standards, environmental protection and anti-corruption or (ii) OECD Guidelines for Multinationals, including severe social and employee issues.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The fund considered and, where possible, mitigated adverse impacts that were deemed material to the investment strategy. Such adverse impacts included but were not limited to GHG emissions, air pollution, biodiversity loss, emissions to water, hazardous/radioactive waste, social and employee matters and corruption and bribery and were addressed through a combination of:

- (i) portfolio management decisions

The investment team scored holdings according to an assessment of Environmental, Social & Governance risks as part of the fund's scoring framework. Scores are determined on a qualitative basis by the investment managers, informed by fundamental research and quantitative ESG data - including data on Principle Adverse Impact, ESG data provided by the companies and data provided by third-party ESG data providers. The investment team's scoring process was a key component of the compartment's portfolio construction process, determining target weights in the portfolio.

(ii) engagement

Interaction with issuers took the form of one-to-one discussions, shareholder/bondholder meetings, investor roadshows and/or conference calls. The objectives of these interactions were to assess an organization, monitor that their strategy was implemented in line with our expectations and ensure that issuers were on track to meet their goals and objectives.

Where appropriate, we engaged issuers on material ESG issues such as GHG reduction targets, governance improvements and on a range of environmental, social or governance controversies, to satisfy ourselves that they fully understood and addressed them effectively over the short, medium and long term. Our engagement activities included a combination of targeted in-house-led discussions, collaborative institutional investor initiatives, and third-party engagement services.

(iii) exclusion of issuers associated with controversial conduct or activities

The fund did not have any exposure to (i) companies that derived a significant portion of their revenue from activities detrimental to society or the environment as defined in Pictet Asset Management's Responsible Investment policy and/or (ii) companies that severely violated the UN Global Compact principles on human rights, labour standards, environmental protection and anti-corruption and controversial weapons.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01.10.2022 - 30.09.2023

LARGEST INVESTMENTS	SECTOR	% ASSETS	COUNTRY

Source: Pictet Asset Management, Merrill Lynch.

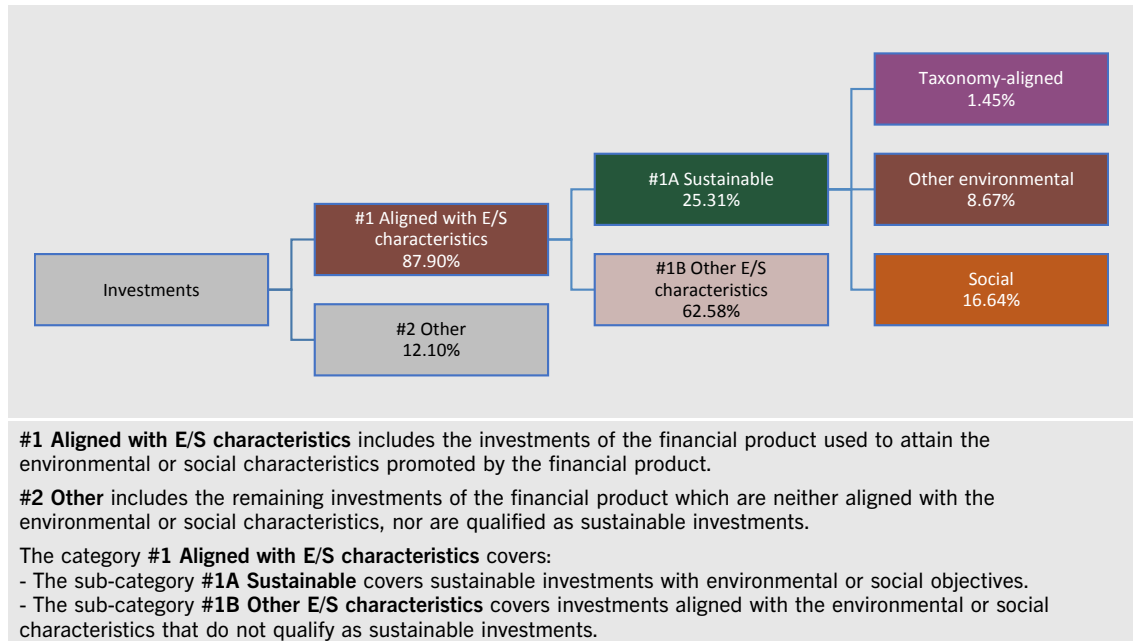

What was the proportion of sustainability-related investments?

25.31%

Asset allocation describes the share of investments in specific assets.

● What was the asset allocation?

The fund was 87.90% aligned with E/S characteristics (#1 Aligned with E/S characteristics) and had 12.10% invested in Other (#2 Other). 25.31% were allocated to Sustainable Investments (#1A Sustainable Investments) and the remainder was invested in investments aligned with other environmental and/or social characteristics (#1B Other E/S characteristics).

Notes:

- "#1A Sustainable", "Other Environmental" and "Social" investments were calculated on a pass/fail basis. They include labelled bonds (where relevant to the asset class) and securities from issuers with minimum 20% exposure to economic activities that contributed to at least one environmental or social objective.
- EU taxonomy-aligned investments were calculated on a revenue-weighted basis (ie security weights are multiplied by the proportion of revenues from economic activities that contribute to climate mitigation and climate adaptation) and cannot be consolidated with other numbers following a pass/fail approach.
- In the absence of an EU social taxonomy, Pictet has developed a proprietary social taxonomy framework. The framework is based on the Report on Social Taxonomy published by the EU Platform on Sustainable Finance in 2022. Eligible activities are defined as socially beneficial goods and services that substantially contribute to one of the following three social objectives: (1) inclusive and sustainable communities, (2) adequate living standards and well-being for end users and (3) decent work.

Source: Pictet Asset Management, Sustainalytics, FTSE Green Revenues, Factset RBICS.

● In which economic sectors were the investments made?

Source: Pictet Asset Management, Merrill Lynch.

We are evaluating the availability and the quality of data that would allow us to disclose more granular information in future reports on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council.

● To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The fund made investments in economic activities that contributed to the first two environmental objectives (climate change adaptation and climate change mitigation) as set out in the Article 9 of Regulation (EU) 2020/852.

EU taxonomy-aligned investments were calculated on a revenue-weighted basis (ie security weights are multiplied by the proportion of revenues from economic activities that contribute to relevant environmental objectives) and cannot be consolidated with other numbers following a pass/fail approach.

EU Green Taxonomy alignment data were sourced from publicly available reports. Calculations may also include estimates in a limited number of cases when EU Green Taxonomy alignment reported data were not available. Estimates were performed on a best effort basis and following a conservative approach so as to produce a prudent outcome.

The monitoring procedures have been implemented to verify at all times compliance with Article 3 of the EU taxonomy regulation.

Data provided have not been verified by an external auditor or reviewed by an independent third-party.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

Yes:

In fossil gas In nuclear energy

No

The insufficient quality and availability of the data currently available on the market does not allow to provide such breakdown. We are working with data providers to increase quality and availability over time.

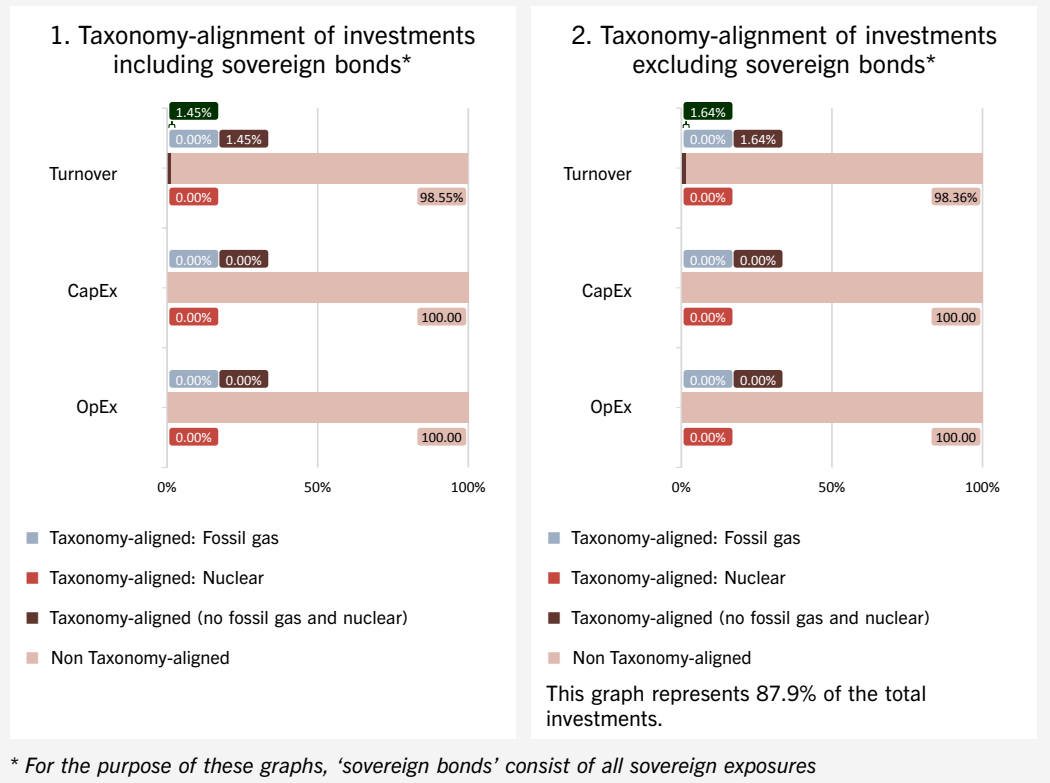

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure (CapEx)** shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure (OpEx)** reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

Note:

- We use revenues as the key metric for setting target allocation to, and actual alignment with, the EU taxonomy due to limited availability and lack of reliable data for OpEx and CapEX.

Source: Pictet Asset Management.

● **What was the share of investments made in transitional and enabling activities?**

The share of investments made in:

- Transitional activities: Not applicable*
- Enabling activities: Not applicable*

*The insufficient quality and availability of the data currently available on the market does not allow to provide such breakdown. We are working with data providers to increase quality and availability over time.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

8.67%

These Sustainable Investments are not aligned with the EU Taxonomy because their economic activities either (i) are not covered by the EU Taxonomy, or (ii) do not comply with the technical screening criteria to achieve substantial contribution in the sense of the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic

What was the share of socially sustainable investments?

16.64%

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The fund’s “other” investments included cash positions primarily held for meeting daily liquidity and risk management purposes as allowed and foreseen by the fund’s investment policy. Where relevant, minimum environmental or social safeguards apply to the underlying securities.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the attainment of the sustainable investment objective was met by following the investment strategy and adhering to the binding elements.

The fund’s binding elements include:

- exclusion of issuers that:
 - are involved with nuclear weapons from countries that are not signatories to the Treaty on the Non-Proliferation of Nuclear Weapons (NPT) and other controversial weapons
 - derive a significant portion of their revenue from activities detrimental to society or the environment, such as thermal coal extraction and power generation, unconventional oil and gas exploration and production, conventional weapons and small arms, military contracting weapons, tobacco production, adult entertainment production, gambling operations. Please refer to Pictet Asset Management’s Responsible Investment policy for further details on exclusion thresholds applicable to the above activities
 - severely violate the UN Global Compact principles on human rights, labour standards, environmental protection and anti-corruption
- a better ESG profile than the investment index
- ESG criteria analysis of eligible securities that covers at least 90% of net assets or the number of issuers in the portfolio

Furthermore, the fund engaged with 7 companies as of 30.09.2023.

How did this financial product perform compared to the reference benchmark?

No reference index has been designated for the purpose of attaining the environmental or social characteristics promoted by the fund.

● How did the reference benchmark differ from a broad market index?

Not applicable.

● How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

● How did this financial product perform compared with the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

● **How did this financial product perform compared with the broad market index?**

Not applicable.

DID THIS FINANCIAL PRODUCT HAVE A SUSTAINABLE INVESTMENT OBJECTIVE?	
<input checked="" type="radio"/> <input checked="" type="radio"/> Yes	<input checked="" type="checkbox"/> <input type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 38.35% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Note: Sustainable investments were calculated on a pass/fail basis including labelled bonds (where relevant to the asset class) and securities from issuers with minimum 20% exposure (as measured by revenue, EBIT, enterprise value or similar metrics) to economic activities that contributed to at least one environmental or social objective.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and social characteristics of this financial product were promoted using:

- **Positive tilt:**
The fund increased the weight of securities with low sustainability risks and/or decreased the weight of securities with high sustainability risks and, as a result, had a better environmental, social and governance (ESG) profile than the reference index. The Topix index was used to measure the positive tilt; however, no reference index has been designated for the purpose of attaining the environmental or social characteristics promoted by the fund.
- **Norms- and values-based exclusions:**
The fund excluded issuers that have significant activities with adverse impacts on society or the environment or are in severe breach of international norms as detailed below:

Company Exclusions based on Controversial Activities and Revenue Thresholds

Activity	Revenue Thresholds
Fossil Fuels and Nuclear Energy	
Thermal Coal Extraction	>25%
Thermal Coal Power Generation	>25%
Oil Sands Extraction	>25%

Company Exclusions based on Controversial Activities and Revenue Thresholds

Shale Energy Extraction	>25%
Off-shore Arctic Oil & Gas Exploration	>10%
Weapons	
Production of controversial weapons[1]	>0%
Military Contracting Weapons	>10%
Small Arms Civilian Customers (Assault Weapons)	>10%
Small Arms Civilian Customers (Non-Assault Weapons)	>10%
Small Arms Military/Law Enforcement Customers	>25%
Small Arms Key Components	>25%
Other Controversial Activities	
Adult Entertainment Production	>10%
Gambling Operations	>10%
Tobacco Products Production	>10%
Company Exclusions based on Breaches of International Norms	Excluded
Companies in severe breach of UN Global Compact Principles on human rights, labour standards, environmental protection and anti-corruption	Yes
Country Exclusions	Excluded
Countries (i) listed as State Sponsors of Terrorism as defined by the Office of Foreign Assets Control[2] or (ii) subject to EU financial sanctions targeting central banks and/or State-Owned enterprises (SOEs)	Yes
Countries (i) classified as very high or high risk in the Fragile State Index or (ii) affected by violent conflict as defined by the World Bank	Yes
Countries (i) listed under "alert" on the Fragile State Index or (ii) subject to export related sanctions by the EU	Watchlist[3]

[1] Controversial weapons include anti-personnel mines, cluster munitions, biological & chemical weapons (including white phosphorous) and nuclear weapons from countries not signatory to the Treaty on the Non-Proliferation of Nuclear Weapons (NPT).

[2] "State Sponsors of Terrorism" is a designation applied by the United States Department of State to countries that repeatedly provided support to acts of international terrorism.

[3] In addition to hard exclusions, Pictet Asset Management maintains a watchlist including countries that require additional due diligence by investment teams prior to investment.

For further details please refer to Pictet Asset Management's Responsible Investment policy (Appendix B).

- Active ownership:

The fund methodically exercised its voting rights and engaged with the management of companies on material ESG issues.

● How did the sustainability indicators perform?

Over the reporting period the sustainability indicators performed as follows:

• Overall ESG profile

The fund increased the weight of securities with low sustainability risks and/or decreased the weight of securities with high sustainability risks.

As a result the fund has achieved a better environmental, social and governance (ESG) profile than the reference index.

• Principle Adverse Impact (PAI)

The fund used a combination of approaches to consider and, where possible, mitigate material adverse impacts of our investments on society and the environment, such as GHG emissions, air pollution, biodiversity loss, emissions to water, hazardous/radioactive waste, human rights, labour standards, corruption and bribery and public health.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The degree and the way these impacts were considered depended on factors such as the specific context of the investment that is causing the adverse impact, or the availability of reliable data. In line with Pictet Asset Management's exclusion policy outlined in the firm's Responsible Investment policy (see table above for excluded activities and applied exclusion thresholds), the fund did not have any exposure to companies that derived a significant portion of their revenue from activities detrimental to society or the environment:

Controversial activities (weighted-average company revenues, in %)*:

	Fund (%)	Reference Index (%)
Fossil fuels and nuclear energy	0.02	1.24
Weapons	0.12	0.15
Other controversial activities	0.09	0.68
Not applicable:	0.77	0.00
Not covered:	0.00	1.06

**Fossil fuels and nuclear energy include thermal coal extraction and power generation, oil & gas production and extraction, shale energy extraction, off-shore arctic oil & gas exploration, and nuclear power generation. Weapons include military contracting (weapon and weapon related services), and small arms (civilian customers (assault/ non-assault weapons, military law enforcement, key components). Other controversial activities include tobacco production, adult entertainment production, gambling operation, GMS development or growth, pesticides production or retail. Exposures are based on third-party data and may not reflect our internal view. Pictet Asset Management retains full discretion over the implementation of exclusion criteria and reserves the right to deviate from third-party information on a case-by-case basis in instances where it is deemed incorrect or incomplete.*

Source: Pictet Asset Management, Sustainalytics.

In addition, the fund excluded issuers that had exposure to:

- (i) PAI 10: Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises.
- (ii) PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons).

● Voting rights

During the reference period, the fund voted at 70 general assembly meetings out of 70 votable meetings (100.00%). We voted "against" (incl. "abstained" or "withhold") at least one resolution at 20.00% of meetings.

Out of 803 management resolutions, we voted against management on 22 items (2.74%) and abstained on 0 items (0.00%).

We supported 5 (83.33%) shareholder resolutions out of 6 proposals.

In respect to Environmental and/or Social issues we voted for 0 out of 0 management resolutions and for 1 out of 1 shareholder resolutions.

Source: Pictet Asset Management, ISS ESG.

● Engagement

The fund engaged with 15 companies on ESG topics (data as of 30.09.2023). This includes in-house-led dialogues, collaborative investor initiatives, and third-party engagement services. To be considered an engagement, a dialogue with a targeted company must have a clear and measurable objective within a pre-defined time horizon. It is important to note that not all routine or monitoring interactions, even if they involve senior management or Board of Directors, are regarded as engagements in our assessment.

Source: Pictet Asset Management, Sustainalytics.

● ...and compared to previous periods?

This question will be addressed in future annual reports due to lack of a track record.

● What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The fund did not commit to a minimum proportion of sustainable investments.

However, ex-post, the fund invested in securities financing economic activities that substantially contributed to environmental and/or social objectives such as:

Environmental

- climate change mitigation or adaptation
- sustainable use and protection of water and marine resources
- transition to a circular economy
- pollution prevention and control, or
- protection and restoration of biodiversity and ecosystems

Social

- inclusive and sustainable communities
- adequate living standards and well-being for end users, or
- decent work

Pictet Asset Management used a proprietary reference framework as well as the objectives of the EU Taxonomy to define sustainable investments.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To prevent sustainable investments from causing significant harm to any other environmental or social objective, the fund applied the following screening criteria on a best effort basis:

- Exclusions of issuers that have significant activities with adverse impacts on society or the environment (see description of RI exclusion framework).
- Issuers associated with high and severe controversies were not counted as Sustainable Investments.

Information were obtained from third-part providers and/or internal research. ESG information from third-party data providers may have been incomplete, inaccurate or unavailable. As a result, there was a risk that the Investment Manager may incorrectly assessed a security or issuer, resulting in the incorrect inclusion or exclusion of a security in the fund. Incomplete, inaccurate or unavailable ESG data may also acted as a methodological limitation to a non-financial investment strategy (such as the application of ESG criteria or similar). Where identified, the Investment Manager sought to mitigate this risk through its own assessment. In the event that the ESG characteristics of a security held by the fund changed, resulting in the security being sold, the Investment Manager does not accept liability in relation to such change.

● *How were the indicators for adverse impacts on sustainability factors taken into account?*

Pictet Asset Management monitors all mandatory Principal Adverse Impact indicators (included in Annex 1 of the Commission Delegated Regulation (EU) 22 / 1288) where we have robust data available. The quality of available data is expected to improve over time.

The fund considered and, where possible, mitigated adverse impacts of its investments on society and the environment that are deemed material to the investment strategy through a combination of portfolio management decisions, active ownership activities, and exclusion of issuers associated with controversial conduct or activities. More information is disclosed in the PAI entity report available under:

<https://documents.am.pictet/?cat=marketing-permalink&dtyp=PAI&dla=en&bl=PAM>

● *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?*

To ensure that sustainable investment did not cause significant harm to any sustainable investment objective, the fund excluded companies with high and severe violations of (i) the UN Global Compact principles on human rights, labour standards, environmental protection and anti-corruption or (ii) OECD Guidelines for Multinationals, including severe social and employee issues.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The fund considered and, where possible, mitigated adverse impacts that were deemed material to the investment strategy. Such adverse impacts included but were not limited to GHG emissions, air pollution, biodiversity loss, emissions to water, hazardous/radioactive waste, social and employee matters and corruption and bribery and were addressed through a combination of:

(i) portfolio management decisions

The investment team scored holdings according to an assessment of Environmental, Social & Governance risks as part of the fund's scoring framework. Scores are determined on a qualitative basis by the investment managers, informed by fundamental research and quantitative ESG data - including data on Principle Adverse Impact, ESG data provided by the companies and data provided by third-party ESG data providers. The investment team's scoring process was a key component of the compartment's portfolio construction process, determining target weights in the portfolio.

(ii) proxy voting

The fund followed Pictet Asset Management's voting guidelines which are designed to support a strong culture of corporate governance, effective management of environmental and social issues and comprehensive reporting according to credible standards. These guidelines also seek to support recognized global governing bodies promoting sustainable business practices advocating for stewardship of environment, fair labour practices, non-discrimination, and the protection of human rights. All voting activities of the fund were logged and can be shared upon request.

(iii) engagement

Interaction with issuers took the form of one-to-one discussions, shareholder/bondholder meetings, investor roadshows and/or conference calls. The objectives of these interactions were to assess an organisation, monitor that their strategy was implemented in line with our expectations and ensure that issuers were on track to meet their goals and objectives.

Where appropriate, we engaged issuers on material ESG issues such as GHG reduction targets, governance improvements and on a range of environmental, social or governance controversies, to satisfy ourselves that they fully understood and addressed them effectively over the short, medium and long term. Our engagement activities included a combination of targeted in-house-led discussions, collaborative institutional investor initiatives, and third-party engagement services.

(iv) exclusion of issuers associated with controversial conduct or activities

The fund did not have any exposure to (i) companies that derived a significant portion of their revenue from activities detrimental to society or the environment as defined in Pictet Asset Management's Responsible Investment policy and/or (ii) companies that severely violated the UN Global Compact principles on human rights, labour standards, environmental protection and anti-corruption and controversial weapons.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01.10.2022 - 30.09.2023

LARGEST INVESTMENTS	SECTOR	% ASSETS	COUNTRY
TOYOTA MOTOR CORP	Consumer Discretionary	3.4	Japan
SONY GROUP CORP	Consumer Discretionary	3.3	Japan

RENESAS ELECTRONICS CORP	Information Technology	2.2	Japan
OLYMPUS CORP	Health Care	2.2	Japan

Source: Pictet Asset Management, GICS/MSCI.

What was the proportion of sustainability-related investments?

38.35%

● What was the asset allocation?

The fund was 99.23% aligned with E/S characteristics (#1 Aligned with E/S characteristics) and had 0.77% invested in Other (#2 Other). 38.35% were allocated to Sustainable Investments (#1A Sustainable Investments) and the remainder was invested in investments aligned with other environmental and/or social characteristics (#1B Other E/S characteristics).

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Notes:

- "#1A Sustainable", "Other Environmental" and "Social" investments were calculated on a pass/fail basis. They include labelled bonds (where relevant to the asset class) and securities from issuers with minimum 20% exposure to economic activities that contributed to at least one environmental or social objective.
- In the absence of an EU social taxonomy, Pictet has developed a proprietary social taxonomy framework. The framework is based on the Report on Social Taxonomy published by the EU Platform on Sustainable Finance in 2022. Eligible activities are defined as socially beneficial goods and services that substantially contribute to one of the following three social objectives: (1) inclusive and sustainable communities, (2) adequate living standards and well-being for end users and (3) decent work.

Source: Pictet Asset Management, Sustainalytics, FTSE Green Revenues, Factset RBICS.

● In which economic sectors were the investments made?

Source: Pictet Asset Management, GICS/MSCI.

We are evaluating the availability and the quality of data that would allow us to disclose more granular information in future reports on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council.

● To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

Yes:

In fossil gas In nuclear energy

No

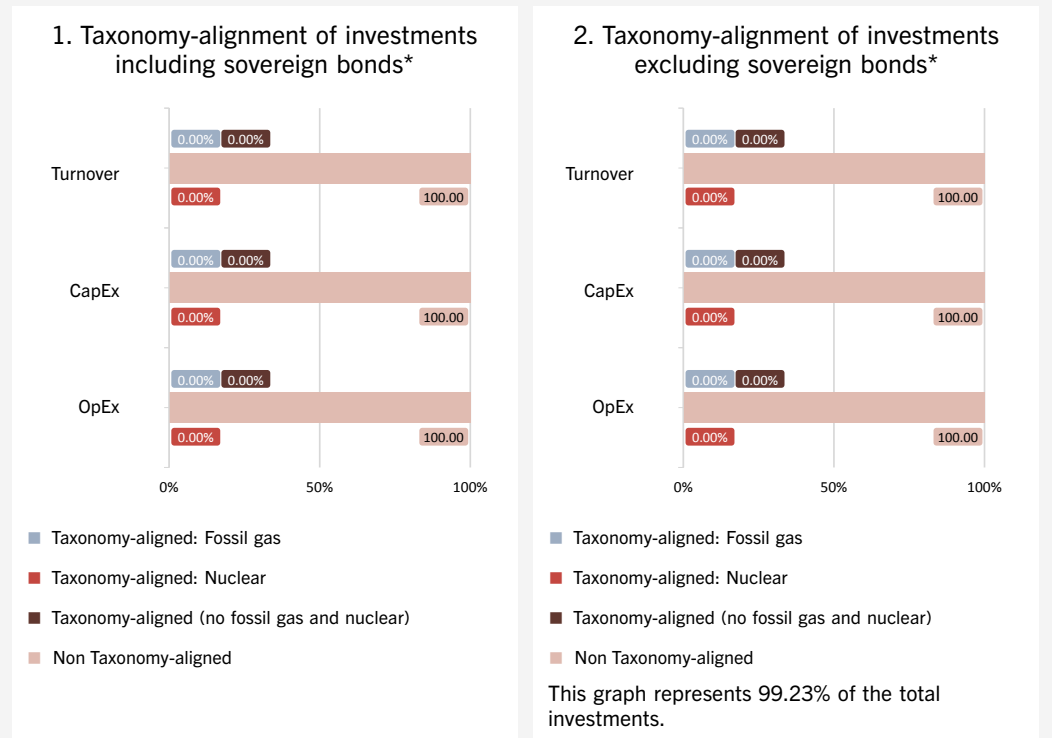

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure (CapEx)** shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure (OpEx)** reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

- **What was the share of investments made in transitional and enabling activities?**
Not applicable.
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**
Not applicable.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

14.25%

These Sustainable Investments are not aligned with the EU Taxonomy because their economic activities either (i) are not covered by the EU Taxonomy, or (ii) do not comply with the technical screening criteria to achieve substantial contribution in the sense of the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

24.1%

What investments were included under “other”, what was their purpose and were there any

minimum environmental or social safeguards?

The fund's "other" investments included cash positions primarily held for meeting daily liquidity and risk management purposes as allowed and foreseen by the fund's investment policy. Where relevant, minimum environmental or social safeguards apply to the underlying securities.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the attainment of the sustainable investment objective was met by following the investment strategy and adhering to the binding elements.

The fund's binding elements include:

- exclusion of issuers that:
 - are involved with nuclear weapons from countries that are not signatories to the Treaty on the Non-Proliferation of Nuclear Weapons (NPT) and other controversial weapons
 - derive a significant portion of their revenue from activities detrimental to society or the environment, such as thermal coal extraction and power generation, unconventional oil and gas exploration and production, conventional weapons and small arms, military contracting weapons, tobacco production, adult entertainment production, gambling operations. Please refer to Pictet Asset Management's Responsible Investment policy for further details on exclusion thresholds applicable to the above activities
 - severely violate the UN Global Compact principles on human rights, labour standards, environmental protection and anti-corruption
- a better ESG profile than the reference index
- ESG criteria analysis of eligible securities that covers at least 90% of net assets or the number of issuers in the portfolio

Furthermore, the fund engaged with 15 companies as of 30.09.2023.

How did this financial product perform compared to the reference benchmark?

No reference index has been designated for the purpose of attaining the environmental or social characteristics promoted by the fund.

● How did the reference benchmark differ from a broad market index?

Not applicable.

● How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

● How did this financial product perform compared with the reference benchmark?

Not applicable.

● How did this financial product perform compared with the broad market index?

Not applicable.

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good Governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

DID THIS FINANCIAL PRODUCT HAVE A SUSTAINABLE INVESTMENT OBJECTIVE?	
<input checked="" type="radio"/> <input checked="" type="radio"/> Yes	<input checked="" type="checkbox"/> <input type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 23.08% of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Note: Sustainable investments were calculated on a pass/fail basis including labelled bonds (where relevant to the asset class) and securities from issuers with minimum 20% exposure (as measured by revenue, EBIT, enterprise value or similar metrics) to economic activities that contributed to at least one environmental or social objective.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and social characteristics of this financial product were promoted using:

- **Positive tilt:**
The fund increased the weight of securities with low sustainability risks and/or decreased the weight of securities with high sustainability risks and, as a result, had a better environmental, social and governance (ESG) profile than the investment universe.
No reference index has been designated for the purpose of attaining the environmental or social characteristics promoted by the fund.

- **Norms- and values-based exclusions:**
The fund excluded issuers that have significant activities with adverse impacts on society or the environment or are in severe breach of international norms as detailed below:

Company Exclusions based on Controversial Activities and Revenue Thresholds

Activity	Revenue Thresholds
Fossil Fuels and Nuclear Energy	
Thermal Coal Extraction	>25%
Thermal Coal Power Generation	>25%
Oil Sands Extraction	>25%

Company Exclusions based on Controversial Activities and Revenue Thresholds

Shale Energy Extraction	>25%
Off-shore Arctic Oil & Gas Exploration	>10%
Weapons	
Production of controversial weapons[1]	>0%
Military Contracting Weapons	>10%
Small Arms Civilian Customers (Assault Weapons)	
Small Arms Civilian Customers (Non-Assault Weapons)	>10%
Small Arms Military/Law Enforcement Customers	>25%
Small Arms Key Components	>25%
Other Controversial Activities	
Adult Entertainment Production	>10%
Gambling Operations	>10%
Tobacco Products Production	>10%
Company Exclusions based on Breaches of International Norms	
Companies in severe breach of UN Global Compact Principles on human rights, labour standards, environmental protection and anti-corruption	Excluded
Country Exclusions	
Countries (i) listed as State Sponsors of Terrorism as defined by the Office of Foreign Assets Control[2] or (ii) subject to EU financial sanctions targeting central banks and/or State-Owned enterprises (SOEs)	Excluded
Countries (i) classified as very high or high risk in the Fragile State Index or (ii) affected by violent conflict as defined by the World Bank	Yes
Countries (i) listed under "alert" on the Fragile State Index or (ii) subject to export related sanctions by the EU	Watchlist[3]

[1] Controversial weapons include anti-personnel mines, cluster munitions, biological & chemical weapons (including white phosphorous) and nuclear weapons from countries not signatory to the Treaty on the Non-Proliferation of Nuclear Weapons (NPT).

[2] "State Sponsors of Terrorism" is a designation applied by the United States Department of State to countries that repeatedly provided support to acts of international terrorism.

[3] In addition to hard exclusions, Pictet Asset Management maintains a watchlist including countries that require additional due diligence by investment teams prior to investment.

For further details please refer to Pictet Asset Management's Responsible Investment policy (Appendix B).

- Active ownership:

The fund methodically exercised its voting rights and engaged with the management of companies on material ESG issues.

● How did the sustainability indicators perform?

Over the reporting period the sustainability indicators performed as follows:

● Overall ESG profile

The fund increased the weight of securities with low sustainability risks and/or decreased the weight of securities with high sustainability risks.

As a result the fund has achieved a better environmental, social and governance (ESG) profile than the investment universe.

● Principle Adverse Impact (PAI)

The fund used a combination of approaches to consider and, where possible, mitigate material adverse impacts of our investments on society and the environment, such as GHG emissions, air pollution, biodiversity loss, emissions to water, hazardous/radioactive waste, human rights, labour standards, corruption and bribery and public health.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The degree and the way these impacts were considered depended on factors such as the specific context of the investment that is causing the adverse impact, or the availability of reliable data. In line with Pictet Asset Management's exclusion policy outlined in the firm's Responsible Investment policy (see table above for excluded activities and applied exclusion thresholds), the fund did not have any exposure to companies that derived a significant portion of their revenue from activities detrimental to society or the environment:

Controversial activities (weighted-average company revenues, in %)*:

	Fund (%)	Reference Index (%)
Fossil fuels and nuclear energy	1.47	0.00
Weapons	0.11	0.00
Other controversial activities	0.14	0.00
Not applicable:	58.01	100.00
Not covered:	0.79	0.00

**Fossil fuels and nuclear energy include thermal coal extraction and power generation, oil & gas production and extraction, shale energy extraction, off-shore arctic oil & gas exploration, and nuclear power generation. Weapons include military contracting (weapon and weapon related services), and small arms (civilian customers (assault/ non-assault weapons, military law enforcement, key components). Other controversial activities include tobacco production, adult entertainment production, gambling operation, GMS development or growth, pesticides production or retail. Exposures are based on third-party data and may not reflect our internal view. Pictet Asset Management retains full discretion over the implementation of exclusion criteria and reserves the right to deviate from third-party information on a case-by-case basis in instances where it is deemed incorrect or incomplete.*

Source: Pictet Asset Management, Sustainalytics.

In addition, the fund excluded issuers that had exposure to:

- (i) PAI 10: Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises.
- (ii) PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons).

● Voting rights

During the reference period, the fund voted at 1370 general assembly meetings out of 1385 votable meetings (98.92%). We voted "against" (incl. "abstained" or "withhold") at least one resolution at 38.63% of meetings.

Out of 19483 management resolutions, we voted against management on 1083 items (5.56%) and abstained on 208 items (1.07%).

We supported 450 (64.66%) shareholder resolutions out of 696 proposals.

In respect to Environmental and/or Social issues we voted for 102 out of 105 management resolutions and for 271 out of 402 shareholder resolutions.

Source: Pictet Asset Management, ISS ESG.

● Engagement

The fund engaged with 284 companies on ESG topics (data as of 30.09.2023). This includes in-house-led dialogues, collaborative investor initiatives, and third-party engagement services. To be considered an engagement, a dialogue with a targeted company must have a clear and measurable objective within a pre-defined time horizon. It is important to note that not all routine or monitoring interactions, even if they involve senior management or Board of Directors, are regarded as engagements in our assessment.

Source: Pictet Asset Management, Sustainalytics.

● ...and compared to previous periods?

This question will be addressed in future annual reports due to lack of a track record.

● What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The fund did not commit to a minimum proportion of sustainable investments.

However, ex-post, the fund invested in securities financing economic activities that substantially contributed to environmental and/or social objectives such as:

Environmental

- climate change mitigation or adaptation
- sustainable use and protection of water and marine resources
- transition to a circular economy
- pollution prevention and control, or
- protection and restoration of biodiversity and ecosystems

Social

- inclusive and sustainable communities
- adequate living standards and well-being for end users, or
- decent work

Pictet Asset Management used a proprietary reference framework as well as the objectives of the EU Taxonomy to define sustainable investments.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To prevent sustainable investments from causing significant harm to any other environmental or social objective, the fund applied the following screening criteria on a best effort basis:

- (i) Exclusions of issuers that have significant activities with adverse impacts on society or the environment (see description of RI exclusion framework).
- (ii) Issuers associated with high and severe controversies were not counted as Sustainable Investments.

Information were obtained from third-part providers and/or internal research. ESG information from third-party data providers may have been incomplete, inaccurate or unavailable. As a result, there was a risk that the Investment Manager may incorrectly assessed a security or issuer, resulting in the incorrect inclusion or exclusion of a security in the fund. Incomplete, inaccurate or unavailable ESG data may also acted as a methodological limitation to a non-financial investment strategy (such as the application of ESG criteria or similar). Where identified, the Investment Manager sought to mitigate this risk through its own assessment. In the event that the ESG characteristics of a security held by the fund changed, resulting in the security being sold, the Investment Manager does not accept liability in relation to such change.

● *How were the indicators for adverse impacts on sustainability factors taken into account?*

Pictet Asset Management monitors all mandatory Principal Adverse Impact indicators (included in Annex 1 of the Commission Delegated Regulation (EU) 22 / 1288) where we have robust data available. The quality of available data is expected to improve over time.

The fund considered and, where possible, mitigated adverse impacts of its investments on society and the environment that are deemed material to the investment strategy through a combination of portfolio management decisions, active ownership activities, and exclusion of issuers associated with controversial conduct or activities. More information is disclosed in the PAI entity report available under:

<https://documents.am.pictet/?cat=marketing-permalink&dtyp=PAI&dla=en&bl=PAM>

● *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?*

To ensure that sustainable investment did not cause significant harm to any sustainable investment objective, the fund excluded companies with high and severe violations of (i) the UN Global Compact principles on human rights, labour standards, environmental protection and anti-corruption or (ii) OECD Guidelines for Multinationals, including severe social and employee issues.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The fund considered and, where possible, mitigated adverse impacts that were deemed material to the investment strategy. Such adverse impacts included but were not limited to GHG emissions, air pollution, biodiversity loss, emissions to water, hazardous/radioactive waste, social and employee matters and corruption and bribery and were addressed through a combination of:

(i) portfolio management decisions

The investment team scored holdings according to an assessment of Environmental, Social & Governance risks as part of the fund's scoring framework. Scores are determined on a qualitative basis by the investment managers, informed by fundamental research and quantitative ESG data - including data on Principle Adverse Impact, ESG data provided by the companies and data provided by third-party ESG data providers. The investment team's scoring process was a key component of the compartment's portfolio construction process, determining target weights in the portfolio.

(ii) proxy voting

The fund followed Pictet Asset Management's voting guidelines which are designed to support a strong culture of corporate governance, effective management of environmental and social issues and comprehensive reporting according to credible standards. These guidelines also seek to support recognised global governing bodies promoting sustainable business practices advocating for stewardship of environment, fair labour practices, non-discrimination, and the protection of human rights. All voting activities of the fund were logged and can be shared upon request.

(iii) engagement

Interaction with issuers took the form of one-to-one discussions, shareholder/bondholder meetings, investor roadshows and/or conference calls. The objectives of these interactions were to assess an organisation, monitor that their strategy was implemented in line with our expectations and ensure that issuers were on track to meet their goals and objectives.

Where appropriate, we engaged issuers on material ESG issues such as GHG reduction targets, governance improvements and on a range of environmental, social or governance controversies, to satisfy ourselves that they fully understood and addressed them effectively over the short, medium and long term. Our engagement activities included a combination of targeted in-house-led discussions, collaborative institutional investor initiatives, and third-party engagement services.

The proxy voting and engagement process were mainly led by investment professionals across several investment teams in Pictet Asset Management, with the support of a central ESG team.

(iv) exclusion of issuers associated with controversial conduct or activities

The fund did not have any exposure to (i) companies that derived a significant portion of their revenue from activities detrimental to society or the environment as defined in Pictet Asset Management's responsible investment policy and/or (ii) companies that severely violated the UN Global Compact principles on human rights, labour standards, environmental protection and anti-corruption and controversial weapons.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01.10.2022 - 30.09.2023

LARGEST INVESTMENTS	SECTOR	% ASSETS	COUNTRY

What was the proportion of sustainability-related investments?

23.08%

● What was the asset allocation?

The fund was 90.08% aligned with E/S characteristics (#1 Aligned with E/S characteristics) and had 9.92% invested in Other (#2 Other). 23.08% were allocated to Sustainable Investments (#1A Sustainable Investments) and the remainder was invested in investments aligned with other environmental and/or social characteristics (#1B Other E/S characteristics).

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Notes:

- "#1A Sustainable", "Other Environmental" and "Social" investments were calculated on a pass/fail basis. They include labelled bonds (where relevant to the asset class) and securities from issuers with minimum 20% exposure to economic activities that contributed to at least one environmental or social objective.
- EU taxonomy-aligned investments were calculated on a revenue-weighted basis (ie security weights are multiplied by the proportion of revenues from economic activities that contribute to climate mitigation and climate adaptation) and cannot be consolidated with other numbers following a pass/fail approach.
- In the absence of an EU social taxonomy, Pictet has developed a proprietary social taxonomy framework. The framework is based on the Report on Social Taxonomy published by the EU Platform on Sustainable Finance in 2022. Eligible activities are defined as socially beneficial goods and services that substantially contribute to one of the following three social objectives: (1) inclusive and sustainable communities, (2) adequate living standards and well-being for end users and (3) decent work.

Source: Pictet Asset Management, Sustainalytics, FTSE Green Revenues, Factset RBICS.

● In which economic sectors were the investments made?

Source: Pictet Asset Management.

We are evaluating the availability and the quality of data that would allow us to disclose more granular information in future reports on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council.

● To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The fund made investments in economic activities that contributed to the first two environmental objectives (climate change adaption and climate change mitigation) as set out in the Article 9 of Regulation (EU) 2020/852.

EU taxonomy-aligned investments were calculated on a revenue-weighted basis (ie security weights are multiplied by the proportion of revenues from economic activities that contribute to relevant environmental objectives) and cannot be consolidated with other numbers following a pass/fail approach.

EU Green Taxonomy alignment data were sourced from publicly available reports. Calculations may also include estimates in a limited number of cases when EU Green Taxonomy alignment reported data were not available. Estimates were performed on a best effort basis and following a conservative approach so as to produce a prudent outcome.

The monitoring procedures have been implemented to verify at all times compliance with Article 3 of the EU taxonomy regulation.

Data provided have not been verified by an external auditor or reviewed by an independent third-party.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

Yes:

In fossil gas In nuclear energy

No

The insufficient quality and availability of the data currently available on the market does not allow to provide such breakdown. We are working with data providers to increase quality and availability over time.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure (CapEx)** shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure (OpEx)** reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

Note:

- We use revenues as the key metric for setting target allocation to, and actual alignment with, the EU taxonomy due to limited availability and lack of reliable data for OpEx and CapEX.

Source: Pictet Asset Management.

● **What was the share of investments made in transitional and enabling activities?**

The share of investments made in:

- Transitional activities: Not applicable*
- Enabling activities: Not applicable*

*The insufficient quality and availability of the data currently available on the market does not allow to provide such breakdown. We are working with data providers to increase quality and availability over time.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

8.44%

These Sustainable Investments are not aligned with the EU Taxonomy because their economic activities either (i) are not covered by the EU Taxonomy, or (ii) do not comply with the technical screening criteria to achieve substantial contribution in the sense of the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic

What was the share of socially sustainable investments?

14.64%

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The fund’s “other” investments included cash positions primarily held for meeting daily liquidity and risk management purposes as allowed and foreseen by the fund’s investment policy. Where relevant, minimum environmental or social safeguards apply to the underlying securities.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the attainment of the sustainable investment objective was met by following the investment strategy and adhering to the binding elements.

The fund’s binding elements include:

- exclusion of issuers that:
 - are involved with nuclear weapons from countries that are not signatories to the Treaty on the Non-Proliferation of Nuclear Weapons (NPT) and other controversial weapons
 - derive a significant portion of their revenue from activities detrimental to society or the environment, such as thermal coal extraction and power generation, unconventional oil and gas exploration and production, conventional weapons and small arms, military contracting weapons, tobacco production, adult entertainment production, gambling operations. Please refer to Pictet Asset Management’s Responsible Investment policy for further details on exclusion thresholds applicable to the above activities
 - severely violate the UN Global Compact principles on human rights, labour standards, environmental protection and anti-corruption
- exclusions of countries subject to international sanctions
- a better ESG profile than the investment universe
- ESG criteria analysis of eligible securities that covers at least 90% of net assets or the number of issuers in the portfolio

Furthermore, the fund engaged with 284 companies as of 30.09.2023.

How did this financial product perform compared to the reference benchmark?

No reference index has been designated for the purpose of attaining the environmental or social characteristics promoted by the fund.

● How did the reference benchmark differ from a broad market index?

Not applicable.

● How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How did this financial product perform compared with the reference benchmark?**
Not applicable.
- **How did this financial product perform compared with the broad market index?**
Not applicable.

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good Governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

DID THIS FINANCIAL PRODUCT HAVE A SUSTAINABLE INVESTMENT OBJECTIVE?	
<input checked="" type="checkbox"/> <input checked="" type="checkbox"/> Yes	<input checked="" type="checkbox"/> <input type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 93.88% of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Note: Sustainable investments were calculated on a pass/fail basis including labelled bonds (where relevant to the asset class) and securities from issuers with minimum 20% exposure (as measured by revenue, EBIT, enterprise value or similar metrics) to economic activities that contributed to at least one environmental or social objective.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and social characteristics of this financial product were promoted using:

- **Positive tilt:**
The fund increased the weight of securities with low sustainability risks and/or decreased the weight of securities with high sustainability risks and, as a result, had a better environmental, social and governance (ESG) profile than the reference index. The MSCI AC World index was used to measure the positive tilt; however, no reference index has been designated for the purpose of attaining the environmental or social characteristics promoted by the fund.
- **Norms- and values-based exclusions:**
The fund excluded issuers that have significant activities with adverse impacts on society or the environment or are in severe breach of international norms as detailed below:

Company Exclusions based on Controversial Activities and Revenue Thresholds

Activity	Revenue Thresholds
Fossil Fuels and Nuclear Energy	
Thermal Coal Extraction	>25%
Thermal Coal Power Generation	>25%
Oil & Gas Production	>25%

Company Exclusions based on Controversial Activities and Revenue Thresholds

Oil Sands Extraction	>10%
Shale Energy Extraction	>10%
Off-shore Arctic Oil & Gas Exploration	>10%
Nuclear Power Generation	>50%
Weapons	
Production of controversial weapons[1]	>0%
Military Contracting Weapons	>10%
Military Contracting Weapon-Related Products and/or Services	>50%
Small Arms Civilian Customers (Assault Weapons)	>10%
Small Arms Civilian Customers (Non-Assault Weapons)	>10%
Small Arms Military/Law Enforcement Customers	>25%
Small Arms Key Components	>25%
Other Controversial Activities	
Adult Entertainment Production	>10%
Gambling Operations	>10%
Genetically Modified Plants and Seeds Development	>25%
Genetically Modified Plants and Seeds Growth	>25%
Pesticides Production	>10%
Pesticides Retail	>10%
Tobacco Products Production	>10%
Company Exclusions based on Breaches of International Norms	
Companies in severe breach of UN Global Compact Principles on human rights, labour standards, environmental protection and anti-corruption	Excluded
Country Exclusions	
Countries (i) listed as State Sponsors of Terrorism as defined by the Office of Foreign Assets Control[2] or (ii) subject to EU financial sanctions targeting central banks and/or State-Owned enterprises (SOEs)	Excluded
Countries (i) classified as very high or high risk in the Fragile State Index or (ii) affected by violent conflict as defined by the World Bank	Excluded
Countries (i) listed under "alert" on the Fragile State Index or (ii) subject to export related sanctions by the EU	Watchlist[3]

[1] Controversial weapons include anti-personnel mines, cluster munitions, biological & chemical weapons (including white phosphorous) and nuclear weapons from countries not signatory to the Treaty on the Non-Proliferation of Nuclear Weapons (NPT).

[2] "State Sponsors of Terrorism" is a designation applied by the United States Department of State to countries that repeatedly provided support to acts of international terrorism.

[3] In addition to hard exclusions, Pictet Asset Management maintains a watchlist including countries that require additional due diligence by investment teams prior to investment.

For further details please refer to Pictet Asset Management's Responsible Investment policy (Appendix B).

In addition to the above exclusions based on Pictet Asset Management's Responsible Investment policy, the strategy applied stricter exclusion limits based on internal guidelines.

- **Active ownership:**

The fund methodically exercised its voting rights and engaged with the management of companies on material ESG issues.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Over the reporting period the sustainability indicators performed as follows:

● **Overall ESG profile**

The fund increased the weight of securities with low sustainability risks and/or decreased the weight of securities with high sustainability risks.

As a result the fund has achieved a better environmental, social and governance (ESG) profile than the reference index.

● **Principle Adverse Impact (PAI)**

The fund used a combination of approaches to consider and, where possible, mitigate material adverse impacts of our investments on society and the environment, such as GHG emissions, air pollution, biodiversity loss, emissions to water, hazardous/radioactive waste, human rights, labour standards, corruption and bribery and public health.

The degree and the way these impacts were considered depended on factors such as the specific context of the investment that is causing the adverse impact, or the availability of reliable data.

In line with Pictet Asset Management’s exclusion policy outlined in the firm’s Responsible Investment policy (see table above for excluded activities and applied exclusion thresholds), the fund did not have any exposure to companies that derived a significant portion of their revenue from activities detrimental to society or the environment:

Controversial activities (weighted-average company revenues, in %)*:

	Fund (%)	Reference Index (%)
Fossil fuels and nuclear energy	0.00	4.15
Weapons	0.03	0.99
Other controversial activities	0.07	1.02
Not applicable:	0.43	0.00
Not covered:	0.05	0.02

**Fossil fuels and nuclear energy include thermal coal extraction and power generation, oil & gas production and extraction, shale energy extraction, off-shore arctic oil & gas exploration, and nuclear power generation. Weapons include military contracting (weapon and weapon related services), and small arms (civilian customers (assault/ non-assault weapons, military law enforcement, key components). Other controversial activities include tobacco production, adult entertainment production, gambling operation, GMS development or growth, pesticides production or retail. Exposures are based on third-party data and may not reflect our internal view. Pictet Asset Management retains full discretion over the implementation of exclusion criteria and reserves the right to deviate from third-party information on a case-by-case basis in instances where it is deemed incorrect or incomplete.*

Source: Pictet Asset Management, Sustainalytics.

In addition, the fund excluded issuers that had exposure to:

(i) PAI 10: Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises.

(ii) PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons).

● **Voting rights**

During the reference period, the fund voted at 52 general assembly meetings out of 52 votable meetings (100.00%). We voted “against” (incl. “abstained” or “withhold”) at least one resolution at 21.15% of meetings.

Out of 676 management resolutions, we voted against management on 6 items (0.89%) and abstained on 10 items (1.48%).

We supported 10 (66.67%) shareholder resolutions out of 15 proposals.

In respect to Environmental and/or Social issues we voted for 2 out of 2 management resolutions and for 6 out of 8 shareholder resolutions.

Source: Pictet Asset Management, ISS ESG.

● **Engagement**

The fund engaged with 14 companies on ESG topics (data as of 30.09.2023). This includes in-house-led dialogues, collaborative investor initiatives, and third-party engagement services. To be considered an engagement, a dialogue with a targeted company must have a clear and measurable objective within a pre-defined time horizon. It is important to note that not all routine or monitoring interactions, even if they involve senior management or Board of Directors, are regarded as engagements in our assessment.

Source: Pictet Asset Management, Sustainalytics.

● **...and compared to previous periods?**

This question will be addressed in future annual reports due to lack of a track record.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The fund did not commit to a minimum proportion of sustainable investments.

However, ex-post, the fund invested in securities financing economic activities that substantially contributed to environmental and/or social objectives such as:

Environmental

- climate change mitigation or adaptation
- sustainable use and protection of water and marine resources
- transition to a circular economy
- pollution prevention and control, or
- protection and restoration of biodiversity and ecosystems

Social

- inclusive and sustainable communities
- adequate living standards and well-being for end users, or
- decent work

Pictet Asset Management used a proprietary reference framework as well as the objectives of the EU Taxonomy to define sustainable investments.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To prevent sustainable investments from causing significant harm to any other environmental or social objective, the fund applied the following screening criteria on a best effort basis:

(i) Exclusions of issuers that have significant activities with adverse impacts on society or the environment (see description of RI exclusion framework).

(ii) Issuers associated with high and severe controversies were not counted as Sustainable Investments.

Information were obtained from third-part providers and/or internal research. ESG information from third-party data providers may have been incomplete, inaccurate or unavailable. As a result, there was a risk that the Investment Manager may incorrectly assessed a security or issuer, resulting in the incorrect inclusion or exclusion of a security in the fund. Incomplete, inaccurate or unavailable ESG data may also acted as a methodological limitation to a non-financial investment strategy (such as the application of ESG criteria or similar). Where identified, the Investment Manager sought to mitigate this risk through its own assessment. In the event that the ESG characteristics of a security held by the fund changed, resulting in the security being sold, the Investment Manager does not accept liability in relation to such change.

● *How were the indicators for adverse impacts on sustainability factors taken into account?*

Pictet Asset Management monitors all mandatory Principal Adverse Impact indicators (included in Annex 1 of the Commission Delegated Regulation (EU) 22 / 1288) where we have robust data available. The quality of available data is expected to improve over time.

The fund considered and, where possible, mitigated adverse impacts of its investments on society and the environment that are deemed material to the investment strategy through a combination of portfolio management decisions, active ownership activities, and exclusion of issuers associated with controversial conduct or activities. More information is disclosed in the PAI entity report available under:

<https://documents.am.pictet/?cat=marketing-permalink&dtyp=PAI&dla=en&bl=PAM>

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

- *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?*

To ensure that sustainable investment did not cause significant harm to any sustainable investment objective, the fund excluded companies with high and severe violations of (i) the UN Global Compact principles on human rights, labour standards, environmental protection and anti-corruption or (ii) OECD Guidelines for Multinationals, including severe social and employee issues.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The fund considered and, where possible, mitigated adverse impacts that were deemed material to the investment strategy. Such adverse impacts included but were not limited to GHG emissions, air pollution, biodiversity loss, emissions to water, hazardous/radioactive waste, social and employee matters and corruption and bribery and were addressed through a combination of:

(i) portfolio management decisions

The investment team scored holdings according to an assessment of Environmental, Social & Governance risks and opportunities as part of the fund’s scoring framework. Scores are determined on a qualitative basis by the investment managers, informed by fundamental research and quantitative ESG data - including data on Principle Adverse Impact, ESG data provided by the companies and data provided by third-party ESG data providers. The investment team’s scoring process was a key component of the compartment’s portfolio construction process, determining target weights in the portfolio.

(ii) proxy voting

The fund followed Pictet Asset Management’s voting guidelines which are designed to support a strong culture of corporate governance, effective management of environmental and social issues and comprehensive reporting according to credible standards. These guidelines also seek to support recognized global governing bodies promoting sustainable business practices advocating for stewardship of environment, fair labour practices, non-discrimination, and the protection of human rights. All voting activities of the fund were logged and can be shared upon request.

(iii) engagement

Interaction with issuers took the form of one-to-one discussions, shareholder/bondholder meetings, investor roadshows and/or conference calls. The objectives of these interactions were to assess an organisation, monitor that their strategy was implemented in line with our expectations and ensure that issuers were on track to meet their goals and objectives.

Where appropriate, we engaged issuers on material ESG issues such as GHG reduction targets, governance improvements and on a range of environmental, social or governance controversies, to satisfy ourselves that they fully understood and addressed them effectively over the short, medium and long term. Our engagement activities included a combination of targeted in-house-led discussions, collaborative institutional investor initiatives, and third-party engagement services.

(iv) exclusion of issuers associated with controversial conduct or activities

The fund did not have any exposure to (i) companies that derived a significant portion of their revenue from activities detrimental to society or the environment as defined in Pictet Asset Management’s Responsible Investment policy and/or (ii) companies that severely violated the UN Global Compact principles on human rights, labour standards, environmental protection and anti-corruption and controversial weapons.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01.10.2022 - 30.09.2023

LARGEST INVESTMENTS	SECTOR	% ASSETS	COUNTRY
THERMO FISHER SCIENTIFIC INC	Health Care	4.3	United States

Source: Pictet Asset Management, GICS/MSCI.

What was the proportion of sustainability-related investments?

93.88%

● What was the asset allocation?

The fund was 97.45% aligned with E/S characteristics (#1 Aligned with E/S characteristics) and had 2.55% invested in Other (#2 Other). 93.88% were allocated to Sustainable Investments (#1A Sustainable Investments) and the remainder was invested in investments aligned with other environmental and/or social characteristics (#1B Other E/S characteristics).

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Notes:

- "#1A Sustainable", "Other Environmental" and "Social" investments were calculated on a pass/fail basis. They include labelled bonds (where relevant to the asset class) and securities from issuers with minimum 20% exposure to economic activities that contributed to at least one environmental or social objective.
- EU taxonomy-aligned investments were calculated on a revenue-weighted basis (ie security weights are multiplied by the proportion of revenues from economic activities that contribute to climate mitigation and climate adaptation) and cannot be consolidated with other numbers following a pass/fail approach.
- In the absence of an EU social taxonomy, Pictet has developed a proprietary social taxonomy framework. The framework is based on the Report on Social Taxonomy published by the EU Platform on Sustainable Finance in 2022. Eligible activities are defined as socially beneficial goods and services that substantially contribute to one of the following three social objectives: (1) inclusive and sustainable communities, (2) adequate living standards and well-being for end users and (3) decent work.

Source: Pictet Asset Management, Sustainalytics, FTSE Green Revenues, Factset RBICS.

● In which economic sectors were the investments made?

Source: Pictet Asset Management, GICS/MSCI.

We are evaluating the availability and the quality of data that would allow us to disclose more granular information in future reports on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The fund made investments in economic activities that contributed to the first two environmental objectives (climate change adaption and climate change mitigation) as set out in the Article 9 of Regulation (EU) 2020/852.

EU taxonomy-aligned investments were calculated on a revenue-weighted basis (ie security weights are multiplied by the proportion of revenues from economic activities that contribute to relevant environmental objectives) and cannot be consolidated with other numbers following a pass/fail approach.

EU Green Taxonomy alignment data were sourced from publicly available reports. Calculations may also include estimates in a limited number of cases when EU Green Taxonomy alignment reported data were not available. Estimates were performed on a best effort basis and following a conservative approach so as to produce a prudent outcome.

The monitoring procedures have been implemented to verify at all times compliance with Article 3 of the EU taxonomy regulation.

Data provided have not been verified by an external auditor or reviewed by an independent third-party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Taxonomy-aligned activities are expressed as a share of:
 - **turnover** reflects the “greenness” of investee companies today.
 - **capital expenditure (CapEx)** shows the green investments made by investee companies, relevant for a transition to a green economy.
 - **operational expenditure (OpEx)** reflects the green operational activities of investee companies.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

- Yes:
 In fossil gas In nuclear energy

No

The insufficient quality and availability of the data currently available on the market does not allow to provide such breakdown. We are working with data providers to increase quality and availability over time.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

Note:

- We use revenues as the key metric for setting target allocation to, and actual alignment with, the EU taxonomy due to limited availability and lack of reliable data for OpEx and CapEX.

Source: Pictet Asset Management.

● **What was the share of investments made in transitional and enabling activities?**

The share of investments made in:

- Transitional activities: Not applicable*
- Enabling activities: Not applicable*

*The insufficient quality and availability of the data currently available on the market does not allow to provide such breakdown. We are working with data providers to increase quality and availability over time.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

25.45%

These Sustainable Investments are not aligned with the EU Taxonomy because their economic activities either (i) are not covered by the EU Taxonomy, or (ii) do not comply with the technical screening criteria to achieve substantial contribution in the sense of the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

68.43%

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The fund’s “other” investments included cash positions primarily held for meeting daily liquidity and risk management purposes as allowed and foreseen by the fund’s investment policy. Where relevant, minimum environmental or social safeguards apply to the underlying securities.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the attainment of the sustainable investment objective was met by following the investment strategy and adhering to the binding elements.

The fund’s binding elements include:

- exclusion of issuers that:
 - are involved in the production of controversial weapons including anti-personnel mines, cluster munitions, biological and chemical weapons, nuclear weapons and depleted uranium
 - derive a significant portion of their revenue from activities detrimental to society or the environment, such as thermal coal extraction and power generation, unconventional oil and gas exploration and production, conventional oil and gas production, nuclear power generation, conventional weapons and small arms, military contracting weapons and weapon-related products and services, tobacco production, adult entertainment production, gambling operations, genetically modified organisms development/growth, pesticides product/retail. Please refer to Pictet Asset Management's Responsible Investment policy for further details on exclusion thresholds applicable to the above activities
 - severely violate international norms including the UN Global Compact principles on human rights, labour standards, environmental protection and anti-corruption
- a better ESG profile than the reference index
- ESG criteria analysis of eligible securities that covers at least 90% of net assets or the number of issuers in the portfolio

Furthermore, the fund engaged with 14 companies as of 30.09.2023.

How did this financial product perform compared to the reference benchmark?

No reference index has been designated for the purpose of attaining the environmental or social characteristics promoted by the fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How did the reference benchmark differ from a broad market index?**
Not applicable.
- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**
Not applicable.
- **How did this financial product perform compared with the reference benchmark?**
Not applicable.
- **How did this financial product perform compared with the broad market index?**
Not applicable.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Global Real Return Fund

Legal entity identifier: TJC2150QHOBNDQ288A280

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Yes	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: _____% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective: _____%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of _____% of sustainable investments <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective <input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental characteristics through the screening of all direct investments against the Fund’s exclusion policy. The Fund also promoted environmental characteristics by actively engaging with issuers on material climate related matters which included encouraging companies to align to the Paris Agreement, adopt science-based targets for carbon emissions reduction and/or broadly advance their sustainability commitments.

● **How did the sustainability indicators perform?**

The Fund’s sustainability-related impact was measured through the Investment Advisor’s implementation of its issuer engagement policy and exclusion strategy. The Fund’s exclusion strategy and exclusion screening process applies to 100% of its direct investments.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

For example, the Fund’s screening process resulted in the exclusion of certain sectors including issuers involved in coal and unconventional oil (such as arctic oil and oil sands). In addition, as part of the Fund’s screening process, the Investment Advisor referred to globally accepted norms such as the UN Global Compact Principles, where appropriate.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is as at 31 December 2022

Largest investments	Sector	% Net Assets	Country
U.S. Treasury Inflation Protected Securities 0.125% due 15/07/2031	Inflation Linked	6.72%	United States
U.S. Treasury Inflation Protected Securities 0.500% due 15/01/2028	Inflation Linked	4.05%	United States
U.S. Treasury Inflation Protected Securities 0.125% due 15/04/2025	Inflation Linked	3.56%	United States

Italy Buoni Poliennali Del Tesoro 1.300% due 15/05/2028	Inflation Linked	2.31%	Italy
U.S. Treasury Inflation Protected Securities 3.625% due 15/04/2028	Inflation Linked	2.29%	United States
U.S. Treasury Inflation Protected Securities 0.125% due 15/04/2026	Inflation Linked	2.01%	United States
Japan Government International Bond 0.100% due 10/03/2029	Inflation Linked	1.79%	Japan
Uniform Mortgage-Backed Security, TBA 3.000% due 01/02/2053	Securitized	1.71%	United States
New Zealand Government International Bond 2.000% due 20/09/2025	Inflation Linked	1.63%	New Zealand

For the purposes of compiling the information disclosed above, the investments of the Fund as at 31 December 2022 have been used.

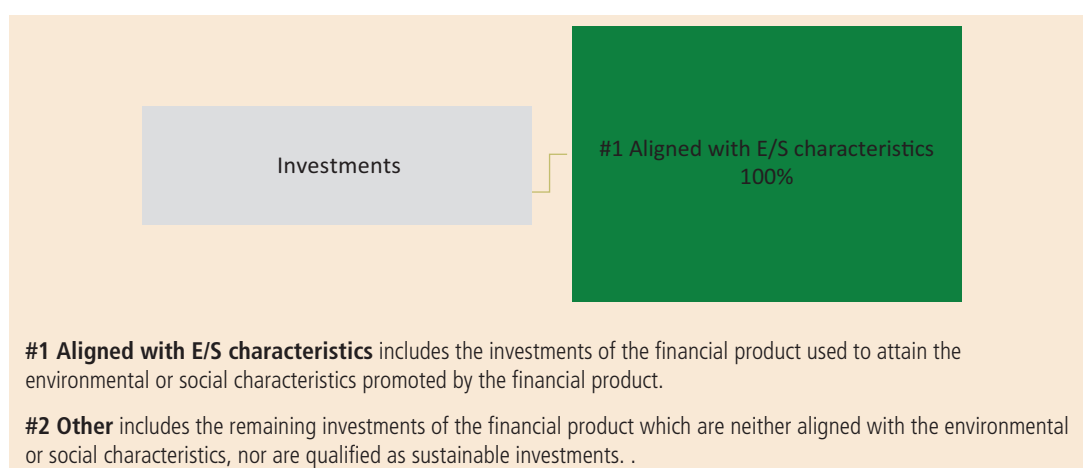

What was the proportion of sustainability-related investments?

Information on the proportion of the Fund which promoted environmental/social characteristics as at 31 December 2022 is provided below.

● *What was the asset allocation?*

As at 31 December 2022, 100% of the Fund's direct investments were considered to promote environmental characteristics as the Fund's exclusion strategy and exclusion screening process was applied to all of its direct investments. Minimum environmental or social safeguards were provided for such direct investments only and did not apply to indirect investments.

● *In which economic sectors were the investments made?*

Sector	% of Net Assets
Inflation Linked	100.97%
Net Other Short Duration Instruments	15.95%
Securitized	8.56%
Covered Bonds and Pfandbriefe	3.62%
Investment Grade Credit	0.17%
Emerging Market Local	0.07%
High Yield Credit	0.04%
Government Related	-29.38%

For the purposes of compiling the information disclosed above, the holdings of the Fund as at 31 December 2022 have been used.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

As at 31 December 2022, the percentage of investments that were aligned with the EU Taxonomy is 0%. This figure has not been subject to an assurance provided by an auditor nor has it been reviewed by any other third party.

Did the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy?

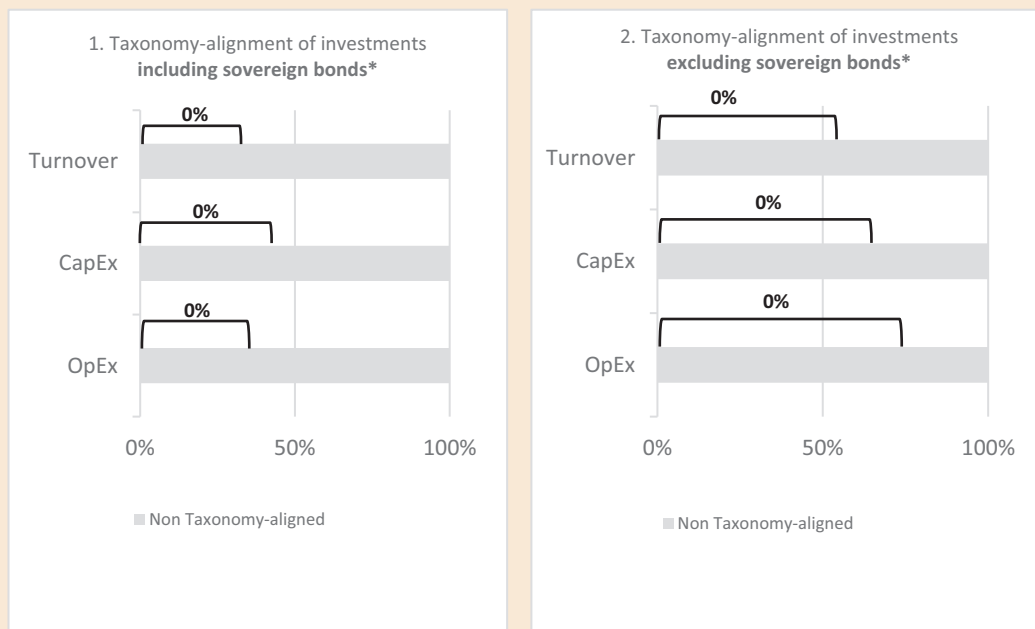

Yes:

In fossil gas In nuclear energy

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

As at 31 December 2022, the proportion of investments of the Fund in transitional and enabling activities during the reference period was 0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions on switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

As noted above, as at 31 December 2022, 100% of the Fund’s direct investments were considered to promote environmental characteristics as the Fund’s exclusion strategy and exclusion screening process was applied to all of its direct investments.

Minimum environmental or social safeguards were provided for such direct investments only and did not apply to indirect investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Investment Advisor engaged with companies and issuers on material climate related matters and sought to encourage companies to align to the Paris Agreement, adopt science-based targets for carbon emissions reduction and/or broadly advance their sustainability commitment.

Sustainability disclosures (unaudited)

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Capital Growth Funds - Robeco BP Global Premium Equities
Legal entity identifier: 2138001L9IU6WM5R6H47

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

It made **sustainable investments with an environmental objective:** ___%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** ___%

No

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 64.2% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund promotes the following Environmental and Social characteristics:

1. All equity holdings granted the right to vote and Robeco exerted that right by voting according to Robeco's Proxy Voting Policy, unless impediments occurred (e.g. share blocking).
2. The sub-fund's portfolio complied with Robeco's Exclusion Policy excluding investments in companies that are exposed to controversial behavior and controversial products. This means that the Sub-fund had no exposure to excluded securities, taking into account a grace period.
3. The sub-fund scrutinized investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies in the portfolio that have

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability disclosures (unaudited)

breached one of the international guidelines during the investment period, have become part of the Enhanced Engagement program. When engagement deemed highly unlikely to succeed, the company was excluded directly.

4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher. The sub-fund was limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of SI specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
5. The sub-fund's weighted carbon footprint was better than that of the general market index.

● ***How did the sustainability indicators perform?***

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on the positions and available data as at 31 December 2022.

1. On behalf of the sub-funds votes, were cast on 1549 agenda items at 108 shareholders' meetings.
2. The portfolio contained no investments that are on the Exclusion list as result of the application of the applicable exclusion policy.
3. 0 companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
4. 0.15% of the holdings in portfolio had an elevated sustainability risk profile.
5. The sub-fund's weighted carbon footprint was 4.36% better than that of the general market index.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to any or more of the UN Sustainable Development Goals, which include both social and environmental objectives. Robeco used its proprietary SDG Framework to assess which investments constitute a sustainable investment as referred to in art 2(17) SFDR. Under the SDG Framework, "SDG scores" are calculated for each investment. Investments having positive SDG scores (+1, +2, +3) are deemed to contribute to the UN SDGs.

Sustainability disclosures (unaudited)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 or -3 may even cause significant harm.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund considered principal adverse impacts of its investment decisions on sustainability factors as part of its investment due diligence process and procedures. For sustainable investments this meant ensuring that the investments do no significant harm to any environmental or social objective. Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators.

The following PAIs were considered in the fund:

- PAI 1, table 1 was considered for scope 1, 2 and 3 Green House Gas emissions via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).
- PAI 2, table 1 was considered for scope 1 and 2 carbon footprint via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).
- PAI 3, table 1 was considered for scope 1 and 2 Green House Gas intensity of investee companies via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).
- PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).
- PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement, proxy voting and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.
- PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

Sustainability disclosures (unaudited)

- PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.
- For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.
- PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behavior program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.
- PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behavior program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.
- PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement, proxy voting and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behavior of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.
- PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement and proxy voting. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGP), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy.
- PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to the gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.
- PAI 13, table 1 regarding board gender diversity was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.
- PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons:1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines.2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions.3. The Chemical Weapons Convention (1997) which

Sustainability disclosures (unaudited)

prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

- PAI 4, table 2 regarding investments in companies without carbon emission reduction initiatives was considered via engagement. Robeco engages with key high emitters in our investment portfolios via the engagement themes "Acceleration to Paris" and "Net Zero Carbon Emissions".
- PAI 5, table 3 regarding the share of investments in investee companies without any grievance or complaintshandling mechanism was considered.
- PAI 6, table 3 regarding insufficient whistleblower protection was considered.
- PAI 7, table 3 regarding incidents of discrimination was considered.
- PAI 8, table 3 regarding excessive CEO pay ratio was considered via proxy voting and engagement under the engagement program "Responsible Executive Remuneration".

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework. Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In the reported year, there have been no breaches.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Sustainability disclosures (unaudited)

How did this financial product consider principal adverse impacts on sustainability factors?

PAI were considered both pre-investment (through exclusions and through integration in the investment due diligence) and post-investments (through engagement). All values are based on the average positions over the reporting period.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- Via the applied normative and activity-based exclusions, the following PAIs were considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 7.53% of the net assets, compared to 5.12% of the benchmark
 - Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0% of the net assets, compared to 0.06% of the benchmark
 - Exposure to companies exploiting activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1) was 10.52% of the net assets, compared to 9.55% of the benchmark. The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0% of the net assets, compared to 0.32% of the benchmark
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs were considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1) when relevant for the sector
 - The board gender diversity (PAI 13, Table 1), expressed as the weighted average ratio of female to male board members of the portfolio was 0.6 compared to 0.5 for the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors were taken into account:

- Via the application of the voting policy, the following PAIs were considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators in related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs were considered:
 - At year end 16 companies in portfolio were subject to the Robeco Entity Engagement program. Via the Robeco Entity Engagement program, the following numbers of engagement cases per PAI were active on portfolio holdings, during the reporting period: PAI 1, table 1: GHG emissions 4 cases. PAI 2, table 1: Carbon footprint 4 cases. PAI 3, table 1: GHG intensity of investee companies 4 cases. PAI 4, table 1: Exposure to companies active in the fossil fuel sector 4 cases. PAI 5, table 1: Share of nonrenewable energy consumption and production 4 cases. PAI 6, table 1: Energy consumption intensity per high impact climate sector 4 cases. PAI 12, table 1: Unadjusted gender pay gap 1 case.
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of The Sub-fund that cause adverse impact might be selected for engagement.

Sustainability disclosures (unaudited)

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2022 through 31 December 2022

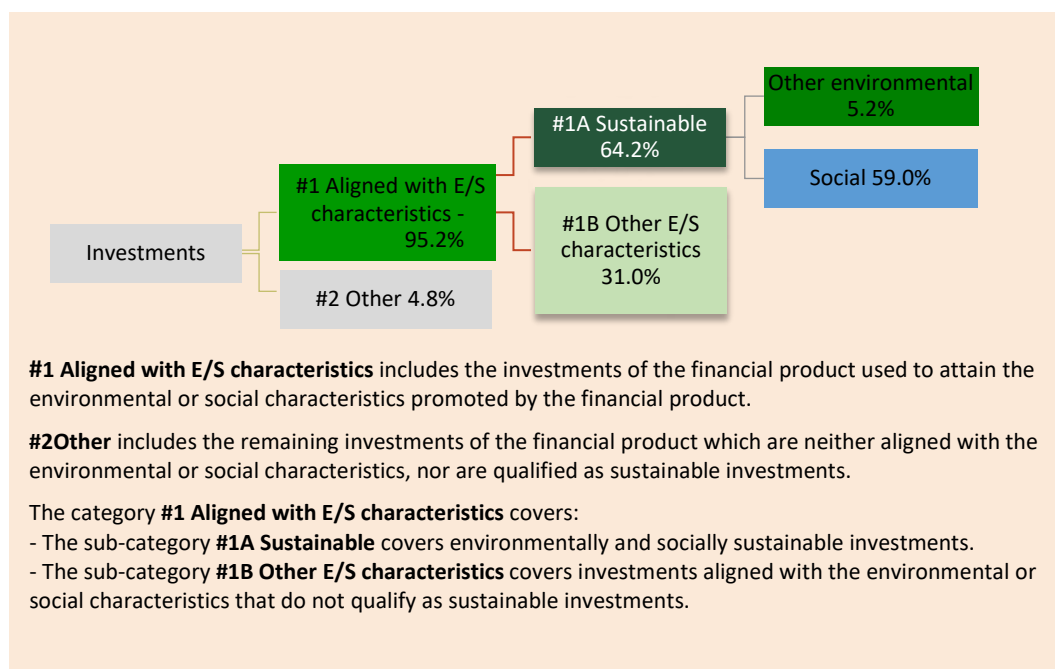

Largest investments	Sector	% Assets	Country
AbbVie Inc	Biotechnology	2.18	United States

Sustainability disclosures (unaudited)

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy 1?

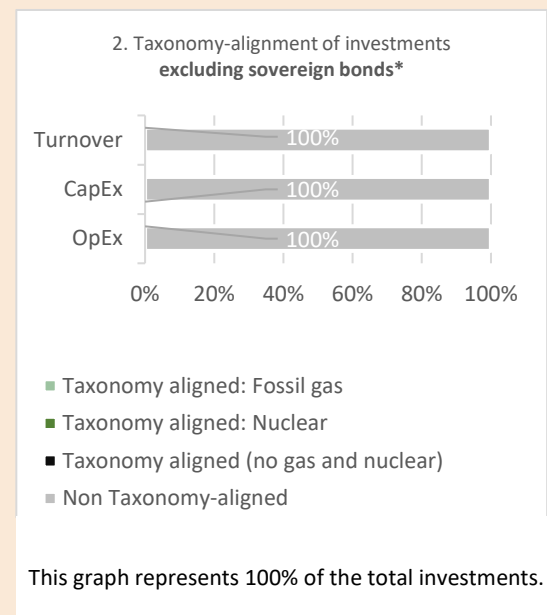

Yes:

In fossil gas

In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Sustainability disclosures (unaudited)

0%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

5.2%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

59.0%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Amongst others, the use of cash, cash equivalents and derivatives is included under "#2 Other". The fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the mandate was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 16 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the carbon footprint of the fund was better than that of the reference index.

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

Sustainability disclosures (unaudited)

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Capital Growth Funds - Robeco FinTech
Legal entity identifier: 213800XVWPYZAY58YG68

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

It made **sustainable investments with an environmental objective:** ___%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** ___%

No

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 82.9% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund promotes the following Environmental and Social characteristics:

1. All equity holdings granted the right to vote and Robeco exerted that right by voting according to Robeco's Proxy Voting Policy, unless impediments occurred (e.g. share blocking).
2. The sub-fund's portfolio complied with Robeco's Exclusion Policy excluding investments in companies that are exposed to controversial behavior and controversial products. This means that the Sub-fund had no exposure to excluded securities, taking into account a grace period.
3. The sub-fund scrutinized investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies in the portfolio that have

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability disclosures (unaudited)

breached one of the international guidelines during the investment period, have become part of the Enhanced Engagement program. When engagement deemed highly unlikely to succeed, the company was excluded directly.

4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher. The sub-fund was limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of SI specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

● **How did the sustainability indicators perform?**

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on the positions and available data as at 31 December 2022.

1. On behalf of the sub-funds votes, were cast on 694 agenda items at 70 shareholders' meetings.
2. The portfolio contained no investments that are on the Exclusion list as result of the application of the applicable exclusion policy.
3. 0 companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
4. 0.00% of the holdings in portfolio had an elevated sustainability risk profile.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to any or more of the UN Sustainable Development Goals, which include both social and environmental objectives. Robeco used its proprietary SDG Framework to assess which investments constitute a sustainable investment as referred to in art 2(17) SFDR. Under the SDG Framework, "SDG scores" are calculated for each investment. Investments having positive SDG scores (+1, +2, +3) are deemed to contribute to the UN SDGs.

Sustainability disclosures (unaudited)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 or -3 may even cause significant harm.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund considered principal adverse impacts of its investment decisions on sustainability factors as part of its investment due diligence process and procedures. For sustainable investments this meant ensuring that the investments do no significant harm to any environmental or social objective. Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators.

The following PAIs were considered in the fund:

- PAI 1, table 1 was considered for scope 1, 2 and 3 Green House Gas emissions via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).
- PAI 2, table 1 was considered for scope 1 and 2 carbon footprint via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).
- PAI 3, table 1 was considered for scope 1 and 2 Green House Gas intensity of investee companies via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).
- PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).
- PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement, proxy voting and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.
- PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

Sustainability disclosures (unaudited)

- PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.
- For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.
- PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behavior program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.
- PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behavior program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.
- PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement, proxy voting and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behavior of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.
- PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement and proxy voting. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGP), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy.
- PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to the gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.
- PAI 13, table 1 regarding board gender diversity was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.
- PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons:1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines.2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions.3. The Chemical Weapons Convention (1997) which

Sustainability disclosures (unaudited)

prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

- PAI 4, table 2 regarding investments in companies without carbon emission reduction initiatives was considered via engagement. Robeco engages with key high emitters in our investment portfolios via the engagement themes "Acceleration to Paris" and "Net Zero Carbon Emissions".
- PAI 5, table 3 regarding the share of investments in investee companies without any grievance or complaintshandling mechanism was considered.
- PAI 6, table 3 regarding insufficient whistleblower protection was considered.
- PAI 7, table 3 regarding incidents of discrimination was considered.
- PAI 8, table 3 regarding excessive CEO pay ratio was considered via proxy voting and engagement under the engagement program "Responsible Executive Remuneration".

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework. Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In the reported year, there have been no breaches.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Sustainability disclosures (unaudited)

How did this financial product consider principal adverse impacts on sustainability factors?

PAI were considered both pre-investment (through exclusions and through integration in the investment due diligence) and post-investments (through engagement). All values are based on the average positions over the reporting period.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- Via the applied normative and activity-based exclusions, the following PAIs were considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.05% of the net assets, compared to 4.98% of the benchmark
 - Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0% of the net assets, compared to 0.23% of the benchmark
 - Exposure to companies exploiting activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1) was 0% of the net assets, compared to 8.9% of the benchmark. The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0% of the net assets, compared to 0.4% of the benchmark
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs were considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1) when relevant for the sector
 - The board gender diversity (PAI 13, Table 1), expressed as the weighted average ratio of female to male board members of the portfolio was 0.5 compared to 0.5 for the benchmark.
 - Post-investment, the following principal adverse impacts on sustainability factors were taken into account:
- Via the application of the voting policy, the following PAIs were considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators in related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs were considered:
 - At year end 4 companies in portfolio were subject to the Robeco Entity Engagement program.
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of The Sub-fund that cause adverse impact might be selected for engagement.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy 1?

Yes:

In fossil gas In nuclear energy

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (unaudited)

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● What was the share of investments made in transitional and enabling activities?

0%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

0.0%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

82.9%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

Sustainability disclosures (unaudited)

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Amongst others, the use of cash, cash equivalents and derivatives is included under “#2 Other”. The fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the mandate was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 4 holdings were under active engagement either within Robeco’s thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues.

Sustainability disclosures (unaudited)

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Capital Growth Funds - Robeco Global Consumer Trends
Legal entity identifier: 213800PFG7CLST9A1742

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

It made **sustainable investments with an environmental objective:** ___%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** ___%

No

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 73.2% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund promotes the following Environmental and Social characteristics:

1. All equity holdings granted the right to vote and Robeco exerted that right by voting according to Robeco's Proxy Voting Policy, unless impediments occurred (e.g. share blocking).
2. The sub-fund's portfolio complied with Robeco's Exclusion Policy excluding investments in companies that are exposed to controversial behavior and controversial products. This means that the Sub-fund had no exposure to excluded securities, taking into account a grace period.
3. The sub-fund scrutinized investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies in the portfolio that have

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability disclosures (unaudited)

breached one of the international guidelines during the investment period, have become part of the Enhanced Engagement program. When engagement deemed highly unlikely to succeed, the company was excluded directly.

4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher. The sub-fund was limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of SI specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
5. The sub-fund's weighted average ESG score was better than that of the general market index.

● ***How did the sustainability indicators perform?***

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on the positions and available data as at 31 December 2022.

1. On behalf of the sub-funds votes, were cast on 603 agenda items at 45 shareholders' meetings.
2. The portfolio contained no investments that are on the Exclusion list as result of the application of the applicable exclusion policy.
3. 0 companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
4. 0.00% of the holdings in portfolio had an elevated sustainability risk profile.
5. The sub-fund's weighted average ESG score was 20.32 against 21.90 for the general market index.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to any or more of the UN Sustainable Development Goals, which include both social and environmental objectives. Robeco used its proprietary SDG Framework to assess which investments constitute a sustainable investment as referred to in art 2(17) SFDR. Under the SDG Framework, "SDG scores" are calculated for each investment. Investments having positive SDG scores (+1, +2, +3) are deemed to contribute to the UN SDGs.

Sustainability disclosures (unaudited)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 or -3 may even cause significant harm.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund considered principal adverse impacts of its investment decisions on sustainability factors as part of its investment due diligence process and procedures. For sustainable investments this meant ensuring that the investments do no significant harm to any environmental or social objective. Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators.

The following PAIs were considered in the fund:

- PAI 1, table 1 was considered for scope 1, 2 and 3 Green House Gas emissions via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).
- PAI 2, table 1 was considered for scope 1 and 2 carbon footprint via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).
- PAI 3, table 1 was considered for scope 1 and 2 Green House Gas intensity of investee companies via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).
- PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).
- PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement, proxy voting and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.
- PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement, proxy voting and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

Sustainability disclosures (unaudited)

- PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.
- For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.
- PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behavior program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.
- PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behavior program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.
- PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement, proxy voting and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behavior of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.
- PAI 11, table 1 regarding lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises was considered via engagement and proxy voting. Robeco supports the human rights principles described in the Universal Declaration of Human Rights (UDHR) and detailed in the Guiding Principles on Business and Human Rights (UNGP), the OECD Guidelines for Multinational Enterprises and the eight fundamental International Labour Organization (ILO) conventions. Our commitment to these principles means Robeco will expect companies to formally commit to respect human rights, have in place human rights due diligence processes, and, where appropriate, ensure that victims of human rights abuses have access to remedy.
- PAI 12, table 1 regarding unadjusted gender pay-gap was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to the gender pay gap. Overall, gender pay gap disclosures are only mandatory in few jurisdictions (e.g. UK, California). Companies are encouraged to improve such disclosures.
- PAI 13, table 1 regarding board gender diversity was considered via engagement and proxy voting. In 2022, Robeco launched an engagement program on diversity and inclusion, which will include elements in relation to equal pay.
- PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons:1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines.2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions.3. The Chemical Weapons Convention (1997) which

Sustainability disclosures (unaudited)

prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

- PAI 4, table 2 regarding investments in companies without carbon emission reduction initiatives was considered via engagement. Robeco engages with key high emitters in our investment portfolios via the engagement themes "Acceleration to Paris" and "Net Zero Carbon Emissions".
- PAI 5, table 3 regarding the share of investments in investee companies without any grievance or complaintshandling mechanism was considered.
- PAI 6, table 3 regarding insufficient whistleblower protection was considered.
- PAI 7, table 3 regarding incidents of discrimination was considered.
- PAI 8, table 3 regarding excessive CEO pay ratio was considered via proxy voting and engagement under the engagement program "Responsible Executive Remuneration".
-

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework. Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In the reported year, there have been no breaches.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Sustainability disclosures (unaudited)

How did this financial product consider principal adverse impacts on sustainability factors?

PAI were considered both pre-investment (through exclusions and through integration in the investment due diligence) and post-investments (through engagement). All values are based on the average positions over the reporting period.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- Via the applied normative and activity-based exclusions, the following PAIs were considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 0.1% of the net assets, compared to 4.98% of the benchmark
 - Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0% of the net assets, compared to 0.23% of the benchmark
 - Exposure to companies exploiting activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1) was 5.09% of the net assets, compared to 8.9% of the benchmark. The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0% of the net assets, compared to 16872643.4% of the benchmark
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs were considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1) when relevant for the sector
 - The board gender diversity (PAI 13, Table 1), expressed as the weighted average ratio of female to male board members of the portfolio was 0.6 compared to 0.5 for the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors were taken into account:

- Via the application of the voting policy, the following PAIs were considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators in related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs were considered:
 - At year end 12 companies in portfolio were subject to the Robeco Entity Engagement program. Via the Robeco Entity Engagement program, the following numbers of engagement cases per PAI were active on portfolio holdings, during the reporting period: PAI 7, table 1: Activities negatively affecting biodiversity sensitive areas 1 case. PAI 8, table 1: Emissions to water 1 case. PAI 9, table 1: Hazardous waste and radioactive waste ratio 1 case. PAI 12, table 1: Unadjusted gender pay gap 1 case.
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of The Sub-fund that cause adverse impact might be selected for engagement.

This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

Sustainability disclosures (unaudited)

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Amongst others, the use of cash, cash equivalents and derivatives is included under “#2 Other”. The fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the mandate was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 12 holdings were under active engagement either within Robeco’s thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues.

Sustainability disclosures (unaudited)

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Capital Growth Funds - Robeco Global Credits
Legal entity identifier: 5493003I7YFQHV1J8E29

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

It made **sustainable investments with an environmental objective:** ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** ___%

No

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 68.5% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund promotes the following Environmental and Social characteristics:

1. The sub-fund's portfolio complied with Robeco's Exclusion Policy excluding investments in companies that are exposed to controversial behavior and controversial products. This means that the Sub-fund had no exposure to excluded securities, taking into account a grace period.
2. The sub-fund scrutinized investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies in the portfolio that have breached one of the international guidelines during the investment period, have become part of the Enhanced Engagement program. When engagement deemed highly unlikely to succeed, the company was excluded directly.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Sustainability disclosures (unaudited)

- Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher. The sub-fund was limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of SI specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
- The sub-fund invested a minimum of 5% in green, social, sustainable, and/or sustainability-linked bonds.

● **How did the sustainability indicators perform?**

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on the positions and available data as at 31 December 2022.

- The portfolio contained no investments that are on the Exclusion list as result of the application of the applicable exclusion policy.
- 0 companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
- 0.84% of the holdings in portfolio had an elevated sustainability risk profile.
- The sub-fund invested 11.47% of its assets in green, social, sustainable and/or sustainability-linked bonds.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to any or more of the UN Sustainable Development Goals, which include both social and environmental objectives. Robeco used its proprietary SDG Framework to assess which investments constitute a sustainable investment as referred to in art 2(17) SFDR. Under the SDG Framework, "SDG scores" are calculated for each investment. Investments having positive SDG scores (+1, +2, +3) are deemed to contribute to the UN SDGs.

Sustainability disclosures (unaudited)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 or -3 may even cause significant harm.

How were the indicators for adverse impacts on sustainability factors taken into account?

The fund considered principal adverse impacts of its investment decisions on sustainability factors as part of its investment due diligence process and procedures. For sustainable investments this meant ensuring that the investments do no significant harm to any environmental or social objective. Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators.

The following PAIs were considered in the fund:

- PAI 1, table 1 was considered for scope 1, 2 and 3 Green House Gas emissions via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).
- PAI 2, table 1 was considered for scope 1 and 2 carbon footprint via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).
- PAI 3, table 1 was considered for scope 1 and 2 Green House Gas intensity of investee companies via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).
- PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).
- PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.
- PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

Sustainability disclosures (unaudited)

- PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.
- For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.
- PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behavior program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.
- PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behavior program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.
- PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behavior of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.
- PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.
- PAI 4, table 2 regarding investments in companies without carbon emission reduction initiatives was considered via engagement. Robeco engages with key high emitters in our investment portfolios via the engagement themes "Acceleration to Paris" and "Net Zero Carbon Emissions".

— — *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Sustainability disclosures (unaudited)

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework. Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In the reported year, there have been no breaches.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

PAI were considered both pre-investment (through exclusions and through integration in the investment due diligence) and post-investments (through engagement). All values are based on the average positions over the reporting period.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- o Via the applied normative and activity-based exclusions, the following PAIs were considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 3.1% of the net assets, compared to 6.87% of the benchmark
 - Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0% of the net assets, compared to 0.06% of the benchmark
 - Exposure to companies exploiting activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1) was 2.22% of the net assets, compared to 4.48% of the benchmark. The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.

Sustainability disclosures (unaudited)

- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1) was 0% of the net assets, compared to 0.25% of the benchmark
- o Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs were considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1) when relevant for the sector

Post-investment, the following principal adverse impacts on sustainability factors were taken into account:

- o Via Robeco's entity engagement program, the following PAIs were considered:
 - At year end 29 companies in portfolio were subject to the Robeco Entity Engagement program. Via the Robeco Entity Engagement program, the following numbers of engagement cases per PAI were active on portfolio holdings, during the reporting period: PAI 1, table 1: GHG emissions 2 cases. PAI 2, table 1: Carbon footprint 2 cases. PAI 3, table 1: GHG intensity of investee companies 2 cases. PAI 4, table 1: Exposure to companies active in the fossil fuel sector 2 cases. PAI 5, table 1: Share of nonrenewable energy consumption and production 2 cases. PAI 6, table 1: Energy consumption intensity per high impact climate sector 2 cases. PAI 12, table 1: Unadjusted gender pay gap 2 cases. PAI 13, table 1: Board gender diversity 2 cases. PAI 7, table 1: Activities negatively affecting biodiversity sensitive areas 1 case. PAI 8, table 1: Emissions to water 1 case. PAI 9, table 1: Hazardous waste and radioactive waste ratio 1 case. PAI 10, table 1: Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises 1 case. PAI 11, table 1: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises 1 case.
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of The Sub-fund that cause adverse impact might be selected for engagement.

Sustainability disclosures (unaudited)

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2022 through 31 December 2022

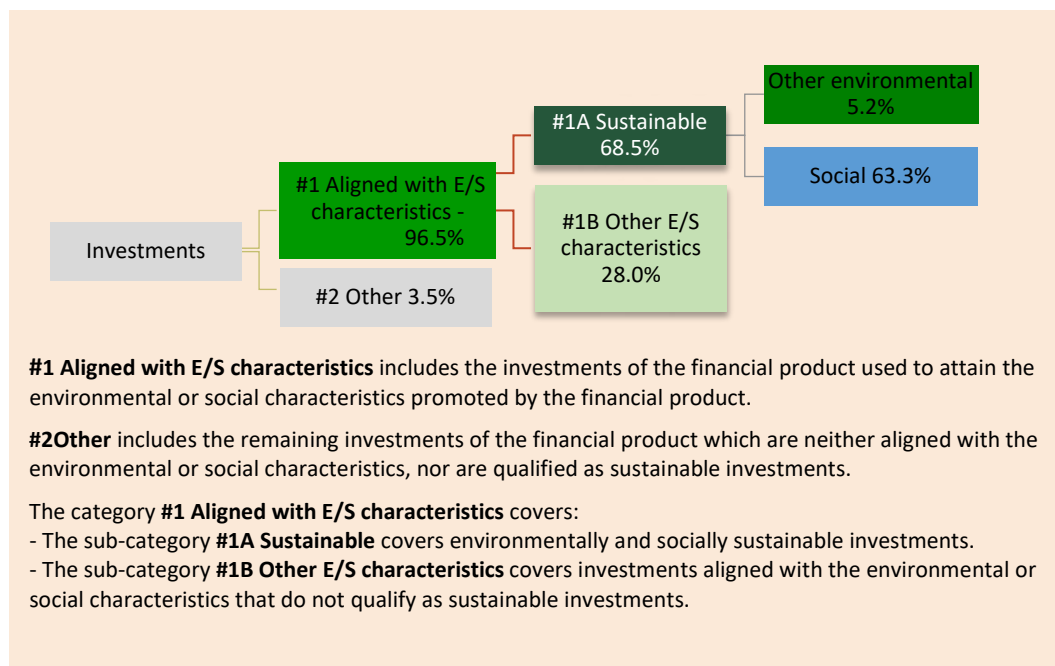

Largest investments	Sector	% Assets	Country
2.250 NEXTERA ENERGY CAPITAL 01-JUN-2030	Electric	1.31	United States

Cash and other instruments	5.06

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy 1?

Yes:

In fossil gas

In nuclear energy

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (unaudited)

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**
0%.

🇺🇪 **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

5.2%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

👤 **What was the share of socially sustainable investments?**

63.3%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

🇺🇪 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

Sustainability disclosures (unaudited)

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Amongst others, the use of cash, cash equivalents and derivatives is included under “#2 Other”. The fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the mandate was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 7 holdings were under active engagement either within Robeco’s thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, 11.47% of the assets were invested in green bonds.

Sustainability disclosure (unaudited)

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco QI Global Dynamic Duration
Legal entity identifier: 21380006XS66TUE3KZ90

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="radio"/> Yes	<input type="radio"/> <input checked="" type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 1.2% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The fund promotes the following Environmental and Social characteristics:

- The sub-fund's portfolio complied with Robeco's Exclusion Policy that is based on exclusion criteria that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom. This means that the Sub-fund has no exposure to excluded securities, taking into account a grace period.
- The sub-fund's weighted carbon footprint was better than that of the general market index.

Sustainability disclosure (unaudited)

3. The sub-fund's weighted average Country Sustainability Ranking was better than the average ranking of the index.

● **How did the sustainability indicators perform?**

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on the positions and available data as at 31 December 2022.

1. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
2. The sub-fund's weighted carbon footprint was 0.00% better than that of the general market index.
3. The sub-fund's weighted average Country Sustainability Ranking was 7.2 against 7.16 for the average ranking of the index.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The Fund did not intend to make investments considered as sustainable investments as defined under the SFDR Regulation (EU) 2019/2088.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

The Fund did not intend to make investments considered as sustainable investments as defined under the SFDR Regulation (EU) 2019/2088.

— *How were the indicators for adverse impacts on sustainability factors taken into account?*

The Fund did not intend to make investments considered as sustainable investments as defined under the SFDR Regulation (EU) 2019/2088.

— *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

As the Fund invests in sovereigns and supranationals, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are not applicable.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainability disclosure (unaudited)

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

PAI were considered both pre-investment (through exclusions and through integration in the investment due diligence) and post-investments (through engagement). All values are based on the average positions over the reporting period.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- As part of Country Sustainability ranking, used for The Fundamental analysis of bonds, the following PAIs were considered:
 - Table 1, PAI 15: The Green House Gas intensity (scope 1 and 2) of the sub-fund was 5% better than the benchmark.
 - Table 1, PAI 16: 0% of the assets was invested in countries subject to social violations.
 - In addition, the Fund has Environmental and Social promoting characteristics in relation to:
 - Table 2, PAI 17: The Share of bonds not certified as green under a future EU act setting up an EU Green Bond Standard was 1.19%.
 - Table 3, PAI 21: The average Corruption score was 0.6% better than the benchmark.

Post-investment, the following principal adverse impacts on sustainability factors were taken into account:

- Table 1, PAI 15: The Green House Gas intensity (scope 1 and 2) of the sub-fund was 5% better than the benchmark.

What was the proportion of sustainability-related investments?

98.3%

What was the asset allocation?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2022 through 31 December 2022

Sustainability disclosure (unaudited)

● In which economic sectors were the investments made?

GICS Sector Level 3	Average exposure in % over the reporting period
Sectors deriving revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels -	
Not applicable	0.00
Other sectors	
Treasuries	97.66
Cash and other instruments	2.34

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy 1?

Yes:

In fossil gas In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosure (unaudited)

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

0%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

1.2%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

No investments were made in socially sustainable investments.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Amongst others, the use of cash, cash equivalents and derivatives is included under "#2 Other". The fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the fund were not used to attain environmental or social characteristics promoted by the financial product.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

Sustainability disclosure (unaudited)

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 1.19% of the assets were invested in green bonds.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: R-co 4Change Moderate Allocation

Legal entity identifier: 969500ZTLK8HAWMAMI53

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** [N/A]

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** N/A

It promotes Environmental/Social (E/S)

characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50.0% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Through our work and MSCI ESG Research, we consider a broad spectrum of criteria relating to the E pillar (physical risks linked to climate change, water stress, waste management, etc.) and S pillar (staff training, product safety, auditing production practices, etc.) as part of our general approach.

Additionally, the investment teams seek to identify relevant and material factors as part of ex-ante analysis of ESG profiles and ex-post assessment of the sustainability trajectory of the issuer and/or industry. Based on dependencies and major impacts, the following elements may be considered: controversies (type, severity and recurrence), externalities (toxic/carbon emissions, water consumption, destruction of biodiversity, accidents, dismissals, strikes, precarious contracts, fraud, etc.) and contributions (Taxonomy alignment, participation in the United Nations sustainable development goals (SDG), alignment with the Paris Agreement temperature goal, etc.).

The fund seeks to contribute to and promote the following United Nations Sustainable Development Goals: affordable and clean energy (SDG 7), decent work and economic growth (SDG 8), responsible consumption and production (SDG 12), life on land (SDG 15), and partnership for the goals (SDG 17).

Sustainability indicators are used to verify how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The sustainability indicators used to demonstrate the promotion of the environmental and/or social characteristics are:

- ESG profile (ESG rating, rating trends and sector distribution)
- Carbon intensity (divergence from indices, sector contribution and identification of main contributors)
- Transition profile (reduction targets, green share, categories of activities in transition, etc.)
- Governance: representation of women on the board of directors
- Sustainable Development Goals (SDG): percentage aligned with the SDG

In particular, and in addition to the above for each SDG to which the fund seeks to contribute, three quantitative indicators have been selected: a positive indicator, a negative indicator and a forward-looking indicator:

- Affordable and clean energy (SDG 7):
 - o Use of renewable energy (gigawatt hour)
 - o Involvement in activities linked to fossil fuels (percentage of turnover)
 - o Clean/renewable energy use policy
- Decent work and economic growth (SDG 8):
 - o Number of women in management roles
 - o Staff turnover
 - o Score for consideration and management of matters linked to human capital, such as health and safety at work, applying labour standards to the value chain, and policies for developing human capital through training and employee equity incentive plans
- Responsible consumption and production (SDG 12):
 - o Environmental and/or social policy and/or procedure covering the entire value chain
 - o Adherence to and compliance with the fundamental principles of the International Labour Organization
 - o Score for consideration and management of ESG matters by the leadership team
- Life on land (SDG 15):
 - o Biodiversity policy and/or procedures
 - o Water intensity (m³ of water used/turnover in dollars or euro)
 - o Score for consideration and management of matters linked to natural resources (managing water consumption, use of ecological materials, policies and procedures for considering and preserving ecosystems, etc.)
- Partnership for the goals (SDG 17):
 - o Alignment with the United Nations Global Compact framework
 - o Number of controversies involving serious cases of commercial fraud (anti-competitive practices, price gouging, controversial business practices and insider trading)
 - o Link between director remuneration mechanisms and the sustainable development goals

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

A sustainable investment may be assessed with respect to three pillars: (i) **contributing to an environmental or social objective**, (ii) doing so without doing significant harm and (iii) applying good governance practices.

Our definition is based on data supplied by our service provider MSCI ESG Research.

Further details are available in the document "Definition of sustainable investments" which can be found on our website: <https://am.fr.rothschildandco.com/en/regulatory-information/>

As regards corporate issuers, our approach to sustainable investment takes into account:

- Companies' general positive contribution through contributing revenue, i.e. revenue linked to activities with a positive impact on the environment or society (clean energy, energy efficiency, access to care, etc.) or to issuance of sustainable debt instruments (green, social or sustainable bonds);
- Contribution to environmental objectives, such as targets for reducing emissions in line with the Paris Agreement or reducing water use;
- Contribution to social objectives, through alignment with United Nations Sustainable Development Goal 5 (gender equality), 8 (decent work and economic growth) or 10 (reduced inequalities).

As regards public issuers, our approach to sustainable investment takes into account:

- States' general positive contribution through issuance of sustainable debt instruments (green, social or sustainable bonds);
- Positive environmental contribution: Signatory to the Paris Agreement or the United Nations Convention on Biological Diversity;
- Positive social contribution: Performance with respect to equality (Gini index) and freedom of the press (Freedom House).

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

In order to be classed as sustainable, an investment must do no significant harm to the various environmental or social objectives to which it intends to contribute.

Rothschild & Co Asset Management Europe has defined a "do no significant harm" ("DNSH") procedure to ensure that the sustainable investments of a financial product with a sustainable investment objective do no significant harm to any of its environmental or social objectives. This procedure includes:

- Standard sector exclusions which reduce the product's exposure to social and environmental controversies;
- Consideration of the mandatory principal adverse impacts (PAIs) of these investments on sustainability factors.

We also use ESG ratings as part of our approach, as a minimal safeguard in relation to overall sustainability performance.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Consideration of mandatory PAIs is carried out as part of the various elements within the Management Company's sustainable approach: as part of the Management Company's common exclusion framework, the combined ESG and financial research methodology, the sustainability requirements at portfolio level, the engagement and controversies management policy, and the measurement and steering of ESG performance indicators.

We pay particular attention to companies' statements about PAIs 1, 2, 3, 10, 13 and 14, and to PAI 16 for public issuers.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Detailed description:

As per our definition of a sustainable investment for corporate issuers, we check to ensure that there are no violations of the United Nations Global Compact (UNGC) or OECD Guidelines for Multinational Enterprises. To that end, we use an overall controversy indicator measuring the company's past and current involvement in violations of international standards. The regulatory frameworks considered include the following: the United Nations Global Compact (UNGC), the United Nations Guiding Principles on Business and Human Rights, the Conventions of the International Labour Organization (ILO) and the OECD Guidelines for Multinational Enterprises.

Moreover, for all the Management Company's investments, we exclude companies suspected of violating the ten fundamental principles of the United Nations Global Compact (UNGC).

In addition to the above, the fund applies these standards-based exclusions at the level of the portfolio as a whole: the United Nations Guiding Principles on Business and Human Rights, the OECD Guidelines for Multinational Enterprises, the Fundamental Conventions of the International Labour Organization.

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and which is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes,

No

Rothschild & Co Asset Management Europe has identified the principal adverse impacts (PAI) on sustainability factors on which we intend to focus our efforts and resources in order to deploy our responsible investment approach:

Corporate issuers:

o Climate change

- Greenhouse gas intensity and emissions, scopes 1 and 2 (PAI 1 & 3)
- Involvement in fossil fuels (PAI 4)
- Exposure to issuers that are not committed to adhering to the Paris Agreement (optional climate PAI 4)

o Human rights, business ethics and respect for human dignity

- Violation of fundamental ethical standards (PAI 10)
- Gender diversity within governance bodies (PAI 13)
- Involvement in controversial weapons (PAI 14)
- Exposure to issuers with fragile anti-corruption processes (optional social/human rights PAI 15)

Sovereign issuers:

o Human rights, business ethics and respect for human dignity

- Exposure to countries implicated in human rights violations and subject to related sanctions (PAI 16)

As part of taking mandatory PAIs into account and defining our optional and priority PAIs, we relied on methodology and data from our external service provider, MSCI ESG Research.

From an operational standpoint, adverse impacts are taken into account in every aspect of our sustainability approach, including the exclusion policy, the analysis and selection process using ESG criteria, the engagement system and ESG reporting. For this product, we produce annual reports on all mandatory PAIs and optional PAIs chosen by the Management Company.

Our Policy for taking into account the principal adverse impacts in sustainability is available on our website: <https://am.fr.rothschildandco.com/en/responsible-investing/documentation/>

To supplement the above, and in strict accordance with the investment strategy, the financial product considers:

- Emissions to water (Climate PAI 8)
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises (Social PAI 11)
- GHG intensity for sovereigns (Climate PAI 15)

What investment strategy does this financial product follow?

The fund may invest (i) between 50% and 100% in money market instruments and/or fixed-income products with fixed or variable rates, with a maximum of 10% of the net assets (“NA”) in convertible bonds and a minimum of 10% of NA in fixed-income products with a credit rating equivalent to investment grade. The fund may invest (a) up to 10% of NA in contingent convertible bonds, (b) up to 10% and 30% of NA in unrated and speculative-grade securities, respectively, and (c) up to 100% of NA in callable and puttable bonds; (ii) between 0% and 50% in equities from OECD countries in any geographical region and with any market capitalisation, with up to 10% in the equities of small caps (including micro caps); and (iii) up to 10% in funds (including listed funds/ETFs) that implement an SRI strategy and have received, or are in the process of receiving, a label (excluding treasury funds).

Please refer to the prospectus for further information.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

Adherence to our common exclusion framework

- o Regulatory exclusions: controversial weapons and international sanctions
- o Discretionary exclusions: United Nations Global Compact (UNGC) and thermal coal

Integrating material ESG criteria into the analysis process

- o An assessment combining financial and ESG criteria: the integration of ESG criteria reflects the analysis process applied by each management team; it may be applied at sector or issuer level, and at management company and/or fund level, depending on the asset class in question.

Adherence to sustainability requirements at portfolio level

- o Target ESG score of at least BBB
- o Minimum level of Taxonomy-aligned and sustainable investments
- o Minimal coverage of ESG ratings (90%)
- o Exclusion of the lowest-scoring 20% of issuers with respect to ESG from the investment universe;

The **investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

o The following standards-based exclusions: the United Nations Guiding Principles on Business and Human Rights, the OECD Guidelines for Multinational Enterprises, the Fundamental Conventions of the International Labour Organization;

o Exclusion of issuers belonging to the following “controversial” sectors: weapons, tobacco, coal, oil, unconventional gas, conventional oil and gas and the generation of electricity.

More information on the fund and its investment strategy can be found in the Transparency Code (Direct Management), which is available on the website.

Active engagement

o Dialogue primarily focused around our top-priority themes (climate transition, inclusion and fair transition, etc.) and controversies,

o A responsible voting policy for the entire equity scope,

o Active participation in multiple industry working groups (ADEME, Finance for Tomorrow, AFG, Climate Action 100+, etc.) on the strategies implemented in the portfolios (impact, biodiversity, fossil fuel, fair transition, etc.)

The ESG ratings mainly come from a data provider called MSCI ESG Research, which rates companies from CCC to AAA (AAA being the best rating).

ESG monitoring is ongoing, since ESG data is fully integrated into our operational systems.

Our entire value chain (compliance, risk, investment management and reporting teams) is covered by the same ESG data flow (updated on a quarterly basis), with ESG constraints and requirements encoded into every system. This allows us to monitor ESG data on a daily basis and in real time.

Our common exclusion framework is kept up to date and encoded into the operational systems with pre-trade blocks by compliance. Specific sustainability constraints and objectives at product level are the responsibility of the risk department.

The management teams have access to ESG data and can monitor their sustainability constraints via their Bloomberg portal every day. The impact of portfolio movements on sustainability requirements are continuously assessed by the investment managers as part of the portfolio allocation process.

Furthermore, regular meetings of the investment committee offer an opportunity to assess the sustainability risks and ESG issues associated with specific issuers and/or portfolios.

Lastly, alerts covering rating changes and ESG controversies are implemented by MSCI ESG Research for the investment teams and control departments, and analysts monitor the latest news. Details of the controversy monitoring process are available in the PAI Policy.

ESG reports are produced using the same ESG data flow, then validated by the investment teams.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The exclusions listed below reduce the initial universe and ensure a minimum selectivity rate of 20%; this rate may be higher depending on the investment universe, sectors and strategy of the financial product:

o Regulatory exclusions, coupled with our Management Company’s discretionary exclusions;

o Exclusion of the lowest-scoring 20% of issuers with respect to ESG from the initial investment universe;

o The following standards-based exclusions: the United Nations Guiding Principles on Business and Human Rights, the OECD Guidelines for Multinational Enterprises, the Fundamental Conventions of the International Labour Organization;

o Exclusion of issuers belonging to the following “controversial” sectors: weapons, tobacco, coal, oil, unconventional gas, conventional oil and gas and the generation of electricity.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance

What is the policy to assess good governance practices of the investee companies?

To determine whether and when a company does not adopt, or no longer adopts, good governance practices, we have implemented a process on two levels:

Standards-based screening

In accordance with our common exclusion framework, sovereign and corporate issuers subject to international sanctions or implicated in violations of the United Nations Global Compact are excluded from our initial investment universes for all our investment vehicles.

Assessment of good governance practices

The portfolio managers and analysis teams are responsible for assessing and monitoring the governance practices of the companies in which they invest.

To assess good governance practices, the investment teams consider factors including: governance data from MSCI ESG Research, commitment to international codes of conduct (e.g. UNGC signatory), the degree of independence and diversity on the board of directors, controversies and the history of senior management and representatives of the board of directors.

In the context of MSCI ESG Research's ESG ratings, the governance pillar is considered material for all sectors and has a minimum weighting of 33% when calculating the final ESG score for every issuer. This governance pillar is based on two sub-themes: Corporate governance (structure and control, board of directors, remuneration and accounting) and corporate behaviour (business ethics and tax transparency). The topics addressed within each of these categories include sound management structures, remuneration matters, employee relations and tax compliance.

We see assessing good governance practices as an ongoing process, and the investment teams are encouraged to engage directly with companies to obtain additional information, raise concerns and/or resolve issues linked to the governance practices identified or associated controversies.

What is the asset allocation planned for this financial product?

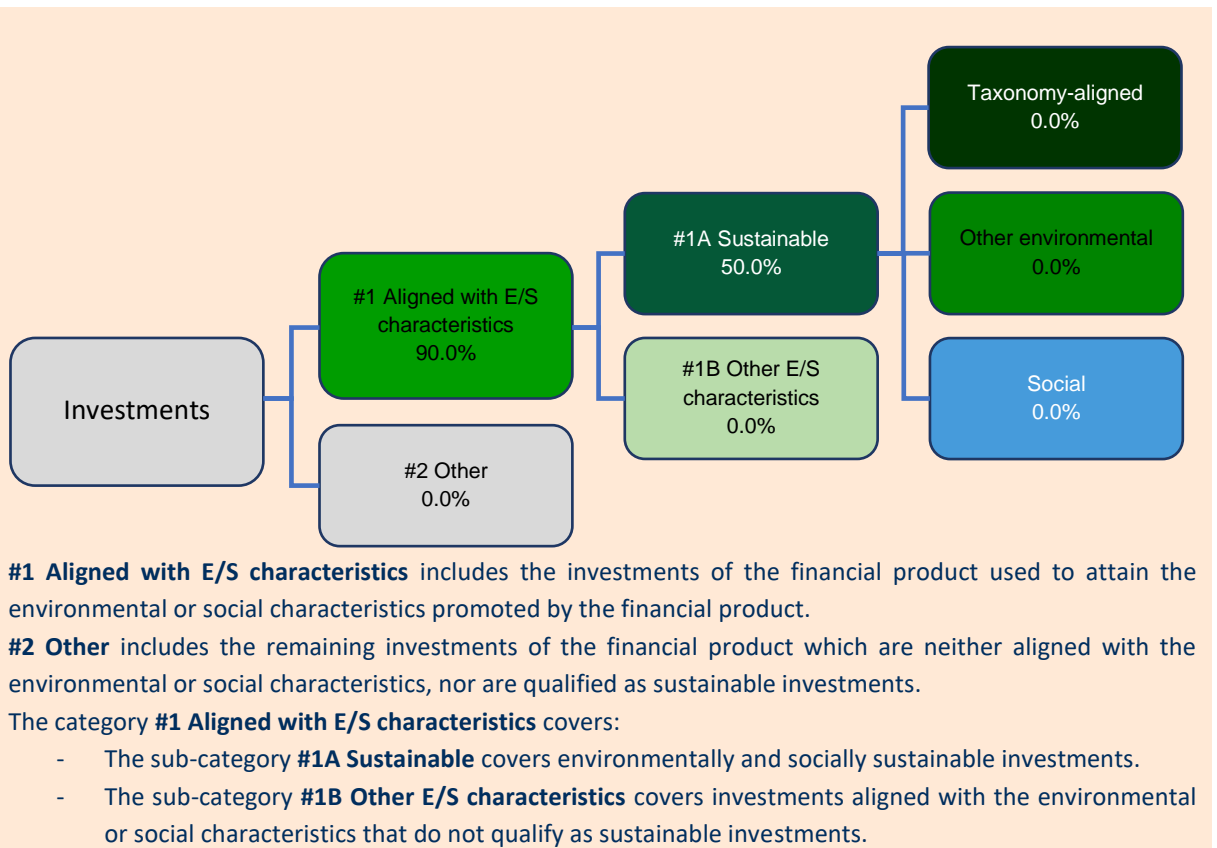

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies;

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy;

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

While the product is committed to a minimum level of sustainable investment, no allocation between environmental and social objectives has been determined in advance, which explains the minimum of 0% for these two pillars. The asset allocation figures presented above are pre-contractual minimums expressed as a percentage of the net assets; they are not a forecast of a target allocation. For information on the percentages achieved, please refer to the annual report.

The underlying investments of the financial product that take into account the EU criteria for environmentally sustainable economic activities represent a minimum alignment commitment of 0% of investments.

A share of the financial product's net assets may be invested in instruments that do not promote environmental or social characteristics (cash, funds or derivatives). They provide technical support and uphold the fund's financial objective (hedging, movements of liabilities, etc.). Minimum ESG safeguards are applied in accordance with our sustainability approach. Details are provided in the response to the question on "other" investments below.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Interest rate and currency derivatives neither contribute to nor affect the environmental and social characteristics promoted by the financial product. Derivatives on other asset classes do not contribute to the attainment of the environmental and social characteristics, but may affect them. For the purposes of transparency, derivatives are not taken into account in the ratios presented above.

- For exposure, the fund may use derivatives whose underlying have been assessed from an ESG perspective, in accordance with the fund’s sustainability approach;
 - All counterparties to over-the-counter instruments will also be subject to ESG analysis.
- Further information is available in the fund’s Transparency Code.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Does the financial product invest in nuclear and/or fossil gas related activities that are aligned with the EU Taxonomy¹?

- Yes
- In fossil gas In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, “sovereign bonds” consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The minimum share in enabling and transitional activities is 0%.

¹ Activities related to nuclear and/or fossil gas related activities will only be considered Taxonomy-aligned if they contribute to climate change mitigation and do no significant harm to any of the objectives of the EU Taxonomy – see the explanatory note in the left-hand margin. All criteria applicable to economic activities in the nuclear and/or fossil gas related activities that are aligned with the EU Taxonomy are defined in Commission Delegated Regulation (EU) 2022/1214.

The applicable criteria for **fossil gas** to be considered aligned with the EU Taxonomy include restrictions on emissions and a transition to renewable energy sources or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive rules regarding nuclear safety and waste management.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Within the minimum invested in sustainable investments, the minimum share of investments with an environmental objective that are not aligned with the Taxonomy is 0%. While the product is committed to a minimum level of sustainable investments overall, no allocation between environmental and social objectives has been determined in advance.

What is the minimum share of socially sustainable investments?

Within the minimum invested in sustainable investments, the minimum share of investments with a social objective is 0%. While the product is committed to a minimum level of sustainable investments overall, no allocation between environmental and social objectives has been determined in advance.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

A share of the financial product’s net assets may be invested in securities that are not analysed with respect to ESG criteria. However, all investments adhere to the Management Company’s common exclusion framework, guaranteeing a baseline level of compliance with ESG principles.

The securities held in the portfolio, in accordance with the allocation levels stated in the prospectus, serve to further the financial product’s financial investment objective.

The financial product may invest up to 10% of its net assets in cash on an ancillary basis. We take the ESG ratings of the depositary bank into account. Cash may also be invested in money market funds managed by our management company, in accordance with our ESG policy and where we have complete transparency.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

N/A.

Are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

N/A.

How does the designated index differ from a relevant broad market index?

N/A.

Where can the methodology used for the calculation of the designated index be found?

N/A.

Where can I find more product specific information online?

Further details on the financial product are available in the prospectus, the ESG policy and the policies for taking into account PAI and sustainability risks, which are available on our website: <https://am.fr.rothschildandco.com/en/responsible-investing/documentation/>

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: R-co Conviction Club

Legal entity identifier:
969500XDF5VOZBJLPG81

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** [N/A]

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** N/A

It promotes Environmental/Social (E/S)

characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30.0% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Through our work and MSCI ESG Research, we consider a broad spectrum of criteria relating to the E pillar (physical risks linked to climate change, water stress, waste management, etc.) and S pillar (staff training, product safety, auditing production practices, etc.) as part of our general approach.

Additionally, the investment teams seek to identify relevant and material factors as part of ex-ante analysis of ESG profiles and ex-post assessment of the sustainability trajectory of the issuer and/or industry. Based on dependencies and major impacts, the following elements may be considered: controversies (type, severity and recurrence), externalities (toxic/carbon emissions, water consumption, destruction of biodiversity, accidents, dismissals, strikes, precarious contracts, fraud, etc.) and contributions (Taxonomy alignment, participation in the United Nations sustainable development goals (SDG), alignment with the Paris Agreement temperature goal, etc.).

Sustainability indicators are used to verify how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The sustainability indicators used to demonstrate the promotion of the environmental and/or social characteristics are:

- ESG profile (ESG rating, rating trends and sector distribution)
- Carbon intensity (divergence from indices, sector contribution and identification of main contributors)
- Transition profile (reduction targets, green share, categories of activities in transition, etc.)
- Governance: representation of women on the board of directors
- Sustainable Development Goals (SDG): percentage aligned with the SDG

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

A sustainable investment may be assessed with respect to three pillars: (i) **contributing to an environmental or social objective**, (ii) doing so without doing significant harm and (iii) applying good governance practices.

Our definition is based on data supplied by our service provider MSCI ESG Research.

Further details are available in the document “Definition of sustainable investments” which can be found on our website: <https://am.fr.rothschildandco.com/en/regulatory-information/>

As regards corporate issuers, our approach to sustainable investment takes into account:

- Companies’ general positive contribution through contributing revenue, i.e. revenue linked to activities with a positive impact on the environment or society (clean energy, energy efficiency, access to care, etc.) or to issuance of sustainable debt instruments (green, social or sustainable bonds);
- Contribution to environmental objectives, such as targets for reducing emissions in line with the Paris Agreement or reducing water use;
- Contribution to social objectives, through alignment with United Nations Sustainable Development Goal 5 (gender equality), 8 (decent work and economic growth) or 10 (reduced inequalities).

As regards public issuers, our approach to sustainable investment takes into account:

- States’ general positive contribution through issuance of sustainable debt instruments (green, social or sustainable bonds);
- Positive environmental contribution: Signatory to the Paris Agreement or the United Nations Convention on Biological Diversity;
- Positive social contribution: Performance with respect to equality (Gini index) and freedom of the press (Freedom House).

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

In order to be classed as sustainable, an investment must do no significant harm to the various environmental or social objectives to which it intends to contribute.

Rothschild & Co Asset Management Europe has defined a “do no significant harm” (“DNSH”) procedure to ensure that the sustainable investments of a financial product with a sustainable investment objective do no significant harm to any of its environmental or social objectives. This procedure includes:

- Standard sector exclusions which reduce the product’s exposure to social and environmental controversies;

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Consideration of the mandatory principal adverse impacts (PAIs) of these investments on sustainability factors.

We also use ESG ratings as part of our approach, as a minimal safeguard in relation to overall sustainability performance.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Consideration of mandatory PAIs is carried out as part of the various elements within the Management Company's sustainable approach: as part of the Management Company's common exclusion framework, the combined ESG and financial research methodology, the sustainability requirements at portfolio level, the engagement and controversies management policy, and the measurement and steering of ESG performance indicators.

We pay particular attention to companies' statements about PAIs 1, 2, 3, 10, 13 and 14, and to PAI 16 for public issuers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Detailed description:

As per our definition of a sustainable investment for corporate issuers, we check to ensure that there are no violations of the United Nations Global Compact (UNGC) or OECD Guidelines for Multinational Enterprises. To that end, we use an overall controversy indicator measuring the company's past and current involvement in violations of international standards. The regulatory frameworks considered include the following: the United Nations Global Compact (UNGC), the United Nations Guiding Principles on Business and Human Rights, the Conventions of the International Labour Organization (ILO) and the OECD Guidelines for Multinational Enterprises.

Moreover, for all the Management Company's investments, we exclude companies suspected of violating the ten fundamental principles of the United Nations Global Compact (UNGC).

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and which is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes,

No

Rothschild & Co Asset Management Europe has identified the principal adverse impacts (PAI) on sustainability factors on which we intend to focus our efforts and resources in order to deploy our responsible investment approach:

Corporate issuers:

o Climate change

- Greenhouse gas intensity and emissions, scopes 1 and 2 (PAI 1 & 3)
- Involvement in fossil fuels (PAI 4)
- Exposure to issuers that are not committed to adhering to the Paris Agreement (optional climate PAI 4)

o Human rights, business ethics and respect for human dignity

- Violation of fundamental ethical standards (PAI 10)
- Gender diversity within governance bodies (PAI 13)
- Involvement in controversial weapons (PAI 14)
- Exposure to issuers with fragile anti-corruption processes (optional social/human rights PAI 15)

Sovereign issuers:

o Human rights, business ethics and respect for human dignity

- Exposure to countries implicated in human rights violations and subject to related sanctions (PAI 16)

As part of taking mandatory PAIs into account and defining our optional and priority PAIs, we relied on methodology and data from our external service provider, MSCI ESG Research.

From an operational standpoint, adverse impacts are taken into account in every aspect of our sustainability approach, including the exclusion policy, the analysis and selection process using ESG criteria, the engagement system and ESG reporting. For this product, we produce annual reports on all mandatory PAIs and optional PAIs chosen by the Management Company.

Our Policy for taking into account the principal adverse impacts in sustainability is available on our website: <https://am.fr.rothschildandco.com/en/responsible-investing/documentation/>

What investment strategy does this financial product follow?

The sub-fund may invest:

- between 0% and 100% in equity products from any geographical region, industrial sector and market capitalisation, with a maximum of 20% in small caps (including micro caps) and a maximum of 20% in equity products from non-OECD countries (including emerging markets);
- between 0% and 100% of the net assets in fixed-income products (public debt/corporate debt) of any maturity, currency and credit rating, of which up to 30% may be made up of speculative-grade (i.e. high yield) bonds. The sub-fund's maximum exposure to convertible bonds is 20%. Moreover, it may invest up to 20% of its net assets in contingent convertible bonds and up to 70% of its net assets in callable/puttable bonds; and
- between 0% and 10% in funds (including listed funds/ETFs).

Please refer to the prospectus for further information.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

Adherence to our common exclusion framework

o Regulatory exclusions: controversial weapons and international sanctions

o Discretionary exclusions: United Nations Global Compact (UNGC) and thermal coal

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Integrating material ESG criteria into the analysis process

o An assessment combining financial and ESG criteria: the integration of ESG criteria reflects the analysis process applied by each management team; it may be applied at sector or issuer level, and at management company and/or fund level, depending on the asset class in question.

Adherence to sustainability requirements at portfolio level

o Target ESG score of at least BBB

o Minimum level of Taxonomy-aligned and sustainable investments

o Minimal coverage of ESG ratings:

The percent share of positions analysed on the basis of non-financial criteria will be permanently higher than:

i. 90% of the portion of net assets invested in equities issued by companies with a market capitalisation of over EUR 10 billion that have their registered office in a developed country, debt securities and money market instruments with an investment grade credit rating, and sovereign debt issued by developed countries;

ii. 75% of the portion of net assets invested in equities issued by companies with a market capitalisation of less than EUR 10 billion or with their registered office located in an emerging country, debt securities and money market instruments with a high-yield credit rating, and sovereign debt issued by emerging countries.

o The rating of the portfolio, with regard to non-financial criteria, is higher than the rating of the initial investment universe

Active engagement

o Dialogue primarily focused around our top-priority themes (climate transition, inclusion and fair transition, etc.) and controversies,

o A responsible voting policy for the entire equity scope,

o Active participation in multiple industry working groups (ADEME, Finance for Tomorrow, AFG, Climate Action 100+, etc.) on the strategies implemented in the portfolios (impact, biodiversity, fossil fuel, fair transition, etc.)

The ESG ratings mainly come from a data provider called MSCI ESG Research, which rates companies from CCC to AAA (AAA being the best rating).

ESG monitoring is ongoing, since ESG data is fully integrated into our operational systems.

Our entire value chain (compliance, risk, investment management and reporting teams) is covered by the same ESG data flow (updated on a quarterly basis), with ESG constraints and requirements encoded into every system. This allows us to monitor ESG data on a daily basis and in real time.

Our common exclusion framework is kept up to date and encoded into the operational systems with pre-trade blocks by compliance. Specific sustainability constraints and objectives at product level are the responsibility of the risk department.

The management teams have access to ESG data and can monitor their sustainability constraints via their Bloomberg portal every day. The impact of portfolio movements on sustainability requirements are continuously assessed by the investment managers as part of the portfolio allocation process.

Furthermore, regular meetings of the investment committee offer an opportunity to assess the sustainability risks and ESG issues associated with specific issuers and/or portfolios.

Lastly, alerts covering rating changes and ESG controversies are implemented by MSCI ESG Research for the investment teams and control departments, and analysts monitor the latest news. Details of the controversy monitoring process are available in the PAI Policy.

ESG reports are produced using the same ESG data flow, then validated by the investment teams.

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The initial investment universe is not reduced using a fixed selectivity rate, determined upstream of the investment process. However, the investment universe is reduced on the basis of regulatory exclusions, as well as our Management Company's discretionary exclusions.

What is the policy to assess good governance practices of the investee companies?

To determine whether and when a company does not adopt, or no longer adopts, good governance practices, we have implemented a process on two levels:

Standards-based screening

In accordance with our common exclusion framework, sovereign and corporate issuers subject to international sanctions or implicated in violations of the United Nations Global Compact are excluded from our initial investment universes for all our investment vehicles.

Assessment of good governance practices

The portfolio managers and analysis teams are responsible for assessing and monitoring the governance practices of the companies in which they invest.

To assess good governance practices, the investment teams consider factors including: governance data from MSCI ESG Research, commitment to international codes of conduct (e.g. UNGC signatory), the degree of independence and diversity on the board of directors, controversies and the history of senior management and representatives of the board of directors.

In the context of MSCI ESG Research's ESG ratings, the governance pillar is considered material for all sectors and has a minimum weighting of 33% when calculating the final ESG score for every issuer. This governance pillar is based on two sub-themes: Corporate governance (structure and control, board of directors, remuneration and accounting) and corporate behaviour (business ethics and tax transparency). The topics addressed within each of these categories include sound management structures, remuneration matters, employee relations and tax compliance.

We see assessing good governance practices as an ongoing process, and the investment teams are encouraged to engage directly with companies to obtain additional information, raise concerns and/or resolve issues linked to the governance practices identified or associated controversies.

What is the asset allocation planned for this financial product?

Asset allocation

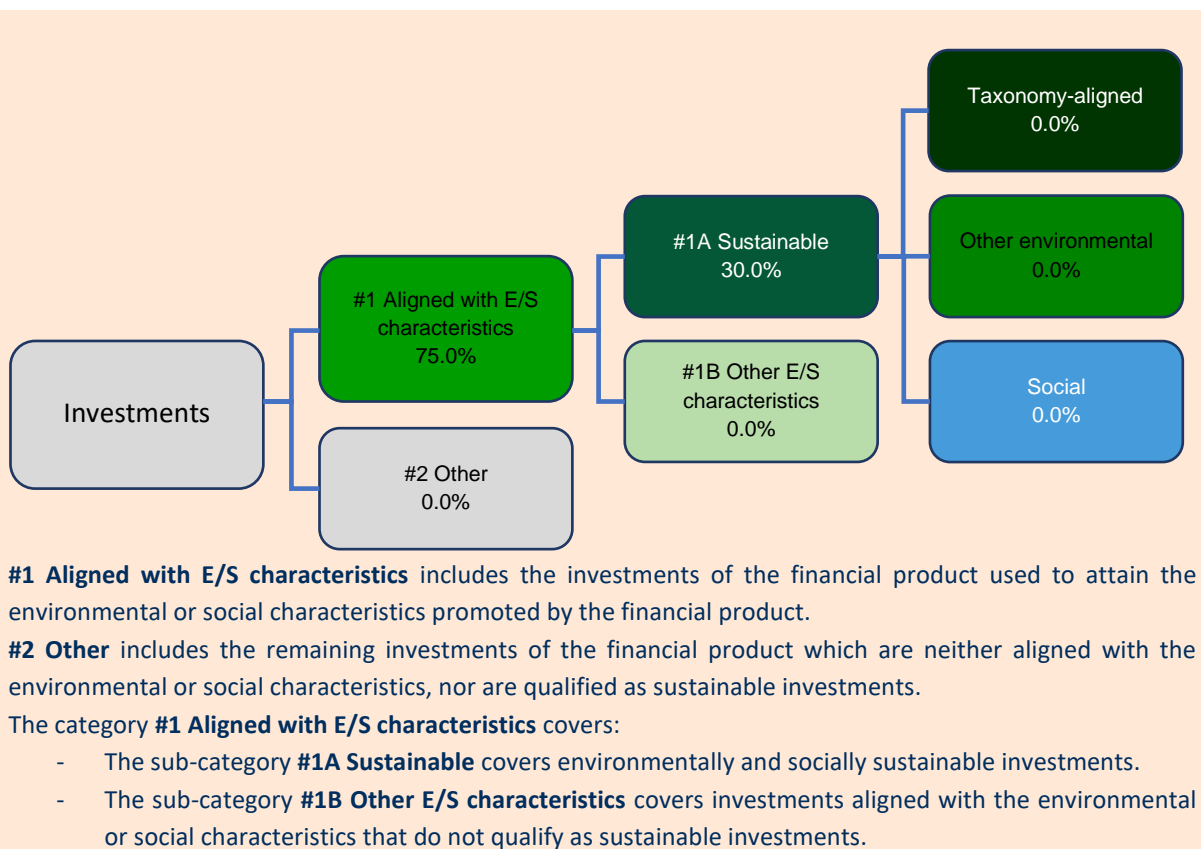

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies;

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy;

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

While the product is committed to a minimum level of sustainable investment, no allocation between environmental and social objectives has been determined in advance, which explains the minimum of 0% for these two pillars. The asset allocation figures presented above are pre-contractual minimums expressed as a percentage of the net assets; they are not a forecast of a target allocation. For information on the percentages achieved, please refer to the annual report.

The underlying investments of the financial product that take into account the EU criteria for environmentally sustainable economic activities represent a minimum alignment commitment of 0% of investments.

A share of the financial product's net assets may be invested in instruments that do not promote environmental or social characteristics (cash, funds or derivatives). They provide technical support and uphold the fund's financial objective (hedging, movements of liabilities, etc.). Minimum ESG safeguards are applied in accordance with our sustainability approach. Details are provided in the response to the question on "other" investments below.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Interest rate and currency derivatives neither contribute to nor affect the environmental and social characteristics promoted by the financial product. Derivatives on other asset classes do not contribute to the attainment of the environmental and social characteristics, but may affect them. For the purposes of transparency, derivatives are not taken into account in the ratios presented above.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Does the financial product invest in nuclear and/or fossil gas related activities that are aligned with the EU Taxonomy¹?

Yes

In fossil gas

In nuclear energy

No

The applicable criteria for **fossil gas** to be considered aligned with the EU Taxonomy include restrictions on emissions and a transition to renewable energy sources or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive rules regarding nuclear safety and waste management.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, "sovereign bonds" consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The minimum share in enabling and transitional activities is 0%.

¹ Activities related to nuclear and/or fossil gas related activities will only be considered Taxonomy-aligned if they contribute to climate change mitigation and do no significant harm to any of the objectives of the EU Taxonomy – see the explanatory note in the left-hand margin. All criteria applicable to economic activities in the nuclear and/or fossil gas related activities that are aligned with the EU Taxonomy are defined in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Within the minimum invested in sustainable investments, the minimum share of investments with an environmental objective that are not aligned with the Taxonomy is 0%. While the product is committed to a minimum level of sustainable investments overall, no allocation between environmental and social objectives has been determined in advance.

What is the minimum share of socially sustainable investments?

Within the minimum invested in sustainable investments, the minimum share of investments with a social objective is 0%. While the product is committed to a minimum level of sustainable investments overall, no allocation between environmental and social objectives has been determined in advance.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

A share of the financial product’s net assets may be invested in securities that are not analysed with respect to ESG criteria. However, all investments adhere to the Management Company’s common exclusion framework, guaranteeing a baseline level of compliance with ESG principles.

The securities held in the portfolio, in accordance with the allocation levels stated in the prospectus, serve to further the financial product’s financial investment objective.

The financial product may invest up to 10% of its net assets in cash on an ancillary basis. We take the ESG ratings of the depositary bank into account. Cash may also be invested in money market funds managed by our management company, in accordance with our ESG policy and where we have complete transparency.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

N/A.

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

N/A.

Are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How does the designated index differ from a relevant broad market index?

N/A.

Where can the methodology used for the calculation of the designated index be found?

N/A.

Where can I find more product specific information online?

Further details on the financial product are available in the prospectus, the ESG policy and the policies for taking into account PAI and sustainability risks, which are available on our website: <https://am.fr.rothschildandco.com/en/responsible-investing/documentation/>

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: R-co Valor

Legal entity identifier:
9695005DN5QLA24VMP19

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** [N/A]

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** N/A

It **promotes Environmental/Social (E/S)**

characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30.0% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Through our work and MSCI ESG Research, we consider a broad spectrum of criteria relating to the E pillar (physical risks linked to climate change, water stress, waste management, etc.) and S pillar (staff training, product safety, auditing production practices, etc.) as part of our general approach.

Additionally, the investment teams seek to identify relevant and material factors as part of ex-ante analysis of ESG profiles and ex-post assessment of the sustainability trajectory of the issuer and/or industry. Based on dependencies and major impacts, the following elements may be considered: controversies (type, severity and recurrence), externalities (toxic/carbon emissions, water consumption, destruction of biodiversity, accidents, dismissals, strikes, precarious contracts, fraud, etc.) and contributions (Taxonomy alignment, participation in the United Nations sustainable development goals (SDG), alignment with the Paris Agreement temperature goal, etc.).

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The sustainability indicators used to demonstrate the promotion of the environmental and/or social characteristics are:

Sustainability indicators are used to verify how the environmental or social characteristics promoted by the financial product are attained.

- ESG profile (ESG rating, rating trends and sector distribution)
- Carbon intensity (divergence from indices, sector contribution and identification of main contributors)
- Transition profile (reduction targets, green share, categories of activities in transition, etc.)
- Governance: representation of women on the board of directors
- Sustainable Development Goals (SDG): percentage aligned with the SDG

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

A sustainable investment may be assessed with respect to three pillars: (i) **contributing to an environmental or social objective**, (ii) doing so without doing significant harm and (iii) applying good governance practices.

Our definition is based on data supplied by our service provider MSCI ESG Research.

Further details are available in the document “Definition of sustainable investments” which can be found on our website: <https://am.fr.rothschildandco.com/en/regulatory-information/>

As regards corporate issuers, our approach to sustainable investment takes into account:

- Companies’ general positive contribution through contributing revenue, i.e. revenue linked to activities with a positive impact on the environment or society (clean energy, energy efficiency, access to care, etc.) or to issuance of sustainable debt instruments (green, social or sustainable bonds);
- Contribution to environmental objectives, such as targets for reducing emissions in line with the Paris Agreement or reducing water use;
- Contribution to social objectives, through alignment with United Nations Sustainable Development Goal 5 (gender equality), 8 (decent work and economic growth) or 10 (reduced inequalities).

As regards public issuers, our approach to sustainable investment takes into account:

- States’ general positive contribution through issuance of sustainable debt instruments (green, social or sustainable bonds);
- Positive environmental contribution: Signatory to the Paris Agreement or the United Nations Convention on Biological Diversity;
- Positive social contribution: Performance with respect to equality (Gini index) and freedom of the press (Freedom House).

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

In order to be classed as sustainable, an investment must do no significant harm to the various environmental or social objectives to which it intends to contribute.

Rothschild & Co Asset Management Europe has defined a “do no significant harm” (“DNSH”) procedure to ensure that the sustainable investments of a financial product with a sustainable investment objective do no significant harm to any of its environmental or social objectives. This procedure includes:

- Standard sector exclusions which reduce the product’s exposure to social and environmental controversies;
- Consideration of the mandatory principal adverse impacts (PAIs) of these investments on sustainability factors.

We also use ESG ratings as part of our approach, as a minimal safeguard in relation to overall sustainability performance.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Consideration of mandatory PAIs is carried out as part of the various elements within the Management Company's sustainable approach: as part of the Management Company's common exclusion framework, the combined ESG and financial research methodology, the sustainability requirements at portfolio level, the engagement and controversies management policy, and the measurement and steering of ESG performance indicators.

We pay particular attention to companies' statements about PAIs 1, 2, 3, 10, 13 and 14, and to PAI 16 for public issuers.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Detailed description:

As per our definition of a sustainable investment for corporate issuers, we check to ensure that there are no violations of the United Nations Global Compact (UNGC) or OECD Guidelines for Multinational Enterprises. To that end, we use an overall controversy indicator measuring the company's past and current involvement in violations of international standards. The regulatory frameworks considered include the following: the United Nations Global Compact (UNGC), the United Nations Guiding Principles on Business and Human Rights, the Conventions of the International Labour Organization (ILO) and the OECD Guidelines for Multinational Enterprises.

Moreover, for all the Management Company's investments, we exclude companies suspected of violating the ten fundamental principles of the United Nations Global Compact (UNGC).

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and which is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes,

No

Rothschild & Co Asset Management Europe has identified the principal adverse impacts (PAI) on sustainability factors on which we intend to focus our efforts and resources in order to deploy our responsible investment approach:

Corporate issuers:

o Climate change

- Greenhouse gas intensity and emissions, scopes 1 and 2 (PAI 1 & 3)
- Involvement in fossil fuels (PAI 4)
- Exposure to issuers that are not committed to adhering to the Paris Agreement (optional climate PAI 4)

- o Human rights, business ethics and respect for human dignity
 - Violation of fundamental ethical standards (PAI 10)
 - Gender diversity within governance bodies (PAI 13)
 - Involvement in controversial weapons (PAI 14)
 - Exposure to issuers with fragile anti-corruption processes (optional social/human rights PAI 15)

Sovereign issuers:

- o Human rights, business ethics and respect for human dignity
 - Exposure to countries implicated in human rights violations and subject to related sanctions (PAI 16)

As part of taking mandatory PAIs into account and defining our optional and priority PAIs, we relied on methodology and data from our external service provider, MSCI ESG Research.

From an operational standpoint, adverse impacts are taken into account in every aspect of our sustainability approach, including the exclusion policy, the analysis and selection process using ESG criteria, the engagement system and ESG reporting. For this product, we produce annual reports on all mandatory PAIs and optional PAIs chosen by the Management Company.

Our Policy for taking into account the principal adverse impacts in sustainability is available on our website: <https://am.fr.rothschildandco.com/en/responsible-investing/documentation/>

What investment strategy does this financial product follow?

The SICAV may invest, depending on market trends:

- between 0% and 100% in the equities of companies with any market capitalisation (up to 20% in small caps, including micro caps) from any geographical region (and up to 100% in equities from non-OECD countries, including emerging countries);
- between 0% and 100% in bonds with up to 20% in convertible bonds and up to 100% in callable and puttable bonds issued by public and/or corporate issuers with any rating; up to 20% of the portfolio may be invested in speculative-grade (high-yield) bonds and up to 10% in unrated bonds; and lastly
- between 0% and 10% in UCITS.

Up to 100% of the SICAV's assets may be exposed, directly and indirectly, to non-OECD countries including emerging markets, and up to 20% may be exposed to the risks associated with small caps, including micro caps.

Please refer to the prospectus for further information.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

Adherence to our common exclusion framework

- o Regulatory exclusions: controversial weapons and international sanctions
- o Discretionary exclusions: United Nations Global Compact (UNGC) and thermal coal

Integrating material ESG criteria into the analysis process

- o An assessment combining financial and ESG criteria: the integration of ESG criteria reflects the analysis process applied by each management team; it may be applied at sector or issuer level, and at management company and/or fund level, depending on the asset class in question.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Adherence to sustainability requirements at portfolio level

- o Target ESG score of at least BBB
- o Minimum level of Taxonomy-aligned and sustainable investments
- o Minimal coverage of ESG ratings:

The percent share of positions analysed on the basis of non-financial criteria will be permanently higher than:

- 90% of the portion of net assets invested in equities issued by companies with a market capitalisation of over EUR 10 billion that have their registered office in a developed country, debt securities and money market instruments with an investment grade credit rating, and sovereign debt issued by developed countries;
- 75% of the portion of net assets invested in equities issued by companies with a market capitalisation of less than EUR 10 billion or with their registered office located in an emerging country, debt securities and money market instruments with a high-yield credit rating, and sovereign debt issued by emerging countries.

- o The rating of the portfolio, with regard to non-financial criteria, is higher than the rating of the initial investment universe.

Active engagement

- o Dialogue primarily focused around our top-priority themes (climate transition, inclusion and fair transition, etc.) and controversies,
- o A responsible voting policy for the entire equity scope,
- o Active participation in multiple industry working groups (ADEME, Finance for Tomorrow, AFG, Climate Action 100+, etc.) on the strategies implemented in the portfolios (impact, biodiversity, fossil fuel, fair transition, etc.)

The ESG ratings mainly come from a data provider called MSCI ESG Research, which rates companies from CCC to AAA (AAA being the best rating).

ESG monitoring is ongoing, since ESG data is fully integrated into our operational systems.

Our entire value chain (compliance, risk, investment management and reporting teams) is covered by the same ESG data flow (updated on a quarterly basis), with ESG constraints and requirements encoded into every system. This allows us to monitor ESG data on a daily basis and in real time.

Our common exclusion framework is kept up to date and encoded into the operational systems with pre-trade blocks by compliance. Specific sustainability constraints and objectives at product level are the responsibility of the risk department.

The management teams have access to ESG data and can monitor their sustainability constraints via their Bloomberg portal every day. The impact of portfolio movements on sustainability requirements are continuously assessed by the investment managers as part of the portfolio allocation process.

Furthermore, regular meetings of the investment committee offer an opportunity to assess the sustainability risks and ESG issues associated with specific issuers and/or portfolios.

Lastly, alerts covering rating changes and ESG controversies are implemented by MSCI ESG Research for the investment teams and control departments, and analysts monitor the latest news. Details of the controversy monitoring process are available in the PAI Policy.

ESG reports are produced using the same ESG data flow, then validated by the investment teams.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The initial investment universe is not reduced using a fixed selectivity rate, determined upstream of the investment process. However, the investment universe is reduced on the basis of regulatory exclusions, as well as our Management Company's discretionary exclusions.

What is the policy to assess good governance practices of the investee companies?

Good governance
practices include sound management structures, employee relations, remuneration of staff and tax compliance

To determine whether and when a company does not adopt, or no longer adopts, good governance practices, we have implemented a process on two levels:

Standards-based screening

In accordance with our common exclusion framework, sovereign and corporate issuers subject to international sanctions or implicated in violations of the United Nations Global Compact are excluded from our initial investment universes for all our investment vehicles.

Assessment of good governance practices

The portfolio managers and analysis teams are responsible for assessing and monitoring the governance practices of the companies in which they invest.

To assess good governance practices, the investment teams consider factors including: governance data from MSCI ESG Research, commitment to international codes of conduct (e.g. UNGC signatory), the degree of independence and diversity on the board of directors, controversies and the history of senior management and representatives of the board of directors.

In the context of MSCI ESG Research's ESG ratings, the governance pillar is considered material for all sectors and has a minimum weighting of 33% when calculating the final ESG score for every issuer. This governance pillar is based on two sub-themes: Corporate governance (structure and control, board of directors, remuneration and accounting) and corporate behaviour (business ethics and tax transparency). The topics addressed within each of these categories include sound management structures, remuneration matters, employee relations and tax compliance.

We see assessing good governance practices as an ongoing process, and the investment teams are encouraged to engage directly with companies to obtain additional information, raise concerns and/or resolve issues linked to the governance practices identified or associated controversies.

What is the asset allocation planned for this financial product?

Asset allocation

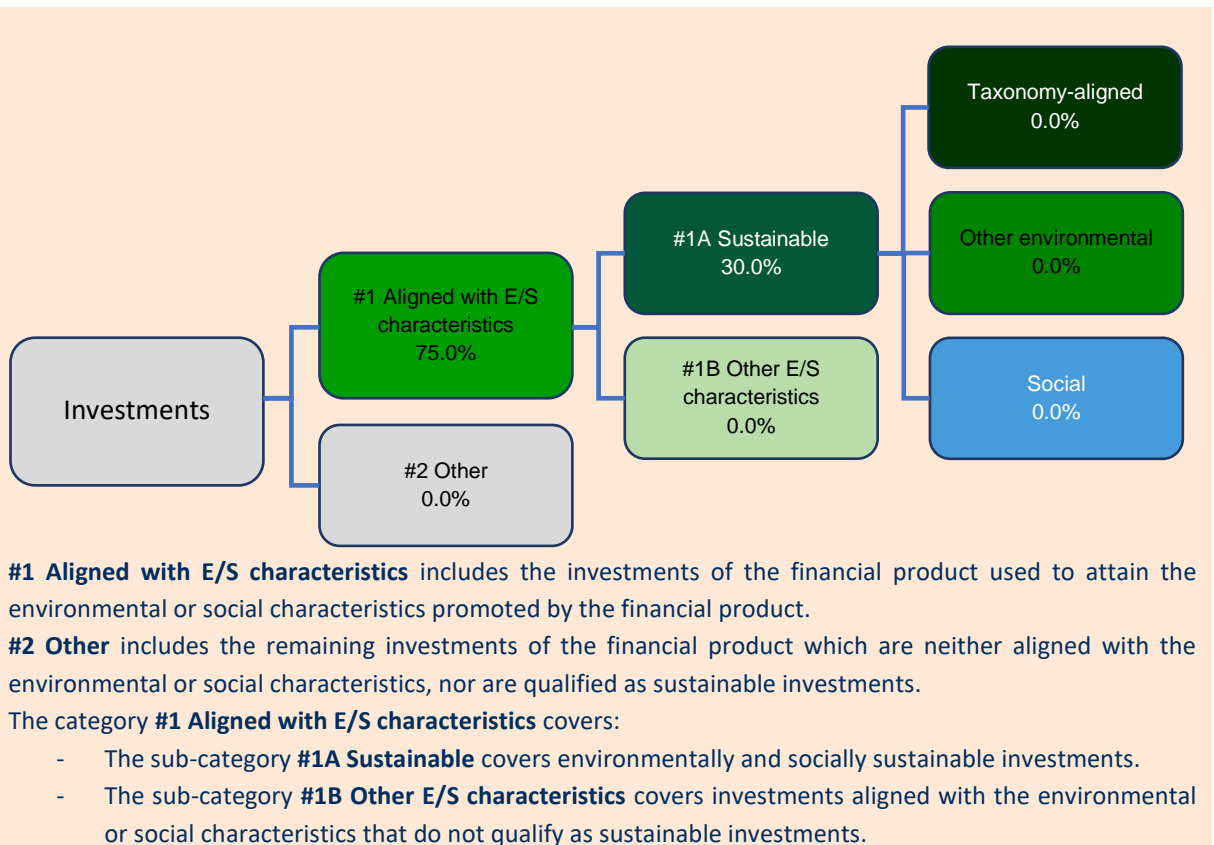

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies;

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy;

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

While the product is committed to a minimum level of sustainable investment, no allocation between environmental and social objectives has been determined in advance, which explains the minimum of 0% for these two pillars. The asset allocation figures presented above are pre-contractual minimums expressed as a percentage of the net assets; they are not a forecast of a target allocation. For information on the percentages achieved, please refer to the annual report.

The underlying investments of the financial product that take into account the EU criteria for environmentally sustainable economic activities represent a minimum alignment commitment of 0% of investments.

A share of the financial product's net assets may be invested in instruments that do not promote environmental or social characteristics (cash, funds or derivatives). They provide technical support and uphold the fund's financial objective (hedging, movements of liabilities, etc.). Minimum ESG safeguards are applied in accordance with our sustainability approach. Details are provided in the response to the question on "other" investments below.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Interest rate and currency derivatives neither contribute to nor affect the environmental and social characteristics promoted by the financial product. Derivatives on other asset classes do not contribute to the attainment of the environmental and social characteristics, but may affect them. For the purposes of transparency, derivatives are not taken into account in the ratios presented above.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Does the financial product invest in nuclear and/or fossil gas related activities that are aligned with the EU Taxonomy¹?

Yes

In fossil gas

In nuclear energy

No

The applicable criteria for **fossil gas** to be considered aligned with the EU Taxonomy include restrictions on emissions and a transition to renewable energy sources or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive rules regarding nuclear safety and waste management.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Activities related to nuclear and/or fossil gas related activities will only be considered Taxonomy-aligned if they contribute to climate change mitigation and do no significant harm to any of the objectives of the EU Taxonomy – see the explanatory note in the left-hand margin. All criteria applicable to economic activities in the nuclear and/or fossil gas related activities that are aligned with the EU Taxonomy are defined in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, “sovereign bonds” consist of all sovereign exposures

What is the minimum share of investments in transitional and enabling activities?

The minimum share in enabling and transitional activities is 0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Within the minimum invested in sustainable investments, the minimum share of investments with an environmental objective that are not aligned with the Taxonomy is 0%. While the product is committed to a minimum level of sustainable investments overall, no allocation between environmental and social objectives has been determined in advance.

What is the minimum share of socially sustainable investments?

Within the minimum invested in sustainable investments, the minimum share of investments with a social objective is 0%. While the product is committed to a minimum level of sustainable investments overall, no allocation between environmental and social objectives has been determined in advance.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social

Are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

safeguards?

A share of the financial product's net assets may be invested in securities that are not analysed with respect to ESG criteria. However, all investments adhere to the Management Company's common exclusion framework, guaranteeing a baseline level of compliance with ESG principles.

The securities held in the portfolio, in accordance with the allocation levels stated in the prospectus, serve to further the financial product's financial investment objective.

The financial product may invest up to 10% of its net assets in cash on an ancillary basis. We take the ESG ratings of the depositary bank into account. Cash may also be invested in money market funds managed by our management company, in accordance with our ESG policy and where we have complete transparency.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

N/A.

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

N/A.

How does the designated index differ from a relevant broad market index?

N/A.

Where can the methodology used for the calculation of the designated index be found?

N/A.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Where can I find more product specific information online?

Further details on the financial product are available in the prospectus, the ESG policy and the policies for taking into account PAI and sustainability risks, which are available on our website: <https://am.fr.rothschildandco.com/en/responsible-investing/documentation/>

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:
Russell Investments World Equity Fund

Legal entity identifier:
HLQBEG4MPYCWQ29U6634

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="radio"/> Yes	<input type="radio"/> <input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective <input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Russell Investments World Equity Fund (the "Fund") promotes a reduction in Carbon Emissions.

The Fund is actively managed with reference to the MSCI World Index (USD) - Net Returns (the "Index"). The Index is a broad market index and is not used by the Fund to attain the environmental characteristics promoted by the Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The Fund was converted to Article 8 status under SFDR on 6 May 2022. Therefore, for the purposes of reporting on the indicators, the reporting period is 6 May 2022 to 31 March 2023 (the "Reporting Period").

The Fund's indicator was achieved. Calculated at each month end, the aggregated Carbon Footprint of the Fund portfolio was at least 20% lower than the Index throughout the Reporting Period.

● ***...and compared to previous periods?***

Not applicable. This is the first SFDR periodic reporting annex produced by the Fund.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

While the Fund promoted environmental and/or social characteristics, it did not commit to making any sustainable investments.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

Not applicable.

— *How were the indicators for adverse impacts on sustainability factors taken into account?*

Not applicable.

— *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Not applicable.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund did not consider principal adverse impacts on sustainability factors.

What were the top investments of this financial product?

The table below outlines the top investments of the Fund. These figures are percentages of net assets and are weighted averages of the market value as at end of September 2022 and March 2023.

Largest investments	Sector	% Assets	Country
Microsoft Corp	Technology	2.25%	United States
Russell Investment Company III plc Russell Investments U.S. Dollar Cash Fund II Class SW Roll-up Shares	Investment Funds	1.99%	Ireland

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 6 May 2022 to 31 March 2023.

What was the proportion of sustainability-related investments?

Please see below.

● What was the asset allocation?

The Fund invested 92.85% of net assets in equities and equity related instruments, all of which are subject to the Fund's binding Carbon Footprint reduction target and are therefore used to meet the environmental characteristic promoted by the Fund. This figure is a weighted average as at end of September 2022 and March 2023.

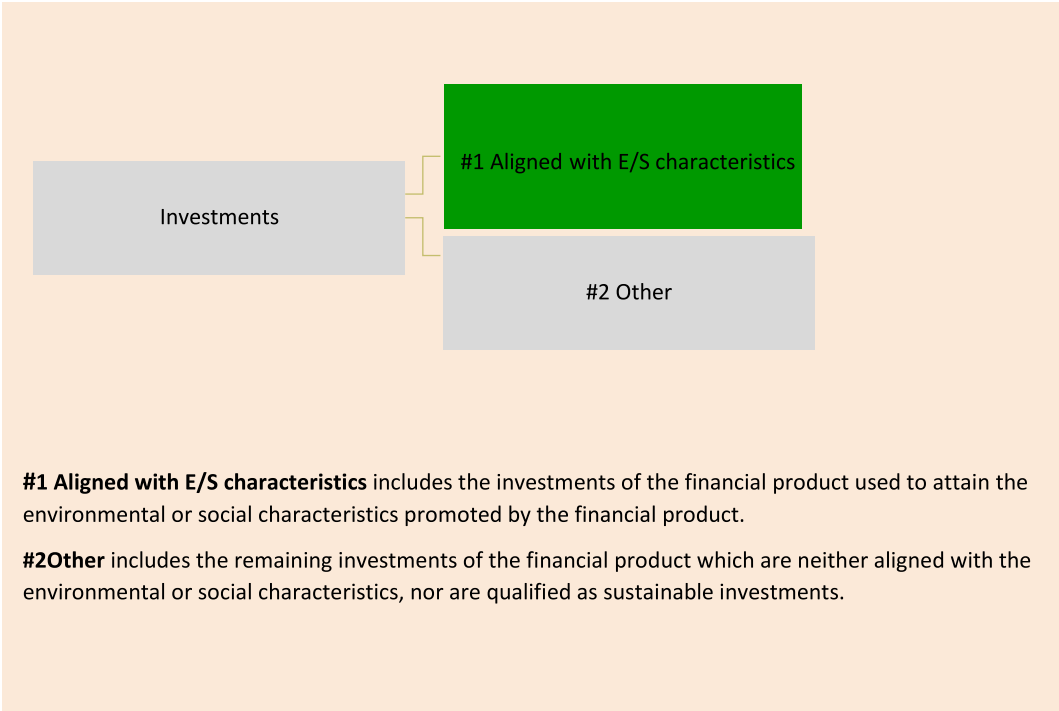

Asset allocation describes the share of investments in specific assets.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● ***In which economic sectors were the investments made?***

The table below outlines the sectors and sub-sectors where the investments of the Fund were made. These figures are percentages of net assets and are weighted averages of the market value as at end of September 2022 and March 2023.

Sector	Sub-Sector	% Assets
Basic Materials	Chemicals	2.08%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable. The Fund did not commit to making any sustainable investments during the Reporting Period.

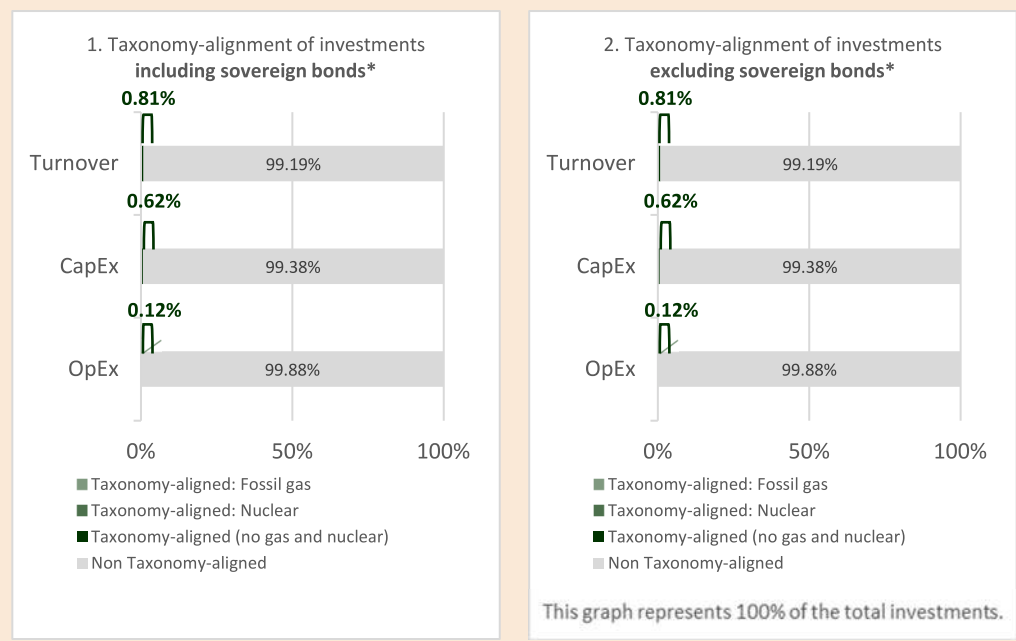

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

What was the share of investments made in transitional and enabling activities?

The share of the Fund's investments made in transitional and enabling activities is as follows:

	Including Sovereign	Excluding Sovereign
Turnover	Transition : 0% Enabling : 0.50%	Transition : 0% Enabling : 0.50%
CapEx	Transition : 0% Enabling : 0.35%	Transition : 0% Enabling : 0.35%
OpEx	Transition : 0% Enabling : 0.11%	Transition : 0% Enabling : 0.11%

These figures are weighted averages of the actual values as at end of September 2022 and March 2023.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Not applicable. This is the first SFDR periodic reporting annex produced by the Fund.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable. The Fund did not commit to making any sustainable investments during the Reporting Period.

What was the share of socially sustainable investments?

Not applicable. The Fund did not commit to making any sustainable investments during the Reporting Period.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The portion of the Fund's net assets within the '#2 Other' section in the graph above amounted to 7.15% of net assets and was comprised of:

Forward contracts and spot foreign exchange transactions were used to hedge against exchange rate risk.

Futures contracts were used to gain exposure to underlying markets.

These assets were not subject to minimum environmental or social safeguards.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund's Carbon Footprint is monitored weekly as the portfolio is rebalanced to ensure the Fund meets its Carbon Footprint target. In order to reduce the possibility of the Fund breaching the Carbon Footprint target between rebalances, due to market movements or otherwise, the Decarbonisation Overlay Strategy aims for a Carbon Footprint reduction in excess of the Fund's target, during each weekly rebalance.

UNGC exclusion lists are updated quarterly and any positions that may have been added to the list of UNGC violators over the previous quarter are removed from the portfolio at the next scheduled weekly rebalance (provided such positions have not been placed under review by the Principal Money Manager in accordance with the process set out in the Fund's Prospectus).

How did this financial product perform compared to the reference benchmark?

Not applicable.

- ***How does the reference benchmark differ from a broad market index?***

Not applicable.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

Not applicable.

- ***How did this financial product perform compared with the reference benchmark?***

Not applicable.

- ***How did this financial product perform compared with the broad market index?***

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Appendix V – Sustainable Finance Disclosure (Unaudited)

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product : Schroder ISF Asian Equity Yield

Legal Entity Identifier : HW8T20METRZQAOYP1O66

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Did this financial product have a sustainable investment objective?

Yes
 No

<input type="checkbox"/> It made sustainable investments with an environmental objective: __%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 60% of sustainable investments
<input type="checkbox"/> In economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> With an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> In economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> With an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> With a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Appendix V – Sustainable Finance Disclosure (Unaudited)

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and/or social characteristics promoted by the Fund were met.

The Fund maintained a higher overall sustainability score than the MSCI AC Asia Pacific ex Japan High Dividend Yield (net TR) Index, based on the Investment Manager's rating system. This means that the Fund's weighted average score over a rolling six month period up to the end of the reference period was higher than the benchmark's weighted average score over the same period, based on month-end data. This benchmark (which is a broad market index) is not a reference benchmark for the purposes of the environmental and social characteristics promoted by the Fund.

The sustainability score is measured by Schrodgers' proprietary tool that provides an estimate of the net "impact" that an issuer may create in terms of social and environmental "costs" or "benefits". It does this by using certain indicators with respect to that issuer, and quantifying them positively and negatively to produce an aggregate notional measure of the effect that the relevant underlying issuer may have on society and the environment. It does this using third party data as well as Schrodgers' own estimates and assumptions and the outcome may differ from other sustainability tools and measures. Examples of such indicators are greenhouse gas emissions, water usage, and salaries compared to the living wage.

The result is expressed as an aggregate score of the sustainability indicators for each issuer, specifically a notional percentage (positive or negative) of sales of the relevant underlying issuer. For example, a score of +2% would mean an issuer contributes \$2 of relative notional positive impact (i.e. benefits to society) per \$100 of sales. The sustainability score of the Fund is derived from the scores of all issuers in the Fund's portfolio measured by Schrodgers' proprietary tool.

The reference period for this Fund is 1 January 2022 to 31 December 2022.

The Fund also invested at least 25% of its assets in sustainable investments from when this commitment came into effect in August 2022 to the end of the reference period.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

• *How did the sustainability indicators perform?*

The Fund's sustainability score for the reference period was 1.9% and the benchmark's sustainability score for the reference period was -10.0%.

In each case the sustainability score is calculated as a notional percentage as described above.

As measured at the end of the reference period, the top 5 indicators in Schrodgers' proprietary tool that contributed positively to the sustainability score of the Fund were:

- Avoided Emissions

Appendix V – Sustainable Finance Disclosure (Unaudited)

- Connectivity
- High Salaries
- Medicine
- Power Provision

The Investment Manager monitored compliance with the characteristic to maintain a higher overall sustainability score than the MSCI AC Asia Pacific ex Japan High Dividend Yield (net TR) Index by reference to the weighted average sustainability score of the Fund in Schroders' proprietary tool compared against the weighted average sustainability score of the MSCI AC Asia Pacific ex Japan High Dividend Yield (net TR) Index in Schroders' proprietary tool over a rolling six month period up to the end of the reference period, based on month-end data. The overall sustainability score aggregates the effect of sustainability indicators including but not limited to greenhouse gas emissions, water usage, and salaries compared to the living wage.

The Investment Manager invested 60% of the Fund's assets in sustainable investments. This figure represents the average percentage of sustainable investments over the four months prior to the end of the reference period, based on month-end data.

The Investment Manager monitored compliance with the characteristic to invest at least 25% of its assets in sustainable investments by reference to the sustainability score of each asset in Schroders' proprietary tool. Compliance with this was monitored daily via our automated compliance controls.

The Fund also applied certain exclusions, with which the Investment Manager monitored compliance on an ongoing basis via its portfolio compliance framework.

• ***...and compared to previous periods?***

As this is our first reporting period, this question is not applicable.

• ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

In respect of the proportion of the Fund's portfolio that was invested in sustainable investments, each sustainable investment demonstrated a net positive effect across a range of environmental or social objectives, as scored by Schroders' proprietary tool.

The objectives of the sustainable investments that the Fund made included, but were not limited to increasing benefits by way of the following:

- Avoided Emissions: the estimated environmental benefits of companies that enable system-or economy-wide reductions in carbon emissions;
- Connectivity: the estimated societal benefits from companies' that enable or support the connection of communities through telecommunication services;
- High Salaries: the estimated societal benefit of paying staff above local living wages (for regions in which they operate). Assigned in proportion to the surplus companies are paying employees compared to the average living wage;

Appendix V – Sustainable Finance Disclosure (Unaudited)

- Medicine: the estimated societal benefits arising from the additional social value the sale of such products and services exhibits of the wider economy. Assigned in proportion to the company's involvement in the healthcare value chain and proportion of company market share to global sub-sector revenue;

- Power Provision: the estimated societal benefits of access to power and electricity. Assigned in proportion to a company's share of power provision revenues;

The above examples of the objectives of the sustainable investments that the Fund made are based on data as at the end of the reference period. Other objectives may have applied during the reference period.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

• *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

The Investment Manager's approach to not causing significant harm to any environmental or social sustainable investment objective included the following:

- Firm-wide exclusions applied to Schrodgers funds. These relate to international conventions on cluster munitions, anti-personnel mines, and chemical and biological weapons. A detailed list of all companies that are excluded is available at <https://www.schrodgers.com/en/sustainability/active-ownership/group-exclusions/>.

- Schrodgers became a signatory to the UN Global Compact (UNGC) principles on 6 January 2020. The Fund excluded companies in violation of the UNGC principles from the portion of the portfolio in sustainable investments, as Schrodgers considers violators cause significant harm to one or more environmental or social sustainable investment objectives. The areas determining whether an issuer is an UNGC violator include issues that are covered by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, such as human rights, bribery and corruption, labour rights, child labour, discrimination, health and safety, and collective bargaining. The list of UNGC violators is provided by a third party and compliance with the list was monitored via our automated compliance controls. Schrodgers applied certain exceptions to the list during the reference period.

- Firm-wide exclusions also applied to companies that derived revenues above certain thresholds from activities related to tobacco and thermal coal, especially tobacco production, tobacco value chain (suppliers, distributors, retailers, licensors), thermal coal mining and coal fired power generation.

- The Fund also applied certain other exclusions.

Appendix V – Sustainable Finance Disclosure (Unaudited)

- Further information on all of the Fund's exclusions is to be found under "Sustainability Related Disclosures" on the Fund's webpage, accessed via <https://www.schroders.com/en/lu/private-investor/gfc>.

How were the indicators for adverse impacts on sustainability factors taken into account?

Where the Investment Manager set levels in relation to the indicators for adverse impacts on sustainability factors, compliance with these thresholds was monitored on an ongoing basis via its portfolio compliance framework. Investee companies in breach of these levels were not eligible to be considered as a sustainable investment.

For example, the Fund excluded companies in violation of the UNGC principles (principal adverse impact (PAI) 10) from the portion of the portfolio in sustainable investments. The list of UNGC violators is provided by a third party and compliance with the list was monitored via our automated compliance controls. Schroders applied certain exceptions to the list during the reference period.

In addition the Fund excluded companies that were deemed to contribute significantly to climate change (related to PAIs 1, 2 and 3 covering GHG emissions). The thresholds that were applied were companies deriving >10% revenue from thermal coal mining and >30% revenue from coal power generation. The Fund may have applied stricter thresholds, as disclosed on the website. Compliance with these exclusions was monitored via our automated compliance controls.

In other areas Schroders set principles of engagement. We have aligned each of the PAIs to one of Schroders six core engagement themes. We summarise below the thresholds that apply and the engagement actions we have for each:

Climate Change

PAIs 1, 2, 3, 4, 5, 6 and 19 relate to the Engagement Blueprint theme of Climate Change. Details of our Engagement Blueprint can be found here: (Link <https://prod.schroders.com/en/sysglobalassets/about-us/schroders-engagement-blueprint-2022.pdf>). We engage to understand how companies are responding to the challenges climate change may pose to their long-term financial position. Through our engagement activity we seek to understand different areas, such as the speed and scale of emission reduction targets and steps being taken to meet climate goals.

Biodiversity and Natural Capital

PAIs 7, 8 and 9 align to the Engagement Blueprint theme of Biodiversity and Natural Capital. We recognise the importance of all companies assessing and reporting on their exposure to natural capital and biodiversity risk. We focus our engagement on improving disclosure around a number of themes such as deforestation and sustainable food and water.

Human Rights

PAIs 10 and 14 relate to the Engagement Blueprint theme of Human Rights. There is increasing pressure on the role that businesses can and should play to respect human rights. We understand the higher operational and financial risks, and the reputational risk that human rights controversies cause. Our engagement focuses on three core stakeholders: workers, communities and customers.

Human Capital Management

Appendix V – Sustainable Finance Disclosure (Unaudited)

PAIs 11, 12 and 13 align to the Engagement Blueprint theme of Human Capital Management. We identify human capital management as a priority issue for engagement, noting that people in an organisation are a significant source of competitive advantage and that effective human capital management is essential to drive innovation and long-term value creation. We also recognise a number of links between high standards of human capital management and the achievement of the Sustainable Development Goals (SDGs). Our engagement activities address themes such as health and safety, corporate culture and investment into the workforce.

Diversity and Inclusion

PAIs 12 and 13 relate to the Engagement Blueprint theme of Diversity and Inclusion. Improving disclosure on board diversity and the gender pay gap are two of the priority objectives outlined in our Engagement Blueprint. We request that companies implement a policy that requires each board vacancy to consider at least one or more diverse candidates. Our engagement approach also addresses diversity of the executive management, the workforce and in the value chain.

Corporate Governance

PAIs 20, 12 and 13 align to the Engagement Blueprint theme of Corporate Governance. We engage with companies to seek to ensure businesses act in the best interest of shareholders and other key stakeholders. We also recognise that, in most cases, in order to see progress and performance on other material Environmental, Social and Governance (ESG) issues, strong governance structures need to first be in place. We therefore engage on a number of corporate governance aspects such as executive remuneration, boards and management, and strategy.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The portion of the portfolio in sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

We used a list of UNGC violators as provided by a third party. Issuers on that list were not categorised as sustainable investments. The areas considered when determining whether an issuer is an UNGC violator included those covered by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, such as human rights, bribery and corruption, labour rights, child labour, discrimination, health and safety, and collective bargaining.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Appendix V – Sustainable Finance Disclosure (Unaudited)

The Investment Manager’s approach to considering principal adverse impacts on sustainability factors involved classifying the indicators into three categories:

1. Set thresholds

For certain PAIs (e.g. PAI 10 on violations of UNGC principles), we set thresholds for considering an investment to be a sustainable investment. Investments in breach of these thresholds were not eligible to be held as sustainable investments. Compliance with these thresholds was monitored on an ongoing basis via the Investment Manager’s portfolio compliance framework.

2. Active ownership

During the reference period, the Investment Manager engaged in line with the approach and expectations set out in our Engagement Blueprint (Link <https://prod.schroders.com/en/sysglobalassets/about-us/schroders-engagement-blueprint-2022.pdf>) and as further described above. A summary of Schroders firm-wide engagement activity during the reference period, including the relevant engagement theme, is shown below:

Engagement Theme	# Issuers
Climate Change	738
Diversity and Inclusion	72
Governance and Oversight	3,096
Human Capital Management	130
Human Rights	121
Natural Capital and Biodiversity	95

3. Improve coverage

Some of the engagements identified in the table above involved discussions where the primary focus was to increase reporting on sustainability data. The purpose is to improve coverage of the PAIs, for example PAI 9 on hazardous waste ratio.

Our approach is subject to ongoing review, particularly as the availability, and quality, of PAI data evolves.

What were the top investments of this financial product?

During the reference period the top 15 investments were:

Appendix V – Sustainable Finance Disclosure (Unaudited)

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: **1 Jan 2022 to 31 Dec 2022**

Largest Investments	Sector	% Assets	Country

The list above represents the average of the Fund's holdings at each quarter end during the reference period.

The largest investments and % of assets referred to above are derived from the Schroders Investment Book of Record (IBoR) data source. The largest investments and % of assets detailed elsewhere in the Audited Annual Report are derived from the Accounting Book of Record (ABoR) maintained by the administrator. As a result of these differing data sources, there may be differences in the largest investments and % of assets due to the differing calculation methodologies of these alternative data sources.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

• What was the asset allocation?

The Fund's investments that were used to meet its environmental or social characteristics are summarised below.

#1 Aligned with E/S characteristics includes the Fund's assets that were used to attain the environmental or social characteristics, which is equal to 99%. The Fund maintained a higher overall sustainability score than the MSCI AC Asia Pacific ex Japan High Dividend Yield (net TR) Index and so the Fund's investments that were scored by Schroders' proprietary sustainability tool are included within #1 on the basis that they contributed to the Fund's sustainability score (whether such individual investment had a positive or a negative score). The percentage in #1 Aligned E/S characteristics represents the average of the last four months of the reference period, based on month-end data. Also included within #1 is the proportion of assets that were invested in sustainable investments, as indicated in #1A.

The sustainability score is measured by Schroders' proprietary tool that provides an estimate of the net "impact" that an issuer may create in terms of social and environmental "costs" or "benefits". It does this by using certain indicators with respect to that issuer, and quantifying them positively and negatively to produce an aggregate notional measure of the effect that the relevant underlying issuer may have on society and the environment. Examples of such indicators are greenhouse gas emissions, water usage, and salaries compared to the living wage.

Appendix V – Sustainable Finance Disclosure (Unaudited)

The Fund invested 60% of its assets in sustainable investments. This percentage represents the average of the last four months of the reference period, based on month-end data. Within this, 25% was invested in sustainable investments with an environmental objective and 35% was invested in sustainable investments with a social objective. In respect of the proportion of the Fund's portfolio that was invested in sustainable investments, each sustainable investment demonstrated a net positive effect across a range of environmental or social objectives, as scored by Schroders' proprietary tool. A sustainable investment is classified as having an environmental or social objective depending on whether the relevant issuer has a higher score in Schroders' proprietary tool relative to its applicable peer group for its environmental indicators or its social indicators. In each case, indicators are comprised of both "costs" and "benefits".

#2 Other includes cash, which was treated as neutral for sustainability purposes. [#2 also includes investments that were not scored by Schroders' proprietary sustainability tool and so did not contribute towards the Fund's sustainability score.]

#1 Aligned with E/S Characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments

The category **#1 Aligned with E/S Characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments
- The sub-category **#1B Other E/S Characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments

Appendix V – Sustainable Finance Disclosure (Unaudited)

• In which economic sectors were the investments made?

During the reference period investments were made in the following economic sectors:

Sector	Sub-Sector	% Assets
Information Technology	Technology Hardware & Equipment	16.52
Information Technology	Semiconductors & Semiconductor Equipment	14.38
Information Technology	Software & Services	3.07
Financials	Banking	12.38
Financials	Insurance	4.38
Financials	Diversified Financials	4.27
Consumer Discretionary	Consumer Durables & Apparel	5.37
Consumer Discretionary	Consumer Services	3.89
Communication Services	Telecommunication Services	5.29
Communication Services	Media & Entertainment	2.50
Communication Services	Retailing	0.61
Materials	Materials	7.86
Real Estate	Real Estate	5.99
Utilities	Utilities	3.98
Health Care	Pharmaceuticals, Biotechnology & Life Sciences	2.69
Health Care	Health Care Equipment & Services	1.29
Industrials	Capital Goods	2.55
Industrials	Transportation	0.68
Cash	Cash	2.19
Energy	Energy	0.11

The list above represents the average of the Fund's holdings at each quarter end during the reference period.

The % of assets and sector classifications aligned to economic sectors referred to above are derived from the Schroders Investment Book of Record (IBoR) data source. The % of assets and sector classifications aligned to economic sectors detailed elsewhere in the Audited Annual Report are derived from the Accounting Book of Record (ABoR) maintained by the administrator. As a result of these differing data sources, there may be differences in the % of assets and sector classifications aligned to economic sectors, due to the differing calculation methodologies and data availability of these alternative data sources.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective

Transitional activities are economic activities for which low-carbon alternatives are not yet available

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

There was no extent to which the Fund's investments (including transitional and enabling activities) with an environmental objective were aligned with the Taxonomy. Taxonomy alignment of this Fund's investments has therefore not been calculated and has as a result been deemed to constitute 0% of the Fund's portfolio.

Appendix V – Sustainable Finance Disclosure (Unaudited)

and that have greenhouse gas emission levels corresponding to the best performance.

• Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

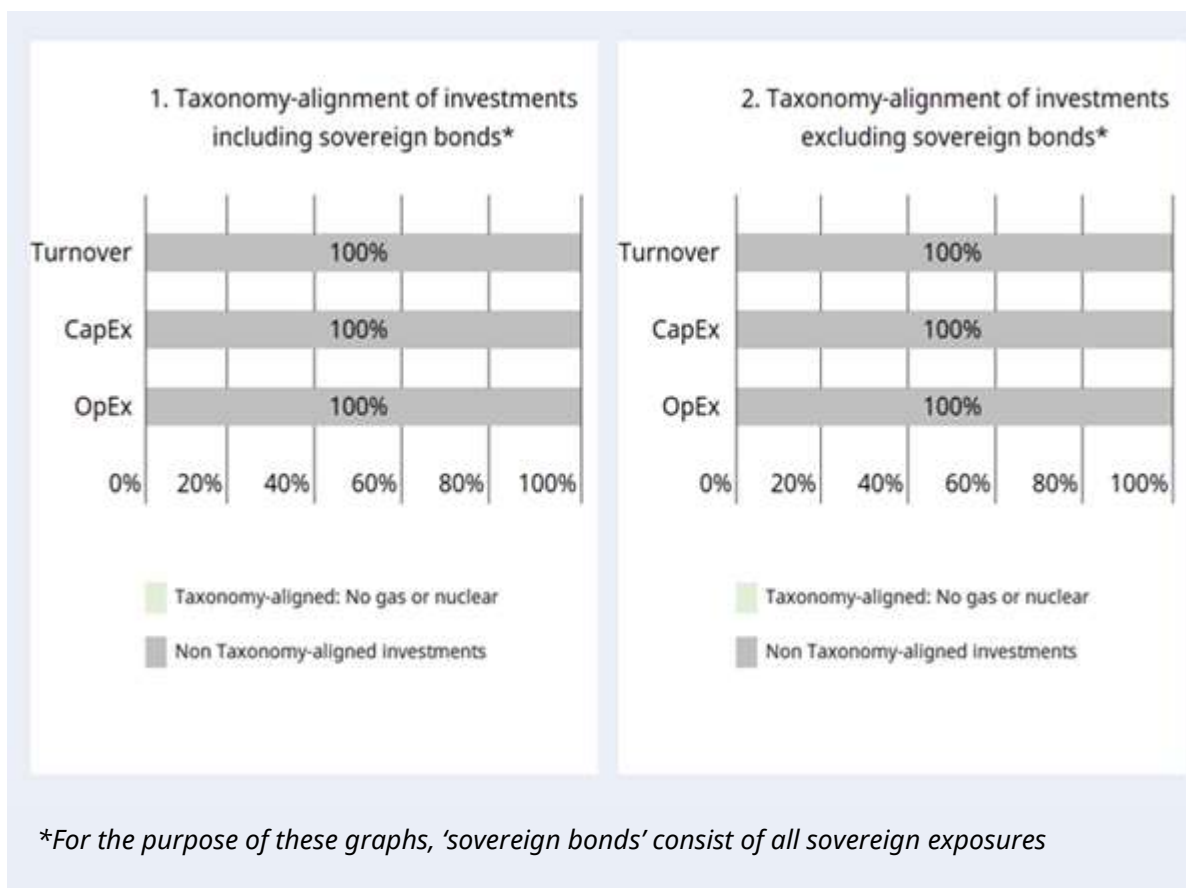

- **turnover** reflecting the share of revenue from green activities of investee companies

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

Appendix V – Sustainable Finance Disclosure (Unaudited)

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

• **What was the share of investments made in transitional and enabling activities?**

As per the above, the share of investments by the Fund in transitional and enabling activities has been deemed to constitute 0% of the Fund's portfolio.

• **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

As this is our first reporting period, this question is not applicable.

Appendix V – Sustainable Finance Disclosure (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund invested 25% of its assets in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy. This percentage is a proportion of the total percentage of sustainable investments, which is calculated as the average of the last four months of the reference period, based on month-end data.

What was the share of socially sustainable investments?

The Fund invested 35% of its assets in sustainable investments with a social objective. This percentage is a proportion of the total percentage of sustainable investments, which is calculated as the average of the last four months of the reference period, based on month-end data.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

#2 Other includes cash, which was treated as neutral for sustainability purposes. [#2 also includes investments that were not scored by Schroders’ proprietary sustainability tool and so did not contribute towards the Fund’s sustainability score.]

Minimum safeguards were applied where relevant to investments and derivatives by restricting (as appropriate) investments in counterparties where there were ownership links or exposure to higher risk countries (for the purpose of money laundering, terrorist financing, bribery, corruption, tax evasion and sanctions risks). A firm-wide risk assessment considers the risk rating of each jurisdiction; which includes reference to a number of public statements, indices and world governance indicators issued by the UN, the European Union, the UK Government, the Financial Action Task Force and several Non-Government Organisations (NGOs), such as Transparency International and the Basel Committee.

In addition, new counterparties were reviewed by Schroders’ credit risk team and approval of a new counterparty was based on a holistic review of the various sources of information available, including, but not limited to, quality of management, ownership structure, location, regulatory and social environment to which each counterparty is subject, and the degree of development of the local banking system and its regulatory framework. Ongoing monitoring was performed through a Schroders’ proprietary tool, which supports the analysis of a counterparty’s management of environmental, social and governance trends and challenges.

Schroders’ credit risk team monitored the counterparties and during the reference period a number of counterparties were removed from the approved list for all funds in line with our policy and compliance requirements. This meant that such counterparties were ineligible for use by the Fund in respect of any relevant investments from the date they were removed.

Appendix V – Sustainable Finance Disclosure (Unaudited)

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The actions taken during the reference period to meet the environmental and social characteristics promoted by the Fund were the following:

- The Investment Manager applied sustainability criteria when selecting investments for the Fund;
- The Investment Manager considered the sustainability score of the Fund [and of individual investments] when selecting the assets held by the Fund;
- The Investment Manager utilised a Schroders' proprietary tool to help assess good governance practices of investee companies; and
- The Investment Manager undertook engagements covering one or more of the six priority themes set out in our Engagement Blueprint (Link <https://prod.schroders.com/en/sysglobalassets/about-us/schroders-engagement-blueprint-2022.pdf>). A summary of Schroders engagement activity, including the number of issuers engaged with and the related theme, is shown above in the question 'How did this financial product consider principal adverse impacts on sustainability factors?'. Through our engagement activities, we build relationships and have a two-way dialogue with our investee companies. We aim to drive change that protects and enhances the value of our investments.

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

No index was designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the Fund.

• *How did the reference benchmark differ from a broad market index?*

This question is not applicable for this Fund.

• *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

This question is not applicable for this Fund.

• *How did this financial product perform compared with the reference benchmark?*

This question is not applicable for this Fund.

Appendix V – Sustainable Finance Disclosure (Unaudited)

- *How did this financial product perform compared with the broad market index?*

This question is not applicable for this Fund.

Appendix V – Sustainable Finance Disclosure (Unaudited)

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product : Schroder ISF EURO Bond

Legal Entity Identifier : 61XW5S6PT0DGAORX3X38

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Did this financial product have a sustainable investment objective?

Yes
 No

<input type="checkbox"/> It made sustainable investments with an environmental objective: __%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 78% of sustainable investments
<input type="checkbox"/> In economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> With an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> In economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> With an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> With a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Appendix V – Sustainable Finance Disclosure (Unaudited)

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and/or social characteristics promoted by the Fund were met.

The Fund maintained a higher overall sustainability score than the Bloomberg EURO Aggregate Index, based on the Investment Manager's rating system. This means that the Fund's weighted average score over a rolling six month period up to the end of the reference period was higher than the benchmark's weighted average score over the same period, based on month-end data. This benchmark (which is a broad market index) is not a reference benchmark for the purposes of the environmental and social characteristics promoted by the Fund.

The sustainability score is measured by Schroders' proprietary tool that provides an estimate of the net "impact" that an issuer may create in terms of social and environmental "costs" or "benefits". It does this by using certain indicators with respect to that issuer, and quantifying them positively and negatively to produce an aggregate notional measure of the effect that the relevant underlying issuer may have on society and the environment. It does this using third party data as well as Schroders own estimates and assumptions and the outcome may differ from other sustainability tools and measures. Examples of such indicators are greenhouse gas emissions, water usage, and salaries compared to the living wage.

The result is expressed as an aggregate score of the sustainability indicators for each issuer, specifically a notional percentage (positive or negative) of sales or GDP of the relevant underlying issuer. For example, a score of +2% would mean an issuer contributes \$2 of relative notional positive impact (i.e. benefits to society) per \$100 of sales or GDP. The sustainability score of the Fund is derived from the scores of all issuers in the Fund's portfolio measured by Schroders' proprietary tool.

The reference period for this Fund is 1 January, 2022 to 31 December, 2022.

The Fund used derivatives that contributed to the environmental and/or social characteristics promoted by the Fund, specifically to the Fund's sustainability score in Schroders' proprietary tool.

The Fund also invested at least 10% of its assets in sustainable investments from when this commitment came into effect in August 2022 to the end of the reference period.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

• *How did the sustainability indicators perform?*

The Fund's sustainability score for the reference period was 3.2% and the benchmark's sustainability score for the reference period was 1.4%.

In each case the sustainability score is calculated as a notional percentage as described above.

As measured at the end of the reference period, the top 5 indicators in Schroders' proprietary tool that contributed positively to the sustainability score of the Fund were:

- Clean Energy
- Connectivity
- Education

Appendix V – Sustainable Finance Disclosure (Unaudited)

- Power Provision

- Socio-Political Stability

The Investment Manager monitored compliance with the characteristic to maintain a higher overall sustainability score than the Bloomberg EURO Aggregate Index by reference to the weighted average sustainability score of the Fund in Schroders' proprietary tool compared against the weighted average sustainability score of the Bloomberg EURO Aggregate Index in Schroders' proprietary tool over a rolling six month period up to the end of the reference period, based on month-end data. The overall sustainability score aggregates the effect of sustainability indicators including but not limited to greenhouse gas emissions, water usage, and salaries compared to the living wage.

The Investment Manager invested 78% of the Fund's assets in sustainable investments. This figure represents the average percentage of sustainable investments over the four months prior to the end of the reference period, based on month-end data.

The Investment Manager monitored compliance with the characteristic to invest at least 10% of its assets in sustainable investments by reference to the sustainability score of each asset in Schroders' proprietary tool. Compliance with this was monitored daily via our automated compliance controls.

The Fund also applied certain exclusions, with which the Investment Manager monitored compliance on an ongoing basis via its portfolio compliance framework.

• *...and compared to previous periods?*

As this is our first reporting period, this question is not applicable.

• *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

In respect of the proportion of the Fund's portfolio that was invested in sustainable investments, each sustainable investment demonstrated a net positive effect across a range of environmental or social objectives, as scored by Schroders' proprietary tool.

The objectives of the sustainable investments that the Fund made included, but were not limited to increasing benefits by way of the following:

- Clean Energy: the estimated environmental benefit associated with renewables and the accelerated transformation of countries' energy systems;
- Connectivity: the estimated societal benefits from companies' that enable or support the connection of communities through telecommunication services;
- Education: the estimated societal benefits of a country's education spend per school age capita;
- Power Provision: the estimated societal benefits of access to power and electricity. Assigned in proportion to a company's share of power provision revenues;
- Socio-Political Stability: the estimated societal benefit a politically and socially stable country can provide in supporting a favourable business environment and attracting investment, thus contributing to long-run economic growth;

Appendix V – Sustainable Finance Disclosure (Unaudited)

The above examples of the objectives of the sustainable investments that the Fund made are based on data as at the end of the reference period. Other objectives may have applied during the reference period.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

• How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Investment Manager's approach to not causing significant harm to any environmental or social sustainable investment objective included the following:

- Firm-wide exclusions applied to Schroders funds. These relate to international conventions on cluster munitions, anti-personnel mines, and chemical and biological weapons. A detailed list of all companies that are excluded is available at <https://www.schroders.com/en/sustainability/active-ownership/group-exclusions/>.

- Schroders became a signatory to the UN Global Compact (UNGC) principles on 6 January 2020. The Fund excluded companies in violation of the UNGC principles from the portion of the portfolio in sustainable investments, as Schroders considers violators cause significant harm to one or more environmental or social sustainable investment objectives. The areas determining whether an issuer is an UNGC violator include issues that are covered by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, such as human rights, bribery and corruption, labour rights, child labour, discrimination, health and safety, and collective bargaining. The list of UNGC violators is provided by a third party and compliance with the list was monitored via our automated compliance controls. Schroders applied certain exceptions to the list during the reference period.

- Firm-wide exclusions also applied to companies that derived revenues above certain thresholds from activities related to tobacco and thermal coal, especially tobacco production, tobacco value chain (suppliers, distributors, retailers, licensors), thermal coal mining and coal fired power generation.

- Further information on all of the Fund's exclusions is to be found under "Sustainability Related Disclosures" on the Fund's webpage, accessed via <https://www.schroders.com/en/lu/private-investor/gfc>.

How were the indicators for adverse impacts on sustainability factors taken into account?

Where the Investment Manager set levels in relation to the indicators for adverse impacts on sustainability factors, compliance with these thresholds was monitored on an ongoing basis via its portfolio compliance framework. Investee companies in breach of these levels were not eligible to be considered as a sustainable investment.

For example, the Fund excluded companies in violation of the UNGC principles (principal adverse impact (PAI) 10) from the portion of the portfolio in sustainable investments. The list of UNGC violators is provided by a third party and compliance with the list was monitored via our automated compliance controls. Schroders applied certain exceptions to the list during the reference period.

In addition the Fund excluded companies that were deemed to contribute significantly to climate change (related to PAIs 1, 2 and 3 covering GHG emissions). The thresholds that were applied were companies deriving >10% revenue from thermal coal mining and >30% revenue from coal power generation. The Fund may have applied stricter thresholds, as disclosed on the website. Compliance with these exclusions was monitored via our automated compliance controls.

Appendix V – Sustainable Finance Disclosure (Unaudited)

In other areas Schroders set principles of engagement. We have aligned each of the PAIs to one of Schroders six core engagement themes. We summarise below the thresholds that apply and the engagement actions we have for each:

Climate Change

PAIs 1, 2, 3, 4, 5, 6 and 19 relate to the Engagement Blueprint theme of Climate Change. Details of our Engagement Blueprint can be found here: (Link <https://prod.schroders.com/en/sysglobalassets/about-us/schroders-engagement-blueprint-2022.pdf>). We engage to understand how companies are responding to the challenges climate change may pose to their long-term financial position. Through our engagement activity we seek to understand different areas, such as the speed and scale of emission reduction targets and steps being taken to meet climate goals.

Biodiversity and Natural Capital

PAIs 7, 8 and 9 align to the Engagement Blueprint theme of Biodiversity and Natural Capital. We recognise the importance of all companies assessing and reporting on their exposure to natural capital and biodiversity risk. We focus our engagement on improving disclosure around a number of themes such as deforestation and sustainable food and water.

Human Rights

PAIs 10 and 14 relate to the Engagement Blueprint theme of Human Rights. There is increasing pressure on the role that businesses can and should play to respect human rights. We understand the higher operational and financial risks, and the reputational risk that human rights controversies cause. Our engagement focuses on three core stakeholders: workers, communities and customers.

Human Capital Management

PAIs 11, 12 and 13 align to the Engagement Blueprint theme of Human Capital Management. We identify human capital management as a priority issue for engagement, noting that people in an organisation are a significant source of competitive advantage and that effective human capital management is essential to drive innovation and long-term value creation. We also recognise a number of links between high standards of human capital management and the achievement of the Sustainable Development Goals (SDGs). Our engagement activities address themes such as health and safety, corporate culture and investment into the workforce.

Diversity and Inclusion

PAIs 12 and 13 relate to the Engagement Blueprint theme of Diversity and Inclusion. Improving disclosure on board diversity and the gender pay gap are two of the priority objectives outlined in our Engagement Blueprint. We request that companies implement a policy that requires each board vacancy to consider at least one or more diverse candidates. Our engagement approach also addresses diversity of the executive management, the workforce and in the value chain.

Corporate Governance

PAIs 20, 12 and 13 align to the Engagement Blueprint theme of Corporate Governance. We engage with companies to seek to ensure businesses act in the best interest of shareholders and other key stakeholders. We also recognise that, in most cases, in order to see progress and performance on other material Environmental, Social and Governance (ESG) issues, strong governance structures

Appendix V – Sustainable Finance Disclosure (Unaudited)

need to first be in place. We therefore engage on a number of corporate governance aspects such as executive remuneration, boards and management, and strategy.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The portion of the portfolio in sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

We used a list of UNGC violators as provided by a third party. Issuers on that list were not categorised as sustainable investments. The areas considered when determining whether an issuer is an UNGC violator included those covered by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, such as human rights, bribery and corruption, labour rights, child labour, discrimination, health and safety, and collective bargaining.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager’s approach to considering principal adverse impacts on sustainability factors involved classifying the indicators into three categories:

1. Set thresholds

For certain PAIs (e.g. PAI 10 on violations of UNGC principles), we set thresholds for considering an investment to be a sustainable investment. Investments in breach of these thresholds were not eligible to be held as sustainable investments. Compliance with these thresholds was monitored on an ongoing basis via the Investment Manager’s portfolio compliance framework.

2. Active ownership

During the reference period, the Investment Manager engaged in line with the approach and expectations set out in our Engagement Blueprint (Link <https://prod.schroders.com/en/sysglobalassets/about-us/schroders-engagement-blueprint-2022.pdf>) and as further described above. A summary of Schroders firm-wide engagement activity, during the reference period, including the relevant engagement theme, is shown below:

Appendix V – Sustainable Finance Disclosure (Unaudited)

Engagement Theme	# Issuers
Climate Change	738
Diversity and Inclusion	72
Governance and Oversight	3,096
Human Capital Management	130
Human Rights	121
Natural Capital and Biodiversity	95

3. Improve coverage

Some of the engagements identified in the table above involved discussions where the primary focus was to increase reporting on sustainability data. The purpose is to improve coverage of the PAIs, for example PAI 9 on hazardous waste ratio.

Our approach is subject to ongoing review, particularly as the availability, and quality, of PAI data evolves.

What were the top investments of this financial product?

During the reference period the top 15 investments were:

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **1 Jan 2022 to 31 Dec 2022**

The list above represents the average of the Fund's holdings at each quarter end during the reference period.

The largest investments and % of assets referred to above are derived from the Schroders Investment Book of Record (IBoR) data source. The largest investments and % of assets detailed elsewhere in the Audited Annual Report are derived from the Accounting Book of Record (ABoR) maintained by the administrator. As a result of these differing data sources, there may be differences in the largest investments and % of assets due to the differing calculation methodologies of these alternative data sources.

Appendix V – Sustainable Finance Disclosure (Unaudited)

What was the proportion of sustainability-related investments?

Asset allocation
describes the share
of investments in
specific assets.

• *What was the asset allocation?*

The Fund's investments that were used to meet its environmental or social characteristics are summarised below.

#1 Aligned with E/S characteristics includes the Fund's assets that were used to attain the environmental or social characteristics, which is equal to 93%. The Fund maintained a higher overall sustainability score than the Bloomberg EURO Aggregate Index and so the Fund's investments that were scored by Schroders' proprietary sustainability tool are included within #1 on the basis that they contributed to the Fund's sustainability score (whether such individual investment had a positive or a negative score). The percentage in #1 Aligned E/S characteristics represents the average of the last four months of the reference period, based on month-end data. Also included within #1 is the proportion of assets that were invested in sustainable investments, as indicated in #1A.

The sustainability score is measured by Schroders' proprietary tool that provides an estimate of the net "impact" that an issuer may create in terms of social and environmental "costs" or "benefits". It does this by using certain indicators with respect to that issuer, and quantifying them positively and negatively to produce an aggregate notional measure of the effect that the relevant underlying issuer may have on society and the environment. Examples of such indicators are greenhouse gas emissions, water usage, and salaries compared to the living wage.

The Fund invested 78% of its assets in sustainable investments. This percentage represents the average of the last four months of the reference period, based on month-end data. Within this, 32% was invested in sustainable investments with an environmental objective and 46% was invested in sustainable investments with a social objective. In respect of the proportion of the Fund's portfolio that was invested in sustainable investments, each sustainable investment demonstrated a net positive effect across a range of environmental or social objectives, as scored by Schroders' proprietary tool. With the exception of any green or social bonds, which will be classified as having an environmental and social objective respectively, a sustainable investment is classified as having an environmental or social objective depending on whether the relevant issuer has a higher score in Schroders' proprietary tool relative to its applicable peer group for its environmental indicators or its social indicators. In each case, indicators are comprised of both "costs" and "benefits".

#2 Other includes cash, which was treated as neutral for sustainability purposes. #2 also includes investments that were not scored by Schroders' proprietary sustainability tool and so did not contribute towards the Fund's sustainability score.

Appendix V – Sustainable Finance Disclosure (Unaudited)

#1 Aligned with E/S Characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments

The category **#1 Aligned with E/S Characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments
- The sub-category **#1B Other E/S Characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments

Appendix V – Sustainable Finance Disclosure (Unaudited)

• In which economic sectors were the investments made?

During the reference period investments were made in the following economic sectors:

Sector	Sub-Sector	% Assets
Sovereign (Developed)		36.46
Financials	Banking	15.72
Financials	Financial Services	3.26
Financials	Insurance	0.29
Industrials	Real Estate	3.07
Industrials	Healthcare	2.54
Industrials	Telecommunications	2.40
Industrials	Automotive	1.21
Industrials	Energy	1.13
Industrials	Consumer Goods	0.80
Industrials	Retail	0.77
Industrials	Transportation	0.75
Industrials	Media & Entertainment	0.67
Industrials	Basic Industry	0.50
Industrials	Services	0.37
Industrials	Capital Goods	0.34
Industrials	Technology & Electronics	0.23
Industrials	Leisure	0.23
Supranational		7.27
Collective Investments	Other	5.47
Government Guaranteed		4.41
Agency		3.44
Utilities	Electric - Integrated	2.82
Utilities	Non-Electric Utilities	0.26
Utilities	Electric - Generation	0.11
Utilities	Electric - Distr/Trans	0.01
Cash	Margin Cash	1.47
Cash	Cash	1.41
Foreign Sovereign		1.33
Local Authority		1.28
EMD Sovereign		0.10
Securitized	Asset Backed	0.01
Derivatives	Credit Derivatives	0.10
Derivatives	FX Derivatives	-0.01
Derivatives	Interest Rate Derivatives	-0.25

The list above represents the average of the Fund's holdings at each quarter end during the reference period.

The % of assets and sector classifications aligned to economic sectors referred to above are derived from the Schroders Investment Book of Record (IBoR) data source. The % of assets and sector classifications aligned to economic sectors detailed elsewhere in the Audited Annual Report are derived from the Accounting Book of Record (ABoR) maintained by the administrator. As a result of these differing data sources, there may be differences in the % of assets and sector classifications aligned to economic sectors, due to the differing calculation methodologies and data availability of these alternative data sources.

Appendix V – Sustainable Finance Disclosure (Unaudited)

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

There was no extent to which the Fund's investments (including transitional and enabling activities) with an environmental objective were aligned with the Taxonomy. Taxonomy alignment of this Fund's investments has therefore not been calculated and has as a result been deemed to constitute 0% of the Fund's portfolio.

• Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

Appendix V – Sustainable Finance Disclosure (Unaudited)

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

• **What was the share of investments made in transitional and enabling activities?**

As per the above, the share of investments by the Fund in transitional and enabling activities has been deemed to constitute 0% of the Fund's portfolio.

• **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

As this is our first reporting period, this question is not applicable.

Appendix V – Sustainable Finance Disclosure (Unaudited)

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund invested 32% of its assets in sustainable investments with an environmental objective that are not aligned with the Taxonomy. This percentage is a proportion of the total percentage of sustainable investments, which is calculated as the average of the last four months of the reference period, based on month-end data.

What was the share of socially sustainable investments?

The Fund invested 46% of its assets in sustainable investments with a social objective. This percentage is a proportion of the total percentage of sustainable investments, which is calculated as the average of the last four months of the reference period, based on month-end data.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

#2 Other includes cash, which was treated as neutral for sustainability purposes. #2 also includes investments that were not scored by Schroders' proprietary sustainability tool and so did not contribute towards the Fund's sustainability score.

Minimum safeguards were applied where relevant to investments and derivatives by restricting (as appropriate) investments in counterparties where there were ownership links or exposure to higher risk countries (for the purpose of money laundering, terrorist financing, bribery, corruption, tax evasion and sanctions risks). A firm-wide risk assessment considers the risk rating of each jurisdiction; which includes reference to a number of public statements, indices and world governance indicators issued by the UN, the European Union, the UK Government, the Financial Action Task Force and several Non-Government Organisations (NGOs), such as Transparency International and the Basel Committee.

In addition, new counterparties were reviewed by Schroders' credit risk team and approval of a new counterparty was based on a holistic review of the various sources of information available, including, but not limited to, quality of management, ownership structure, location, regulatory and social environment to which each counterparty is subject, and the degree of development of the local banking system and its regulatory framework. Ongoing monitoring was performed through a Schroders' proprietary tool, which supports the analysis of a counterparty's management of environmental, social and governance trends and challenges.

Schroders' credit risk team monitored the counterparties and during the reference period a number of counterparties were removed from the approved list for all funds in line with our policy and compliance requirements. This meant that such counterparties were ineligible for use by the Fund in respect of any relevant investments from the date they were removed.

Appendix V – Sustainable Finance Disclosure (Unaudited)

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The actions taken during the reference period to meet the environmental and social characteristics promoted by the Fund were the following:

- The Investment Manager applied sustainability criteria when selecting investments for the Fund;
- The Investment Manager considered the sustainability score of the Fund and of individual investments when selecting the assets held by the Fund;
- The Investment Manager utilised a Schroders' proprietary tool to help assess good governance practices of investee companies; and
- The Investment Manager undertook engagements covering one or more of the six priority themes set out in our Engagement Blueprint (Link <https://prod.schroders.com/en/sysglobalassets/about-us/schroders-engagement-blueprint-2022.pdf>). A summary of Schroders engagement activity, including the number of issuers engaged with and the related theme, is shown above in the question 'How did this financial product consider principal adverse impacts on sustainability factors?'. Through our engagement activities, we build relationships and have a two-way dialogue with our investee companies. We aim to drive change that protects and enhances the value of our investments.

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

No index was designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the Fund.

• *How did the reference benchmark differ from a broad market index?*

This question is not applicable for this Fund.

• *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

This question is not applicable for this Fund.

• *How did this financial product perform compared with the reference benchmark?*

This question is not applicable for this Fund.

• *How did this financial product perform compared with the broad market index?*

This question is not applicable for this Fund.

Appendix V – Sustainable Finance Disclosure (Unaudited)

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product : Schroder ISF EURO Government Bond
Legal Entity Identifier : GQO6F0370CMTJBILPZ30

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Did this financial product have a sustainable investment objective?

Yes
 No

<input type="checkbox"/> It made sustainable investments with an environmental objective: __%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 97% of sustainable investments
<input type="checkbox"/> In economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> With an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> In economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> With an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> With a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Appendix V – Sustainable Finance Disclosure (Unaudited)

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and/or social characteristics promoted by the Fund were met.

The Fund maintained a higher overall sustainability score than the ICE BofA Merrill Lynch Euro Government Index, based on the Investment Manager's rating system. This means that the Fund's weighted average score over a rolling six month period up to the end of the reference period was higher than the benchmark's weighted average score over the same period, based on month-end data. This benchmark (which is a broad market index) is not a reference benchmark for the purposes of the environmental and social characteristics promoted by the Fund.

The sustainability score is measured by Schroders' proprietary tool that provides an estimate of the net "impact" that an issuer may create in terms of social and environmental "costs" or "benefits". It does this by using certain indicators with respect to that issuer, and quantifying them positively and negatively to produce an aggregate notional measure of the effect that the relevant underlying issuer may have on society and the environment. It does this using third party data as well as Schroders own estimates and assumptions and the outcome may differ from other sustainability tools and measures. Examples of such indicators are greenhouse gas emissions, water usage, and salaries compared to the living wage.

The result is expressed as an aggregate score of the sustainability indicators for each issuer, specifically a notional percentage (positive or negative) of sales or GDP of the relevant underlying issuer. For example, a score of +2% would mean an issuer contributes \$2 of relative notional positive impact (i.e. benefits to society) per \$100 of sales or GDP. The sustainability score of the Fund is derived from the scores of all issuers in the Fund's portfolio measured by Schroders' proprietary tool.

The reference period for this Fund is 1 January, 2022 to 31 December, 2022.

The Fund also invested at least 10% of its assets in sustainable investments from when this commitment came into effect in August 2022 to the end of the reference period.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

• *How did the sustainability indicators perform?*

The Fund's sustainability score for the reference period was 2.7% and the benchmark's sustainability score for the reference period was 2.4%.

In each case the sustainability score is calculated as a notional percentage as described above.

As measured at the end of the reference period, the top 5 indicators in Schroders' proprietary tool that contributed positively to the sustainability score of the Fund were:

- Clean Energy
- Education
- International Aid
- Multinational Institutions

Appendix V – Sustainable Finance Disclosure (Unaudited)

- Socio-Political Stability

The Investment Manager monitored compliance with the characteristic to maintain a higher overall sustainability score than the ICE BofA Merrill Lynch Euro Government Index by reference to the weighted average sustainability score of the Fund in Schroders' proprietary tool compared against the weighted average sustainability score of the ICE BofA Merrill Lynch Euro Government Index in Schroders' proprietary tool over a rolling six month period up to the end of the reference period, based on month-end data. The overall sustainability score aggregates the effect of sustainability indicators including but not limited to greenhouse gas emissions, water usage, and salaries compared to the living wage.

The Investment Manager invested 97% of the Fund's assets in sustainable investments. This figure represents the average percentage of sustainable investments over the four months prior to the end of the reference period, based on month-end data.

The Investment Manager monitored compliance with the characteristic to invest at least 10% of its assets in sustainable investments by reference to the sustainability score of each asset in Schroders' proprietary tool. Compliance with this was monitored daily via our automated compliance controls.

The Fund also applied certain exclusions, with which the Investment Manager monitored compliance on an ongoing basis via its portfolio compliance framework.

• *...and compared to previous periods?*

As this is our first reporting period, this question is not applicable.

• *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

In respect of the proportion of the Fund's portfolio that was invested in sustainable investments, each sustainable investment demonstrated a net positive effect across a range of environmental or social objectives, as scored by Schroders' proprietary tool.

The objectives of the sustainable investments that the Fund made included, but were not limited to increasing benefits by way of the following:

- Clean Energy: the estimated environmental benefit associated with renewables and the accelerated transformation of countries' energy systems;
- Education: the estimated societal benefits of a country's education spend per school age capita;
- International Aid: the estimated societal benefits associated with humanitarian aid following natural disasters or conflicts and financial support for economic development of underdeveloped economies. Assigned in proportion to total net Official Development Assistance (ODA) receipts;
- Multinational Institutions: the estimated societal benefits associated with countries working together through international organisations that encourage cooperation and diplomatic resolutions to global problems. Assigned in proportion to a country's net UN contributions;
- Socio-Political Stability: the estimated societal benefit a politically and socially stable country can provide in supporting a favourable business environment and attracting investment, thus contributing to long-run economic growth;

Appendix V – Sustainable Finance Disclosure (Unaudited)

The above examples of the objectives of the sustainable investments that the Fund made are based on data as at the end of the reference period. Other objectives may have applied during the reference period.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

• ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

The Investment Manager's approach to not causing significant harm to any environmental or social sustainable investment objective included the following:

- Firm-wide exclusions applied to Schroders funds. These relate to international conventions on cluster munitions, anti-personnel mines, and chemical and biological weapons. A detailed list of all companies that are excluded is available at <https://www.schroders.com/en/sustainability/active-ownership/group-exclusions/>.

- Schroders became a signatory to the UN Global Compact (UNGC) principles on 6 January 2020. The Fund excluded companies in violation of the UNGC principles from the portion of the portfolio in sustainable investments, as Schroders considers violators cause significant harm to one or more environmental or social sustainable investment objectives. The areas determining whether an issuer is an UNGC violator include issues that are covered by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, such as human rights, bribery and corruption, labour rights, child labour, discrimination, health and safety, and collective bargaining. The list of UNGC violators is provided by a third party and compliance with the list was monitored via our automated compliance controls. Schroders applied certain exceptions to the list during the reference period.

- Firm-wide exclusions also applied to companies that derived revenues above certain thresholds from activities related to tobacco and thermal coal, especially tobacco production, tobacco value chain (suppliers, distributors, retailers, licensors), thermal coal mining and coal fired power generation.

- Further information on all of the Fund's exclusions is to be found under "Sustainability Related Disclosures" on the Fund's webpage, accessed via <https://www.schroders.com/en/lu/private-investor/gfc>.

How were the indicators for adverse impacts on sustainability factors taken into account?

Where the Investment Manager set levels in relation to the indicators for adverse impacts on sustainability factors, compliance with these thresholds was monitored on an ongoing basis via its portfolio compliance framework. Investee companies in breach of these levels were not eligible to be considered as a sustainable investment.

For example, the Fund excluded companies in violation of the UNGC principles (principal adverse impact (PAI) 10) from the portion of the portfolio in sustainable investments. The list of UNGC violators is provided by a third party and compliance with the list was monitored via our automated compliance controls. Schroders applied certain exceptions to the list during the reference period.

In addition the Fund excluded companies that were deemed to contribute significantly to climate change (related to PAIs 1, 2 and 3 covering GHG emissions). The thresholds that were applied were companies deriving >10% revenue from thermal coal mining and >30% revenue from coal power generation. The Fund may have applied stricter thresholds, as disclosed on the website. Compliance with these exclusions was monitored via our automated compliance controls.

Appendix V – Sustainable Finance Disclosure (Unaudited)

In other areas Schroders set principles of engagement. We have aligned each of the PAIs to one of Schroders six core engagement themes. We summarise below the thresholds that apply and the engagement actions we have for each:

Climate Change

PAIs 1, 2, 3, 4, 5, 6 and 19 relate to the Engagement Blueprint theme of Climate Change. Details of our Engagement Blueprint can be found here: (Link <https://prod.schroders.com/en/sysglobalassets/about-us/schroders-engagement-blueprint-2022.pdf>). We engage to understand how companies are responding to the challenges climate change may pose to their long-term financial position. Through our engagement activity we seek to understand different areas, such as the speed and scale of emission reduction targets and steps being taken to meet climate goals.

Biodiversity and Natural Capital

PAIs 7, 8 and 9 align to the Engagement Blueprint theme of Biodiversity and Natural Capital. We recognise the importance of all companies assessing and reporting on their exposure to natural capital and biodiversity risk. We focus our engagement on improving disclosure around a number of themes such as deforestation and sustainable food and water.

Human Rights

PAIs 10 and 14 relate to the Engagement Blueprint theme of Human Rights. There is increasing pressure on the role that businesses can and should play to respect human rights. We understand the higher operational and financial risks, and the reputational risk that human rights controversies cause. Our engagement focuses on three core stakeholders: workers, communities and customers.

Human Capital Management

PAIs 11, 12 and 13 align to the Engagement Blueprint theme of Human Capital Management. We identify human capital management as a priority issue for engagement, noting that people in an organisation are a significant source of competitive advantage and that effective human capital management is essential to drive innovation and long-term value creation. We also recognise a number of links between high standards of human capital management and the achievement of the Sustainable Development Goals (SDGs). Our engagement activities address themes such as health and safety, corporate culture and investment into the workforce.

Diversity and Inclusion

PAIs 12 and 13 relate to the Engagement Blueprint theme of Diversity and Inclusion. Improving disclosure on board diversity and the gender pay gap are two of the priority objectives outlined in our Engagement Blueprint. We request that companies implement a policy that requires each board vacancy to consider at least one or more diverse candidates. Our engagement approach also addresses diversity of the executive management, the workforce and in the value chain.

Corporate Governance

PAIs 20, 12 and 13 align to the Engagement Blueprint theme of Corporate Governance. We engage with companies to seek to ensure businesses act in the best interest of shareholders and other key stakeholders. We also recognise that, in most cases, in order to see progress and performance on

Appendix V – Sustainable Finance Disclosure (Unaudited)

other material Environmental, Social and Governance (ESG) issues, strong governance structures need to first be in place. We therefore engage on a number of corporate governance aspects such as executive remuneration, boards and management, and strategy.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The portion of the portfolio in sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

We used a list of UNGC violators as provided by a third party. Issuers on that list were not categorised as sustainable investments. The areas considered when determining whether an issuer is an UNGC violator included those covered by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, such as human rights, bribery and corruption, labour rights, child labour, discrimination, health and safety, and collective bargaining.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager’s approach to considering principal adverse impacts on sustainability factors involved classifying the indicators into three categories:

1. Set thresholds

For certain PAIs (e.g. PAI 10 on violations of UNGC principles), we set thresholds for considering an investment to be a sustainable investment. Investments in breach of these thresholds were not eligible to be held as sustainable investments. Compliance with these thresholds was monitored on an ongoing basis via the Investment Manager’s portfolio compliance framework.

2. Active ownership

During the reference period, the Investment Manager engaged in line with the approach and expectations set out in our Engagement Blueprint (Link <https://prod.schroders.com/en/sysglobalassets/about-us/schroders-engagement-blueprint-2022.pdf>) and as further described above. A summary of Schroders firm-wide engagement activity, during the reference period, including the relevant engagement theme, is shown below:

Appendix V – Sustainable Finance Disclosure (Unaudited)

Engagement Theme	# Issuers
Climate Change	738
Diversity and Inclusion	72
Governance and Oversight	3,096
Human Capital Management	130
Human Rights	121
Natural Capital and Biodiversity	95

3. Improve coverage

Some of the engagements identified in the table above involved discussions where the primary focus was to increase reporting on sustainability data. The purpose is to improve coverage of the PAIs, for example PAI 9 on hazardous waste ratio.

Our approach is subject to ongoing review, particularly as the availability, and quality, of PAI data evolves.

What were the top investments of this financial product?

During the reference period the top 15 investments were:

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **1 Jan 2022 to 31 Dec 2022**

Largest Investments	Sector	% Assets	Country
GERMANY (FEDERAL REPUBLIC OF) SR REGS 0% 10 Apr 2026	Sovereign (Developed)	6.09	Germany

The list above represents the average of the Fund's holdings at each quarter end during the reference period.

The largest investments and % of assets referred to above are derived from the Schroders Investment Book of Record (IBoR) data source. The largest investments and % of assets detailed elsewhere in the Audited Annual Report are derived from the Accounting Book of Record (ABoR) maintained by the administrator. As a result of these differing data sources, there may be differences in the largest investments and % of assets due to the differing calculation methodologies of these alternative data sources.

Appendix V – Sustainable Finance Disclosure (Unaudited)

What was the proportion of sustainability-related investments?

Asset allocation
describes the share
of investments in
specific assets.

• *What was the asset allocation?*

The Fund's investments that were used to meet its environmental or social characteristics are summarised below.

#1 Aligned with E/S characteristics includes the Fund's assets that were used to attain the environmental or social characteristics, which is equal to 98%. The Fund maintained a higher overall sustainability score than the ICE BofA Merrill Lynch Euro Government Index and so the Fund's investments that were scored by Schrodgers' proprietary sustainability tool are included within #1 on the basis that they contributed to the Fund's sustainability score (whether such individual investment had a positive or a negative score). The percentage in #1 Aligned E/S characteristics represents the average of the last four months of the reference period, based on month-end data. Also included within #1 is the proportion of assets that were invested in sustainable investments, as indicated in #1A.

The sustainability score is measured by Schrodgers' proprietary tool that provides an estimate of the net "impact" that an issuer may create in terms of social and environmental "costs" or "benefits". It does this by using certain indicators with respect to that issuer, and quantifying them positively and negatively to produce an aggregate notional measure of the effect that the relevant underlying issuer may have on society and the environment. Examples of such indicators are greenhouse gas emissions, water usage, and salaries compared to the living wage.

The Fund invested 97% of its assets in sustainable investments. This percentage represents the average of the last four months of the reference period, based on month-end data. Within this, 37% was invested in sustainable investments with an environmental objective and 59% was invested in sustainable investments with a social objective. The percentage of sustainable investments with an environmental objective and the percentage of sustainable investments with a social objective do not sum to the percentage of sustainable investments, due to rounding. In respect of the proportion of the Fund's portfolio that was invested in sustainable investments, each sustainable investment demonstrated a net positive effect across a range of environmental or social objectives, as scored by Schrodgers' proprietary tool. With the exception of any green or social bonds, which will be classified as having an environmental and social objective respectively, a sustainable investment is classified as having an environmental or social objective depending on whether the relevant issuer has a higher score in Schrodgers' proprietary tool relative to its applicable peer group for its environmental indicators or its social indicators. In each case, indicators are comprised of both "costs" and "benefits".

#2 Other includes cash, which was treated as neutral for sustainability purposes. #2 also includes investments that were not scored by Schrodgers' proprietary sustainability tool and so did not contribute towards the Fund's sustainability score.

Appendix V – Sustainable Finance Disclosure (Unaudited)

#1 Aligned with E/S Characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments

The category **#1 Aligned with E/S Characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments
- The sub-category **#1B Other E/S Characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments

• In which economic sectors were the investments made?

During the reference period investments were made in the following economic sectors:

Sector	Sub-Sector	% Assets
Sovereign (Developed)		89.25
Financials	Banking	2.50
Financials	Financial Services	0.07
Government Guaranteed		2.06
Supranational		1.90
Agency		1.81
Cash	Margin Cash	0.83
Cash	Cash	0.69
EMD Sovereign		1.00
Local Authority		0.09
Derivatives	FX Derivatives	-0.01
Derivatives	Interest Rate Derivatives	-0.17

Appendix V – Sustainable Finance Disclosure (Unaudited)

The list above represents the average of the Fund's holdings at each quarter end during the reference period.

The % of assets and sector classifications aligned to economic sectors referred to above are derived from the Schroders Investment Book of Record (IBoR) data source. The % of assets and sector classifications aligned to economic sectors detailed elsewhere in the Audited Annual Report are derived from the Accounting Book of Record (ABoR) maintained by the administrator. As a result of these differing data sources, there may be differences in the % of assets and sector classifications aligned to economic sectors, due to the differing calculation methodologies and data availability of these alternative data sources.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

There was no extent to which the Fund's investments (including transitional and enabling activities) with an environmental objective were aligned with the Taxonomy. Taxonomy alignment of this Fund's investments has therefore not been calculated and has as a result been deemed to constitute 0% of the Fund's portfolio.

• Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Appendix V – Sustainable Finance Disclosure (Unaudited)

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

• **What was the share of investments made in transitional and enabling activities?**

As per the above, the share of investments by the Fund in transitional and enabling activities has been deemed to constitute 0% of the Fund's portfolio.

• **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

As this is our first reporting period, this question is not applicable.

Appendix V – Sustainable Finance Disclosure (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund invested 37% of its assets in sustainable investments with an environmental objective that are not aligned with the Taxonomy. This percentage is a proportion of the total percentage of sustainable investments, which is calculated as the average of the last four months of the reference period, based on month-end data.

What was the share of socially sustainable investments?

The Fund invested 59% of its assets in sustainable investments with a social objective. This percentage is a proportion of the total percentage of sustainable investments, which is calculated as the average of the last four months of the reference period, based on month-end data.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

#2 Other includes cash, which was treated as neutral for sustainability purposes. #2 also includes investments that were not scored by Schroders' proprietary sustainability tool and so did not contribute towards the Fund's sustainability score.

Minimum safeguards were applied where relevant to investments and derivatives by restricting (as appropriate) investments in counterparties where there were ownership links or exposure to higher risk countries (for the purpose of money laundering, terrorist financing, bribery, corruption, tax evasion and sanctions risks). A firm-wide risk assessment considers the risk rating of each jurisdiction; which includes reference to a number of public statements, indices and world governance indicators issued by the UN, the European Union, the UK Government, the Financial Action Task Force and several Non-Government Organisations (NGOs), such as Transparency International and the Basel Committee.

In addition, new counterparties were reviewed by Schroders' credit risk team and approval of a new counterparty was based on a holistic review of the various sources of information available, including, but not limited to, quality of management, ownership structure, location, regulatory and social environment to which each counterparty is subject, and the degree of development of the local banking system and its regulatory framework. Ongoing monitoring was performed through a Schroders' proprietary tool, which supports the analysis of a counterparty's management of environmental, social and governance trends and challenges.

Schroders' credit risk team monitored the counterparties and during the reference period a number of counterparties were removed from the approved list for all funds in line with our policy and compliance requirements. This meant that such counterparties were ineligible for use by the Fund in respect of any relevant investments from the date they were removed.

Appendix V – Sustainable Finance Disclosure (Unaudited)

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The actions taken during the reference period to meet the environmental and social characteristics promoted by the Fund were the following:

- The Investment Manager applied sustainability criteria when selecting investments for the Fund;
- The Investment Manager considered the sustainability score of the Fund and of individual investments when selecting the assets held by the Fund;
- The Investment Manager utilised a Schroders' proprietary tool to help assess good governance practices of investee companies; and
- The Investment Manager undertook engagements covering one or more of the six priority themes set out in our Engagement Blueprint (Link <https://prod.schroders.com/en/sysglobalassets/about-us/schroders-engagement-blueprint-2022.pdf>). A summary of Schroders engagement activity, including the number of issuers engaged with and the related theme, is shown above in the question 'How did this financial product consider principal adverse impacts on sustainability factors?'. Through our engagement activities, we build relationships and have a two-way dialogue with our investee companies. We aim to drive change that protects and enhances the value of our investments.

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

No index was designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the Fund.

• *How did the reference benchmark differ from a broad market index?*

This question is not applicable for this Fund.

• *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

This question is not applicable for this Fund.

• *How did this financial product perform compared with the reference benchmark?*

This question is not applicable for this Fund.

• *How did this financial product perform compared with the broad market index?*

This question is not applicable for this Fund.

Appendix V – Sustainable Finance Disclosure (Unaudited)

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product : Schroder ISF European Special Situations

Legal Entity Identifier : KV1VJCZ9TY7EN2E4WH87

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Did this financial product have a sustainable investment objective?

Yes
 No

<input type="checkbox"/> It made sustainable investments with an environmental objective: __%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 69% of sustainable investments
<input type="checkbox"/> In economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> With an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> In economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> With an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> With a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Appendix V – Sustainable Finance Disclosure (Unaudited)

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and/or social characteristics promoted by the Fund were met.

The Fund maintained a higher overall sustainability score than the MSCI Europe Net TR Index, based on the Investment Manager's rating system. This means that the Fund's weighted average score over a rolling six-month period up to the end of the reference period was higher than the benchmark's weighted average score over the same period, based on month-end data. This benchmark (which is a broad market index) is not a reference benchmark for the purposes of the environmental and social characteristics promoted by the Fund.

The sustainability score is measured by Schroders' proprietary tool that provides an estimate of the net "impact" that an issuer may create in terms of social and environmental "costs" or "benefits". It does this by using certain indicators with respect to that issuer, and quantifying them positively and negatively to produce an aggregate notional measure of the effect that the relevant underlying issuer may have on society and the environment. It does this using third party data as well as Schroders' own estimates and assumptions and the outcome may differ from other sustainability tools and measures. Examples of such indicators are greenhouse gas emissions, water usage, and salaries compared to the living wage.

The result is expressed as an aggregate score of the sustainability indicators for each issuer, specifically a notional percentage (positive or negative) of sales of the relevant underlying issuer. For example, a score of +2% would mean an issuer contributes \$2 of relative notional positive impact (i.e. benefits to society) per \$100 of sales. The sustainability score of the Fund is derived from the scores of all issuers in the Fund's portfolio measured by Schroders' proprietary tool.

The reference period for this Fund is 1 January 2022 to 31 December 2022.

The Fund also invested at least 25% of its assets in sustainable investments from when this commitment came into effect in August 2022 to the end of the reference period.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

• *How did the sustainability indicators perform?*

The Fund's sustainability score for the reference period was 2.0% and the benchmark's sustainability score for the reference period was -8.1%.

In each case the sustainability score is calculated as a notional percentage as described above.

As measured at the end of the reference period, the top 5 indicators in Schroders' proprietary tool that contributed positively to the sustainability score of the Fund were:

- Connectivity
- High Salaries
- Innovation
- Medicine

Appendix V – Sustainable Finance Disclosure (Unaudited)

- Training

The Investment Manager monitored compliance with the characteristic to maintain a higher overall sustainability score than the MSCI Europe Net TR Index by reference to the weighted average sustainability score of the Fund in Schroders' proprietary tool compared against the weighted average sustainability score of the MSCI Europe Net TR Index in Schroders' proprietary tool over a rolling six-month period up to the end of the reference period, based on month-end data. The overall sustainability score aggregates the effect of sustainability indicators including but not limited to greenhouse gas emissions, water usage, and salaries compared to the living wage.

The Investment Manager invested 69% of the Fund's assets in sustainable investments. This figure represents the average percentage of sustainable investments over the four months prior to the end of the reference period, based on month-end data.

The Investment Manager monitored compliance with the characteristic to invest at least 25% of its assets in sustainable investments by reference to the sustainability score of each asset in Schroders' proprietary tool. Compliance with this was monitored daily via our automated compliance controls.

The Fund also applied certain exclusions, with which the Investment Manager monitored compliance on an ongoing basis via its portfolio compliance framework.

• *...and compared to previous periods?*

As this is our first reporting period, this question is not applicable.

• *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

In respect of the proportion of the Fund's portfolio that was invested in sustainable investments, each sustainable investment demonstrated a net positive effect across a range of environmental or social objectives, as scored by Schroders' proprietary tool.

The objectives of the sustainable investments that the Fund made included, but were not limited to increasing benefits by way of the following:

- Connectivity: the estimated societal benefits from companies' that enable or support the connection of communities through telecommunication services;
- High Salaries: the estimated societal benefit of paying staff above local living wages (for regions in which they operate). Assigned in proportion to the surplus companies are paying employees compared to the average living wage;
- Innovation: the estimated societal benefits arising from the investment in Research and Development (R&D). Assigned based on the unitary benefit of R&D spend, or estimated based on company patent applications;
- Medicine: the estimated societal benefits arising from the additional social value the sale of such products and services exhibits of the wider economy. Assigned in proportion to the company's involvement in the healthcare value chain and proportion of company market share to global sub-sector revenue;

Appendix V – Sustainable Finance Disclosure (Unaudited)

- Training: the estimated societal benefit associated with a more highly skilled workforce, both to the company and society. Assigned based on company spending on employee training;

The above examples of the objectives of the sustainable investments that the Fund made are based on data as at the end of the reference period. Other objectives may have applied during the reference period.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

• How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Investment Manager's approach to not causing significant harm to any environmental or social sustainable investment objective included the following:

- Firm-wide exclusions applied to Schroders funds. These relate to international conventions on cluster munitions, anti-personnel mines, and chemical and biological weapons. A detailed list of all companies that are excluded is available at <https://www.schroders.com/en/sustainability/active-ownership/group-exclusions/>.

- Schroders became a signatory to the UN Global Compact (UNGC) principles on 6 January 2020. The Fund excluded companies in violation of the UNGC principles from the portion of the portfolio in sustainable investments, as Schroders considers violators cause significant harm to one or more environmental or social sustainable investment objectives. The areas determining whether an issuer is an UNGC violator include issues that are covered by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, such as human rights, bribery and corruption, labour rights, child labour, discrimination, health and safety, and collective bargaining. The list of UNGC violators is provided by a third party and compliance with the list was monitored via our automated compliance controls. Schroders applied certain exceptions to the list during the reference period.

- Firm-wide exclusions also applied to companies that derived revenues above certain thresholds from activities related to tobacco and thermal coal, especially tobacco production, tobacco value chain (suppliers, distributors, retailers, licensors), thermal coal mining and coal fired power generation.

- Further information on all of the Fund's exclusions is to be found under "Sustainability Related Disclosures" on the Fund's webpage, accessed via <https://www.schroders.com/en/lu/private-investor/gfc>.

How were the indicators for adverse impacts on sustainability factors taken into account?

Where the Investment Manager set levels in relation to the indicators for adverse impacts on sustainability factors, compliance with these thresholds was monitored on an ongoing basis via its portfolio compliance framework. Investee companies in breach of these levels were not eligible to be considered as a sustainable investment.

For example, the Fund excluded companies in violation of the UNGC principles (principal adverse impact (PAI) 10) from the portion of the portfolio in sustainable investments. The list of UNGC violators is provided by a third party and compliance with the list was monitored via our automated compliance controls. Schroders applied certain exceptions to the list during the reference period.

In addition the Fund excluded companies that were deemed to contribute significantly to climate change (related to PAIs 1, 2 and 3 covering GHG emissions). The thresholds that were applied were companies deriving >10% revenue from thermal coal mining and >30% revenue from coal power

Appendix V – Sustainable Finance Disclosure (Unaudited)

generation. The Fund may have applied stricter thresholds, as disclosed on the website. Compliance with these exclusions was monitored via our automated compliance controls.

In other areas Schroders set principles of engagement. We have aligned each of the PAIs to one of Schroders six core engagement themes. We summarise below the thresholds that apply and the engagement actions we have for each:

Climate Change

PAIs 1, 2, 3, 4, 5, 6 and 19 relate to the Engagement Blueprint theme of Climate Change. Details of our Engagement Blueprint can be found here: (Link <https://prod.schroders.com/en/sysglobalassets/about-us/schroders-engagement-blueprint-2022.pdf>). We engage to understand how companies are responding to the challenges climate change may pose to their long-term financial position. Through our engagement activity we seek to understand different areas, such as the speed and scale of emission reduction targets and steps being taken to meet climate goals.

Biodiversity and Natural Capital

PAIs 7, 8 and 9 align to the Engagement Blueprint theme of Biodiversity and Natural Capital. We recognise the importance of all companies assessing and reporting on their exposure to natural capital and biodiversity risk. We focus our engagement on improving disclosure around a number of themes such as deforestation and sustainable food and water.

Human Rights

PAIs 10 and 14 relate to the Engagement Blueprint theme of Human Rights. There is increasing pressure on the role that businesses can and should play to respect human rights. We understand the higher operational and financial risks, and the reputational risk that human rights controversies cause. Our engagement focuses on three core stakeholders: workers, communities and customers.

Human Capital Management

PAIs 11, 12 and 13 align to the Engagement Blueprint theme of Human Capital Management. We identify human capital management as a priority issue for engagement, noting that people in an organisation are a significant source of competitive advantage and that effective human capital management is essential to drive innovation and long-term value creation. We also recognise a number of links between high standards of human capital management and the achievement of the Sustainable Development Goals (SDGs). Our engagement activities address themes such as health and safety, corporate culture and investment into the workforce.

Diversity and Inclusion

PAIs 12 and 13 relate to the Engagement Blueprint theme of Diversity and Inclusion. Improving disclosure on board diversity and the gender pay gap are two of the priority objectives outlined in our Engagement Blueprint. We request that companies implement a policy that requires each board vacancy to consider at least one or more diverse candidates. Our engagement approach also addresses diversity of the executive management, the workforce and in the value chain.

Corporate Governance

Appendix V – Sustainable Finance Disclosure (Unaudited)

PAIs 20, 12 and 13 align to the Engagement Blueprint theme of Corporate Governance. We engage with companies to seek to ensure businesses act in the best interest of shareholders and other key stakeholders. We also recognise that, in most cases, in order to see progress and performance on other material Environmental, Social and Governance (ESG) issues, strong governance structures need to first be in place. We therefore engage on a number of corporate governance aspects such as executive remuneration, boards and management, and strategy.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The portion of the portfolio in sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

We used a list of UNGC violators as provided by a third party. Issuers on that list were not categorised as sustainable investments. The areas considered when determining whether an issuer is an UNGC violator included those covered by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, such as human rights, bribery and corruption, labour rights, child labour, discrimination, health and safety, and collective bargaining.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager’s approach to considering principal adverse impacts on sustainability factors involved classifying the indicators into three categories:

1. Set thresholds

For certain PAIs (e.g. PAI 10 on violations of UNGC principles), we set thresholds for considering an investment to be a sustainable investment. Investments in breach of these thresholds were not eligible to be held as sustainable investments. Compliance with these thresholds was monitored on an ongoing basis via the Investment Manager’s portfolio compliance framework.

2. Active ownership

During the reference period, the Investment Manager engaged in line with the approach and expectations set out in our Engagement Blueprint (Link <https://prod.schroders.com/en/sysglobalassets/about-us/schroders-engagement-blueprint-2022.pdf>)

Appendix V – Sustainable Finance Disclosure (Unaudited)

and as further described above. A summary of Schroders firm-wide engagement activity during the reference period, including the relevant engagement theme, is shown below:

Engagement Theme	# Issuers
Climate Change	738
Diversity and Inclusion	72
Governance and Oversight	3,096
Human Capital Management	130
Human Rights	121
Natural Capital and Biodiversity	95

3. Improve coverage

Some of the engagements identified in the table above involved discussions where the primary focus was to increase reporting on sustainability data. The purpose is to improve coverage of the PAIs, for example PAI 9 on hazardous waste ratio.

Our approach is subject to ongoing review, particularly as the availability, and quality, of PAI data evolves.

What were the top investments of this financial product?

During the reference period the top 15 investments were:

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **1 Jan 2022 to 31 Dec 2022**

Largest Investments	Sector	% Assets	Country
RELX PLC ORDINARY 14.4397P	Industrials	5.43	United Kingdom
NESTLE SA CHF0.10 (REGISTERED)	Consumer Staples	5.01	United States
ASML HOLDING NV EURO.09 (POST SPLIT)	Information Technology	4.98	Netherlands
DKSH HOLDING LIMITED CHF0.10	Industrials	4.13	Switzerland
INFINEON TECHNOLOGIES AG NPV	Information Technology	4.07	Germany
SCHNEIDER ELECTRIC SE EUR4	Industrials	3.81	United States
HEXAGON CLASS B	Information Technology	3.79	Sweden
SIEMENS HEALTHINEERS AG NPV REGS/144A	Health Care	3.72	Germany
DNB BANK NOK12.5	Financials	3.54	Norway
ESSILORLUXOTTICA SA EURO.18	Health Care	3.29	France
SIKA AG CHF0.01	Materials	3.24	Switzerland
LONZA AG CHF1(REGISTERED)	Health Care	3.20	Switzerland
EXPERIAN PLC ORDINARY USD0.10	Industrials	3.03	United Kingdom
PRYSMIAN SPA EURO.10	Industrials	3.03	Italy
GETINGE AB SERIES 'B' NPV	Health Care	2.65	Sweden

The list above represents the average of the Fund's holdings at each quarter end during the reference period.

The largest investments and % of assets referred to above are derived from the Schroders Investment Book of Record (IBoR) data source. The largest investments and % of assets detailed elsewhere in the Audited Annual Report are derived from the Accounting Book of Record (ABoR) maintained by the administrator. As a result of these differing data sources, there may be differences in the largest

Appendix V – Sustainable Finance Disclosure (Unaudited)

investments and % of assets due to the differing calculation methodologies of these alternative data sources.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

• *What was the asset allocation?*

The Fund's investments that were used to meet its environmental or social characteristics are summarised below.

#1 Aligned with E/S characteristics includes the Fund's assets that were used to attain the environmental or social characteristics, which is equal to 98%. The Fund maintained a higher overall sustainability score than the MSCI Europe Net TR Index and so the Fund's investments that were scored by Schroders' proprietary sustainability tool are included within #1 on the basis that they contributed to the Fund's sustainability score (whether such individual investment had a positive or a negative score). The percentage in #1 Aligned E/S characteristics represents the average of the last four months of the reference period, based on month-end data. Also included within #1 is the proportion of assets that were invested in sustainable investments, as indicated in #1A.

The sustainability score is measured by Schroders' proprietary tool that provides an estimate of the net "impact" that an issuer may create in terms of social and environmental "costs" or "benefits". It does this by using certain indicators with respect to that issuer, and quantifying them positively and negatively to produce an aggregate notional measure of the effect that the relevant underlying issuer may have on society and the environment. Examples of such indicators are greenhouse gas emissions, water usage, and salaries compared to the living wage.

The Fund invested 69% of its assets in sustainable investments. This percentage represents the average of the last four months of the reference period, based on month-end data. Within this, 25% was invested in sustainable investments with an environmental objective and 44% was invested in sustainable investments with a social objective. In respect of the proportion of the Fund's portfolio that was invested in sustainable investments, each sustainable investment demonstrated a net positive effect across a range of environmental or social objectives, as scored by Schroders' proprietary tool. A sustainable investment is classified as having an environmental or social objective depending on whether the relevant issuer has a higher score in Schroders' proprietary tool relative to its applicable peer group for its environmental indicators or its social indicators. In each case, indicators are comprised of both "costs" and "benefits".

#2 Other includes cash, which was treated as neutral for sustainability purposes. #2 also includes investments that were not scored by Schroders' proprietary sustainability tool and so did not contribute towards the Fund's sustainability score.

Appendix V – Sustainable Finance Disclosure (Unaudited)

#1 Aligned with E/S Characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments

The category **#1 Aligned with E/S Characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments
- The sub-category **#1B Other E/S Characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments

• In which economic sectors were the investments made?

During the reference period investments were made in the following economic sectors:

Sector	Sub-Sector	% Assets
Industrials	Capital Goods	24.02
Industrials	Commercial & Professional Services	13.57
Health Care	Health Care Equipment & Services	11.40
Health Care	Pharmaceuticals, Biotechnology & Life Sciences	7.80
Information Technology	Semiconductors & Semiconductor Equipment	13.29
Information Technology	Technology Hardware & Equipment	3.79
Materials	Materials	9.48
Consumer Discretionary	Automobiles & Components	3.18
Consumer Discretionary	Consumer Durables & Apparel	2.37
Consumer Staples	Food, Beverage & Tobacco	5.01
Financials	Banking	3.54
Cash	Cash	2.55

Appendix V – Sustainable Finance Disclosure (Unaudited)

The list above represents the average of the Fund's holdings at each quarter end during the reference period.

The % of assets and sector classifications aligned to economic sectors referred to above are derived from the Schroders Investment Book of Record (IBoR) data source. The % of assets and sector classifications aligned to economic sectors detailed elsewhere in the Audited Annual Report are derived from the Accounting Book of Record (ABoR) maintained by the administrator. As a result of these differing data sources, there may be differences in the % of assets and sector classifications aligned to economic sectors, due to the differing calculation methodologies and data availability of these alternative data sources.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

There was no extent to which the Fund's investments (including transitional and enabling activities) with an environmental objective were aligned with the Taxonomy. Taxonomy alignment of this Fund's investments has therefore not been calculated and has as a result been deemed to constitute 0% of the Fund's portfolio.

• Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Appendix V – Sustainable Finance Disclosure (Unaudited)

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

• **What was the share of investments made in transitional and enabling activities?**

As per the above, the share of investments by the Fund in transitional and enabling activities has been deemed to constitute 0% of the Fund's portfolio.

• **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

As this is our first reporting period, this question is not applicable.

Appendix V – Sustainable Finance Disclosure (Unaudited)

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund invested 25% of its assets in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy. This percentage is a proportion of the total percentage of sustainable investments, which is calculated as the average of the last four months of the reference period, based on month-end data.

What was the share of socially sustainable investments?

The Fund invested 44% of its assets in sustainable investments with a social objective. This percentage is a proportion of the total percentage of sustainable investments, which is calculated as the average of the last four months of the reference period, based on month-end data.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

#2 Other includes cash, which was treated as neutral for sustainability purposes. #2 also includes investments that were not scored by Schroders' proprietary sustainability tool and so did not contribute towards the Fund's sustainability score.

Minimum safeguards were applied where relevant to investments and derivatives by restricting (as appropriate) investments in counterparties where there were ownership links or exposure to higher risk countries (for the purpose of money laundering, terrorist financing, bribery, corruption, tax evasion and sanctions risks). A firm-wide risk assessment considers the risk rating of each jurisdiction; which includes reference to a number of public statements, indices and world governance indicators issued by the UN, the European Union, the UK Government, the Financial Action Task Force and several Non-Government Organisations (NGOs), such as Transparency International and the Basel Committee.

In addition, new counterparties were reviewed by Schroders' credit risk team and approval of a new counterparty was based on a holistic review of the various sources of information available, including, but not limited to, quality of management, ownership structure, location, regulatory and social environment to which each counterparty is subject, and the degree of development of the local banking system and its regulatory framework. Ongoing monitoring was performed through a Schroders' proprietary tool, which supports the analysis of a counterparty's management of environmental, social and governance trends and challenges.

Schroders' credit risk team monitored the counterparties and during the reference period a number of counterparties were removed from the approved list for all funds in line with our policy and compliance requirements. This meant that such counterparties were ineligible for use by the Fund in respect of any relevant investments from the date they were removed.

Appendix V – Sustainable Finance Disclosure (Unaudited)

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The actions taken during the reference period to meet the environmental and social characteristics promoted by the Fund were the following:

- The Investment Manager applied sustainability criteria when selecting investments for the Fund;
- The Investment Manager considered the sustainability score of the Fund and of individual investments when selecting the assets held by the Fund;
- The Investment Manager utilised a Schroders' proprietary tool to help assess good governance practices of investee companies; and
- The Investment Manager undertook engagements covering one or more of the six priority themes set out in our Engagement Blueprint (Link <https://prod.schroders.com/en/sysglobalassets/about-us/schroders-engagement-blueprint-2022.pdf>). A summary of Schroders engagement activity, including the number of issuers engaged with and the related theme, is shown above in the question 'How did this financial product consider principal adverse impacts on sustainability factors?'. Through our engagement activities, we build relationships and have a two-way dialogue with our investee companies. We aim to drive change that protects and enhances the value of our investments.

How did this financial product perform compared to the reference benchmark?

No index was designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

• *How did the reference benchmark differ from a broad market index?*

This question is not applicable for this Fund.

• *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

This question is not applicable for this Fund.

• *How did this financial product perform compared with the reference benchmark?*

This question is not applicable for this Fund.

• *How did this financial product perform compared with the broad market index?*

This question is not applicable for this Fund.

Appendix V – Sustainable Finance Disclosure (Unaudited)

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product : Schroder ISF Japanese Equity

Legal Entity Identifier : CJJRRIDG3Y95POYRD382

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Did this financial product have a sustainable investment objective?

Yes
 No

<input type="checkbox"/> It made sustainable investments with an environmental objective: __%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 58% of sustainable investments
<input type="checkbox"/> In economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> With an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> In economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> With an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> With a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Appendix V – Sustainable Finance Disclosure (Unaudited)

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and/or social characteristics promoted by the Fund were met.

The Fund maintained a higher overall sustainability score than the Tokyo Stock Exchange 1st Section Index (TOPIX) (Net TR), based on the Investment Manager's rating system. This means that the Fund's weighted average score over a rolling six month period up to the end of the reference period was higher than the benchmark's weighted average score over the same period, based on month-end data. This benchmark (which is a broad market index) is not a reference benchmark for the purposes of the environmental and social characteristics promoted by the Fund.

The sustainability score is measured by Schroders' proprietary tool that provides an estimate of the net "impact" that an issuer may create in terms of social and environmental "costs" or "benefits". It does this by using certain indicators with respect to that issuer, and quantifying them positively and negatively to produce an aggregate notional measure of the effect that the relevant underlying issuer may have on society and the environment. It does this using third party data as well as Schroders' own estimates and assumptions and the outcome may differ from other sustainability tools and measures. Examples of such indicators are greenhouse gas emissions, water usage, and salaries compared to the living wage.

The result is expressed as an aggregate score of the sustainability indicators for each issuer, specifically a notional percentage (positive or negative) of sales of the relevant underlying issuer. For example, a score of +2% would mean an issuer contributes \$2 of relative notional positive impact (i.e. benefits to society) per \$100 of sales. The sustainability score of the Fund is derived from the scores of all issuers in the Fund's portfolio measured by Schroders' proprietary tool.

The reference period for this Fund is 1 January 2022 to 31 December 2022.

The Fund also invested at least 25% of its assets in sustainable investments from when this commitment came into effect in August 2022 to the end of the reference period.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

• *How did the sustainability indicators perform?*

The Fund's sustainability score for the reference period was 1.2% and the benchmark's sustainability score for the reference period was -3.1%.

In each case the sustainability score is calculated as a notional percentage as described above.

As measured at the end of the reference period, the top 5 indicators in Schroders' proprietary tool that contributed positively to the sustainability score of the Fund were:

- Connectivity

Appendix V – Sustainable Finance Disclosure (Unaudited)

- Financial Inclusion
- High Salaries
- Medicine
- Water Access

The Investment Manager monitored compliance with the characteristic to maintain a higher overall sustainability score than the Tokyo Stock Exchange 1st Section Index (TOPIX) (Net TR) by reference to the weighted average sustainability score of the Fund in Schroders' proprietary tool compared against the weighted average sustainability score of the Tokyo Stock Exchange 1st Section Index (TOPIX) (Net TR) in Schroders' proprietary tool over a rolling six month period up to the end of the reference period, based on month-end data. The overall sustainability score aggregates the effect of sustainability indicators including but not limited to greenhouse gas emissions, water usage, and salaries compared to the living wage.

The Investment Manager invested 58% of the Fund's assets in sustainable investments. This figure represents the average percentage of sustainable investments over the four months prior to the end of the reference period, based on month-end data.

The Investment Manager monitored compliance with the characteristic to invest at least 25% of its assets in sustainable investments by reference to the sustainability score of each asset in Schroders' proprietary tool. Compliance with this was monitored daily via our automated compliance controls.

The Fund also applied certain exclusions, with which the Investment Manager monitored compliance on an ongoing basis via its portfolio compliance framework.

• *...and compared to previous periods?*

As this is our first reporting period, this question is not applicable.

• *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

In respect of the proportion of the Fund's portfolio that was invested in sustainable investments, each sustainable investment demonstrated a net positive effect across a range of environmental or social objectives, as scored by Schroders' proprietary tool.

The objectives of the sustainable investments that the Fund made included, but were not limited to increasing benefits by way of the following:

- Connectivity: the estimated societal benefits from companies' that enable or support the connection of communities through telecommunication services;
- Financial Inclusion: the estimated societal benefits from the provision of financial services on local populations. Assigned in proportion to company market share of global revenue;
- High Salaries: the estimated societal benefit of paying staff above local living wages (for regions in which they operate). Assigned in proportion to the surplus companies are paying employees compared to the average living wage;

Appendix V – Sustainable Finance Disclosure (Unaudited)

- Medicine: the estimated societal benefits arising from the additional social value the sale of such products and services exhibits of the wider economy. Assigned in proportion to the company's involvement in the healthcare value chain and proportion of company market share to global sub-sector revenue;

- Water Access: the estimated societal benefits associated with the benefits to human health from the provision of clean drinking water. Assigned in proportion to company market share of global revenue;

The above examples of the objectives of the sustainable investments that the Fund made are based on data as at the end of the reference period. Other objectives may have applied during the reference period.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

• ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

The Investment Manager's approach to not causing significant harm to any environmental or social sustainable investment objective included the following:

- Firm-wide exclusions applied to Schrodgers funds. These relate to international conventions on cluster munitions, anti-personnel mines, and chemical and biological weapons. A detailed list of all companies that are excluded is available at <https://www.schrodgers.com/en/sustainability/active-ownership/group-exclusions/>.

- Schrodgers became a signatory to the UN Global Compact (UNGC) principles on 6 January 2020. The Fund excluded companies in violation of the UNGC principles from the portion of the portfolio in sustainable investments, as Schrodgers considers violators cause significant harm to one or more environmental or social sustainable investment objectives. The areas determining whether an issuer is an UNGC violator include issues that are covered by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, such as human rights, bribery and corruption, labour rights, child labour, discrimination, health and safety, and collective bargaining. The list of UNGC violators is provided by a third party and compliance with the list was monitored via our automated compliance controls. Schrodgers applied certain exceptions to the list during the reference period.

- Firm-wide exclusions also applied to companies that derived revenues above certain thresholds from activities related to tobacco and thermal coal, especially tobacco production, tobacco value chain (suppliers, distributors, retailers, licensors), thermal coal mining and coal fired power generation.

- The Fund also applied certain other exclusions.

Appendix V – Sustainable Finance Disclosure (Unaudited)

- Further information on all of the Fund's exclusions is to be found under "Sustainability Related Disclosures" on the Fund's webpage, accessed via <https://www.schroders.com/en/lu/private-investor/gfc>.

How were the indicators for adverse impacts on sustainability factors taken into account?

Where the Investment Manager set levels in relation to the indicators for adverse impacts on sustainability factors, compliance with these thresholds was monitored on an ongoing basis via its portfolio compliance framework. Investee companies in breach of these levels were not eligible to be considered as a sustainable investment.

For example, the Fund excluded companies in violation of the UNGC principles (principal adverse impact (PAI) 10) from the portion of the portfolio in sustainable investments. The list of UNGC violators is provided by a third party and compliance with the list was monitored via our automated compliance controls. Schroders applied certain exceptions to the list during the reference period.

In addition the Fund excluded companies that were deemed to contribute significantly to climate change (related to PAIs 1, 2 and 3 covering GHG emissions). The thresholds that were applied were companies deriving >10% revenue from thermal coal mining and >30% revenue from coal power generation. The Fund may have applied stricter thresholds, as disclosed on the website. Compliance with these exclusions was monitored via our automated compliance controls.

In other areas Schroders set principles of engagement. We have aligned each of the PAIs to one of Schroders six core engagement themes. We summarise below the thresholds that apply and the engagement actions we have for each:

Climate Change

PAIs 1, 2, 3, 4, 5, 6 and 19 relate to the Engagement Blueprint theme of Climate Change. Details of our Engagement Blueprint can be found here: (Link <https://prod.schroders.com/en/sysglobalassets/about-us/schroders-engagement-blueprint-2022.pdf>). We engage to understand how companies are responding to the challenges climate change may pose to their long-term financial position. Through our engagement activity we seek to understand different areas, such as the speed and scale of emission reduction targets and steps being taken to meet climate goals.

Biodiversity and Natural Capital

PAIs 7, 8 and 9 align to the Engagement Blueprint theme of Biodiversity and Natural Capital. We recognise the importance of all companies assessing and reporting on their exposure to natural capital and biodiversity risk. We focus our engagement on improving disclosure around a number of themes such as deforestation and sustainable food and water.

Human Rights

PAIs 10 and 14 relate to the Engagement Blueprint theme of Human Rights. There is increasing pressure on the role that businesses can and should play to respect human rights. We understand the higher operational and financial risks, and the reputational risk that human rights controversies cause. Our engagement focuses on three core stakeholders: workers, communities and customers.

Human Capital Management

Appendix V – Sustainable Finance Disclosure (Unaudited)

PAIs 11, 12 and 13 align to the Engagement Blueprint theme of Human Capital Management. We identify human capital management as a priority issue for engagement, noting that people in an organisation are a significant source of competitive advantage and that effective human capital management is essential to drive innovation and long-term value creation. We also recognise a number of links between high standards of human capital management and the achievement of the Sustainable Development Goals (SDGs). Our engagement activities address themes such as health and safety, corporate culture and investment into the workforce.

Diversity and Inclusion

PAIs 12 and 13 relate to the Engagement Blueprint theme of Diversity and Inclusion. Improving disclosure on board diversity and the gender pay gap are two of the priority objectives outlined in our Engagement Blueprint. We request that companies implement a policy that requires each board vacancy to consider at least one or more diverse candidates. Our engagement approach also addresses diversity of the executive management, the workforce and in the value chain.

Corporate Governance

PAIs 20, 12 and 13 align to the Engagement Blueprint theme of Corporate Governance. We engage with companies to seek to ensure businesses act in the best interest of shareholders and other key stakeholders. We also recognise that, in most cases, in order to see progress and performance on other material Environmental, Social and Governance (ESG) issues, strong governance structures need to first be in place. We therefore engage on a number of corporate governance aspects such as executive remuneration, boards and management, and strategy.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The portion of the portfolio in sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

We used a list of UNGC violators as provided by a third party. Issuers on that list were not categorised as sustainable investments. The areas considered when determining whether an issuer is an UNGC violator included those covered by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, such as human rights, bribery and corruption, labour rights, child labour, discrimination, health and safety, and collective bargaining.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Appendix V – Sustainable Finance Disclosure (Unaudited)

The Investment Manager’s approach to considering principal adverse impacts on sustainability factors involved classifying the indicators into three categories:

1. Set thresholds

For certain PAIs (e.g. PAI 10 on violations of UNGC principles), we set thresholds for considering an investment to be a sustainable investment. Investments in breach of these thresholds were not eligible to be held as sustainable investments. Compliance with these thresholds was monitored on an ongoing basis via the Investment Manager’s portfolio compliance framework.

2. Active ownership

During the reference period, the Investment Manager engaged in line with the approach and expectations set out in our Engagement Blueprint (Link <https://prod.schroders.com/en/sysglobalassets/about-us/schroders-engagement-blueprint-2022.pdf>) and as further described above. A summary of Schroders firm-wide engagement activity during the reference period, including the relevant engagement theme, is shown below:

Engagement Theme	# Issuers
Climate Change	738
Diversity and Inclusion	72
Governance and Oversight	3,096
Human Capital Management	130
Human Rights	121
Natural Capital and Biodiversity	95

3. Improve coverage

Some of the engagements identified in the table above involved discussions where the primary focus was to increase reporting on sustainability data. The purpose is to improve coverage of the PAIs, for example PAI 9 on hazardous waste ratio.

Our approach is subject to ongoing review, particularly as the availability, and quality, of PAI data evolves.

What were the top investments of this financial product?

During the reference period the top 15 investments were:

Appendix V – Sustainable Finance Disclosure (Unaudited)

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: **1 Jan 2022 to 31 Dec 2022**

Largest Investments	Sector	% Assets	Country
mitsubishi UFJ FINANCIAL GROUP INCORPORATED NPV	Financials	4.76	Japan
NIPPON TELEGRAPH AND TELEPHONE CORPORATION NPV	Communication Services	4.74	Japan
SONY GROUP CORPORATION NPV	Consumer Discretionary	3.97	Japan
TOKIO MARINE HOLDINGS INCORPORATED NPV	Financials	3.48	Japan
KDDI CORPORATION NPV	Communication Services	3.05	Japan
ASTELLAS PHARMA INCORPORATED NPV	Health Care	2.77	Japan
MITSUI FUDOSAN COMPANY LIMITED NPV	Real Estate	2.73	Japan
KEYENCE CORPORATION NPV	Information Technology	2.64	Japan
DAIKIN INDUSTRIES LIMITED NPV	Industrials	2.63	Japan
ISUZU MOTORS LIMITED NPV	Consumer Discretionary	2.43	Japan
DAI-ICHI LIFE HOLDINGS INCORPORATED NPV	Financials	2.42	Japan
BRIDGESTONE CORPORATION NPV	Consumer Discretionary	2.40	Japan
ORIX CORPORATION NPV	Financials	2.35	Japan
MatsukiyoCocokara & Co NPV	Consumer Staples	2.27	Japan
TOYOTA INDUSTRIES CORPORATION JPY50	Industrials	2.18	Japan

The list above represents the average of the Fund's holdings at each quarter end during the reference period.

The largest investments and % of assets referred to above are derived from the Schroders Investment Book of Record (IBoR) data source. The largest investments and % of assets detailed elsewhere in the Audited Annual Report are derived from the Accounting Book of Record (ABoR) maintained by the administrator. As a result of these differing data sources, there may be differences in the largest investments and % of assets due to the differing calculation methodologies of these alternative data sources.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

• What was the asset allocation?

The Fund's investments that were used to meet its environmental or social characteristics are summarised below.

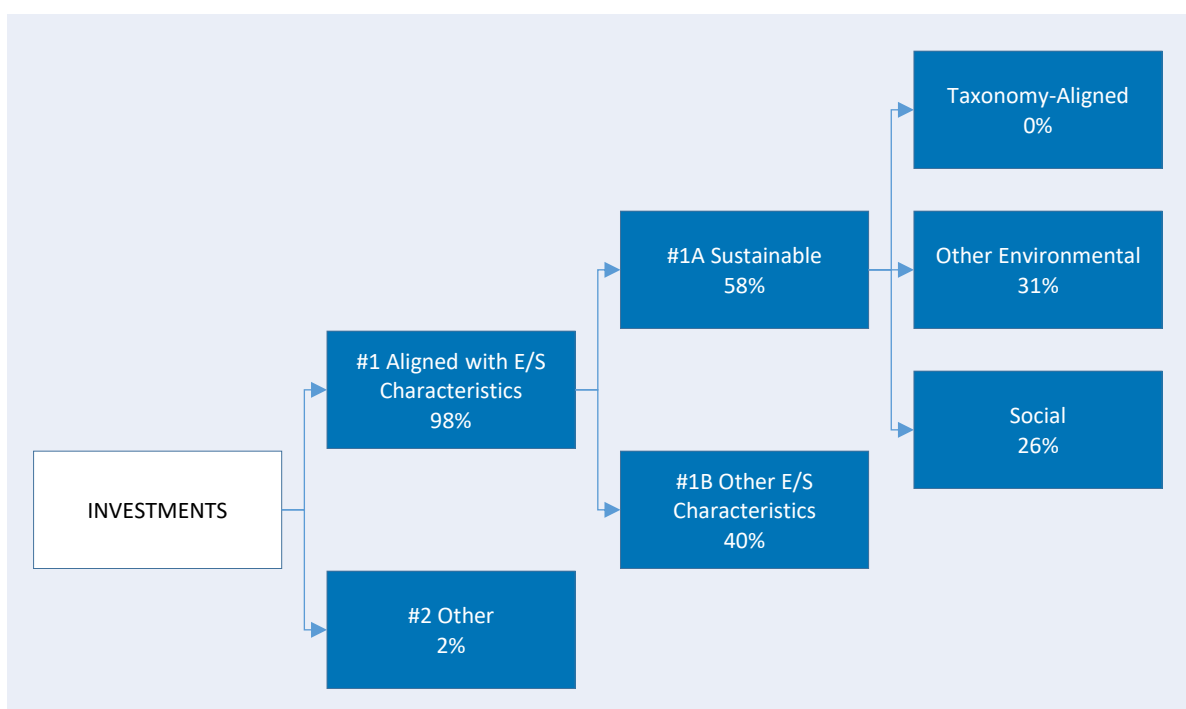

#1 Aligned with E/S characteristics includes the Fund's assets that were used to attain the environmental or social characteristics, which is equal to 98%. The Fund maintained a higher overall sustainability score than the Tokyo Stock Exchange 1st Section Index (TOPIX) (Net TR) and so the Fund's investments that were scored by Schroders' proprietary sustainability tool are included within #1 on the basis that they contributed to the Fund's sustainability score (whether such individual investment had a positive or a negative score). The percentage in #1 Aligned E/S characteristics represents the average of the last four months of the reference period, based on month-end data. Also included within #1 is the proportion of assets that were invested in sustainable investments, as indicated in #1A.

The sustainability score is measured by Schroders' proprietary tool that provides an estimate of the net "impact" that an issuer may create in terms of social and environmental "costs" or "benefits". It does this by using certain indicators with respect to that issuer, and quantifying them positively and negatively to produce an aggregate notional measure of the effect that the relevant underlying issuer may have on society and the environment. Examples of such indicators are greenhouse gas emissions, water usage, and salaries compared to the living wage.

Appendix V – Sustainable Finance Disclosure (Unaudited)

The Fund invested 58% of its assets in sustainable investments. This percentage represents the average of the last four months of the reference period, based on month-end data. Within this, 31% was invested in sustainable investments with an environmental objective and 26% was invested in sustainable investments with a social objective. The percentage of sustainable investments with an environmental objective and the percentage of sustainable investments with a social objective do not sum to the percentage of sustainable investments, due to rounding. In respect of the proportion of the Fund's portfolio that was invested in sustainable investments, each sustainable investment demonstrated a net positive effect across a range of environmental or social objectives, as scored by Schroders' proprietary tool. A sustainable investment is classified as having an environmental or social objective depending on whether the relevant issuer has a higher score in Schroders' proprietary tool relative to its applicable peer group for its environmental indicators or its social indicators. In each case, indicators are comprised of both "costs" and "benefits".

#2 Other includes cash, which was treated as neutral for sustainability purposes. #2 also includes investments that were not scored by Schroders' proprietary sustainability tool and so did not contribute towards the Fund's sustainability score.

#1 Aligned with E/S Characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments

The category **#1 Aligned with E/S Characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments
- The sub-category **#1B Other E/S Characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments

Appendix V – Sustainable Finance Disclosure (Unaudited)

• In which economic sectors were the investments made?

During the reference period investments were made in the following economic sectors:

Sector	Sub-Sector	% Assets
Consumer Discretionary	Automobiles & Components	11.26
Consumer Discretionary	Consumer Durables & Apparel	6.03
Consumer Discretionary	Retailing	1.87
Industrials	Capital Goods	13.72
Industrials	Transportation	2.53
Industrials	Commercial & Professional Services	1.77
Financials	Insurance	5.90
Financials	Banking	4.76
Financials	Diversified Financials	4.76
Information Technology	Software & Services	6.15
Information Technology	Technology Hardware & Equipment	5.65
Information Technology	Semiconductors & Semiconductor Equipment	3.21
Communication Services	Telecommunication Services	9.68
Communication Services	Media & Entertainment	2.19
Health Care	Pharmaceuticals, Biotechnology & Life Sciences	6.38
Health Care	Health Care Equipment & Services	2.64
Consumer Staples	Food & Staples Retailing	2.27
Consumer Staples	Food, Beverage & Tobacco	1.18
Consumer Staples	Household & Personal Products	0.08
Real Estate	Real Estate	3.37
Materials	Materials	3.36
Cash	Cash	1.14
Cash	Margin Cash	0.09

The list above represents the average of the Fund's holdings at each quarter end during the reference period.

The % of assets and sector classifications aligned to economic sectors referred to above are derived from the Schroders Investment Book of Record (IBoR) data source. The % of assets and sector classifications aligned to economic sectors detailed elsewhere in the Audited Annual Report are derived from the Accounting Book of Record (ABoR) maintained by the administrator. As a result of these differing data sources, there may be differences in the % of assets and sector classifications aligned to economic sectors, due to the differing calculation methodologies and data availability of these alternative data sources.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

There was no extent to which the Fund's investments (including transitional and enabling activities) with an environmental objective were aligned with the Taxonomy. Taxonomy alignment of this Fund's investments has therefore not been calculated and has as a result been deemed to constitute 0% of the Fund's portfolio.

Transitional

Appendix V – Sustainable Finance Disclosure (Unaudited)

activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

• Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

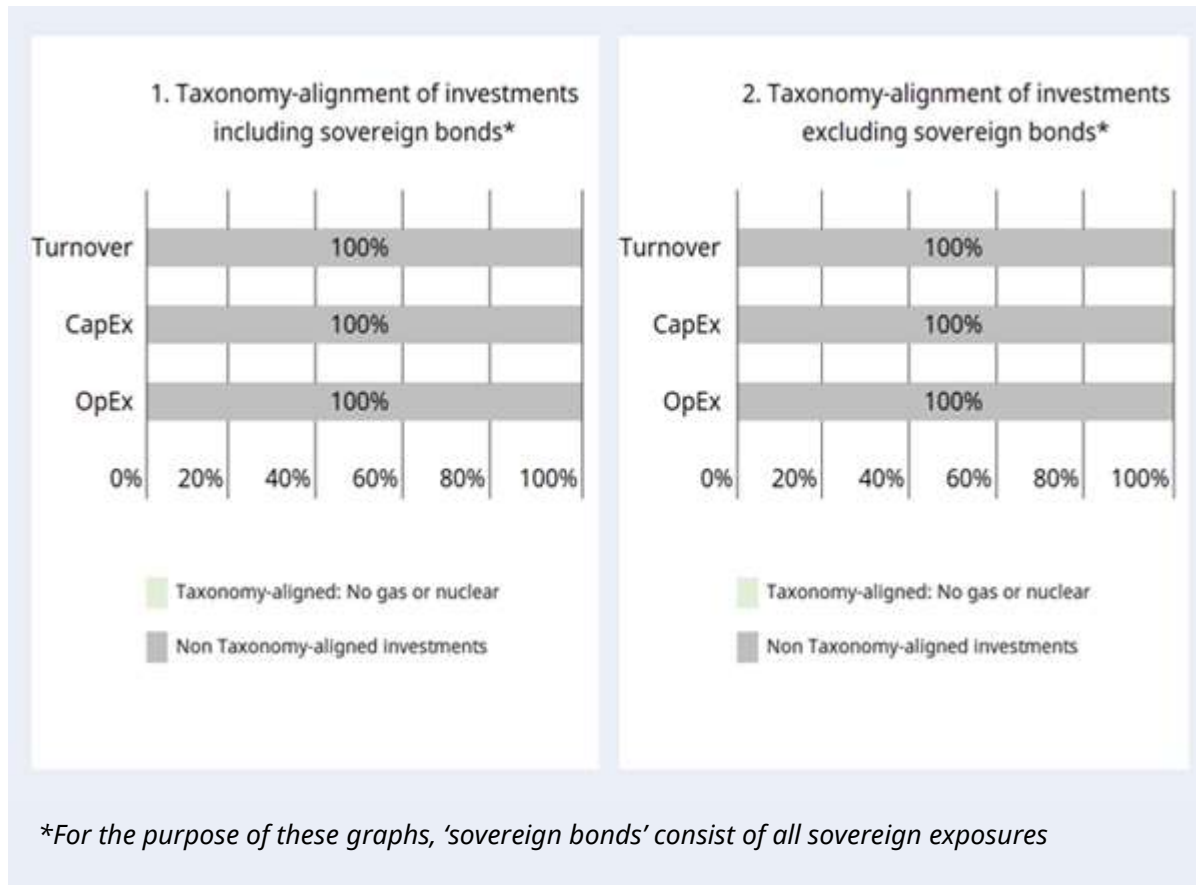

- **turnover** reflecting the share of revenue from green activities of investee companies

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

Appendix V – Sustainable Finance Disclosure (Unaudited)

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

• **What was the share of investments made in transitional and enabling activities?**

As per the above, the share of investments by the Fund in transitional and enabling activities has been deemed to constitute 0% of the Fund's portfolio.

• **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

As this is our first reporting period, this question is not applicable.

Appendix V – Sustainable Finance Disclosure (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund invested 31% of its assets in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy. This percentage is a proportion of the total percentage of sustainable investments, which is calculated as the average of the last four months of the reference period, based on month-end data.

What was the share of socially sustainable investments?

The Fund invested 26% of its assets in sustainable investments with a social objective. This percentage is a proportion of the total percentage of sustainable investments, which is calculated as the average of the last four months of the reference period, based on month-end data.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

#2 Other includes cash, which was treated as neutral for sustainability purposes. #2 also includes investments that were not scored by Schroders’ proprietary sustainability tool and so did not contribute towards the Fund’s sustainability score.

Minimum safeguards were applied where relevant to investments and derivatives by restricting (as appropriate) investments in counterparties where there were ownership links or exposure to higher risk countries (for the purpose of money laundering, terrorist financing, bribery, corruption, tax evasion and sanctions risks). A firm-wide risk assessment considers the risk rating of each jurisdiction; which includes reference to a number of public statements, indices and world governance indicators issued by the UN, the European Union, the UK Government, the Financial Action Task Force and several Non-Government Organisations (NGOs), such as Transparency International and the Basel Committee.

In addition, new counterparties were reviewed by Schroders’ credit risk team and approval of a new counterparty was based on a holistic review of the various sources of information available, including, but not limited to, quality of management, ownership structure, location, regulatory and social environment to which each counterparty is subject, and the degree of development of the local banking system and its regulatory framework. Ongoing monitoring was performed through a Schroders’ proprietary tool, which supports the analysis of a counterparty’s management of environmental, social and governance trends and challenges.

Schroders’ credit risk team monitored the counterparties and during the reference period a number of counterparties were removed from the approved list for all funds in line with our policy and compliance requirements. This meant that such counterparties were ineligible for use by the Fund in respect of any relevant investments from the date they were removed.

Appendix V – Sustainable Finance Disclosure (Unaudited)

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The actions taken during the reference period to meet the environmental and social characteristics promoted by the Fund were the following:

- The Investment Manager applied sustainability criteria when selecting investments for the Fund;
- The Investment Manager considered the sustainability score of the Fund [and of individual investments] when selecting the assets held by the Fund;
- The Investment Manager utilised a Schroders' proprietary tool to help assess good governance practices of investee companies; and
- The Investment Manager undertook engagements covering one or more of the six priority themes set out in our Engagement Blueprint (Link <https://prod.schroders.com/en/sysglobalassets/about-us/schroders-engagement-blueprint-2022.pdf>). A summary of Schroders engagement activity, including the number of issuers engaged with and the related theme, is shown above in the question 'How did this financial product consider principal adverse impacts on sustainability factors?'. Through our engagement activities, we build relationships and have a two-way dialogue with our investee companies. We aim to drive change that protects and enhances the value of our investments.

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

No index was designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the Fund.

• *How did the reference benchmark differ from a broad market index?*

This question is not applicable for this Fund.

• *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

This question is not applicable for this Fund.

• *How did this financial product perform compared with the reference benchmark?*

This question is not applicable for this Fund.

Appendix V – Sustainable Finance Disclosure (Unaudited)

- *How did this financial product perform compared with the broad market index?*

This question is not applicable for this Fund.

Appendix V – Sustainable Finance Disclosure (Unaudited)

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product : Schroder ISF QEP Global Quality

Legal Entity Identifier : AOE3GPC0XP7JH5DJTH02

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Did this financial product have a sustainable investment objective?	
●● <input type="checkbox"/> Yes	●● <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 57% of sustainable investments
<input type="checkbox"/> In economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> With an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> In economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> With an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> With a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Appendix V – Sustainable Finance Disclosure (Unaudited)

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and/or social characteristics promoted by the Fund were met.

The Fund maintained a higher overall sustainability score than the MSCI AC World (Net TR) Index, based on the Investment Manager's rating system. This means that the Fund's weighted average score over a rolling six-month period up to the end of the reference period was higher than the benchmark's weighted average score over the same period, based on month-end data. This benchmark (which is a broad market index) is not a reference benchmark for the purposes of the environmental and social characteristics promoted by the Fund.

The sustainability score is measured by Schroders' proprietary tool that provides an estimate of the net "impact" that an issuer may create in terms of social and environmental "costs" or "benefits". It does this by using certain indicators with respect to that issuer, and quantifying them positively and negatively to produce an aggregate notional measure of the effect that the relevant underlying issuer may have on society and the environment. It does this using third party data as well as Schroders' own estimates and assumptions and the outcome may differ from other sustainability tools and measures. Examples of such indicators are greenhouse gas emissions, water usage, and salaries compared to the living wage.

The result is expressed as an aggregate score of the sustainability indicators for each issuer, specifically a notional percentage (positive or negative) of sales of the relevant underlying issuer. For example, a score of +2% would mean an issuer contributes \$2 of relative notional positive impact (i.e. benefits to society) per \$100 of sales. The sustainability score of the Fund is derived from the scores of all issuers in the Fund's portfolio measured by Schroders' proprietary tool.

The reference period for this Fund is 1 January 2022 to 31 December 2022.

The Fund also invested at least 25% of its assets in sustainable investments from when this commitment came into effect in August 2022 to the end of the reference period.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

• *How did the sustainability indicators perform?*

The Fund's sustainability score for the reference period was -0.5% and the benchmark's sustainability score for the reference period was -4.6%.

In each case the sustainability score is calculated as a notional percentage as described above.

As measured at the end of the reference period, the top 5 indicators in Schroders' proprietary tool that contributed positively to the sustainability score of the Fund were:

- Connectivity
- Contraception
- High Salaries
- Medicine

Appendix V – Sustainable Finance Disclosure (Unaudited)

- Sanitation

The Investment Manager monitored compliance with the characteristic to maintain a higher overall sustainability score than the MSCI AC World (Net TR) Index by reference to the weighted average sustainability score of the Fund in Schroders' proprietary tool compared against the weighted average sustainability score of the MSCI AC World (Net TR) Index in Schroders' proprietary tool over a rolling six-month period up to the end of the reference period, based on month-end data. The overall sustainability score aggregates the effect of sustainability indicators including but not limited to greenhouse gas emissions, water usage, and salaries compared to the living wage.

The Investment Manager invested 57% of the Fund's assets in sustainable investments. This figure represents the average percentage of sustainable investments over the four months prior to the end of the reference period, based on month-end data.

The Investment Manager monitored compliance with the characteristic to invest at least 25% of its assets in sustainable investments by reference to the sustainability score of each asset in Schroders' proprietary tool. Compliance with this was monitored daily via our automated compliance controls.

The Fund also applied certain exclusions, with which the Investment Manager monitored compliance on an ongoing basis via its portfolio compliance framework.

• *...and compared to previous periods?*

As this is our first reporting period, this question is not applicable.

• *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

In respect of the proportion of the Fund's portfolio that was invested in sustainable investments, each sustainable investment demonstrated a net positive effect across a range of environmental or social objectives, as scored by Schroders' proprietary tool.

The objectives of the sustainable investments that the Fund made included, but were not limited to increasing benefits by way of the following:

- Connectivity: the estimated societal benefits from companies' that enable or support the connection of communities through telecommunication services;
- Contraception: the estimated societal benefits attained from the production and supply of contraceptives. Assigned in proportion to company market share of global revenue;
- High Salaries: the estimated societal benefit of paying staff above local living wages (for regions in which they operate). Assigned in proportion to the surplus companies are paying employees compared to the average living wage;
- Medicine: the estimated societal benefits arising from the additional social value the sale of such products and services exhibits of the wider economy. Assigned in proportion to the company's involvement in the healthcare value chain and proportion of company market share to global sub-sector revenue;
- Sanitation: the estimated societal benefits associated with the provisions of products and services that

Appendix V – Sustainable Finance Disclosure (Unaudited)

tackle poor sanitation, lack of safe water and hygiene. Assigned in proportion to company market share of global revenue;

The above examples of the objectives of the sustainable investments that the Fund made are based on data as at the end of the reference period. Other objectives may have applied during the reference period.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

• How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Investment Manager's approach to not causing significant harm to any environmental or social sustainable investment objective included the following:

- Firm-wide exclusions applied to Schroders funds. These relate to international conventions on cluster munitions, anti-personnel mines, and chemical and biological weapons. A detailed list of all companies that are excluded is available at <https://www.schroders.com/en/sustainability/active-ownership/group-exclusions/>.
- Schroders became a signatory to the UN Global Compact (UNGC) principles on 6 January 2020. The Fund excluded companies in violation of the UNGC principles from the portion of the portfolio in sustainable investments, as Schroders considers violators cause significant harm to one or more environmental or social sustainable investment objectives. The areas determining whether an issuer is an UNGC violator include issues that are covered by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, such as human rights, bribery and corruption, labour rights, child labour, discrimination, health and safety, and collective bargaining. The list of UNGC violators is provided by a third party and compliance with the list was monitored via our automated compliance controls. Schroders applied certain exceptions to the list during the reference period.
- Firm-wide exclusions also applied to companies that derived revenues above certain thresholds from activities related to tobacco and thermal coal, especially tobacco production, tobacco value chain (suppliers, distributors, retailers, licensors), thermal coal mining and coal fired power generation.
- The Fund also applied certain other exclusions.
- Further information on all of the Fund's exclusions is to be found under "Sustainability Related Disclosures" on the Fund's webpage, accessed via <https://www.schroders.com/en/lu/private-investor/gfc..>

How were the indicators for adverse impacts on sustainability factors taken into account?

Where the Investment Manager set levels in relation to the indicators for adverse impacts on sustainability factors, compliance with these thresholds was monitored on an ongoing basis via its portfolio compliance framework. Investee companies in breach of these levels were not eligible to be considered as a sustainable investment.

For example, the Fund excluded companies in violation of the UNGC principles (principal adverse impact (PAI) 10) from the portion of the portfolio in sustainable investments. The list of UNGC violators is provided by a third party and compliance with the list was monitored via our automated compliance controls. Schroders applied certain exceptions to the list during the reference period.

In addition, the Fund excluded companies that were deemed to contribute significantly to climate

Appendix V – Sustainable Finance Disclosure (Unaudited)

change (related to PAIs 1, 2 and 3 covering GHG emissions). The thresholds that were applied were companies deriving >10% revenue from thermal coal mining and >30% revenue from coal power generation. The Fund may have applied stricter thresholds, as disclosed on the website. Compliance with these exclusions was monitored via our automated compliance controls.

In other areas Schroders set principles of engagement. We have aligned each of the PAIs to one of Schroders six core engagement themes. We summarise below the thresholds that apply and the engagement actions we have for each:

Climate Change

PAIs 1, 2, 3, 4, 5, 6 and 19 relate to the Engagement Blueprint theme of Climate Change. Details of our Engagement Blueprint can be found here: (Link <https://prod.schroders.com/en/sysglobalassets/about-us/schroders-engagement-blueprint-2022.pdf>). We engage to understand how companies are responding to the challenges climate change may pose to their long-term financial position. Through our engagement activity we seek to understand different areas, such as the speed and scale of emission reduction targets and steps being taken to meet climate goals.

Biodiversity and Natural Capital

PAIs 7, 8 and 9 align to the Engagement Blueprint theme of Biodiversity and Natural Capital. We recognise the importance of all companies assessing and reporting on their exposure to natural capital and biodiversity risk. We focus our engagement on improving disclosure around a number of themes such as deforestation and sustainable food and water.

Human Rights

PAIs 10 and 14 relate to the Engagement Blueprint theme of Human Rights. There is increasing pressure on the role that businesses can and should play to respect human rights. We understand the higher operational and financial risks, and the reputational risk that human rights controversies cause. Our engagement focuses on three core stakeholders: workers, communities and customers.

Human Capital Management

PAIs 11, 12 and 13 align to the Engagement Blueprint theme of Human Capital Management. We identify human capital management as a priority issue for engagement, noting that people in an organisation are a significant source of competitive advantage and that effective human capital management is essential to drive innovation and long-term value creation. We also recognise a number of links between high standards of human capital management and the achievement of the Sustainable Development Goals (SDGs). Our engagement activities address themes such as health and safety, corporate culture and investment into the workforce.

Diversity and Inclusion

PAIs 12 and 13 relate to the Engagement Blueprint theme of Diversity and Inclusion. Improving disclosure on board diversity and the gender pay gap are two of the priority objectives outlined in our Engagement Blueprint. We request that companies implement a policy that requires each board vacancy to consider at least one or more diverse candidates. Our engagement approach also addresses diversity of the executive management, the workforce and in the value chain.

Corporate Governance

Appendix V – Sustainable Finance Disclosure (Unaudited)

PAIs 20, 12 and 13 align to the Engagement Blueprint theme of Corporate Governance. We engage with companies to seek to ensure businesses act in the best interest of shareholders and other key stakeholders. We also recognise that, in most cases, in order to see progress and performance on other material Environmental, Social and Governance (ESG) issues, strong governance structures need to first be in place. We therefore engage on a number of corporate governance aspects such as executive remuneration, boards and management, and strategy.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The portion of the portfolio in sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

We used a list of UNGC violators as provided by a third party. Issuers on that list were not categorised as sustainable investments. The areas considered when determining whether an issuer is an UNGC violator included those covered by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, such as human rights, bribery and corruption, labour rights, child labour, discrimination, health and safety, and collective bargaining.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager’s approach to considering principal adverse impacts on sustainability factors involved classifying the indicators into three categories:

1. Set thresholds

For certain PAIs (e.g. PAI 10 on violations of UNGC principles), we set thresholds for considering an investment to be a sustainable investment. Investments in breach of these thresholds were not eligible to be held as sustainable investments. Compliance with these thresholds was monitored on an ongoing basis via the Investment Manager’s portfolio compliance framework.

2. Active ownership

During the reference period, the Investment Manager engaged in line with the approach and expectations set out in our Engagement Blueprint (Link <https://prod.schroders.com/en/sysglobalassets/about-us/schroders-engagement-blueprint-2022.pdf>) and as further described above. A summary of Schroders firm-wide engagement activity during the

Appendix V – Sustainable Finance Disclosure (Unaudited)

reference period, including the relevant engagement theme, is shown below:

Engagement Theme	# Issuers
Climate Change	738
Diversity and Inclusion	72
Governance and Oversight	3,096
Human Capital Management	130
Human Rights	121
Natural Capital and Biodiversity	95

3. Improve coverage

Some of the engagements identified in the table above involved discussions where the primary focus was to increase reporting on sustainability data. The purpose is to improve coverage of the PAIs, for example PAI 9 on hazardous waste ratio.

Our approach is subject to ongoing review, particularly as the availability, and quality, of PAI data evolves.

What were the top investments of this financial product?

During the reference period the top 15 investments were:

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **1 Jan 2022 to 31 Dec 2022**

Largest Investments	Sector	% Assets	Country
EQUINOR ASA NOK2.50	Energy	0.97	Norway
MICROSOFT CORPORATION COMMON STOCK USD0.0000125	Information Technology	0.97	United States

JOHNSON AND JOHNSON COMMON STOCK USD1	Health Care	0.88	United States
TAIWAN SEMICONDUCTOR MANUFACTURING COMPANY LIMITED ADS	Information Technology	0.88	Taiwan

The list above represents the average of the Fund's holdings at each quarter end during the reference period.

The largest investments and % of assets referred to above are derived from the Schroders Investment Book of Record (IBoR) data source. The largest investments and % of assets detailed elsewhere in the Audited Annual Report are derived from the Accounting Book of Record (ABoR) maintained by the administrator. As a result of these differing data sources, there may be differences in the largest investments and % of assets due to the differing calculation methodologies of these alternative data

Appendix V – Sustainable Finance Disclosure (Unaudited)

sources.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

• *What was the asset allocation?*

The Fund's investments that were used to meet its environmental or social characteristics are summarised below.

#1 Aligned with E/S characteristics includes the Fund's assets that were used to attain the environmental or social characteristics, which is equal to 97%. The Fund maintained a higher overall sustainability score than the MSCI AC World (Net TR) Index and so the Fund's investments that were scored by Schroders' proprietary sustainability tool are included within #1 on the basis that they contributed to the Fund's sustainability score (whether such individual investment had a positive or a negative score). The percentage in #1 Aligned E/S characteristics represents the average of the last four months of the reference period, based on month-end data. Also included within #1 is the proportion of assets that were invested in sustainable investments, as indicated in #1A.

The sustainability score is measured by Schroders' proprietary tool that provides an estimate of the net "impact" that an issuer may create in terms of social and environmental "costs" or "benefits". It does this by using certain indicators with respect to that issuer, and quantifying them positively and negatively to produce an aggregate notional measure of the effect that the relevant underlying issuer may have on society and the environment. Examples of such indicators are greenhouse gas emissions, water usage, and salaries compared to the living wage.

The Fund invested 57% of its assets in sustainable investments. This percentage represents the average of the last four months of the reference period, based on month-end data. Within this, 33% was invested in sustainable investments with an environmental objective and 24% was invested in sustainable investments with a social objective. In respect of the proportion of the Fund's portfolio that was invested in sustainable investments, each sustainable investment demonstrated a net positive effect across a range of environmental or social objectives, as scored by Schroders' proprietary tool. A sustainable investment is classified as having an environmental or social objective depending on whether the relevant issuer has a higher score in Schroders' proprietary tool relative to its applicable peer group for its environmental indicators or its social indicators. In each case, indicators are comprised of both "costs" and "benefits".

#2 Other includes cash, which was treated as neutral for sustainability purposes. #2 also includes investments that were not scored by Schroders' proprietary sustainability tool and so did not contribute towards the Fund's sustainability score.

Appendix V – Sustainable Finance Disclosure (Unaudited)

#1 Aligned with E/S Characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments

The category **#1 Aligned with E/S Characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments
- The sub-category **#1B Other E/S Characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments

• In which economic sectors were the investments made?

During the reference period investments were made in the following economic sectors:

Sector	Sub-Sector	% Assets
Information Technology	Software & Services	11.66
Information Technology	Semiconductors & Semiconductor Equipment	4.35
Information Technology	Technology Hardware & Equipment	3.29
Health Care	Pharmaceuticals, Biotechnology & Life Sciences	14.32
Health Care	Health Care Equipment & Services	1.74
Financials	Diversified Financials	6.44
Financials	Banking	5.51
Financials	Insurance	1.96
Industrials	Capital Goods	7.47
Industrials	Commercial & Professional Services	3.31
Industrials	Transportation	2.43
Consumer Staples	Food, Beverage & Tobacco	5.53

Appendix V – Sustainable Finance Disclosure (Unaudited)

Consumer Staples	Household & Personal Products	3.87
Consumer Staples	Food & Staples Retailing	0.21
Communication Services	Telecommunication Services	4.59
Communication Services	Media & Entertainment	3.32
Consumer Discretionary	Retailing	3.14
Consumer Discretionary	Consumer Durables & Apparel	2.31
Consumer Discretionary	Consumer Services	1.65
Consumer Discretionary	Automobiles & Components	0.66
Energy	Energy	4.33
Materials	Materials	3.37
Cash	Cash	2.62
Cash	Margin Cash	0.07
Utilities	Utilities	1.56
Real Estate	Real Estate	0.25
Derivatives	FX Derivatives	0.05

The list above represents the average of the Fund's holdings at each quarter end during the reference period.

The % of assets and sector classifications aligned to economic sectors referred to above are derived from the Schroders Investment Book of Record (IBoR) data source. The % of assets and sector classifications aligned to economic sectors detailed elsewhere in the Audited Annual Report are derived from the Accounting Book of Record (ABoR) maintained by the administrator. As a result of these differing data sources, there may be differences in the % of assets and sector classifications aligned to economic sectors, due to the differing calculation methodologies and data availability of these alternative data sources.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

There was no extent to which the Fund's investments (including transitional and enabling activities) with an environmental objective were aligned with the Taxonomy. Taxonomy alignment of this Fund's investments has therefore not been calculated and has as a result been deemed to constitute 0% of the Fund's portfolio.

Appendix V – Sustainable Finance Disclosure (Unaudited)

• **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

- Yes:
- In fossil gas In nuclear energy
- No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do no significant harm to any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

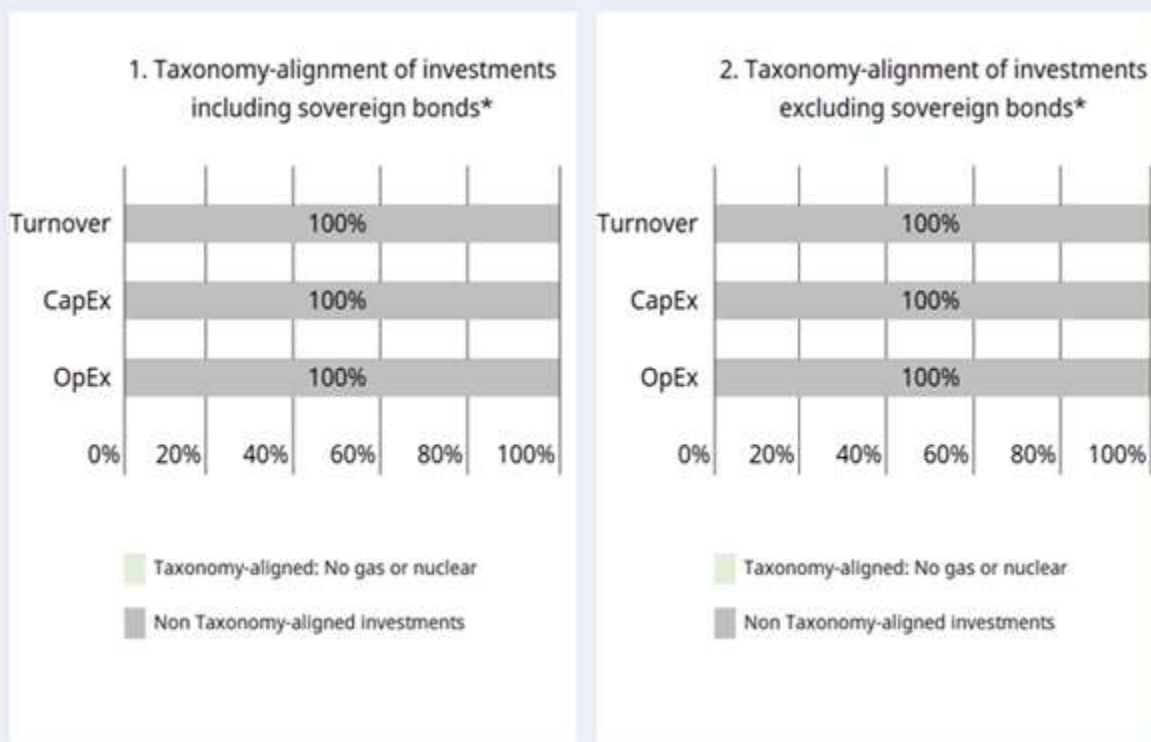

Taxonomy-aligned activities are expressed as a share of:

- **turnover**
reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

Appendix V – Sustainable Finance Disclosure (Unaudited)

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

• **What was the share of investments made in transitional and enabling activities?**

As per the above, the share of investments by the Fund in transitional and enabling activities has been deemed to constitute 0% of the Fund's portfolio.

• **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

As this is our first reporting period, this question is not applicable.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU_2020/852.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund invested 33% of its assets in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy. This percentage is a proportion of the total percentage of sustainable investments, which is calculated as the average of the last four months of the reference period, based on month-end data.

What was the share of socially sustainable investments?

The Fund invested 24% of its assets in sustainable investments with a social objective. This percentage is a proportion of the total percentage of sustainable investments, which is calculated as the average of the last four months of the reference period, based on month-end data.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

#2 Other includes cash, which was treated as neutral for sustainability purposes. #2 also includes investments that were not scored by Schroders' proprietary sustainability tool and so did not contribute towards the Fund's sustainability score.

Minimum safeguards were applied where relevant to investments and derivatives by restricting (as appropriate) investments in counterparties where there were ownership links or exposure to higher risk countries (for the purpose of money laundering, terrorist financing, bribery, corruption, tax evasion and sanctions risks). A firm-wide risk assessment considers the risk rating of each jurisdiction; which includes reference to a number of public statements, indices and world governance indicators issued by the UN, the European Union, the UK Government, the Financial Action Task Force and several Non-

Appendix V – Sustainable Finance Disclosure (Unaudited)

Government Organisations (NGOs), such as Transparency International and the Basel Committee.

In addition, new counterparties were reviewed by Schroders' credit risk team and approval of a new counterparty was based on a holistic review of the various sources of information available, including, but not limited to, quality of management, ownership structure, location, regulatory and social environment to which each counterparty is subject, and the degree of development of the local banking system and its regulatory framework. Ongoing monitoring was performed through a Schroders' proprietary tool, which supports the analysis of a counterparty's management of environmental, social and governance trends and challenges.

Schroders' credit risk team monitored the counterparties and during the reference period a number of counterparties were removed from the approved list for all funds in line with our policy and compliance requirements. This meant that such counterparties were ineligible for use by the Fund in respect of any relevant investments from the date they were removed.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The actions taken during the reference period to meet the environmental and social characteristics promoted by the Fund were the following:

- The Investment Manager applied sustainability criteria when selecting investments for the Fund;
- The Investment Manager considered the sustainability score of the Fund and of individual investments when selecting the assets held by the Fund;
- The Investment Manager applied a Schroders' proprietary governance assessment within the quantitative investment process to assess good governance practices of investee companies in the investment universe; and
- The Investment Manager undertook engagements covering one or more of the six priority themes set out in our Engagement Blueprint (Link <https://prod.schroders.com/en/sysglobalassets/about-us/schroders-engagement-blueprint-2022.pdf>). A summary of Schroders engagement activity, including the number of issuers engaged with and the related theme, is shown above in the question 'How did this financial product consider principal adverse impacts on sustainability factors?'. Through our engagement activities, we build relationships and have a two-way dialogue with our investee companies. We aim to drive change that protects and enhances the value of our investments.

How did this financial product perform compared to the reference benchmark?

No index was designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Appendix V – Sustainable Finance Disclosure (Unaudited)

• How did the reference benchmark differ from a broad market index?

This question is not applicable for this Fund.

• How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

This question is not applicable for this Fund.

• How did this financial product perform compared with the reference benchmark?

This question is not applicable for this Fund.

• How did this financial product perform compared with the broad market index?

This question is not applicable for this Fund.

Appendix V – Sustainable Finance Disclosure (Unaudited)

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product : Schroder ISF US Dollar Bond
Legal Entity Identifier : GB3IPB54OX2RMO1Y4781

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input type="checkbox"/> Yes	<input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 62% of sustainable investments
<input type="checkbox"/> In economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> With an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> In economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> With an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> With a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Appendix V – Sustainable Finance Disclosure (Unaudited)

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and/or social characteristics promoted by the Fund were met.

The Fund maintained a higher overall sustainability score than the Bloomberg US Aggregate Bond (TR) Index, based on the Investment Manager's rating system. This means that the Fund's weighted average score over a rolling six month period up to the end of the reference period was higher than the benchmark's weighted average score over the same period, based on month-end data. This benchmark (which is a broad market index) is not a reference benchmark for the purposes of the environmental and social characteristics promoted by the Fund.

The sustainability score is measured by Schroders' proprietary tool that provides an estimate of the net "impact" that an issuer may create in terms of social and environmental "costs" or "benefits". It does this by using certain indicators with respect to that issuer, and quantifying them positively and negatively to produce an aggregate notional measure of the effect that the relevant underlying issuer may have on society and the environment. It does this using third party data as well as Schroders own estimates and assumptions and the outcome may differ from other sustainability tools and measures. Examples of such indicators are greenhouse gas emissions, water usage, and salaries compared to the living wage.

The result is expressed as an aggregate score of the sustainability indicators for each issuer, specifically a notional percentage (positive or negative) of sales or GDP of the relevant underlying issuer. For example, a score of +2% would mean an issuer contributes \$2 of relative notional positive impact (i.e. benefits to society) per \$100 of sales or GDP. The sustainability score of the Fund is derived from the scores of all issuers in the Fund's portfolio measured by Schroders' proprietary tool.

The reference period for this Fund is 1 January, 2022 to 31 December, 2022.

The Fund also invested at least 10% of its assets in sustainable investments from when this commitment came into effect in August 2022 to the end of the reference period.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

• *How did the sustainability indicators perform?*

The Fund's sustainability score for the reference period was 3.6% and the benchmark's sustainability score for the reference period was -2.3%.

In each case the sustainability score is calculated as a notional percentage as described above.

As measured at the end of the reference period, the top 5 indicators in Schroders' proprietary tool that contributed positively to the sustainability score of the Fund were:

- Connectivity
- Education
- Power Provision
- Sanitation

Appendix V – Sustainable Finance Disclosure (Unaudited)

- Water Access

The Investment Manager monitored compliance with the characteristic to maintain a higher overall sustainability score than the Bloomberg US Aggregate Bond (TR) Index by reference to the weighted average sustainability score of the Fund in Schroders' proprietary tool compared against the weighted average sustainability score of the Bloomberg US Aggregate Bond (TR) Index in Schroders' proprietary tool over a rolling six month period up to the end of the reference period, based on month-end data. The overall sustainability score aggregates the effect of sustainability indicators including but not limited to greenhouse gas emissions, water usage, and salaries compared to the living wage.

The Investment Manager invested 62% of the Fund's assets in sustainable investments. This figure represents the average percentage of sustainable investments over the four months prior to the end of the reference period, based on month-end data.

The Investment Manager monitored compliance with the characteristic to invest at least 10% of its assets in sustainable investments by reference to the sustainability score of each asset in Schroders' proprietary tool. Compliance with this was monitored daily via our automated compliance controls.

The Fund also applied certain exclusions, with which the Investment Manager monitored compliance on an ongoing basis via its portfolio compliance framework.

• *...and compared to previous periods?*

As this is our first reporting period, this question is not applicable.

• *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

In respect of the proportion of the Fund's portfolio that was invested in sustainable investments, each sustainable investment demonstrated a net positive effect across a range of environmental or social objectives, as scored by Schroders' proprietary tool.

The objectives of the sustainable investments that the Fund made included, but were not limited to increasing benefits by way of the following:

- Connectivity: the estimated societal benefits from companies' that enable or support the connection of communities through telecommunication services;
- Education: the estimated societal benefits of a country's education spend per school age capita;
- Power Provision: the estimated societal benefits of access to power and electricity. Assigned in proportion to a company's share of power provision revenues;
- Sanitation: the estimated societal benefits associated with the provisions of products and services that tackle poor sanitation, lack of safe water and hygiene. Assigned in proportion to company market share of global revenue;
- Water Access: the estimated societal benefits associated with the benefits to human health from the provision of clean drinking water. Assigned in proportion to company market share of global revenue;

The above examples of the objectives of the sustainable investments that the Fund made are based on data as at the end of the reference period. Other objectives may have applied during the reference

Appendix V – Sustainable Finance Disclosure (Unaudited)

period.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

• How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Investment Manager's approach to not causing significant harm to any environmental or social sustainable investment objective included the following:

- Firm-wide exclusions applied to Schroders funds. These relate to international conventions on cluster munitions, anti-personnel mines, and chemical and biological weapons. A detailed list of all companies that are excluded is available at <https://www.schroders.com/en/sustainability/active-ownership/group-exclusions/>.
- Schroders became a signatory to the UN Global Compact (UNGC) principles on 6 January 2020. The Fund excluded companies in violation of the UNGC principles from the portion of the portfolio in sustainable investments, as Schroders considers violators cause significant harm to one or more environmental or social sustainable investment objectives. The areas determining whether an issuer is an UNGC violator include issues that are covered by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, such as human rights, bribery and corruption, labour rights, child labour, discrimination, health and safety, and collective bargaining. The list of UNGC violators is provided by a third party and compliance with the list was monitored via our automated compliance controls. Schroders applied certain exceptions to the list during the reference period.
- Firm-wide exclusions also applied to companies that derived revenues above certain thresholds from activities related to tobacco and thermal coal, especially tobacco production, tobacco value chain (suppliers, distributors, retailers, licensors), thermal coal mining and coal fired power generation.
- The Fund also applied certain other exclusions.
- Further information on all of the Fund's exclusions is to be found under "Sustainability Related Disclosures" on the Fund's webpage, accessed via <https://www.schroders.com/en/lu/private-investor/gfc>.

How were the indicators for adverse impacts on sustainability factors taken into account?

Where the Investment Manager set levels in relation to the indicators for adverse impacts on sustainability factors, compliance with these thresholds was monitored on an ongoing basis via its portfolio compliance framework. Investee companies in breach of these levels were not eligible to be considered as a sustainable investment.

For example, the Fund excluded companies in violation of the UNGC principles (principal adverse impact (PAI) 10) from the portion of the portfolio in sustainable investments. The list of UNGC violators is provided by a third party and compliance with the list was monitored via our automated compliance controls. Schroders applied certain exceptions to the list during the reference period.

In addition the Fund excluded companies that were deemed to contribute significantly to climate change (related to PAIs 1, 2 and 3 covering GHG emissions). The thresholds that were applied were companies deriving >10% revenue from thermal coal mining and >30% revenue from coal power generation. The Fund may have applied stricter thresholds, as disclosed on the website. Compliance with these exclusions was monitored via our automated compliance controls.

Appendix V – Sustainable Finance Disclosure (Unaudited)

In other areas Schroders set principles of engagement. We have aligned each of the PAIs to one of Schroders six core engagement themes. We summarise below the thresholds that apply and the engagement actions we have for each:

Climate Change

PAIs 1, 2, 3, 4, 5, 6 and 19 relate to the Engagement Blueprint theme of Climate Change. Details of our Engagement Blueprint can be found here: (Link <https://prod.schroders.com/en/sysglobalassets/about-us/schroders-engagement-blueprint-2022.pdf>). We engage to understand how companies are responding to the challenges climate change may pose to their long-term financial position. Through our engagement activity we seek to understand different areas, such as the speed and scale of emission reduction targets and steps being taken to meet climate goals.

Biodiversity and Natural Capital

PAIs 7, 8 and 9 align to the Engagement Blueprint theme of Biodiversity and Natural Capital. We recognise the importance of all companies assessing and reporting on their exposure to natural capital and biodiversity risk. We focus our engagement on improving disclosure around a number of themes such as deforestation and sustainable food and water.

Human Rights

PAIs 10 and 14 relate to the Engagement Blueprint theme of Human Rights. There is increasing pressure on the role that businesses can and should play to respect human rights. We understand the higher operational and financial risks, and the reputational risk that human rights controversies cause. Our engagement focuses on three core stakeholders: workers, communities and customers.

Human Capital Management

PAIs 11, 12 and 13 align to the Engagement Blueprint theme of Human Capital Management. We identify human capital management as a priority issue for engagement, noting that people in an organisation are a significant source of competitive advantage and that effective human capital management is essential to drive innovation and long-term value creation. We also recognise a number of links between high standards of human capital management and the achievement of the Sustainable Development Goals (SDGs). Our engagement activities address themes such as health and safety, corporate culture and investment into the workforce.

Diversity and Inclusion

PAIs 12 and 13 relate to the Engagement Blueprint theme of Diversity and Inclusion. Improving disclosure on board diversity and the gender pay gap are two of the priority objectives outlined in our Engagement Blueprint. We request that companies implement a policy that requires each board vacancy to consider at least one or more diverse candidates. Our engagement approach also addresses diversity of the executive management, the workforce and in the value chain.

Corporate Governance

PAIs 20, 12 and 13 align to the Engagement Blueprint theme of Corporate Governance. We engage with companies to seek to ensure businesses act in the best interest of shareholders and other key stakeholders. We also recognise that, in most cases, in order to see progress and performance on other material Environmental, Social and Governance (ESG) issues, strong governance structures

Appendix V – Sustainable Finance Disclosure (Unaudited)

need to first be in place. We therefore engage on a number of corporate governance aspects such as executive remuneration, boards and management, and strategy.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The portion of the portfolio in sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

We used a list of UNGC violators as provided by a third party. Issuers on that list were not categorised as sustainable investments. The areas considered when determining whether an issuer is an UNGC violator included those covered by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, such as human rights, bribery and corruption, labour rights, child labour, discrimination, health and safety, and collective bargaining.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager’s approach to considering principal adverse impacts on sustainability factors involved classifying the indicators into three categories:

1. Set thresholds

For certain PAIs (e.g. PAI 10 on violations of UNGC principles), we set thresholds for considering an investment to be a sustainable investment. Investments in breach of these thresholds were not eligible to be held as sustainable investments. Compliance with these thresholds was monitored on an ongoing basis via the Investment Manager’s portfolio compliance framework.

2. Active ownership

During the reference period, the Investment Manager engaged in line with the approach and expectations set out in our Engagement Blueprint (Link <https://prod.schroders.com/en/sysglobalassets/about-us/schroders-engagement-blueprint-2022.pdf>) and as further described above. A summary of Schroders firm-wide engagement activity, during the reference period, including the relevant engagement theme, is shown below:

Engagement Theme	# Issuers
Climate Change	738

Appendix V – Sustainable Finance Disclosure (Unaudited)

Diversity and Inclusion	72
Governance and Oversight	3,096
Human Capital Management	130
Human Rights	121
Natural Capital and Biodiversity	95

3. Improve coverage

Some of the engagements identified in the table above involved discussions where the primary focus was to increase reporting on sustainability data. The purpose is to improve coverage of the PAIs, for example PAI 9 on hazardous waste ratio.

Our approach is subject to ongoing review, particularly as the availability, and quality, of PAI data evolves.

What were the top investments of this financial product?

During the reference period the top 15 investments were:

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **1 Jan 2022 to 31 Dec 2022**

Largest Investments	Sector	% Assets	Country
SISF SECURITISED CREDIT I ACCUMULATION	Collective Investments	6.18	Luxembourg
TREASURY NOTE SR GOVT 3.25% 31 Aug 2024	Sovereign (Developed)	2.56	United States
US TREASURY BOND 3% 15 Aug 2052	Sovereign (Developed)	2.00	United States

GLM 2017-2A AR 5.1526% 20 Nov 2030	Securitized	1.16	United States

The list above represents the average of the Fund's holdings at each quarter end during the reference period.

The largest investments and % of assets referred to above are derived from the Schroders Investment Book of Record (IBoR) data source. The largest investments and % of assets detailed elsewhere in the Audited Annual Report are derived from the Accounting Book of Record (ABoR) maintained by the administrator. As a result of these differing data sources, there may be differences in the largest investments and % of assets due to the differing calculation methodologies of these alternative data sources.

Appendix V – Sustainable Finance Disclosure (Unaudited)

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

• *What was the asset allocation?*

The Fund's investments that were used to meet its environmental or social characteristics are summarised below.

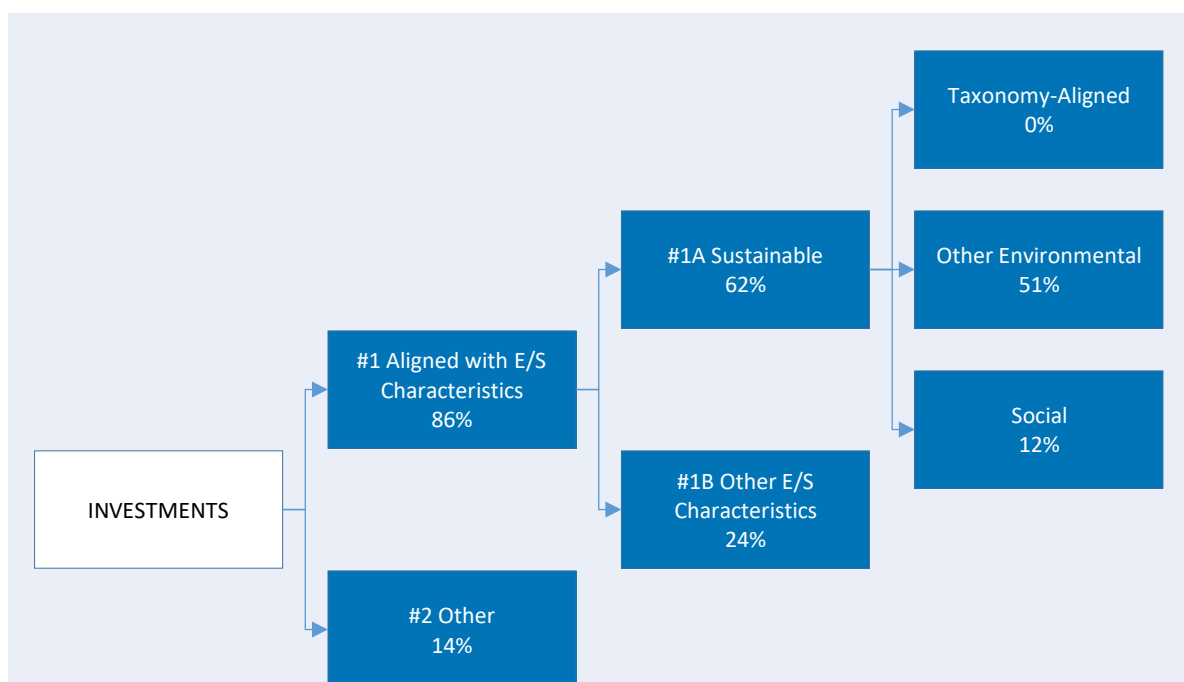

#1 Aligned with E/S characteristics includes the Fund's assets that were used to attain the environmental or social characteristics, which is equal to 86%. The Fund maintained a higher overall sustainability score than the Bloomberg US Aggregate Bond (TR) Index and so the Fund's investments that were scored by Schroders' proprietary sustainability tool are included within #1 on the basis that they contributed to the Fund's sustainability score (whether such individual investment had a positive or a negative score). The percentage in #1 Aligned E/S characteristics represents the average of the last four months of the reference period, based on month-end data. Also included within #1 is the proportion of assets that were invested in sustainable investments, as indicated in #1A.

The sustainability score is measured by Schroders' proprietary tool that provides an estimate of the net "impact" that an issuer may create in terms of social and environmental "costs" or "benefits". It does this by using certain indicators with respect to that issuer, and quantifying them positively and negatively to produce an aggregate notional measure of the effect that the relevant underlying issuer may have on society and the environment. Examples of such indicators are greenhouse gas emissions, water usage, and salaries compared to the living wage.

The Fund invested 62% of its assets in sustainable investments. This percentage represents the average of the last four months of the reference period, based on month-end data. Within this, 51% was invested in sustainable investments with an environmental objective and 12% was invested in sustainable investments with a social objective. The percentage of sustainable investments with an environmental objective and the percentage of sustainable investments with a social objective do not sum to the percentage of sustainable investments, due to rounding. In respect of the proportion of the Fund's portfolio that was invested in sustainable investments, each sustainable investment demonstrated a net positive effect across a range of environmental or social objectives, as scored by Schroders' proprietary tool. With the exception of any green or social bonds, which will be classified as having an environmental and social objective respectively, a sustainable investment is classified as having an environmental or social objective depending on whether the relevant issuer has a higher score in Schroders' proprietary tool relative to its applicable peer group for its environmental indicators or its social indicators. In each case, indicators are comprised of both "costs" and "benefits".

#2 Other includes cash, which was treated as neutral for sustainability purposes. #2 also includes investments that were not scored by Schroders' proprietary sustainability tool and so did not contribute towards the Fund's sustainability score.

Appendix V – Sustainable Finance Disclosure (Unaudited)

#1 Aligned with E/S Characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments

The category **#1 Aligned with E/S Characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments
- The sub-category **#1B Other E/S Characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments

• In which economic sectors were the investments made?

During the reference period investments were made in the following economic sectors:

Sector	Sub-Sector	% Assets
Industrials	Telecommunications	4.10
Industrials	Real Estate	3.53
Industrials	Automotive	3.45
Industrials	Basic Industry	2.71
Industrials	Technology & Electronics	2.48
Industrials	Media & Entertainment	2.40
Industrials	Energy	1.83
Industrials	Healthcare	1.55
Industrials	Leisure	1.02
Industrials	Consumer Goods	0.81
Industrials	Capital Goods	0.59
Industrials	Services	0.43

Appendix V – Sustainable Finance Disclosure (Unaudited)

Industrials	Retail	0.25
Industrials	Transportation	0.10
Financials	Banking	18.54
Financials	Financial Services	4.82
Financials	Insurance	0.83
Sovereign (Developed)		20.61
Securitized	Mortgage Backed	10.87
Securitized	Asset Backed	2.53
Securitized	Collateralized Mortgage Obligation	0.15
Collective Investments	Unit Trusts	6.18
Utilities	Electric - Integrated	1.86
Utilities	Non-Electric Utilities	1.72
Utilities	Electric - Generation	0.19
Utilities	Electric - Distr/Trans	0.05
Foreign Sovereign		2.29
U.S. Taxable Municipal		1.38
Cash	Margin Cash	0.56
Cash	Cash	0.51
Local Authority	Local Authority	0.72
Local Authority		0.04
EMD Sovereign		0.47
Cash Equivalents	Treasury Bills	0.36
Agency		0.08

The list above represents the average of the Fund's holdings at each quarter end during the reference period.

The % of assets and sector classifications aligned to economic sectors referred to above are derived from the Schroders Investment Book of Record (IBoR) data source. The % of assets and sector classifications aligned to economic sectors detailed elsewhere in the Audited Annual Report are derived from the Accounting Book of Record (ABoR) maintained by the administrator. As a result of these differing data sources, there may be differences in the % of assets and sector classifications aligned to economic sectors, due to the differing calculation methodologies and data availability of these alternative data sources.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

There was no extent to which the Fund's investments (including transitional and enabling activities) with an environmental objective were aligned with the Taxonomy. Taxonomy alignment of this Fund's investments has therefore not been calculated and has as a result been deemed to constitute 0% of the Fund's portfolio.

Appendix V – Sustainable Finance Disclosure (Unaudited)

corresponding to
the best
performance.

• Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

Yes:

In fossil gas

In nuclear energy

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned
activities are
expressed as a
share of:

- **turnover**
reflecting the share
of revenue from
green activities of
investee companies

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

Appendix V – Sustainable Finance Disclosure (Unaudited)

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

• **What was the share of investments made in transitional and enabling activities?**

As per the above, the share of investments by the Fund in transitional and enabling activities has been deemed to constitute 0% of the Fund's portfolio.

• **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

As this is our first reporting period, this question is not applicable.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities

• **What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?**

The Fund invested 51% of its assets in sustainable investments with an environmental objective that are not aligned with the Taxonomy. This percentage is a proportion of the total percentage of sustainable investments, which is calculated as the average of the last four months of the reference period, based on month-end data.

Appendix V – Sustainable Finance Disclosure (Unaudited)

under Regulation
(EU) 2020/852.

What was the share of socially sustainable investments?

The Fund invested 12% of its assets in sustainable investments with a social objective. This percentage is a proportion of the total percentage of sustainable investments, which is calculated as the average of the last four months of the reference period, based on month-end data.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

#2 Other includes cash, which was treated as neutral for sustainability purposes. #2 also includes investments that were not scored by Schrodgers’ proprietary sustainability tool and so did not contribute towards the Fund’s sustainability score.

Minimum safeguards were applied where relevant to investments and derivatives by restricting (as appropriate) investments in counterparties where there were ownership links or exposure to higher risk countries (for the purpose of money laundering, terrorist financing, bribery, corruption, tax evasion and sanctions risks). A firm-wide risk assessment considers the risk rating of each jurisdiction; which includes reference to a number of public statements, indices and world governance indicators issued by the UN, the European Union, the UK Government, the Financial Action Task Force and several Non-Government Organisations (NGOs), such as Transparency International and the Basel Committee.

In addition, new counterparties were reviewed by Schrodgers’ credit risk team and approval of a new counterparty was based on a holistic review of the various sources of information available, including, but not limited to, quality of management, ownership structure, location, regulatory and social environment to which each counterparty is subject, and the degree of development of the local banking system and its regulatory framework. Ongoing monitoring was performed through a Schrodgers’ proprietary tool, which supports the analysis of a counterparty’s management of environmental, social and governance trends and challenges.

Schrodgers’ credit risk team monitored the counterparties and during the reference period a number of counterparties were removed from the approved list for all funds in line with our policy and compliance requirements. This meant that such counterparties were ineligible for use by the Fund in respect of any relevant investments from the date they were removed.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The actions taken during the reference period to meet the environmental and social characteristics promoted by the Fund were the following:

- The Investment Manager applied sustainability criteria when selecting investments for the Fund;
- The Investment Manager considered the sustainability score of the Fund and of individual investments when selecting the assets held by the Fund;
- The Investment Manager utilised a Schrodgers' proprietary tool to help assess good governance

Appendix V – Sustainable Finance Disclosure (Unaudited)

practices of investee companies; and

- The Investment Manager undertook engagements covering one or more of the six priority themes set out in our Engagement Blueprint (Link <https://prod.schroders.com/en/sysglobalassets/about-us/schroders-engagement-blueprint-2022.pdf>). A summary of Schroders engagement activity, including the number of issuers engaged with and the related theme, is shown above in the question 'How did this financial product consider principal adverse impacts on sustainability factors?'. Through our engagement activities, we build relationships and have a two-way dialogue with our investee companies. We aim to drive change that protects and enhances the value of our investments.

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

No index was designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the Fund.

• *How did the reference benchmark differ from a broad market index?*

This question is not applicable for this Fund.

• *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

This question is not applicable for this Fund.

• *How did this financial product perform compared with the reference benchmark?*

This question is not applicable for this Fund.

• *How did this financial product perform compared with the broad market index?*

This question is not applicable for this Fund.

Appendix V – Sustainable Finance Disclosure (Unaudited)

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product : Schroder ISF Global Sustainable Growth
Legal Entity Identifier : 0NL7S0Z6XT6U55O6U359

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Did this financial product have a sustainable investment objective?	
<input type="radio"/> Yes	<input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: __%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 59% of sustainable investments
<input type="checkbox"/> In economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> With an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> In economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> With an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> With a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Appendix V – Sustainable Finance Disclosure (Unaudited)

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and/or social characteristics promoted by the Fund were met.

The Fund maintained a higher overall sustainability score than the MSCI AC World (Net TR) Index, based on the Investment Manager's rating system. This means that the Fund's weighted average score over a rolling six-month period up to the end of the reference period was higher than the benchmark's weighted average score over the same period, based on month-end data. This benchmark (which is a broad market index) is not a reference benchmark for the purposes of the environmental and social characteristics promoted by the Fund.

The sustainability score is measured by Schroders' proprietary tool that provides an estimate of the net "impact" that an issuer may create in terms of social and environmental "costs" or "benefits". It does this by using certain indicators with respect to that issuer, and quantifying them positively and negatively to produce an aggregate notional measure of the effect that the relevant underlying issuer may have on society and the environment. It does this using third party data as well as Schroders' own estimates and assumptions and the outcome may differ from other sustainability tools and measures. Examples of such indicators are greenhouse gas emissions, water usage, and salaries compared to the living wage.

The result is expressed as an aggregate score of the sustainability indicators for each issuer, specifically a notional percentage (positive or negative) of sales of the relevant underlying issuer. For example, a score of +2% would mean an issuer contributes \$2 of relative notional positive impact (i.e. benefits to society) per \$100 of sales. The sustainability score of the Fund is derived from the scores of all issuers in the Fund's portfolio measured by Schroders' proprietary tool.

The reference period for this Fund is 1 January 2022 to 31 December 2022.

The Fund also invested at least 50% of its assets in sustainable investments from when this commitment came into effect in August 2022 to the end of the reference period.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

• *How did the sustainability indicators perform?*

The Fund's sustainability score for the reference period was 4.1% and the benchmark's sustainability score for the reference period was -4.6%.

In each case the sustainability score is calculated as a notional percentage as described above.

As measured at the end of the reference period, the top 5 indicators in Schroders' proprietary tool that contributed positively to the sustainability score of the Fund were:

- Avoided Emissions
- Contraception
- Donations
- High Salaries

Appendix V – Sustainable Finance Disclosure (Unaudited)

- Medicine

The Investment Manager monitored compliance with the characteristic to maintain a higher overall sustainability score than the MSCI AC World (Net TR) Index by reference to the weighted average sustainability score of the Fund in Schroders' proprietary tool compared against the weighted average sustainability score of the MSCI AC World (Net TR) Index in Schroders' proprietary tool over a rolling six-month period up to the end of the reference period, based on month-end data. The overall sustainability score aggregates the effect of sustainability indicators including but not limited to greenhouse gas emissions, water usage, and salaries compared to the living wage.

The Investment Manager invested 59% of the Fund's assets in sustainable investments. This figure represents the average percentage of sustainable investments over the four months prior to the end of the reference period, based on month-end data.

The Investment Manager monitored compliance with the characteristic to invest at least 50% of its assets in sustainable investments by reference to the sustainability score of each asset in Schroders' proprietary tool. Compliance with this was monitored daily via our automated compliance controls.

The Fund also applied certain exclusions, with which the Investment Manager monitored compliance on an ongoing basis via its portfolio compliance framework.

• *...and compared to previous periods?*

As this is our first reporting period, this question is not applicable.

• *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

In respect of the proportion of the Fund's portfolio that was invested in sustainable investments, each sustainable investment demonstrated a net positive effect across a range of environmental or social objectives, as scored by Schroders' proprietary tool.

The objectives of the sustainable investments that the Fund made included, but were not limited to increasing benefits by way of the following:

- Avoided Emissions: the estimated environmental benefits of companies that enable system-or economy-wide reductions in carbon emissions;

- Contraception: the estimated societal benefits attained from the production and supply of contraceptives. Assigned in proportion to company market share of global revenue;

- Donations: the estimated societal benefits from a company's philanthropic donations. Measured based on the monetary value of the sum donated;

- High Salaries: the estimated societal benefit of paying staff above local living wages (for regions in which they operate). Assigned in proportion to the surplus companies are paying employees compared to the average living wage;

- Medicine: the estimated societal benefits arising from the additional social value the sale of such products and services exhibits of the wider economy. Assigned in proportion to the company's

Appendix V – Sustainable Finance Disclosure (Unaudited)

involvement in the healthcare value chain and proportion of company market share to global sub-sector revenue;

The above examples of the objectives of the sustainable investments that the Fund made are based on data as at the end of the reference period. Other objectives may have applied during the reference period.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

• How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Investment Manager's approach to not causing significant harm to any environmental or social sustainable investment objective included the following:

- Firm-wide exclusions applied to Schroders funds. These relate to international conventions on cluster munitions, anti-personnel mines, and chemical and biological weapons. A detailed list of all companies that are excluded is available at <https://www.schroders.com/en/sustainability/active-ownership/group-exclusions/>.
- Schroders became a signatory to the UN Global Compact (UNGC) principles on 6 January 2020. The Fund excluded companies in violation of the UNGC principles from the portion of the portfolio in sustainable investments, as Schroders considers violators cause significant harm to one or more environmental or social sustainable investment objectives. The areas determining whether an issuer is an UNGC violator include issues that are covered by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, such as human rights, bribery and corruption, labour rights, child labour, discrimination, health and safety, and collective bargaining. The list of UNGC violators is provided by a third party and compliance with the list was monitored via our automated compliance controls. Schroders applied certain exceptions to the list during the reference period.
- Firm-wide exclusions also applied to companies that derived revenues above certain thresholds from activities related to tobacco and thermal coal, especially tobacco production, tobacco value chain (suppliers, distributors, retailers, licensors), thermal coal mining and coal fired power generation.
- The Fund also applied certain other exclusions.
- Further information on all of the Fund's exclusions is to be found under "Sustainability Related Disclosures" on the Fund's webpage, accessed via <https://www.schroders.com/en/lu/private-investor/gfc>.

How were the indicators for adverse impacts on sustainability factors taken into account?

Where the Investment Manager set levels in relation to the indicators for adverse impacts on sustainability factors, compliance with these thresholds was monitored on an ongoing basis via its portfolio compliance framework. Investee companies in breach of these levels were not eligible to be considered as a sustainable investment.

For example, the Fund excluded companies in violation of the UNGC principles (principal adverse impact (PAI) 10) from the portion of the portfolio in sustainable investments. The list of UNGC violators is provided by a third party and compliance with the list was monitored via our automated compliance controls. Schroders applied certain exceptions to the list during the reference period.

Appendix V – Sustainable Finance Disclosure (Unaudited)

In addition, the Fund excluded companies that were deemed to contribute significantly to climate change (related to PAIs 1, 2 and 3 covering GHG emissions). The thresholds that were applied were companies deriving >10% revenue from thermal coal mining and >30% revenue from coal power generation. The Fund may have applied stricter thresholds, as disclosed on the website. Compliance with these exclusions was monitored via our automated compliance controls.

In other areas Schroders set principles of engagement. We have aligned each of the PAIs to one of Schroders six core engagement themes. We summarise below the thresholds that apply and the engagement actions we have for each:

Climate Change

PAIs 1, 2, 3, 4, 5, 6 and 19 relate to the Engagement Blueprint theme of Climate Change. Details of our Engagement Blueprint can be found here: (Link <https://prod.schroders.com/en/sysglobalassets/about-us/schroders-engagement-blueprint-2022.pdf>). We engage to understand how companies are responding to the challenges climate change may pose to their long-term financial position. Through our engagement activity we seek to understand different areas, such as the speed and scale of emission reduction targets and steps being taken to meet climate goals.

Biodiversity and Natural Capital

PAIs 7, 8 and 9 align to the Engagement Blueprint theme of Biodiversity and Natural Capital. We recognise the importance of all companies assessing and reporting on their exposure to natural capital and biodiversity risk. We focus our engagement on improving disclosure around a number of themes such as deforestation and sustainable food and water.

Human Rights

PAIs 10 and 14 relate to the Engagement Blueprint theme of Human Rights. There is increasing pressure on the role that businesses can and should play to respect human rights. We understand the higher operational and financial risks, and the reputational risk that human rights controversies cause. Our engagement focuses on three core stakeholders: workers, communities and customers.

Human Capital Management

PAIs 11, 12 and 13 align to the Engagement Blueprint theme of Human Capital Management. We identify human capital management as a priority issue for engagement, noting that people in an organisation are a significant source of competitive advantage and that effective human capital management is essential to drive innovation and long-term value creation. We also recognise a number of links between high standards of human capital management and the achievement of the Sustainable Development Goals (SDGs). Our engagement activities address themes such as health and safety, corporate culture and investment into the workforce.

Diversity and Inclusion

PAIs 12 and 13 relate to the Engagement Blueprint theme of Diversity and Inclusion. Improving disclosure on board diversity and the gender pay gap are two of the priority objectives outlined in our Engagement Blueprint. We request that companies implement a policy that requires each board vacancy to consider at least one or more diverse candidates. Our engagement approach also addresses diversity of the executive management, the workforce and in the value chain.

Appendix V – Sustainable Finance Disclosure (Unaudited)

Corporate Governance

PAIs 20, 12 and 13 align to the Engagement Blueprint theme of Corporate Governance. We engage with companies to seek to ensure businesses act in the best interest of shareholders and other key stakeholders. We also recognise that, in most cases, in order to see progress and performance on other material Environmental, Social and Governance (ESG) issues, strong governance structures need to first be in place. We therefore engage on a number of corporate governance aspects such as executive remuneration, boards and management, and strategy.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The portion of the portfolio in sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

We used a list of UNGC violators as provided by a third party. Issuers on that list were not categorised as sustainable investments. The areas considered when determining whether an issuer is an UNGC violator included those covered by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, such as human rights, bribery and corruption, labour rights, child labour, discrimination, health and safety, and collective bargaining.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager’s approach to considering principal adverse impacts on sustainability factors involved classifying the indicators into three categories:

1. Set thresholds

For certain PAIs (e.g. PAI 10 on violations of UNGC principles), we set thresholds for considering an investment to be a sustainable investment. Investments in breach of these thresholds were not eligible to be held as sustainable investments. Compliance with these thresholds was monitored on an ongoing basis via the Investment Manager’s portfolio compliance framework.

2. Active ownership

During the reference period, the Investment Manager engaged in line with the approach and expectations set out in our Engagement Blueprint (Link <https://prod.schroders.com/en/sysglobalassets/about-us/schroders-engagement-blueprint-2022.pdf>)

Appendix V – Sustainable Finance Disclosure (Unaudited)

and as further described above. A summary of Schroders firm-wide engagement activity during the reference period, including the relevant engagement theme, is shown below:

Engagement Theme	# Issuers
Climate Change	738
Diversity and Inclusion	72
Governance and Oversight	3,096
Human Capital Management	130
Human Rights	121
Natural Capital and Biodiversity	95

3. Improve coverage

Some of the engagements identified in the table above involved discussions where the primary focus was to increase reporting on sustainability data. The purpose is to improve coverage of the PAIs, for example PAI 9 on hazardous waste ratio.

Our approach is subject to ongoing review, particularly as the availability, and quality, of PAI data evolves.

What were the top investments of this financial product?

During the reference period the top 15 investments were:

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **1 Jan 2022 to 31 Dec 2022**

Largest Investments	Sector	% Assets	Country
MICROSOFT CORPORATION COMMON STOCK USD0.0000125	Information Technology	5.94	United States
ALPHABET INCORPORATED CL A NPV	Communication Services	4.07	United States

The list above represents the average of the Fund's holdings at each quarter end during the reference period.

The largest investments and % of assets referred to above are derived from the Schroders Investment Book of Record (IBoR) data source. The largest investments and % of assets detailed elsewhere in the Audited Annual Report are derived from the Accounting Book of Record (ABoR) maintained by the

Appendix V – Sustainable Finance Disclosure (Unaudited)

administrator. As a result of these differing data sources, there may be differences in the largest investments and % of assets due to the differing calculation methodologies of these alternative data sources.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

• *What was the asset allocation?*

The Fund's investments that were used to meet its environmental or social characteristics are summarised below.

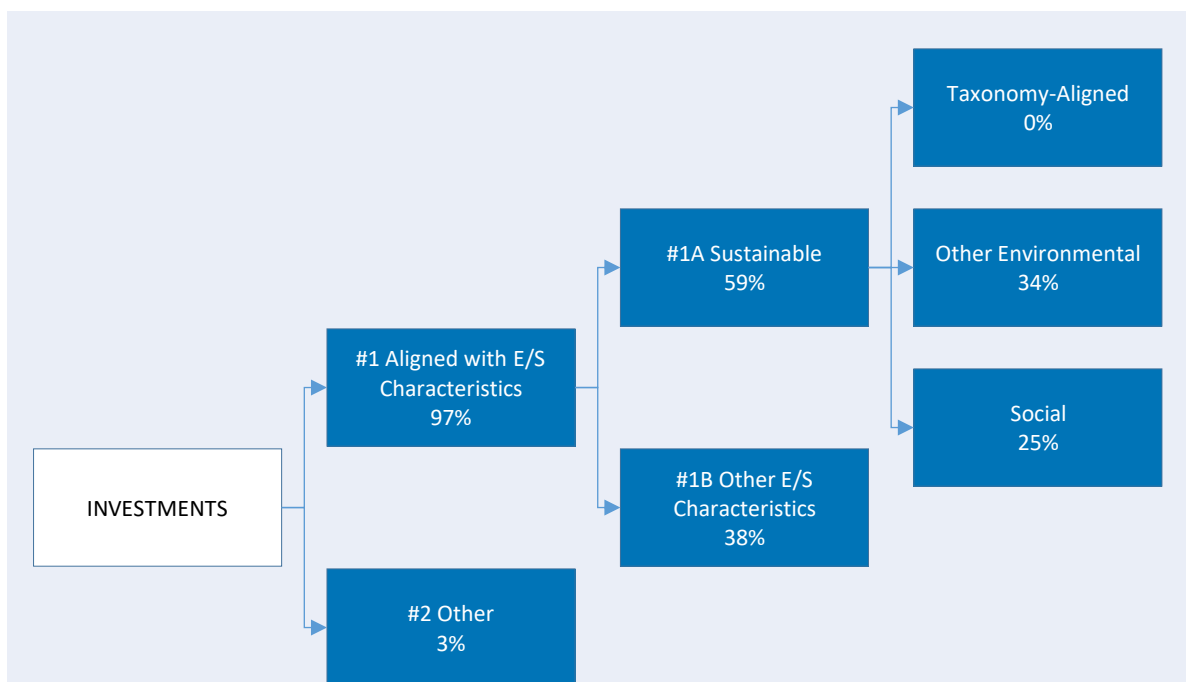

#1 Aligned with E/S characteristics includes the Fund's assets that were used to attain the environmental or social characteristics, which is equal to 97%. The Fund maintained a higher overall sustainability score than the MSCI AC World (Net TR) Index and so the Fund's investments that were scored by Schroders' proprietary sustainability tool are included within #1 on the basis that they contributed to the Fund's sustainability score (whether such individual investment had a positive or a negative score). The percentage in #1 Aligned E/S characteristics represents the average of the last four months of the reference period, based on month-end data. Also included within #1 is the proportion of assets that were invested in sustainable investments, as indicated in #1A.

The sustainability score is measured by Schroders' proprietary tool that provides an estimate of the net "impact" that an issuer may create in terms of social and environmental "costs" or "benefits". It does this by using certain indicators with respect to that issuer, and quantifying them positively and negatively to produce an aggregate notional measure of the effect that the relevant underlying issuer may have on society and the environment. Examples of such indicators are greenhouse gas emissions, water usage, and salaries compared to the living wage.

The Fund invested 59% of its assets in sustainable investments. This percentage represents the average of the last four months of the reference period, based on month-end data. Within this, 34% was invested in sustainable investments with an environmental objective and 25% was invested in sustainable investments with a social objective. In respect of the proportion of the Fund's portfolio that was invested in sustainable investments, each sustainable investment demonstrated a net positive effect across a range of environmental or social objectives, as scored by Schroders' proprietary tool. A sustainable investment is classified as having an environmental or social objective depending on whether the relevant issuer has a higher score in Schroders' proprietary tool relative to its applicable peer group for its environmental indicators or its social indicators. In each case, indicators are comprised of both "costs" and "benefits".

#2 Other includes cash, which was treated as neutral for sustainability purposes.

Appendix V – Sustainable Finance Disclosure (Unaudited)

#1 Aligned with E/S Characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments

The category **#1 Aligned with E/S Characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments
- The sub-category **#1B Other E/S Characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments

Appendix V – Sustainable Finance Disclosure (Unaudited)

• In which economic sectors were the investments made?

During the reference period investments were made in the following economic sectors:

Sector	Sub-Sector	% Assets
Information Technology	Software & Services	13.34
Industrials	Capital Goods	12.6
Financials	Banking	11.54
Health Care	Pharmaceuticals, Biotechnology & Life Sciences	9.33
Health Care	Health Care Equipment & Services	8.59
Information Technology	Semiconductors & Semiconductor Equipment	7.55
Industrials	Commercial & Professional Services	4.91
Communication Services	Media & Entertainment	3.87
Financials	Insurance	3.86
Consumer Discretionary	Consumer Durables & Apparel	3.77
Consumer Discretionary	Consumer Services	3.76
Consumer Staples	Household & Personal Products	3.52
Consumer Discretionary	Retailing	2.92
Cash	Cash	2.84
Financials	Diversified Financials	2.76
Consumer Staples	Food & Staples Retailing	2.13
Consumer Staples	Food, Beverage & Tobacco	2.08
Materials	Materials	0.64

The list above represents the average of the Fund's holdings at each quarter end during the reference period.

The % of assets and sector classifications aligned to economic sectors referred to above are derived from the Schroders Investment Book of Record (IBoR) data source. The % of assets and sector classifications aligned to economic sectors detailed elsewhere in the Audited Annual Report are derived from the Accounting Book of Record (ABoR) maintained by the administrator. As a result of these differing data sources, there may be differences in the % of assets and sector classifications aligned to economic sectors, due to the differing calculation methodologies and data availability of these alternative data sources.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

There was no extent to which the Fund's investments (including transitional and enabling activities) with an environmental objective were aligned with the Taxonomy. Taxonomy alignment of this Fund's investments has therefore not been calculated and has as a result been deemed to constitute 0% of the Fund's portfolio.

Appendix V – Sustainable Finance Disclosure (Unaudited)

the best
performance.

• Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do no significant harm to any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

Appendix V – Sustainable Finance Disclosure (Unaudited)

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

• **What was the share of investments made in transitional and enabling activities?**

As per the above, the share of investments by the Fund in transitional and enabling activities has been deemed to constitute 0% of the Fund's portfolio.

• **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

As this is our first reporting period, this question is not applicable.

Appendix V – Sustainable Finance Disclosure (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund invested 34% of its assets in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy. This percentage is a proportion of the total percentage of sustainable investments, which is calculated as the average of the last four months of the reference period, based on month-end data.

What was the share of socially sustainable investments?

The Fund invested 25% of its assets in sustainable investments with a social objective. This percentage is a proportion of the total percentage of sustainable investments, which is calculated as the average of the last four months of the reference period, based on month-end data.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

#2 Other includes cash, which was treated as neutral for sustainability purposes.

Minimum safeguards were applied where relevant to investments and derivatives by restricting (as appropriate) investments in counterparties where there were ownership links or exposure to higher risk countries (for the purpose of money laundering, terrorist financing, bribery, corruption, tax evasion and sanctions risks). A firm-wide risk assessment considers the risk rating of each jurisdiction; which includes reference to a number of public statements, indices and world governance indicators issued by the UN, the European Union, the UK Government, the Financial Action Task Force and several Non-Government Organisations (NGOs), such as Transparency International and the Basel Committee.

In addition, new counterparties were reviewed by Schroders' credit risk team and approval of a new counterparty was based on a holistic review of the various sources of information available, including, but not limited to, quality of management, ownership structure, location, regulatory and social environment to which each counterparty is subject, and the degree of development of the local banking system and its regulatory framework. Ongoing monitoring was performed through a Schroders' proprietary tool, which supports the analysis of a counterparty's management of environmental, social and governance trends and challenges.

Schroders' credit risk team monitored the counterparties and during the reference period a number of counterparties were removed from the approved list for all funds in line with our policy and compliance requirements. This meant that such counterparties were ineligible for use by the Fund in respect of any relevant investments from the date they were removed.

Appendix V – Sustainable Finance Disclosure (Unaudited)

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The actions taken during the reference period to meet the environmental and social characteristics promoted by the Fund were the following:

- The Investment Manager applied sustainability criteria when selecting investments for the Fund;
- The Investment Manager considered the sustainability score of the Fund and of individual investments when selecting the assets held by the Fund;
- The Investment Manager utilised a Schroders' proprietary tool to help assess good governance practices of investee companies; and
- The Investment Manager undertook engagements covering one or more of the six priority themes set out in our Engagement Blueprint (Link <https://prod.schroders.com/en/sysglobalassets/about-us/schroders-engagement-blueprint-2022.pdf>). A summary of Schroders engagement activity, including the number of issuers engaged with and the related theme, is shown above in the question 'How did this financial product consider principal adverse impacts on sustainability factors?'. Through our engagement activities, we build relationships and have a two-way dialogue with our investee companies. We aim to drive change that protects and enhances the value of our investments.

How did this financial product perform compared to the reference benchmark?

No index was designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

• *How did the reference benchmark differ from a broad market index?*

This question is not applicable for this Fund.

• *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

This question is not applicable for this Fund.

• *How did this financial product perform compared with the reference benchmark?*

This question is not applicable for this Fund.

• *How did this financial product perform compared with the broad market index?*

This question is not applicable for this Fund.

Appendix V – Sustainable Finance Disclosure (Unaudited)

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: State Street Global ESG Screened Managed Volatility Equity Fund (the "Fund")

Legal entity identifier: 549300SR9616JQE7C E72

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input type="checkbox"/> Yes	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective : ____%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

<input type="checkbox"/> It made sustainable investments with a social objective : ____%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The investment policy of the State Street Global ESG Screened Managed Volatility Equity Fund (“Fund”) is to outperform the MSCI World Index (“Index”) over the medium and long term while screening out securities based on an assessment of their adherence to ESG criteria i.e. international norms in relation to environmental protection, human rights, labour standards, anti-corruption and controversial weapons.

The environmental and social characteristics promoted by the Fund is the negative and norms-based screen that was applied to the portfolio of the Fund throughout the period to screen out securities based on an assessment of their adherence to ESG criteria, i.e. international norms in relation to environmental protection, human rights, labour standards, anti-corruption and controversial weapons.

● **How did the sustainability indicators perform?**

The attainment of the environmental and social characteristics is measured through the % of the portfolio invested in securities that are included in the negative and norms-based screen

● **...and compared to previous periods?**

N/A – first reporting period. No comparison available.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The Fund does not commit to making sustainable investments within the meaning of the SFDR or the Taxonomy Regulation.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

The Fund does not commit to investing in sustainable investments.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund considered Principal Adverse Impacts (“PAI”) on sustainability factors by applying the negative and norms-based ESG screen prior to the construction of the portfolio. Specifically, the Fund considered

- Exposure to companies active in the fossil fuel sector
- Violations of UN Global Compact Principles
- Exposure to controversial weapons

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01 January 2022 to 31 December 2022.

What was the proportion of sustainability-related investments?

See below – The Fund does not commit to making sustainable investments within the meaning of the SFDR or the Taxonomy Regulation.

Asset allocation describes the share of investments in specific assets.

● What was the asset allocation?

99.18% of the Fund's assets were invested in securities which are #1 Aligned with the environmental and social characteristics as outlined in the table below. 0.82% of the assets, consisting of cash as well as cash equivalents were classified under #2 Other in the below table and are not aligned with the promoted environmental and social characteristics.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

CONSUMER STAPLES	25.03%
FOOD PRODUCTS	10.16%
HOUSEHOLD PRODUCTS	6.12%
FOOD & STAPLES RETAILING	5.04%
TOBACCO	1.87%
BEVERAGES	1.74%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund does not currently commit to investing in any “environmentally sustainable investment’ within the meaning of the Taxonomy Regulation.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹

Yes:

In fossil gas

In nuclear energy

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

-turnover reflecting the share of revenue from green activities of investee companies.

-capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

-operational expenditure (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of investments made in transitional and enabling activities?**

As the Fund does not commit to invest any “environmentally sustainable investment” within the meaning of the Taxonomy Regulation, the minimum share of investments in transitional and enabling activities within the meaning of the Taxonomy Regulation is therefore also set at 0%.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – first reporting period. No comparison available.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund promotes environmental and social characteristics but does not commit to making any environmentally sustainable investments. As a consequence, the Fund does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

N/A

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

At year end, the Fund held 0.82% of its assets in cash, cash equivalents or use financial derivative instruments at the Investment Manager’s discretion, which would be classified under #2 Other in the above table. Such assets are not aligned with environmental and social characteristics nor are there any environmental or social safeguards in place.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The environmental and social characteristics promoted by the Fund is the negative and norms-based screen applied to the portfolio of the Fund to screen out securities based on an assessment of their adherence to ESG criteria, i.e. international norms in relation to environmental protection, human rights, labour standards, anti-corruption and controversial weapons.

In implementing the Investment Policy of the Fund, securities in the Fund were selected primarily from the constituents of the Index and the Investment Manager applied the negative and norms-based ESG screen prior to the construction of the portfolio of the Fund and on an ongoing basis throughout the reference period. This resulted in the exclusion of any securities from the portfolio based on an assessment of their adherence to certain ESG criteria defined by the Investment Manager. The Fund screened out securities identified as being non-compliant with UN Global Compact Principles relating to environmental protection, human rights, labour standards and anti-corruption, as well as controversial weapons.

How did this financial product perform compared to the reference benchmark?

The Fund does not designate a reference benchmark to determine whether the Fund is aligned with the environmental and / or social characteristics that it promotes.

Dynamic Global Bond Fund

Legal entity identifier: 549300EZGJHY7GNVPY28

1 October to 31 December 2022

Environmental and/or social characteristics

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** _____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** _____%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of _____% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the reference period the promotion of environmental and/or social ("E/S") characteristics was achieved by meeting the Fund's commitment to:

- Avoid sectors or companies, whose activities may be considered harmful to the environment and/or society through the application of its proprietary responsible screen (the T. Rowe Price Responsible Exclusion List)*.
- Maintain at least 50% of the value of its portfolio invested in issuers and/or securities that are rated "Green" by T. Rowe Price proprietary Responsible Investor Indicator Model ("RIIM"). More details on the approach to identifying these investments can be found in the prospectus.

* From 1 January 2023 the E/S characteristics promoted by the Fund changed. Please refer to the latest prospectus for more information.

● How did the sustainability indicators perform?

The sustainability indicators performed as follows:

- The Fund did not hold any securities that were included in the T. Rowe Price Responsible Exclusion List.
- As at 31 December 2022, 87.0% of the value of the Fund's portfolio was invested in issuers and/or securities that were rated "Green" by RIIM.

T. Rowe Price calculates the proportion of RIIM green-rated investments during a reference period by averaging quarter-end portfolio measurements. As the Fund's commitment took effect from 1 October 2022, the sustainability indicator reflects their proportion on 31 December 2022.

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Dynamic Global Bond Fund continued

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Not applicable as the Fund has not committed to make sustainable investments.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Not applicable as the Fund has not committed to make sustainable investments.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other Sustainable Investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Fund made a commitment to consider the following PAI indicators:

- investee countries subject to social violations (PAI #16)

PAI Indicator	Unit of Measurement	Value (%)	Fund Coverage (%)*
Investee countries subject to social violations (PAI #16)	Percentage of Fund invested	0.0	93.4

* Fund coverage represents the proportion of investments for which PAI data is available and applicable. The proportion of the Fund that is uncovered consisted of cash and derivatives used for efficient portfolio management.

The Fund considers PAI #16 by restricting investment in countries the investment manager identifies are subject to social violations. These restrictions are implemented systematically via the T. Rowe Price Responsible Exclusion List. For the reference period, the Fund’s exposure to countries subject to social violations was zero. Since this PAI value cannot be improved, the investment manager is not planning any engagement or investment action. The investment manager will continue to monitor this on an ongoing basis.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 October to 31 December 2022

Dynamic Global Bond Fund continued

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.

- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The actual proportion of Taxonomy-aligned investments held by the Fund as at 31 December 2022 was 0.0%.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● What was the share of investments made in transitional and enabling activities?

The share of investments in transitional activities was 0.0% and in enabling activities was 0.0%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund did not commit to making sustainable investments and therefore the investment manager has not assessed the Fund's portfolio alignment with the SFDR sustainable investment criteria.

What was the share of socially sustainable investments?

The Fund did not commit to making sustainable investments and therefore the investment manager has not assessed the Fund's portfolio alignment with the SFDR sustainable investment criteria.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

These investments included cash positions held as ancillary liquidity and certain derivatives used for hedging and efficient portfolio management which are not screened by the T. Rowe Price Responsible Exclusion List and do not contribute to the Fund's promotion of environmental and/or social characteristics. The investment manager did not apply any minimum environmental or social safeguards to these investments.

Dynamic Global Bond Fund continued

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Proprietary responsible screen:

The Fund avoided sectors or companies, whose activities may be considered harmful to the environment and/or society, as per the T. Rowe Price Responsible Exclusion List, the investment manager’s proprietary responsible screen.

These restrictions are automated within the investment manager’s internal investment compliance system. Adherence to them is monitored by its investment compliance team on a pre-trade, post-trade and portfolio basis. The constituents of the T. Rowe Price Responsible Exclusion List are monitored by the investment manager’s ESG specialists using third-party data. While changes can be made at any time, a full review is conducted quarterly.

The investment manager conducts compliance reviews on an on-going basis throughout the year to ensure the Fund is subject to the exclusions and reports quarterly to the Board of Directors of T. Rowe Price Funds SICAV. There have been no breaches of the T. Rowe Price Responsible Exclusion List identified during the reference period.

Commitment to RIIM green-rated issuers:

As at 31 December 2022, 87.0% of the value of the Fund’s portfolio was invested in securities that were rated “Green” in RIIM.

In determining whether an issuer or security is rated “Green” in RIIM, the investment manager took into account the following E/S factors, as applicable, to sovereign and corporate investments. Each E/S factor was scored using the investment manager’s proprietary methodology and an overall issuer/security profile score was assigned on a weighted average basis. This means that not all E/S factors described below may have positively contributed to an issuer’s “Green” profile score and those E/S factors that did positively contribute may change over time.

As the Fund’s RIIM green-rated investment commitment took effect from 1 October 2022, the calculation was made as at 31 December 2022.

Sovereign investments		Corporate investments	
Environmental	Energy and emissions	Environmental	Operations
	Freshwater		Environment end product
	Climate risk		Human capital
	Biodiversity	Social	Society
	Use of natural capital		Social end product
	Demographics		
Safety			
Social	Health		
	Education and employment		
	Infrastructure		
	Equality		

How did this financial product perform compared to the reference benchmark?

A reference benchmark is not used for the purpose of promoting the Fund’s E/S characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

European Equity Fund

Environmental and/or social characteristics

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** _____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** _____%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 49.2% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the reference period the promotion of environmental and/or social ("E/S") characteristics was achieved by meeting the Fund's commitment to:

- Avoid sectors or companies, whose activities may be considered harmful to the environment and/or society through the application of its proprietary responsible screen (the T. Rowe Price Responsible Exclusion List)*.
- Maintain at least 10% of the value of its portfolio invested in sustainable investments.

* From 1 January 2023 the E/S characteristics promoted by the Fund changed. Please refer to the latest prospectus for more information.

● How did the sustainability indicators perform?

The sustainability indicators performed as follows:

- The Fund did not hold any securities that were included in the T. Rowe Price Responsible Exclusion List.
- As at 31 December 2022, 49.2% of the value of the Fund's portfolio was invested in securities that the investment manager identified as sustainable investments.

T. Rowe Price calculates the proportion of sustainable investments during a reference period by averaging quarter-end portfolio measurements. As the Fund's sustainable investment commitment took effect from 1 October 2022, the sustainability indicator reflects the sustainable investment proportion on 31 December 2022.

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

European Equity Fund continued

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The Fund invested in sustainable investments that have E and S objectives. No minimum exposure to either objective was imposed upon the Fund. The Fund used the following E/S pillars that align to the UN Sustainable Development Goals (“SDGs”) to determine economic activities that contributed to E/S objectives:

Pillar	Activities
Climate and resource impact	Reducing greenhouse gases Promoting healthy ecosystems Nurturing circular economies
Social equity and quality of life	Enabling social equity Improving health Enhancing quality of life

An issuer’s sustainable contribution is measured as a percentage of its revenue generated from sustainable economic activities.

The Fund held investments in companies which, through their products or services, were aligned to economic activities that contributed to the following objectives:

- reducing greenhouse gases
- promoting healthy ecosystems
- nurturing circular economies
- enabling social equality
- improving health
- enhancing quality of life

More details on the approach to identifying sustainable investments can be found on the website: www.funds.troweprice.com

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

The investment manager utilises its proprietary internal research platform to support its assessment of whether an issuer is causing significant harm to any E/S objective. Combined with third-party data, the “do no significant harm” assessment incorporates issuer information in relation to Principal Adverse Impact (“PAI”) indicators and alignment to certain international guidelines and principles.

All investments that the investment manager has determined as sustainable have been assessed against all relevant PAI indicators and OECD guidelines for multinational enterprises and the UN Guiding Principles on Business and Human Rights. Based on this assessment, the sustainable investments held by the Fund did not significantly harm any environmental or social objectives.

Do No Significant Harm (DNSH)	OECD Guidelines & Human Rights	Supply Chain
		Employee Treatment
		Society & Community Relations
		General Corporate
		Involvement in extreme ESG breaches of international norms
	PAI Indicators	GHG Emissions
		Biodiversity
		Water, Waste & Material Emissions
		Social & Employee Matters
		Exposure to Controversial Weapons

● **How were the indicators for adverse impacts on sustainability factors taken into account?**

The table above illustrates the framework the investment manager applies to systematically assess DNSH as a part of its investment process, which is inclusive of both PAI indicators and OECD guidelines and human rights principles. Where issuer data for a PAI indicator is unavailable the investment manager used proxy PAI indicators that aligned to the mandatory PAI sub-categories described in the table above.

The investment manager determined whether significant harm was being caused by applying a qualitative and quantitative assessment of the data it has obtained for the mandatory PAI indicators listed in Table 1 and any relevant indicators in Tables 2 and 3 of Annex I of the SFDR Delegated Regulation. The investment manager also analysed issuer PAI metrics relative to internally set thresholds, where relevant and appropriate. These thresholds provided an initial indication of whether significant harm is occurring.

European Equity Fund continued

The investment manager undertook further analysis to support its view, where necessary. The investment manager considered the materiality of a given indicator relative to an issuer's industry, sector, or location, which was factored into the overall determination. Where sufficient data was not available, other relevant data points were used to make an assessment.

● **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Yes, all sustainable investments were aligned with the UN Guiding Principles on Business and Human Rights and related standards and OECD Guidelines for Multinational Enterprises during the reference period.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the fund that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other Sustainable Investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Fund made a commitment to consider the following PAI indicators:

- violations of UN Global Compact principles (PAI #10)
- board gender diversity (PAI #13)
- exposure to controversial weapons (antipersonnel mines, cluster munitions, chemical weapons and biological weapons) (PAI #14)

PAI Indicator	Unit of Measurement	Value (%)	Fund Coverage (%)*
Violations of UN Global Compact principles (PAI #10)	Percentage of Fund invested	0.0	96.9
Board gender diversity (PAI #13)	Average percentage of female board members	36.6	96.9
Exposure to controversial weapons (PAI #14)	Percentage of Fund invested	0.0	96.9

* Fund coverage represents the proportion of investments for which PAI data is available and applicable. The proportion of the Fund that is uncovered consisted of cash and derivatives used for efficient portfolio management.

The Fund considers Violations of UN Global Compact principles (PAI #10) and Exposure to controversial weapons (PAI #14) by restricting investment in companies the investment manager identifies as violating UNGC principles and/or having exposure to controversial weapons. These restrictions are implemented systematically through the T. Rowe Price Responsible Exclusion List. For the reference period, the Fund's exposure to controversial weapons and violations of UN Global Compact was zero. Since these PAI values cannot be improved, the investment manager is not planning any engagement or investment action. The investment manager will continue to monitor these on an ongoing basis.

The Fund considers Board gender diversity (PAI #13) by periodically collecting issuer-level PAI data, aggregating the data and averaging this over the reference period to provide a portfolio-level view of the indicator. In accordance with its PAI policy (available at www.troweprice.com/esg), the investment manager evaluates the portfolio-level view at least annually to identify and prioritise stewardship or investment action, where appropriate. Following this evaluation, the investment manager has updated its diversity expectations, which feed through to its engagement programs and voting policies as follows, in order to pursue an improvement in this figure.

Diversity can be defined across a number of dimensions. However, if a board is to be considered meaningfully diverse in the investment manager's view, some diversity across gender, ethnic, or nationality lines must be present. For companies in EMEA, if no evidence of board diversity is found, the investment manager generally will engage with the company and, in the case of equity holdings, generally opposes the re-elections of Governance Committee members and/or senior executives, as appropriate.

European Equity Fund continued

In markets where there is a well-established expectation for board diversity (regulatory, quasi-regulatory or listing standards), the investment manager will generally apply the same expectation.

During 2023, in the U.K. market, the minimum expectation for board diversity within FTSE 350 companies will rise to 40% representation of the minority gender. Additionally, the investment manager will continue with its expectation that company boards in the FTSE 100 should include at least one director from an underrepresented ethnic or racial group. For smaller companies in this market, the diversity policy is applied to single-gender boards.

Continuing what has started in 2022:

- In the Continental European markets the investment manager's minimum expectation for board diversity of companies on the main listing is that they should be at least 30% diverse by gender. For smaller companies in these markets, the diversity policy is applied to single-gender boards.
- In markets elsewhere in EMEA the diversity policy is applied to single-gender boards.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 October to 31 December 2022

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.

- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The actual proportion of Taxonomy-aligned investments held by the Fund as at 31 December 2022 was 0.0%.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

- Yes:
- In fossil gas In nuclear energy
- No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● What was the share of investments made in transitional and enabling activities?

The share of investments in transitional activities was 0.0% and in enabling activities was 0.0%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU taxonomy was 14.3%.

Sustainable investments may not be EU Taxonomy aligned for a number of reasons, including:

- The Fund does not currently commit to investing any of its assets in investments aligned with the EU Taxonomy.
- In order to demonstrate EU Taxonomy alignment, the EU Taxonomy Regulation prescribes specific criteria that the investment manager must assess the assets for. These requirements rely heavily on data availability and reliability. Many issuers are currently not required to comply with the Taxonomy disclosure requirements, making it difficult to obtain the data needed to assess Taxonomy alignment.
- Not all economic activities are covered by the EU Taxonomy as it is not possible to develop criteria for all sectors where activities could make a substantial contribution to the environment. Where developed, not all criteria were in place to apply for the reporting period.

European Equity Fund continued

What was the share of socially sustainable investments?

The share of socially sustainable investments was 34.9%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

These investments included cash positions held as ancillary liquidity and certain derivatives used for hedging and efficient portfolio management which are not screened by the T. Rowe Price Responsible Exclusion List and do not contribute to the Fund’s promotion of environmental and/or social characteristics. The investment manager did not apply any minimum environmental or social safeguards to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Proprietary responsible screen:

The Fund avoided sectors or companies, whose activities may be considered harmful to the environment and/or society, as per the T. Rowe Price Responsible Exclusion List, the investment manager’s proprietary responsible screen.

These restrictions are automated within the investment manager’s internal investment compliance system. Adherence to them is monitored by its investment compliance team on a pre-trade, post-trade and portfolio basis.

The constituents of the T. Rowe Price Responsible Exclusion List are monitored by the investment manager’s ESG specialists using third-party data. While changes can be made at any time, a full review is conducted quarterly.

The investment manager conducts compliance reviews on an on-going basis throughout the year to ensure the Fund is subject to the exclusions and reports quarterly to the Board of Directors of T. Rowe Price Funds SICAV.

There have been no breaches of the T. Rowe Price Responsible Exclusion List identified during the reference period.

Sustainable investment commitment:

As at 31 December 2022, 49.2% of the value of the Fund’s portfolio was invested in securities that the investment manager identified as sustainable investments.

The sustainable investments have been identified using the following steps:

The investment manager identified each investee company’s contribution to an E/S objective based on the company’s revenue derived from that specific sustainable activity, or through its use of proceeds from bond sales. The sustainable investment exposure for each company was aggregated by the investment manager. This means that only the proportion of the investment contributing to a sustainable activity by an investee company was counted towards meeting the Fund’s minimum 10% commitment.

The investment manager has adopted a robust process to consistently identify whether a company causes significant harm to an E/S objective and incorporates PAIs into that assessment, where appropriate on an issuer-by-issuer basis. Its “do no significant harm” assessment is comprised of both proprietary research and third-party data inputs, including data in relation to PAI where relevant to the issuer and/or sector. The investment manager assessed whether the company caused significant harm by setting and monitoring thresholds, where relevant and appropriate, relative to PAI indicators, and whether it has been involved in significant controversies related to the OECD guidelines for multinational enterprises and UNGPs on business and human rights. If the activity breached the set thresholds, regardless of the percentage of revenue alignment (or use of bond proceeds) to an E/S objective, the company failed the sustainable investment test.

The investment manager also assessed the governance practices of an investee company by undertaking:

- A quantitative review using the investment manager’s good governance test which consists of weighted pillars designed to measure specific corporate governance risks, rolled up to an overall rating, and
- A qualitative review by the governance team if a company’s good governance test rating is red, taking into account market and sector norms.

All investments held by the Fund that contributed to a specific E/S objective and passed “do no significant harm” as well as good governance assessments, as detailed above, contributed towards the Fund’s overall exposure to sustainable investments.

European Equity Fund continued

How did this financial product perform compared to the reference benchmark?

Reference benchmarks

are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

A reference benchmark is not used for the purpose of promoting the Fund's E/S characteristics.

European High Yield Bond Fund

1 January to 31 December 2022

Environmental and/or social characteristics

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** _____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** _____%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 28.6% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

The above describes the characteristics of the Fund as at 31 December 2022. Prior to 1 October 2022 the Fund promoted environmental and/or social ("E/S") characteristics but did not commit to investing in sustainable investments.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the reference period the promotion of E/S characteristics was achieved by meeting the Fund's commitment to:

- Avoid sectors or companies, whose activities may be considered harmful to the environment and/or society through the application of its proprietary responsible screen (the T. Rowe Price Responsible Exclusion List)*.
- From 1 October 2022, maintain at least 10% of the value of its portfolio invested in sustainable investments.

* From 1 January 2023 the E/S characteristics promoted by the Fund changed. Please refer to the latest prospectus for more information.

● How did the sustainability indicators perform?

The sustainability indicators performed as follows:

- The Fund did not hold any securities that were included in the T. Rowe Price Responsible Exclusion List.
- As at 31 December 2022, 28.6% of the value of the Fund's portfolio was invested in securities that the investment manager identified as sustainable investments.

T. Rowe Price calculates the proportion of sustainable investments during a reference period by taking quarter-end portfolio measurements and averaging these over four quarters. As the Fund's sustainable investment commitment took effect from 1 October 2022, the sustainability indicator reflects the sustainable investment proportion on 31 December 2022.

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

European High Yield Bond Fund continued

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

From 1 October 2022, the Fund invested in sustainable investments that have E and S objectives. No minimum exposure to either objective was imposed upon the Fund. The Fund used the following E/S pillars that align to the UN Sustainable Development Goals (“SDGs”) to determine economic activities that contributed to E/S objectives:

Pillar	Activities
Climate and resource impact	Reducing greenhouse gases
	Promoting healthy ecosystems
	Nurturing circular economies
Social equity and quality of life	Enabling social equity
	Improving health
	Enhancing quality of life

An issuer’s sustainable contribution is measured as a percentage of its revenue generated from sustainable economic activities, or through its use of proceeds from bond sales used to fund sustainable economic activities.

The Fund held investments in companies which, through their products or services, were aligned to economic activities that contributed to the following objectives:

- reducing greenhouse gases
- promoting healthy ecosystems
- nurturing circular economies
- enabling social equality
- improving health
- enhancing quality of life

More details on the approach to identifying sustainable investments can be found on the website: www.funds.troweprice.com

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

The investment manager utilises its proprietary internal research platform to support its assessment of whether an issuer is causing significant harm to any E/S objective. Combined with third-party data, the “do no significant harm” assessment incorporates issuer information in relation to Principal Adverse Impact (“PAI”) indicators and alignment to certain international guidelines and principles.

Since 1 October 2022, all investments that the investment manager has determined as sustainable have been assessed against all relevant PAI indicators and OECD guidelines for multinational enterprises and the UN Guiding Principles on Business and Human Rights. Based on this assessment, the sustainable investments held by the Fund did not significantly harm any environmental or social objectives.

Do No Significant Harm (DNSH)	OECD Guidelines & Human Rights	Supply Chain
		Employee Treatment
		Society & Community Relations
	PAI Indicators	General Corporate
		Involvement in extreme ESG breaches of international norms
		GHG Emissions
		Biodiversity
		Water, Waste & Material Emissions
		Social & Employee Matters
		Exposure to Controversial Weapons

● **How were the indicators for adverse impacts on sustainability factors taken into account?**

The table above illustrates the framework the investment manager applies to systematically assess DNSH as a part of its investment process, which is inclusive of both PAI indicators and OECD guidelines and human rights principles. Where issuer data for a PAI indicator is unavailable the investment manager used proxy PAI indicators that aligned to the mandatory PAI sub-categories described in the table above.

The investment manager determined whether significant harm was being caused by applying a qualitative and quantitative assessment of the data it has obtained for the mandatory PAI indicators listed in Table 1 and any relevant indicators in Tables 2 and 3 of Annex I of the SFDR Delegated Regulation. The investment manager also analysed issuer PAI metrics relative to internally set thresholds, where relevant and appropriate. These thresholds provided an initial indication of whether significant harm is occurring.

European High Yield Bond Fund continued

The investment manager undertook further analysis to support its view, where necessary. The investment manager considered the materiality of a given indicator relative to an issuer's industry, sector, or location, which was factored into the overall determination. Where sufficient data was not available, other relevant data points were used to make an assessment.

● **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Yes, all sustainable investments were aligned with the UN Guiding Principles on Business and Human Rights and related standards and OECD Guidelines for Multinational Enterprises during the reference period.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the fund that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other Sustainable Investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

From 1 July 2022, the Fund made a commitment to consider the following PAI indicators:

- violations of UN Global Compact principles (PAI #10)
- board gender diversity (PAI #13)
- exposure to controversial weapons (antipersonnel mines, cluster munitions, chemical weapons and biological weapons) (PAI #14)

PAI Indicator	Unit of Measurement	Value (%)	Fund Coverage (%)*
Violations of UN Global Compact principles (PAI #10)	Percentage of Fund invested	0.0	95.2
Board gender diversity (PAI #13)	Average percentage of female board members	15.8	95.2
Exposure to controversial weapons (PAI #14)	Percentage of Fund invested	0.0	95.2

* Fund coverage represents the proportion of investments for which PAI data is available and applicable. The proportion of the Fund that is uncovered consisted of cash and derivatives used for efficient portfolio management.

The Fund considers Violations of UN Global Compact principles (PAI #10) and Exposure to controversial weapons (PAI #14) by restricting investment in companies the investment manager identifies as violating UNGC principles and/or having exposure to controversial weapons. These restrictions are implemented systematically through the T. Rowe Price Responsible Exclusion List. For the reference period, the Fund's exposure to controversial weapons and violations of UN Global Compact was zero. Since these PAI values cannot be improved, the investment manager is not planning any engagement or investment action. The investment manager will continue to monitor these on an ongoing basis.

The Fund considers Board gender diversity (PAI #13) by periodically collecting issuer-level PAI data, aggregating the data and averaging this over the reference period to provide a portfolio-level view of the indicator. In accordance with its PAI policy (available at www.troweprice.com/esg), the investment manager evaluates the portfolio-level view at least annually to identify and prioritise stewardship or investment action, where appropriate. Following this evaluation, the investment manager has updated its diversity expectations, which feed through to its engagement programs and voting policies as follows, in order to pursue an improvement in this figure.

Diversity can be defined across a number of dimensions. However, if a board is to be considered meaningfully diverse in the investment manager's view, some diversity across gender, ethnic, or nationality lines must be present. For companies in EMEA, if no evidence of board diversity is found, the investment manager generally will engage with the company and, in the case of equity holdings, generally opposes the re-elections of Governance Committee members and/or senior executives, as appropriate.

European High Yield Bond Fund continued

In markets where there is a well-established expectation for board diversity (regulatory, quasi-regulatory or listing standards), the investment manager will generally apply the same expectation.

During 2023, in the U.K. market, the minimum expectation for board diversity within FTSE 350 companies will rise to 40% representation of the minority gender. Additionally, the investment manager will continue with its expectation that company boards in the FTSE 100 should include at least one director from an underrepresented ethnic or racial group. For smaller companies in this market, the diversity policy is applied to single-gender boards.

Continuing what has started in 2022:

- In the Continental European markets the investment manager's minimum expectation for board diversity of companies on the main listing is that they should be at least 30% diverse by gender. For smaller companies in these markets, the diversity policy is applied to single-gender boards.
- In markets elsewhere in EMEA the diversity policy is applied to single-gender boards.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January to 31 December 2022

Largest Investments	Sector	% Assets	Country

European High Yield Bond Fund continued

What was the proportion of sustainability-related investments?

● What was the asset allocation?

Asset allocation

describes the share of investments in specific assets.

During the reference period the Fund promoted E/S characteristics by avoiding investing in companies and/or sectors that may be considered harmful to the environment and/or society according to the T. Rowe Price Responsible Exclusion List.

From 1 October 2022 the Fund made a commitment to invest at least 10% of the value of its portfolio in sustainable investments.

● In which economic sectors were the investments made?

Sector	% Assets	Sector	% Assets
Services	15.6	Wireless Communications	2.9
Cable Operators	12.8	Metals & Mining	2.8
Automotive	8.3	Retail	2.0

Entertainment & Leisure	5.6	Manufacturing	1.2
Container	4.6	Other Telecommunications	1.1
Supermarkets	4.3	Other	3.3
Building & Real Estate	4.3	Cash/Reserves	2.0
Broadcasting	4.2		
Building Products	3.6		
Forest Products	3.0		

European High Yield Bond Fund continued

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.

- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The actual proportion of Taxonomy-aligned investments held by the Fund as at 31 December 2022 was 0.0%.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹

- Yes:
- In fossil gas In nuclear energy
- No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● What was the share of investments made in transitional and enabling activities?

The share of investments in transitional activities was 0.0% and in enabling activities was 0.0%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU taxonomy was 12.5%.

Sustainable investments may not be EU Taxonomy aligned for a number of reasons, including:

- The Fund does not currently commit to investing any of its assets in investments aligned with the EU Taxonomy.
- In order to demonstrate EU Taxonomy alignment, the EU Taxonomy Regulation prescribes specific criteria that the investment manager must assess the assets for. These requirements rely heavily on data availability and reliability. Many issuers are currently not required to comply with the Taxonomy disclosure requirements, making it difficult to obtain the data needed to assess Taxonomy alignment.
- Not all economic activities are covered by the EU Taxonomy as it is not possible to develop criteria for all sectors where activities could make a substantial contribution to the environment. Where developed, not all criteria were in place to apply for the reporting period.

European High Yield Bond Fund continued

What was the share of socially sustainable investments?

The share of socially sustainable investments was 16.1%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

These investments included cash positions held as ancillary liquidity and certain derivatives used for hedging and efficient portfolio management which are not screened by the T. Rowe Price Responsible Exclusion List and do not contribute to the Fund’s promotion of environmental and/or social characteristics. The investment manager did not apply any minimum environmental or social safeguards to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Proprietary responsible screen:

The Fund avoided sectors or companies, whose activities may be considered harmful to the environment and/or society, as per the T. Rowe Price Responsible Exclusion List, the investment manager’s proprietary responsible screen.

These restrictions are automated within the investment manager’s internal investment compliance system. Adherence to them is monitored by its investment compliance team on a pre-trade, post-trade and portfolio basis.

The constituents of the T. Rowe Price Responsible Exclusion List are monitored by the investment manager’s ESG specialists using third-party data. While changes can be made at any time, a full review is conducted quarterly.

The investment manager conducts compliance reviews on an on-going basis throughout the year to ensure the Fund is subject to the exclusions and reports quarterly to the Board of Directors of T. Rowe Price Funds SICAV.

There have been no breaches of the T. Rowe Price Responsible Exclusion List identified during the reference period.

Sustainable investment commitment:

As at 31 December 2022, 28.6% of the value of the Fund’s portfolio was invested in securities that the investment manager identified as sustainable investments.

The sustainable investments have been identified using the following steps:

The investment manager identified each investee company’s contribution to an E/S objective based on the company’s revenue derived from that specific sustainable activity, or through its use of proceeds from bond sales. The sustainable investment exposure for each company was aggregated by the investment manager. This means that only the proportion of the investment contributing to a sustainable activity by an investee company was counted towards meeting the Fund’s minimum 10% commitment.

The investment manager has adopted a robust process to consistently identify whether a company causes significant harm to an E/S objective and incorporates PAIs into that assessment, where appropriate on an issuer-by-issuer basis. Its “do no significant harm» assessment is comprised of both proprietary research and third-party data inputs, including data in relation to PAI where relevant to the issuer and/or sector. The investment manager assessed whether the company caused significant harm by setting and monitoring thresholds, where relevant and appropriate, relative to PAI indicators, and whether it has been involved in significant controversies related to the OECD guidelines for multinational enterprises and UNGPs on business and human rights. If the activity breached the set thresholds, regardless of the percentage of revenue alignment (or use of bond proceeds) to an E/S objective, the company failed the sustainable investment test.

The investment manager also assessed the governance practices of an investee company by undertaking:

- A quantitative review using the investment manager’s good governance test which consists of weighted pillars designed to measure specific corporate governance risks, rolled up to an overall rating, and
- A qualitative review by the governance team if a company’s good governance test rating is red, taking into account market and sector norms.

All investments held by the Fund that contributed to a specific E/S objective and passed “do no significant harm» as well as good governance assessments, as detailed above, contributed towards the Fund’s overall exposure to sustainable investments.

European High Yield Bond Fund continued

How did this financial product perform compared to the reference benchmark?

Reference benchmarks

are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

A reference benchmark is not used for the purpose of promoting the Fund's E/S characteristics.

US Equity Fund

Legal entity identifier: KWR8UEVM6WRT0Q148C22

1 October to 31 December 2022

Environmental and/or social characteristics

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** _____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** _____%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 39.8% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

During the reference period the promotion of environmental and/or social ("E/S") characteristics was achieved by meeting the Fund's commitment to:

- Avoid sectors or companies, whose activities may be considered harmful to the environment and/or society through the application of its proprietary responsible screen (the T. Rowe Price Responsible Exclusion List)*.
- Maintain at least 10% of the value of its portfolio invested in sustainable investments.

* From 1 January 2023 the E/S characteristics promoted by the Fund changed. Please refer to the latest prospectus for more information.

● How did the sustainability indicators perform?

The sustainability indicators performed as follows:

- The Fund did not hold any securities that were included in the T. Rowe Price Responsible Exclusion List.
- As at 31 December 2022, 39.8% of the value of the Fund's portfolio was invested in securities that the investment manager identified as sustainable investments.

T. Rowe Price calculates the proportion of sustainable investments during a reference period by averaging quarter-end portfolio measurements. As the Fund's sustainable investment commitment took effect from 1 October 2022, the sustainability indicator reflects the sustainable investment proportion on 31 December 2022.

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

US Equity Fund continued

● What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Fund invested in sustainable investments that have E and S objectives. No minimum exposure to either objective was imposed upon the Fund. The Fund used the following E/S pillars that align to the UN Sustainable Development Goals (“SDGs”) to determine economic activities that contributed to E/S objectives:

Pillar	Activities
Climate and resource impact	Reducing greenhouse gases Promoting healthy ecosystems Nurturing circular economies
Social equity and quality of life	Enabling social equity Improving health Enhancing quality of life

An issuer’s sustainable contribution is measured as a percentage of its revenue generated from sustainable economic activities.

The Fund held investments in companies which, through their products or services, were aligned to economic activities that contributed to the following objectives:

- reducing greenhouse gases
- promoting healthy ecosystems
- nurturing circular economies
- enabling social equality
- improving health
- enhancing quality of life

More details on the approach to identifying sustainable investments can be found on the website: www.funds.troweprice.com

● How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The investment manager utilises its proprietary internal research platform to support its assessment of whether an issuer is causing significant harm to any E/S objective. Combined with third-party data, the “do no significant harm” assessment incorporates issuer information in relation to Principal Adverse Impact (“PAI”) indicators and alignment to certain international guidelines and principles.

All investments that the investment manager has determined as sustainable have been assessed against all relevant PAI indicators and OECD guidelines for multinational enterprises and the UN Guiding Principles on Business and Human Rights. Based on this assessment, the sustainable investments held by the Fund did not significantly harm any environmental or social objectives.

Do No Significant Harm (DNSH)	OECD Guidelines & Human Rights	Supply Chain
		Employee Treatment
		Society & Community Relations
		General Corporate
		Involvement in extreme ESG breaches of international norms
		GHG Emissions
		Biodiversity
	PAI Indicators	Water, Waste & Material Emissions
		Social & Employee Matters
		Exposure to Controversial Weapons

● How were the indicators for adverse impacts on sustainability factors taken into account?

The table above illustrates the framework the investment manager applies to systematically assess DNSH as a part of its investment process, which is inclusive of both PAI indicators and OECD guidelines and human rights principles. Where issuer data for a PAI indicator is unavailable the investment manager used proxy PAI indicators that aligned to the mandatory PAI sub-categories described in the table above.

The investment manager determined whether significant harm was being caused by applying a qualitative and quantitative assessment of the data it has obtained for the mandatory PAI indicators listed in Table 1 and any relevant indicators in Tables 2 and 3 of Annex I of the SFDR Delegated Regulation. The investment manager also analysed issuer PAI metrics relative to internally set thresholds, where relevant and appropriate. These thresholds provided an initial indication of whether significant harm is occurring.

US Equity Fund continued

The investment manager undertook further analysis to support its view, where necessary. The investment manager considered the materiality of a given indicator relative to an issuer’s industry, sector, or location, which was factored into the overall determination. Where sufficient data was not available, other relevant data points were used to make an assessment.

● **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Yes, all sustainable investments were aligned with the UN Guiding Principles on Business and Human Rights and related standards and OECD Guidelines for Multinational Enterprises during the reference period.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the fund that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other Sustainable Investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Fund made a commitment to consider the following PAI indicators:

- violations of UN Global Compact principles (PAI #10)
- board gender diversity (PAI #13)
- exposure to controversial weapons (antipersonnel mines, cluster munitions, chemical weapons and biological weapons) (PAI #14)

PAI Indicator	Unit of Measurement	Value (%)	Fund Coverage (%)*
Violations of UN Global Compact principles (PAI #10)	Percentage of Fund invested	0.0	99.7
Board gender diversity (PAI #13)	Average percentage of female board members	31.4	99.7
Exposure to controversial weapons (PAI #14)	Percentage of Fund invested	0.0	99.7

* Fund coverage represents the proportion of investments for which PAI data is available and applicable. The proportion of the Fund that is uncovered consisted of cash and derivatives used for efficient portfolio management.

The Fund considers Violations of UN Global Compact principles (PAI #10) and Exposure to controversial weapons (PAI #14) by restricting investment in companies the investment manager identifies as violating UNGC principles and/or having exposure to controversial weapons. These restrictions are implemented systematically through the T. Rowe Price Responsible Exclusion List. For the reference period, the Fund’s exposure to controversial weapons and violations of UN Global Compact was zero. Since these PAI values cannot be improved, the investment manager is not planning any engagement or investment action. The investment manager will continue to monitor these on an ongoing basis.

The Fund considers Board gender diversity (PAI #13) by periodically collecting issuer-level PAI data, aggregating the data and averaging this over the reference period to provide a portfolio-level view of the indicator. In accordance with its PAI policy (available at www.troweprice.com/esg), the investment manager evaluates the portfolio-level view at least annually to identify and prioritise stewardship or investment action, where appropriate. Following this evaluation, the investment manager has updated its diversity expectations, which feed through to its engagement programs and voting policies as follows, in order to pursue an improvement in this figure.

Diversity can be defined across a number of dimensions. However, if a board is to be considered meaningfully diverse in the investment manager’s view, some diversity across gender, ethnic, or nationality lines must be present. For companies in the Americas, if no evidence of board diversity is found, the investment manager generally will engage with the company and, in the case of equity holdings, generally opposes the re-elections of Governance Committee members and/or senior executives, as appropriate.

- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The actual proportion of Taxonomy-aligned investments held by the Fund as at 31 December 2022 was 0.0%.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?**

- Yes:
- In fossil gas In nuclear energy
- No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The share of investments in transitional activities was 0.0% and in enabling activities was 0.0%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU taxonomy was 13.0%.

Sustainable investments may not be EU Taxonomy aligned for a number of reasons, including:

- The Fund does not currently commit to investing any of its assets in investments aligned with the EU Taxonomy.
- In order to demonstrate EU Taxonomy alignment, the EU Taxonomy Regulation prescribes specific criteria that the investment manager must assess the assets for. These requirements rely heavily on data availability and reliability. Many issuers are currently not required to comply with the Taxonomy disclosure requirements, making it difficult to obtain the data needed to assess Taxonomy alignment.
- Not all economic activities are covered by the EU Taxonomy as it is not possible to develop criteria for all sectors where activities could make a substantial contribution to the environment. Where developed, not all criteria were in place to apply for the reporting period.

US Equity Fund continued

What was the share of socially sustainable investments?

The share of socially sustainable investments was 26.9%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

These investments included cash positions held as ancillary liquidity and certain derivatives used for hedging and efficient portfolio management which are not screened by the T. Rowe Price Responsible Exclusion List and do not contribute to the Fund’s promotion of environmental and/or social characteristics. The investment manager did not apply any minimum environmental or social safeguards to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Proprietary responsible screen:

The Fund avoided sectors or companies, whose activities may be considered harmful to the environment and/or society, as per the T. Rowe Price Responsible Exclusion List, the investment manager’s proprietary responsible screen.

These restrictions are automated within the investment manager’s internal investment compliance system. Adherence to them is monitored by its investment compliance team on a pre-trade, post-trade and portfolio basis.

The constituents of the T. Rowe Price Responsible Exclusion List are monitored by the investment manager’s ESG specialists using third-party data. While changes can be made at any time, a full review is conducted quarterly.

The investment manager conducts compliance reviews on an on-going basis throughout the year to ensure the Fund is subject to the exclusions and reports quarterly to the Board of Directors of T. Rowe Price Funds SICAV.

There have been no breaches of the T. Rowe Price Responsible Exclusion List identified during the reference period.

Sustainable investment commitment:

As at 31 December 2022, 39.8% of the value of the Fund’s portfolio was invested in securities that the investment manager identified as sustainable investments.

The sustainable investments have been identified using the following steps:

The investment manager identified each investee company’s contribution to an E/S objective based on the company’s revenue derived from that specific sustainable activity, or through its use of proceeds from bond sales. The sustainable investment exposure for each company was aggregated by the investment manager. This means that only the proportion of the investment contributing to a sustainable activity by an investee company was counted towards meeting the Fund’s minimum 10% commitment.

The investment manager has adopted a robust process to consistently identify whether a company causes significant harm to an E/S objective and incorporates PAIs into that assessment, where appropriate on an issuer-by-issuer basis. Its “do no significant harm” assessment is comprised of both proprietary research and third-party data inputs, including data in relation to PAI where relevant to the issuer and/or sector. The investment manager assessed whether the company caused significant harm by setting and monitoring thresholds, where relevant and appropriate, relative to PAI indicators, and whether it has been involved in significant controversies related to the OECD guidelines for multinational enterprises and UNGPs on business and human rights. If the activity breached the set thresholds, regardless of the percentage of revenue alignment (or use of bond proceeds) to an E/S objective, the company failed the sustainable investment test.

The investment manager also assessed the governance practices of an investee company by undertaking:

- A quantitative review using the investment manager’s good governance test which consists of weighted pillars designed to measure specific corporate governance risks, rolled up to an overall rating, and
- A qualitative review by the governance team if a company’s good governance test rating is red, taking into account market and sector norms.

All investments held by the Fund that contributed to a specific E/S objective and passed “do no significant harm” as well as good governance assessments, as detailed above, contributed towards the Fund’s overall exposure to sustainable investments.

US Equity Fund continued

How did this financial product perform compared to the reference benchmark?

Reference benchmarks

are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

A reference benchmark is not used for the purpose of promoting the Fund's E/S characteristics.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Threadneedle (Lux) American Smaller Companies

Legal entity identifier: 549300FL849SFZ3EMB26

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
<p>●● <input type="checkbox"/> Yes</p> <p><input type="checkbox"/> It made sustainable investments with an environmental objective: ___%</p> <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <p><input type="checkbox"/> It made sustainable investments with a social objective: ___%</p>	<p>● ● <input checked="" type="checkbox"/> No</p> <p><input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments</p> <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective <p><input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments</p>

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The financial product promoted environmental and social characteristics by integrating the following responsible investment measures into the investment decision-making process:

- Comparing favourably with the index on material ESG criteria, measured by the Columbia Threadneedle ESG Materiality Rating model, over 12 month rolling periods.
- Maintaining at least 50% of the Portfolio holdings in companies rated 1-3 on the Columbia Threadneedle ESG Materiality Rating. Where necessary, by assessing companies that are not covered by the ESG Materiality Rating Model using fundamental research, or by engaging with companies that have a low ESG Materiality rating for improvement, in order to achieve this 50% minimum commitment.
- Excluding companies in breach of accepted international standards and principles, such as the United Nations Global Compact and the United Nations Guiding Principles on Business and Human Rights.
- Excluding companies with involvement in controversial weapons, in line with the Columbia Threadneedle Controversial Weapons Policy, and companies with direct involvement in nuclear weapons.
- To support the promotion of environmental and social characteristics, engaging with companies with a view to influence management teams to improve their practices, for example on issues relating to carbon emissions.

● ***How did the sustainability indicators perform?***

The financial product has the following sustainability indicators:

- The primary indicator is the positive weighted average ESG Materiality rating of the Portfolio versus the Russell 2500 Index, assessed over a rolling 12-month period. The positive ESG Materiality rating versus the index was monitored on a daily basis by our compliance systems. The portfolio maintained a better ESG Materiality rating than the benchmark throughout the period.
On 31 March 2023 the portfolio rating was 2.41 and the benchmark rating was 2.97 (on a scale of 1-5, where lower is better).
- We invested at least 50% of the Portfolio in companies that have a strong ESG Materiality Rating. Where necessary, we may assess companies that are not covered by the ESG Materiality Rating Model using fundamental research, or by engaging with companies that have a low ESG Materiality rating for improvement, in order to achieve this 50% minimum commitment. The financial product maintained over 50% of its holdings in companies rated 1-3 over the period.
- We excluded companies that we determined were in breach of accepted international standards, for example the UN Global Compact Principles. The exclusion policy was adhered to with the application of strict pre-trade restrictions and was monitored on an ongoing basis.
- We also adhered to our Controversial Weapons Policy and excluded companies with direct involvement in nuclear weapons.

As these indicators form the basis of the environmental and/or social characteristics promoted by the financial product, they are also the binding elements of Portfolio's ESG strategy.

● **...and compared to previous periods?**

We will provide a comparison of the sustainability indicators to a previous period in the next report.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Not applicable – the financial product does not make a commitment to invest in sustainable investments.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Not applicable – the financial product does not make a commitment to invest in sustainable investments.

— **How were the indicators for adverse impacts on sustainability factors taken into account?**

Not applicable – the financial product does not make a commitment to invest in sustainable investments.

— **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Not applicable – the financial product does not make a commitment to invest in sustainable investments.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

Not applicable – the financial product does not make a commitment to consider the principal adverse impacts of investment decisions on sustainability factors.

What were the top investments of this financial product?

Largest investments	Sector	Average weight	Country
WILLSCOT MOBILE MINI	Industrials	3.83%	United States
AVISTA CORP	Utilities	3.76%	United States
CONMED CORP	Health Care	3.54%	United States
CARRIAGE SERVICES INC	Consumer	3.32%	United States

ESSENT GROUP LTD	Financials	1.92%	United States

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period.

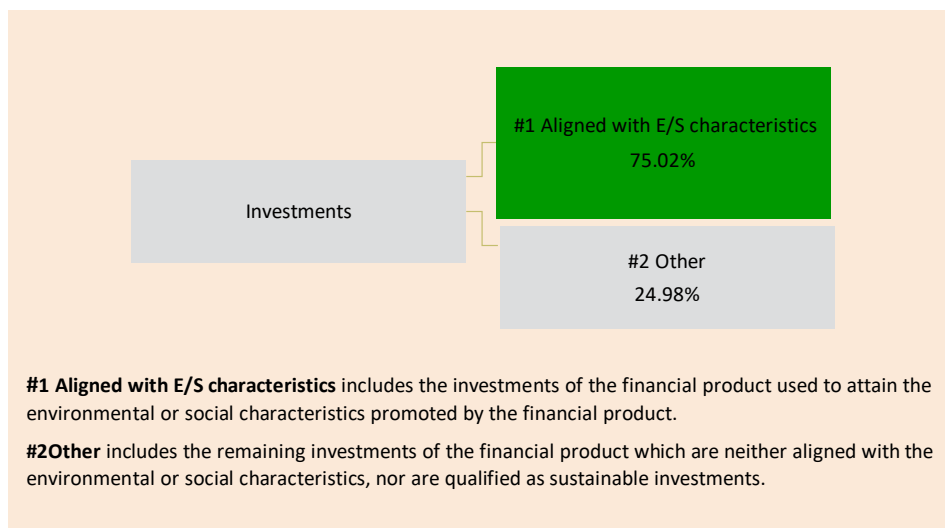

What was the proportion of sustainability-related investments?

● What was the asset allocation?

75.02% of the financial product was invested in companies with an ESG Materiality rating of 1-3 and so were aligned with E/S characteristics.

24.98% of the financial product was invested in: (1) companies with an ESG Materiality rating of 4 or 5 and so were not aligned with E/S characteristics, (2) companies not covered by the ESG Materiality model, and (3) cash and derivatives.

Asset allocation describes the share of investments in specific assets.

● **In which economic sectors were the investments made?**

Sector	Average weight
Industrials	18.55%
Financials	15.65%
Consumer Discretionary	13.46%
Health Care	11.91%
Information Technology	11.28%
Materials	6.48%
Consumer Staples	6.27%
Energy	5.66%
Utilities	3.76%
Real Estate	3.02%
Cash	2.54%
Communication Services	1.43%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

The fund does not have a commitment to align with the EU criteria for environmentally sustainable economic activities as defined by the EU Taxonomy Regulation.

Based on reliable data that has been made available to date, the fund is reporting 0% of its investments are in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

Yes:

In fossil gas In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

0% of the investments made by the fund are in transitional and enabling activities as defined by the EU Taxonomy Regulation.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Based on reliable data that has been made available to date, the fund is reporting 0% of its investments are in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation. The fund is yet to report any alignment to the EU Taxonomy Regulation.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable - the fund does not have a commitment to invest in sustainable investments with an environmental objective not aligned with the EU Taxonomy Regulation.

What was the share of socially sustainable investments?

Not applicable - the fund does not have a commitment to invest in sustainable investments with a social objective

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Holdings classified as “other” include (i) ancillary liquid assets (i.e. bank deposit at sight) which are held for the purposes of liquidity management; (ii) bank deposits, money market instruments or money market funds held for treasury purposes; (iii) derivatives for hedging purposes; (iv) companies with an ESG Materiality rating of 4 or 5; or (v) companies not covered by the ESG Materiality model.

These investments are not used to meet the environmental and social characteristics of the Portfolio. The purpose of these securities is to provide a diversified portfolio that can achieve the financial objective.

Minimum environmental or social safeguards are ensured by applying the exclusion screening to all holdings in investee companies. For cash positions and derivatives, ESG considerations are integrated into the counterparty risk assessment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

We engaged with companies, aiming to influence their approach to ESG risks and ESG practices.

For example, over the period we engaged with Livent about the key E&S themes affecting them and their ability to retain a licence to operate. The company is aware that licence to operate is critical and claim to be prioritizing human rights, building community relationships and ensuring they meet customers' demands for well audited, lower impact supply chains. The company's highest profile site is in Argentina, where they have historically had issues with anti-mining protests. They have worked with a UN affiliated NGO to run townhall events for locals, and are aware of the need to maintain Free, Prior and Informed Consent on an ongoing basis. The desire to proceed with operations in a way that also benefits communities is one of the main drivers behind seeking IRMA accreditation. Another driver for this is that major OEMs (Livent customers) are on the IRMA board and are pushing suppliers in this direction due to their emphasis on supply chain traceability and carbon reductions. Water is a material topic in lithium extraction, so the company has liaised with local government authorities and US universities to develop a hydro geological study of the area, identifying that they are not as exposed to water stress as peers due to local geographical quirks. They are heavily monitored in the area, and communicate with local communities as well as the authorities on water consumption. Livent have a target to be net zero by 2040, but only a 30% GHG intensity reduction target by 2030, implying significant reductions post 2030. In the near term they are working on process optimisation and are confident of meeting the 2030 target. However longer term they may face challenges sourcing renewables. The company's disclosure remains light and nature impact reduction plans are unclear. Overall Livent have a robust approach to E&S issues for a company their size, however more tangible plans and disclosure on how they are reducing emissions, water consumption and nature impacts will be required, as well as strengthened, clearer approaches to human rights and community relations.

We also engaged with Medpace by writing to the company to explain the importance of diversity in clinical trials to us as investors. We raised our interest in learning more about the company's strategy while simultaneously encouraging greater transparency from the industry on topics such as trust-building with (historically) underrepresented trial participants, incentivization of trial participation (e.g., rewards, infrastructural challenges, decentralized trials), hiring practices, internal awareness and capacity-building, collaboration with relevant stakeholder groups such as patient groups and industry initiatives and tracking of effectiveness of diversity in clinical trials strategy including data collection and use of findings to adapt approaches. We ended the email by asking for an engagement call.

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable - the financial product does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that the Portfolio promotes.

- **How does the reference benchmark differ from a broad market index?**

Not applicable - the financial product does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that the Portfolio promotes.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

Not applicable - the financial product does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that the Portfolio promotes.

- ***How did this financial product perform compared with the reference benchmark?***

Not applicable - the financial product does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that the Portfolio promotes.

- ***How did this financial product perform compared with the broad market index?***

Over the period, the financial product maintained a superior ESG profile to the Russell 2500 Index, as measured by the Columbia Threadneedle Investments ESG Materiality Rating model.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="radio"/> Yes	<input type="radio"/> <input checked="" type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promoted environmental and social characteristics by integrating the following responsible investment measures into the investment decision-making process:

- Comparing favorably with the index on material ESG criteria, measured by the Columbia Threadneedle ESG Materiality Rating model, over 12 month rolling periods.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- We invested at least 80% of the portfolio in companies with strong or improving ESG characteristics, measured by a combination of the ESG Materiality rating and fundamental research of portfolio companies. The Portfolio will tend to favour companies which score strongly on the Columbia Threadneedle ESG Materiality Rating, therefore giving the Portfolio a positive tilt in favour of ESG characteristics when compared with those of the MSCI Europe Index on a rolling 12-month basis. All strongly rated companies are considered as aligned with the E/S characteristics promoted by the Portfolio. However, the Portfolio may invest in companies with a poorer rating and these companies are also considered as aligned with the E/S characteristics promoted by the Portfolio on the basis that these securities, notwithstanding such rating, are (i) determined through our fundamental research to already demonstrate strong ESG practices or (ii) have scope for improvement in their ESG practices. We seek to encourage such improvements through the implementation of its engagement policy.
- Excluding companies in breach of accepted international standards and principles, such as the United Nations Global Compact and the United Nations Guiding Principles on Business and Human Rights.
- Excluding companies with involvement in controversial weapons, in line with the Columbia Threadneedle Controversial Weapons Policy, and companies with direct involvement in nuclear weapons.
- To support the promotion of environmental and social characteristics, engaging with companies with a view to influence management teams to improve their practices, for example on issues relating to carbon emissions.

● **How did the sustainability indicators perform?**

The financial product has the following sustainability indicators:

- The primary indicator is the positive weighted average ESG Materiality rating of the Portfolio versus the MSCI Europe (Gross TR) Index, assessed over rolling 12-month periods. The positive ESG Materiality rating versus the index was monitored on a daily basis by our compliance systems. The portfolio maintained a better ESG Materiality rating than the benchmark throughout the period.
On 31 March 2023 the portfolio rating was 2.70 and the benchmark rating was 2.79 (on a scale of 1-5, where lower is better).
- We invested at least 80% of the portfolio in companies with strong or improving ESG characteristics, measured by a combination of the ESG Materiality rating and fundamental research of companies.
- We excluded companies that we determined were in breach of accepted international standards, for example the UN Global Compact Principals. The exclusion policy was adhered to with the application of strict pre-trade restrictions and was monitored on an ongoing basis.
- We also adhered to our Controversial Weapons Policy and excluded companies with direct involvement in nuclear weapons.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

As these indicators form the basis of the environmental and/or social characteristics promoted by the financial product, they are also the binding elements of Portfolio's ESG strategy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

**To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?**

The fund does not have a commitment to align with the EU criteria for environmentally sustainable economic activities as defined by the EU Taxonomy Regulation.

Based on reliable data that has been made available to date, the fund is reporting 0% of its investments are in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

Yes:

In fossil gas In nuclear energy

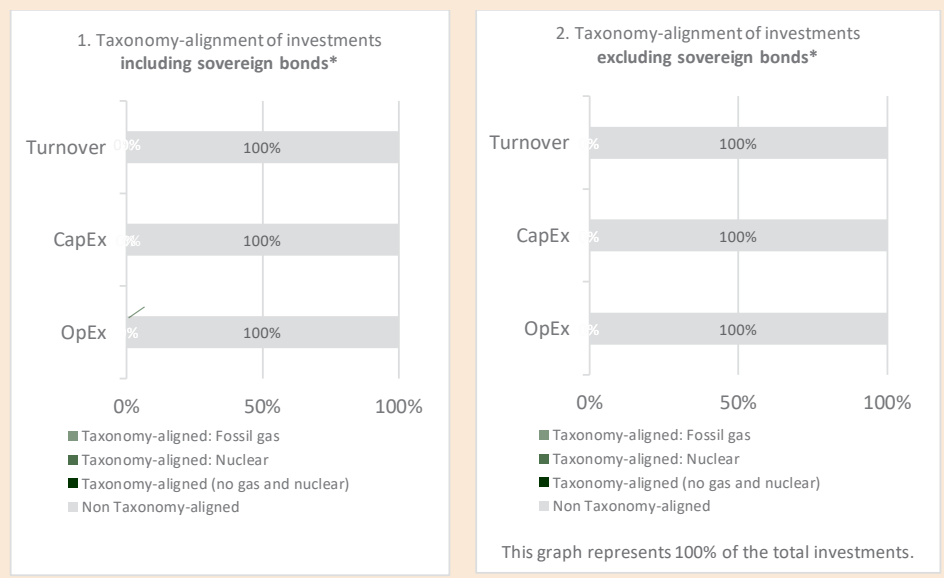

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

0% of the investments made by the fund are in transitional and enabling activities as defined by the EU Taxonomy Regulation.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Based on reliable data that has been made available to date, the fund is reporting 0% of its investments are in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation. The fund is yet to report any alignment to the EU Taxonomy Regulation.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable - the fund does not have a commitment to invest in sustainable investments with an environmental objective not aligned with the EU Taxonomy Regulation.

What was the share of socially sustainable investments?

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

- Not applicable - the fund does not have a commitment to invest in sustainable investments with a social objective

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Holdings classified as “other” include (i) ancillary liquid assets (i.e. bank deposit at sight) which are held for the purposes of liquidity management; (ii) bank deposits, money market instruments or money market funds held for treasury purposes; or (iii) derivatives for hedging purposes.

Minimum environmental or social safeguards for cash positions and derivatives are integrated into the ESG counterparty risk assessment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

We engaged with companies, aiming to influence their approach to ESG risks and ESG practices.

For example, over the period we engaged with ASM International to discuss governance and the incorporation of ESG metrics into executive remuneration. This will provide accountability for leadership. Following our engagement, the company agreed to implement this. Additionally, following engagements in 2022, the company has improved workplace diversity and set future gender hiring targets. Lastly, the company has set emissions target in line with the global 1.5C pathway.

We also discussed nutrition strategy with Nestle. The company shared their ambition to be a leader in the sale of healthy food products. We expressed concern that, unlike their peers, Nestle do not have any specific targets. We stated that any targets would send a strong message to the wider industry. We will continue to engage on this theme.

How did this financial product perform compared to the reference benchmark?

Not applicable - the financial product does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that the Portfolio promotes.

- *How does the reference benchmark differ from a broad market index?*

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable - the financial product does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that the Portfolio promotes.

Not applicable - the financial product does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that the Portfolio promotes.

- ***How did this financial product perform compared with the broad market index?***

Over the period, the financial product maintained a superior ESG profile to the MSCI Europe (Gross TR) Index, as measured by the Columbia Threadneedle Investments ESG Materiality Rating model.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Threadneedle (Lux) Pan European Smaller Companies

Legal entity identifier: 549300FG0S32L53EKJ87

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective? *[tick and fill in as relevant, the percentage figure represents sustainable investments]*

<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Yes	<input type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective <input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The financial product promoted environmental and social characteristics by integrating the following responsible investment measures into the investment decision-making process:

- Comparing favourably with the index on material ESG criteria, measured by the Columbia Threadneedle ESG Materiality Rating model, over 12 month rolling periods.

- Maintaining at least 50% of the Portfolio holdings in companies rated 1-3 on the Columbia Threadneedle ESG Materiality Rating. Where necessary, by assessing companies that are not covered by the ESG Materiality Rating Model using fundamental research, or by engaging with companies that have a low ESG Materiality rating for improvement, in order to achieve this 50% minimum commitment.
- Excluding companies in breach of accepted international standards and principles, such as the United Nations Global Compact and the United Nations Guiding Principles on Business and Human Rights.
- Excluding companies with involvement in controversial weapons, in line with the Columbia Threadneedle Controversial Weapons Policy, and companies with direct involvement in nuclear weapons.
- To support the promotion of environmental and social characteristics, engaging with companies with a view to influence management teams to improve their practices, for example on issues relating to carbon emissions.

● ***How did the sustainability indicators perform?***

The financial product has the following sustainability indicators:

- The primary indicator is the positive weighted average ESG Materiality rating of the Portfolio versus the EMIX Smaller Europe (inc UK) Index, assessed over rolling 12-month periods. The positive ESG Materiality rating versus the index was monitored on a daily basis by our compliance systems. The portfolio maintained a better ESG Materiality rating than the benchmark throughout the period.
On 31 March 2023 the portfolio rating was 2.76 and the benchmark rating was 2.97 (on a scale of 1-5, where lower is better).
- We invest at least 50% of the Portfolio in companies that have a strong ESG Materiality Rating. Where necessary, we may assess companies that are not covered by the ESG Materiality Rating Model using fundamental research, or by engaging with companies that have a low ESG Materiality rating for improvement, in order to achieve this 50% minimum commitment. The financial product maintained over 50% of its holdings in companies rated 1-3 over the period.
- We excluded companies that we determined were in breach of accepted international standards, for example the UN Global Compact Principals. The exclusion policy was adhered to with the application of strict pre-trade restrictions and was monitored on an ongoing basis.
- We also adhered to our Controversial Weapons Policy and excluded companies with direct involvement in nuclear weapons.

As these indicators form the basis of the environmental and/or social characteristics promoted by the financial product, they are also the binding elements of Portfolio's ESG strategy.

● **...and compared to previous periods?**

We will provide a comparison of the sustainability indicators to a previous period in the next report.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Not applicable – the financial product does not make a commitment to invest in sustainable investments.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Not applicable – the financial product does not make a commitment to invest in sustainable investments.

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable – the financial product does not make a commitment to invest in sustainable investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable – the financial product does not make a commitment to invest in sustainable investments.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

Not applicable – the financial product does not make a commitment to consider the principal adverse impacts of investment decisions on sustainability factors.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period.

Largest investments	Sector	Average weight	Country
SIG GROUP N AG	Materials	2.60%	Switzerland
CVS GROUP PLC	Health Care	2.50%	United Kingdom
CTS EVENTIM AG	Communication Services	2.41%	Germany
WATCHES OF SWITZERLAND GROUP PLC	Consumer Discretionary	2.20%	United Kingdom
EUROFINS SCIENTIFIC	Health Care	2.09%	Luxembourg
FINECOBANK BANCA FINECO	Financials	2.08%	Italy
GENUS PLC	Health Care	2.06%	United Kingdom
AVANZA BANK HOLDING	Financials	2.05%	Sweden
ST.JAMES PLACE PLC	Financials	2.04%	United Kingdom
HOWDEN JOINERY GROUP PLC	Industrials	2.01%	United Kingdom
BIG YELLOW GROUP PLC	Real Estate	2.00%	United Kingdom
COMPUGROUP MEDICAL N	Health Care	1.97%	Germany
BELIMO N AG	Industrials	1.96%	Switzerland
FLUIDRA SA	Industrials	1.94%	Spain
ASM INTERNATIONAL NV	Information Technology	1.88%	Netherlands

What was the proportion of sustainability-related investments?

● *What was the asset allocation?*

57.5% of the financial product was invested in companies with an ESG Materiality rating of 1-3 and so were aligned with E/S characteristics.

Asset allocation describes the share of investments in specific assets.

42.5% of the financial product was invested in: (1) companies with an ESG Materiality rating of 4 or 5 and so were not aligned with E/S characteristics, and (2) companies not covered by the ESG Materiality model, and (3) cash and derivatives.

● In which economic sectors were the investments made?

Sector	Average weight
Industrials	20.71%
Health Care	18.02%
Information Technology	14.10%
Financials	12.31%
Consumer Discretionary	10.49%
Materials	9.52%
Communication Services	8.19%
Consumer Staples	3.38%
Real Estate	2.65%
Energy	0.08%
Cash	0.56%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The fund does not have a commitment to align with the EU criteria for environmentally sustainable economic activities as defined by the EU Taxonomy Regulation.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

Based on reliable data that has been made available to date, the fund is reporting 0% of its investments are in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation.

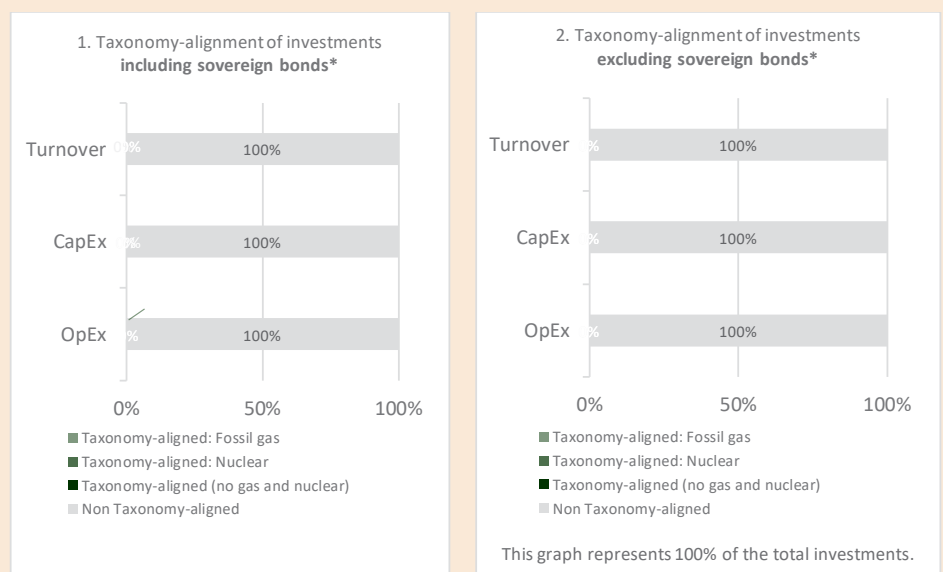

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

Yes:

In fossil gas In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

0% of the investments made by the fund are in transitional and enabling activities as defined by the EU Taxonomy Regulation.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Based on reliable data that has been made available to date, the fund is reporting 0% of its investments are in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation. The fund is yet to report any alignment to the EU Taxonomy Regulation.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable - the fund does not have a commitment to invest in sustainable investments with an environmental objective not aligned with the EU Taxonomy Regulation.

What was the share of socially sustainable investments?

Not applicable - the fund does not have a commitment to invest in sustainable investments with a social objective

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Holdings classified as “other” include (i) ancillary liquid assets (i.e. bank deposit at sight) which are held for the purposes of liquidity management; (ii) bank deposits, money market instruments or money market funds held for treasury purposes; (iii) derivatives for hedging purposes; (iv) companies with an ESG Materiality rating of 4 or 5; or (v) companies not covered by the ESG Materiality model.

These investments are not used to meet the environmental and social characteristics of the Portfolio. The purpose of these securities is to provide a diversified portfolio that can achieve the financial objective.

Minimum environmental or social safeguards are ensured by applying the exclusion screening to all holdings in investee companies. For cash positions and derivatives, ESG considerations are integrated into the counterparty risk assessment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

We engaged with companies, aiming to influence their approach to ESG risks and ESG practices.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

For example, over the period we engaged with ASM International to discuss governance and the incorporation of ESG metrics into executive remuneration. This will provide accountability for leadership. Following our engagement, the company agreed to implement this. Additionally, following engagements in 2022, the company has improved workplace diversity and set future gender hiring targets. Lastly, the company has set emissions target in line with the global 1.5C pathway.

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable - the financial product does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that the Portfolio promotes.

- ***How does the reference benchmark differ from a broad market index?***

Not applicable - the financial product does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that the Portfolio promotes.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

Not applicable - the financial product does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that the Portfolio promotes.

- ***How did this financial product perform compared with the reference benchmark?***

Not applicable - the financial product does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that the Portfolio promotes.

- ***How did this financial product perform compared with the broad market index?***

Over the period, the financial product maintained a superior ESG profile to the EMIX Smaller Europe (inc UK) Index, as measured by the Columbia Threadneedle Investments ESG Materiality Rating model.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Threadneedle (Lux) Global Smaller Companies

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
<p style="margin: 0;"><input checked="" type="radio"/> <input type="radio"/> Yes</p> <p style="margin: 0;"><input type="checkbox"/> It made sustainable investments with an environmental objective: ____%</p> <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <p style="margin: 0;"><input type="checkbox"/> It made sustainable investments with a social objective: ____%</p>	<p style="margin: 0;"><input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No</p> <p style="margin: 0;"><input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments</p> <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective <p style="margin: 0;"><input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments</p>

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The financial product promoted environmental and social characteristics by integrating the following responsible investment measures into the investment decision-making process:

- Comparing favourably with the index on material ESG criteria, measured by the Columbia Threadneedle ESG Materiality Rating model, over 12 month rolling periods.
- Maintaining at least 50% of the Portfolio holdings in companies rated 1-3 on the Columbia Threadneedle ESG Materiality Rating. Where necessary, by assessing companies that are not covered by the ESG Materiality Rating Model using fundamental research, or by engaging with companies that have a low ESG Materiality rating for improvement, in order to achieve this 50% minimum commitment.
- Excluding companies in breach of accepted international standards and principles, such as the United Nations Global Compact and the United Nations Guiding Principles on Business and Human Rights.
- Excluding companies with involvement in controversial weapons, in line with the Columbia Threadneedle Controversial Weapons Policy, and companies with direct involvement in nuclear weapons.
- To support the promotion of environmental and social characteristics, engaging with companies with a view to influence management teams to improve their practices, for example on issues relating to carbon emissions.

● ***How did the sustainability indicators perform?***

The financial product has the following sustainability indicators:

- The primary indicator is the positive weighted average ESG Materiality rating of the Portfolio versus the MSCI World Small Cap Index, assessed over rolling 12-month periods. The positive ESG Materiality rating versus the index was monitored on a daily basis by our compliance systems. The portfolio maintained a better ESG Materiality rating than the benchmark throughout the period.
On 31 March 2023 the portfolio rating was 2.70 and the benchmark rating was 2.99 (on a scale of 1-5, where lower is better).
- We invest at least 50% of the Portfolio in companies that have a strong ESG Materiality Rating. Where necessary, we may assess companies that are not covered by the ESG Materiality Rating Model using fundamental research, or by engaging with companies that have a low ESG Materiality rating for improvement, in order to achieve this 50% minimum commitment. The financial product maintained over 50% of its holdings in companies rated 1-3 over the period.
- We excluded companies that we determined were in breach of accepted international standards, for example the UN Global Compact Principles. The exclusion policy was adhered to with the application of strict pre-trade restrictions and was monitored on an ongoing basis.
- We also adhered to our Controversial Weapons Policy and excluded companies with direct involvement in nuclear weapons.

As these indicators form the basis of the environmental and/or social characteristics promoted by the financial product, they are also the binding elements of Portfolio's ESG strategy.

● **...and compared to previous periods?**

We will provide a comparison of the sustainability indicators to a previous period in the next report.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Not applicable – the financial product does not make a commitment to invest in sustainable investments.

- **operational expenditure (OpEx)** reflecting green operational activities of investee

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The fund does not have a commitment to align with the EU criteria for environmentally sustainable economic activities as defined by the EU Taxonomy Regulation.

Based on reliable data that has been made available to date, the fund is reporting 0% of its investments are in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

Yes:

In fossil gas In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

0% of the investments made by the fund are in transitional and enabling activities as defined by the EU Taxonomy Regulation.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Based on reliable data that has been made available to date, the fund is reporting 0% of its investments are in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation. The fund is yet to report any alignment to the EU Taxonomy Regulation.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable - the fund does not have a commitment to invest in sustainable investments with an environmental objective not aligned with the EU Taxonomy Regulation.

What was the share of socially sustainable investments?

Not applicable - the fund does not have a commitment to invest in sustainable investments with a social objective

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Holdings classified as “other” include (i) ancillary liquid assets (i.e. bank deposit at sight) which are held for the purposes of liquidity management; (ii) bank deposits, money market instruments or money market funds held for treasury purposes; (iii) derivatives for hedging purposes; (iv) companies with an ESG Materiality rating of 4 or 5; or (v) companies not covered by the ESG Materiality model.

These investments are not used to meet the environmental and social characteristics of the Portfolio. The purpose of these securities is to provide a diversified portfolio that can achieve the financial objective.

Minimum environmental or social safeguards are ensured by applying the exclusion screening to all holdings in investee companies. For cash positions and derivatives, ESG considerations are integrated into the counterparty risk assessment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

We engaged with companies, aiming to influence their approach to ESG risks and ESG practices. For example, over the period we engaged with holdings in the portfolio on a range of topics. This includes but is not limited to engagement with a US bank to better understand the company's governance structure, specifically concerning board structure and remuneration.

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable - the financial product does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that the Portfolio promotes.

- ***How does the reference benchmark differ from a broad market index?***

Not applicable - the financial product does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that the Portfolio promotes.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

Not applicable - the financial product does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that the Portfolio promotes.

- ***How did this financial product perform compared with the reference benchmark?***

Not applicable - the financial product does not have a designated reference benchmark that is used to measure whether it attains the environmental and/or social characteristics that the Portfolio promotes.

- ***How did this financial product perform compared with the broad market index?***

Over the period, the financial product maintained a superior ESG profile to the MSCI World Small Cap Index, as measured by the Columbia Threadneedle Investments ESG Materiality Rating model.

SFDR SCHEDULE- Annex IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: UBAM - 30 GLOBAL LEADERS EQUITY

Legal entity identifier: O00000869_00000057

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** %

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 7.7% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Over the course of the reporting period, the Sub-Fund's environmental objective of having a Weighted Average Carbon Intensity lower than that of its benchmark MSCI AC World Net Return USD was met at all times, the latest performance is shown in the following section. By targeting a lower carbon footprint than its benchmark, the environmental characteristics promoted by this product have positively contributed to climate change mitigation.

Through the strict exclusion of companies in breach of the United Nations Global Compact norms, the social objective of the product of having better corporate sustainability than its benchmark has also been met.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

● **How did the sustainability indicators perform?**

Sustainability indicator	Sub-Fund	Index*
Weighted Average Carbon Intensity (tCO2e/\$ mi. invested)	71.5	161.0
Share of companies in breach of the UN Global Compact	0.0%	0.8%

Past performance is not a guide for current or future returns.

Source: UBP, MSCI ESG Research, as of 30 December 2022

*Index: MSCI AC World Net Return USD

The benchmark is a standard reference representing the Sub-Fund’s universe but is not aligned with the sustainable objective of the Sub-Fund.

To measure the achievement of the environmental and social characteristics promoted by the Sub-Fund, the sub-fund’s performance relative to its benchmark based on the following indicators were considered:

- The Weighted Average Carbon Intensity of the companies in which the portfolio is invested; The WACI of the portfolio (71.5 CO2e) was 55% lower than the benchmark (161.0 CO2e).
- The share of companies in breach of UN Global Compact; The portfolio did not have any exposure to companies that do not comply with the UN Global Compact principles during the reference period, whereas the benchmark had a share of 0.8%.

● **And compared to previous periods?**

N/A

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

During the reporting period, the Sub-Fund had 7.7% of sustainable investments, which contributed to the following objectives that the Sub-Fund partially made:

- environmental (2.8%) such as climate change mitigation through resource efficiency: for example through investments in companies with revenues from products or services that help reduce the consumption of energy, raw materials, and other resources.
- social (5.0%) such as major disease treatment: for example through investments in companies with revenues from products for the treatment or diagnosis of major diseases of the world;

This Sub-Fund generally avoided biodiversity laggards to the extent possible and engaged with companies with any potential impact on biodiversity. The Investment Team namely engaged with a company in the Consumer Staples sector on issues related to palm oil production and deforestation allegations as well as plastic pollution. The company provided a constructive feedback on the current status and their action plan.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure that the sustainable investments made by this Sub-Fund during the reporting period did not significantly harm any other sustainable investment objectives, the Investment Manager applied its in-house methodology that covers Principal Adverse Impacts, controversies, misalignment with SDGs and ESG/governance quality checks.

Based on our in-house methodology, we consider that these sustainable investments did not cause significant harm to any environmental or social sustainable objective. For this, we tested their compliance with mandatory PAIs either directly, where data was available, or indirectly through the consideration of Controversies (social, environmental, governance, labour compliance), SDG alignment (environmental activities strongly misaligned with environmental SDGs and social activities strongly misaligned with social SDGs are not deemed sustainable), overall ESG and governance quality as well as the exclusion of some harmful sectors).

- ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The Investment Manager sought to limit the adverse impacts on sustainability factors primarily through the investment research, the application of an exclusion list and the norms-based screening. In particular, we tested compliance with mandatory PAIs both directly or indirectly for sustainable investments, as explained above.

In addition, some PAIs were also taken into account via the Sub-Fund's objective of maintaining a weighted average carbon intensity lower than that of the investment universe.

- ***Were sustainable investments aligned with the OECD Guidelines for Multinational and the UN Guiding Principles on Business and Human Rights? Details:***

This Sub-Fund did not invest in companies flagged as being in breach of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights according to the analyses of external providers.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Indicator	Metrics	Value	Covered assets	Eligible Assets	Planned actions
PAI 3	GHG intensity of investee companies (tCO ₂ eq/EURm revenue)	65.8	96.5%	96.5%	The Sub-Fund aims to maintain a weighted average carbon intensity lower than the benchmark at all times by paying attention to issuer's GHG emissions and climate strategy; thus priority is given to selecting companies with low carbon footprint. Furthermore, the Sub-Fund should have limited exposure to conventional oil & gas revenues (5%), have no exposure to revenues from unconventional oil and gas extraction, limited exposure to other revenues associated to unconventional oil and gas (5%) and have no exposure to thermal coal extraction as well as no revenues or installed capacities in power generation derived from coal, nuclear sources or oil & gas.
PAI 10	Share of investments that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (%)	0.0%	96.5%	96.5%	The Sub-Fund excludes companies in breach of international standards and social practices as flagged by both MSCI ESG Research and Sustainalytics. Related information is also integrated in the proprietary forecast of companies' cash flows
PAI 14	Share of investments involved in the manufacture or selling of controversial weapons (%)	0.0%	96.5%	96.5%	The Sub-Fund excludes issuers that are involved in controversial weapons

Source: Fund administration data, as of 30 December 2022

The use of different data sources and systems may result in limited variations across the various sections of the present report.

To comply with the EU taxonomy, the criteria for **fossil gas**

include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

In the absence of reported information on taxonomy-alignment by companies, the Investment Manager considers that this Sub-Fund had no reported taxonomy-aligned investments as at 30 December 2022.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?**

- YES
- In fossil gas in nuclear energy
- NO

"1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214."

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

Source: Reported Taxonomy-alignment, based on company reports, as of 30 December 2022
The graph 'taxonomy aligned investments-excluded sovereign obligations' represents 100% of the total net assets.

- **What was the share of investments in transitional and enabling activities?**

N/A

How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?

N/A

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

2.8%

Source : UBP, Sustainalytics, MSCI ESG Research, as of 30 December 2022

In the absence of taxonomy reported data, this includes 0.3% of investments that are estimated to be aligned with the current EU Taxonomy by Sustainalytics, as well as 2.5% with an environmental objective not covered by this Taxonomy.

What was the share of socially sustainable investments?

5.0%

Source : UBP, Sustainalytics, MSCI ESG Research, as of 30 December 2022

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

3.5% representing the cash position of the Sub-Fund for flows management purposes, which is considered as investments not aligned with the environmental and social characteristics promoted. There is no minimum E/S safeguards on this bucket.

Source: UBP, as of 30 December 2022

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The investment framework is not intended to focus on a company's ESG credentials at the expense of its financial performance potential. Indeed, the approach is intended to be holistic as ESG and sustainability factors are fully integrated across the investment process.

During the reporting period the Sub-Fund has applied exclusion rules, which, among other aspects, reduce the exposure to carbon-intensive sectors. These rules include the exclusion of companies with certain exposure to conventional oil & gas revenues (5%), any exposure to revenues from unconventional oil and gas extraction, exposure to other revenues associated to unconventional oil and gas (5%) and any exposure to thermal coal extraction as well as no revenues or installed capacities in power generation derived from coal, nuclear sources or oil & gas. In addition, any company in breach of the UN Global Compact principles, if flagged by both MSCI ESG Research and Sustainalytics, is excluded as well.

As part of its engagement activities, the investment team engaged with an Industrials company held in the portfolio during 2022, with the objective of clarifying the data mismatch between the company's reported proportion of EU Taxonomy eligible revenues and the data provider's assessment. The investment team engaged first with the company directly to better understand its roadmap to comply with the regulations via email, as well as with the data provider itself. We expect

the discrepancy to be resolved in 2023 when the company will have to officially report with more transparency.

Furthermore, during 2022 the investment team sold its position in a Health Care company as the company's Covid-related revenues were projected to drop, and as the temporary closure of its baby milk factories in the US due to safety issues was projected to impact its CFROI® (Cash Flow Return on Investment, Source: Credit Suisse HOLT) and ESG profile over the medium to long term, and potentially cause severe controversies.

How did this financial product perform compared to the reference benchmark?

No reference benchmark.

- ***How did the reference benchmark differ from a broad market index?***

N/A

- ***How did this financial product perform compared with the broad market index?***

N/A

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social

SFDR SCHEDULE- Annex IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: **UBAM - EMERGING MARKET CORPORATE BOND SHORT DURATION**
 Legal entity identifier: **O00000869_00000084**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** %

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This Sub-Fund promoted to have better environmental and social characteristics than the Emerging Market (EM) corporate bond universe, as measured by the JP Morgan Corporate EMBI Diversified index. This index is a standard reference representing the EM Corporate Bond Universe but is not aligned with the environmental and/or social characteristics promoted by this Sub-Fund. These characteristics include better ESG practices, a lower carbon intensity and a greater respect of international norms such as the UN Global compact compared to the Index.

To measure the attainment of each of the environmental and social characteristics promoted by this Sub-Fund, we considered the Sub-Fund's performance against its reference index on the following indicators:

- achieve a higher overall ESG quality score than the Index
- have a lower Weighted Average Carbon Intensity (WACI) than the index
- exclude any companies in breach of UN Global Compact and other international norms, as measured by MSCI red overall controversy flag

Certain exclusion criteria apply to ensure that the objectives are met. The fund seeks to limit its exposure to high emitting companies, for example, by excluding companies where 20% or more of revenues are derived from thermal coal mining or are linked to coal-based power generation. In addition, the fund excludes companies where revenues are 10% or more related to the unconventional oil and gas sector. Companies that do not comply with the UN Global Compact Principles as flagged by MSCI or companies exposed to controversial weapons are also excluded.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

● **How did the sustainability indicators perform?**

Sustainability indicator	Sub-fund	Index*
Weighted Average Carbon Intensity (tCO2e/\$ mi. invested)	533.8	615.4
MSCI ESG Quality Score	6.3	5.5
Share of companies in breach of the UN Global Compact	0.0%	4.2%

Past performance is not a guide for current or future returns.
 Source: UBP, MSCI ESG Research, as of 30 December 2022
 *Index: JPM CEMBI Diversified

The benchmark is a standard reference representing the Sub-Fund's universe but is not aligned with the sustainable objective of the Sub-Fund.

Over the course of the reporting period, the Sub-Fund achieved its environmental and social objectives:

- the MSCI overall ESG quality score: The MSCI ESG Quality Score of the portfolio (6.3) was above the score of the Index (5.5)
- the Weighted Average Carbon Intensity (WACI): The WACI of the portfolio (533.8 tCO2e) was lower than the Index (615.4 tCO2e)
- the share of companies in breach of UN Global Compact and other international norms, as measured by MSCI red overall controversy flag: The portfolio did not have any exposure to companies that do not comply with UN Global Compact principles as measured by MSCI red overall controversy flag, where as the benchmark had a share of 4.2%

● **And compared to previous periods?**

Source: Fund administration data, as of 30 December 2022

The use of different data sources and systems may result in limited variations across the various sections of the present report.

Our approach relies on bottom-up research to assess companies' practices and commitments to ESG.

GEOPARK is an Oil and Gas exploration company which has put in place relatively ambitious GHG emission intensity reduction targets as transcribed below. It is rated A by MSCI ESG Research and outperforms its peers on the environmental score.

Source: Geopark's Apr-23 Corporate Presentation.

In addition to assessing the company from an ESG standpoint, we have engaged with the company. An initial contact with Geopark was established in Q1 2022 and a meeting with the company was set up in Q2 2022. The meeting was focused on gathering more information about their climate and environmental efforts. The company confirmed having set up climate and environmental KPIs linked to senior management remuneration. Following the meeting, we found their climate transition plan credible and maintained the position remained in the portfolio. The progress and commitment of the company will be monitored in the future.

Both above mentioned examples reflect on the Investment Manager's bottom-up ESG assessment that consists in analyzing companies' ESG metrics, policies and targets case by case in order to support, through our investments, companies that are working and investing to improve in key metrics especially in the controversial sectors such as O&G and mining where transition to a significant reduction in carbon footprint is most needed, as it will have the greatest impact on the reduction of global greenhouse gas emissions.

What was the proportion of sustainability-related investments?

0%

Source: Fund administration data, as of 30 December 2022

The use of different data sources and systems may result in limited variations across the various sections of the present report.

As mentioned above, investments in companies in some controversial sectors from an environmental standpoint, such as O&G and mining, that are working and investing in order to significantly reduce their carbonfootprint. This is the case with the companies that we hold in these sectors and we mentioned as an example a case of a company above in this document. In this sense, it is also worth highlighting that 24% of the exposure to the utility sector is represented by renewable power companies.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

N/A

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?**

YES

In fossil gas in nuclear energy

NO

"1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214."

To comply with the EU taxonomy, the criteria for **fossil gas**

include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Source: estimated Taxonomy-alignment, Sustainalytics, as of 30 December 2022

The graph 'taxonomy aligned investments-excluded sovereign obligations' represents 100% of the total net assets.

● **What was the share of investments in transitional and enabling activities?**

NA

How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?

N/A

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

N/A

What was the share of socially sustainable investments?

N/A

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The Sub-Fund held 2.1% in other net assets (cash positions for liquidity and risk management purposes). While there was no minimum environmental or social safeguards on these investments, this is not expected to have any impact on the sustainability objective of this Sub-Fund.

Source: UBP, as of 30 December 2022

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Investment Manager strictly adhered to the sustainability processes/ safeguards described in the prospectus, including evaluating all investments against sustainability criteria with hard thresholds required to be met for inclusion, applying various exclusions and on-going monitoring of the portfolio.

During the reporting period the Sub-Fund has applied and adhered to exclusion rules to further reduce the exposure to carbon-intensive sectors and companies reported to be in violation of international standards. The exclusion criteria include:

- companies with an ESG rating from MSCI ESG Research below BB
- companies in breach of UN Global Compact or other international norms as flagged by the Red Overall Controversy Flag by MSCI ESG Research
- companies involved in controversial or nuclear weapons, exposure to unconventional oil & gas revenues (10%), exposure to thermal coal extraction (20%) as well as revenues from coal-powered utilities (20%)
- companies involved in tobacco production

As part of the investment process most companies held in the portfolio were ESG-assessed. Also, the Investment Manager engaged with some of the investee companies where deemed that this was needed. For instance, in 2022 several ESG questionnaires were sent out to companies as well as meetings were arranged to get in touch directly with the investee companies and follow-up on specific issues or for broader E, S, and G strategy questions.

Additionally, it is worth highlighting that we divested from all the companies we had in the gambling sector during the period.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Appendix 5 – Sustainable Finance Disclosure Regulation (Regulation (EU) 2019/2088) (unaudited)

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Product name: UBS (Lux) Equity Fund – China Opportunity (USD)
Legal entity identifier: 54930095U1XDI65OZQ89

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> Yes	●○ <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following characteristics were promoted by the financial product:

- 1) A lower Weighted Average Carbon Intensity (WACI) than the reference benchmark or a low absolute carbon profile.
- 2) A sustainability profile that is higher than its benchmark's sustainability profile or a minimum of 51% of assets invested in companies with a sustainability profile in the top half of the benchmark.

Appendix 5 – Sustainable Finance Disclosure Regulation (Regulation (EU) 2019/2088) (unaudited)

The extent to which the environmental and/ or social characteristics promoted by this financial product is met is stated in the answer to the question “How did the sustainability indicators perform?” of this annex.

The benchmark is a broad market index which does not assess or include constituents according to environmental and/or social characteristics and therefore is not intended to be consistent with the characteristics promoted by the financial product. No ESG reference benchmark has been designated for the purpose of attaining the characteristics promoted by the financial product.

The sustainability profile of the financial product is measured by its benchmark’s profile and the corresponding results are calculated at least once a year from the respective monthly profiles.

● **How did the sustainability indicators perform?**

Characteristic 1:

- The Weighted Average Carbon Intensity (WACI) was lower than that of its benchmark.
 - Weighted Average Carbon Intensity (WACI) of the financial product: 151.78 tonnes CO2 per million dollars revenues.
 - Weighted Average Carbon Intensity (WACI) of the benchmark: 230.80 tonnes CO2 per million dollars revenues.
- No low absolute carbon profile, as a low absolute carbon profile is defined as below 100 tonnes of CO2 emissions per million US dollars of revenues.

Characteristic 2:

- The UBS ESG consensus score of the financial product was higher than that of its benchmark.
 - UBS consensus score of the financial product: 4.69
 - UBS consensus score of the benchmark: 4.48
- 78.17% of assets were invested in issuers with a sustainability profile in the top half of the benchmark.

● **... and compared to previous periods?**

Not applicable. This is the first reference period.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Not applicable.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Not applicable.

----- How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Appendix 5 – Sustainable Finance Disclosure Regulation (Regulation (EU) 2019/2088) (unaudited)

----- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Not applicable.

What were the top investments of this financial product?

Largest Investments	Sector	% Net Assets*	Country
Tencent Holdings Ltd	Internet, software & IT serv	9.09	China

Appendix 5 – Sustainable Finance Disclosure Regulation (Regulation (EU) 2019/2088) (unaudited)

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure** (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflects the green operational activities of investee companies.

● What was the proportion of sustainability-related investments?

Not applicable.

● What was the asset allocation?

● In which economic sectors were the investments made?

Please refer to the section “Structure of the Securities Portfolio” of the relevant subfund of this Annual report to review the breakdown of the economic sectors where the investments were made.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable.

Appendix 5 – Sustainable Finance Disclosure Regulation (Regulation (EU) 2019/2088) (unaudited)

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

Not applicable.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable.

What was the share of socially sustainable investments?

Not applicable.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Included in "#2 Other" are cash and unrated instruments for the purpose of liquidity and portfolio risk management. Unrated instruments may also include securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

Appendix 5 – Sustainable Finance Disclosure Regulation (Regulation (EU) 2019/2088) (unaudited)

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the environmental and/ or social characteristics were met by following the investment strategy and applying exclusion criteria as per the sales prospectus. The investment strategies and/ or exclusion criteria are monitored to ensure adherence.

How did this financial product perform compared to the reference benchmark?

No ESG reference benchmark has been designated for the purpose of determining whether the financial product is aligned with the characteristics that it promotes.

- ***How does the reference benchmark differ from a broad market index?***

Not applicable.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

Not applicable.

- ***How did this financial product perform compared with the reference benchmark?***

Not applicable.

- ***How did this financial product perform compared with the broad market index?***

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Appendix 5 – Sustainable Finance Disclosure Regulation (Regulation (EU) 2019/2088) (unaudited)

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy

is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Product name: UBS (Lux) Equity SICAV – Swiss Opportunity (CHF)

Legal entity identifier: 549300COJIM2GMLKIP90

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> Yes	●○ <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective <input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following characteristics are promoted by the financial product:

- 1) A lower Weighted Average Carbon Intensity (WACI) than the reference benchmark or a low absolute carbon profile.
- 2) A sustainability profile that is higher than its benchmark's sustainability profile or a minimum of 51% of assets invested in companies with a sustainability profile in the top half of the benchmark.

Appendix 5 – Sustainable Finance Disclosure Regulation (Regulation (EU) 2019/2088) (unaudited)

The extent to which the environmental and/ or social characteristics promoted by this financial product were met is stated in the answer to the question "How did the sustainability indicators perform?" of this annex.

The benchmark is a broad market index which does not assess or include constituents according to environmental and/or social characteristics and therefore is not intended to be consistent with the characteristics promoted by the financial product. No ESG reference benchmark has been designated for the purpose of attaining the characteristics promoted by the financial product.

The sustainability profile of the financial product is measured by its benchmark's profile and the corresponding results are calculated at least once a year from the respective monthly profiles.

● **How did the sustainability indicators perform?**

Characteristic 1:

- The Weighted Average Carbon Intensity (WACI) was lower than that of its benchmark.
- Weighted Average Carbon Intensity (WACI) of the financial product: 63.67 tonnes of CO₂ per million dollars revenues.
- Weighted Average Carbon Intensity (WACI) of the benchmark: 109.40 tonnes of CO₂ per million dollars revenues.
- A low absolute carbon profile, as a low absolute carbon profile is defined as below 100 tonnes of CO₂ emissions per million US dollars of revenues.

Characteristic 2:

- The UBS ESG consensus score of the financial product was lower than that of its benchmark.
- UBS consensus score of the financial product: 7.34
- UBS consensus score of the benchmark: 7.53
- 91.91% of assets were invested in issuers with a sustainability profile in the top half of the benchmark.

● **...and compared to previous periods?**

Not applicable. This is the first reference period.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Not applicable.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Not applicable.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Appendix 5 – Sustainable Finance Disclosure Regulation (Regulation (EU) 2019/2088) (unaudited)

Appendix 5 – Sustainable Finance Disclosure Regulation (Regulation (EU) 2019/2088) (unaudited)

What was the proportion of sustainability-related investments?

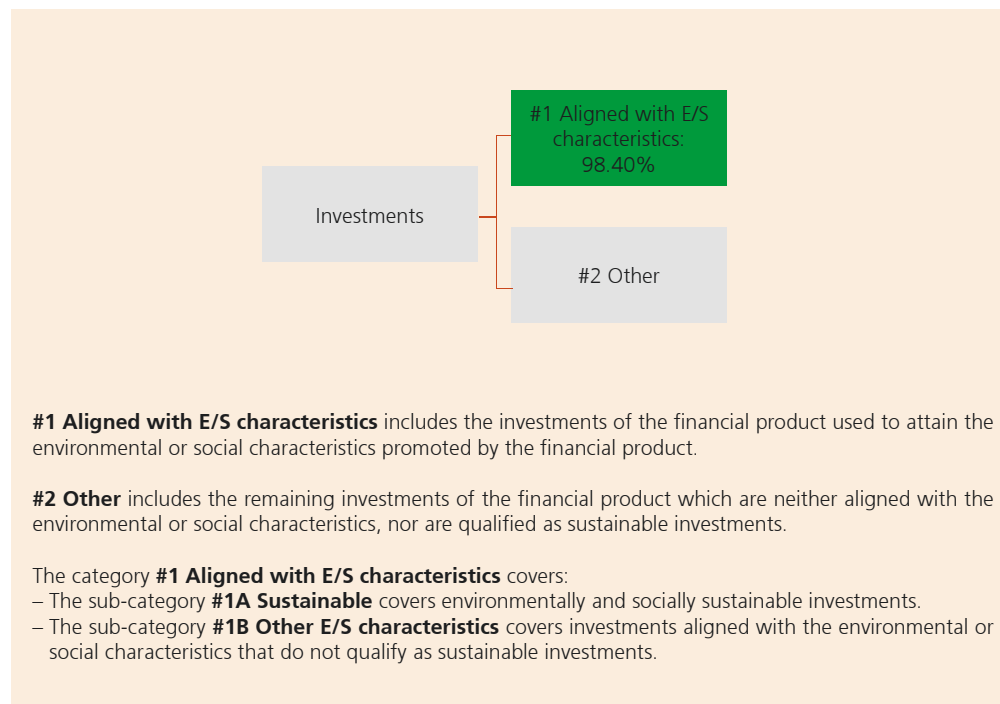

Not applicable.

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● In which economic sectors were the investments made?

Please refer to the section “Structure of the Securities Portfolio” of the relevant subfund of this Annual report to review the breakdown of the economic sectors where the investments were made.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

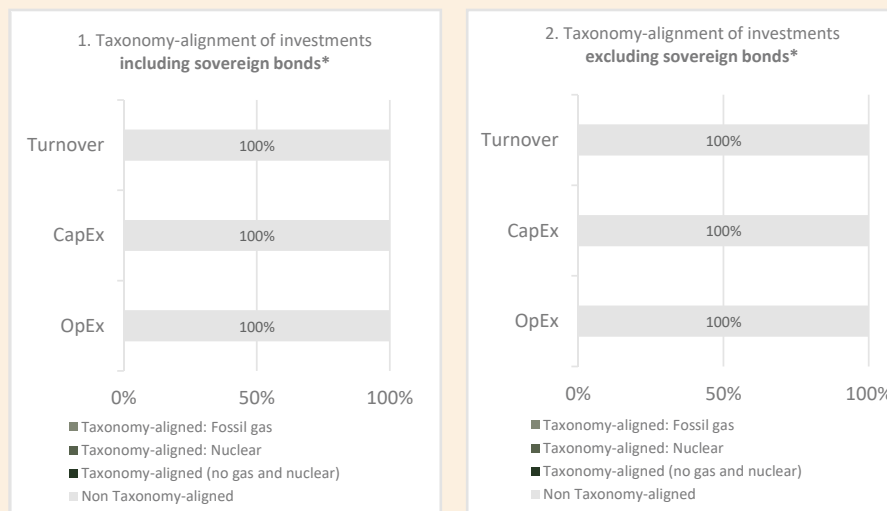

Appendix 5 – Sustainable Finance Disclosure Regulation (Regulation (EU) 2019/2088) (unaudited)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

Not applicable.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable. This is the first reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

Not applicable.

Appendix 5 – Sustainable Finance Disclosure Regulation (Regulation (EU) 2019/2088) (unaudited)

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Product name: UBS (Lux) Equity SICAV – Engage for Impact (USD) [formerly UBS (Lux) Equity SICAV – Global Impact (USD)]

Legal entity identifier: 549300ZSXZYFYENYQ609

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> Yes	●● <input checked="" type="checkbox"/> No
<p><input type="checkbox"/> It made sustainable investments with an environmental objective: ___%</p> <p><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> It made sustainable investments with a social objective: ___%</p>	<p><input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 62.63% of sustainable investments</p> <p><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p><input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p><input checked="" type="checkbox"/> with a social objective</p> <p><input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments</p>

To what extent were the environmental and/or social characteristics promoted by this financial product met?

From 1 June 2022 until 24 November 2022, the following characteristic is promoted by the financial product:

Invest at least two thirds of its assets in equities and other equity interests of companies in developed and emerging markets worldwide that promote the United Nations Sustainable Development Goals (UN SDGs).

From 25 November 2022 onwards, the following characteristic is promoted by the financial product:

Appendix 5 – Sustainable Finance Disclosure Regulation (Regulation (EU) 2019/2088) (unaudited)

A 90% overlap to the proprietary impact Universe of companies which are aligned with the United Nations Sustainable Investment Goals. The product aims to provide capital appreciation and a positive environmental and/or social impact by investing in and engaging with attractively valued companies that offer products or services that are aligned to specific UN SDGs and present the potential for further impact by active engagement.

The extent to which the environmental and/ or social characteristics promoted by this financial product were met is stated in the answer to the question "How did the sustainability indicators perform?" of this annex.

The benchmark is a broad market index which does not assess or include constituents according to environmental and/or social characteristics and therefore is not intended to be consistent with the characteristics promoted by the financial product. No ESG reference benchmark has been designated for the purpose of attaining the characteristics promoted by the financial product.

The sustainability profile of the financial product is measured by its benchmark's profile and the corresponding results are calculated at least once a year from the respective monthly profiles.

● **How did the sustainability indicators perform?**

From 1 June 2022 until 24 November 2022, the financial product overlap with the promoted characteristic described above was higher than 66.7%.

- Percentage of the financial product aligned with the promoted characteristic: 81.32%

From 25 November 2022 onwards, the financial product overlap with the promoted characteristic described above was higher than 90%.

- Percentage of the financial product aligned with the promoted characteristic: 96.51%

● **...and compared to previous periods?**

Not applicable. This is the first reference period.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the sustainable investments that the financial product partially intends to make is to contribute to the environmental and/or social characteristic(s) promoted by the financial product.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

The Portfolio Manager applies exclusions to the investment universe of the financial product. The link to the Sustainability Exclusion Policy can be found in the main body of the Sales Prospectus.

The exclusions include thermal coal mining and thermal coal-based energy production & oil sands. UBS Asset Management does not invest in companies involved in controversial weapons i.e. cluster munitions, anti-personnel mines, chemical and biological weapons, or companies in breach of the Treaty on the Non-Proliferation of Nuclear Weapons.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Appendix 5 – Sustainable Finance Disclosure Regulation (Regulation (EU) 2019/2088) (unaudited)

Investments are positively screened according to the environmental and/or social characteristics promoted by the financial product.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Portfolio Manager employs a proprietary ESG Risk Dashboard, the Dashboard allows equity and credit analysts to quickly identify companies with significant ESG risks via the "UBS ESG Risk Signal". This clear, actionable signal serves as starting point for more in-depth analysis of the underlying sources of these risks and the links to their investment cases.

Were sustainable investments aligned with the OECD Guidelines for Multi-national Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Companies violating the United Nations Global Compact (UNGC) principles, who do not demonstrate credible corrective action will be excluded from the investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Portfolio Manager applies exclusions to the investment universe of the financial product. The link to the Sustainability Exclusion Policy can be found in the main body of the Sales Prospectus.

The exclusions include thermal coal mining and thermal coal-based energy production & oil sands. UBS Asset Management does not invest in companies involved in controversial weapons i.e. cluster munitions, anti-personnel mines, chemical and biological weapons, or companies in breach of the Treaty on the Non-Proliferation of Nuclear Weapons.

The Portfolio Manager employs a proprietary ESG Risk Dashboard, the Dashboard allows equity and credit analysts to quickly identify companies with significant ESG risks via the "UBS ESG Risk Signal". This clear, actionable signal serves as starting point for more in-depth analysis of the underlying sources of these risks and the links to their investment cases.

Companies violating the United Nations Global Compact (UNGC) principles, which do not demonstrate credible corrective action were excluded from the investment universe.

Appendix 5 – Sustainable Finance Disclosure Regulation (Regulation (EU) 2019/2088) (unaudited)

What were the top investments of this financial product?

Largest Investments	Sector	% Net Assets*	Country
Danone SA	Food & soft drinks	4.64	France
Spectris PLC	Electronics & semiconductors	4.60	United Kingdom

AbbVie Inc	Pharmaceuticals, cosm & med prod	2.85	United States of America
Genmab A/S	Biotechnology	2.78	Denmark
Ecolab Inc	Chemicals	2.78	United States of America

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31 May 2023.

*Minor differences with "Statement of Investments in Securities" might occur due to rounding in production system

What was the proportion of sustainability-related investments?

As per the end of the reference period the proportion of sustainability-related investments of the financial product was 62.63%.

● What was the asset allocation?

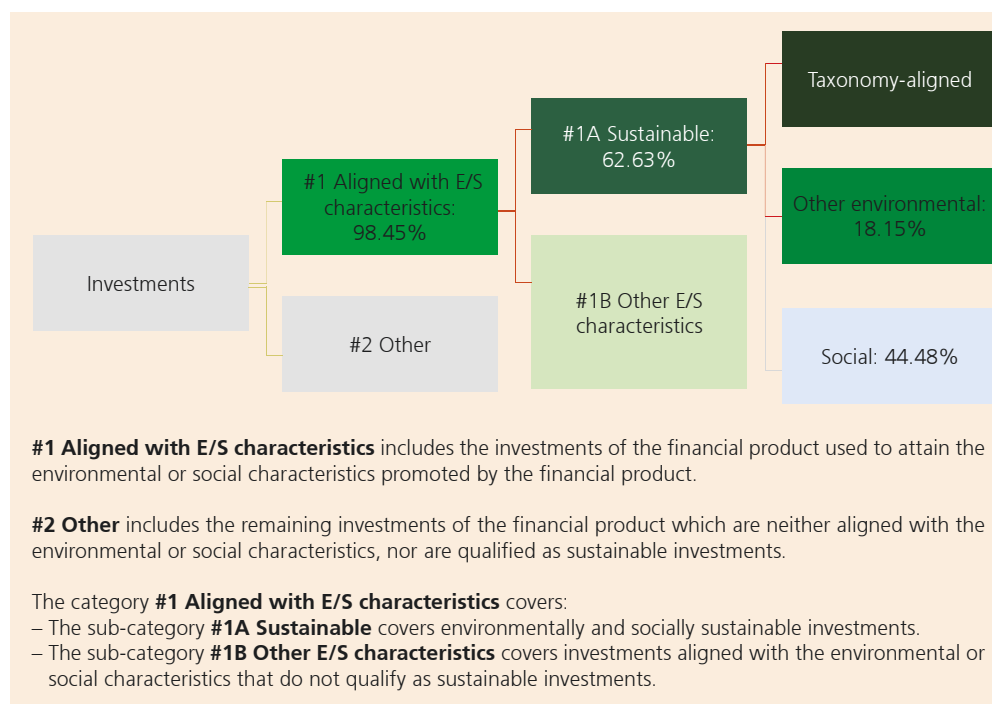

The proportions of investments of the financial product were calculated as per the end of the reference period, which is: 31 May 2023.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Appendix 5 – Sustainable Finance Disclosure Regulation (Regulation (EU) 2019/2088) (unaudited)

● In which economic sectors were the investments made?

Please refer to the section “Structure of the Securities Portfolio” of the relevant subfund of this Annual report to review the breakdown of the economic sectors where the investments were made.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

It has not been possible to collect data on the environmental objective(s) set out in Article 9 of the Taxonomy Regulation and on how and to what extent the investments underlying the financial product are in economic activities that qualify as environmentally sustainable under Article 3 of the Taxonomy Regulation (“Taxonomy Aligned Investments”). On that basis, the financial product has 0% Taxonomy Aligned Investments.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Appendix 5 – Sustainable Finance Disclosure Regulation (Regulation (EU) 2019/2088) (unaudited)

- **What was the share of investments made in transitional and enabling activities?**

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable. This is the first reference period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

- **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The sustainable investments made by the financial product will contribute to either environmental or social objectives or both. The financial product does not commit to a predetermined combination of environmental or social objectives, and therefore there is no minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy. Where the financial product does invest in environmentally sustainable investments that are not Taxonomy-aligned, this is due to the absence of necessary data to determine Taxonomy-alignment.

- **What was the share of socially sustainable investments?**

The sustainable investments made by the financial product will contribute to either environmental or social objectives or both. The financial product does not commit a predetermined combination of environmental or social objectives, and therefore there is no minimum share of socially sustainable investments.

- **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

Included in “#2 Other” are cash and unrated instruments for the purpose of liquidity and portfolio risk management. Unrated instruments may also include securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

During the reference period, the environmental and/ or social characteristics were met by following the investment strategy and applying exclusion criteria as per the sales prospectus. The investment strategies and/ or exclusion criteria are monitored to ensure adherence.

● ***How did this financial product perform compared with the broad market index?***

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Appendix 5 – Sustainable Finance Disclosure Regulation (Regulation (EU) 2019/2088) (unaudited)

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy

is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

Product name: UBS (Lux) Equity SICAV – Long Term Themes (USD)

Legal entity identifier: 549300ZFARXUQG507G05

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> Yes	●○ <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 59.43% of sustainable investments <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following characteristics are promoted by the financial product:

- 1) A sustainability profile that is higher than its benchmark's sustainability profile or a UBS ESG consensus score between 7 and 10 (indicating a strong sustainability profile).
- 2) A lower Weighted Average Carbon Intensity (WACI) than the reference benchmark or a low absolute carbon profile from 25 November 2022 onwards (i.e., date at which the characteristic became effective).

Appendix 5 – Sustainable Finance Disclosure Regulation (Regulation (EU) 2019/2088) (unaudited)

The extent to which the environmental and/ or social characteristics promoted by this financial product were met is stated in the answer to the question "How did the sustainability indicators perform?" of this annex.

The benchmark is a broad market index which does not assess or include constituents according to environmental and/or social characteristics and therefore is not intended to be consistent with the characteristics promoted by the financial product. No ESG reference benchmark has been designated for the purpose of attaining the characteristics promoted by the financial product.

The sustainability profile of the financial product is measured by its benchmark's profile and the corresponding results are calculated at least once a year from the respective monthly profiles.

● **How did the sustainability indicators perform?**

Characteristic 1:

The UBS ESG consensus score of the financial product was higher than that of its benchmark.

- UBS consensus score of the financial product: 7.24
- UBS consensus score of the benchmark: 6.70

The UBS ESG consensus score is below the range of 7 to 10 (indicating a strong sustainability profile).

Characteristic 2:

From 25 November 2022, the Weighted Average Carbon Intensity (WACI) was lower than that of its benchmark.

- Weighted Average Carbon Intensity (WACI) of the financial product: 67.06 tonnes of CO₂ per million dollars revenues.
- Weighted Average Carbon Intensity (WACI) of the benchmark: 149.65 tonnes of CO₂ per million dollars revenues.

A low absolute carbon profile, as a low absolute carbon profile is defined as below 100 tonnes of CO₂ emissions per million US dollars of revenues.

● **...and compared to previous periods?**

Not applicable. This is the first reference period.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the sustainable investments that the financial product partially made was to contribute to the environmental and/or social characteristic(s) promoted by the financial product.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

The Portfolio Manager applies exclusions to the investment universe of the financial product. The link to the Sustainability Exclusion Policy can be found in the main body of the Sales Prospectus.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Appendix 5 – Sustainable Finance Disclosure Regulation (Regulation (EU) 2019/2088) (unaudited)

The exclusions include thermal coal mining and thermal coal-based energy production & oil sands, the portfolio manager selects investments based upon a lower absolute or relative scope 1+2 carbon intensity. UBS Asset Management does not invest in companies involved in controversial weapons i.e. cluster munitions, anti-personnel mines, chemical and biological weapons, or companies in breach of the Treaty on the Non-Proliferation of Nuclear Weapons.

Investments are positively screened according to the environmental and/or social characteristics promoted by the financial product.

----- *How were the indicators for adverse impacts on sustainability factors taken into account?*

The Portfolio Manager employs a proprietary ESG Risk Dashboard, the Dashboard allows equity and credit analysts to quickly identify companies with significant ESG risks via the "UBS ESG Risk Signal". This clear, actionable signal serves as starting point for more in-depth analysis of the underlying sources of these risks and the links to their investment cases.

----- *Were sustainable investments aligned with the OECD Guidelines for Multi-national Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Companies violating the United Nations Global Compact (UNGC) principles, who do not demonstrate credible corrective action will be excluded from the investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Portfolio Manager applies exclusions to the investment universe of the financial product. The link to the Sustainability Exclusion Policy can be found in the main body of the Sales Prospectus.

Appendix 5 – Sustainable Finance Disclosure Regulation (Regulation (EU) 2019/2088) (unaudited)

The exclusions include thermal coal mining and thermal coal-based energy production & oil sands, the portfolio manager selects investments based upon a lower absolute or relative scope 1+2 carbon intensity. UBS Asset Management does not invest in companies involved in controversial weapons i.e. cluster munitions, anti-personnel mines, chemical and biological weapons, or companies in breach of the Treaty on the Non-Proliferation of Nuclear Weapons.

The Portfolio Manager employs a proprietary ESG Risk Dashboard, the Dashboard allows equity and credit analysts to quickly identify companies with significant ESG risks via the "UBS ESG Risk Signal". *Minor differences with "Statement of Investments in Securities" might occur due to rounding in production system

What was the proportion of sustainability-related investments?

As per the end of the reference period the proportion of sustainability-related investments of the financial product was 59.43%.

● What was the asset allocation?

The proportions of investments of the financial product were calculated as per the end of the reference period, which is: 31 May 2023.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31 May 2023.

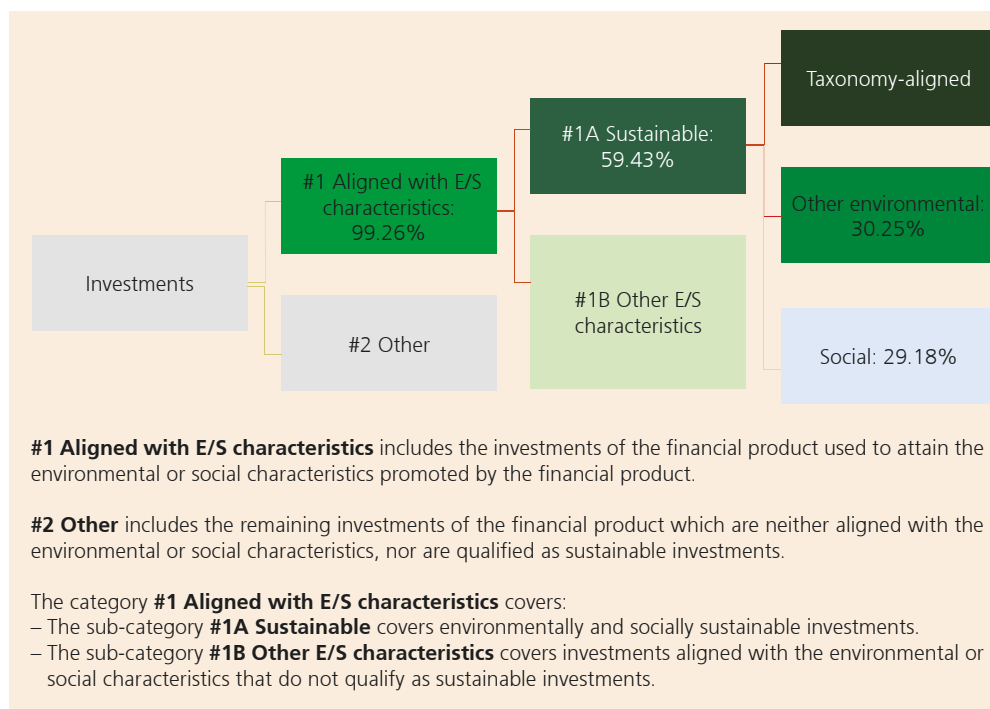

Asset allocation describes the share of investments in specific assets.

Appendix 5 – Sustainable Finance Disclosure Regulation (Regulation (EU) 2019/2088) (unaudited)

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● In which economic sectors were the investments made?

Please refer to the section “Structure of the Securities Portfolio” of the relevant subfund of this Annual report to review the breakdown of the economic sectors where the investments were made.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

It has not been possible to collect data on the environmental objective(s) set out in Article 9 of the Taxonomy Regulation and on how and to what extent the investments underlying the financial product are in economic activities that qualify as environmentally sustainable under Article 3 of the Taxonomy Regulation (“Taxonomy Aligned Investments”). On that basis, the financial product has 0% Taxonomy Aligned Investments.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Appendix 5 – Sustainable Finance Disclosure Regulation (Regulation (EU) 2019/2088) (unaudited)

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

There is no commitment to a minimum proportion of investments in transitional and enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable. This is the first reference period.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The sustainable investments made by the financial product will contribute to either environmental or social objectives or both. The financial product does not commit to a predetermined combination of environmental or social objectives, and therefore there is no minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy. Where the financial product does invest in environmentally sustainable investments that are not Taxonomy-aligned, this is due to the absence of necessary data to determine Taxonomy-alignment.

Appendix 5 – Sustainable Finance Disclosure Regulation (Regulation (EU) 2019/2088) (unaudited)

What was the share of socially sustainable investments?

The sustainable investments made by the financial product will contribute to either environmental or social objectives or both. The financial product does not commit a predetermined combination of environmental or social objectives, and therefore there is no minimum share of socially sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Included in “#2 Other” are cash and unrated instruments for the purpose of liquidity and portfolio risk management. Unrated instruments may also include securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the environmental and/ or social characteristics were met by following the investment strategy and applying exclusion criteria as per the sales prospectus. The investment strategies and/ or exclusion criteria are monitored to ensure adherence.

How did this financial product perform compared to the reference benchmark?

No ESG reference benchmark has been designated for the purpose of determining whether the financial product is aligned with the characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

● *How does the reference benchmark differ from a broad market index?*

Not applicable.

● *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

Not applicable.

● *How did this financial product perform compared with the reference benchmark?*

Not applicable.

● *How did this financial product perform compared with the broad market index?*

Not applicable.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Vontobel Fund - Emerging Markets Equity (FQ_00068)

Legal entity identifier: ZM4Q3MBON4HNUYCJQU59

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** ___%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** ___%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and social characteristics promoted by the Sub-Fund were met. The Sub-Fund promoted environmental and social characteristics and invested in issuers that the Investment Manager considered well-prepared to handle financially material environmental and social challenges. Issuers were selected based on the Investment Manager's ESG framework. The Sub-Fund has not designated a reference benchmark for the purpose of attaining the environmental and social characteristics that it promotes.

Sustainability

indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Sustainability Indicator	Value	Comment
Percentage of investments in securities of corporate issuers that derive a non-negligible part of their revenues from products and/or activities excluded by the Sub-Fund.	0%	Excluded products and /or activities are indicated under the investment strategy section of the pre-contractual disclosure annex
Percentage of investments in issuers that are in violation of certain international norms and standards promoted by the Sub-Fund or that are exposed to severe controversies (unless a positive outlook has been identified). Such controversies may be related to environmental, social or governance issues	0%	During the reporting period, there were two potential breaches of UNGC standards. After review, a positive outlook has been identified by the Research and ESG Analyst(s) and confirmed by Investment Risk.
Sub-Fund's weighted average carbon intensity compared to the investment universe. The investment universe is represented by the Sub-Fund's benchmark (MSCI Emerging Markets TR net.)	72.63 tons CO2e/USD million revenue (Sub-Fund) vs 321.75 tons CO2e/USD million revenue (benchmark)	
Percentage of securities covered by ESG analysis	100%	

● **... and compared to previous periods ?**

Sustainability Indicator	year ending on August 31, 2022
Percentage of investments in securities of corporate issuers that derive a non-negligible part of their revenues from products and/or activities excluded by the Sub-Fund.	N/A
Percentage of investments in issuers that are in violation of certain international norms and standards promoted by the Sub-Fund or that are exposed to severe controversies (unless a positive outlook has been identified). Such controversies may be related to environmental, social or governance issues	N/A

Sustainability Indicator	year ending on August 31, 2022
Sub-Fund's weighted average carbon intensity compared to the investment universe. The investment universe is represented by the Sub-Fund's benchmark (MSCI Emerging Markets TR net.)	N/A
Percentage of securities covered by ESG analysis	N/A

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Not Applicable

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Not Applicable

- How were the indicators for adverse impacts on sustainability factors taken into account?

Not Applicable

- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not Applicable

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered a set of principal adverse impacts on sustainability factors in the following areas: controversial weapons (Table 1 – PAI indicator 14: Exposure to controversial weapons), social matters and human rights (Table 1 – PAI indicator 10: Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises), greenhouse gas emissions (Table 1 – PAI indicator 3: GHG intensity of investee companies), biodiversity (Table 1 – PAI indicator 7: Activities negatively affecting biodiversity-sensitive areas), and social and employee matters (Table 1 – PAI indicator 13: Board gender diversity). The Investment Manager applied a process to identify issuers that are exposed to principal adverse impacts on sustainability factors based on in-house research and/or external data sources, including ESG data providers, news alerts, and the issuers themselves. No investment was identified as having a critical and poorly managed impact in any of the principal adverse impacts areas considered.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: August 31, 2023

Largest investments	Sector	% Assets	Country
Taiwan Semiconductor Manufacturing	Electronics & semiconductors	5.67	Taiwan
Tencent Holdings	Internet, software & IT services	5.54	Cayman Islands
HDFC Bank	Banks & other credit institutions	5.13	India
Samsung Electronics	Electronics & semiconductors	4.65	Korea, Republic Of
Walmart de Mexico	Retail trade & department stores	3.39	Mexico
Bank Rakyat Indonesia TBK PT	Banks & other credit institutions	3.10	Indonesia
Yum China Holdings	Lodging & catering ind., leisure facilities	2.77	United States

Miscellaneous consumer goods	0.83
Textiles, garments & leather goods	0.81
Mining, coal & steel	0.78
Financial, investment & other diversified comp.	0.70
Healthcare & social services	0.15

2.36% of the total value of investments (NAV) were in companies involved in sectors that could be connected to fossil fuels, like "Energy & water supply", "Mining, coal & steel" or "Petroleum/Oil and natural gas". It's important to note that even companies categorized under different sectors might still have some involvement with fossil fuel-related activities, even if it's not their main focus.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure** (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **What was the share of investments made in transitional and enabling activities?**

Activities	Investment share
transitional	0.00%
enabling	0.00%

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Period	Investment share
year ending on August 31, 2022	0.00%

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Investment share
0.00%

What was the share of socially sustainable investments?

Investment share
0.00%

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments	Purpose	Minimum of environmental or social safeguards
Cash (4.01%)	Liquidity management	No minimum environmental or social safeguards were applied.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used for the selection of the investments to attain the environmental and/or social characteristics promoted by this Sub-Fund have been monitored throughout the reporting period.

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

The financial product has not designated a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Vontobel Fund - Euro Corporate Bond (FF_00075)

Legal entity identifier: 5299007053L3LRN24X46

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** ___%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** ___%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and social characteristics promoted by the Sub-Fund were met. The Sub-Fund promoted social transition through empowerment with a focus on pre-defined empowerment indicators. The Investment Manager favored issuers that performed well in such indicators or were on their way to perform well in these indicators while excluding any issuers that were not aligned with the strategy. Issuers were selected based on the Investment Manager's ESG framework. The Sub-Fund has not designated a reference benchmark for the purpose of attaining the environmental and social characteristics that it promotes.

Sustainability

indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Sustainability Indicator	Value	Comment
Percentage of investments in securities of corporate issuers that derive a non-negligible part of their revenues from products and/or activities excluded by the Sub-Fund	0%	Excluded products and /or activities are indicated under the investment strategy section of the pre-contractual disclosure annex
Percentage of investments in securities of sovereign issuers with substantial UN or international sanctions	0%	
Percentage of investments in securities of corporate issuers that, in respect to the pre-defined empowerment related indicators (i.e. diversity oversight by management and programs, percentage of women in total workforce, ILO Labor core convention violations and percentage of employees to receive training provided by specialized third-party ESG research), (i) perform well, or (ii) are on their way to perform well in these indicators, or (iii) where potential for improvement has been identified, based on the Investment Manager's analysis	(i): 60.39% (ii): 17.62% (iii): 1.23%	
Percentage of investments in issuers that are in violation of certain international norms and standards promoted by the Sub-Fund or that are exposed to severe controversies (unless a positive outlook has been identified). Such controversies may be related to environmental, social or governance issues	0%	Two issuers were exposed to severe controversies (Glencore and Volkswagen). A positive outlook has been identified by the ESG Analyst and confirmed by Investment Risk.
Sub-Fund's weighted average UN Global Compact profile, compared to the investment universe (i.e. euro investment grade corporate debt market)	Sub-Fund: 82.75 Universe: 81.13	
Percentage of securities covered by ESG analysis	Exclusions and Screening: 100% Controversies and UNGC: 99.5%	

● **... and compared to previous periods ?**

Sustainability Indicator	August 31, 2022

Such controversies may be related to environmental, social or governance issues	N/A
Sub-Fund's weighted average UN Global Compact profile, compared to the investment universe (i.e. euro investment grade corporate debt market)	N/A
Percentage of securities covered by ESG analysis	N/A

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

Not Applicable

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Not Applicable

- *How were the indicators for adverse impacts on sustainability factors taken into account?*

Not Applicable

- *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Not Applicable

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered a set of principal adverse impacts on sustainability factors in the following areas: controversial weapons (Table 1 – PAI indicator 14: Exposure to controversial weapons), social matters and human rights (Table 1 – PAI indicator 10: Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises), environment-related indicators (Table 1 – PAI indicator 7: Activities negatively affecting biodiversity-sensitive areas, PAI indicator 8: Emissions to water, PAI indicator 9: Hazardous waste and radioactive waste ratio), and social and employee rights (PAI indicator 13: Board gender diversity, and for sovereigns PAI indicator 16: Investee countries subject to social violations). The Investment Manager applied a process to identify issuers that are exposed to principal adverse impacts on sustainability factors based on in-house research and/or external data sources, including ESG data providers, news alerts, and the issuers themselves. No investment was identified as having a critical and poorly managed impact in any of the principal adverse impacts areas considered.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: August 31, 2023

6.66% of the total value of investments (NAV) were in companies involved in sectors that could be connected to fossil fuels, like "Energy & water supply", "Mining, coal & steel" or "Petroleum/Oil and natural gas". It's important to note that even companies categorized under different sectors might still have some involvement with fossil fuel-related activities, even if it's not their main focus. Also, the Sub-Fund might invest in bonds labeled as green, social, or sustainability bonds. These bonds typically fund projects unrelated to fossil fuels, even if the companies issuing them can be active in sectors with potential links to fossil fuels.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure** (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **What was the share of investments made in transitional and enabling activities?**

Activities	Investment share
transitional	0.00%
enabling	0.00%

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Period	Investment share
August 31, 2022	0.00%

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Investment share
0.00%

What was the share of socially sustainable investments?

Investment share
0.00%

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments	Purpose	Minimum of environmental or social safeguards
Cash (0.97%)	Liquidity management	No minimum environmental or social safeguards were applied.
Derivatives (1.17%)	Hedging	No minimum environmental or social safeguards were applied.
Funds (3.25%)	Investment/ Diversification	Minimum environmental and social safeguards applied to one SFDR Art.8 fund (0.09%). No minimum environmental and social safeguards applied to the rest of the funds (3.16%).

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used for the selection of the investments to attain the environmental and/or social characteristics promoted by this Sub-Fund have been monitored throughout the reporting period.

How did this financial product perform compared to the reference benchmark?

The financial product has not designated a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Vontobel Fund - European Equity (FQ_00078)

Legal entity identifier: WMZ8K5LDTZ4Z1L1E2V22

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** ___%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** ___%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and social characteristics promoted by the Sub-Fund were met. The Sub-Fund promoted environmental and social characteristics and invested in issuers that the Investment Manager considered well-prepared to handle financially material environmental and social challenges. Issuers were selected based on the Investment Manager's ESG framework. The Sub-Fund has not designated a reference benchmark for the purpose of attaining the environmental and social characteristics that it promotes.

Sustainability

indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Sustainability Indicator	Value	Comment
Percentage of investments in securities of corporate issuers that derive a non-negligible part of their revenues from products and/or activities excluded by the Sub-Fund	0%	Excluded products and /or activities are indicated under the investment strategy section of the pre-contractual disclosure annex
Percentage of investments in issuers that are in violation of certain international norms and standards promoted by the Sub-Fund or that are exposed to severe controversies (unless a positive outlook has been identified). Such controversies may be related to environmental, social or governance issues	0%	
Sub-Fund's weighted average carbon intensity compared to the investment universe. The investment universe is represented by the Sub-Fund's benchmark (MSCI Europe Index TR net)	66.71 tons CO2e/USD million revenue (Sub-Fund) vs 96.55 tons CO2e/USD million revenue (benchmark)	
Percentage of securities covered by ESG analysis	100%

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Not applicable.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Not applicable.

- *How were the indicators for adverse impacts on sustainability factors taken into account?*

Not applicable.

- *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Not applicable.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered a set of principal adverse impacts on sustainability factors in the following areas: controversial weapons (Table 1 – PAI indicator 14: Exposure to controversial weapons), social matters and human rights (Table 1 – PAI indicator 10: Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises), greenhouse gas emissions (Table 1 – PAI indicator 3: GHG intensity of investee companies), biodiversity (Table 1 – PAI indicator 7: Activities negatively affecting biodiversity-sensitive areas), and social and employee matters (Table 1 – PAI indicator 13: Board gender diversity). The Investment Manager applied a process to identify issuers that are exposed to principal adverse impacts on sustainability factors based on in-house research and/or external data sources, including ESG data providers, news alerts, and the issuers themselves. No investment was identified as having a critical and poorly managed impact in any of the principal adverse impacts areas considered.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: August 31, 2022

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

It made **sustainable investments with an environmental objective:** ___%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** ___%

No

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and social characteristics promoted by the Sub-Fund were met. The Sub-Fund promoted environmental and social characteristics by investing in issuers that the Investment Manager considered well-prepared to handle financially material environmental and/or social challenges. Issuers were selected based on the Investment Manager's ESG framework. In addition, it partially targeted instruments providing solutions to environmental challenges, i.e. climate change. The Sub-Fund has not designated a reference benchmark for the purpose of attaining the environmental and social characteristics that it promotes.

Sustainability

indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Sustainability Indicator	Value	Comment

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered a set of principal adverse impacts on sustainability factors in the following areas: controversial weapons (Table 1 – PAI indicator 14: Exposure to controversial weapons), social matters and human rights (Table 1 – PAI indicator 10: Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises), climate and other environment-related indicators (Table 1 – PAI indicator 1: GHG emissions (Scope 1 and 2), Scope 1 GHG emissions, Scope 2 GHG emissions, Total GHG emissions (Scope 1 and 2), PAI indicator 2: Carbon footprint, PAI indicator 3: GHG intensity of investee companies, PAI indicator 4: Exposure to companies active in the fossil fuel sector, PAI indicator 5: Share of non-renewable energy consumption and production, PAI indicator 6: Energy consumption intensity per high impact climate sector, PAI indicator 7: Activities negatively affecting biodiversity-sensitive areas, PAI indicator 8: Emissions to water, PAI indicator 9: Hazardous waste and radioactive waste ratio), and social aspects for sovereigns (PAI indicator 16: Investee countries subject to social violations). The Investment Manager applied a process to identify issuers that are exposed to principal adverse impacts on sustainability factors based on in-house research and/or external data sources, including ESG data providers, news alerts, and the issuers themselves. No investment was identified as having a critical and poorly managed impact in any of the principal adverse impacts areas considered.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: August 31, 2023

Pharmaceuticals, cosmetics & med. products	0.08

3.78% of the total value of investments (NAV) were in companies involved in sectors that could be connected to fossil fuels, like "Energy & water supply", "Mining, coal & steel" or "Petroleum/Oil and natural gas". It's important to note that even companies categorized under different sectors might still have some involvement with fossil fuel-related activities, even if it's not their main focus. Also, the Sub-Fund might invest in bonds labeled as green, social, or sustainability bonds. These bonds typically fund projects unrelated to fossil fuels, even if the companies issuing them can be active in sectors with potential links to fossil fuels.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

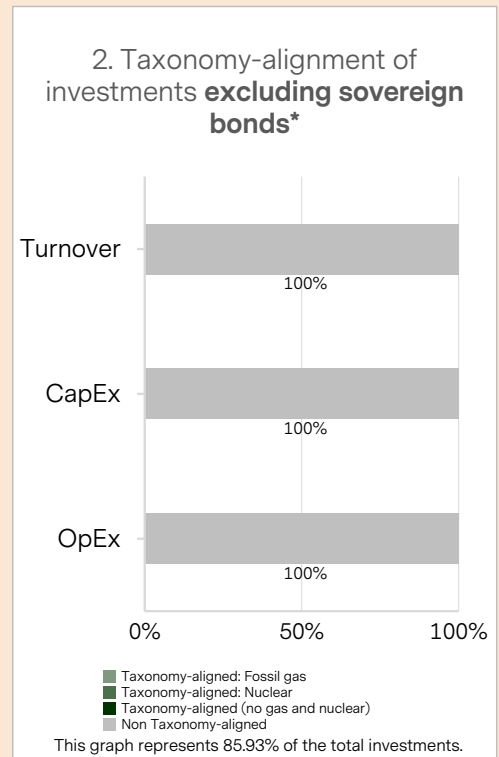

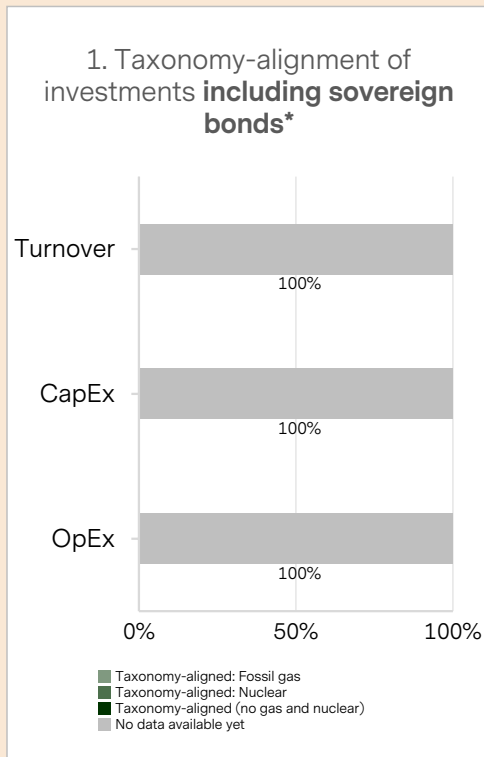

- Yes:
- In fossil gas In nuclear energy
- No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure** (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **What was the share of investments made in transitional and enabling activities?**

Activities	Investment share
transitional	0.00%
enabling	0.00%

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Period	Investment share
August 31, 2022	0.00%

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Investment share
0.00%

What was the share of socially sustainable investments?

Investment share
0.00%

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments	Purpose	Minimum of environmental or social safeguards
Liquidity management	Liquidity management	No minimum environmental or social safeguards were applied.
Derivatives (2.18%)	Hedging	No minimum environmental or social safeguards were applied.
Funds (8.81%)	Investment/ Diversification	No minimum environmental or social safeguards were applied.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used for the selection of the

investments to attain the environmental and/or social characteristics promoted by this Sub-Fund have been monitored throughout the reporting period.

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

The financial product has not designated a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Vontobel Fund - Global Equity (FQ_00140)

Legal entity identifier: HKDKDIFFGRVL37GZF444

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective:** ___%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective:** ___%

It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and social characteristics promoted by the Sub-Fund were met. The Sub-Fund promoted environmental and social characteristics and invested in issuers that the Investment Manager considered well-prepared to handle financially material environmental and social challenges. Issuers were selected based on the Investment Manager's ESG framework. The Sub-Fund has not designated a reference benchmark for the purpose of attaining the environmental and social characteristics that it promotes.

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Sustainability Indicator	Value	Comment
Percentage of investments in securities of corporate issuers that derive a non-negligible part of their revenues from products and/or activities excluded by the Sub-Fund.	0%	Excluded products and /or activities are indicated under the investment strategy section of the pre-contractual disclosure annex
Percentage of investments in issuers that are in violation of certain international norms and standards promoted by the Sub-Fund or that are exposed to severe controversies (unless a positive outlook has been identified). Such controversies may be related to environmental, social or governance issues	0%	During the reporting period, there was one potential breach of UNGC standards. After review, a positive outlook has been identified by the Research and ESG Analyst(s) and confirmed by Investment Risk.
Sub-Fund's weighted average carbon intensity compared to the investment universe. The investment universe is represented by the Sub-Fund's benchmark (MSCI All Country World Index TR net).	43.31 tons CO2e/USD million revenue (Sub-Fund) vs 134.64 tons CO2e/USD million revenue (benchmark)

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Not applicable.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Not applicable.

- *How were the indicators for adverse impacts on sustainability factors taken into account?*

Not applicable.

- *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Not applicable.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered a set of principal adverse impacts on sustainability factors in the following areas: controversial weapons (Table 1 – PAI indicator 14: Exposure to controversial weapons), social matters and human rights (Table 1 – PAI indicator 10: Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises), greenhouse gas emissions (Table 1 – PAI indicator 3: GHG intensity of investee companies), biodiversity (Table 1 – PAI indicator 7: Activities negatively affecting biodiversity-sensitive areas), and social and employee matters (Table 1 – PAI indicator 13: Board gender diversity). The Investment Manager applied a process to identify issuers that are exposed to principal adverse impacts on sustainability factors based on in-house research and/or external data sources, including ESG data providers, news alerts, and the issuers themselves. No investment was identified as having a critical and poorly managed impact in any of the principal adverse impacts areas considered.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: August 31, 2023

Largest investments	Sector	% Assets	Country
Microsoft	Internet, software & IT services	5.50	United States
Nestlé	Food & soft drinks	4.54	Switzerland

0% of the total value of investments (NAV) were in companies involved in sectors that could be connected to fossil fuels, like "Energy & water supply", "Mining, coal & steel" or "Petroleum/Oil and natural gas". It's important to note that even companies categorized under different sectors might still have some involvement with fossil fuel-related activities, even if it's not their main focus.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

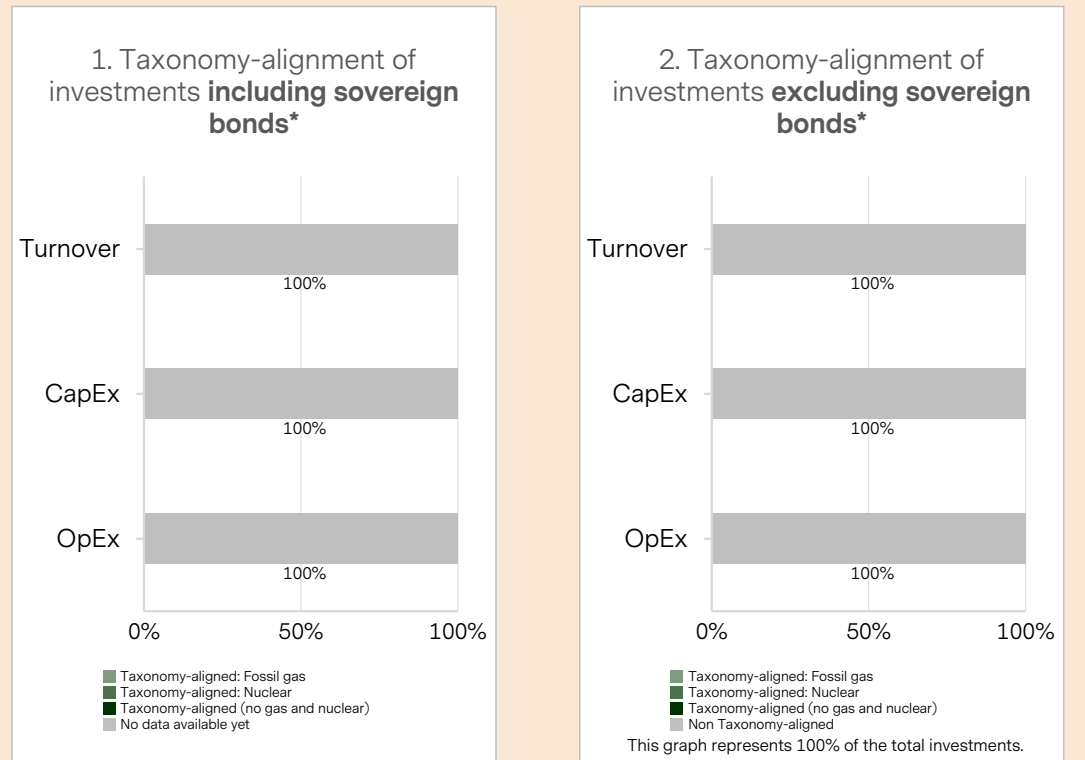

- Yes:
- In fossil gas In nuclear energy
- No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the "greenness" of investee companies today.
- **capital expenditure** (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

● **What was the share of investments made in transitional and enabling activities?**

Activities	Investment share

Product name: Vontobel Fund - TwentyFour Strategic Income Fund (FT_00126)

Legal entity identifier: 222100B4OXV5BVOSPQ71

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

It made **sustainable investments with an environmental objective:** ___%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** ___%

No

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and/or social characteristics promoted by the Sub-Fund were met. The Sub-Fund promoted certain environmental and social characteristics by investing in issuers that the Investment Manager considered well prepared to handle financially material environmental and social challenges. Issuers were screened in accordance with the Investment Manager's view of appropriate sustainability parameters as measured in Investment Manager's proprietary Environmental (E) and Social (S) scoring model. Additionally, the Sub-Fund applied certain exclusion criteria with regards to products and activities related to unconventional / controversial weapons. The Sub-Fund has not designated a

reference benchmark for the purpose of attaining the environmental and social characteristics that it promotes.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Sustainability Indicator	Value	Comment

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered a set of principal adverse impacts on sustainability factors in the following areas: controversial weapons (Table 1 – PAI indicator 14: Exposure to controversial weapons), social matters and human rights (Table 1 – PAI indicator 10: Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises), greenhouse gas emissions (Table 1 – PAI indicator 3: GHG intensity of investee companies), biodiversity (Table 1 – PAI indicator 7: Activities negatively affecting biodiversity-sensitive areas), and social and employee matters (Table 1 – PAI indicator 13: Board gender diversity). The Investment Manager applied a process to identify issuers that are exposed to principal adverse impacts on sustainability factors based on in-house research and/or external data sources, including ESG data providers, news alerts, and the issuers themselves. No investment was identified as having a critical and poorly managed impact in any of the principal adverse impacts areas considered.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: August 31, 2023

Largest investments	Sector	% Assets	Country
Microsoft	Internet, software & IT services	5.45	United States
CME Group	Financial, investment & other diversified comp.	4.43	United States
Intercontinental Exchange	Financial, investment & other diversified comp.	4.23	United States
Comcast	Graphics, publishing & printing media	4.23	United States
Mondelez International	Food & soft drinks	4.21	United States
Berkshire Hathaway 'A'	Financial, investment & other diversified comp.	4.16	United States
Alphabet 'C'	Internet, software & IT services	4.15	United States
Coca-Cola	Food & soft drinks	4.14	United States
Adobe	Internet, software & IT services	4.10	United States
Mastercard	Financial, investment & other diversified comp.	4.09	United States
Amazon.com	Retail trade & department stores	3.89	United States
UnitedHealth Group	Healthcare & social services	3.66	United States

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

The proportion of sustainability-related investments was 98.19% (assets aligned with environmental and social characteristics).

● *What was the asset allocation?*

98.19% of the investments of the financial product were used to attain the environmental and social characteristics (#1 Aligned with E/S characteristics)

#2 Other (1.81%)

● ***In which economic sectors were the investments made?***

Economic sector	
Internet, software & IT services	22.08
Financial, investment & other diversified comp.	21.61
Food & soft drinks	11.21
Retail trade & department stores	10.16
Pharmaceuticals, cosmetics & med. products	8.82
Healthcare & social services	5.86
Electronics & semiconductors	4.55
Building materials & building industry	4.25
Graphics, publishing & printing media	4.23
Mechanical engineering & industrial equip.	1.86
Insurance companies	1.70
Electrical appliances & components	1.03
Textiles, garments & leather goods	0.79
Vehicles	0.30

0% of the total value of investments (NAV) were in companies involved in sectors that could be connected to fossil fuels, like "Energy & water supply", "Mining, coal & steel" or "Petroleum/Oil and natural gas". It's important to note that even companies categorized under different sectors might still have some involvement with fossil fuel-related activities, even if it's not their main focus.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure** (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **What was the share of investments made in transitional and enabling activities?**

Activities	Investment share
transitional	0.00%
enabling	0.00%

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Period	Investment share
year ending on August 31, 2022	0.00%

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Investment share
0.00%

What was the share of socially sustainable investments?

Investment share
0.00%

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments	Purpose	Minimum of environmental or social safeguards
Cash (1.81%)	Liquidity management	No minimum environmental or social safeguards were applied.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used for the selection of the investments to attain the environmental and/or social characteristics promoted by this Sub-Fund have been monitored throughout the reporting period.

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

The financial product has not designated a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes.

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: AXA WORLD FUNDS - ACT SOCIAL PROGRESS
 Legal entity identifier: 213800Z5DWFODAPKIC63

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input checked="" type="checkbox"/> Yes	<input type="radio"/> <input type="radio"/> <input type="checkbox"/> No
<input checked="" type="checkbox"/> It made sustainable investments with an environmental objective: 6.33% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input checked="" type="checkbox"/> It made sustainable investments with a social objective: 89.85%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent was the sustainable investment objective of this financial product met?

The Financial Product seeks a sustainable investment objective to advance the United Nations Sustainable Development Goals (SDGs) by investing into companies whose business models and/or operational practices are aligned with targets defined by one or more SDGs and that create financial and societal value by fostering social progress.

In line with this sustainable investment objective, the Financial Product seeks to deliver a positive and measurable impact on society, and more specifically targets the areas of social progress such as

housing and essential infrastructure, financial and technology inclusion, healthcare solutions, well-being and safety, education and entrepreneurship through the support of the United Nations Sustainable Development Goals (SDGs) in their social dimension.

The Financial Product has met its sustainable investment objective for the reference period by investing in companies considering their:

- Social Product & Services Score

The financial product has met its sustainable investment objectives by investing in companies assessed as sustainable through the following dimension:

1. **UN Sustainable Development Goals alignment (SDG)** of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:
 - a. the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
 - b. using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. **Integration of issuers engaged in a solid Transition Pathway** consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

● **How did the sustainability indicators perform?**

During the reference the period, the attainment of the sustainable objective of the Financial Product has been measured with the sustainability indicator mentioned below:

Sustainability KPI Name	Value	Benchmark	Coverage
Social Product & Services score	3.51	0.96	89.7606869189488%

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● **... And compared to previous periods?**

Not applicable

● **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

The application of the Do No Significant Harm Principle for the sustainable investments the Financial Product made means that the following companies cannot qualify as sustainable if they met any of the criteria listed below:

- The issuer causes harm along any of the SDGs when one of its SDG scores is below – 5 based on a quantitative database from external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer is in AXA IM’s sectorial and ESG standards ban lists (as described below), which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer has a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology. The ESG score is based on ESG scoring from external data provider as primary inputs assessing data points across Environment, Social and Governance (ESG) dimensions. AXA IM analysts can complement with a fundamental and documented ESG analysis in case of lack of coverage or disagreement on the ESG rating provided that it is approved by AXA IM dedicated internal governance body.

Indicators for principal adverse impacts on sustainability factors were considered, including through the application of AXA IM’s exclusion and stewardship policies.

— **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through AXA IM sectorial exclusion policies and AXA IM ESG standards (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Where relevant, Stewardship policies are an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors.

Voting at general meetings is also an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes	
Ecosystem Protection & Deforestation policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	
	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	% of investments	
SDG no significantly negative score	PAI 5 : Share of non-renewable energy consumption and production	% of total energy sources	
Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	GWh per million EUR of revenue of investee companies, per high impact climate sector	
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity sensitive areas	% of investments	
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes per million EUR invested, expressed as a weighted average	
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes per million EUR invested,	

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

	expressed as a weighted average	
--	---------------------------------	--

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement
ESG standards policy: violation of international norms and standards	PAI 10: Violations of UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for multinational enterprises	% of investments	
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	
SDG no significantly negative score	PAI 13: Board gender diversity	Expressed as a percentage of all board members	
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

AXA IM relies on an third-party data provider, notably for the PAI indicators included above. The data used is the data available at the time of reporting and can therefore reflect a prior reference period. The data comes either from disclosures made by investee companies or from estimations. It is currently not possible, from a technical standpoint, for AXA IM to distinguish reference periods or the level of estimation of data in this reporting.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

Please note that these indicators have been published for information purposes only, as SFDR Level 2 requirements entered into force on 01/01/2023, after this report's reference period. The PAI indicators measures given here reflect the Financial Product's assets as of 30/12/2022.

AXA IM may, in particular with the aim of improving data quality, change third party data providers at any time and at its own discretion. This may lead to changes on the data used for the same instruments or investments in future reporting.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM relies on an external provider's screening framework and excludes any companies that have been assessed as "non-compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

Please note that, despite our commitment in the precontractual SFDR annex to publish these indicators in our periodic reporting SFDR annex, SFDR Level 2 requirements – such as the integration of PAI indicators in the investment process – only entered into force on 01/01/2023, after this report's reference period. Therefore, PAI indicators will start being disclosed in the periodic reporting SFDR annex relative to the reference period in which SFDR Level 2 requirements entered into application.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators as presented below:

Relevant AXA IM policies	PAI indicator	Units	Measurement
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes	
Ecosystem protection & Deforestation policy			
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/M€ or tCO ₂ e/M\$)	
Ecosystem protection & Deforestation policy			
Climate Risk policy			

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Ecosystem protection & Deforestation policy	PAI 3: GHG intensity of investee companies	Metric tonnes per eur million revenue	
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	% of investments	
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	% of total energy sources	
Ecosystem protection & Deforestation policy	PAI 7: activities negatively affecting biodiversity sensitive area	% of investments	
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN global compact principles & OECD guidelines for Multinational Enterprises	% of investments	
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Expressed as a percentage of all board members	
Controversial weapons policy	PAI 14: Exposure to controversial weapons	% of investments	

AXA IM relies on an third-party data provider, notably for PAI indicators. The data used is the data available at the time of reporting and can therefore reflect a prior reference period. The data comes either from disclosures made by investee companies or from estimations. It is currently not possible, from a technical standpoint, for AXA IM to distinguish reference periods or the level of estimation of data in this reporting.

Please note that these indicators have been published for information purposes only, as SFDR Level 2 requirements entered into force on 01/01/2023, after this report's reference period. The PAI indicators measures given here reflect the Financial Product's assets as of 30/12/2022.

AXA IM may, in particular with the aim of improving data quality, change third party data providers at any time and at its own discretion. This may lead to changes on the data used for the same instruments or investments in future reporting.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 30/12/2022

What were the top investments of this financial product?

The top investments of the Financial Product are detailed below:

Top investments	Sector	Proportion	Country
ASTRAZENECA PLC XLON GBP	Manufacture of basic pharmaceutical products	3.22%	GB

AIA GROUP LTD XHKG HKD	Life insurance	2.9%	HK
CSL LTD XASX AUD	Research and experimental development on biotechnology	2.68%	AU
STRYKER CORP XNYS USD	Manufacture of medical and dental instruments and supplies	2.66%	US
DEXCOM INC XNGS USD	Manufacture of medical and dental instruments and supplies	2.5%	US
MSA SAFETY INC XNYS USD	Manufacture of tools	2.49%	US
JOHNSON CONTROLS INTERNATION XNYS USD	Manufacture of ovens, furnaces and furnace burners	2.46%	US
UNICHARM CORP XTKS JPY	Manufacture of household and sanitary goods and of toilet requisites	2.42%	JP
INTUITIVE SURGICAL INC XNGS USD	Manufacture of medical and dental instruments and supplies	2.41%	US
NATIONAL VISION HOLDINGS INC XNGS USD	Other retail sale of new goods in specialised stores	2.38%	US
CENTENE CORP XNYS USD	Non-life insurance	2.31%	US
GENTEX CORP XNGS USD	Manufacture of electrical and electronic equipment for motor vehicles	2.28%	US
ETSY INC XNGS USD	Retail sale via mail order houses or via Internet	2.27%	US
INTUIT INC XNGS USD	Other software publishing	2.27%	US
PLANET FITNESS INC - CL A XNYS USD	Fitness facilities	2.26%	US

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

● *What was the asset allocation?*

The actual asset allocation has been reported based on the assets weighted average at the end of the reference period.

● ***In which economic sectors were the investments made?***

Financial product's investments were made in the economic sectors detailed below:

Top sector	Proportion
Other software publishing	8.41%
Manufacture of medical and dental instruments and supplies	7.58%
Other monetary intermediation	7.2%
Education	6.82%
Research and experimental development on biotechnology	5.77%
Life insurance	4.08%
Manufacture of electrical and electronic equipment for motor vehicles	4%
Other activities auxiliary to financial services, except insurance and pension funding	3.8%
Technical testing and analysis	3.76%
Manufacture of instruments and appliances for measuring, testing and navigation	3.57%

Manufacture of basic pharmaceutical products	3.22%
Construction of utility projects for electricity and telecommunications	2.93%
Renting and operating of own or leased real estate	2.78%
Manufacture of tools	2.49%
Manufacture of ovens, furnaces and furnace burners	2.46%
Manufacture of household and sanitary goods and of toilet requisites	2.42%
Other retail sale of new goods in specialised stores	2.38%
Non-life insurance	2.31%
Retail sale via mail order houses or via Internet	2.27%
Fitness facilities	2.26%
Manufacture of other chemical products n.e.c.	2.23%
Other cleaning activities	2.11%
Manufacture of other special-purpose machinery n.e.c.	2.06%
Manufacture of pharmaceutical preparations	2.04%
Manufacture of other food products n.e.c.	1.88%
Retail sale of medical and orthopaedic goods in specialised stores	1.83%
Construction of residential and non-residential buildings	1.71%
Other human health activities	1.63%
Manufacture of soap and detergents, cleaning and polishing preparations	1.54%
Private security activities	1.47%
Manufacture of electric motors, generators and transformers	0.97%

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product is not considering the “do not significantly harm” criteria of the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

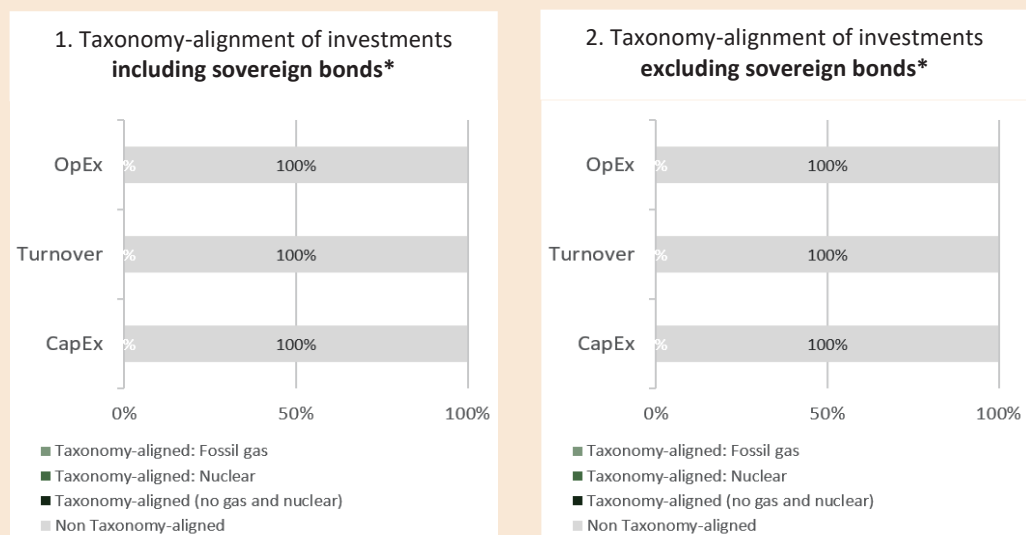

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with EU Taxonomy³?**

Yes : In fossil gas In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

This graph represents 100% of the total investments.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

Not applicable.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 6.33 % for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 89.85% of sustainable investments with a social objective.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

Investments included under “not sustainable” represented 3.82 % of the Net Asset Value of the product.

The “not sustainable” assets may have consisted in, as defined in the precontractual annex:

- derivatives used in hedging strategies or used for liquidity management purpose and,
- cash and cash equivalent investments (being bank deposit, eligible money market instruments and money market funds) used for managing the liquidity of the Financial Product

Environmental or social safeguards are applied and assessed on all “Not Sustainable” assets except on (i) non single name derivatives and (ii) on cash and cash equivalent investments described above.

What actions have been taken to attain the sustainable investment objective during the reference period?

In 2022, the Financial Product reinforced exclusion policies applied with new exclusions related to unconventional oil and gas, mainly (i) oil sands leading to the exclusion of companies for which oil sands represents more than 5% of global oil sands production, (ii) Shale/ Fracking excluding players that produce less than 100kboepd with more than 30% of their total production derived from fracking, and (ii) Arctic with divestment from companies deriving more than 10% of their production from Arctic Monitoring and Assessment Programme (AMAP) region or representing more than 5% of the total global Arctic production. More details on those enrichments are available under the following link: <https://www.axa-im.com/our-policies-and-reports>

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP Paribas Funds Aqua

Legal Entity Identifier: 2138005A212V32SRUZ61

SUSTAINABLE INVESTMENT OBJECTIVE

Did this financial product have a sustainable investment objective?

Yes

No

<p><input checked="" type="checkbox"/> It made a sustainable investment with an environmental objective: 70.9%*</p> <ul style="list-style-type: none"> <input checked="" type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <p><input checked="" type="checkbox"/> It made sustainable investments with a social objective: 59.3%*</p>	<p><input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it had a proportion of __ % of sustainable investments</p> <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective <p><input type="checkbox"/> It promoted E/S characteristics but did not make any sustainable investments</p>
--	--

All actual data within this periodic report are calculated on the closing date of the accounting year.

*At the date of preparation of this periodic information document, the management company does not have all the necessary data to determine the alignment of investments with the taxonomy, excluding sovereign bonds. The percentage of alignment of investments with the taxonomy, including sovereign bonds being by construction a real minimum proportion is taken up accordingly.

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the BNP Paribas Funds Aqua is to help or accelerate the transition into a sustainable world by focusing on challenges related to the global water value chain.

At all times, this sub-fund invests in equities and/or equity equivalent securities issued by companies that conduct a significant part of their business in water and related or connected sectors, with sustainable activities and processes.

Sustainable investments underlying the financial product contribute to two of the environmental objectives set out in Article 9 of Regulation (EU) 2020/852, these are climate change mitigation and climate change adaptation.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives? "

● *How did the sustainability indicators perform?*

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio invested in companies with at least a 20% of revenue, profit or invested capital aligned with the financial product's thematic: **100%**
- The percentage of the financial product's portfolio compliant with the BNP Paribas Asset Management Responsible Business Conduct Policy (RBC Policy): **100% of the equity portfolio**
- The percentage of the financial product's assets covered by the ESG analysis based on the proprietary Impax Fundamental Score ESG methodology (excluding ancillary liquid assets): **100% of the equity portfolio**
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation: **89.3%**
- The percentage of the financial product's portfolio aggregate Revenue which is "EU Taxonomy Aligned" as defined by Regulation (EU) 2020/852: **3.4%**

● *...and compared to previous periods ?*

Not applicable for the first periodic report.

● *How did the sustainable investments not cause significant harm to any sustainable investment objective?*

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

In order to ensure that the sustainable investments that the financial product intends to make do not cause significant harm to any environmental or social sustainable objective, the financial product assesses each investment against a set of indicators of adverse impacts by conducting proprietary Fundamental ESG analysis for all portfolio holdings. The ESG analysis aims to identify the quality of governance structures, the most material environmental and social harms for a company or issuer and assesses how well these harms are addressed and managed. The Investment Manager seeks robust policies, processes, management systems and incentives as well as adequate disclosure, as applicable. Additionally, the Investment Manager assesses any past controversies identified. A proprietary aggregate ESG score is then assigned for each company or issuer taking into account the indicators as set out below, based on a qualitative judgement. Where sufficient ESG quality is not achieved, a company or issuer is excluded from the financial product's investable universe. The Investment Manager considers it important to engage with companies and issuers and to analyse company and issuer disclosures and reports. The ESG process is proprietary to the Investment Manager, although the Investment Manager uses external ESG-research as an input.

— — — *How were the indicators for adverse impacts on sustainability factors taken into account?*

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Management Global Sustainability Strategy (GSS) into its investment process : RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The Indicators for adverse impacts on sustainability factors have been taken into account in the Investment Manager's Fundamental ESG analysis as follows – the data considered, as prescribed by SFDR, by the Investment Manager to assess the relevant indicator is set out in the first paragraph under each indicator below:

Mandatory Indicators

GHG emissions, carbon footprint and GHG intensity of investee companies

Data considered: an investee company's absolute scope 1, 2 and 3 GHG emissions, and its enterprise value and revenue.

Companies are tiered between those providing full disclosure of Scopes 1, 2, 3 emissions across the majority of their operations; reporting across all four pillars prescribed by the Task Force on Climate related Financial Disclosures (TCFD); having set stretching short-medium term target (3+ years), as well as a Net zero/Paris Agreement aligned/Science-based long term target (10-30 years) and detailed actions plans versus those with no emission disclosure in place, no targets and no clear commitment to setting one.

Exposure to companies active in the fossil fuel sector

Data considered: an investee company's exposure to fossil fuel revenues.

The Investment Manager evaluates a company's transition to a low carbon economy by working towards ambitious science-based Paris-aligned decarbonisation targets and by strategically phasing out any fossil fuel exposure.

Share of non-renewable energy consumption and production, and energy consumption intensity per high impact climate sector

Data considered: an investee company's total energy consumption and production as well as the consumption and production from non-renewable energy sources, and an investee company's output metric as the basis of energy intensity.

Companies are tiered between those providing state of the art management processes and reporting for all environmental key issues through certified management systems referencing international or industry standards, challenging long term and interim targets relevant to key issues, relevant KPIs and reporting aligned with internationally recognised frameworks prescribed by the International Sustainability Standards Board (ISSB), the Global Reporting Initiative (GRI) and the CDP, versus companies with limited management processes and reporting, for example providing only qualitative KPIs and anecdotal disclosures.

Activities negatively affecting biodiversity-sensitive areas

Data considered an investee company's sites/operations located in or near to biodiversity-sensitive areas.

The Investment Manager uses external tools and research as well as its own proprietary analysis in assessing companies' management of nature-related harms. The Investment Manager seeks investment in companies or issuers that have addressed the harm with robust policies, processes, management systems and incentives that are scaled appropriately to the importance of the harm. Site-level geolocation data and regional exposure are not always easily available or disclosed by companies and issuers. The Investment Manager engages with companies to achieve geo-location data and to assess the potential harm at the specific locations of interest, for example highlighting habitats of IUCN Red List species (the International Union for Conservation of Nature), protected areas and key biodiversity areas in the vicinity.

Emissions to water, and hazardous waste and radioactive waste ratio

Data considered: an investee company's generated tonnes of emissions to water, and tonnes of hazardous waste and radioactive waste.

Companies are tiered between those providing state of the art management processes and reporting for all environmental key issues through certified management systems referencing international or industry standards, challenging long term and interim targets relevant to key issues, relevant KPIs and reporting aligned with internationally recognised frameworks such as ISSB, GRI and CDP, versus companies with limited management processes and reporting, for example providing only qualitative KPIs and anecdotal disclosures.

Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

Data considered: an investee company's involvement in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises.

The Investment Manager screens the Sub-Fund's investments against adherence to global standards such as the UN Global Compact principles and OECD Guidelines for Multinational Enterprises. An external research provider is used to support this screening activity. A company found to be in breach of these international norms and standards is excluded from the investable universe and divested. Where a company is flagged for potential breaches, the Investment Manager will monitor and seek to engage, as appropriate.

Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

Data considered: instances where an investee company is lacking policies to monitor compliance with the UNGC Principles or OECD Guidelines.

The Investment Manager uses external tools and research to ascertain the existence/non-existence of these policies and identify those companies that do not satisfy credible policy standards in all those areas that speak to UNGC principles or the OECD Guidelines.

Unadjusted gender pay gap

Data considered: an investee company's average gross hourly earnings of male paid employees and of female paid employees as a percentage of average gross hourly earnings of male paid employees.

Companies are assessed for their pay equity through review of the pay gap, where available, alongside a broader set of KPIs related to Equality, Diversity & Inclusion (ED&I). Companies are tiered between those demonstrating state of the art management processes and those with no ED&I disclosure.

Board gender diversity

Data considered: an investee company's number of women on the board of directors and percentage of board members that are female.

Companies are assessed for their board gender diversity alongside other key roles which influence company strategy alongside a broader set of metrics related to leadership diversity. Companies are tiered between those achieving 40%-60% women on the board and in executive management as well as demonstrating diversity in key roles and those with no women on the board or in executive management.

Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Data considered: an investee company's exposure to controversial weapons through business activity and ownership.

Companies are screened by business activity in an effort to ensure, using a combination of screen activity and the Investment Manager's qualitative judgement, that they are not involved in the

activity of manufacturing or of manufacturing tailor-made components, using, repairing, putting up for sale, selling, distributing, importing or exporting, storing or transporting controversial or indiscriminate weapons such as anti-personnel mines, submunitions, inert ammunition and armour containing depleted uranium or any other industrial uranium, weapons containing white phosphorus, biological, chemical or nuclear weapons. The Investment Manager seeks to exclude all companies with any involvement in controversial weapons from investment and in addition uses qualitative judgement as part of the analysis. If the Investment Manager determines that one of these activities takes place within a subsidiary, the direct parent company is also considered to be involved in controversial weapons if it holds a majority equity interest in the subsidiary. Likewise, if one of the above-mentioned activities is determined to take place within a parent company, any majority-owned subsidiary of this parent company is also deemed to be involved.

Voluntary Indicators

Investments in companies without carbon emission reduction initiatives

Data considered: instances where an investee company is lacking of all of the following: near-term GHG reduction target, long-term GHG reduction target (10+ years), science-based GHG reduction target, Net Zero commitment.

The Investment Manager actively seeks to engage with companies to encourage the implementation of effective performance management systems, with the objective to establish GHG emissions baseline data (scope 1, 2 and 3), set science-based long-term carbon emission reduction targets with a viable action plan to deliver on these targets, and regularly report.

Water usage and recycling

Data considered: an investee company's operational water use (cubic meters of water consumed), and water management (percentage of water recycled and reused).

Companies are tiered between those providing state of the art management processes and reporting for all environmental key issues through certified management systems referencing international or industry standards, challenging long term and interim targets relevant to key issues, relevant KPIs and reporting aligned with internationally recognised frameworks such as ISSB, GRI and CDP, versus companies with limited management processes and reporting, for example providing only qualitative KPIs and anecdotal disclosures.

Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws

Data considered: an investee company's number of convictions per severity category in the past three to five years (three years for minor controversies or incidents; five years for more significant controversies or incidents).

The materiality and severity of convictions and fines for violation of anti-corruption and anti-bribery laws are reviewed as part of the Fundamental ESG analysis.

— — — Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal

procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate

How did this financial product consider principal adverse impacts on sustainability factors ?

The Sub-Fund considers principal adverse impacts on sustainability factors by identifying, assessing, and managing negative effects of portfolio-related investment decisions on environmental, social and employee matters, respect for human rights, and anti-bribery & corruption matters.

The following illustrates how this exposure is intended to be managed, once identified and assessed, taking into account each of the mandatory and voluntary indicators listed above.

1. All companies and other issuers must meet financial and ESG criteria before entering the Sub-Fund's list of investable companies. When all the data is gathered, an ESG report is written and a proprietary aggregate ESG score assigned. Where sufficient ESG quality is not achieved, a company or issuer is excluded from the investable universe. In cases where a company has a low ESG score, but is not deemed to cause significant harm and is not excluded, the company will have a capped position size in the portfolio, for risk management reasons. The Investment Manager does not seek to exclude a certain number or percentage of companies or issuers, but rather seeks an absolute level of ESG quality based on a qualitative judgement.

2. Bottom-up company-specific engagement: As part of the Investment Manager's ongoing, proprietary company and issuer-level ESG analysis, it identifies company and issuer-specific matters and risks and actively engages with companies and issuers about these matters. For the bottom-up, company specific engagements, the objective is typically to solve or improve the issue that has been identified as part of ESG analysis and when that objective has been achieved, move to the next objective or pause the engagement.

Top-down strategic engagement: Every year the Investment Manager assesses and outlines the engagement priorities for the next 12 months. These priorities are based on market developments and emerging sustainability issues that are considered relevant and material for companies and issuers. The Investment Manager then identifies the companies and issuers which it considers are most exposed to these topics and focuses its engagement on specific companies and issuers. For the strategic engagement areas, the Investment Manager sets up specific steps as objectives that it seeks to reach with the engagements. The strategic engagement areas have analysts assigned as leads for each of the areas of engagement.

3. Where the Investment Manager identifies unmanaged risk, and its usual management approach to engagement fails to produce positive outcomes, its Escalation Policy takes hold.

If the Investment Manager views the investee company or issuer is unresponsive to engagement or unwilling to consider alternative options posing less significant risks to shareholders, the Investment Manager will escalate the dialogue by:

- Seeking alternative or more senior contacts within the company or issuer
- Intervening or engaging together with other shareholders
- Intervening or engaging together with other institutions or organisations (multi-stakeholder)
- Highlighting the issue and/or joint engagements regarding the issue through institutional platforms and/or
- Filing or co-filing resolutions at General Meetings

If interventions are unsuccessful and the Investment Manager considers that the risk profile of the company has significantly deteriorated or company strategy/governance structures have altered because of an incident, to a degree where the return outlook and the company's strategy and quality no longer meet expectations, the company would be excluded from the investable universe and/or sold.

What were the top investments of this financial product?

Largest investments

	Sector	% Assets*	Country
VEOLIA ENVIRON. SA	Utilities	4.02%	France
AGILENT TECHNOLOGIES INC	Health Care	3.81%	United States

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and that contribute to the environmental objectives climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control and/or the protection and restoration of biodiversity and ecosystems are disclosed in the two graphs below.

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

● *Did the financial product invest in fossil gas and/or nuclear energy activities that comply with the EU Taxonomy ¹?*

Yes:

In fossil gas In nuclear energy

No:

At the date of closure of the accounting year and preparation of the annual report, the data are not available and the management company does not have the information relating to the previous year.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the "greenness" of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies relevant for a transition to a green economy
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** Real taxonomy aligned

● **What was the share of investments made in transitional and enabling activities?**

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable for the first periodic report.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **67.5%**.

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **59.3%** of the financial product.

What investments were included under 'not sustainable', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments is made in instruments used for liquidity and/or hedging purposes, such as cash, deposits and derivatives.

The investment manager will ensure that those investments are made while maintaining the sustainable investment objective of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

What actions have been taken to attain the sustainable investment objective during the reference period ?

- The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment; More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com).
- The financial product shall invest in companies with at least a 20% of revenue, profit or invested capital aligned with the financial product's thematics;
- The financial product shall have at least 90% of its assets (excluding ancillary assets) covered by the ESG analysis based on the proprietary Impax Fundamental Score ESG methodology;
- The financial product shall invest at least 85% of its portfolio in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as "sustainable investment" and the quantitative and qualitative thresholds are indicated in the main part of the Prospectus.
- The financial product's shall invest at least 2% of its assets in companies "EU Taxonomy Aligned".

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: <https://www.bnpparibas-am.com/en/documentation-sustainability/>

How did this financial product perform compared to the reference sustainable benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective

- *How does the reference benchmark differ from a broad market index?*
Not applicable.
- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable objective?*
Not applicable.
- *How did this financial product perform compared with the reference benchmark?*
Not applicable.
- *How did this financial product perform compared with the broad market index?*
Not applicable.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP Paribas Funds SMaRT Food

Legal Entity Identifier: 213800YTNPCDGU4KGD79

SUSTAINABLE INVESTMENT OBJECTIVE

Did this financial product have a sustainable investment objective?

Yes

No

It made a sustainable investment with an environmental objective: 57.5%*

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made sustainable investments with a social objective: 56.0%*

It promoted Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it had a proportion of __ % of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics but did not make any sustainable investments

All actual data within this periodic report are calculated on the closing date of the accounting year.

*At the date of preparation of this periodic information document, the management company does not have all the necessary data to determine the alignment of investments with the taxonomy, excluding sovereign bonds. The percentage of alignment of investments with the taxonomy, including sovereign bonds being by construction a real minimum proportion is taken up accordingly.

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the BNP Paribas SMaRT Food is to help or accelerate the transition into a sustainable world by focusing on challenges related to the food value chain and nutrition.

At all times, this sub-fund invests in equities and/or equity equivalent securities issued by companies that conduct a significant proportion of their business in the food supply chain and related or connected sectors with sustainable activities and processes.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives? "

● *How did the sustainability indicators perform?*

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio invested in companies with at least a 20% of revenue, profit or invested capital aligned with the financial product's thematic: **100%**
- The percentage of the financial product's portfolio compliant with the BNP Paribas Asset Management Responsible Business Conduct Policy (RBC Policy): **100% of the equity portfolio**
- The percentage of the financial product's assets covered by the ESG analysis based on the proprietary Impax Fundamental Score ESG methodology (excluding ancillary liquid assets): **100% of the equity portfolio**
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation: **96.1%**

● *...and compared to previous periods ?*

Not applicable for the first periodic report.

● *How did the sustainable investments not cause significant harm to any sustainable investment objective?*

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

In order to ensure that the sustainable investments that the financial product intends to make do not cause significant harm to any environmental or social sustainable objective, the financial product assesses each investment against a set of indicators of adverse impacts by conducting proprietary Fundamental ESG analysis for all portfolio holdings. The ESG analysis aims to identify the quality of governance structures, the most material environmental and social harms for a company or issuer and assesses how well these harms are addressed and managed. The Investment Manager seeks robust policies, processes, management systems and incentives as well as adequate disclosure, as applicable. Additionally, the Investment Manager assesses any past controversies identified. A proprietary aggregate ESG score is then assigned for each company or issuer taking into account the indicators as set out below, based on a qualitative judgement. Where sufficient ESG quality is not achieved, a company or issuer is excluded from the financial product's investable universe. The Investment Manager considers it important to engage with companies and issuers and to analyse company and issuer disclosures and reports. The ESG process is proprietary to the Investment Manager, although the Investment Manager uses external ESG-research as an input.

— — — *How were the indicators for adverse impacts on sustainability factors taken into account?*

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process : RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Indicators for adverse impacts on sustainability factors have been taken into account in the Investment Manager's Fundamental ESG analysis as follows – the data considered, as prescribed by SFDR, by the Investment Manager to assess the relevant indicator is set out in the first paragraph under each indicator below:

Mandatory Indicators

GHG emissions, carbon footprint and GHG intensity of investee companies

Data considered: an investee company's absolute scope 1, 2 and 3 GHG emissions, and its enterprise value and revenue.

Companies are tiered between those providing full disclosure of Scopes 1, 2, 3 emissions across the majority of their operations; reporting across all four pillars prescribed by the Task Force on Climate related Financial Disclosures (TCFD); having set stretching short-medium term target (3+ years), as well as a Net zero/Paris Agreement aligned/Science-based long term target (10-30 years) and detailed actions plans versus those with no emission disclosure in place, no targets and no clear commitment to setting one.

Exposure to companies active in the fossil fuel sector

Data considered: an investee company's exposure to fossil fuel revenues.

The Investment Manager evaluates a company's transition to a low carbon economy by working towards ambitious science-based Paris-aligned decarbonisation targets and by strategically phasing out any fossil fuel exposure.

Share of non-renewable energy consumption and production, and energy consumption intensity per high impact climate sector

Data considered: an investee company's total energy consumption and production as well as the consumption and production from non-renewable energy sources, and an investee company's output metric as the basis of energy intensity.

Companies are tiered between those providing state of the art management processes and reporting for all environmental key issues through certified management systems referencing international or industry standards, challenging long term and interim targets relevant to key issues, relevant KPIs and reporting aligned with internationally recognised frameworks prescribed by the International Sustainability Standards Board (ISSB), the Global Reporting Initiative (GRI) and the CDP, versus companies with limited management processes and reporting, for example providing only qualitative KPIs and anecdotal disclosures.

Activities negatively affecting biodiversity-sensitive areas

Data considered an investee company's sites/operations located in or near to biodiversity-sensitive areas.

The Investment Manager uses external tools and research as well as its own proprietary analysis in assessing companies' management of nature-related harms. The Investment Manager seeks investment in companies or issuers that have addressed the harm with robust policies, processes, management systems and incentives that are scaled appropriately to the importance of the harm. Site-level geolocation data and regional exposure are not always easily available or disclosed by companies and issuers. The Investment Manager engages with companies to achieve geo-location data and to assess the potential harm at the specific locations of interest, for example highlighting habitats of IUCN Red List species (the International Union for Conservation of Nature), protected areas and key biodiversity areas in the vicinity.

Emissions to water, and hazardous waste and radioactive waste ratio

Data considered: an investee company's generated tonnes of emissions to water, and tonnes of hazardous waste and radioactive waste.

Companies are tiered between those providing state of the art management processes and reporting for all environmental key issues through certified management systems referencing international or industry standards, challenging long term and interim targets relevant to key issues, relevant KPIs and reporting aligned with internationally recognised frameworks such as ISSB, GRI and CDP, versus companies with limited management processes and reporting, for example providing only qualitative KPIs and anecdotal disclosures.

Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

Data considered: an investee company's involvement in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises.

The Investment Manager screens the Sub-Fund's investments against adherence to global standards such as the UN Global Compact principles and OECD Guidelines for Multinational Enterprises. An external research provider is used to support this screening activity. A company found to be in breach of these international norms and standards is excluded from the investable universe and divested. Where a company is flagged for potential breaches, the Investment Manager will monitor and seek to engage, as appropriate.

Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

Data considered: instances where an investee company is lacking policies to monitor compliance with the UNGC Principles or OECD Guidelines.

The Investment Manager uses external tools and research to ascertain the existence/non-existence of these policies and identify those companies that do not satisfy credible policy standards in all those areas that speak to UNGC principles or the OECD Guidelines.

Unadjusted gender pay gap

Data considered: an investee company's average gross hourly earnings of male paid employees and of female paid employees as a percentage of average gross hourly earnings of male paid employees.

Companies are assessed for their pay equity through review of the pay gap, where available, alongside a broader set of KPIs related to Equality, Diversity & Inclusion (ED&I). Companies are tiered between those demonstrating state of the art management processes and those with no ED&I disclosure.

Board gender diversity

Data considered: an investee company's number of women on the board of directors and percentage of board members that are female.

Companies are assessed for their board gender diversity alongside other key roles which influence company strategy alongside a broader set of metrics related to leadership diversity. Companies are tiered between those achieving 40%-60% women on the board and in executive management as well as demonstrating diversity in key roles and those with no women on the board or in executive management.

Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Data considered: an investee company's exposure to controversial weapons through business activity and ownership.

Companies are screened by business activity in an effort to ensure, using a combination of screen activity and the Investment Manager's qualitative judgement, that they are not involved in the activity of manufacturing or of manufacturing tailor-made components, using, repairing, putting up for sale, selling, distributing, importing or exporting, storing or transporting controversial or indiscriminate weapons such as anti-personnel mines, submunitions, inert ammunition and

armour containing depleted uranium or any other industrial uranium, weapons containing white phosphorus, biological, chemical or nuclear weapons. The Investment Manager seeks to exclude all companies with any involvement in controversial weapons from investment and in addition uses qualitative judgement as part of the analysis. If the Investment Manager determines that one of these activities takes place within a subsidiary, the direct parent company is also considered to be involved in controversial weapons if it holds a majority equity interest in the subsidiary. Likewise, if one of the above-mentioned activities is determined to take place within a parent company, any majority-owned subsidiary of this parent company is also deemed to be involved.

Voluntary Indicators

Investments in companies without carbon emission reduction initiatives

Data considered: instances where an investee company is lacking of all of the following: near-term GHG reduction target, long-term GHG reduction target (10+ years), science-based GHG reduction target, Net Zero commitment.

The Investment Manager actively seeks to engage with companies to encourage the implementation of effective performance management systems, with the objective to establish GHG emissions baseline data (scope 1, 2 and 3), set science-based long-term carbon emission reduction targets with a viable action plan to deliver on these targets, and regularly report.

Water usage and recycling

Data considered: an investee company's operational water use (cubic meters of water consumed), and water management (percentage of water recycled and reused).

Companies are tiered between those providing state of the art management processes and reporting for all environmental key issues through certified management systems referencing international or industry standards, challenging long term and interim targets relevant to key issues, relevant KPIs and reporting aligned with internationally recognised frameworks such as ISSB, GRI and CDP, versus companies with limited management processes and reporting, for example providing only qualitative KPIs and anecdotal disclosures.

Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws

Data considered: an investee company's number of convictions per severity category in the past three to five years (three years for minor controversies or incidents; five years for more significant controversies or incidents).

The materiality and severity of convictions and fines for violation of anti-corruption and anti-bribery laws are reviewed as part of the Fundamental ESG analysis.

— — — Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

How did this financial product consider principal adverse impacts on sustainability factors ?

The Sub-Fund considers principal adverse impacts on sustainability factors by identifying, assessing, and managing negative effects of portfolio-related investment decisions on environmental, social and employee matters, respect for human rights, and anti-bribery & corruption matters.

The following illustrates how this exposure is intended to be managed, once identified and assessed, taking into account each of the mandatory and voluntary indicators listed above.

1. All companies and other issuers must meet financial and ESG criteria before entering the Sub-Fund's list of investable companies. When all the data is gathered, an ESG report is written and a proprietary aggregate ESG score assigned. Where sufficient ESG quality is not achieved, a company or issuer is excluded from the investable universe. In cases where a company has a low ESG score, but is not deemed to cause significant harm and is not excluded, the company will have a capped position size in the portfolio, for risk management reasons. The Investment Manager does not seek to exclude a certain number or percentage of companies or issuers, but rather seeks an absolute level of ESG quality based on a qualitative judgement.

2. Bottom-up company-specific engagement: As part of the Investment Manager's ongoing, proprietary company and issuer-level ESG analysis, it identifies company and issuer-specific matters and risks and actively engages with companies and issuers about these matters. For the bottom-up, company specific engagements, the objective is typically to solve or improve the issue that has been identified as part of ESG analysis and when that objective has been achieved, move to the next objective or pause the engagement.

Top-down strategic engagement: Every year the Investment Manager assesses and outlines the engagement priorities for the next 12 months. These priorities are based on market developments and emerging sustainability issues that are considered relevant and material for companies and issuers. The Investment Manager then identifies the companies and issuers which it considers are most exposed to these topics and focuses its engagement on specific companies and issuers. For the strategic engagement areas, the Investment Manager sets up specific steps as objectives that it seeks to reach with the engagements. The strategic engagement areas have analysts assigned as leads for each of the areas of engagement.

3. Where the Investment Manager identifies unmanaged risk, and its usual management approach to engagement fails to produce positive outcomes, its Escalation Policy takes hold.

If the Investment Manager views the investee company or issuer is unresponsive to engagement or unwilling to consider alternative options posing less significant risks to shareholders, the Investment Manager will escalate the dialogue by:

- Seeking alternative or more senior contacts within the company or issuer
- Intervening or engaging together with other shareholders
- Intervening or engaging together with other institutions or organisations (multi-stakeholder)
- Highlighting the issue and/or joint engagements regarding the issue through institutional platforms and/or
- Filing or co-filing resolutions at General Meetings

If interventions are unsuccessful and the Investment Manager considers that the risk profile of the company has significantly deteriorated or company strategy/governance structures have altered because of an incident, to a degree where the return outlook and the company's strategy and quality no longer meet expectations, the company would be excluded from the investable universe and/or sold.

 The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and that contribute to the environmental objectives climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control and/or the protection and restoration of biodiversity and ecosystems are disclosed in the two graphs below.

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

● ***Did the financial product invest in fossil gas and/or nuclear energy activities that comply with the EU Taxonomy ¹?***

- Yes: In fossil gas In nuclear energy
- No:

At the date of closure of the accounting year and preparation of the annual report, the data are not available and the management company does not have the information relating to the previous year.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of :

- **turnover** reflecting the “greenness” of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies relevant for a transition to a green economy
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

Enabling activities

directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities

are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** Real taxonomy aligned

● What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

Not applicable for the first periodic report.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **57.5%**.

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **56.0%** of the financial product.

What investments were included under 'not sustainable', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments is made in instruments used for liquidity and/or hedging purposes, such as cash, deposits and derivatives.

The investment manager will ensure that those investments are made while maintaining the sustainable investment objective of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

What actions have been taken to attain the sustainable investment objective during the reference period ?

- The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment; More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com).
- The financial product shall invest in companies with at least a 20% of revenue, profit or invested capital aligned with the financial product's thematics;
- The financial product shall have at least 90% of its assets (excluding ancillary assets) covered by the ESG analysis based on the proprietary Impax Fundamental Score ESG methodology;
- The financial product shall invest at least 85% of its portfolio in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as "sustainable investment" and the quantitative and qualitative thresholds are indicated in the main part of the Prospectus.

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: <https://www.bnpparibas-am.com/en/documentation-sustainability/>

How did this financial product perform compared to the reference sustainable benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective

- *How does the reference benchmark differ from a broad market index?*
Not applicable.
- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable objective?*
Not applicable.
- *How did this financial product perform compared with the reference benchmark?*
Not applicable.
- *How did this financial product perform compared with the broad market index?*
Not applicable.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP Paribas Funds Social Bond

Legal Entity Identifier: 213800P7I4V0JL4IZP76

SUSTAINABLE INVESTMENT OBJECTIVE

Did this financial product have a sustainable investment objective?

Yes

No

<p><input checked="" type="checkbox"/> It made a sustainable investment with an environmental objective: 27.8%*</p> <ul style="list-style-type: none"> <input checked="" type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <p><input checked="" type="checkbox"/> It made sustainable investments with a social objective: 91.2%*</p>	<p><input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it had a proportion of __ % of sustainable investments</p> <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective <p><input type="checkbox"/> It promoted E/S characteristics but did not make any sustainable investments</p>
--	--

All actual data within this periodic report are calculated on the closing date of the accounting year.

**At the date of preparation of this periodic information document, the management company does not have all the necessary data to determine the alignment of investments with the taxonomy, excluding sovereign bonds. The percentage of alignment of investments with the taxonomy, including sovereign bonds being by construction a real minimum proportion is taken up accordingly.*

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the BNP Paribas Social Bond fund is to allocate capital to new and existing projects with positive social outcomes or a combination of both social and environmental benefits by investing in:

- 1) Social bonds issued by corporate, supranational, sovereign agencies, local entities and/or governments to finance socially sound and sustainable projects that achieve greater social benefits.

The eligible social project categories include, but are not limited to, providing and/or promoting:

- Affordable basic infrastructure (e.g. clean drinking water, sewers, sanitation, transport, energy);

- Access to essential services (e.g. health, education and vocational training, healthcare, financing and financial services);
 - Affordable housing;
 - Employment generation, and programs designed to prevent and/or alleviate unemployment stemming from socioeconomic crises;
 - Food security and sustainable food systems (e.g. physical, social, and economic access to safe, nutritious, and sufficient food that meets dietary needs and requirements; resilient agricultural practices; reduction of food loss and waste; and improved productivity of small-scale producers).
- 2) Sustainability bonds issued by corporate, supranational sovereign agencies, local entities and/or governments to finance a combination of both green and social projects.

Examples of the eligible social project categories are mentioned above. The eligible green project categories include, but are not limited to:

- Renewable energy (including production, transmission, appliances and products);
- Energy efficiency (such as in new and refurbished buildings, energy storage, district heating, smart grids, appliances and products);
- Clean transportation (such as electric, hybrid, public, rail, non-motorized, multi-modal transportation, infrastructure for clean energy vehicles and reduction of harmful emissions);
- Climate change adaptation (including efforts to make infrastructure more resilient to impacts of climate change, as well as information support systems, such as climate observation and early warning systems);
- Green buildings that meet regional, national or internationally recognized standards or certifications for environmental performance.

The selected social and sustainability bonds should comply with the principles formulated by the International Capital Market Association and receive a "POSITIVE" or "NEUTRAL" investment recommendation from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

The sustainable investment objective of the financial product is social and therefore outside the scope of the environmental objectives defined by the EU Taxonomy.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives? "

● *How did the sustainability indicators perform?*

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the BNP Paribas Asset Management Responsible Business Conduct Policy (RBC Policy): **100% of the equity portfolio**
- The percentage of the financial product's assets covered by the ESG analysis based on the proprietary ESG methodology (excluding ancillary liquid assets): **100% of the equity portfolio**

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

- The percentage of the financial product's portfolio invested in social and sustainability bonds compliant with the principles formulated by the International Capital Market Association and having a "POSITIVE" or "NEUTRAL" investment recommendation from the Sustainability Center: **100%**
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation: **93.9%**

● *...and compared to previous periods ?*

Not applicable for the first periodic report.

● *How did the sustainable investments not cause significant harm to any sustainable investment objective?*

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights

— *How were the indicators for adverse impacts on sustainability factors taken into account?*

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process : RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision - the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity

14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

4. Lack of a supplier code of conduct

9. Lack of a human rights policy

Sovereign mandatory indicator:

15. GHG intensity

16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: <https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-BOED-84FC06E090BF>

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions :

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues - Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector

7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:

15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: <https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF>

The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The two graphs below illustrate the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

● **Did the financial product invest in fossil gas and/or nuclear energy activities that comply with the EU Taxonomy ¹?**

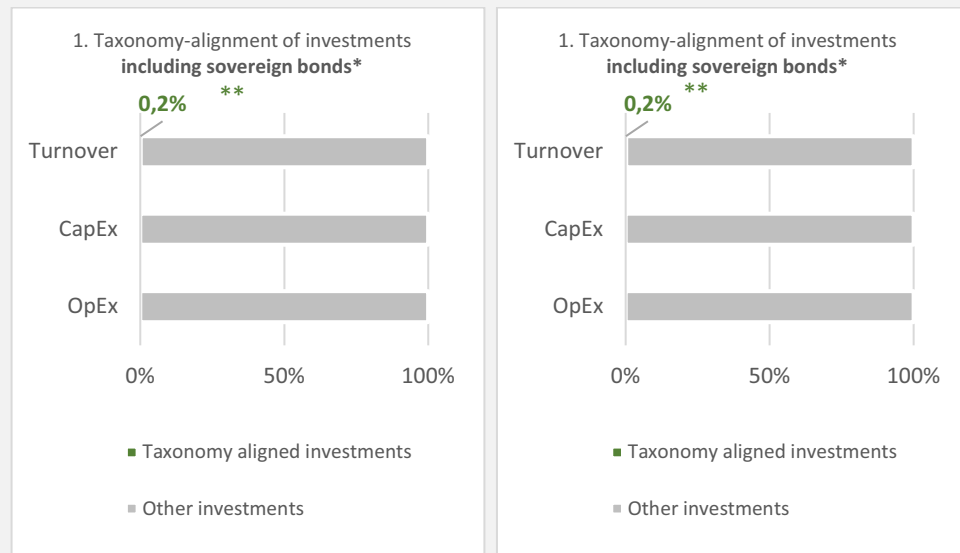

- Yes:
 - In fossil gas
 - In nuclear energy
- No:

At the date of closure of the accounting year and preparation of the annual report, the data are not available and the management company does not have the information relating to the previous year.

Taxonomy-aligned activities are expressed as a share of :

- **turnover** reflecting the "greenness" of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies relevant for a transition to a green economy
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** Real taxonomy aligned

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

- ***What was the share of investments made in transitional and enabling activities?***

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

- ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?***

Not applicable for the first periodic report.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **27.7%**.

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **91.2%** of the financial product.

What investments were included under 'not sustainable', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments is made in instruments used for liquidity and/or hedging purposes, such as cash, deposits and derivatives.

The investment manager will ensure that those investments are made while maintaining the sustainable investment objective of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

What actions have been taken to attain the sustainable investment objective during the reference period ?

- The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment; More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com).
- The financial product shall have at least 90% of its assets (excluding ancillary assets) covered by the ESG analysis based on the proprietary ESG methodology;
- The financial product shall invest in social and sustainability bonds compliant with the principles formulated by the International Capital Market Association and having a "POSITIVE" or "NEUTRAL" investment recommendation from the Sustainability Center;
- The financial product shall invest at least 80% of its assets in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation . Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: <https://www.bnpparibas-am.com/en/documentation-sustainability/>

How did this financial product perform compared to the reference sustainable benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

- ***How does the reference benchmark differ from a broad market index?***
Not applicable.
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable objective?***
Not applicable.
- ***How did this financial product perform compared with the reference benchmark?***
Not applicable.
- ***How did this financial product perform compared with the broad market index?***
Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective

Obiettivo di investimento sostenibile

Investimento sostenibile significa un investimento in un'attività economica che contribuisca ad un obiettivo ambientale o sociale, ponendo la condizione che tale investimento non arrechi un danno significativo ad alcun obiettivo ambientale o sociale e che le società oggetto dell'investimento seguano pratiche di buona governance.

La **Tassonomia dell'UE** è una classificazione definita nel Regolamento (UE) 2020/852 che stabilisce un elenco di attività economiche ecosostenibili. Tale Regolamento non include un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere allineati con la **Tassonomia** o meno.

Questo prodotto finanziario ha avuto un obiettivo di investimento sostenibile?

●● <input checked="" type="checkbox"/> SÌ	●● <input type="checkbox"/> NO
<input checked="" type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo ambientale: 0%	<input type="checkbox"/> Ha promosso aspetti ambientali/sociali (E/S) e, pur non ponendosi come obiettivo un investimento sostenibile, ha compreso una proporzione del ___% di investimenti sostenibili
<input type="checkbox"/> in attività economiche che si qualificano come ecosostenibili secondo la Tassonomia UE	<input type="checkbox"/> con un obiettivo ambientale in attività economiche che si qualificano come ecosostenibili secondo la Tassonomia UE
<input checked="" type="checkbox"/> in attività economiche che non si qualificano come ecosostenibili secondo la Tassonomia UE	<input type="checkbox"/> con un obiettivo ambientale in attività economiche che non si qualificano come ecosostenibili secondo la Tassonomia UE
<input checked="" type="checkbox"/> ha effettuato investimenti sostenibili con un obiettivo sociale: 93.55%	<input type="checkbox"/> con un obiettivo sociale
	<input type="checkbox"/> ha promosso caratteristiche A/S ma non ha effettuato alcun investimento sostenibile

In quale misura è stato soddisfatto l'obiettivo di sostenibilità degli investimenti per questo prodotto finanziario?

Il raggiungimento degli obiettivi sostenibili è stato misurato tramite i seguenti indicatori di sostenibilità:

- Spese di ricerca e sviluppo: spese di ricerca e sviluppo superiori al benchmark in proporzione alla capitalizzazione di mercato dell'azienda.
- Livello di istruzione dei team di gestione: percentuale di dirigenti senior in possesso di un dottorato superiore al benchmark.

Inoltre, sono stati monitorati i seguenti criteri:

- garantire che non vi siano investimenti in emittenti che violino gli Orientamenti dell'OCSE per le società multinazionali o il Global Compact delle Nazioni Unite.
- garantire che non vi siano investimenti in società che figurano nell'elenco delle esclusioni SRI di Candriam, a seguito dell'applicazione della Politica di esclusioni di Candriam.
- Numero di società controllanti sostenute dal voto di Candriam.

● Cosa hanno rilevato gli indicatori di sostenibilità?

Il Comparto è stato gestito nel rispetto dei suoi indicatori di sostenibilità come definito di seguito.

Gli indicatori di sostenibilità rilevano la misura in cui sono stati soddisfatti gli obiettivi di

Per la selezione degli investimenti sostenibili, il gestore del portafoglio ha preso in considerazione le valutazioni ESG degli emittenti prodotte dal team di analisti ESG di Candriam.

Per le società, queste valutazioni sono basate sull'analisi delle interazioni della società con i principali stakeholder e sull'analisi delle sue attività commerciali e del loro impatto, positivo o negativo, sulle sfide chiave della sostenibilità come il cambiamento climatico e l'impoverimento delle risorse. Inoltre, l'analisi ESG di Candriam comprende filtri di esclusione basati sulla conformità alle norme internazionali e sul coinvolgimento in attività controverse.

L'analisi e ricerca ESG di Candriam di investimenti sostenibili valuta inoltre la conformità degli investimenti al principio secondo il quale non devono "arrecare danno" all'obiettivo di un investimento sostenibile e le pratiche di buona governance.

L'integrazione della metodologia di ricerca ESG di Candriam ha permesso al Fondo di rispettare la proporzione minima di investimenti sostenibili definiti nel prospetto (75% minimo). La proporzione di investimenti sostenibili nel Fondo è stata pertanto al di sopra della soglia minima, come indicato nella sezione "Qual è stata la proporzione di investimenti associati alla sostenibilità?"

Il benchmark di riferimento non è stato designato allo scopo di realizzare l'obiettivo di investimento sostenibile del Comparto.

Il benchmark di riferimento del Comparto non ha i requisiti richiesti per essere un Indice di riferimento dell'UE relativo alla transizione climatica o un Indice di riferimento allineato all'accordo UE di Parigi ai sensi del Titolo III, Capo 3a, del regolamento (UE) 2016/1011.

In ogni caso, dato il coinvolgimento di Candriam nell'iniziativa Net Zero Asset Management, il Comparto mira a ridurre le emissioni di gas serra in linea con gli obiettivi dell'Accordo di Parigi

Nome dell'indicatore KPI	Valore	Indice di riferimento
PhD in Mgmt - Corporate - Higher than bench	23.73%	3.94%
R&D Expense - Corporate - Higher than bench	3.11%	1.19%

...E rispetto ai periodi precedenti?

Non applicabile in quanto non sono disponibili dati relativi al periodo precedente.

In che modo gli investimenti sostenibili non hanno arrecato danno significativo ad alcun obiettivo di investimento sostenibile?

Candriam ha garantito che i suoi investimenti sostenibili non causassero un danno significativo a qualsiasi obiettivo d'investimento sostenibile di carattere ambientale e/o sociale mediante la sua ricerca e analisi ESG degli emittenti societari e sovrani. In base alle sue valutazioni e punteggi ESG, la metodologia ESG di Candriam definisce chiari requisiti e soglie minime per identificare quegli emittenti che si qualificano come "investimento sostenibile" e, in particolare, non arrecano danni significativi a qualsiasi obiettivo di investimento sostenibile ambientale e/o sociale.

In particolare, il principio di "non arrecare danno significativo", è stato valutato per le società tramite:

- la considerazione dei "principali impatti negativi"
- l'allineamento agli orientamenti OCSE per le società multinazionali e del Global Compact delle Nazioni Unite per garantire le tutele minime sociali e ambientali.

Per maggiori dettagli, fare riferimento alla sezione che segue sulla considerazione dei principali effetti avversi sui fattori della sostenibilità.

In che modo sono stati presi in considerazione gli indicatori degli effetti avversi sui fattori di sostenibilità?

La considerazione degli impatti negativi è centrale per l'approccio agli investimenti sostenibili di Candriam. I principali impatti negativi sono presi in considerazione nell'intero processo di analisi e ricerca ESG e attraverso un'ampia gamma di metodi:

1. Valutazione ESG delle società: la metodologia di ricerca e screening ESG considera e valuta il principale impatto negativo sulla sostenibilità da due angolazioni distinte ma interconnesse:

- le attività economiche degli emittenti societari e come incidono, in termini positivi o negativi, sulle sfide chiave di sostenibilità come il cambiamento climatico e l'impoverimento delle risorse;
- le interazioni della società con i principali stakeholder.

2. Screening negativo delle società, che comprende un'esclusione su base normativa e un'esclusione delle società coinvolte in attività controverse.

3. Attività di coinvolgimento con società, attraverso attività di dialogo e di voto, che contribuiscono ad evitare o ridurre la portata degli impatti negativi. Il quadro dell'analisi ESG ed i suoi risultati alimentano il nostro processo di coinvolgimento, e viceversa.

L'integrazione dei principali impatti negativi sui fattori di sostenibilità è stata basata sulla rilevanza o possibile rilevanza di ciascun indicatore per ogni settore specifico a cui la società appartiene. La rilevanza dipende da diversi fattori quali: il tipo di informazioni, la qualità e la portata dei dati, l'applicabilità, la pertinenza e la copertura geografica.

Gli investimenti sostenibili sono stati allineati con gli "Orientamenti OCSE per le imprese multinazionali" e con i Principi Guida delle Nazioni Unite su Imprese e Diritti Umani?

Dettagli:

Gli investimenti del Comparto sono stati assoggettati a un'analisi delle attività controverse su base normativa che considera la conformità a norme internazionali di carattere sociale, umano, ambientale e anticorruzione, secondo quanto definito dal Global Compact delle Nazioni Unite e dagli Orientamenti OCSE per le aziende multinazionali. L'Organizzazione internazionale del lavoro (OIL) e la Carta internazionale dei diritti umani sono parte dei numerosi riferimenti internazionali integrati nel nostro modello ESG e di analisi normativa.

Questa analisi è volta ad escludere le società che hanno significativamente e ripetutamente violato uno qualsiasi di questi principi.

I principali effetti avversi sono gli effetti negativi più rilevanti delle decisioni di investimento sui fattori di sostenibilità correlati ad aspetti ambientali e sociali, alle condizioni di lavoro, al rispetto dei diritti umani, all'anticorruzione e anticorruzione.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti avversi sui fattori sostenibili?

A livello di comparto, i principali impatti negativi (PAI) sui fattori di sostenibilità vengono considerati attraverso uno o più strumenti (si veda la dichiarazione PAI di Candriam: <https://www.candriam.com/en/private/sfdr/>):

- Impegno e processo di voto: al fine di evitare e/o ridurre l'impatto negativo sugli obiettivi di sostenibilità, il Comparto ha considerato anche gli impatti negativi nelle sue interazioni con le società, attraverso il dialogo e il processo di voto. Candriam ha attribuito la priorità alle sue attività di coinvolgimento e voto in base a una valutazione delle sfide ESG più rilevanti e sostanziali, relative a settori ed emittenti, prendendo in considerazione gli impatti finanziari e societari e quelli sugli stakeholder. Pertanto, il livello di coinvolgimento in ciascuna società all'interno dello stesso prodotto può variare ed è soggetto alla metodologia di prioritizzazione di Candriam.
 - Dialogo:

Il clima (da PAI1 a PAI6) è ovviamente centrale nel nostro dialogo con le aziende. Le priorità dell'impegno per il clima da parte delle società sono identificate prendendo in considerazione:

- società che presentano un debole profilo di transizione (modello del rischio di transizione proprietario) e/o emissioni di carbonio ancora elevate (Scope 1-2) o elevate emissioni di Scope 3.
- emittenti dei settori finanziari ancora ampiamente esposti ai combustibili fossili e con un ruolo primario nel finanziamento della transizione
- relativa esposizione dei portafogli gestiti agli emittenti sopra citati.

Il nostro obiettivo è ovviamente incoraggiare le società a comunicare pubblicamente la loro strategia di allineamento alla traiettoria 1.5D e a sostenere questo allineamento. Oltre a qualsiasi impegno per l'obiettivo Net Zero e alla comunicazione delle emissioni assolute di Scope1-2-3, Candriam incoraggia le aziende a fornire indicazioni su come gli obiettivi a breve/medio termine siano allineati con la traiettoria 1.5D scientificamente riconosciuta. In particolare, chiediamo agli emittenti di spiegare in che modo la loro strategia e il loro piano di spesa in conto capitale vadano nel senso dell'impegno a favore della decarbonizzazione. Di norma, utilizziamo una combinazione di dialogo individuale e collaborativo. Come nell'anno precedente, continuiamo a sostenere e a prendere attivamente parte a diverse iniziative su base collaborativa come Climate Action 100+. Queste iniziative non solo contribuiscono ad aumentare il livello di trasparenza sulle emissioni di gas effetto serra e sulla relativa strategia ma anche a per acquisire una posizione di forza a favore del cambiamento strategico. I risultati di questo impegno sono riportati in dettaglio nella nostra relazione annuale su Impegno e processo di voto, disponibile sul nostro sito web pubblico (<https://www.candriam.com/en/professional/insight-overview/publications/#sri-publications>).

Dato il contesto geopolitico e la crescita delle disegualianze osservata, sono state intraprese diverse iniziative per la protezione dei diritti umani fondamentali a diversi livelli di rapporto di lavoro diretto o indiretto (due diligence della catena di approvvigionamento) (PAI10,PAI11). Abbiamo anche condotto una campagna di impegno diretto post-covid con la finalità di indagare gli effetti sulle relazioni con gli stakeholder e i cambiamenti ora entrati a far parte della "nuova normalità" dell'attività commerciale nelle società in cui Candriam investe. Nello stesso ambito, anche la gestione del capitale umano è un aspetto che trattiamo ampiamente nel dialogo con le società. Continuiamo a sostenere la Workforce Disclosure Initiative per un miglior accesso a dati affidabili, pertinenti e comparabili sui rapporti di lavoro diretti e indiretti delle società.

- Processo di voto:

L'approccio di Candriam alla Governance aziendale si fonda sulle norme riconosciute a livello internazionale, in particolare sui principi stabiliti dall'OCSE e sulla International Corporate Governance Network (ICGN).

A tal riguardo, Candriam ha esercitato i suoi diritti di voto quando disponibili per le posizioni del portafoglio. I diritti degli Azionisti, la parità di trattamento per gli azionisti, la responsabilità del consiglio di amministrazione, la trasparenza e l'integrità dei bilanci sono pilastri fondamentali della nostra politica di voto. La maggior parte dei nostri voti relativi al management si concentra sulla remunerazione e l'elezione degli amministratori. Infatti, richiediamo alle società di rispettare il principio di retribuzione della prestazione e manifesteremo il nostro disaccordo non appena risconteremo un livello di remunerazione eccessivo o condizioni di attribuzione non sufficientemente trasparenti o stringenti. In modo analogo, pretendiamo dalle società il rispetto con i nostri requisiti minimi di indipendenza: in caso di consigli di amministrazione che non rispettino questo requisito, ci opponiamo all'elezione, o rielezione, di qualsiasi amministratore non indipendente, ad eccezione del CEO. Naturalmente, per la votazione sono anche presi in considerazione la diversità (PAI13) ed il livello di competenza del consiglio.

Inoltre, Candriam considera sempre la pertinenza, la coerenza e la fattibilità delle misure promosse da qualsiasi decisione in ambito ESG prima di esprimere il voto.

Nel miglior interesse dei suoi clienti, Candriam considera, nelle sue decisioni di voto, l'opinione ESG interna sulle società oggetto dell'investimento insieme agli eventuali risultati dell'impegno intrapreso con tale società.

Nel contesto della politica di voto di Candriam, sono applicate linee guida specifiche per una serie di decisioni degli azionisti e del management relative ad ambiente (per esempio il clima (da PAI1 a PAI6), biodiversità (PAI7)), sociale (per esempio, la diversità, il divario retributivo tra i sessi (PAI12), diritti umani (PAI10, PAI11)) e governance. Più specificamente, Candriam accoglie con favore l'introduzione di risoluzioni "Say-on-Climate" sponsorizzate dal management. Candriam ha costruito un modello dettagliato da applicare a ogni risoluzione Say-on-Climate, che valuta il rigore e l'allineamento della strategia di transizione della società con un percorso verso le emissioni zero nel 2050. Ne consegue, che molte di queste non hanno ottenuto il nostro supporto nel corso di questo periodo.

- Esclusione: selezione negativa di Candriam delle società o dei paesi volta a evitare investimenti in attività o pratiche pericolose che può condurre a esclusioni connesse all'impatto negativo di società o emittenti.

- Monitoraggio: calcolo e valutazione dei principali indicatori di impatto negativo, compreso il report a livello di Comparto. Alcuni di questi indicatori possono avere obiettivi espliciti e possono essere utilizzati per misurare il raggiungimento dell'obiettivo d'investimento sostenibile del Comparto. Di seguito sono riportati gli indicatori di questo Comparto:

Indicatori PAI	Valore
1- GHG Emissions - Scope 1 GHG Emissions	3184.87
1- GHG Emissions - Scope 2 GHG Emissions	2608.30
1- GHG Emissions - Total GHG Emissions	5793.17
2 - Carbon Footprint	3.57
3 - GHG intensity of investee companies	27.23
4 - Exposure to companies active in fossil fuel sector	0.00%
10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0.00%
13 - Board gender diversity	31.47%
14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0.00%

Quali sono stati i principali investimenti di questo prodotto finanziario?

L'elenco comprende gli investimenti che costituiscono la **proporzione maggiore degli investimenti** del prodotto finanziario durante il periodo di riferimento, ovvero: 31/12/2022

Principali investimenti	Settore	Proporzione	Paese
ASTRAZENECA PLC	Pharmaceuticals	8.26%	GB
MERCK & CO INC	Pharmaceuticals	8.03%	US
ROCHE HOLDING LTD	Pharmaceuticals	7.05%	CH
REGENERON PHARMACEUTICALS INC	Biotechnology	6.38%	US
THERMO FISHER SCIENT SHS	Electronics and semiconductors	4.59%	US
DANAHER CORP	Machine and apparatus construction	4.19%	US
AMGEN INC	Pharmaceuticals	4.03%	US
MERCK KGAA	Pharmaceuticals	3.93%	DE
SIEMENS HEALTHINEERS	Pharmaceuticals	3.88%	DE
DAIICHI SANKYO CO LTD	Banks and other financial institutions	3.56%	JP
ELI LILLY & CO	Pharmaceuticals	3.55%	US
HOLOGIC INC	Pharmaceuticals	3.54%	US
GENMAB AS	Biotechnology	2.85%	DK
SEAGEN INC	Biotechnology	2.44%	US
IQVIA HOLDINGS INC	Pharmaceuticals	2.27%	US

A seguito del processo di arrotondamento delle cifre, possono essere presenti differenze minime tra i dati sopra riportati e quelli corrispondenti contenuti nella sezione "Portafoglio titoli" della relazione annuale.

Qual è stata la proporzione di investimenti associati alla sostenibilità?

L'allocazione delle attività descrive la quota di investimenti in una specifica classe di attività.

● Qual è stata l'allocazione delle attività?

● **In quali settori economici sono stati effettuati gli investimenti?**

Settore principale	Proporzione
Pharmaceuticals	51.08%
Biotechnology	25.44%
Electronics and semiconductors	4.98%
Banks and other financial institutions	4.38%
Machine and apparatus construction	4.19%
Chemicals	1.08%
Miscellaneous services	1.00%
Photographic and optics	0.94%
Healthcare	0.49%

A seguito del processo di arrotondamento delle cifre, possono essere presenti differenze minime tra i dati sopra riportati e quelli corrispondenti contenuti nella sezione "Portafoglio titoli" della relazione annuale.

In quale misura gli investimenti sostenibili con l'obiettivo di tutela ambientale sono stati allineati con la Tassonomia UE?

Per la conformità con la Tassonomia UE, i criteri relativi al **gas fossile** comprendono limiti sulle emissioni e la transizione all'energia completamente rinnovabile o ai combustibili a basso tenore di carbonio entro la fine del 2035. Per quanto riguarda l'**energia nucleare**, i criteri comprendono la sicurezza totale e le regole di gestione dei rifiuti.

Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale ad un obiettivo ambientale.

Le **attività di transizione** sono attività per le quali le alternative a basse emissioni di carbonio non sono ancora disponibili e, tra gli altri, hanno livelli di emissioni di gas effetto-serra corrispondenti alle migliori performance.

Le attività allineate alla Tassonomia sono espresse come quota di:

- **giro d'affari** che riflette la quota di profitto risultante dalle attività green delle aziende oggetto dell'investimento

- **spese in conto capitale (CapEx)** che rappresentano gli investimenti green effettuati dalle società oggetto dell'investimento, per esempio per la transizione ad un'economia green.

- **spese operative (OpEx)** che riflettono le attività operative green società oggetto dell'investimento.

Il prodotto finanziario ha investito in attività associate al gas fossile e/o all'energia nucleare conformi alla Tassonomia UE¹?

Sì

Nel gas fossile

Nell'energia nucleare

No

Le due grafici riportati di seguito rappresentano in verde la percentuale minima di investimenti allineati con la Tassonomia UE. Non essendoci una metodologia appropriata per la determinazione dell'allineamento alla Tassonomia dei titoli di stato, il primo grafico mostra l'allineamento della Tassonomia in relazione a tutti gli investimenti del prodotto finanziario, comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla Tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.*

* Nell'ambito di questi grafici, per "titoli di stato" si intende l'esposizione a qualsiasi obbligazione sovrana

Qual è stata la quota di investimenti in attività abilitanti e di transizione?

Il Comparto non è in grado di pubblicare una percentuale di allineamento con la Tassonomia, né di attività di transizione e abilitanti, in quanto solo un piccolo numero di società a livello globale fornisce i dati necessari per una valutazione rigorosa del loro allineamento alla Tassonomia.

¹ Le attività relative ai gas fossili e/o al nucleare sono conformi alla Tassonomia UE solo se contribuiscono alla limitazione del cambiamento climatico ("mitigazione dei cambiamenti climatici") e non recano alcun danno significativo agli obiettivi della Tassonomia UE. Si veda la nota esplicativa nel margine sinistro. L'insieme completo dei criteri per le attività associate al gas fossile e all'energia nucleare conformi alla Tassonomia UE è fornito nel regolamento delegato (UE) 2022/1214 della Commissione.

Qual è il rapporto con la percentuale di investimenti allineati con la Tassonomia UE effettuati nei precedenti periodi di riferimento?

Non applicabile in quanto non sono disponibili dati relativi al periodo precedente.

Qual è la ripartizione della proporzione degli investimenti per ciascuna delle categorie della Tassonomia UE alla quale hanno contribuito questi investimenti?

Il Comparto non è in grado di pubblicare una percentuale di allineamento con la Tassonomia, in quanto solo un piccolo numero di società a livello globale fornisce i dati necessari per una valutazione rigorosa del loro allineamento alla Tassonomia.

. Pertanto la percentuale è considerata nulla.

Qual è stata la quota di investimenti sostenibili con un obiettivo di tutela ambientale non allineati con la Tassonomia UE?

Il Comparto ha registrato una quota del 0% di investimenti in attività sostenibili sul piano ambientale non allineate con la tassonomia UE.

In effetti, ad oggi, solo due dei sei obiettivi sono stati implementati nel 2022 e un numero esiguo di società a livello globale forniscono i dati necessari per una valutazione rigorosa del loro allineamento alla Tassonomia.

Qual è stata la quota di investimenti socialmente sostenibili?

Il Comparto ha registrato una quota del 93,55% di investimenti con un obiettivo sociale

Quali investimenti sono stati inclusi nella voce “#2 Non sostenibili”, qual era il loro scopo, ed esistevano delle salvaguardie ambientali o sociali minime?

Gli investimenti inclusi alla voce "Non sostenibili" sono presenti nel Comparto nella misura del 6,42% del valore del patrimonio netto totale.

Tali investimenti comprendono uno o più dei seguenti asset:

- Contanti: Contanti a vista, depositi in liquidità, accordi di riacquisto inverso (reverse repo) necessari per gestire la liquidità del Comparto in base alle sottoscrizioni/riscatti oppure risultanti dalle decisioni di esposizione al mercato del Comparto.
- Investimenti su emittenti considerati sostenibili al momento dell'investimento e non più completamente allineati ai criteri di investimento sostenibile di Candriam. Questi investimenti sono pianificati per essere venduti.
- Derivati non a titolo singolo utilizzati per la gestione efficiente del portafoglio e/o a fini di copertura e/o temporaneamente a seguito di sottoscrizioni/riscatti.

Quali misure sono state intraprese per soddisfare l'obiettivo di investimento sostenibile durante il periodo di riferimento?

Al fine di rispettare l'obiettivo di investimento sostenibile durante il periodo di riferimento, abbiamo venduto i seguenti investimenti per i quali gli emittenti hanno contribuito al raggiungimento dell'obiettivo di investimento sostenibile del comparto. Le vendite hanno riguardato Johnson & Johnson. L'azienda ha una valutazione di 6 nell'ambito Bet-In-Universe di Candriam ed è pertanto esclusa dall'universo di investimenti accettabili. Poiché un'analisi approfondita del team ESG non ha individuato ragioni per un eventuale aggiornamento, abbiamo venduto la posizione.

Per realizzare il suo obiettivo sostenibile, il comparto sta tentando di superare il benchmark per due indicatori sociali, allo scopo di valutare le risorse umane e finanziarie mobilitate dalle società nella lotta ai tumori. 1/ Spesa nella ricerca e sviluppo come quota della capitalizzazione di mercato della società. 2/ Livello di istruzione dei team di gestione, misurato come percentuale dei dirigenti senior. Il fondo ha registrato una performance superiore al benchmark per entrambi gli indicatori sociali. La spesa per la ricerca e lo sviluppo come quota della capitalizzazione di mercato della società è risultata complessivamente del 3,1% per il fondo e più dell'1,2% per il benchmark. Il livello di istruzione dei team di gestione, misurato come percentuale di dirigenti senior che hanno conseguito un dottorato, è stato complessivamente del 23,73% per il fondo e di 3,94% per il benchmark.

Inoltre, il comparto si propone di realizzare un punteggio ESG superiore al benchmark, sulla base della metodologia ESG proprietaria di Candriam. Alla fine del 2022, il punteggio complessivo ESG del comparto era di 58 a fronte del punteggio di 51 dell'indice di riferimento del periodo.

Qual è stata la performance di questo prodotto finanziario rispetto al benchmark di sostenibilità di riferimento?

I **benchmark di riferimento** sono indici per la misurazione della capacità del prodotto finanziario di realizzare l'obiettivo sostenibile.

Non è stato scelto nessun indice specifico come indice di riferimento sostenibile per gli obiettivi di investimento sostenibile.

Obiettivo di investimento sostenibile

Investimento sostenibile significa un investimento in un'attività economica che contribuisca ad un obiettivo ambientale o sociale, ponendo la condizione che tale investimento non arrechi un danno significativo ad alcun obiettivo ambientale o sociale e che le società oggetto dell'investimento seguano pratiche di buona governance.

La **Tassonomia dell'UE** è una classificazione definita nel Regolamento (UE) 2020/852 che stabilisce un elenco di attività economiche ecosostenibili. Tale Regolamento non include un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere allineati con la **Tassonomia** o meno.

Questo prodotto finanziario ha avuto un obiettivo di investimento sostenibile?

●● <input checked="" type="checkbox"/> SÌ	●● <input type="checkbox"/> NO
<input checked="" type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo ambientale: 61.56%	<input type="checkbox"/> Ha promosso aspetti ambientali/sociali (E/S) e, pur non ponendosi come obiettivo un investimento sostenibile, ha compreso una proporzione del ___% di investimenti sostenibili
<input type="checkbox"/> in attività economiche che si qualificano come ecosostenibili secondo la Tassonomia UE	<input type="checkbox"/> con un obiettivo ambientale in attività economiche che si qualificano come ecosostenibili secondo la Tassonomia UE
<input checked="" type="checkbox"/> in attività economiche che non si qualificano come ecosostenibili secondo la Tassonomia UE	<input type="checkbox"/> con un obiettivo ambientale in attività economiche che non si qualificano come ecosostenibili secondo la Tassonomia UE
<input checked="" type="checkbox"/> ha effettuato investimenti sostenibili con un obiettivo sociale: 31.28%	<input type="checkbox"/> con un obiettivo sociale
	<input type="checkbox"/> ha promosso caratteristiche A/S ma non ha effettuato alcun investimento sostenibile

In quale misura è stato soddisfatto l'obiettivo di sostenibilità degli investimenti per questo prodotto finanziario?

Il conseguimento degli obiettivi di investimento sostenibile è stato misurato tramite i seguenti indicatori di sostenibilità:

- un allineamento del portafoglio complessivo con uno scenario di temperatura uguale o inferiore a 2,5 gradi. Poiché la disponibilità e l'affidabilità dei dati sul clima di una società evolvono nel tempo, il Comparto mira ad essere allineato a uno scenario di temperatura pari o inferiore a 2 gradi entro il 1° gennaio 2025.
- un investimento in un quantitativo superiore di totale attivo in gestione presso società "high-stake" rispetto all'indice di riferimento del Comparto. Le società high-stake sono definite dal regolamento dell'EU Climate Benchmark come quelle appartenenti a uno dei settori ritenuti più importanti per il raggiungimento degli obiettivi dell'Accordo di Parigi.

Sono inoltre stati monitorati i seguenti indici:

- Orientamenti dell'OCSE per le società multinazionali, Global Compact delle Nazioni Unite: per garantire che non vi siano investimenti in società che violino tali principi.
- Politica delle esclusioni di Candriam: garantire che non vi siano investimenti in società che figurano nell'elenco delle esclusioni SRI di Candriam a seguito dell'applicazione della Politica di esclusioni di Candriam.
- Numero di società controllanti sostenute da Candriam.

● Cosa hanno rilevato gli indicatori di sostenibilità?

Il Comparto è stato gestito nel rispetto dei suoi indicatori di sostenibilità come definito di seguito.

Gli **indicatori di sostenibilità** rilevano la misura in cui sono stati soddisfatti gli obiettivi

Per la selezione degli investimenti sostenibili, il gestore del portafoglio ha preso in considerazione le valutazioni ESG degli emittenti prodotte dal team di analisti ESG di Candriam.

Per le società, queste valutazioni sono basate sull'analisi delle interazioni della società con i principali stakeholder e sull'analisi delle sue attività commerciali e del loro impatto, positivo o negativo, sulle sfide chiave della sostenibilità come il cambiamento climatico e l'impoverimento delle risorse. Inoltre, l'analisi ESG di Candriam comprende filtri di esclusione basati sulla conformità alle norme internazionali e sul coinvolgimento in attività controverse.

L'analisi e ricerca ESG di Candriam di investimenti sostenibili valuta inoltre la conformità degli investimenti al principio secondo il quale non devono "arrecare danno" all'obiettivo di un investimento sostenibile e le pratiche di buona governance.

L'integrazione della metodologia di ricerca ESG di Candriam ha permesso al Fondo di rispettare la proporzione minima di investimenti sostenibili definiti nel prospetto (75% minimo). La proporzione di investimenti sostenibili nel Fondo è stata pertanto al di sopra della soglia minima, come indicato nella sezione "Qual è stata la proporzione di investimenti associati alla sostenibilità?"

Il benchmark di riferimento non è stato designato allo scopo di realizzare l'obiettivo di investimento sostenibile del Comparto.

Il benchmark di riferimento del Comparto non ha i requisiti richiesti per essere un Indice di riferimento dell'UE relativo alla transizione climatica o un Indice di riferimento allineato all'accordo UE di Parigi ai sensi del Titolo III, Capo 3a, del regolamento (UE) 2016/1011.

Come parte dell'impegno di Candriam nell'iniziativa NZAI, il Comparto mirava ad investire in aziende che promuovano una strategia di allineamento con gli obiettivi dell'Accordo di Parigi. A livello di Comparto, questo allineamento è quantificato mediante la misurazione della temperatura.

Nome dell'indicatore KPI	Valore	Indice di riferimento
Portfolio Temperature - Corporate - Lower than 2.5°C - Lower than 2°C in 2025	2.49	
Exposure to High Stakes sectors - Corporate - Higher than bench	80.90%	62.39%

...E rispetto ai periodi precedenti?

Non applicabile in quanto non sono disponibili dati relativi al periodo precedente.

In che modo gli investimenti sostenibili non hanno arrecato danno significativo ad alcun obiettivo di investimento sostenibile?

Candriam ha garantito che i suoi investimenti sostenibili non causassero un danno significativo a qualsiasi obiettivo d'investimento sostenibile di carattere ambientale e/o sociale mediante la sua ricerca e analisi ESG degli emittenti societari e sovrani. In base alle sue valutazioni e punteggi ESG, la metodologia ESG di Candriam definisce chiari requisiti e soglie minime per identificare quegli emittenti che si qualificano come "investimento sostenibile" e, in particolare, non arrecano danni significativi a qualsiasi obiettivo di investimento sostenibile ambientale e/o sociale.

In particolare, il principio di "non arrecare danno significativo", è stato valutato per le società tramite:

- la considerazione dei "principali impatti negativi"
- l'allineamento agli orientamenti OCSE per le società multinazionali e del Global Compact delle Nazioni Unite per garantire le tutele minime sociali e ambientali.

Per maggiori dettagli, fare riferimento alla sezione che segue sulla considerazione dei principali effetti avversi sui fattori della sostenibilità.

In che modo sono stati presi in considerazione gli indicatori degli effetti avversi sui fattori di sostenibilità?

La considerazione degli impatti negativi è centrale per l'approccio agli investimenti sostenibili di Candriam. I principali impatti negativi sono presi in considerazione nell'intero processo di analisi e ricerca ESG e attraverso un'ampia gamma di metodi:

1. Valutazione ESG delle società: la metodologia di ricerca e screening ESG considera e valuta il principale impatto negativo sulla sostenibilità da due angolazioni distinte ma interconnesse:

- le attività economiche degli emittenti societari e come incidono, in termini positivi o negativi, sulle sfide chiave di sostenibilità come il cambiamento climatico e l'impoverimento delle risorse;
- le interazioni della società con i principali stakeholder.

2. Screening negativo delle società, che comprende un'esclusione su base normativa e un'esclusione delle società coinvolte in attività controverse.

3. Attività di coinvolgimento con società, attraverso attività di dialogo e di voto, che contribuiscono ad evitare o ridurre la portata degli impatti negativi. Il quadro dell'analisi ESG ed i suoi risultati alimentano il nostro processo di coinvolgimento, e viceversa.

L'integrazione dei principali impatti negativi sui fattori di sostenibilità è stata basata sulla rilevanza o possibile rilevanza di ciascun indicatore per ogni settore specifico a cui la società appartiene. La rilevanza dipende da diversi fattori quali: il tipo di informazioni, la qualità e la portata dei dati, l'applicabilità, la pertinenza e la copertura geografica.

Gli investimenti sostenibili sono stati allineati con gli "Orientamenti OCSE per le imprese multinazionali" e con i Principi Guida delle Nazioni Unite su Imprese e Diritti Umani? Dettagli:

Gli investimenti del Comparto sono stati assoggettati a un'analisi delle attività controverse su base normativa che considera la conformità a norme internazionali di carattere sociale, umano, ambientale e anticorruzione, secondo quanto definito dal Global Compact delle Nazioni Unite e dagli Orientamenti OCSE per le aziende multinazionali. L'Organizzazione internazionale del lavoro (OIL) e la Carta internazionale dei diritti umani sono parte dei numerosi riferimenti internazionali integrati nel nostro modello ESG e di analisi normativa.

Questa analisi è volta ad escludere le società che hanno significativamente e ripetutamente violato uno qualsiasi di questi principi.

I principali effetti avversi sono gli effetti negativi più rilevanti delle decisioni di investimento sui fattori di sostenibilità correlati ad aspetti ambientali e sociali, alle condizioni di lavoro, al rispetto dei diritti umani, all'anticorruzione e anticorruzione.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti avversi sui fattori sostenibili?

A livello di comparto, i principali impatti negativi (PAI) sui fattori di sostenibilità vengono considerati attraverso uno o più strumenti (si veda la dichiarazione PAI di Candriam: <https://www.candriam.com/en/private/sfdr/>):

- Impegno e processo di voto: al fine di evitare e/o ridurre l'impatto negativo sugli obiettivi di sostenibilità, il Comparto ha considerato anche gli impatti negativi nelle sue interazioni con le società, attraverso il dialogo e il processo di voto. Candriam ha attribuito la priorità alle sue attività di coinvolgimento e voto in base a una valutazione delle sfide ESG più rilevanti e sostanziali, relative a settori ed emittenti, prendendo in considerazione gli impatti finanziari e societari e quelli sugli stakeholder. Pertanto, il livello di coinvolgimento in ciascuna società all'interno dello stesso prodotto può variare ed è soggetto alla metodologia di prioritizzazione di Candriam.
 - Dialogo:

Il clima (da PAI1 a PAI6) è ovviamente centrale nel nostro dialogo con le aziende. Le priorità dell'impegno per il clima da parte delle società sono identificate prendendo in considerazione:

- società che presentano un debole profilo di transizione (modello del rischio di transizione proprietario) e/o emissioni di carbonio ancora elevate (Ambito 1-2) o elevate emissioni di Ambito 3.
- emittenti dei settori finanziari ancora ampiamente esposti ai combustibili fossili e con un ruolo primario nel finanziamento della transizione
- relativa esposizione dei portafogli gestiti agli emittenti sopra citati.

Il nostro obiettivo è ovviamente incoraggiare le società a comunicare pubblicamente la loro strategia di allineamento alla traiettoria 1.5D e a sostenere questo allineamento. Oltre a qualsiasi impegno per l'obiettivo Net Zero e alla comunicazione delle emissioni assolute di Scope1-2-3, Candriam incoraggia le aziende a fornire indicazioni su come gli obiettivi a breve/medio termine siano allineati con la traiettoria 1.5D scientificamente riconosciuta. In particolare, chiediamo agli emittenti di spiegare in che modo la loro strategia e il loro piano di spesa in conto capitale vadano nel senso dell'impegno a favore della decarbonizzazione. Di norma, utilizziamo una combinazione di dialogo individuale e collaborativo. Come nell'anno precedente, continuiamo a sostenere e a prendere attivamente parte a diverse iniziative su base collaborativa come Climate Action 100+. Queste iniziative non solo contribuiscono ad aumentare il livello di trasparenza sulle emissioni di gas effetto serra e sulla relativa strategia ma anche a per acquisire una posizione di forza a favore del cambiamento strategico. I risultati di questo impegno sono riportati in dettaglio nella nostra relazione annuale su Impegno e processo di voto, disponibile sul nostro sito web pubblico (<https://www.candriam.com/en/professional/insight-overview/publications/#sri-publications>).

Dato il contesto geopolitico e la crescita delle disegualianze osservata, sono state intraprese diverse iniziative per la protezione dei diritti umani fondamentali a diversi livelli di rapporto di lavoro diretto o indiretto (due diligence della catena di approvvigionamento) (PAI10,PAI11). Abbiamo anche condotto una campagna di impegno diretto post-covid con la finalità di indagare gli effetti sulle relazioni con gli stakeholder e i cambiamenti ora entrati a far parte della "nuova normalità" dell'attività commerciale nelle società in cui Candriam investe. Nello stesso ambito, anche la gestione del capitale umano è un aspetto che trattiamo ampiamente nel dialogo con le società. Continuiamo a sostenere la Workforce Disclosure Initiative per un miglior accesso a dati affidabili, pertinenti e comparabili sui rapporti di lavoro diretti e indiretti delle società.

- Processo di voto:

L'approccio di Candriam alla Governance aziendale si fonda sulle norme riconosciute a livello internazionale, in particolare sui principi stabiliti dall'OCSE e sulla International Corporate Governance Network (ICGN).

A tal riguardo, Candriam ha esercitato i suoi diritti di voto quando disponibili per le posizioni del portafoglio. I diritti degli Azionisti, la parità di trattamento per gli azionisti, la responsabilità del consiglio di amministrazione, la trasparenza e l'integrità dei bilanci sono pilastri fondamentali della nostra politica di voto. La maggior parte dei nostri voti relativi al management si concentra sulla remunerazione e l'elezione degli amministratori. Infatti, richiediamo alle società di rispettare il principio di retribuzione della prestazione e manifesteremo il nostro disaccordo non appena risconteremo un livello di remunerazione eccessivo o condizioni di attribuzione non sufficientemente trasparenti o stringenti. In modo analogo, pretendiamo dalle società il rispetto con i nostri requisiti minimi di indipendenza: in caso di consigli di amministrazione che non rispettino questo requisito, ci opponiamo all'elezione, o rielezione, di qualsiasi amministratore non indipendente, ad eccezione del CEO. Naturalmente, per la votazione sono anche presi in considerazione la diversità (PAI13) ed il livello di competenza del consiglio.

Inoltre, Candriam considera sempre la pertinenza, la coerenza e la fattibilità delle misure promosse da qualsiasi decisione in ambito ESG prima di esprimere il voto.

Nel miglior interesse dei suoi clienti, Candriam considera, nelle sue decisioni di voto, l'opinione ESG interna sulle società oggetto dell'investimento insieme agli eventuali risultati dell'impegno intrapreso con tale società.

Nel contesto della politica di voto di Candriam, sono applicate linee guida specifiche per una serie di decisioni degli azionisti e del management relative ad ambiente (per esempio il clima (da PAI1 a PAI6), biodiversità (PAI7)), sociale (per esempio, la diversità, il divario retributivo tra i sessi (PAI12), diritti umani (PAI10, PAI11)) e governance. Più specificamente, Candriam accoglie con favore l'introduzione di risoluzioni "Say-on-Climate" sponsorizzate dal management. Candriam ha costruito un modello dettagliato da applicare a ogni risoluzione Say-on-Climate, che valuta il rigore e l'allineamento della strategia di transizione della società con un percorso verso le emissioni zero nel 2050. Ne consegue, che molte di queste non hanno ottenuto il nostro supporto nel corso di questo periodo.

- Esclusione: selezione negativa di Candriam delle società o dei paesi volta a evitare investimenti in attività o pratiche pericolose che può condurre a esclusioni connesse all'impatto negativo di società o emittenti.

- Monitoraggio: calcolo e valutazione dei principali indicatori di impatto negativo, compreso il report a livello di Comparto. Alcuni di questi indicatori possono avere obiettivi espliciti e possono essere utilizzati per misurare il raggiungimento dell'obiettivo d'investimento sostenibile del Comparto. Di seguito sono riportati gli indicatori di questo Comparto:

Indicatori PAI	Valore
1- GHG Emissions - Scope 1 GHG Emissions	19215.92
1- GHG Emissions - Scope 2 GHG Emissions	7465.30
1- GHG Emissions - Total GHG Emissions	26681.22
2 - Carbon Footprint	74.43
3 - GHG intensity of investee companies	201.19
4 - Exposure to companies active in fossil fuel sector	2.22%
10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0.00%
13 - Board gender diversity	36.87%
14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0.00%

Quali sono stati i principali investimenti di questo prodotto finanziario?

L'elenco comprende gli investimenti che costituiscono la **proporzione maggiore degli investimenti** del prodotto finanziario durante il periodo di riferimento, ovvero: 31/12/2022

Principali investimenti	Settore	Proporzione	Paese
WASTE MANAGEMENT	Environmental services and recycling	4.01%	US
AMERICAN WATER WORKS CO INC	Utilities	3.57%	US
GRAPHIC PACKAGING	Banks and other financial institutions	3.49%	US
NESTLE SA REG SHS	Foods and non alcoholic drinks	3.47%	US
DARLING INGREDIENT INC	Utilities	3.16%	US
PROCTER & GAMBLE CO	Miscellaneous consumer goods	3.08%	US
CROWN HOLDINGS INC	Banks and other financial institutions	2.61%	US
UNILEVER	Foods and non alcoholic drinks	2.58%	GB
ECOLAB INC	Chemicals	2.56%	US
CISCO SYSTEMS INC	Office supplies and computing	2.47%	US
ESTEE LAUDER COMPANIES INC -A-	Pharmaceuticals	2.45%	US
PTC INC	Internet and internet services	2.40%	US
LKQ CORP	Road vehicles	2.32%	US
ZEBRA TECHNOLOGIES -A-	Electronics and semiconductors	2.25%	US
IBERDROLA SA	Utilities	2.11%	ES

A seguito del processo di arrotondamento delle cifre, possono essere presenti differenze minime tra i dati sopra riportati e quelli corrispondenti contenuti nella sezione "Portafoglio titoli" della relazione annuale.

Qual è stata la proporzione di investimenti associati alla sostenibilità?

L'allocazione delle attività descrive la quota di investimenti in una specifica classe di attività.

● Qual è stata l'allocazione delle attività?

● **In quali settori economici sono stati effettuati gli investimenti?**

Settore principale	Proporzione
Utilities	10.78%
Environmental services and recycling	10.77%
Banks and other financial institutions	9.75%
Internet and internet services	7.65%
Chemicals	6.40%
Foods and non alcoholic drinks	6.05%
Electronics and semiconductors	5.87%
Pharmaceuticals	4.59%
Miscellaneous consumer goods	3.82%
Retail trade and department stores	3.51%
Machine and apparatus construction	3.24%
Building materials	3.09%
Packaging industries	2.48%
Office supplies and computing	2.47%
Road vehicles	2.32%

A seguito del processo di arrotondamento delle cifre, possono essere presenti differenze minime tra i dati sopra riportati e quelli corrispondenti contenuti nella sezione "Portafoglio titoli" della relazione annuale.

In quale misura gli investimenti sostenibili con l'obiettivo di tutela ambientale sono stati allineati con la Tassonomia UE?

Per la conformità con la Tassonomia UE, i criteri relativi al **gas fossile** comprendono limiti sulle emissioni e la transizione all'energia completamente rinnovabile o ai combustibili a basso tenore di carbonio entro la fine del 2035. Per quanto riguarda l'**energia nucleare**, i criteri comprendono la sicurezza totale e le regole di gestione dei rifiuti.

Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale ad un obiettivo ambientale.

Le **attività di transizione** sono attività per le quali le alternative a basse emissioni di carbonio non sono ancora disponibili e, tra gli altri, hanno livelli di emissioni di gas effetto-serra corrispondenti alle migliori performance.

Le attività allineate alla Tassonomia sono espresse come quota di:

- **giro d'affari** che riflette la quota di profitto risultante dalle attività green delle aziende oggetto dell'investimento

- **spese in conto capitale (CapEx)** che rappresentano gli investimenti green effettuati dalle società oggetto dell'investimento, per esempio per la transizione ad un'economia green.

- **spese operative (OpEx)** che riflettono le attività operative green società oggetto dell'investimento.

Il prodotto finanziario ha investito in attività associate al gas fossile e/o all'energia nucleare conformi alla Tassonomia UE¹?

Sì

Nel gas fossile

Nell'energia nucleare

No

Le due grafici riportati di seguito rappresentano in verde la percentuale minima di investimenti allineati con la Tassonomia UE. Non essendoci una metodologia appropriata per la determinazione dell'allineamento alla Tassonomia dei titoli di stato, il primo grafico mostra l'allineamento della Tassonomia in relazione a tutti gli investimenti del prodotto finanziario, comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla Tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.*

* Nell'ambito di questi grafici, per "titoli di stato" si intende l'esposizione a qualsiasi obbligazione sovrana

Qual è stata la quota di investimenti in attività abilitanti e di transizione?

Il Comparto non è in grado di pubblicare una percentuale di allineamento con la Tassonomia, né di attività di transizione e abilitanti, in quanto solo un piccolo numero di società a livello globale fornisce i dati necessari per una valutazione rigorosa del loro allineamento alla Tassonomia.

¹ Le attività relative ai gas fossili e/o al nucleare sono conformi alla Tassonomia UE solo se contribuiscono alla limitazione del cambiamento climatico ("mitigazione dei cambiamenti climatici") e non recano alcun danno significativo agli obiettivi della Tassonomia UE. Si veda la nota esplicativa nel margine sinistro. L'insieme completo dei criteri per le attività associate al gas fossile e all'energia nucleare conformi alla Tassonomia UE è fornito nel regolamento delegato (UE) 2022/1214 della Commissione.

 Rappresenta gli investimenti sostenibili con un obiettivo di tutela ambientale che **non prendono in considerazione** i criteri per le attività economiche ecosostenibili previste dalla Tassonomia UE.

● **Qual è il rapporto con la percentuale di investimenti allineati con la Tassonomia UE effettuati nei precedenti periodi di riferimento?**

Non applicabile in quanto non sono disponibili dati relativi al periodo precedente.

● **Qual è la ripartizione della proporzione degli investimenti per ciascuna delle categorie della Tassonomia UE alla quale hanno contribuito questi investimenti?**

Il Comparto non è in grado di pubblicare una percentuale di allineamento con la Tassonomia, in quanto solo un piccolo numero di società a livello globale fornisce i dati necessari per una valutazione rigorosa del loro allineamento alla Tassonomia.

Pertanto la percentuale è considerata nulla.

Qual è stata la quota di investimenti sostenibili con un obiettivo di tutela ambientale non allineati con la Tassonomia UE?

Il Comparto ha registrato una quota del 61,56% di investimenti in attività sostenibili sul piano ambientale non allineate con la tassonomia UE.

In effetti, ad oggi, solo due dei sei obiettivi sono stati implementati nel 2022 e un numero esiguo di società a livello globale forniscono i dati necessari per una valutazione rigorosa del loro allineamento alla Tassonomia.

Qual è stata la quota di investimenti socialmente sostenibili?

Il Comparto ha registrato una quota del 31,28% di investimenti con un obiettivo sociale

Quali investimenti sono stati inclusi nella voce “#2 Non sostenibili”, qual era il loro scopo, ed esistevano delle salvaguardie ambientali o sociali minime?

Gli investimenti inclusi alla voce "Non sostenibili" sono presenti nel Comparto nella misura del 7,16% del valore del patrimonio netto totale.

Tali investimenti comprendono uno o più dei seguenti asset:

- Contanti: Contanti a vista, depositi in liquidità, accordi di riacquisto inverso (reverse repo) necessari per gestire la liquidità del Comparto in base alle sottoscrizioni/riscatti oppure risultanti dalle decisioni di esposizione al mercato del Comparto.
- Investimenti su emittenti considerati sostenibili al momento dell'investimento e non più completamente allineati ai criteri di investimento sostenibile di Candriam. Questi investimenti sono pianificati per essere venduti.
- Derivati non a titolo singolo utilizzati per la gestione efficiente del portafoglio e/o a fini di copertura e/o temporaneamente a seguito di sottoscrizioni/riscatti.

Quali misure sono state intraprese per soddisfare l'obiettivo di investimento sostenibile durante il periodo di riferimento?

Per rispettare l'obiettivo di investimento sostenibile durante il periodo di riferimento, il comparto ha avviato nuove posizioni e venduto posizioni esistenti allo scopo di rafforzare l'allineamento con il suo obiettivo di investimento sostenibile. L'obiettivo di investimento sostenibile primario del comparto è quello di contribuire alla transizione ad un'economia circolare. In linea con questo obiettivo, il comparto mira a costituire un portafoglio con una temperatura media ponderata inferiore a 2,5°C.

Un esempio di nuova posizione è quella avviata con West Fraser durante il periodo di riferimento. La società è un produttore di prodotti di legno con sede nel Nord America, che ricava il legno da foreste sostenibili che vengono ripiantate e pertanto costituiscono una fonte circolare di materia prima per l'industria edilizia. Il punteggio di allineamento di West Fraser agli obiettivi associati al clima è anch'esso volto verso un'economia a basso tenore di carbonio, come calcolato da Carbon4Finance, secondo quanto configurato dall'obiettivo del comparto relativo alla temperatura.

Durante il periodo di riferimento, il comparto ha disinvestito dalle società che non avevano strategie conformi ai suoi standard di sostenibilità. Per esempio, gli investimenti nella società Flat Glass, un produttore di vetro cinese che produceva pannelli solari, sono stati venduti a seguito dell'assenza di impegni ambientali da parte della società. Anche se i pannelli solari sono una delle principali soluzioni per imbrigliare energia sostenibile, la fabbricazione del vetro in se stessa può generare un danno ambientale significativo, un aspetto riguardo al quale Flat Glass, nonostante i numerosi tentativi degli analisti di Candriam di contattare la società, ha fornito scarsa trasparenza.

Il comparto mira ad una percentuale superiore di società ad alto valore. Alla fine dell'anno, il fondo aveva investito l'81% in società ad alto valore, a fronte del 62% dell'indice di riferimento.

Il comparto ambisce a conseguire un punteggio ESG, basato sulla metodologia ESG proprietaria di Candriam, superiore al benchmark. Alla fine dell'anno 2022, l'ESG complessivo del comparto era 55 ovvero il 5% oltre al punteggio ESG del benchmark corrente.

Qual è stata la performance di questo prodotto finanziario rispetto al benchmark di sostenibilità di riferimento?

Non è stato scelto nessun indice specifico come indice di riferimento sostenibile per gli obiettivi di investimento sostenibile.

I **benchmark di riferimento** sono indici per la misurazione della capacità del prodotto finanziario di realizzare l'obiettivo sostenibile.

Obiettivo di investimento sostenibile

Investimento sostenibile significa un investimento in un'attività economica che contribuisca ad un obiettivo ambientale o sociale, ponendo la condizione che tale investimento non arrechi un danno significativo ad alcun obiettivo ambientale o sociale e che le società oggetto dell'investimento seguano pratiche di buona governance.

La **Tassonomia dell'UE** è una classificazione definita nel Regolamento (UE) 2020/852 che stabilisce un elenco di attività economiche ecosostenibili. Tale Regolamento non include un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere allineati con la **Tassonomia** o meno.

Questo prodotto finanziario ha avuto un obiettivo di investimento sostenibile?

●● <input checked="" type="checkbox"/> SÌ	●○ <input type="checkbox"/> NO
<input checked="" type="checkbox"/> Ha effettuato investimenti sostenibili con un obiettivo ambientale: 34.72%	<input type="checkbox"/> Ha promosso aspetti ambientali/sociali (E/S) e, pur non ponendosi come obiettivo un investimento sostenibile, ha compreso una proporzione del ___% di investimenti sostenibili
<input type="checkbox"/> in attività economiche che si qualificano come ecosostenibili secondo la Tassonomia UE	<input type="checkbox"/> con un obiettivo ambientale in attività economiche che si qualificano come ecosostenibili secondo la Tassonomia UE
<input checked="" type="checkbox"/> in attività economiche che non si qualificano come ecosostenibili secondo la Tassonomia UE	<input type="checkbox"/> con un obiettivo ambientale in attività economiche che non si qualificano come ecosostenibili secondo la Tassonomia UE
<input checked="" type="checkbox"/> ha effettuato investimenti sostenibili con un obiettivo sociale: 61.74%	<input type="checkbox"/> con un obiettivo sociale
	<input type="checkbox"/> ha promosso caratteristiche A/S ma non ha effettuato alcun investimento sostenibile

In quale misura è stato soddisfatto l'obiettivo di sostenibilità degli investimenti per questo prodotto finanziario?

La realizzazione degli obiettivi di investimento sostenibile sono stati misurati tramite i seguenti indicatori di sostenibilità:

- impronta di carbonio: il Comparto registrava un'impronta di carbonio almeno del 30% inferiore rispetto a quella dell'indice di riferimento del Comparto.
- punteggio ESG: il Comparto ha conseguito un punteggio ESG medio ponderato superiore a quello dell'indice di riferimento del Comparto. Il punteggio ESG viene calcolato utilizzando la metodologia d'analisi ESG proprietaria di Candriam.

Sono inoltre stati monitorati i seguenti indici:

- Orientamenti dell'OCSE per le società multinazionali, Global Compact delle Nazioni Unite: per garantire che non vi siano investimenti in società che violino tali principi.
- Politica delle esclusioni di Candriam: garantire che non vi siano investimenti in società che figurano nell'elenco delle esclusioni SRI di Candriam a seguito dell'applicazione della Politica di esclusioni di Candriam.
- Numero di società controllanti sostenute dal voto di Candriam.

● Cosa hanno rilevato gli indicatori di sostenibilità?

Il Comparto è stato gestito nel rispetto dei suoi indicatori di sostenibilità come definito di seguito.

Gli **indicatori di sostenibilità** rilevano la misura in cui sono stati soddisfatti gli obiettivi

Per la selezione degli investimenti sostenibili, il gestore del portafoglio ha preso in considerazione le valutazioni ESG degli emittenti prodotte dal team di analisti ESG di Candriam.

Per le società, queste valutazioni sono basate sull'analisi delle interazioni della società con i principali stakeholder e sull'analisi delle sue attività commerciali e del loro impatto, positivo o negativo, sulle sfide chiave della sostenibilità come il cambiamento climatico e l'impoverimento delle risorse. Inoltre, l'analisi ESG di Candriam comprende filtri di esclusione basati sulla conformità alle norme internazionali e sul coinvolgimento in attività controverse.

L'analisi e ricerca ESG di Candriam di investimenti sostenibili valuta inoltre la conformità degli investimenti al principio secondo il quale non devono "arrecare danno" all'obiettivo di un investimento sostenibile e le pratiche di buona governance.

L'integrazione della metodologia di ricerca ESG di Candriam ha permesso al Fondo di rispettare la proporzione minima di investimenti sostenibili definiti nel prospetto (75% minimo). La proporzione di investimenti sostenibili nel Fondo è stata pertanto al di sopra della soglia minima, come indicato nella sezione "Qual è stata la proporzione di investimenti associati alla sostenibilità?"

Il benchmark di riferimento non è stato designato allo scopo di realizzare l'obiettivo di investimento sostenibile del Comparto.

Il benchmark di riferimento del Comparto non ha i requisiti richiesti per essere un Indice di riferimento dell'UE relativo alla transizione climatica o un Indice di riferimento allineato all'accordo UE di Parigi ai sensi del Titolo III, Capo 3a, del regolamento (UE) 2016/1011.

Tuttavia, il Comparto mirava a produrre un'impronta di carbonio che fosse almeno del 30% inferiore rispetto a quella dell'indice di riferimento del Comparto.

Inoltre, poiché Candriam è parte dell'iniziativa Net Zero Asset Management, il Comparto mirava a ridurre le emissioni di gas serra in linea con gli obiettivi dell'Accordo di Parigi.

Nome dell'indicatore KPI	Valore	Indice di riferimento
Carbon Footprint - Corporate - Scope 1&2 - 30% reduction vs bench	22.10	167.82
ESG Score - Corporate - Higher than bench	50.56	44.87

...E rispetto ai periodi precedenti?

Non applicabile in quanto non sono disponibili dati relativi al periodo precedente.

In che modo gli investimenti sostenibili non hanno arrecato danno significativo ad alcun obiettivo di investimento sostenibile?

Candriam ha garantito che i suoi investimenti sostenibili non causassero un danno significativo a qualsiasi obiettivo d'investimento sostenibile di carattere ambientale e/o sociale mediante la sua ricerca e analisi ESG degli emittenti societari e sovrani. In base alle sue valutazioni e punteggi ESG, la metodologia ESG di Candriam definisce chiari requisiti e soglie minime per identificare quegli emittenti che si qualificano come "investimento sostenibile" e, in particolare, non arrecano danni significativi a qualsiasi obiettivo di investimento sostenibile ambientale e/o sociale.

In particolare, il principio di "non arrecare danno significativo", è stato valutato per le società tramite:

- la considerazione dei "principali impatti negativi"
- l'allineamento agli orientamenti OCSE per le società multinazionali e del Global Compact delle Nazioni Unite per garantire le tutele minime sociali e ambientali.

Per maggiori dettagli, fare riferimento alla sezione che segue sulla considerazione dei principali effetti avversi sui fattori della sostenibilità.

In che modo sono stati presi in considerazione gli indicatori degli effetti avversi sui fattori di sostenibilità?

La considerazione degli impatti negativi è centrale per l'approccio agli investimenti sostenibili di Candriam. I principali impatti negativi sono presi in considerazione nell'intero processo di analisi e ricerca ESG e attraverso un'ampia gamma di metodi:

1. Valutazione ESG delle società: la metodologia di ricerca e screening ESG considera e valuta il principale impatto negativo sulla sostenibilità da due angolazioni distinte ma interconnesse:

- le attività economiche degli emittenti societari e come incidono, in termini positivi o negativi, sulle sfide chiave di sostenibilità come il cambiamento climatico e l'impoverimento delle risorse;
- le interazioni della società con i principali stakeholder.

2. Screening negativo delle società, che comprende un'esclusione su base normativa e un'esclusione delle società coinvolte in attività controverse.

3. Attività di coinvolgimento con società, attraverso attività di dialogo e di voto, che contribuiscono ad evitare o ridurre la portata degli impatti negativi. Il quadro dell'analisi ESG ed i suoi risultati alimentano il nostro processo di coinvolgimento, e viceversa.

L'integrazione dei principali impatti negativi sui fattori di sostenibilità è stata basata sulla rilevanza o possibile rilevanza di ciascun indicatore per ogni settore specifico a cui la società appartiene. La rilevanza dipende da diversi fattori quali: il tipo di informazioni, la qualità e la portata dei dati, l'applicabilità, la pertinenza e la copertura geografica.

Gli investimenti sostenibili sono stati allineati con gli "Orientamenti OCSE per le imprese multinazionali" e con i Principi Guida delle Nazioni Unite su Imprese e Diritti Umani? **Dettagli:**

Gli investimenti del Comparto sono stati assoggettati a un'analisi delle attività controverse su base normativa che considera la conformità a norme internazionali di carattere sociale, umano, ambientale e anticorruzione, secondo quanto definito dal Global Compact delle Nazioni Unite e dagli Orientamenti OCSE per le aziende multinazionali. L'Organizzazione internazionale del lavoro (OIL) e la Carta internazionale dei diritti umani sono parte dei numerosi riferimenti internazionali integrati nel nostro modello ESG e di analisi normativa.

Questa analisi è volta ad escludere le società che hanno significativamente e ripetutamente violato uno qualsiasi di questi principi.

I principali effetti avversi sono gli effetti negativi più rilevanti delle decisioni di investimento sui fattori di sostenibilità correlati ad aspetti ambientali e sociali, alle condizioni di lavoro, al rispetto dei diritti umani, all'anticorruzione e anticorruzione.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti avversi sui fattori sostenibili?

A livello di comparto, i principali impatti negativi (PAI) sui fattori di sostenibilità vengono considerati attraverso uno o più strumenti (si veda la dichiarazione PAI di Candriam: <https://www.candriam.com/en/private/sfdr/>):

- Impegno e processo di voto: al fine di evitare e/o ridurre l'impatto negativo sugli obiettivi di sostenibilità, il Comparto ha considerato anche gli impatti negativi nelle sue interazioni con le società, attraverso il dialogo e il processo di voto. Candriam ha attribuito la priorità alle sue attività di coinvolgimento e voto in base a una valutazione delle sfide ESG più rilevanti e sostanziali, relative a settori ed emittenti, prendendo in considerazione gli impatti finanziari e societari e quelli sugli stakeholder. Pertanto, il livello di coinvolgimento in ciascuna società all'interno dello stesso prodotto può variare ed è soggetto alla metodologia di prioritizzazione di Candriam.
 - Dialogo:

Il clima (da PAI1 a PAI6) è ovviamente centrale nel nostro dialogo con le aziende. Le priorità dell'impegno per il clima da parte delle società sono identificate prendendo in considerazione:

- società che presentano un debole profilo di transizione (modello del rischio di transizione proprietario) e/o emissioni di carbonio ancora elevate (Ambito 1-2) o elevate emissioni di Ambito 3.
- emittenti dei settori finanziari ancora ampiamente esposti ai combustibili fossili e con un ruolo primario nel finanziamento della transizione
- relativa esposizione dei portafogli gestiti agli emittenti sopra citati.

Il nostro obiettivo è ovviamente incoraggiare le società a comunicare pubblicamente la loro strategia di allineamento alla traiettoria 1.5D e a sostenere questo allineamento. Oltre a qualsiasi impegno per l'obiettivo Net Zero e alla comunicazione delle emissioni assolute di Scope1-2-3, Candriam incoraggia le aziende a fornire indicazioni su come gli obiettivi a breve/medio termine siano allineati con la traiettoria 1.5D scientificamente riconosciuta. In particolare, chiediamo agli emittenti di spiegare in che modo la loro strategia e il loro piano di spesa in conto capitale vadano nel senso dell'impegno a favore della decarbonizzazione. Di norma, utilizziamo una combinazione di dialogo individuale e collaborativo. Come nell'anno precedente, continuiamo a sostenere e a prendere attivamente parte a diverse iniziative su base collaborativa come Climate Action 100+. Queste iniziative non solo contribuiscono ad aumentare il livello di trasparenza sulle emissioni di gas effetto serra e sulla relativa strategia ma anche a per acquisire una posizione di forza a favore del cambiamento strategico. I risultati di questo impegno sono riportati in dettaglio nella nostra relazione annuale su Impegno e processo di voto, disponibile sul nostro sito web pubblico (<https://www.candriam.com/en/professional/insight-overview/publications/#sri-publications>).

Dato il contesto geopolitico e la crescita delle diseguglianze osservata, sono state intraprese diverse iniziative per la protezione dei diritti umani fondamentali a diversi livelli di rapporto di lavoro diretto o indiretto (due diligence della catena di approvvigionamento) (PAI10,PAI11). Abbiamo anche condotto una campagna di impegno diretto post-covid con la finalità di indagare gli effetti sulle relazioni con gli stakeholder e i cambiamenti ora entrati a far parte della "nuova normalità" dell'attività commerciale nelle società in cui Candriam investe. Nello stesso ambito, anche la gestione del capitale umano è un aspetto che trattiamo ampiamente nel dialogo con le società. Continuiamo a sostenere la Workforce Disclosure Initiative per un miglior accesso a dati affidabili, pertinenti e comparabili sui rapporti di lavoro diretti e indiretti delle società.

- Processo di voto:

L'approccio di Candriam alla Governance aziendale si fonda sulle norme riconosciute a livello internazionale, in particolare sui principi stabiliti dall'OCSE e sulla International Corporate Governance Network (ICGN).

A tal riguardo, Candriam ha esercitato i suoi diritti di voto quando disponibili per le posizioni del portafoglio. I diritti degli Azionisti, la parità di trattamento per gli azionisti, la responsabilità del consiglio di amministrazione, la trasparenza e l'integrità dei bilanci sono pilastri fondamentali della nostra politica di voto. La maggior parte dei nostri voti relativi al management si concentra sulla remunerazione e l'elezione degli amministratori. Infatti, richiediamo alle società di rispettare il principio di retribuzione della prestazione e manifesteremo il nostro disaccordo non appena riscontreremo un livello di remunerazione eccessivo o condizioni di attribuzione non sufficientemente trasparenti o stringenti. In modo analogo, pretendiamo dalle società il rispetto con i nostri requisiti minimi di indipendenza: in caso di consigli di amministrazione che non rispettino questo requisito, ci opponiamo all'elezione, o rielezione, di qualsiasi amministratore non indipendente, ad eccezione del CEO. Naturalmente, per la votazione sono anche presi in considerazione la diversità (PAI13) ed il livello di competenza del consiglio.

Inoltre, Candriam considera sempre la pertinenza, la coerenza e la fattibilità delle misure promosse da qualsiasi decisione in ambito ESG prima di esprimere il voto.

Nel miglior interesse dei suoi clienti, Candriam considera, nelle sue decisioni di voto, l'opinione ESG interna sulle società oggetto dell'investimento insieme agli eventuali risultati dell'impegno intrapreso con tale società.

Nel contesto della politica di voto di Candriam, sono applicate linee guida specifiche per una serie di decisioni degli azionisti e del management relative ad ambiente (per esempio il clima (da PAI1 a PAI6), biodiversità (PAI7)), sociale (per esempio, la diversità, il divario retributivo tra i sessi (PAI12), diritti umani (PAI10, PAI11)) e governance. Più specificamente, Candriam accoglie con favore l'introduzione di risoluzioni "Say-on-Climate" sponsorizzate dal management. Candriam ha costruito un modello dettagliato da applicare a ogni risoluzione Say-on-Climate, che valuta il rigore e l'allineamento della strategia di transizione della società con un percorso verso le emissioni zero nel 2050. Ne consegue, che molte di queste non hanno ottenuto il nostro supporto nel corso di questo periodo.

- Esclusione: La selezione negativa di Candriam delle società o dei paesi mira a evitare investimenti in attività o pratiche dannose e può condurre ad esclusioni connesse all'impatto negativo di società o emittenti.
- Monitoraggio: calcolo e valutazione dei principali indicatori di impatto negativo, compreso il report a livello di Comparto. Alcuni di questi indicatori possono avere obiettivi espliciti e possono essere utilizzati per misurare il

raggiungimento dell'obiettivo d'investimento sostenibile del Comparto. Di seguito sono riportati gli indicatori di questo Comparto:

Indicatori PAI	Valore
1- GHG Emissions - Scope 1 GHG Emissions	18915.92
1- GHG Emissions - Scope 2 GHG Emissions	41915.66
1- GHG Emissions - Total GHG Emissions	60831.58
2 - Carbon Footprint	22.10
3 - GHG intensity of investee companies	87.44
4 - Exposure to companies active in fossil fuel sector	0.00%
10 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	0.00%
13 - Board gender diversity	18.98%
14 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0.00%

Quali sono stati i principali investimenti di questo prodotto finanziario?

L'elenco comprende gli investimenti che costituiscono la **proporzione maggiore degli investimenti** del prodotto finanziario durante il periodo di riferimento, ovvero: 31/12/2022

Principali investimenti	Settore	Proporzione	Paese
TAIWAN SEMICONDUCTOR CO	Electronics and semiconductors	6.79%	TW
ALIBABA GROUP	Miscellaneous services	4.74%	CN
MEITUAN - SHS 114A/REG S	Internet and internet services	3.39%	CN
HOUSING DEVELOPMENT FINANCE CORP	Banks and other financial institutions	3.09%	IN
JD.COM INC - CL A	Retail trade and department stores	2.63%	CN
PING AN INS (GRP) CO -H-	Insurance	2.38%	CN
SK HYNIX INC	Electronics and semiconductors	2.24%	KR
AXIS BANK	Banks and other financial institutions	2.16%	IN
DELTA ELECTRONIC INCS	Electrical engineering	2.10%	TW
INFOSYS TECHNOLOGIES DEMATERIALIZED	Internet and internet services	1.98%	IN
DINA POLSKA S.A.	Foods and non alcoholic drinks	1.89%	PL
SAMSUNG SDI CO LTD	Electronics and semiconductors	1.78%	KR
KB FINANCIAL GROUP INC	Banks and other financial institutions	1.71%	KR
JIUMAOJIU INTERNATIONAL HOLDINGS LIMITED	Foods and non alcoholic drinks	1.70%	CN
CIMB GROUP HOLDINGS BHD	Banks and other financial institutions	1.68%	MY

A seguito del processo di arrotondamento delle cifre, possono essere presenti differenze minime tra i dati sopra riportati e quelli corrispondenti contenuti nella sezione "Portafoglio titoli" della relazione annuale.

Qual è stata la proporzione di investimenti associati alla sostenibilità?

L'allocazione delle attività descrive la quota di investimenti in una specifica classe di attività.

● Qual è stata l'allocazione delle attività?

● **In quali settori economici sono stati effettuati gli investimenti?**

Settore principale	Proporzione
Banks and other financial institutions	26.61%
Electronics and semiconductors	12.42%
Internet and internet services	9.10%
Foods and non alcoholic drinks	6.90%
Miscellaneous services	4.74%
Retail trade and department stores	4.65%
Machine and apparatus construction	4.18%
Communication	4.10%
Pharmaceuticals	3.73%
Electrical engineering	3.52%
Insurance	3.15%
Chemicals	3.08%
Biotechnology	2.54%
Road vehicles	2.16%
Utilities	1.93%

A seguito del processo di arrotondamento delle cifre, possono essere presenti differenze minime tra i dati sopra riportati e quelli corrispondenti contenuti nella sezione "Portafoglio titoli" della relazione annuale.

In quale misura gli investimenti sostenibili con l'obiettivo di tutela ambientale sono stati allineati con la Tassonomia UE?

Per la conformità con la Tassonomia UE, i criteri relativi al **gas fossile** comprendono limiti sulle emissioni e la transizione all'energia completamente rinnovabile o ai combustibili a basso tenore di carbonio entro la fine del 2035. Per quanto riguarda l'**energia nucleare**, i criteri comprendono la sicurezza totale e le regole di gestione dei rifiuti.

Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale ad un obiettivo ambientale.

Le **attività di transizione** sono attività per le quali le alternative a basse emissioni di carbonio non sono ancora disponibili e, tra gli altri, hanno livelli di emissioni di gas effetto-serra corrispondenti alle migliori performance.

Le attività allineate alla Tassonomia sono espresse come quota di:

- **giro d'affari** che riflette la quota di profitto risultante dalle attività green delle aziende oggetto dell'investimento
- **spese in conto capitale (CapEx)** che rappresentano gli investimenti green effettuati dalle società oggetto dell'investimento, per esempio per la transizione ad un'economia green.
- **spese operative (OpEx)** che riflettono le attività operative green società oggetto dell'investimento.

Il prodotto finanziario ha investito in attività associate al gas fossile e/o all'energia nucleare conformi alla Tassonomia UE¹?

- Sì
- Nel gas fossile Nell'energia nucleare
- No

Le due grafici riportati di seguito rappresentano in verde la percentuale minima di investimenti allineati con la Tassonomia UE. Non essendoci una metodologia appropriata per la determinazione dell'allineamento alla Tassonomia dei titoli di stato, il primo grafico mostra l'allineamento della Tassonomia in relazione a tutti gli investimenti del prodotto finanziario, comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla Tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.*

* Nell'ambito di questi grafici, per "titoli di stato" si intende l'esposizione a qualsiasi obbligazione sovrana

Qual è stata la quota di investimenti in attività abilitanti e di transizione?

Il Comparto non è in grado di pubblicare una percentuale di allineamento con la Tassonomia, né di attività di transizione e abilitanti, in quanto solo un piccolo numero di società a livello globale fornisce i dati necessari per una valutazione rigorosa del loro allineamento alla Tassonomia.

¹ Le attività relative ai gas fossili e/o al nucleare sono conformi alla Tassonomia UE solo se contribuiscono alla limitazione del cambiamento climatico ("mitigazione dei cambiamenti climatici") e non recano alcun danno significativo agli obiettivi della Tassonomia UE. Si veda la nota esplicativa nel margine sinistro. L'insieme completo dei criteri per le attività associate al gas fossile e all'energia nucleare conformi alla Tassonomia UE è fornito nel regolamento delegato (UE) 2022/1214 della Commissione.

 Rappresenta gli investimenti sostenibili con un obiettivo di tutela ambientale che **non prendono in considerazione** i criteri per le attività economiche ecosostenibili previste dalla Tassonomia UE.

Qual è il rapporto con la percentuale di investimenti allineati con la Tassonomia UE effettuati nei precedenti periodi di riferimento?

Non applicabile in quanto non sono disponibili dati relativi al periodo precedente.

Qual è la ripartizione della proporzione degli investimenti per ciascuna delle categorie della Tassonomia UE alla quale hanno contribuito questi investimenti?

Il Comparto non è in grado di pubblicare una percentuale di allineamento con la Tassonomia, in quanto solo un piccolo numero di società a livello globale fornisce i dati necessari per una valutazione rigorosa del loro allineamento alla Tassonomia.

Pertanto la percentuale è considerata nulla.

Qual è stata la quota di investimenti sostenibili con un obiettivo di tutela ambientale non allineati con la Tassonomia UE?

Il Comparto ha registrato una quota del 34,72% di investimenti in attività sostenibili sul piano ambientale non allineate con la tassonomia UE.

In effetti, ad oggi, solo due dei sei obiettivi sono stati implementati nel 2022 e un numero esiguo di società a livello globale forniscono i dati necessari per una valutazione rigorosa del loro allineamento alla Tassonomia.

Qual è stata la quota di investimenti socialmente sostenibili?

Il Comparto ha registrato una quota del 61,74% di investimenti con un obiettivo sociale

Quali investimenti sono stati inclusi nella voce “#2 Non sostenibili”, qual era il loro scopo, ed esistevano delle salvaguardie ambientali o sociali minime?

Gli investimenti inclusi alla voce "Non sostenibili" sono presenti nel Comparto nella misura del 3,63% del valore del patrimonio netto totale.

Tali investimenti comprendono uno o più dei seguenti asset:

- Contanti: Contanti a vista, depositi in liquidità, accordi di riacquisto inverso (reverse repo) necessari per gestire la liquidità del Comparto in base alle sottoscrizioni/riscatti oppure risultanti dalle decisioni di esposizione al mercato del Comparto.
- Investimenti su emittenti considerati sostenibili al momento dell'investimento e non più completamente allineati ai criteri di investimento sostenibile di Candriam. Questi investimenti sono pianificati per essere venduti.
- Derivati non a titolo singolo utilizzati per la gestione efficiente del portafoglio e/o a fini di copertura e/o temporaneamente a seguito di sottoscrizioni/riscatti.

Quali misure sono state intraprese per soddisfare l'obiettivo di investimento sostenibile durante il periodo di riferimento?

Per rispettare gli obiettivi ambientali e/o sociali durante il periodo di riferimento, abbiamo escluso o venduto i seguenti investimenti, per i quali gli emittenti non prevedevano caratteristiche ambientali e/o sociali:

- Tencent: la società ha ricevuto una valutazione al di sotto della media ESG di ESG 7 ed ha ottenuto una segnalazione per lo screening con criteri normativi (che ci ha impedito di incrementare le posizioni esistenti). La valutazione ESG ha evidenziato i rischi ESG associati alle attività fortemente basate sui dati, che potevano tradursi in rischi normativi. Questi rischi includono violazioni della sicurezza delle informazioni e della privacy dei dati, nonché potenziali flussi finanziari illeciti attraverso la sua piattaforma di pagamento online. L'aumento del controllo normativo sulle aziende tecnologiche da parte del governo cinese negli ultimi anni può comportare un aumento dei rischi di non conformità per Tencent, in relazione a questi aspetti. Inoltre, Tencent e altre piattaforme di social media in Cina sono state segnalate da diverse ricerche pubbliche internazionali sulla policy per l'uso e il trattamento non autorizzato dei dati personali dei clienti a fini di sorveglianza online, tra cui il monitoraggio e la censura di post politicamente sensibili. Questo fondo ha venduto le sue posizioni su Tencent.
- Li Ning: La società ha ottenuto una valutazione ESG di ESG 7 a seguito della quale, dati i rischi ESG, il fondo ha venduto le sue posizioni su Li Ning. Al momento, poiché Li Ning non ha target ambientali pubblicamente noti sufficientemente completi e ambiziosi, e non ha visibilmente dimostrato di aver intrapreso misure sostanziali per migliorare significativamente la sostenibilità, i punteggi degli stakeholder di questa società per le categorie ambiente e fornitori riflette la strategia scarsamente avanzata di Li Ning rispetto alle altre società di pari livello.

Impegno: al fine di realizzare o mantenere l'obiettivo di investimenti sostenibili del fondo, Il team ESG di Candriam insieme al team EME ha intrapreso una serie di iniziative post-covid con diverse società dei mercati emergenti focalizzate sull'impatto della pandemia sulla gestione del capitale umano e sulla struttura della catena di approvvigionamento, nonché sul cambiamento delle tendenze e dei modelli di consumo.

Longi Green Energy Tech – Longi è un attore importante nel settore dei moduli solari PV. L'impegno è stato intrapreso con l'obiettivo di incoraggiare le società all'interno della catena del valore dell'energia solare a valutare, monitorare e comunicare i rischi relativi ai diritti umani e ai diritti dei lavoratori nella loro specifica catena di fornitura, in particolare rispetto al lavoro forzato. L'impegno era volta anche ad ottenere maggior trasparenza della catena di fornitura, in particolare relativamente alla tracciabilità dei prodotti.

Per dare un segnale che le sfide relative al cambiamento climatico sono state prese in considerazione, misuriamo l'impronta di carbonio delle società. Al 31/12/2022, l'impronta di carbonio era 22,10 tCO₂-eq / milione di euro investito, a fronte di 167,82 tCO₂-eq / milione di euro investito del benchmark del fondo.

Il comparto ambisce a conseguire un punteggio ESG, basato sulla metodologia ESG proprietaria di Candriam, superiore al benchmark. Al 31/12/2022, il punteggio ESG complessivo del comparto era di 50.56, a fronte di un punteggio ESG di 44.87 del benchmark.

Qual è stata la performance di questo prodotto finanziario rispetto al benchmark di sostenibilità di riferimento?

Non è stato scelto nessun indice specifico come indice di riferimento sostenibile per gli obiettivi di investimento sostenibile.

I benchmark di riferimento sono indici per la misurazione della capacità del prodotto finanziario di realizzare l'obiettivo sostenibile.

Template periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: **CARMIGNAC PORTFOLIO CLIMATE TRANSITION** Legal entity identifier: **54930057GC9U64S2L480**

Sustainable investment objective

3. Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: 80 %*

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ___%

4. It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

During the 2022 period, the minimum proportion of sustainable investment was 60% and was increased to 80% of net assets sustainable investments as of 1st of January 2023 while maintaining an additional environmental objective of 10% of Taxonomy aligned investments for 2022 and 2023 periods.

To what extent was the sustainable investment objective of this financial product met ?

In regard to the Article 9 of the Sustainable Finance Disclosure Regulation ("SFDR"), the Sub-Fund's sustainable objective was, in 2022, to invest at least 60% of net assets in companies contributing to climate change mitigation and adaptation according to EU taxonomy standards.

To determine if a company contributes to an eligible environmental activity, the Taxonomy Report: Technical Annex is used which predefines sectorial NACE codes in scope. An investment universe of eligible companies is created containing around 450-500 companies. Once a company's activities are identified as satisfying the aforementioned sustainable objectives measured by the related revenue, the full weight of the company is considered as satisfying the sustainable objective.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

The Sub-Fund 's minimum proportion of Taxonomy aligned investments that contribute to the above-mentioned environmental objectives is 10% of the Sub-Fund's net assets. For the minimum Taxonomy alignment calculation, the Technical Annex also serves as reference. The 4-step process is followed according to this guidance:

1. Determine if a company has eligible turnover
2. Assess the eligible activity's substantial contribution,
3. Ensure that the companies activities as a whole do not cause significant harm against the Taxonomy environmental objectives,
4. Determine if minimum safeguards are undertaken and the company does not violate important business norms such as the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

No breach of attainment of the sustainable objective have been identified during the year.

● **How did the sustainability indicators perform?**

This Sub-Fund has used the following sustainability indicators to measure the attainment of the sustainable objective :

- Sustainable investments that are eligible companies within the Taxonomy regulation (EU) 2020/852 (minimum 60% of the Sub-Fund's net assets, as described above) As of 30/12/2022, the proportion of taxonomy eligible investments was 88,59% of net assets.
- Alignment with Taxonomy regulation (EU) 2020/852 (minimum 10% of the Sub-Fund's net assets). As of 30/12/2022, the proportion of taxonomy aligned investments was 16.29%

The Sub-Fund has also used the following approaches and indicators to demonstrate its level of commitment to sustainability:

1) The coverage rate of ESG analysis: ESG integration through ESG scoring using Carmignac's proprietary ESG platform "START" (System for Tracking and Analysis of a Responsible Trajectory) is applied to at least 90% of issuers. As of 30/12/2022, the coverage rate of ESG analysis was 100% of issuers.

2) Amount the equity universe is reduced by (minimum 20%): Negative screening and exclusions of unsustainable activities based on following indicators: (a) controversies against the OECD business guidelines and UN Global compact principles, (b) companies involved in the manufacture of controversial weapons (c) coal mining activity (d) power companies that do not respect certain carbon intensity limits, (e) companies involved in tobacco (f) companies involved in adult entertainment. The universe is further reduced by excluding companies not meeting the aforementioned sustainable objectives. As of 30/12/2022, the universe was reduced by 78% of the portfolio.

3) Active stewardship: Environmental and social related company engagements leading to improvement in companies sustainability policies were measured by the following indicators: (a) level of active engagement and voting policies, (b) number of engagements, (c) rate of voting and (d) participation at shareholder and bondholder meetings. In 2022, we engaged with 81 companies at Carmignac level, and 7 companies at Carmignac Portfolio Climate Transition level. At Sub-fund level, we voted for close to 100% of the meetings where we have shareholder or bondholder rights to exercise (96.30%).

Furthermore, this Sub-Fund is committed to applying the SFDR level II 2019/2088 Regulatory Technical Standards (RTS) annex 1 related to Principal Adverse Impacts whereby 14 mandatory and 2 optional environmental and social indicators (selected by the Responsible Investment team for pertinence and coverage) have been monitored to show the impact of such sustainable investments against these indicators: Greenhouse gas emissions, Carbon footprint, GHG intensity (investee companies), Exposure to companies in fossil fuel sector, Non-renewable energy consumption and production, Energy consumption intensity per high-impact climate sector, Activities negatively affecting biodiversity-sensitive areas, Emissions to water, Hazardous waste ratio, Water usage and recycling (optional choice), Violations of UN Global Compact principles or OECD Guidelines for Multinational Enterprises, Lack of processes and compliance mechanisms to monitor compliance with UN Global

Sustainability

indicators measure how the sustainable objectives of this financial product are attained.

Compact and OECD Guidelines for Multinational Enterprises, Unadjusted gender pay gap, Board gender diversity, Exposure to controversial weapons, Excessive CEO pay ratio (optional choice).

Please find below the performance of the principal adverse impacts indicators for the year 2022, based on average quarter-end data, for the equity and corporate bond portions of the portfolio:

PAI Indicators	Based on company reported	Fund	Coverage
GHG Scope 1	Scope 1 GHG emissions	69 583	99%
GHG Scope 2	Scope 2 GHG emissions	7 775	99%
GHG Scope 3	From 1 January 2023, Scope 3 GHG emissions	172 165	99%
Total GHG	Total GHG emissions	249 523	99%
Carbon footprint	Carbon footprint	858,08	99%
GHG intensity	GHG intensity of investee companies	1 558,39	99%
Exposure to fossil fuels	Share of investments in companies active in the fossil fuel sector	16,83%	99%
Non-renewable energy consumption	Share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage	70,77%	99%
Non-renewable energy production	Share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage	30,81%	99%
Energy consumption intensity - Total	Energy consumption in GWh per million EUR of revenue of investee companies - Total	1,27	99%
Energy consumption intensity - NACE Sector A	Energy consumption in GWh per million EUR of revenue of investee companies - NACE Sector A (Agriculture, forestry and fishing)	0,16	99%
Energy consumption intensity - NACE Sector B	Energy consumption in GWh per million EUR of revenue of investee companies - NACE Sector B (Mining and quarrying)	1,02	99%
Energy consumption intensity - NACE Sector C	Energy consumption in GWh per million EUR of revenue of investee companies - NACE Sector C (Manufacturing)	0,68	99%
Energy consumption intensity - NACE Sector D	Energy consumption in GWh per million EUR of revenue of investee companies - NACE Sector D (Electricity, gas, steam and air conditioning supply)	6,29	99%
Energy consumption intensity - NACE Sector E	Energy consumption in GWh per million EUR of revenue of investee companies - NACE Sector E (Water supply; sewerage; waste management and remediation activities)	0,48	99%
Energy consumption intensity - NACE Sector F	Energy consumption in GWh per million EUR of revenue of investee companies - NACE Sector F (Construction)	0,20	99%
Energy consumption intensity - NACE Sector G	Energy consumption in GWh per million EUR of revenue of investee companies - NACE Sector G (Wholesale and retail trade; repair of motor vehicles and motorcycles)	N/A	0%
Energy consumption intensity - NACE Sector H	Energy consumption in GWh per million EUR of revenue of investee companies - NACE Sector H (Transporting and storage)	0,27	99%
Energy consumption intensity - NACE Sector L	Energy consumption in GWh per million EUR of revenue of investee companies - NACE Sector L (Real estate activities)	N/A	0%
Biodiversity	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those areas	1,24%	99%
Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	527,16	99%
Hazardous waste	Tonnes of hazardous waste generated by investee companies per million EUR invested, expressed as a weighted average	161,60	99%
Water usage and recycling	Average amount of water consumed and reclaimed by the investee companies (in cubic meters) per million EUR of revenue of investee companies	24 727,05	99%
Violations of UNGC/OECD	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0,30%	99%
Processes to monitor UNGC / OECD compliance	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance/complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	59,88%	99%

Gender pay gap	Average unadjusted gender pay gap of investee companies	84,13%	99%
Board gender diversity	Average ratio of female to male board members in investee companies	28,00%	99%
Controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0,00%	99%
Excessive CEO pay ratio	Average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest-compensated individual)	61,16	99%

● **...and compared to previous periods?**

N/A

● **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

All of the Sub-Fund's investments were examined for adherence to global norms on environmental protection, human rights, labor standards and anti-corruption, through controversy screening. More precisely, the investments were subject to a screening of minimum safeguards to ensure that their business activities are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

As mentioned for taxonomy alignment calculations, the Sub-Fund ensures that such activities do not significantly harm the EU environmental and social safeguards objectives.

Controversial behaviours engagement is aimed at eliminating a company's breach of the UN Global Compact and/ or OECD Guidelines for Multinational Enterprises and installing proper management systems to prevent such a breach from recurring. If engagement is unsuccessful, the company is considered for exclusion. Enhanced engagement cases are selected quarterly depending on the need for a follow-up. Engagement focus can differ between various investment exposures.

How were the indicators for adverse impacts on sustainability factors taken into account?

According to Carmignac approach defined, the Principal Adverse Impact indicators have been monitored on a quarterly basis. Adverse impacts are identified for degree of severity. After internal discussion an action plan is established including a timeline for execution.

Company dialogue is usually the preferred course of action to influence the company's mitigation of adverse impacts, in which case the company engagement is included in the quarterly Carmignac Engagement plan according to the Carmignac Shareholder Engagement policy. Disinvestment may be considered with a predetermined exit strategy within the confines of this aforementioned policy.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

Carmignac applies a controversy screening process on OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights for all its investments across all Sub-funds.

Carmignac acts in accordance with the United Nations Global Compact (UNGC) principles, the International Labour Organization (ILO) Declaration on Fundamental Principles and Rights at Work, and the Organisation for Economic Co-operation and Development (OECD) guidelines for multinational enterprises to assess companies' norms, including but not limited to human rights abuses, labour laws and standard climate related practices.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

This Sub-Fund applies a controversy screening process for all its investments. This process has for objective the exclusion from its investment universe companies that have committed significant controversies against the environment, human rights and international labour laws to name a few. This screening process bases its controversy identification on the OECD Business Guidelines and UN Global compact principles and is commonly called Norms-based screening, integrating a strict flagging system monitored and measured through Carmignac's proprietary ESG system START.

A company controversy scoring and research is applied using data extracted from ISS ESG as the research data base.

How did this financial product consider principal adverse impacts on sustainability factors?

Carmignac has committed to apply the SFDR level II 2019/2088 Regulatory Technical Standards (RTS) annex 1 whereby 14 mandatory and 2 optional environmental and social indicators will be monitored to show the impact of such sustainable investments against these indicators: Greenhouse gas emissions, Carbon footprint, GHG intensity (investee companies), Exposure to companies in fossil fuel sector, Non-renewable energy consumption and production, Energy consumption intensity per high-impact climate sector, Activities negatively affecting biodiversity-sensitive areas, Emissions to water, Hazardous waste ratio, Water usage and recycling, Violations of UN Global Compact principles or OECD Guidelines for Multinational Enterprises, Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact and OECD Guidelines for Multinational Enterprises, Unadjusted gender pay gap, Board gender diversity, Exposure to controversial weapons, Excessive CEO pay ratio.

As part of its PAI strategy Carmignac identifies companies that underperform the benchmark in terms of PAI Indicators. Our third party data provider Impact Cubed enables us to monitor the impact of our funds for each PAI.

Identifying outliers for each PAI indicator (biodiversity, Energy consumption, Non-renewable energy production etc.) enables us to engage with companies in order to ensure they are committed to reducing their impact. We identified that Total Energies was one of the main contributors to the underperformance of Carmignac Portfolio Climate Transition for the GHG Intensity PAI. In 2022, we engaged with Total Energies SA, following our vote against the company's sustainability and climate transition plan at the company's 2022 AGM. We contacted the company in June to provide feedback on our views and areas for improvement identified. Those included:

- 1) a clearer way of showing their Co2 emissions reduction targets for Scope 1 and 2
- 2) a revision of their CAPEX allocation provisions towards renewables and green energy in the medium term

This engagement was also the opportunity to engage on environmental and social controversies the company is involved in. Taking into account the commitments made by the company to respect communities and the biodiversity, we asked for more clarity going forward on how the company intends to have sufficient oversight and ensure it is acting in line with its commitments over the long-term, while reporting to investors the respect of these commitments. We will follow-up with Total Energies on this specific PAI and make sure that appropriate measures are being implemented.

What were the top investments of this financial product?

Please find below the average top investments based on 12 month end data for 2022:

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is:

Larger investments	Sector	% Assets	Country
WASTE MANAGEMENT INC	Utilities	5.38%	USA
MICROSOFT CORP	Industrials	5.17%	USA
SAMSUNG ELECTRONICS	Information Technology	5.12%	South Korea
NEXTERA ENERGY	Utilities	3.97%	USA
RWE AG	Healthcare	3.94%	Germany
DANAHER CORP	Utilities	3.78%	USA
THERMO FISHER SCIENTIFIC INC	Healthcare	3.54%	USA
SCHNEIDER ELECTRIC SA	Industrials	2.93%	France
TAIWAN SEMICONDUCTOR	Information Technology	2.56%	Taiwan
STMICROELECTRONICS	Information Technology	2.53%	France
GEOPARK LTD	Energy	2.42%	Chile
KINGSPAN GROUP	Industrials	2.39%	Ireland
MASTEC INC	Industrials	2.32%	USA
LG CHEM	Materials	2.25%	South Korea
TOTAL SA	Energy	2.16%	France

What was the proportion of sustainability-related investments?

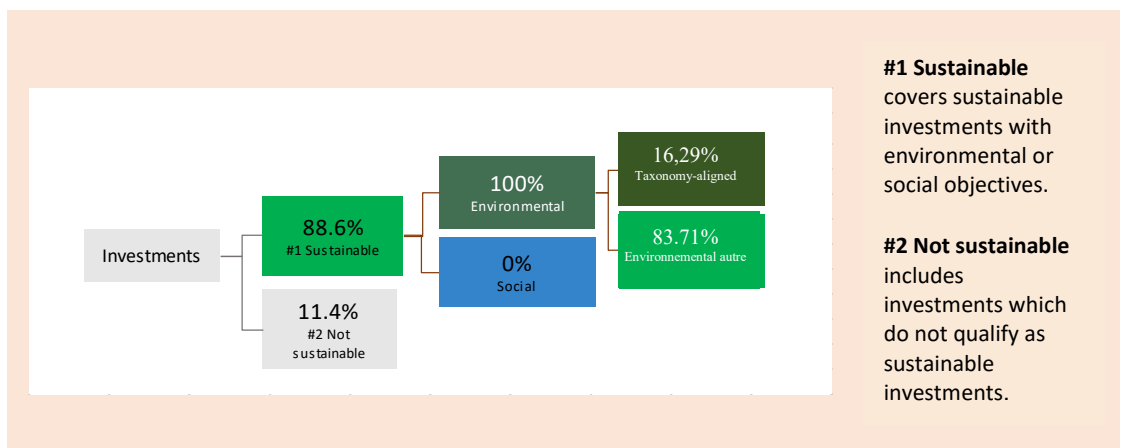

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

A minimum proportion of 60% of the of this Sub-Fund's net assets was used to meet the sustainable objective of the Sub-Fund in accordance with the binding elements of the investment strategy. As of 30/12/2022, 88.6% of the Sub-fund's net assets was invested in shares of companies that contribute to climate change mitigation and climate change adaption according to EU Taxonomy standards regulation (EU) 2020/852.

A minimum proportion of 10% of the Sub-Fund's net assets was invested in sustainable investments aligned with the Taxonomy regulation. As of 30/12/2022, 16,29% of the Sub-Fund's net assets were invested in companies aligned with the EU Taxonomy regulation.

The "#2 Not Sustainable investments" include cash and derivative instruments, which may be used for hedging purposes. These instruments are not used to achieve the sustainable objective of the Sub-Fund.

In which economic sectors were the investments made?

Please find below the average top sectors based on 12 month end data for 2022:

Larger economic sectors	% Assets
Industry	27.1%
Information Technology	27.1%
Utilities	14.5%
Materials	13.1%
Health Care	8.3%
Energy	5.4%
<i>Oil & Gas - Exploration & Production</i>	2.8%
<i>Integrated Oil & Gas</i>	2.4%
<i>Oil & Gas - Equipment & Services</i>	0.2%
Consumer Discretionary	2.5%
Communication Services	1.7%
Consumer Staples	0.5%

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

As of 30/12/2022, 16,29% of the sustainable investments with an environmental objective were aligned with the EU Taxonomy.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy²?

Yes:

In fossil gas

In nuclear energy

No:

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

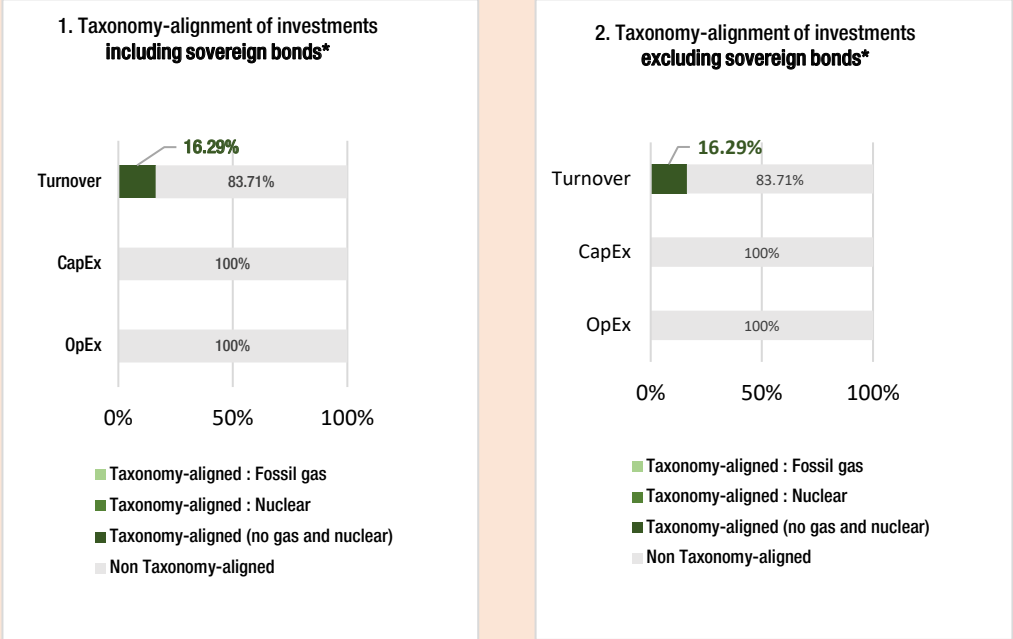

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

² Fossil gas and / or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 92% of the total investments.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

The share of investments made in transitional and enabling activities are :

- 7,35% of enabling activities investments : portion of companies' aligned revenue from activities that enable other activities to reduce their CO2 emissions.
- 0,00% of transition activities investments : portion of companies' aligned revenue from activities that contribute to the transition towards a net zero carbon economy by 2050.

● **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

Not Applicable

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

As of 30/12/2022, 72.3% of the sustainable investments with an environmental objective were not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Not Applicable

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

In addition to sustainable investments, the Sub-Fund may invest in cash, and cash equivalent instruments, for liquidity management purposes. The Sub-Fund may also invest in derivatives instruments for hedging purposes.

To the extent that the Sub-Fund enters into short positions by using single issuer derivative instruments, the firm-wide exclusions are applied. The derivatives on single issuers are examined for adherence to global norms on environmental protection, human rights, labor standards and anti-corruption, through controversy (“norms-based”) screening. More precisely, the investments are subject to a screening of minimum safeguards to ensure that their business activities are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

What actions have been taken to meet the sustainable investment objective during the reference period?

The below listed actions were conducted at Carmignac in 2022 in order to support the investment process in meeting environmental /social characteristics :

Pillar 1: ESG Integration

- Addition of supplementary Social indicators (employee and consumer satisfaction data) in the proprietary START ESG scoring process informing analysts of material aspects that can affect the investment rationale.
- Improved tracking capacity of Green, Social, Sustainability, and Sustainability linked bonds to help monitor and produce future reporting in the Global Portfolio Monitoring system, a portfolio managers dashboard of the funds positions.
- The addition of the proprietary sovereign ESG scoring models (Impact and Global) into the START interface enhancing the efficiency and knowledge base for the portfolio management team.
- Integration of Principal Adverse Impacts monitoring and initiation of a policy to integrate this information of Environmental, Social and Human rights indicators into the investment rationale.
- Increased automated monitoring of the universe reduction process.
- Weekly monitoring of the minimum % of Sustainable Investments shared by Investment Teams

Pillar 2: Exclusions

- Automation of the quarterly review process of the list to identify companies that would be subject to the sector or controversy hard exclusions and the universe reduction process if relevant.

Pillar 3: Voting and Engagement

- Introduction of a ‘key vote’ approach to prioritise companies that are identified for more focused voting recommendations and potential engagements related to vote decision, in particular “Say on climate” votes.
- Launch of quarterly Stewardship newsletters to showcase to clients publicly how we promote active ownership.
- Continuation of our quarterly corporate engagement plan for which close to 58% were related to either Environmental or Social or Governance thematic-related issues.

More specifically regarding engagements, our fiduciary responsibility involves the full exercise of our rights as shareholders and engagement with the companies in which we are invested. Dialogue is maintained by financial analysts, portfolio managers and ESG team. We believe that our engagement leads to a better understanding of how companies manage their extra-financial risks and significantly improve their ESG profile while delivering long-term value creation for our clients, society and the environment. Our engagement may concern one of five considerations: 1) ESG risks, 2) an ESG theme,

3) a desired impact, 4) controversial behaviour, or 5) a voting decision at a General Meeting. Carmignac may collaborate with other shareholders and bondholders when doing so would help influence the actions and governance of companies held in the portfolio. In order to ensure that the company correctly identifies, foresees and manages any potential or confirmed conflict of interest situation, Carmignac has put in place and maintains policies and guidelines. For more information on our engagement policies, please visit the website.

In 2022, we engaged with 81 companies on ESG specific topics at Carmignac level, and with 7 companies in this particular fund.

For example, we engaged with TotalEnergies SA, following our vote against the company's sustainability and climate transition plan at the company's 2022 Annual General Meeting (AGM). We contacted the company in June to provide feedback on our views and areas for improvement identified. Those included:

- 1) a clearer way of showing their Co2 emissions reduction targets for Scope 1 and 2
- 2) a revision of their Capital expenditure (CAPEX) allocation provisions towards renewables and green energy in the medium term

This engagement was also the opportunity to engage on environmental and social controversies the company is involved in. Taking into account the commitments made by the company to respect communities and the biodiversity, we asked for more clarity going forward on how the company intends to have sufficient oversight and ensure it is acting in line with its commitments over the long-term, while reporting to investors the respect of these commitments. We will follow-up with TotalEnergies to ensure our expectations have been considered and appropriate measures are being implemented.

How did this financial product perform compared to the reference sustainable benchmark?

Not Applicable

- **How did the reference benchmark differ from a broad market index?**

Not Applicable

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?**

Not Applicable

Not Applicable

- **How did this financial product perform compared with the broad market index?**

Not Applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Annex IV

ANNEX V

Template periodic disclosure for financial products referred to in Article 9(1), (2) and (3) of Regulation (EU) 2019/2088 and Article 5 of Regulation (EU) 2020/852

Product name: CT (Lux) SDG Engagement Global Equity Legal entity identifier: 213800TVDYDJOO2JBG48

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system, establishing a list of **environmentally sustainable economic activities**. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

It made **sustainable investments with an environmental objective: 28.39%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective: 70.30%**

No

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The CT (Lux) SDG Engagement Global Equity Fund allocated to companies in line with its investment policy, over the period. The Fund looks to demonstrate positive progress towards achieving the underlying targets of the UN's Sustainable Development Goals. Every investment made by the Fund was deemed sustainable, as per our definition of sustainable investments (see question 4 for further details). In the event an investment subsequently became non-sustainable post investment, for reasons such as changes in data or Fund investment policy, then the Fund would divest from the name.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

● **How did the sustainability indicators perform?**

The Portfolio exclusively invests in sustainable investments using the investment manager’s ‘avoid, invest, improve’ framework. The Portfolio adheres to a set of exclusions, targets investment exclusively in sustainable investment. The fund aims to undertake targeted, impact-focused, active engagement with companies, using the Sustainable Development Goals ("SDGs") framework.

The Portfolio utilises several indicators to assess performance against this framework. During the period under review the Portfolio;

1. *Invested exclusively in Sustainable Investments with 87.58% of holdings demonstrating a positive revenue contribution to SDG objectives*
2. *Over the previous year the Portfolio had 125 investee company engagements, representing 42 companies engaged across 17 countries*
3. *19 milestones achieved, meaning the company made a tangible improvement in their policies and practices in alignment with our SDG engagement objective*

● **...and compared to previous periods?**

Indicator	2022	2021
Proportion of the fund with >50% net revenue positively aligned with Sustainable Development Goals (SDGs ¹)	87.58%	81.95%
The number of SDG-linked engagements conducted	125	90
The number of SDG-linked engagement milestones achieved	19	33

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

¹ Calculated as the Proportion of fund held in issuers which have greater than 50% of their Net Revenue aligned with the SDGs

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The Portfolio's investment approach assesses that the sustainable investments made by the Portfolio do not significantly harm other sustainable investment objectives in several ways:

The Portfolio screens out investments that are contrary to the goals of making positive contributions to the environment and/or society. These criteria are product- and conduct-based, covering topics such as fossil fuels and weapons, and United Nations Global Compact breaches.

Through the Investment Manager's investment research, Sustainability Risks and ESG factors are considered throughout the investment cycle, which serves to mitigate the risks of significant harm. Companies are identified which the Investment Manager thinks could benefit from active engagement to address material ESG issues which exist but are not considered significantly harmful.

How were the indicators for adverse impacts on sustainability factors taken into account?

Investments which are reported as sustainable investments have been assessed to ensure they do not significantly harm (DNSH) sustainability objectives using an in-house data driven model and investment team due diligence.

The Investment Manager identifies harm by using quantitative thresholds against a selection of principal adverse impact indicators, including all mandatory indicators from Table 1 and certain indicators from Tables 2 and 3 of Annex I of the Regulatory Technical Standards (RTS)². Issuers which fall below these thresholds are flagged as potentially harmful and a review is then undertaken to determine whether significant harm is being caused by the issuer. Where quantitative data is not available, the investment teams endeavour to satisfy that no significant harm has taken place through desk-based qualitative research or issuer engagement.

Depending on the materiality of the principal adverse impact indicator, the investment manager will either exclude the issuer or, in limited cases, seek to engage with the issuer to address the harmful practices by taking appropriate action.

During 2022 the investment team reviewed all portfolio holdings against the model and discussed the outcomes with the responsible investment team. It was agreed that no significant adverse impacts were identified for the fund.

² The Regulatory Technical Standards set out three tables detailing principal adverse indicators which have been defined by the European Commission. The tables cover a range of harmful activities across environmental, social and governance areas.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Yes. The Fund explicitly prohibits investment in companies which breach UN Global Compact (UNGC) principles. In addition, the sustainable investments are assessed under the DNSH due diligence against factors which align with UNGC and OECD guidelines to identify any significant harmful practices.

How did this financial product consider principal adverse impacts on sustainability factors?

The fund considered PAIs in three ways:

- 1) Through alignment with the fund exclusion policy which covers four of the PAIs:
 - i. Exposure to companies active in the fossil fuel sector

The fund did not invest in companies:

- With ownership of geological reserves of coal/oil/gas. In line with the Net Zero Investment Framework, we avoid mining companies which are planning or constructing new thermal coal projects.
 - That derive >0% of their revenue from exploration or production in areas of high environmental sensitivity, including the Arctic.
 - That derive >5% of their revenue from:
 - Coal-related activities, including exploration, extraction, transportation, distribution and refining*³.
 - Activities related to the exploration or extraction of unconventional oil & gas.
 - Conventional oil & gas-related activities, including exploration, extraction, refining and transportation
 - That derive >50% of their revenue from equipment or services for coal- and/or conventional/ unconventional oil & gas-related activities.
- ii. Share of non-renewable energy consumption and production
 - Electricity utilities with coal in their electricity generation mix must commit to the objective of phasing out unabated coal-fired power by 2030 for OECD countries and 2040 for non- OECD countries. Electricity utilities that are structurally increasing coal-based power generation are excluded.
 - In addition, the fund excluded electricity utilities*:
 - With a carbon intensity >374 gCO₂/kWh.
 - Where >30% of the power production is based on oil & gas.
 - Excluded electricity utilities where >5% of the power production is based on nuclear sources.

*Unless they have a [Science Based Targets initiative \(SBTi\)](#) target set at well-below 2°C or have a SBTi “Business Ambition or 1.5°C” commitment. NB. Companies’ involvement in coal-related and/or oil & gas-related activities should not be increasing.

- Exclude electricity utilities constructing new nuclear power stations.
- Exclude companies that derive >5% of their revenue from selling products or services to the nuclear power industry³, except those that provide standard, non-customised or safety-related products/services.
- Exclude companies that own or operate active uranium mines.

iii. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

The fund did not invest in companies which are actively breaching the UN Global Compact Principles

iv. Exposure to controversial weapons

The fund did not make investments in companies that generate revenues from developing, manufacturing, or trading controversial weapons, including cluster munitions and anti-personnel landmines.

- 2) Utilising the PAI framework to review issuers against PAIs as per Table 1 in the RTS. This allows us to monitor harmful practices which may arise. No instances of significant harmful practices were identified for the positions held in the portfolio.
- 3) PAIs align with stewardship activities undertaken by the fund. For example, the fund took voting action at eight AGMs during the year due to issues related to diversity, more than a quarter of engagements related to employee matters, and more than 20% related to climate change topics. Further details of our engagement activity are described in this report.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:

Company	Sector	% of portfolio	Country
Waste Connections	Industrials	3.80	Canada
Alleghany Corp	Financials	3.69	United States
Bank Mandiri	Financials	3.56	Indonesia
Acuity Brands	Industrials	2.96	United States
ICON	Health Care	2.85	Ireland
Tecan Group	Health Care	2.84	Switzerland
Steris Corp	Health Care	2.72	United States
NetApp	Information Technology	2.69	United States
Americold Realty Trust	Real Estate	2.69	United States
WEX	Information Technology	2.68	United States
Xylem	Industrials	2.65	United States
Mettler-Toledo International	Health Care	2.63	United States
Wolters Kluwer	Industrials	2.60	Netherlands
Uni-Charm	Consumer Staples	2.59	Japan
ComfortDelGro	Industrials	2.47	Singapore

What was the proportion of sustainability-related investments?

As at 30/09/2022 the fund held 98.69% in investments which are deemed to be sustainable investments.

● What was the asset allocation?

As at 30/09/2022 the fund held 1.31 % in cash positions and the remaining 98.69 % in investments which are deemed to be sustainable investments.

Note an investment may contribute to one of more environmental or social objectives. Investments have been split based on a quantitative review of revenue exposure and with additional context provided from the investment and responsible investment teams.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects investee companies today.
- **capital expenditure** the “greenness” of (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflects the green operational activities of investee companies.

● In which economic sectors were the investments made?

Sector	% Of Net Assets
Financial Services	11.98%
Healthcare	10.42%
Semiconductors	10.15%
Machinery-Diversified	8.85%
Insurance	5.98%
Food & Beverages	5.23%
Environmental Control	5.04%
Miscellaneous Manufacturers	3.97%
Retail	3.72%
Chemicals	3.60%
Electrical Component & Equipment	2.93%
Computers	2.67%
Real Estate	2.66%
Commercial Services	2.65%
Cosmetics & Personal Care	2.57%
Media	2.57%
Transportation	2.47%
Office & Business Equipment	2.06%
Auto Parts & Equipment	1.82%
Water	1.65%
Software	1.61%
Forest Products & Paper	1.59%
Building Materials	1.22%
Agriculture	1.14%

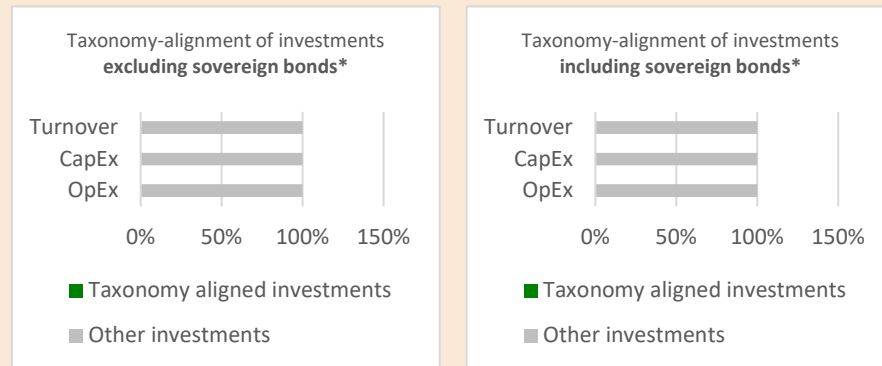

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sustainable investments with an environmental objective made by the fund do not have a commitment to align with the EU criteria for environmentally sustainable economic activities as defined by the EU Taxonomy Regulation.

Based on reliable data that has made available to date, the fund is reporting 0% of its investments are in economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

Note that for this period no investments have been assessed against the taxonomy.

* For the purpose of these graphs, 'sovereign bonds' consists of all sovereign exposures

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● What was the share of investments made in transitional and enabling activities?

0% of the investments made by the fund are in transitional and enabling activities as defined by the EU Taxonomy Regulation.

● How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?

The fund has not reported there being any alignment of its investments with the EU criteria for environmentally sustainable economic activities as defined by the EU Taxonomy Regulation to date

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

28.39% of the portfolio was invested in sustainable investments which predominantly contribute to an environmental objective.

What was the share of socially sustainable investments?

70.30% of the portfolio was invested in sustainable investments which predominantly contribute to a social objective.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

Holdings classified as not sustainable refer to cash positions only. Cash positions comprised 1.31% of the fund. We do not apply minimum safeguards to cash positions.

What actions have been taken to attain the sustainable investment objective during the reference period?

In Q4 2021, we committed to aligning the fund with net zero emissions by 2050 or sooner. This builds on the existing climate change commitments for the fund, which include the exclusions of companies with fossil fuel reserves and engagement on climate opportunities and risks reinforced by our voting policy.

While the fund does not invest in companies which have significant adverse impacts, we believe we should still engage with companies to further support the fund’s sustainable objective.

During the year there were 125 engagements with companies held in the portfolio. These covered 42 companies across 17 countries across a range of themes.

Given the explicit engagement mandate of this Fund, where a company has resisted engagement for two years and/or where engagement has not led to any momentum towards tangible positive change, the Global Equities team and Responsible Investment team would consider divesting. During the period, we sold out of several holdings on this basis. For example, in January 2022, we exited a name largely on grounds of illiquidity, but we also noted that while there had been some progress in board independence, (for which we had logged a Milestone) that engagement traction had generally been challenging. As such, we sold the name from the portfolio.

Our engagements are structured in line with the firm’s engagement themes which align with the PAIs. Below we provide a breakdown of the engagements undertaken and which PAI categories these typically address. We are updating our engagement tracking and reporting to enable PAI reporting at indicator level. We note that an engagement may correlate with a number of PAI indicators.

Engagements by Theme	Alignment with PAIs ⁴	Proportion of engagements	Milestones Achieved by Theme
Climate Change	GHG Emissions and Energy Performance	22.41%	26.32%
Environmental Stewardship	Biodiversity, Water, Waste	17.59%	31.58%
Business Conduct	Social and Employee Matters	1.72%	5.26%
Human Rights		5.86%	0.00%
Labour Standards		27.93%	10.53%
Public Health		5.86%	5.26%
Corporate Governance		18.62%	21.05%
Diversity – Voting Action		<p>Took voting action at eight AGMs due to poor board gender diversity or failure to implement appropriate workforce diversity targets .</p>	

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable.

● **How did the reference benchmark differ from a broad market index?**

Not applicable.

● **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable**

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

⁴ Note that themes may align with multiple PAIs. We will update engagement tracking and reporting capabilities to break down engagements by PAIs from 2023

ANNEX V

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name:
DPAM B Equities Sustainable Food Trends

Legal entity identifier:
549300RTIGL1SBGOOZ17

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: 16.05%**

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective: 87.69%**

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

During the Reference Period, the Sub-fund invested in companies that contribute through their products and services to the 2 Sustainable Development Goals (SDGs) (2 (zero hunger) and 3 (good health and well-being)) defined by the United Nations, and to advance companies on their contribution to sustainable development and environmental, social and governance (ESG) issues.

The investment universe has been narrowed: the portfolio is focused on companies whose core business is the development of products and services that contribute to the achievement of the Sustainable Development Goals (SDGs) and/or climate change mitigation and adaptation as defined by the EU Taxonomy.

The Sub-fund has not designated a benchmark to achieve its sustainable investment objective within the meaning of Article 9 of Regulation 2019/2088. Derivative financial products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting environmental and/or social characteristics.

● *How did the sustainability indicators perform?*

During the Reference Period, the Sub-fund achieved the following sustainability indicators:

- a. The Sub-fund has not been exposed to companies considered to be non-compliant with Global Standards;
- b. The Sub-fund has not been exposed to companies involved in controversial activities according to the definitions and thresholds stipulated by DPAM's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM_policy_Controversial_activities.pdf);
- c. The Sub-fund has no exposure to companies facing ESG controversies of maximum severity;
- d. During the reference period, the portfolio was not exposed to issuers in the bottom quintile (20%) for at least 2 of the 4 ESG risks identified for the issuer's activity and geographical area of activity. This sustainability indicator as currently drafted in the prospectus can be considered not to have been violation. However, due to a clerical error in the wording of this sustainability indicator, it has not been correctly reflected in the prospectus and should in fact read as follows: "Zero exposure to companies in the bottom 20% on more than 2 of its 4 main environmental, social or governance risks, specific to the company's activity and geographical scope." For the reference period, the Sub-fund had zero exposure to companies in the bottom 20% on more than 2 of its 4 main environmental, social or governance risks, specific to the company's activity and geographical scope and that, on this basis, there was no breach.
- e. A carbon intensity (direct scope 1 and 2 emissions) above the average carbon intensity of the Dax Agri before the sustainable investment

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

selection methodology was applied: 662.23 tCO₂e/M revenue compared to 467.07 tCO₂e/mn revenue (as at 31/12/2022).

- f. The Sub-fund made a net positive contribution across the portfolio to the SDGs: 2 (zero hunger) and 3 (good health and well-being): total portfolio score: 3.76% (as at 31/12/2022) ¹;
- g. the Sub-fund invested 47.37% in companies with a positive net contribution to the SDGs: 2 (zero hunger) and 3 (good health and well-being)

● **...and compared to previous periods?**

Not applicable

● **How did the sustainable investments not cause significant harm to any environmental or social sustainable investment objective?**

DPAM ensures that the Sub-fund's sustainable investments during the Reference Period do not materially undermine an environmentally or socially sustainable investment objective by:

Issuer level:

- Consideration of the principal adverse impacts on the mandatory sustainability factors (hereinafter "PAIs") listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 which allows for the reduction of the negative impacts of the investment, including:
 - by incorporating several elements to avoid and/or reduce its exposure to activities or behaviours that could affect another environmental or social objective (such as the Global Standards compliance filter and the exclusion of ESG controversies of maximum severity or activities most harmful to other environmental and/or social objectives);
 - via an engagement process with investee companies, in accordance with its Engagement Policy, which can be accessed at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006835/DPAM_policy_engagement.pdf. The commitments made by DPAM are also the subject of an annual report available at (https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006835/DPAM_report_engagement_activity.pdf).
- An impact calculation methodology which takes into account the positive and negative contribution of the company's products and services to the SDGs in order to optimise the net positive (resulting) contribution.

¹ The net positive contribution is the difference between the positive and negative impact contributions and is calculated at the level of the invested company and the overall portfolio. Based on the SDGs framework, the net positive contribution takes into account on the one hand (1) the extent to which the invested company's products and services contribute to the achievement of the SDGs and on the other hand (2) the negative impacts of their activities along the value chain.

Overall portfolio level:

- A rule of positive net contribution of the portfolio as a whole to sustainable development objectives (SDG) 2 (zero hunger) and 3 (good health and well-being): total portfolio score: 3.76% (as at 31/12/2022);
 - A rule of minimum 50% of assets aligned with the EU Taxonomy or making a net positive contribution to the SDGs. 2 (zero hunger) and 3 (good health and well-being). During the Reference Period, a minimum 47.37% of assets aligned with the EU Taxonomy or making a net positive contribution to the 2 SDGs.
- *How were the indicators for adverse impacts on sustainability factors taken into account?*

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAI") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviors that may significantly hinder sustainable and inclusive growth. This commitment is incorporated into the entire research and investment process.

In concrete terms, the PAI have been integrated into the various stages of the sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

1) Firstly, with regard to environmental PAIs:

- a) they have been analyzed and monitored at the level of the invested issuers, particularly with respect to PAI related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD).
Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.
- b) After that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with global standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.
- c) the exclusion filter for companies involved in controversial activities (in accordance with DPAM's Controversial Activities Policy (accessible at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM_policy_Controversial_activities.pdf)). has been applied. The exclusion of companies

involved in thermal coal production, for example, allows for better coverage of indicators such as biodiversity and greenhouse gas emissions.

The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).

d) Similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impact their scorecard.

2) Second, the social PAIs were systematically analyzed according to the stages of the research and investment process:

a) the Global Standards compliance filter is structured around human rights, labor rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.

b) the exclusion filter for companies involved in controversial activities (definitions and thresholds in accordance with DPAM's Controversial Activities Policy (available at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM_policy_Controversial_activities.pdf). In this way, companies involved in controversial armaments were directly excluded from the investment universe.

c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.

d) The issue of gender diversity within the board of directors has been addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet a minimum of 30% gender diversity on their boards. DPAM participated in 706 general and extraordinary meetings on behalf of 651 companies in 2022.

e) Similarly, social indicators are included in the analysis of the ESG profile of companies and impact their scorecard.

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006836/DPAM_policy_Sustainable_and_Responsible_Investment.pdf and [DPAM_report_TCFD.pdf](https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006836/DPAM_report_TCFD.pdf) (cloudinary.com).

- *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The first stage of the Sub-fund's investment is based on a normative screening, which includes compliance with Global Standards based on human rights, labour rights and the prevention of corruption. These include the OECD Guidelines for Multinational Enterprises and the UN Guidelines on Business and Human Rights. Companies that do not meet these criteria are excluded from the inverse of eligible investments.

The Sub-fund has therefore not been invested during the Reference Period in any company that is deemed not to comply with these principles.

How did this financial product consider principal adverse impacts on sustainability factors?

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAI") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviors that may significantly hinder sustainable and inclusive growth. This commitment is incorporated into the entire research and investment process.

In concrete terms, the PAI have been integrated into the various stages of the sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

- 1) Firstly, with regard to environmental PAIs:
 - a) they have been analyzed and monitored at the level of the invested issuers, particularly with respect to PAI related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD). Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.
 - b) After that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with global standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.
 - c) the exclusion filter for companies involved in controversial activities (in accordance with DPAM's Controversial Activities Policy (accessible at <https://res.cloudinary.com/degroof-petercam-asset->

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

[management/image/upload/v1614006839/DPAM_policy_Controversial_activities.pdf](https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM_policy_Controversial_activities.pdf)). has been applied. The exclusion of companies involved in thermal coal production, for example, allows for better coverage of indicators such as biodiversity and greenhouse gas emissions.

The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).

- d) Similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impact their best-in-class ranking.
- 2) Second, the social PAIs were systematically analyzed according to the stages of the research and investment process:
- a) the Global Standards compliance filter is structured around human rights, labor rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.
 - b) the exclusion filter for companies involved in controversial activities (definitions and thresholds in accordance with DPAM's Controversial Activities Policy (available at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM_policy_Controversial_activities.pdf). In this way, companies involved in controversial armaments were directly excluded from the investment universe.
 - c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.
 - d) The issue of gender diversity within the board of directors has been addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet a minimum of 30% gender diversity on their boards. DPAM participated in 706 general and extraordinary meetings on behalf of 651 companies in 2022.
 - e) Similarly, social indicators are included in the analysis of the ESG profile of companies and impact their best-in-class ranking.

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006836/DPAM_policy_Sustainable_and_Responsible_Investment.pdf and [DPAM_report_TCFD.pdf](#) (cloudinary.com).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31/12/2022

Largest investments	Sector	% Assets	Country
DEERE & COMPANY	MANUFACTURING	8.67 %	United States
OCI NV	MANUFACTURING	6.79 %	Netherlands
NUTRIEN LTD.	MANUFACTURING	6.07 %	Canada
CF INDUSTRIES HOLDINGS	MANUFACTURING	5.57 %	United States
KONINKLIJKE DSM	MANUFACTURING	5.44 %	Netherlands
BAKKAFROST	AGRICULTURE, FORESTRY AND FISHING	4.28 %	Norway
DARLING INGREDIENTS	MANUFACTURING	3.72 %	United States
MARINE HARVEST ASA	MANUFACTURING	3.28 %	Norway
ZOETIS A	MANUFACTURING	3.05 %	United States
SYSCO CORPORATION	MANUFACTURING	2.96 %	United States
TOMRA SYSTEMS ASA	MANUFACTURING	2.80 %	Norway
COMPASS GROUP PLC	ACCOMMODATION AND FOOD SERVICE ACTIVITIES	2.74 %	United Kingdom
TATE & LYLE PLC	MANUFACTURING	2.54 %	United Kingdom
SIG COMBIBLOC GROUP AG	MANUFACTURING	2.08 %	Switzerland
AGCO CORP	MANUFACTURING	2.06 %	United States

What was the proportion of sustainability-related investments?

● What was the asset allocation?

In the Reference Period, the Sub-fund invested at least 98.37% of its assets in sustainable investments with environmental or social objectives.

Sustainable investments (in the table below referred to as "#1 Sustainable") are: companies aligned with one of the first two objectives of the EU taxonomy (climate change mitigation and adaptation);

- companies aiming to make a net positive contribution to the United Nations (UN) Sustainable Development Goals ("SDGs"), which are environmental in nature;
- companies aiming to make a net positive contribution to the social SDGs.

The percentage of the portfolio invested in sustainable investments that meet an environmental and/or social objective (#1A Sustainable) is calculated using the cascade methodology described in the prospectus (section "Environmental, social and governance (ESG) considerations – Sustainability transparency"), which excludes double counting at the cascade level: an investment qualifying as sustainable at the level of a first element of the cascade is not then taken into account at the level of subsequent elements of the cascade.

Asset allocation describes the share of investments in specific assets.

In contrast, the percentages of the two sub-categories of sustainable investments (#1A Sustainable) in the portfolio invested in environmental investments other than those aligned with the taxonomy and social investments may involve some double counting. All portfolio companies are analysed against both (i) the environmental SDGs (and therefore may fall into the sub-category 'other environmental investments' even if they are also considered to be aligned with the taxonomy and/or as a social sustainable investment) and (ii) the social SDGs (and therefore may fall into the sub-category 'social investments' even if they are also considered to be aligned with the taxonomy and/or as an other environmental investment).

● *In which economic sectors were the investments made?*

Sector	Sub-sector	% of assets
Manufacturing	Manufacture of chemicals and chemical products	27.43 %
Manufacturing	Manufacture of food products	25.88 %
Manufacturing	Manufacture of machinery and equipment n.e.c.	16.03 %
Agriculture, forestry and fishing	Fishing and aquaculture	5.55 %
Accommodation and food service activities	Food and beverage service activities	4.45 %
Manufacturing	Manufacture of basic pharmaceutical products and pharmaceutical preparations	3.82 %
Agriculture, forestry and fishing	Crop and animal production, hunting and related service activities	3.23 %
Manufacturing	Repair and installation of machinery and equipment	2.96 %
Administrative and support service activities	Office administrative, office support and other business support activities	2.70 %
Manufacturing	Manufacture of paper and paper products	2.62 %
Wholesale and retail trade; repair of motor vehicles and motorcycles	Retail trade, except of motor vehicles and motorcycles	2.19 %
Agriculture, forestry and fishing	Forestry and logging	1.51 %
Cash	Cash	1.63 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

DPAM's methodology for assessing the EU Taxonomy alignment of investee companies is based on data provided either by the investee companies or by third party providers. The latter use a mixed approach:

- Firstly, a direct mapping between the business activities in their own sectoral classification system and the economic activities covered by the Technical Selection Criteria of the EU Taxonomy.
- Secondly, any business activity that could not be directly mapped is examined through a bottom-up assessment of its alignment with the EU Taxonomy's Technical Selection Criteria.
- Any economic activity remaining after the first and second steps is considered not to be aligned with the EU Taxonomy.

In principle, the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is assessed by means of turnover (based on performance data provided by third-party suppliers).

Where information on the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy cannot be readily obtained from information published by the invested issuers, DPAM shall rely on equivalent information obtained by third-party providers from the invested issuers.

Applying this methodology, over the Reference Period, the Sub-fund is aligned for 0.13% with the first two objectives of the Taxonomy (environmental objectives of climate change mitigation and/or adaptation).

The compliance of these investments with the requirements set out in Article 3 of the EU Taxonomy is not subject to a guarantee provided by one or more auditors or a review by one or more auditors or a review by one or more third parties.

Commission Delegated Regulation (EU) 2023/363 of 31 October 2022 amending and correcting the technical regulatory standards set out in Delegated Regulation (EU) 2022/1288 as regards the content and format of information to be published in pre-contractual documents and periodic reports relating to financial products that invest in environmentally sustainable economic activities entered into force on 20 February 2023. In particular, it amends the format of the information to be published in the periodic reports in order to declare whether, and graphically demonstrate the extent to which, a sub-fund invests in fossil gas and/or nuclear energy related activities, which are in line with the EU Taxonomy ('climate change mitigation'). DPAM does not have sufficient data at this stage to publish this information in the periodic report for the Reporting Period. DPAM will make every effort to obtain this data in 2023.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- **What was the share of investments made in transitional and enabling activities?**
Not applicable
- **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**
Not applicable

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

Based on the approach described below, the Sub-fund invested 16.05% of its portfolio in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy over the Reference Period.

Only two of the six environmental objectives defined by the EU Taxonomy are currently covered by the regulatory framework of the EU Taxonomy Technical Selection Criteria that determine alignment with the EU Taxonomy (adaptation and climate change mitigation). Similar criteria for the other four environmental objectives have yet to be developed. In the meantime, DPAM wishes to continue to make sustainable investments that contribute to environmental objectives not covered by the current EU Taxonomy Technical Selection Criteria, including key environmental objectives such as the sustainable use and protection of water and marine resources, the prevention and control of pollution and the protection and restoration of biodiversity and ecosystems.

To this end, DPAM has adopted and defined a specific framework for identifying the environmental objectives of these sustainable investments and assessing their contribution to these objectives.

This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the UN Sustainable Development Goals (SDGs) that can be attributed to environmental objectives.

DPAM will review and reassess this framework when the EU Taxonomy Technical Selection Criteria have been implemented for the other four environmental objectives defined by the EU Taxonomy.

What was the share of socially sustainable investments?

Based on the approach described below, the Sub-fund invested 87.69% of its portfolio in sustainable investments with a social objective over the Reference Period. A European Taxonomy for social sustainability goals has yet to be developed.

In the meantime, DPAM wishes to continue to make sustainable investments that contribute to the achievement of key social goals such as zero hunger, quality education and peace, justice and strong institutions.

To this end, DPAM has adopted and defined a specific framework for identifying the social objectives of these sustainable investments and assessing their contribution to these objectives.

This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as

a percentage of their turnover, to the UN Sustainable Development Goals (SDGs) that can be attributed to social objectives.

DPAM will review and reassess this framework when the EU Taxonomy Technical Selection Criteria have been implemented for the social objectives under the EU Taxonomy.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole sub-fund, excluding the:

- Liquid assets
- Derivative instruments

The Sub-fund may invest or hold these types of assets for the purpose of achieving investment objectives, portfolio diversification, liquidity management and risk hedging.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 1.63% cash. There are no minimum environmental or social guarantees on this allocation.

What actions have been taken to attain the sustainable investment objective during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e:

On a quarterly basis, a normative screening has been established based on compliance with Global Standards.

Subsequently, companies meeting the thresholds as defined in the activities excluded by DPAM's controversial activities policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

DPAM supplemented the various ESG exclusion filters using ESG risk and opportunities scorecards for each issuer in the portfolio. The scorecards were updated on an annual basis or ad hoc if an event should require a revision of the issuer's scorecard.

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector. In addition, this qualitative analysis also includes consideration of the sustainability theme and the issuer's total contribution to the UN Sustainable Development Goals.

Finally, the sustainable objective was measured by ensuring that:

- the net contribution at the level of the entire portfolio to the SDGs 2 (zero hunger) and 3 (good health and well-being) is positive and
- a minimum of 50% of assets under management has been invested in companies making a net positive contribution to the SDGs: 2 (zero hunger) and 3 (good health and well-being).

How did this financial product perform compared to the reference sustainable benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

ANNEX V

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:
DPAM B Equities World Sustainable

Legal entity identifier:
549300KYQ8QOYI13OU03

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input checked="" type="radio"/> <input checked="" type="checkbox"/> Yes	<input type="radio"/> <input type="radio"/> <input type="checkbox"/> No
<p><input checked="" type="checkbox"/> It made sustainable investments with an environmental objective: 49.01%</p> <ul style="list-style-type: none"> <input checked="" type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <p><input checked="" type="checkbox"/> It made sustainable investments with a social objective: 89.67%</p>	<p><input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments</p> <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective <p><input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments</p>

To what extent was the sustainable investment objective of this financial product met?

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

During the Reference Period, the Sub-fund invested in companies that contribute through their products and services to the 17 Sustainable Development Goals (SDGs) defined by the United Nations, and to advance companies on their contribution to sustainable development and environmental, social and governance (ESG) issues.

The investment universe has been narrowed: the portfolio is focused on companies whose core business is the development of products and services that contribute to the achievement of the Sustainable Development Goals (SDGs) and/or climate change mitigation and adaptation as defined by the EU Taxonomy.

The Sub-fund has not designated a benchmark to achieve its sustainable investment objective within the meaning of Article 9 of Regulation 2019/2088. Derivative financial products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting environmental and/or social characteristics.

● *How did the sustainability indicators perform?*

During the Reference Period, the Sub-fund achieved the following sustainability indicators:

- a. The Sub-fund has not been exposed to companies considered to be non-compliant with Global Standards;
- b. The Sub-fund has not been exposed to companies involved in controversial activities according to the definitions and thresholds stipulated by DPAM's Controversial Activities Policy (accessible via the link https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM_policy_Controversial_activities.pdf);
- c. The Sub-fund has no exposure to companies facing ESG controversies of maximum severity;
- d. The Sub-fund had a better weighted average ESG profile than its benchmark, before the application of the ESG and sustainable investment selection methodology: 55.06 compared to 51.58 (as at 31/12/2022).
- e. A carbon intensity (direct scope 1 and 2 emissions) below the average carbon intensity of the reference universe before the sustainable investment selection methodology was applied: 31.38 tCO₂e/M revenue compared to 185.03 tCO₂e/mn revenue (as at 31/12/2022);
- f. the Sub-fund made a net positive contribution across the portfolio to the: total score of the portfolio: 2.98% (as at 31/12/2022) ¹;

¹ The net positive contribution is the difference between the positive and negative impact contributions and is calculated at the level of the invested company and the overall portfolio. Based on the SDGs framework, the net positive contribution takes into account on the one hand (1) the extent to which the invested company's products and services contribute to the achievement of the SDGs and on the other hand (2) the negative impacts of their activities along the value chain.

- g. the Sub-fund invested 79.84% in companies with a positive net contribution to the SDGs.

● **...and compared to previous periods?**

Not applicable

● **How did the sustainable investments not cause significant harm to any environmental or social sustainable investment objective?**

DPAM ensures that the Sub-fund's sustainable investments during the Reference Period do not materially undermine an environmentally or socially sustainable investment objective by:

Issuer level:

- Consideration of the principal adverse impacts on the mandatory sustainability factors (hereinafter "PAIs") listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 which allows for the reduction of the negative impacts of the investment, including:
 - by incorporating several elements to avoid and/or reduce its exposure to activities or behaviours that could affect another environmental or social objective (such as the Global Standards compliance filter and the exclusion of ESG controversies of maximum severity or activities most harmful to other environmental and/or social objectives);
 - via an engagement process with investee companies, in accordance with its Engagement Policy, which can be accessed at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006835/DPAM_policy_engagement.pdf. The commitments made by DPAM are also the subject of an annual report available at (https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006835/DPAM_report_engagement_activity.pdf).
- An impact calculation methodology which takes into account the positive and negative contribution of the company's products and services to the SDGs in order to optimise the net positive (resulting) contribution.

Overall portfolio level:

- A rule of positive net contribution of the portfolio as a whole to the 17: total portfolio score: 2.98% (as at 31/12/2022)
- A rule of minimum 50% of assets aligned with the EU Taxonomy or in net positive contribution on all 17 SDGs. During the Reference Period, a minimum 79.84% of assets aligned with the EU Taxonomy or making a net positive contribution to all 17 SDGs.

- How were the indicators for adverse impacts on sustainability factors taken into account?

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAI") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviors that may significantly hinder sustainable and inclusive growth. This commitment is incorporated into the entire research and investment process.

In concrete terms, the PAI have been integrated into the various stages of the sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

- 1) Firstly, with regard to environmental PAIs:
 - a) they have been analyzed and monitored at the level of the invested issuers, particularly with respect to PAI related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD).
Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.
 - b) After that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with global standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.
 - c) the exclusion filter for companies involved in controversial activities (in accordance with DPAM's Controversial Activities Policy (accessible at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM_policy_Controversial_activities.pdf). The exclusion of companies involved in thermal coal production, for example, allows for better coverage of indicators such as biodiversity and greenhouse gas emissions. The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).
 - d) Similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impact their best-in-class ranking.

2) Second, the social PAIs were systematically analyzed according to the stages of the research and investment process:

- a) the Global Standards compliance filter is structured around human rights, labor rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.
- b) the exclusion filter for companies involved in controversial activities (definitions and thresholds in accordance with DPAM's Controversial Activities Policy (available at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM_policy_Controversial_activities.pdf). In this way, companies involved in controversial armaments were directly excluded from the investment universe.
- c) In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.
- d) The issue of gender diversity within the board of directors has been addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet a minimum of 30% gender diversity on their boards. DPAM participated in 706 general and extraordinary meetings on behalf of 651 companies in 2022.

Similarly, social indicators are included in the analysis of the ESG profile of companies and impact their best-in-class ranking. DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006836/DPAM_policy_Sustainable_and_Responsible_Investment.pdf and [DPAM report TCFD.pdf](https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006836/DPAM_report_TCFD.pdf) (cloudinary.com).

— *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The first stage of the Sub-fund's investment is based on a normative screening, which includes compliance with Global Standards based on human rights, labour rights and the prevention of corruption.

These include the OECD Guidelines for Multinational Enterprises and the UN Guidelines on Business and Human Rights. Companies that do not meet these criteria are excluded from the universe of eligible investments. The Sub-fund

has therefore not been invested during the Reference Period in any company that is deemed not to comply with these principles.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

During the Reference Period, the Sub-fund considered all the principal adverse impacts on sustainability factors (hereinafter "PAI") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288.

The PAIs are intrinsically linked to DPAM's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviors that may significantly hinder sustainable and inclusive growth. This commitment is incorporated into the entire research and investment process.

In concrete terms, the PAIs have been integrated into the various stages of the Sub-fund's construction upstream via exclusions and the resulting eligible universe (i), and throughout the investment process via fundamental analysis, monitoring of controversies and ongoing dialogue with the companies invested in (ii):

- 1) Firstly, with regard to environmental PAIs:
 - a) they have been analyzed and monitored at the level of the invested issuers, particularly with respect to PAI related to greenhouse gas emissions and energy performance, including through DPAM's searches under the recommendations of the Task Force on Climate-Related Financial Disclosures (TCFD). Thus, indicators related to greenhouse gas emissions and water have been integrated into the analysis of the five companies that contribute most to the carbon intensity of the portfolio. This analysis is used by research and management to validate their investment decisions.
 - b) After that, the Global Standards compliance filter includes a filter on environmental protection. Companies that do not comply with global standards for significant environmental protection breaches related to pollution (emissions), water, waste and biodiversity were thus excluded from the portfolio in advance.
 - c) the exclusion filter for companies involved in controversial activities (in accordance with DPAM's Controversial Activities Policy (accessible at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM_policy_Controversial_activities.pdf)).

The exclusion of companies involved in thermal coal production, for example, allows for better coverage of indicators such as biodiversity and greenhouse gas emissions. The filtering and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to environmental issues such as the environmental impact of the company's operations (emissions, waste, energy use, biodiversity, and water consumption), the environmental impact of the supply chain, and the impact of products and services (carbon and environmental impact).

- d) Similarly, environmental indicators have been included in the analysis of the ESG profile of companies and impact their best-in-class ranking.
- 2) Second, the social PAIs were systematically analyzed according to the stages of the research and investment process:
- the Global Standards compliance filter is structured around human rights, labor rights and the prevention of corruption. Thus, companies in breach of the Global Compact principles and the OECD Guidelines for Multinational Enterprises have been de facto excluded from the investment universe.
 - the exclusion filter for companies involved in controversial activities (definitions and thresholds in accordance with DPAM's Controversial Activities Policy (available at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006839/DPAM_policy_Controversial_activities.pdf). In this way, companies involved in controversial armaments were directly excluded from the investment universe.
 - In addition, the screening and analysis based on the main ESG controversies in which companies may be involved also includes controversies related to social issues, i.e. society and community, customer and employee, and controversies related to governance issues such as business ethics, including corruption and bribery.
 - The issue of gender diversity within the board of directors has been addressed primarily through shareholder responsibility, by voting against or engaging in dialogue with companies that do not meet a minimum of 30% gender diversity on their boards. DPAM participated in 706 general and extraordinary meetings on behalf of 651 companies in 2022.
 - Similarly, social indicators are included in the analysis of the ESG profile of companies and impact their best-in-class ranking.

DPAM's approach and processes are further described in its Sustainable and Responsible Investments Policy and in the TCFD report, which are available at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006836/DPAM_policy_Sustainable_and_Responsible_Investment.pdf and [DPAM report TCFD.pdf](https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006836/DPAM_report_TCFD.pdf) (cloudinary.com).

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31/12/2022

Largest investments	Sector	% Assets	Country
MICROSOFT	INFORMATION AND COMMUNICATION	4.44 %	United States
ALPHABET A	INFORMATION AND COMMUNICATION	3.95 %	United States
MASTERCARD INCORPORATED CLASS A	ADMINISTRATIVE AND SUPPORT SERVICE ACTIVITIES	3.27 %	United States
DANAHER CORPORATION	MANUFACTURING	3.01 %	United States
THERMO FISHER SCIENTIFIC	MANUFACTURING	3.01 %	United States

NESTLE (NOM)	MANUFACTURING	2.89 %	Switzerland
STRYKER CORPORATION	MANUFACTURING	2.85 %	United States
BOSTON SCIENTIFIC CORPORATION	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	2.85 %	United States
LVMH	MANUFACTURING	2.79 %	France
S&P GLOBAL INC	ADMINISTRATIVE AND SUPPORT SERVICE ACTIVITIES	2.79 %	United States
LONZA GROUP AG	MANUFACTURING	2.75 %	Switzerland
MARSH & MCLENNAN COMPANIES, INC.	FINANCIAL AND INSURANCE ACTIVITIES	2.56 %	United States
NVIDIA CORP	MANUFACTURING	2.34 %	United States
UNITEDHEALTH GROUP	FINANCIAL AND INSURANCE ACTIVITIES	2.29 %	United States
ADOBE SYSTEMS INCORPORATED	INFORMATION AND COMMUNICATION	2.28 %	United States

What was the proportion of sustainability-related investments?

● *What was the asset allocation?*

In the Reference Period, the Sub-fund invested at least 97.37% of its assets in sustainable investments with environmental or social objectives.

Sustainable investments (in the table below referred to as "#1 Sustainable") are: companies aligned with one of the first two objectives of the EU taxonomy (climate change mitigation and adaptation);

- companies aiming to make a net positive contribution to the United Nations (UN) Sustainable Development Goals ("SDGs"), which are environmental in nature;
- companies aiming to make a net positive contribution to the social SDGs.

The percentage of the portfolio invested in sustainable investments that meet an environmental and/or social objective (#1A Sustainable) is calculated using the cascade methodology described in the prospectus (section "Environmental, social and governance (ESG) considerations – Sustainability transparency"), which excludes double counting at the cascade level: an investment qualifying as sustainable at the level of a first element of the cascade is not then taken into account at the level of subsequent elements of the cascade.

In contrast, the percentages of the two sub-categories of sustainable investments (#1A Sustainable) in the portfolio invested in environmental investments other than those aligned with the taxonomy and social investments may involve some double counting. All portfolio companies are analysed against both (i) the environmental SDGs (and therefore may fall into the sub-category 'other environmental investments' even if they are also considered to be aligned with the taxonomy and/or as a social sustainable investment) and (ii) the social SDGs (and therefore may fall into the sub-category 'social investments' even if they are also

Asset allocation
describes the share
of investments in
specific assets.

considered to be aligned with the taxonomy and/or as an other environmental investment).

● **In which economic sectors were the investments made?**

Sector	Sub-sector	% of assets
Information and communication	Publishing activities	15.67 %
Manufacturing	Manufacture of computer, electronic and optical products	14.20 %
Administrative and support service activities	Office administrative, office support and other business support activities	8.89 %
Manufacturing	Other manufacturing	7.77 %
Manufacturing	Manufacture of basic pharmaceutical products and pharmaceutical preparations	6.98 %
Information and communication	Information service activities	5.59 %
Manufacturing	Manufacture of chemicals and chemical products	5.14 %
Manufacturing	Manufacture of food products	4.56 %
Financial and insurance activities	Activities auxiliary to financial services and insurance activities	3.95 %
Manufacturing	Manufacture of machinery and equipment n.e.c.	3.84 %
Financial and insurance activities	Financial service activities, except insurance and pension funding	3.55 %
Wholesale and retail trade; repair of motor vehicles and motorcycles	Wholesale trade, except of motor vehicles and motorcycles	2.85 %
Manufacturing	Manufacture of wearing apparel	2.79 %
Financial and insurance activities	Insurance, reinsurance and pension funding, except compulsory social security	2.29 %
Other service activities	Other personal service activities	2.04 %
Manufacturing	Manufacture of leather and related products	1.91 %
Information and communication	Computer programming, consultancy and related activities	1.85 %
Real estate activities	Real estate activities	1.79 %
Manufacturing	Manufacture of wood and of products of wood and cork, straw and plaiting	1.72 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

DPAM's methodology for assessing the EU Taxonomy alignment of investee companies is based on data provided either by the investee companies or by third party providers.

The latter use a mixed approach:

- Firstly, a direct mapping between the business activities in their own sectoral classification system and the economic activities covered by the Technical Selection Criteria of the EU Taxonomy.
- Secondly, any business activity that could not be directly mapped is examined through a bottom-up assessment of its alignment with the EU Taxonomy's Technical Selection Criteria.
- Any economic activity remaining after the first and second steps is considered not to be aligned with the EU Taxonomy.

In principle, the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is assessed by means of turnover (based on performance data provided by third-party suppliers).

Where information on the extent to which investments are investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy cannot be readily obtained from information published by the invested issuers, DPAM shall rely on equivalent information obtained by third-party providers from the invested issuers.

Applying this methodology, over the Reference Period, the Sub-fund is aligned for 1.79% with the first two objectives of the Taxonomy (environmental objectives of climate change mitigation and/or adaptation).

The compliance of these investments with the requirements set out in Article 3 of the EU Taxonomy is not subject to a guarantee provided by one or more auditors or a review by one or more auditors or a review by one or more third parties.

Commission Delegated Regulation (EU) 2023/363 of 31 October 2022 amending and correcting the technical regulatory standards set out in Delegated Regulation (EU) 2022/1288 as regards the content and format of information to be published in pre-contractual documents and periodic reports relating to financial products that invest in environmentally sustainable economic activities entered into force on 20 February 2023. In particular, it amends the format of the information to be published in the periodic reports in order to declare whether, and graphically demonstrate the extent to which, a sub-fund invests in fossil gas and/or nuclear energy related activities, which are in line with the EU Taxonomy ('climate change mitigation'). DPAM does not have

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

sufficient data at this stage to publish this information in the periodic report for the Reporting Period. DPAM will make every effort to obtain this data in 2023.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- **What was the share of investments made in transitional and enabling activities?**
Not applicable
- **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**
Not applicable

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

Based on the approach described below, the Sub-fund invested 49.01% of its portfolio in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy over the Reference Period.

Only two of the six environmental objectives defined by the EU Taxonomy are currently covered by the regulatory framework of the EU Taxonomy Technical Selection Criteria that determine alignment with the EU Taxonomy (adaptation and climate change mitigation). Similar criteria for the other four environmental objectives have yet to be developed. In the meantime, DPAM wishes to continue to make sustainable investments that contribute to environmental objectives not covered by the current EU Taxonomy Technical Selection Criteria, including key environmental objectives such

as the sustainable use and protection of water and marine resources, the prevention and control of pollution and the protection and restoration of biodiversity and ecosystems.

To this end, DPAM has adopted and defined a specific framework for identifying the environmental objectives of these sustainable investments and assessing their contribution to these objectives. This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the UN Sustainable Development Goals (SDGs) that can be attributed to environmental objectives.

DPAM will review and reassess this framework when the EU Taxonomy Technical Selection Criteria have been implemented for the other four environmental objectives defined by the EU Taxonomy.

What was the share of socially sustainable investments?

Based on the approach described below, the Sub-fund invested 89.67% of its portfolio in sustainable investments with a social objective over the Reference Period. A European Taxonomy for social sustainability goals has yet to be developed. In the meantime, DPAM wishes to continue to make sustainable investments that contribute to the achievement of key social goals such as zero hunger, quality education and peace, justice and strong institutions.

To this end, DPAM has adopted and defined a specific framework for identifying the social objectives of these sustainable investments and assessing their contribution to these objectives. This framework uses data from investee companies and third-party suppliers and assesses the negative and positive contribution of (potential) investee companies, as a percentage of their turnover, to the UN Sustainable Development Goals (SDGs) that can be attributed to social objectives.

DPAM will review and reassess this framework when the EU Taxonomy Technical Selection Criteria have been implemented for the social objectives under the EU Taxonomy.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole sub-fund, excluding the:

- Liquid assets
- Derivative instruments

The Sub-fund may invest or hold these types of assets for the purpose of achieving investment objectives, portfolio diversification, liquidity management and risk hedging.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 2.63% cash. There are no minimum environmental or social guarantees on this allocation.

What actions have been taken to attain the sustainable investment objective during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e:

On a quarterly basis, a normative screening has been established based on compliance with Global Standards.

Subsequently, companies meeting the thresholds as defined in the activities excluded by DPAM's controversial activities policy were excluded.

On a quarterly basis, the controversy exposure of the companies in the investment universe was analysed to screen out the most severe controversies on environmental, social and governance issues.

Subsequently, on a semi-annual basis, the resulting universe was subject to a "best-in-class" ranking in order to retain only the best ESG profiles of companies on a list of securities eligible for management (25% of the lowest scores were removed from the eligible list by sector).

From this defined eligible universe, the research and management teams have applied their expertise to select the securities in the portfolio on the basis of an in-depth fundamental analysis, which also includes a thorough analysis of the various environmental, social and governance criteria relevant to the business sector. In addition, this qualitative analysis also includes consideration of the sustainability theme and the issuer's total contribution to the UN Sustainable Development Goals.

Finally, the sustainable objective was measured by ensuring that:

- the net contribution at the level of the whole portfolio to the 17 SDGs is positive and
- a minimum of 50% of assets under management has been invested in companies making a net positive contribution to the 17 SDGs:

The stages of the investment process are outlined below:

How did this financial product perform compared to the reference sustainable benchmark?

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. This regulation does not set out a list socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

<input checked="" type="radio"/> <input checked="" type="radio"/> <input checked="" type="checkbox"/> Yes	<input type="radio"/> <input type="radio"/> <input type="checkbox"/> No
<input checked="" type="checkbox"/> It made sustainable investments with an environmental objective: 63.86% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input type="checkbox"/> It promoted environmental and/or social (E/S) characteristics and although it did not have a sustainable investment target, it had a sustainable investment ratio of ___%. <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input checked="" type="checkbox"/> It made sustainable investments with a social objective: 71.65%	<input type="checkbox"/> It promoted E/S features, but did not make sustainable investments

Sustainability indicators assess how the environmental or social characteristics promoted by the financial product are achieved.

To what extent was the sustainable investment objective of this financial product met?

During the Reference Period (01/01/2022-31/12/2022), the Sub-fund invested in countries that are committed to respecting fundamental rights (human rights, labour rights, democratic rights, etc.), protecting their environmental capital and promoting the well-being of their present and future generations. By combining a rigorous selection of countries with a formal and systematic engagement policy and prioritising recognised impact bonds (green bonds and equivalents), the Sub-fund invested in the most committed or best performing countries in terms of sustainable development.

The objective of sustainable development was pursued via:

- rigorous ESG screening, based on a proprietary sustainability model of states aligned with the Sustainable Development Goals
- promoting best practices and best efforts by defining eligibility rules based on ESG ratings
- formal and systematic engagement with issuers and investment in impact securities (green bonds and similar).

The Sub-fund has not designated a benchmark to achieve its sustainable investment objective within the meaning of Article 9 of Regulation 2019/2088.

Derivative financial products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting the environmental and/or social characteristics of the Sub-fund.

● **How did the sustainability indicators perform?**

During the Reference Period, the Sub-fund achieved the following sustainability indicators:

- a. The Sub-fund was not exposed to countries which do not meet a minimum standard of democracy in accordance with the Manager's controversial activities policy
- b. The Sub-fund invested a minimum of 40% of its assets in countries ranked in the top quartile according to the proprietary country sustainability model
- c. The Sub-fund invested a maximum of 10% of its assets in countries ranked in the last quartile according to the proprietary country sustainability model
- d. The Sub-fund engaged in a dialogue with the invested issuers according to the approach described in its Engagement Policy

Thus, over the Reference Period, the Sub-fund achieved:

- achieve a weighted average democratic score above the weighted average democratic score of the reference universe (consisting of emerging and developing countries as defined by the IMF): 63.4 vs 31.2
- a greenhouse gas emission intensity of the investee countries that is lower than the greenhouse gas emission intensity of its reference universe (consisting of emerging and developing countries as defined by the IMF) as defined by regulatory technical standards: 1714 tCO₂e/\$ GDP bn versus 6466 tCO₂e/*GDP bn (at 31/12/2022).

● ***...and in comparison with previous periods?***

Not applicable

● ***How did the sustainable investments not cause significant harm to any sustainable investment objective?***

The Manager ensured that the Sub-fund's sustainable investments during the Reference Period did not materially undermine an environmentally or socially sustainable investment objective by:

- excluding issuers that do not meet a democratic minimum
- sustainability analysis of countries to identify those that show the greatest commitment to sustainable development on governance, environmental and social issues but also those that show a willingness to make progress on these issues; the resulting country rankings form the basis of the investment rules i.e. min. 40% of assets in countries ranked in the top quartile and max. 10% in countries ranked in the bottom quartile.
- an engagement process with investee countries, in accordance with its Engagement Policy, which can be accessed at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006835/DPAM_policy_engagement.pdf. The commitments made by DPAM are also the subject of an annual report available at (https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006835/DPAM_report_engagement_activity.pdf).

— ***How were the indicators for adverse impacts on sustainability factors taken into account?***

During the Reference Period, the sub-fund has taken into consideration all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in

Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288 that are applicable to investments in sovereign or supranational issuers.

The PAIs are intrinsically linked to the Manager's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

The first PAI relates to environmental issues and focuses on the greenhouse gas emission intensity of the investee countries. The indicator is an integral component of the country sustainability model that the Manager developed for its sovereign bond strategies. Consequently, it is included in the country's sustainability score and can influence it positively or negatively depending on its level and development compared to other issuer countries.

The second PAI relates to social issues and focuses on issues of social breaches. Our country sustainability model monitors a number of indicators on this issue, such as respect for civil liberties and political rights, respect for human rights and the level of violence within the country, commitment to key labour law conventions, the issue of equal opportunities and distribution of wealth, etc. These different indicators are included in the country's sustainability score and can influence it positively or negatively depending on its level and evolution compared to other emitting countries.

Were the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable to sovereign bonds.

How has this financial product considered principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

During the Reference Period, the sub-fund has taken into consideration all the principal adverse impacts on sustainability factors (hereinafter “PAIs”) listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288 that are applicable to investments in sovereign or supranational issuers.

The PAIs are intrinsically linked to the Manager’s commitment to reduce the negative impact of the Sub-fund’s investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

The first PAI relates to environmental issues and focuses on the greenhouse gas emission intensity of the investee countries. The indicator is an integral component of the country sustainability model that the Manager developed for its sovereign bond strategies. Consequently, it is included in the country’s sustainability score and can influence it positively or negatively depending on its level and development compared to other issuer countries.

The second PAI relates to social issues and focuses on issues of social breaches. Our country sustainability model monitors a number of indicators on this issue, such as respect for civil liberties and political rights, respect for human rights and the level of violence within the country, commitment to key labour law conventions, the issue of equal opportunities and distribution of wealth, etc. These different indicators are included in the country’s sustainability score and can influence it positively or negatively depending on its level and evolution compared to other emitting countries.

What were the main investments of this financial product?

The list includes the investments that constitute **the largest share of the financial product’s investments** during the reference period, namely: 31/12/2022

Largest investments	Sector	% of assets	Country
POLAND (REPUBLIC OF) 1.750% 25-APR-2032	PUBLIC ADMINISTRATION AND DEFENCE; COMPULSORY SOCIAL SECURITY	2.89%	Poland

What was the ratio of sustainability-related investments?

● *What was the asset allocation?*

In the Reference Period, the Sub-fund invested at least 85.86% of its assets in sustainable investments with environmental or social objectives. These sustainable investments (in the table below referred to as “#1 Sustainable”) are:

- countries that are committed to respecting fundamental rights (human rights, labour rights, democratic rights, etc.), protecting their environmental capital and promoting the well-being of their present and future generations.
- that have an environmental objective not aligned with the European Taxonomy, due to their more advanced positioning on energy efficiency, climate change, biodiversity and emissions or
- which have a social objective, due to their more advanced positioning on issues related to wealth distribution, population and welfare, health care, education and innovation.

The percentage of the portfolio invested in sustainable investments that meet an environmental and/or social objective (#1A Sustainable) is calculated using the following cascade methodology:

- impact instruments such as green and sustainable emissions (2.8%)
- bonds issued by a government whose environmental score is in the top three quartiles of the benchmark universe (environmental objective)
- bonds issued by a government whose social score is in the top three quartiles of the ranking of countries in the reference universe (social objective).

In contrast, the percentages of the two sub-categories of sustainable investments (#1A Sustainable) in the portfolio invested in environmental investments other than

Asset allocation
describes the share of
investments in specific
assets.

those aligned with the taxonomy and social investments may involve some double counting. All countries in the portfolio are analysed against both (i) the environmental aspect and (ii) the social aspect (and therefore may fall into the sub-category “social investments” even if they are also considered environmental investments).

● *In which economic sectors were investments made?*

Sector	Sub-sector	% of assets	
Public administration and defence; compulsory social security	Public administration and defence; compulsory social security	88.82	%
Activities of extraterritorial organisations and bodies	Activities of extraterritorial organisations and bodies	3.38	%
Financial and insurance activities	Financial service activities, except insurance and pension funding	1.51	%
Information and communication	Telecommunications	0.09	%
Derivatives	Derivatives	0.31	%
Cash	Cash	5.90	%

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

To date, the EU Taxonomy does not provide a methodology for determining the alignment of sovereign bonds with the EU Taxonomy. These bonds are therefore not covered by the EU Taxonomy or its eligibility and technical selection criteria.

Has the financial product invested in fossil gas and/or nuclear energy activities in line with the EU Taxonomy¹?

- Yes:
- In fossil gas
 - In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, "sovereign bonds" consist of all sovereign exposures.

¹ Fossil gas and/or nuclear activities will only be compliant with the EU Taxonomy if they contribute to mitigating climate change ("climate change mitigation") and do not significantly undermine an objective of the EU Taxonomy - see explanatory note in the left margin. The full criteria for fossil gas and nuclear energy economic activities that are in line with the EU Taxonomy are defined in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities are economic activities** for which low-carbon alternatives are not yet available and whose greenhouse gas emission levels correspond to the best achievable performance.

● **What was the share of investments made in transitional and enabling activities?**

Not applicable

● **What was the percentage of investments aligned with the EU Taxonomy compared to previous reporting periods?**

Not applicable

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

Based on the approach described below, the Sub-fund invested 63.86% of its portfolio in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy over the Reference Period.

The proprietary sustainability model is based on environmental, social and governmental aspects. In the environmental aspect, the proprietary model takes into account energy efficiency, climate change, biodiversity and country emissions. Investing in the highest ranked countries in this aspect therefore means that the Sub-fund has an environmental objective. The scores of the Environment component of the EM Manager country model make it possible to rank the member states in descending order. Countries in the bottom quartile of the ranking (rounding up the number of eligible countries) do not have an environmental target. Further information on methodology and data resources is available in the information on this Sub-fund via www.dpamfunds.com (in particular in the sections “Methodologies” and “Data Sources and Data Processing”).

What was the share of socially sustainable investments?

Based on the approach described below, the Sub-fund invested 71.65% of its portfolio in sustainable investments with a social objective over the Reference Period.

The proprietary sustainability model is based on environmental, social and governmental aspects. In the social aspect, the proprietary model of sustainability of countries takes into account both current generations (wealth distribution, population, health care) and future generations (education and innovation). Investing in the highest ranked countries in this aspect therefore means that the Sub-

Are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

fund has a social objective. Similarly, the scores for the Social component (i.e. present and future generations of the proprietary model) allow the member states to be ranked in descending order. Countries in the bottom quartile of the ranking do not have a social target. Further information on methodology and data resources is available in the information on this Sub-fund via www.dpamfunds.com (in particular in the sections “Methodologies” and “Data Sources and Data Processing”).

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding the:

- Liquid assets
- Derivative instruments
- Collective investment schemes

The Sub-fund may invest or hold these types of assets for the purpose of achieving investment objectives, portfolio diversification, liquidity management and risk hedging.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 5.9% cash. There are no minimum environmental or social guarantees on this allocation.

What actions have been taken to attain the sustainable investment objective during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e:

On a half-yearly basis, a normative screening has been established on the basis of compliance with democratic minimums by excluding countries that do not meet a democratic minimum as defined by the manager’s controversial activities policy.

On a semi-annual basis, the eligible universe was subject to a best-in-class ranking based on the country sustainability model so as to invest a minimum of 40% of assets under management in top quartile countries and a maximum of 10% of assets under management in bottom quartile countries.

How has this financial product performed in comparison to the sustainable reference benchmark?

Not applicable

- ***How does the reference benchmark differ from a broad market index?***

Not applicable

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made sustainable **investments with an environmental objective: 66.20%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made sustainable **investments with a social objective: 78.29%**

It promoted **environmental and/or social (E/S) characteristics** and although it did not have a sustainable investment target, it had a sustainable investment ratio of ____%.

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S features, but **did not make sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. This regulation does not set out a list socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent was the sustainable investment objective of this financial product met?

During the Reference Period (01/01/2022-31/12/2022), the Sub-fund invested in countries that are committed to respecting fundamental rights (human rights, labour rights, democratic rights, etc.), protecting their environmental capital and promoting the well-being of their present and future generations. By combining a rigorous selection of countries with a formal and systematic engagement policy and prioritising recognised impact bonds (green bonds and equivalents), the Sub-fund invested in the most committed or best performing countries in terms of sustainable development.

The Sub-fund has not designated a benchmark to achieve its sustainable investment objective within the meaning of Article 9 of Regulation 2019/2088.

Derivative financial products, if any, used for the purpose of achieving the investment objectives of the Sub-fund have not been used for the purpose of promoting the environmental and/or social characteristics of the Sub-fund.

Sustainability indicators assess how the environmental or social characteristics promoted by the financial product are achieved.

● *How did the sustainability indicators perform?*

During the Reference Period, the Sub-fund achieved the following sustainability indicators:

- a. The Sub-fund was not exposed to countries which do not meet a minimum standard of democracy in accordance with the Manager's controversial activities policy
- b. The Sub-fund invested only in the top 50% of OECD countries ranked according to the proprietary country sustainability model. The Sub-fund engaged in a dialogue with the invested issuers according to the approach described in its Engagement Policy.
- c. The Sub-fund focused on impact instruments such as green and sustainable emissions. The portfolio was 16% exposed to this type of instrument at the end of the reference period.

Thus, over the Reference Period, the Sub-fund achieved:

- a weighted average democratic score above the weighted average democratic score of the reference universe (consisting of OECD member countries): 95 vs 87
- a greenhouse gas emission intensity of the investee countries lower than the greenhouse gas emission intensity of its reference universe (consisting of member states of the OECD) as defined by regulatory technical standards: 384.15 tCO₂e/\$ GDP bn (at 31/12/2022).

● *...and in comparison with previous periods?*

Not applicable

● ***How did the sustainable investments not cause significant harm to any sustainable investment objective?***

The Manager ensured that the Sub-fund's sustainable investments during the Reference Period did not materially undermine an environmentally or socially sustainable investment objective by:

- excluding issuers that do not meet a democratic minimum
- sustainability analysis of countries to identify those that show the greatest commitment to sustainable development on governance, environmental and social issues but also those that show a willingness to make progress on these issues; the resulting country rankings form the basis of the investment rules i.e. only in the top 50% of OECD countries according to the proprietary country sustainability model the consideration of the principal adverse impacts on the mandatory sustainability factors (hereinafter "PAIs") listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 which allows for the reduction of the adverse impacts of the investment
- an engagement process with investee countries, in accordance with its Engagement Policy, which can be accessed at https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006835/DPAM_policy_engagement.pdf. The commitments made by DPAM are also the subject of an annual report available at (https://res.cloudinary.com/degroof-petercam-asset-management/image/upload/v1614006835/DPAM_report_engagement_activity.pdf).

— ***How were the indicators for adverse impacts on sustainability factors taken into account?***

During the Reference Period, the sub-fund has taken into consideration all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288 that are applicable to investments in sovereign or supranational issuers.

The PAIs are intrinsically linked to the Manager's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated into the entire

research and investment process.

The first PAI relates to environmental issues and focuses on the greenhouse gas emission intensity of the investee countries. The indicator is an integral component of the country sustainability model that the Manager developed for its sovereign bond strategies. Consequently, it is included in the country's

sustainability score and can influence it positively or negatively depending on its level and development compared to other issuer countries.

The second PAI relates to social issues and focuses on issues of social breaches. Our country sustainability model monitors a number of indicators on this issue, such as respect for civil liberties and political rights, respect for human rights and the level of violence within the country, commitment to key labour law conventions, the issue of equal opportunities and distribution of wealth, etc. These different indicators are included in the country's sustainability score and can influence it positively or negatively depending on its level and evolution compared to other emitting countries.

Were the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable for investments in sovereigns.

How has this financial product considered principal adverse impacts on sustainability factors?

During the Reference Period, the sub-fund has taken into consideration all the principal adverse impacts on sustainability factors (hereinafter "PAIs") listed in Table 1 of Appendix I of the Delegated Regulation (EU) 2022/1288 that are applicable to investments in sovereign or supranational issuers.

The PAIs are intrinsically linked to the Manager's commitment to reduce the negative impact of the Sub-fund's investments by avoiding activities or behaviours that may significantly hinder sustainable and inclusive growth. This commitment is incorporated throughout the research and investment process from its inception.

The first PAI relates to environmental issues and focuses on the greenhouse gas emission intensity of the investee countries. The indicator is an integral component of the country sustainability model that the Manager developed for its sovereign bond strategies. Consequently, it is included in the country's sustainability score and can influence it positively or negatively depending on its level and development compared to other issuer countries.

The second PAI relates to social issues and focuses on issues of social breaches. Our country sustainability model monitors a number of indicators on this issue, such as respect for civil liberties and political rights, respect for human rights and the level of violence within the country, commitment to key labour law conventions, the issue of equal opportunities and distribution of wealth, etc. These different indicators are included in the country's sustainability score and can influence it positively or negatively depending on its level and evolution compared to other emitting countries.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

What were the main investments of this financial product?

2 3/4 FINLAND JUL28 04.07.2028	PUBLIC ADMINISTRATION AND DEFENCE; COMPULSORY SOCIAL SECURITY	1.80%	Finland

The list includes the investments that constitute **the largest share of the financial product's investments** during the reference period, namely: 31/12/2022

What was the ratio of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

● *What was the asset allocation?*

In the Reference Period, the Sub-fund invested at least 94.11% of its assets in sustainable investments with environmental or social objectives. These sustainable investments (in the table below referred to as “#1 Sustainable”) are:

- countries that are committed to respecting fundamental rights (human rights, labour rights, democratic rights, etc.), protecting their environmental capital and promoting the well-being of their present and future generations:
- that have an environmental objective not aligned with the European Taxonomy, due to their more advanced positioning on energy efficiency, climate change, biodiversity and emissions or
- which have a social objective, due to their more advanced positioning on issues related to wealth distribution, population and welfare, health care, education and innovation.

The percentage of the portfolio invested in sustainable investments that meet an environmental and/or social objective (#1A Sustainable) is calculated using the following cascade methodology:

- impact instruments such as green and sustainable emissions
- bonds issued by a government whose environmental score is in the top three quartiles of the benchmark universe (environmental objective)
- bonds issued by a government whose social score is in the top three quartiles of the ranking of countries in the reference universe (social objective).

In contrast, the percentages of the two sub-categories of sustainable investments (#1A Sustainable) in the portfolio invested in environmental investments other than those aligned with the taxonomy and social investments may involve some double counting. All countries in the portfolio are analysed against both (i) the environmental aspect and (ii) the social aspect (and therefore may fall into the sub-category “social investments” even if they are also considered environmental investments).

The percentage of the portfolio invested in sustainable investments that meet an environmental and/or social objective (#1A Sustainable) is calculated using the cascade methodology described in the prospectus (section “Environmental, social and governance (ESG) considerations – Sustainability transparency”), which excludes double counting at the cascade level: an investment qualifying as sustainable at the level of a first element of the cascade is not then taken into account at the level of subsequent elements of the cascade.

● ***In which economic sectors were investments made?***

Sector	Sub-sector	% of assets	
Public administration and defence; compulsory social security	Public administration and defence; compulsory social security	89.58	%
Activities of extraterritorial organisations and bodies	Activities of extraterritorial organisations and bodies	7.95	%
Financial and insurance activities	Financial service activities, except insurance and pension funding	0.38	%
Derivatives	Derivatives	0.76	%
Cash	Cash	1.33	%

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

To date, the EU Taxonomy does not provide a methodology for determining the alignment of sovereign bonds with the EU Taxonomy. These bonds are therefore not covered by the EU Taxonomy or its eligibility and technical selection criteria.

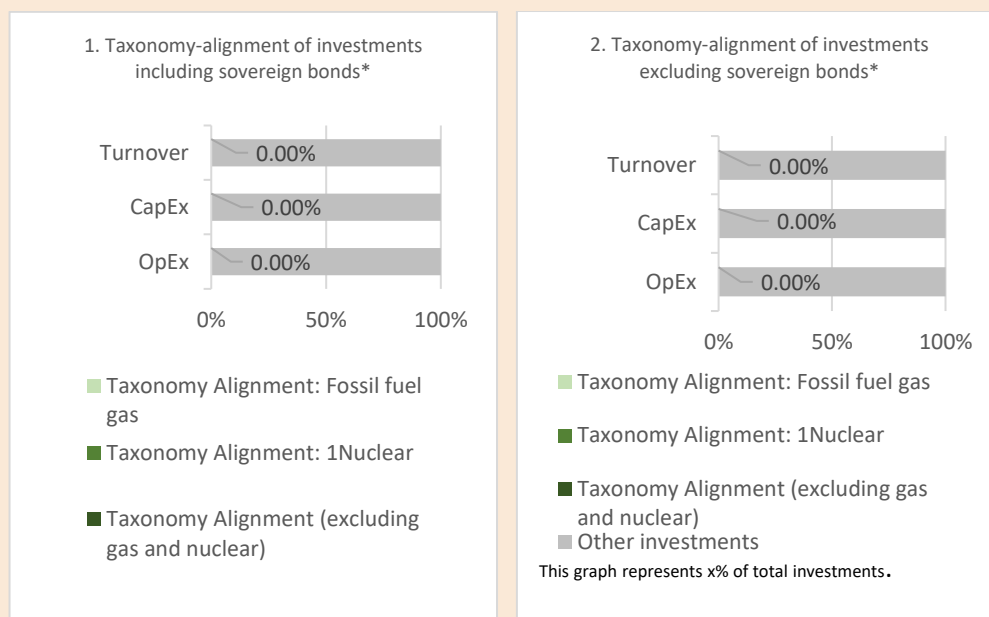

Has the financial product invested in fossil gas and/or nuclear energy activities in line with the EU Taxonomy¹?

- Yes:
- In fossil gas
 - In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, "sovereign bonds" consist of all sovereign exposures.

¹ Fossil gas and/or nuclear activities will only be compliant with the EU Taxonomy if they contribute to mitigating climate change ("climate change mitigation") and do not significantly undermine an objective of the EU Taxonomy - see explanatory note in the left margin. The full criteria for fossil gas and nuclear energy economic activities that are in line with the EU Taxonomy are defined in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities are economic activities** for which low-carbon alternatives are not yet available and whose greenhouse gas emission levels correspond to the best achievable performance.

● ***What was the share of investments made in transitional and enabling activities?***

Not applicable

● ***What was the percentage of investments aligned with the EU Taxonomy compared to previous reporting periods?***

Not applicable

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

Based on the approach described below, the Sub-fund invested 66.20% of its portfolio in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy over the Reference Period.

The proprietary sustainability model is based on environmental, social and governmental aspects. In the environmental aspect, the proprietary model takes into account energy efficiency, climate change, biodiversity and country emissions. Investing in the highest ranked countries in this aspect therefore means that the Sub-fund has an environmental objective. The scores of the Environment component of the Manager's country model make it possible to rank the member states in descending order. Countries in the bottom quartile of the ranking (rounding up the number of eligible countries) do not have an environmental target. Further information on methodology and data resources is available in the information on this Sub-fund via www.dpamfunds.com (in particular in the sections "Methodologies" and "Data Sources and Data Processing").

Are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of socially sustainable investments?

Based on the approach described below, the Sub-fund invested 78.29% of its portfolio in sustainable investments with a social objective over the Reference Period.

The proprietary sustainability model is based on environmental, social and governmental aspects. In the social aspect, the proprietary model of sustainability of countries takes into account both current generations (wealth distribution, population, health care) and future generations (education and innovation). Investing in the highest ranked countries in this aspect therefore means that the Sub-

fund has a social objective. Similarly, the scores for the Social component (i.e. present and future generations of the proprietary model) allow the member states to be ranked in descending order. Countries in the bottom quartile of the ranking do not have a social target. Further information on methodology and data resources is available in the information on this Sub-fund via www.dpamfunds.com (in particular in the sections “Methodologies” and “Data Sources and Data Processing”).

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

Binding ESG screenings carried out in accordance with the investment strategy described above are applied to the whole Sub-fund, excluding the:

- Liquid assets
- Derivative instruments
- Collective investment schemes

The Sub-fund may invest or hold these types of assets for the purpose of achieving investment objectives, portfolio diversification, liquidity management and risk hedging.

Over the Reference Period, for liquidity management purposes, the Sub-fund was exposed to 1.33% cash. There are no minimum environmental or social guarantees on this allocation.

What actions have been taken to attain the sustainable investment objective during the reference period?

Over the Reference Period, the Sub-fund followed the actions and investment steps as described in its methodology, i.e:

On a semi-annual basis, a normative screening has been established on the basis of compliance with democratic minimums by excluding countries that are not free according to Freedom House and authoritarian according to the democracy index published by the Economist Intelligence Unit.

On a semi-annual basis, the eligible universe was subject to a best-in-class ranking based on the country sustainability model so as to invest only in the top 50% of OECD countries ranked according to the proprietary country sustainability model.

How has this financial product performed in comparison to the sustainable reference benchmark?

Not applicable

- ***How does the reference benchmark differ from a broad market index?***

Not applicable

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?***

Not applicable

- ***How has this financial product performed in comparison to the reference benchmark?***

Not applicable

- ***How has this financial product performed in comparison to the broad market index?***

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Trasparenza della promozione delle caratteristiche ambientali o sociali (art. 11 Reg UE 2019/2088 SFDR) (segue)

- (ii) non ha effettuato investimenti: (a) in società caratterizzate da comportamenti non conformi ai principali standard internazionali in materia di sostenibilità, o coinvolte in attività che possono comportare significativi rischi ambientali e sociali, con particolare riferimento a investimenti in (i) società responsabili di gravissime violazioni dei diritti umani e dei diritti dei minori, (ii) società che operano nei settori delle armi controverse, del carbone, delle sabbie bituminose, dell'energia nucleare, del tabacco e dei gas e oli combustibili; e in (b) derivati sulle materie prime alimentari.

- **Qual è stata la prestazione degli indicatori di sostenibilità?**

La prestazione degli indicatori di sostenibilità del Comparto indicati nell'informativa precontrattuale resa disponibile al cliente ai sensi del SFDR, nel periodo di riferimento, è stata la seguente.

Gli Indicatori di Sostenibilità misurano in che modo sono rispettate le caratteristiche ambientali e sociali promosse dal prodotto finanziario.

INDICATORE	PERFORMANCE NEL PERIODO DI RIFERIMENTO
Investimento di almeno il 90% degli attivi del Comparto in (i) obbligazioni green e obbligazioni sostenibili volti a finanziare attività o progetti che perseguono l'obiettivo della mitigazione del cambiamento climatico; (ii) strumenti finanziari di tipo azionario e/o obbligazionario emessi da società che contribuiscono al raggiungimento degli Obiettivi di Sviluppo Sostenibile (SDGs) legati alla salvaguardia dell'ambiente; e (iii) OICR che si qualificano come fondi di investimento di cui all'art. 9 del SFDR che perseguono come obiettivo di investimento sostenibile la mitigazione del cambiamento climatico	97,97% dell'attivo del Comparto investito in obbligazioni green e obbligazioni sostenibili volti a finanziare attività o progetti che perseguono l'obiettivo della mitigazione del cambiamento climatico; e (ii) strumenti finanziari emessi da società che contribuiscono al raggiungimento degli Obiettivi di Sviluppo Sostenibile (SDGs) legati alla salvaguardia dell'ambiente; e (iii) OICR che si qualificano come fondi di investimento di cui all'art. 9 del SFDR che perseguono come obiettivo di investimento sostenibile la mitigazione del cambiamento climatico
nessun investimento in OICR che non si qualificano come fondi di investimento di cui all'art. 9 del Regolamento SFDR che perseguono come obiettivo di investimento sostenibile la mitigazione del cambiamento climatico	Rispettato sul 100% del portafoglio.
soglia massima di investimenti sostenibili con <i>scoring</i> ESG inferiore a D- pari al 3%	0% dell'attivo del Comparto in strumenti finanziari con <i>scoring</i> ESG inferiore a D-
limite di concentrazione pari al 3% per investimenti sostenibili in singole azioni con <i>scoring</i> inferiore a C- o senza <i>scoring</i>	esposizione verso singola azione con <i>scoring</i> inferiore a C- o senza <i>scoring</i> è stata pari al massimo a 0%
limite di concentrazione pari al 5% per investimenti sostenibili in singole obbligazioni con <i>scoring</i> inferiore a C- o senza <i>scoring</i>	esposizione verso singola obbligazione con <i>scoring</i> inferiore a C- o senza <i>scoring</i> è stata pari al massimo a 0%
Esclusioni di investimenti in:	
(i) società responsabili di gravissime violazioni ai diritti umani e ai diritti dei minori;	Rispettato sul 100% del portafoglio.

Informazioni aggiuntive (non certificate) (segue)

Trasparenza della promozione delle caratteristiche ambientali o sociali (art. 11 Reg UE 2019/2088 SFDR) (segue)

INDICATORE	PERFORMANCE NEL PERIODO DI RIFERIMENTO
(ii) società che derivano più del 5% del fatturato dalla lavorazione di sabbie bituminose ;	Rispettato sul 100% del portafoglio.
(iii) utilities che generano più del 15% del proprio fatturato da fonti energia nucleare ;	Rispettato sul 100% del portafoglio.
(iv) società che derivano più del 10% del fatturato dalla fabbricazione di prodotti del tabacco ;	Rispettato sul 100% del portafoglio.
(v) società che violano i principi del UN Global Compact e delle Linee guida OCSE	Rispettato sul 100% del portafoglio.
(vi) società che ottengono l'1% o più dei ricavi dalla prospezione, estrazione, distribuzione o raffinazione del carbone	Rispettato sul 100% del portafoglio.
(vii) società che ottengono il 10% o più dei ricavi dalla prospezione, estrazione, distribuzione o raffinazione di oli combustibili ;	Rispettato sul 100% del portafoglio.
(viii) società che ottengono il 50% o più dei ricavi dalla prospezione, estrazione, raffinazione o distribuzione di gas combustibili ;	Rispettato sul 100% del portafoglio.
(ix) società che ottengono il 50% o più dei ricavi dalla produzione di energia elettrica con un'intensità dei gas a effetto serra superiore a 100g CO2/KWh ;	Rispettato sul 100% del portafoglio.
(x) società che generano ricavi rilevanti da attività legate ad armi controverse , ovvero armi che hanno effetti indiscriminati, causano danni indebiti e sono incapaci di distinguere tra obiettivi civili e militari);	Rispettato sul 100% del portafoglio.
(xi) derivati su materie prime alimentari.	Rispettato sul 100% del portafoglio.

- ***In che modo gli investimenti sostenibili non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile?***

La SGR, nel periodo di riferimento, ha monitorato che gli investimenti sostenibili non arrechino un danno significativo all'obiettivo di investimento sostenibile della mitigazione del cambiamento climatico, adottando una strategia composta da 3 livelli:

- applicazione delle esclusioni elencate nella tabella sugli indicatori di sostenibilità di cui alla precedente domanda;
- controllo che l'investimento non sia disallineato rispetto agli SDGs sociali e ambientali dell'ONU. In particolare, la SGR verifica, per ciascun investimento, il punteggio relativo a ciascun SDGs, tramite la consultazione del database fornito dal provider esterno MainStreet Partners, ed esclude dall'universo investibile i titoli che non superano una soglia minima di allineamento per tutti gli SDGs;

Informazioni aggiuntive (non certificate) (segue)

Trasparenza della promozione delle caratteristiche ambientali o sociali (art. 11 Reg UE 2019/2088 SFDR) (segue)

- (iii) verifica che l'investimento non abbia significativi effetti negativi sui fattori di sostenibilità rispetto agli indicatori previsti dalla normativa europea, secondo quanto indicato nella risposta alla domanda successiva.
- *In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?*

Con riferimento agli investimenti sostenibili non allineati alla Tassonomia, la SGR ha preso in considerazione tutti gli indicatori degli effetti negativi sui fattori di sostenibilità previsti dalla normativa come obbligatori per gli investimenti diretti in società e per gli emittenti sovrani e le organizzazioni internazionali, ovvero:

- (i) per gli **investimenti diretti in società**: (1) emissioni di GHG; (2) impronta di carbonio; (3) Intensità di GHG delle imprese beneficiarie degli investimenti; (4) esposizione a imprese attive nel settore dei combustibili fossili; (5) quota di consumo e produzione di energia non rinnovabile; (6) intensità di consumo energetico per settore ad alto impatto climatico; (7) attività che incidono negativamente sulle aree sensibili sotto il profilo della biodiversità; (8) emissioni in acqua; (9) Rapporto tra rifiuti pericolosi e rifiuti radioattivi; (10) violazioni dei principi del Global Compact delle Nazioni Unite e delle linee guida dell'Organizzazione per la cooperazione e lo sviluppo economico (OCSE) destinate alle imprese multinazionali; (11) mancanza di procedure e di meccanismi di conformità per monitorare la conformità ai principi del Global Compact delle Nazioni Unite e alle linee guida OCSE destinate alle imprese multinazionali; (12) divario retributivo di genere non corretto; (13) diversità di genere nel consiglio; (14) esposizione ad armi controverse (mine antiuomo, munizioni a grappolo, armi chimiche e armi biologiche).
- (ii) per **emittenti sovrani e organizzazioni sovranazionali**: (1) intensità di GHG; e (2) benefici derivanti dagli investimenti soggetti a violazioni sociali.

Il gruppo Credem ha definito dei criteri per stabilire se l'investimento abbia un effetto negativo significativo sul relativo fattore di sostenibilità. Nel fissare tali criteri, il gruppo Credem ha fatto riferimento, ove possibile, al regolamento Delegato UE (EU) 2021/2139.

I titoli che non hanno soddisfatto i predetti criteri sono stati esclusi dall'universo investibile. Con riferimento agli investimenti allineati alla Tassonomia, la valutazione circa l'assenza di un danno significativo a nessuno degli altri obiettivi ambientali identificati dal Regolamento Tassonomia è avvenuto secondo i criteri stabiliti dalla normativa UE.

In questa fase, in relazione ad alcuni indicatori degli effetti negativi sulla sostenibilità, la disponibilità di dati è ancora molto limitata. Ciò considerato, anche al fine di evitare effetti distorsivi sulla selezione degli investimenti, la SGR ha deciso di non prendere in considerazione gli indicatori per i quali il livello di copertura dei dati non abbia raggiunto almeno un quarto degli emittenti presenti nell'universo investibile.

- *Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani?*
Descrizione particolareggiata:

Informazioni aggiuntive (non certificate) (segue)

Trasparenza della promozione delle caratteristiche ambientali o sociali (art. 11 Reg UE 2019/2088 SFDR) (segue)

La SGR ha verificato che ciascun investimento sostenibile fosse allineato con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani, tramite l'acquisizione di dati specifici su questo indicatore dal service provider terzo MainStreet Partners.

I titoli che sono risultati non allineati con tali Linee e Principi Guida sono stati esclusi dall'universo investibile.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

Durante il periodo di riferimento, il Comparto ha tenuto in considerazione i principali effetti negativi sulla sostenibilità degli investimenti unicamente al fine di determinare che tali investimenti non abbiano arrecato un danno significativo a nessun obiettivo di investimento sostenibile, secondo quanto illustrato nelle risposte precedenti.

In aggiunta a quanto sopra, si anticipa che il Comparto, a partire dal 1 gennaio 2023, ha altresì iniziato a prendere considerazione gli effetti negativi degli investimenti effettuati su alcuni specifici parametri di sostenibilità ambientali, al fine, più generale, di migliorare la *performance* del Comparto in relazione ai medesimi.

In particolare, i parametri di sostenibilità individuati, in via prioritaria, sono i seguenti: (a) carbon footprint; (b) emissioni di gas a effetto serra; (c) violazione dei principi del UN Global Compact e le Linee guida OCSE sulle multinazionali; (d) esposizione alle armi controverse; (e) esposizione a società attive nel settore dei combustibili fossili; (f) consumo e produzione di energia non rinnovabile, sulla base di dati forniti da provider terzi.

Pertanto, il prossimo rendiconto darà evidenza anche di tali dati.

L'elenco comprende gli investimenti che hanno costituito la quota maggiore di investimenti del prodotto finanziario durante il periodo di riferimento, ossia: i primi 15 investimenti del Comparto che rappresentano il 32,66% del portafoglio del Comparto.

Quali sono stati i principali investimenti di questo prodotto finanziario?

Investimenti di maggiore entità	Settore	% di attivi	Paese
SCHRODER GB ENERGY TRA- C	Fund	4,16%	Luxembourg
LOF-NATURAL CAP-USD NA	Fund	3,42%	Luxembourg

I **Principali effetti negativi** sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

Informazioni aggiuntive (non certificate) (segue)

Trasparenza della promozione delle caratteristiche ambientali o sociali (art. 11 Reg UE 2019/2088 SFDR) (segue)

Qual è stata la quota degli investimenti in materia di sostenibilità?

• Qual è stata l’allocazione degli attivi?

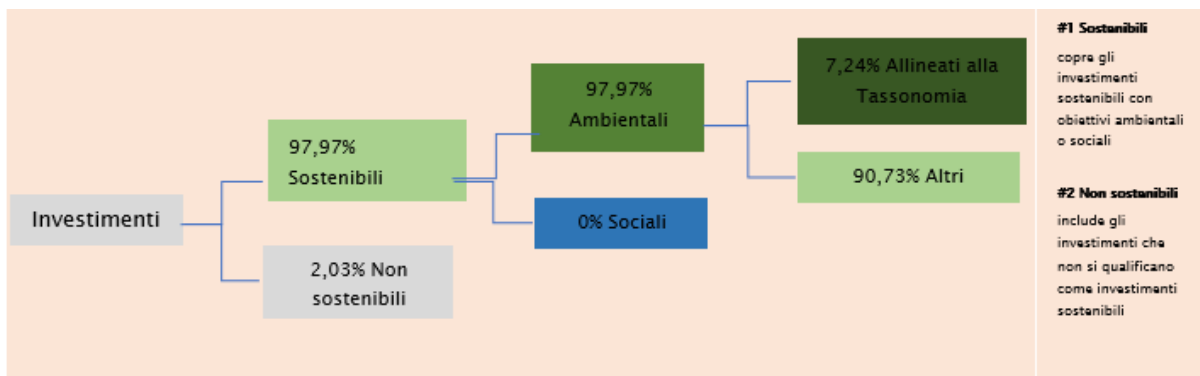

L’ Asset allocation
 Descrive la quota di investimenti in attività specifiche.

Nel periodo di riferimento, il Comparto ha investito il 97,97% degli attivi in investimenti sostenibili, in forma di (i) obbligazioni *green* e obbligazioni sostenibili in cui è previsto l’impegno di destinare i proventi al finanziamento di attività o progetti che perseguono l’obiettivo della mitigazione del cambiamento climatico; (ii) strumenti finanziari di tipo azionario e/o obbligazionario emessi da società che contribuiscono al raggiungimento degli SDGs definiti dall’ONU legati alla salvaguardia dell’ambiente; e (iii) da OICVM e FIA aperti classificati come prodotti finanziari di cui all’Articolo 9 del SFDR che abbiamo come obiettivo di investimento sostenibile la mitigazione del cambiamento climatico.

Al fine di contribuire a realizzare l’obiettivo ambientale della mitigazione del cambiamento climatico, il Comparto ha investito, altresì, una quota pari al 7,24% dell’attivo del Comparto in attività economiche allineate alla Tassonomia.

La restante quota del 92,76% è stata impegnata in investimenti che non si qualificano come investimenti sostenibili, o in depositi di denaro o liquidità o derivati.

Al fine di determinare la quota degli investimenti in attività economiche sostenibili allineate alla Tassonomia UE nel periodo di riferimento, la SGR ha utilizzato i dati forniti da *provider terzi*. Tenuto conto che, nell’anno 2022, gli emittenti non erano soggetti a obblighi di *disclosure* in relazione ai dati connessi all’allineamento alla Tassonomia, ai fini del predetto calcolo, i *provider terzi* hanno fatto ricorso, in via prevalente, a informazioni equivalenti ottenute direttamente da tali emittenti o da altre fonti, compresi dati rinvenuti da stime e valutazioni effettuate a partire dai dati disponibili. Ad ogni modo, le stime sono state effettuate dai *provider terzi* sulla base di una metodologia ragionata e secondo criteri di prudenza.

Trasparenza della promozione delle caratteristiche ambientali o sociali (art. 11 Reg UE 2019/2088 SFDR) (segue)

- ***In quali settori economici sono stati effettuati gli investimenti?***

Informazioni aggiuntive (non certificate) (segue)

Trasparenza della promozione delle caratteristiche ambientali o sociali (art. 11 Reg UE 2019/2088 SFDR) (segue)

In che misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla Tassonomia dell'UE?

Il Comparto ha investito il 7,24% degli attivi in investimenti sostenibili con un obiettivo ambientale allineati alla Tassonomia dell'UE.

- **Il prodotto finanziario ha investito in attività connesse al gas fossile e/o all'energia nucleare che erano conformi alla tassonomia dell'UE?**

Gas Fossile Energia Nucleare
 SI NO SI NO

I due grafici che seguono mostrano in verde la percentuale di investimenti che erano allineati alla tassonomia dell'UE. Poiché non esiste una metodologia adeguata per determinare l'allineamento delle obbligazioni sovrane* alla tassonomia, il primo grafico mostra l'allineamento alla tassonomia in relazione a tutti gli investimenti del prodotto finanziario comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

*Ai fini dei grafici di cui sopra, per «obbligazioni sovrane» si intendono tutte le esposizioni sovrane.

Le attività allineate alla tassonomia sono espresse in percentuale di:

- **fatturato**: riflette il carattere ecologico attuale delle imprese beneficiarie degli investimenti;
- **spese in conto capitale (CapEx)**: rivelano gli investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, utili per la transizione verso un'economia verde;
- **spese operative (OpEx)**: illustrano le attività operative verdi delle imprese beneficiarie degli investimenti

Informazioni aggiuntive (non certificate) (segue)

Trasparenza della promozione delle caratteristiche ambientali o sociali (art. 11 Reg UE 2019/2088 SFDR) (segue)

Le **attività abilitanti** consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale. Le **attività di transizione** sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano, tra l'altro, livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

- **Qual era la quota degli investimenti effettuata in attività transitorie e abilitanti?**

In linea con quanto indicato nell'informativa pre-contrattuale, il Comparto non ha effettuato investimenti in attività transitorie e abilitanti nel periodo di riferimento.

Quale era la quota di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?

Il Comparto ha investito 92,76% degli attivi in investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE.

Quali investimenti erano compresi nella categoria "Non sostenibili", qual era il loro scopo ed esistevano garanzie minime di salvaguardia ambientale o sociale?

La categoria "Non sostenibili" comprende gli investimenti in depositi di denaro, liquidità e derivati.

I depositi di denaro e la liquidità, che hanno costituito una parte residuale del portafoglio pari a 2,03%, hanno avuto finalità di assicurare un minimo grado di liquidità al Comparto.

Il portafoglio ha fatto ricorso anche a derivati con la finalità di copertura rispetto ad alcuni dei rischi cui il portafoglio del Comparto è stato esposto.

Quali azioni sono state adottate per raggiungere l'obiettivo di investimento sostenibile durante il periodo di riferimento?

Al fine di ritenere soddisfatte le caratteristiche ambientali e sociali promosse dal Comparto, la SGR ha condotto un'attività di monitoraggio nei confronti degli emittenti e degli *asset manager* degli OICR in cui il Comparto ha investito durante il periodo di riferimento, in modo da assicurare il costante rispetto degli indicatori di sostenibilità.

Nome del prodotto: **EUROMOBILIARE GREEN 4 PLANET**

Identificativo della persona giuridica: **EUROMOBILIARE ASSET MANAGEMENT SGR**

Obiettivo di investimento sostenibile

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?

Sì

No

Ha effettuato **investimenti sostenibili con un obiettivo ambientale: 96,70 %**

in attività considerate ecosostenibili conformemente alla

in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE

Ha effettuato **investimenti sostenibili con un obiettivo sociale: _____ %**

Ha **promosso caratteristiche ambientali/sociali (A/S)** e pur **non avendo come obiettivo un investimento sostenibile, aveva una quota del(lo) _____ %** di investimenti sostenibili

con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE

con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE

con un obiettivo sociale

Ha promosso caratteristiche A/S, ma **non ha effettuato alcun investimento sostenibile**

In che misura è stato conseguito l'obiettivo di investimento sostenibile di questo prodotto finanziario?

Nel periodo di riferimento (1 gennaio 2022 – 31 Dicembre 2022) questo Fondo ha contribuito a realizzare **l'obiettivo ambientale della mitigazione del cambiamento climatico** secondo quanto previsto nell'informativa pre-contrattuale resa disponibile al cliente ai sensi del SFDR, poiché:

- (i) ha investito, in misura preponderante in (i) *green bond* e *sustainability bond* volti a finanziare attività o progetti che perseguono l'obiettivo della mitigazione del cambiamento climatico; e (ii) strumenti finanziari di tipo azionario e/o obbligazionario emessi da società che contribuiscono al raggiungimento degli Obiettivi di Sviluppo Sostenibile ("SDGs") legati alla salvaguardia dell'ambiente;
- (ii) ha effettuato investimenti in misura pari al 27,35% degli attivi del Fondo in attività economiche allineate alla Tassonomia ivi comprese, a titolo esemplificativo, la produzione di elettricità da energia eolica e l'installazione, la manutenzione e la riparazione di attrezzature per l'efficienza energetica
- (iii) non ha effettuato investimenti: (a) in società caratterizzate da comportamenti non conformi ai principali standard internazionali in materia di sostenibilità, o coinvolte in attività che possono comportare significativi rischi ambientali e sociali, con particolare riferimento a investimenti in (i) società responsabili di gravissime violazioni dei diritti umani e dei diritti dei minori, (ii) società che operano nei settori delle armi controverse, del carbone, delle sabbie bituminose, dell'energia nucleare, del tabacco e dei gas e oli combustibili; e in (b) derivati sulle materie prime alimentari.

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, purché tale investimento non arrechi danno significativo a nessun obiettivo ambientale o sociale e l'impresa beneficiaria degli investimenti segua prassi di buona governance.

La **tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non comprende un elenco di attività economiche socialmente sostenibili. Gli investimenti con un obiettivo ambientale potrebbero essere allineati o no alla tassonomia

• **Qual è stata la prestazione degli indicatori di sostenibilità?**

La prestazione degli indicatori di sostenibilità del Fondo indicati nell'informativa precontrattuale resa disponibile al cliente ai sensi del SFDR, nel periodo di riferimento, è stata la seguente. Per completezza, si segnala che l'indicatore relativo alla soglia minima di investimenti in prodotti allineati alla Tassonomia è stato introdotto dal 1 gennaio 2023 e, pertanto, non è stato indicato in questa tabella perché non applicabile al periodo di riferimento 1 gennaio – 31 dicembre 2022.

Gli Indicatori di Sostenibilità
misurano in che modo sono rispettate le caratteristiche ambientali e sociali promosse dal prodotto finanziario.

INDICATORE	PERFORMANCE NEL PERIODO DI RIFERIMENTO
Investimento di almeno il 90% degli attivi del Fondo in (i) green bond e sustainability bond volti a finanziare attività o progetti che perseguono l'obiettivo della mitigazione del cambiamento climatico; (ii) strumenti finanziari di tipo azionario e/o obbligazionario emessi da società che contribuiscono al raggiungimento degli Obiettivi di Sviluppo Sostenibile (SDGs) legati alla salvaguardia dell'ambiente; e (iii) OICR che si qualificano come fondi di investimento di cui all'art. 9 del SFDR che perseguono come obiettivo di investimento sostenibile la mitigazione del cambiamento climatico	96,70% dell'attivo del Fondo investito in <i>green bond</i> e <i>sustainability bond</i> volti a finanziare attività o progetti che perseguono l'obiettivo della mitigazione del cambiamento climatico; e (ii) strumenti finanziari emessi da società che contribuiscono al raggiungimento degli Obiettivi di Sviluppo Sostenibile (SDGs) legati alla salvaguardia dell'ambiente; e (iii) OICR che si qualificano come fondi di investimento di cui all'art. 9 del SFDR che perseguono come obiettivo di investimento sostenibile la mitigazione del cambiamento climatico
nessun investimento in OICR che non si qualificano come fondi di investimento di cui all'art. 9 del Regolamento SFDR che perseguono come obiettivo di investimento sostenibile la mitigazione del cambiamento climatico	Rispettato sul 100% del portafoglio.
soglia massima di investimenti sostenibili con <i>scoring</i> ESG inferiore a D- pari al 3%	0% dell'attivo del Fondo in strumenti finanziari con <i>scoring</i> ESG inferiore a D-
limite di concentrazione pari al 3% per investimenti sostenibili in singole azioni con <i>scoring</i> inferiore a C- o senza <i>scoring</i>	esposizione verso singola azione con <i>scoring</i> inferiore a C- o senza <i>scoring</i> è stata pari al massimo a 0%
limite di concentrazione pari al 5% per investimenti sostenibili in singole obbligazioni con <i>scoring</i> inferiore a C- o senza <i>scoring</i>	esposizione verso singola obbligazione con <i>scoring</i> inferiore a C- o senza <i>scoring</i> è stata pari al massimo a 0%
Esclusioni di investimenti in:	
(i) società responsabili di gravissime violazioni ai diritti umani e ai diritti dei minori;	Rispettato sul 100% del portafoglio.
(ii) società che derivano più del 5% del fatturato dalla lavorazione di sabbie bituminose ;	Rispettato sul 100% del portafoglio.
(iii) utilities che generano più del 15% del proprio fatturato da fonti energia nucleare ;	Rispettato sul 100% del portafoglio.
(iv) società che derivano più del 10% del fatturato dalla fabbricazione di prodotti del tabacco ;	Rispettato sul 100% del portafoglio.
(v) società che violano i principi del UN Global Compact e delle Linee guida OCSE	Rispettato sul 100% del portafoglio.

(vi)	società che ottengono l'1% o più dei ricavi dalla prospezione, estrazione, distribuzione o raffinazione del carbone	Rispettato sul 100% del portafoglio.
(vii)	società che ottengono il 10% o più dei ricavi dalla prospezione, estrazione, distribuzione o raffinazione di oli combustibili ;	Rispettato sul 100% del portafoglio.
(viii)	società che ottengono il 50% o più dei ricavi dalla prospezione, estrazione, raffinazione o distribuzione di gas combustibili ;	Rispettato sul 100% del portafoglio.
(ix)	società che ottengono il 50% o più dei ricavi dalla produzione di energia elettrica con un'intensità dei gas a effetto serra superiore a 100g CO2/KWh ;	Rispettato sul 100% del portafoglio.
(x)	società che generano ricavi rilevanti da attività legate ad armi controverse , ovvero armi che hanno effetti indiscriminati, causano danni indebiti e sono incapaci di distinguere tra obiettivi civili e militari);	Rispettato sul 100% del portafoglio.
(xi)	derivati su materie prime alimentari.	Rispettato sul 100% del portafoglio.

- ***In che modo gli investimenti sostenibili non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile?***

La SGR, nel periodo di riferimento, ha monitorato che gli investimenti sostenibili non arrechino un danno significativo all'obiettivo di investimento sostenibile della mitigazione del cambiamento climatico, adottando una strategia composta da 3 livelli:

- (i) applicazione delle esclusioni elencate nella sezione sugli indicatori di sostenibilità, sub (v);
- (ii) controllo che l'investimento non sia disallineato rispetto agli SDGs sociali e ambientali dell'ONU. In particolare, la SGR verifica, per ciascun investimento, il punteggio relativo a ciascun SDGs, tramite la consultazione del database fornito dal provider esterno MainStreet Partners, ed esclude dall'universo investibile i titoli che non superano una soglia minima di allineamento per tutti gli SDGs;
- (iii) verifica che l'investimento non abbia significativi effetti negativi sui fattori di sostenibilità rispetto agli indicatori previsti dalla normativa europea, secondo quanto indicato nella risposta alla domanda successiva.

- ***In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?***

Con riferimento agli investimenti sostenibili non allineati alla Tassonomia, la SGR ha preso in considerazione tutti gli indicatori degli effetti negativi sui fattori di sostenibilità previsti dalla normativa come obbligatori per gli investimenti diretti in società e per gli emittenti sovrani e le organizzazioni internazionali, ovvero:

- (i) per gli **investimenti diretti in società**: (1) emissioni di GHG; (2) impronta di carbonio; (3) Intensità di GHG delle imprese beneficiarie degli investimenti; (4) esposizione a imprese attive nel settore dei combustibili fossili; (5) quota di consumo e produzione di energia non rinnovabile; (6) intensità di consumo energetico per settore ad alto impatto climatico; (7) attività che incidono negativamente sulle aree sensibili sotto il profilo della biodiversità; (8) emissioni in acqua; (9) Rapporto tra rifiuti pericolosi e rifiuti radioattivi; (10) violazioni dei principi del Global Compact delle Nazioni Unite e delle linee guida

dell'Organizzazione per la cooperazione e lo sviluppo economico (OCSE) destinate alle imprese multinazionali; (11) mancanza di procedure e di meccanismi di conformità per monitorare la conformità ai principi del Global Compact delle Nazioni Unite e alle linee guida OCSE destinate alle imprese multinazionali; (12) divario retributivo di genere non corretto; (13) diversità di genere nel consiglio; (14) esposizione ad armi controverse (mine antiuomo, munizioni a grappolo, armi chimiche e armi biologiche).

- (ii) per **emittenti sovrani e organizzazioni sovranazionali**: (1) intensità di GHG; e (2) benefici derivanti dagli investimenti soggetti a violazioni sociali.

Il gruppo Credem ha definito dei criteri per stabilire se l'investimento abbia un effetto negativo significativo sul relativo fattore di sostenibilità. Nel fissare tali criteri, il gruppo Credem ha fatto riferimento, ove possibile, al regolamento Delegato UE (EU) 2021/2139.

I titoli che non hanno soddisfatto i predetti criteri sono stati esclusi dall'universo investibile. Con riferimento agli investimenti allineati alla Tassonomia, la valutazione circa l'assenza di un danno significativo a nessuno degli altri obiettivi ambientali identificati dal Regolamento Tassonomia è avvenuto secondo i criteri stabiliti dalla normativa UE.

In questa fase, in relazione ad alcuni indicatori degli effetti negativi sulla sostenibilità, la disponibilità di dati è ancora molto limitata. Ciò considerato, anche al fine di evitare effetti distorsivi sulla selezione degli investimenti, la SGR ha deciso di non prendere in considerazione gli indicatori per i quali il livello di copertura dei dati non abbia raggiunto almeno un quarto degli emittenti presenti nell'universo investibile.

- *Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:*

La SGR ha verificato che ciascun investimento sostenibile fosse allineato con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani, tramite l'acquisizione di dati specifici su questo indicatore dal service provider terzo MainStreet Partners.

I titoli che sono risultati non allineati con tali Linee e Principi Guida sono stati esclusi dall'universo investibile.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

Durante il periodo di riferimento, il Fondo ha tenuto in considerazione i principali effetti negativi sulla sostenibilità degli investimenti unicamente al fine di determinare che tali investimenti non abbiano arrecato un danno significativo a nessun obiettivo di investimento sostenibile, secondo quanto illustrato nelle risposte precedenti.

In aggiunta a quanto sopra, si anticipa che il Fondo, a partire dal 1 gennaio 2023, ha altresì iniziato a prendere considerazione gli effetti negativi degli investimenti effettuati su alcuni specifici parametri di sostenibilità ambientali, al fine, più generale, di migliorare la *performance* del Fondo in relazione ai medesimi.

In particolare, i parametri di sostenibilità individuati, in via prioritaria, sono i seguenti: (a) carbon footprint; (b) emissioni di gas a effetto serra; (c) violazione dei principi del UN Global Compact e le Linee guida OCSE sulle multinazionali; (d) esposizione alle armi controverse; (e) esposizione a società attive nel settore dei combustibili fossili; (f) consumo e produzione di energia non rinnovabile, sulla base di dati forniti da provider terzi.

Pertanto, il prossimo rendiconto darà evidenza anche di tali dati.

I Principali effetti negativi sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

Quali sono stati i principali investimenti di questo prodotto finanziario?

Investimenti di maggiore entità	Settore	% di attivi	Paese
BOT ZC ST23 A EUR	Government Bonds	2,48%	Italy

L'elenco comprende gli investimenti che hanno costituito la quota maggiore di investimenti del prodotto finanziario durante il periodo di riferimento, ossia: i primi 15 investimenti del Fondo che rappresentato il 26,93% del portafoglio del Fondo.

Qual è stata la quota degli investimenti in materia di sostenibilità?

- **Qual è stata l'allocazione degli attivi?**

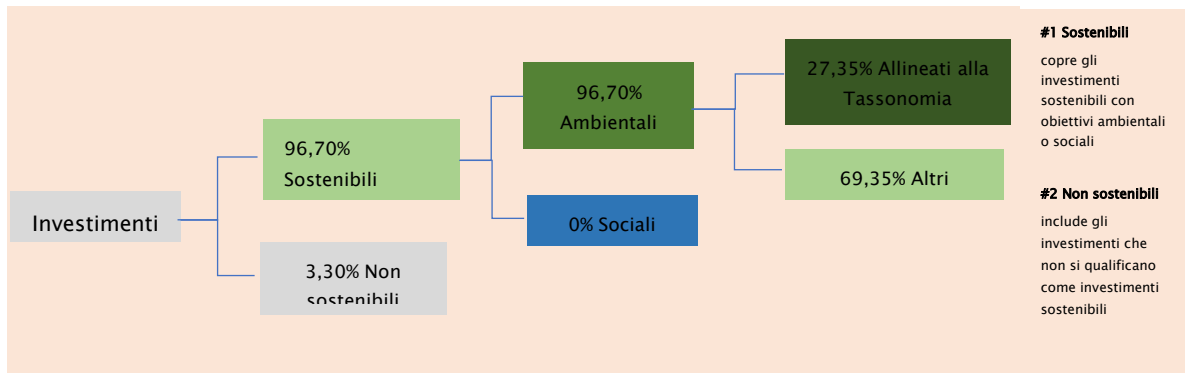

Nel periodo di riferimento, il Fondo ha investito il 96,70% degli attivi in investimenti sostenibili, in forma di (i) *green bond* e *sustainability bond* in cui è previsto l'impegno di destinare i proventi al finanziamento di attività o progetti che perseguono l'obiettivo della mitigazione del cambiamento climatico; (ii) strumenti finanziari di tipo azionario e/o obbligazionario emessi da società che contribuiscono al raggiungimento degli Obiettivi di Sviluppo Sostenibile (SGDs) definiti dall'ONU legati alla salvaguardia dell'ambiente; e (iii) da OICVM e FIA aperti classificati come prodotti finanziari di cui all'Articolo 9 del SFDR che abbiamo come obiettivo di investimento sostenibile la mitigazione del cambiamento climatico.

Al fine di contribuire a realizzare l'obiettivo ambientale della mitigazione del cambiamento climatico, il Fondo ha investito, altresì, una quota pari al 27,35% dell'attivo del Fondo in attività economiche allineate alla Tassonomia.

La restante quota del 72,65% è stata impegnata in investimenti che non si qualificano come investimenti sostenibili, o in depositi di denaro o liquidità o derivati.

Al fine di determinare la quota degli investimenti in attività economiche sostenibili allineate alla Tassonomia UE nel periodo di riferimento, la SGR ha utilizzato i dati forniti da *provider terzi*. Tenuto conto che, nell'anno 2022, gli emittenti non erano soggetti a obblighi di *disclosure* in relazione ai dati connessi all'allineamento alla Tassonomia, ai fini del predetto calcolo, i *provider terzi* hanno fatto ricorso, in via prevalente, a informazioni equivalenti ottenute direttamente da tali emittenti o da altre fonti, compresi dati rinvenuti da stime e valutazioni effettuate a partire dai dati disponibili. Ad ogni modo, le stime sono state effettuate dai *provider terzi* sulla base di una metodologia ragionata e secondo criteri di prudenza.

L' Asset allocation
Descrive la quota di investimenti in attività specifiche.

- In quali settori economici sono stati effettuati gli investimenti?**

In che misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Il Fondo ha investito il 27,35% degli attivi in investimenti sostenibili con un obiettivo ambientale allineati alla tassonomia dell'UE.

- Il prodotto finanziario ha investito in attività connesse al gas fossile e/o all'energia nucleare che erano conformi alla tassonomia dell'UE?**

Gas Fossile

SI NO

Energia Nucleare

SI NO

Le attività allineate alla tassonomia sono espresse in percentuale di:

- **fatturato**: riflette il carattere ecologico attuale delle imprese beneficiarie degli investimenti;

- **spese in conto capitale (CapEx)**: rivelano gli investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, utili per la transizione verso un'economia verde;

- **spese operative (OpEx)**: illustrano le attività operative verdi delle imprese beneficiarie degli investimenti

I due grafici che seguono mostrano in verde la percentuale di investimenti che erano allineati alla tassonomia dell'UE. Poiché non esiste una metodologia adeguata per determinare l'allineamento delle obbligazioni sovrane* alla tassonomia, il primo grafico mostra l'allineamento alla tassonomia in relazione a tutti gli investimenti del prodotto finanziario comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

*Ai fini dei grafici di cui sopra, per «obbligazioni sovrane» si intendono tutte le esposizioni sovrane.

Le attività abilitanti consentono direttamente ad altre attività di apportare un contributo sostanziale a un obiettivo ambientale.

Le attività di transizione sono attività per le quali non sono ancora disponibili alternative a basse emissioni di carbonio e che presentano, tra l'altro, livelli di emissione di gas a effetto serra corrispondenti alla migliore prestazione.

- **Qual era la quota degli investimenti effettuata in attività transitorie e abilitanti?**
In linea con quanto indicato nell'informativa pre-contrattuale, il fondo non ha effettuato investimenti in attività transitorie e abilitanti nel periodo di riferimento.

Quale era la quota di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?

Il Fondo ha investito 72,65% degli attivi in investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE.

Quali investimenti erano compresi nella categoria “Non sostenibili”, qual era il loro scopo ed esistevano garanzie minime di salvaguardia ambientale o sociale?

La categoria “Non sostenibili” comprende gli investimenti in depositi di denaro, liquidità e derivati.

I depositi di denaro e la liquidità, che hanno costituito una parte residuale del portafoglio pari a 3,30%, hanno avuto finalità di assicurare un minimo grado di liquidità al Fondo.

Il portafoglio ha fatto ricorso anche a derivati con la finalità di copertura rispetto ad alcuni dei rischi cui il portafoglio del Fondo è stato esposto.

Quali azioni sono state adottate per raggiungere l'obiettivo di investimento sostenibile durante il periodo di riferimento?

Al fine di ritenere soddisfatte le caratteristiche ambientali e sociali promosse dal Fondo, la SGR ha condotto un'attività di monitoraggio nei confronti degli emittenti e degli *asset manager* degli OICR in cui il Fondo ha investito durante il periodo di riferimento, in modo da assicurare il costante rispetto degli indicatori di sostenibilità.

- **How did this financial product perform compared with the broad market index?**
N/A

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Product Name: M&G (Lux) Investment Funds 1 - M&G (Lux) Sustainable Allocation Fund
Legal Entity Identifier: 549300G7EE7U31UKHL78

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes
 No

It made **sustainable investments with an environmental objective**: 67.2%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: 30.12%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The fund contributed to a sustainable economy by investing in assets supporting environmental and/or social goals, in particular climate change mitigation, in line with its sustainable investment objective. The strength of the fund's performance against this objective is evaluated in the sustainability indicators section below.

The alignment percentage indicated in the graphic below shows the allocation between sustainable investments made in pursuit of the sustainable investment objective and "Other" investments.

● How did the sustainability indicators perform?

As part of the climate focus of the fund, we aim to assess our holdings not only relative to their current carbon emissions and emission intensity but also on the basis of their climate transparency, governance and ambition as represented by clear reduction targets.

It is encouraging to see that a significant amount of holdings now have SBTi-aligned targets. These organisations are increasingly embedding sustainability-led approaches within their organisations that could help prevent the worst impacts of climate change and future-proof their business growth.

It is also encouraging to see that over half of fund holdings now consist of positive impact assets. Our allocation to attractively valued impact assets has increased in recent years as the pool of eligible investments has grown as companies and governments strive to adapt products and solutions to meet the world's social and environmental challenges.

The fund's declining weighted average carbon emissions intensity reflects the decisions made in the investment process and growing climate data accessibility to inform our decisions. The fund also holds several investments in renewable energy infrastructure and solution providers.

Sustainability Indicator Name	Value	Eligibility	Coverage
As at - 31 March 2023			
Change in CO2 emissions intensity over the previous three year period CAGR Corporate	-8.24 CAGR 3Y	71.60%	64.14%
Change in CO2 emissions intensity over the previous three year period CAGR Sovereign	-3.53 CAGR 3Y	21.33%	73.90%
Percentage (%) of sovereigns party to the Paris Agreement	73.90%	21.33%	73.90%
Weighted average carbon intensity (WACI) for the fund	59.14 tCO2e /€m sales	71.60%	88.44%
Percentage (%) of NAV with ratified Science-Based Targets (SBTs)	26.44%	83.46%	50.89%
Percentage (%) of corporate issuers participating in the Carbon Disclosure Project (CDP)	68.14%	71.60%	89.61%
Tonnes of CO2 emissions avoided by positive impact investments	385911148 tCO2e	83.47%	17.23%
Percentage (%) of sovereign ranked above the Social Progress Index (SPI) Global Average, which assesses how well a society provides its people with material needs, and does not have a negative 5 year trend	96.53%	21.33%	96.53%
Number of underserved people reached including patients treated, customers served etc. by positive impact investments	110.8 Million people	83.47%	26.60%
Percentage (%) of NAV invested in positive impact assets in the Fund	52.70%	100%	100%

- **...and compared to previous periods?**

The Fund is not yet able to provide comparison to a previous reporting period as this is the Fund's first SFDR Level 2 Periodic Report. The Fund will provide historic comparison in the next Periodic Report.

- **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

Sustainable investments that the Fund made did not cause significant harm to any environmental or social sustainable investment objective as they passed a series of tests, including:

1. Whether they represent significant exposure to businesses the Investment Manager considers harmful.
2. Principal Adverse Impact indicators considered to render the investment incompatible with sustainable investment (violations of the UN Global Compact Principles or the OECD Guidelines for Multinational Enterprises, social violations by sovereigns such as being subject to sanctions, negative effects on biodiversity sensitive areas).
3. Other Principal Adverse Impact indicators form part of a materiality assessment to understand whether any exposures were compatible with sustainable investment.

- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Investment Manager's research process included consideration of Principal Adverse Impact indicators for all investments where data was available (i.e. not just for sustainable investments), which allows the Investment Manager to make informed investment decisions.

The Fund's consideration of Principal Adverse Impact indicators was used as part of understanding the operating practices of the investments purchased by the Fund. Investments held by the Fund were then subject to ongoing monitoring and a quarterly review process.

Further information on the Principal Adverse Impact indicators which were taken into account by the Investment Manager can be found in the Annex to the Investment Manager's website disclosures for the Fund.

- **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

All investments purchased by the Fund passed the Investment Manager's good governance tests, and in addition, sustainable investments also passed tests to confirm they do no significant harm, as described above. These tests embed a consideration of the OECD Guidelines and UN Guiding Principles.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

For sustainable investments, principal adverse impacts are a key part of assessing such investments do not do significant harm as explained above. For other investments the Investment Manager's research process included consideration of Principal Adverse Impact indicators for all investments where data was available, which allows the Investment Manager to make informed investment decisions, as explained above.

Further information on the Principal Adverse Impact indicators which are taken into account by the Investment Manager can be found in the Annex to the Investment Manager's website disclosures for the Fund.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/04/2022 to 31/03/2023

Largest investments	Sector	% Assets	Country
INTER-AMERICAN DEVELOPMENT BANK	Activities of extraterritorial organisations and bodies	5.71%	SP
TREASURY BOND	Public administration and defence; compulsory social security	5.65%	US
GERMANY (FEDERAL REPUBLIC OF)	Public administration and defence; compulsory social security	2.54%	DE
INTER-AMERICAN DEVELOPMENT BANK	Activities of extraterritorial organisations and bodies	2.35%	SP
CHILE (REPUBLIC OF)	Public administration and defence; compulsory social security	2.17%	CL
COLOMBIA (REPUBLIC OF)	Public administration and defence; compulsory social security	2.11%	CO
INTERNATIONAL BANK FOR RECONSTRUCT	Activities of extraterritorial organisations and bodies	1.82%	SP
GERMANY (FEDERAL REPUBLIC OF)	Public administration and defence; compulsory social security	1.70%	DE
GREENCOAT RENEWABLES PLC	Financial and insurance activities	1.65%	IE
INTER-AMERICAN DEVELOPMENT BANK	Activities of extraterritorial organisations and bodies	1.58%	SP
OCTOPUS RENEWABLES INFRASTRUCTURE	Financial and insurance activities	1.58%	GB
UK CONV GILT	Public administration and defence; compulsory social security	1.39%	GB
GERMANY (FEDERAL REPUBLIC OF)	Public administration and defence; compulsory social security	1.31%	DE
CHILE (REPUBLIC OF)	Public administration and defence; compulsory social security	1.13%	CL
EUROPEAN INVESTMENT BANK	Financial and insurance activities	1.11%	SP

What was the proportion of sustainability-related investments?

In the SFDR Level 2 Pre-Contractual Disclosure (annex to the Fund Prospectus) the Fund committed to a minimum of 70% of the Fund to be invested in sustainable investments, in pursuit of the sustainable investment objective, with at least 20% in sustainable investments with a social objective and at least 30% in sustainable investments with an environmental objective.

As of 31 March 2023, 97.32% of the Net Asset Value of the Fund was in sustainable investments, which is above the minimum commitment of 70%. Whilst the fund did not commit to invest in investments aligned to the EU Taxonomy, 0.90% of the sustainable investments were aligned to the EU Taxonomy. 66.30% related to investments with environmental objectives and 30.12% related to investments with a social objective.

2.68 % of the Fund is comprised of "not sustainable" investments.

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The graphic below provides an overview of the asset allocation.

#1 Sustainable covers sustainable investments with environmental or social objectives.

#2 Not sustainable includes investments which do not qualify as sustainable investments.

In which economic sectors were the investments made?

The investment breakdown uses NACE (Nomenclature of Economic Activities) and is expressed as a % of Net Asset Value (NAV).

Economic sector	% Assets
Financial and insurance activities	21.55%
Public administration and defence; compulsory social security	20.47%
Manufacturing	18.59%
Activities of extraterritorial organisations and bodies	16.55%
Information and communication	5.85%
Other	5.76%
Real estate activities	2.42%
Electricity, gas, steam and air conditioning supply	2.32%
Human health and social work activities	1.97%
Construction	1.92%
Wholesale and retail trade; repair of motor vehicles and motorcycles	1.18%
Water supply; sewerage, waste management and remediation activities	0.53%
Education	0.45%
Professional, scientific and technical activities	0.44%

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to Taxonomy-aligned sustainable investments is 0%, the Fund is permitted to allocate to such investments, which would form part of its overall allocation to sustainable investments with environmental objectives.

The Fund held 0.90% in Taxonomy-aligned sustainable investments during the reference period. This percentage is determined by taking the quarter end figure for each quarter in the reference period and averaging it. The information was obtained from public disclosures.

No assurance from an auditor, third party or review was undertaken on the EU Taxonomy data.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- Yes:
- In fossil gas
- In nuclear energy
- No

1 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As there is no Taxonomy-alignment, there is no impact on the graph if sovereign bonds are excluded (i.e. the percentage of Taxonomy-aligned investments remains 0%) and the Management Company therefore believes that there is no need to mention this information.

- **What was the share of investments made in transitional and enabling activities?**

The share of the Fund's investments made in transitional activities was 0.02% and in enabling activities was 0.13% over the period. This compares to a minimum percentage commitment of 0% stated in the Fund's precontractual disclosure.

Activity	Percentage Investments
Share of transitional activities	0.02%
Share of enabling activities	0.13%

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Fund is not yet able to provide comparison to a previous reporting period as this is the Fund's first SFDR Level 2 Periodic Report. The Fund will provide historic comparison in the next Periodic Report.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

- **What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?**

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 66.30%. This compares to a minimum percentage commitment of 30% in environmentally sustainable investments (i.e., both aligned to the EU Taxonomy and not) stated in the Fund's precontractual disclosure.

- **What was the share of socially sustainable investments?**

The share of sustainable investments with a social objective was 30.12%. This compares to a minimum percentage commitment of 20% stated in the Fund's precontractual disclosure.

- **What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?**

During the reference period the Fund held varying levels of cash, near cash, FX and FX forwards as "Other" investments, for any purpose permitted by the Fund's investment policy. No minimum environmental or social safeguards are applied.

As part of the fund merger between the Fund and M&G (Lux) Conservative Allocation Fund on 21 October 2022, two sanctioned Russian-listed securities were transferred into the beneficial ownership of the Fund. As both funds have been prohibited from selling these assets, they have remained in a custody account of M&G (Lux) Conservative Allocation Fund.

- **What actions have been taken to attain the sustainable investment objective during the reference period?**

The Fund contributed to a sustainable economy by investing in assets supporting environmental and/or social goals, in particular climate change mitigation. Its compliance with the same is reported in the sustainability indicators above.

ESG engagements are also a key focus for the fund in order to help investment companies improve their impact and sustainability standards, to support the fund's sustainable investment objective. An example of an engagement carried out in 2022 was with Ball Corporation, the world's leading aluminium packaging specialist. The objective of the engagement was to encourage the firm's decarbonisation plans and push for increased ambition around scope 3 emissions. We met with the company's chief sustainability officer in May 2022 to discuss these matters. The company announced that it will be publishing a recycling roadmap in September 2022, aimed at ensuring a 1.5°C pathway for its Scope 3 emissions.

We divested from LG Corp in the beginning of 2023 following a downgrade in its MSCI ESG score due to governance related issues.

How did this financial product perform compared to the reference sustainable benchmark?

N/A. No reference benchmark was designated for the purpose of attaining the Fund's sustainable investment objective.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

- **How did the reference benchmark differ from a broad market index?**

N/A

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?**

N/A

- **How did this financial product perform compared with the reference benchmark?**

N/A

- **How did this financial product perform compared with the broad market index?**

N/A

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: MIROVA FUNDS - Mirova Euro Green and Sustainable Corporate Bond Fund

Legal entity identifier: 549300NGBY43BJCJ2T38

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input checked="" type="checkbox"/> Yes	<input type="radio"/> <input type="radio"/> <input type="checkbox"/> No
<input checked="" type="checkbox"/> It made sustainable investments with an environmental objective: 67.23% <ul style="list-style-type: none"> <input checked="" type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input checked="" type="checkbox"/> It made sustainable investments with a social objective: 22.71%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Fund is to invest in bonds from corporate issuers:

- whose economic activities contribute, or are to risingly contribute, positively through their products, services and/or practices to the achievement of one or

more of the United Nations Sustainable Development Goals (the “SDGs”), and/or –

- use of proceeds bonds whose purpose is to finance projects with a positive environmental and/or social impacts (green, social, green and social bonds).

The Fund aims at contributing to keeping the maximum global temperature rise to a maximum 2 degrees Celsius.

The Regulation (EU) 2020/852 (the “Taxonomy Regulation”) aims to establish the criteria for determining whether an economic activity is considered environmentally sustainable. This Fund may make investments in bonds issued by corporates or in use-of proceeds bonds which proceeds will be applied to finance) economic activities that contribute to the environmental objectives set out in the Article 9 of the Taxonomy Regulation: (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

To date, only two of the environmental objectives have been defined and only a limited number of activities are eligible to be screened against the EU technical screening criteria.

The alignment of the economics activities of the issuer (or financed by the use-of proceeds bonds) with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. Depending on the investment opportunities available, the Fund may contribute to any of the above environmental objectives and may not at all times contribute to all of the objectives.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective.

89.95% of the Fund’s net assets were aligned with sustainable investment objectives as of 31/12/2022. Alignment with EU Taxonomy amounted to 9.26%.

The indicators have not been subject to an assurance provided by an auditor or a review by a third party.

Some securities selected according to the approach to Impact and ESG assessments in effect before 31.12.2022 meet the criteria for managing the risks of obstruction to the SDGs (DNSH test) and good governance practices but may have a positive contribution assessed as low or unquantifiable.

As the analysis framework has been enhanced to date, the positive contribution of certain securities has been reviewed. An adjustment of the portfolios under the conditions set out in the investment process has been made.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

● **How did the sustainability indicators perform?**

Benchmark: BLOOMBERG EURO AGGREGATE CORPORATE TOTAL RETURN INDEX VALUE UNHEDGED EUR

The benchmark is not intended to be aligned with environmental and social ambitions as promoted by the fund.

SUSTAINABILITY OPINION BREAKDOWN*

in % of assets, cash equivalence excluded

The ESG Opinion is designed to assess whether the investment is compatible with the UN SDGs and is based upon the analysis of Mirova and ISS ESG, a third party. The opinion does not guarantee a profit or protect against a loss, and does not ensure the stability or safety of the overall portfolio.

CONTRIBUTION TO UN SUSTAINABLE DEVELOPMENT GOALS (SDGS)

in % of assets with Committed/positive opinions

Mirova pillars		Extent to which an asset contributes to the SDGs corresponding to each pillar	
		Fund	Index
Environment	CLIMATE STABILITY Limit greenhouse gas levels to stabilize global temperature rise under 2°C	54%	23%
	HEALTHY ECO-SYSTEMS Maintain ecologically sound landscape and seas for nature and people	28%	11%
	RESOURCE SECURITY Preserve stocks of natural resources through efficient and circular use	24%	13%
Social	BASIC NEEDS Basic services (food, water, energy, transport, health, etc.) for all	15%	11%
	WELL BEING Enhanced health education, justice and equality of opportunity for all	17%	11%
	DECENT WORK Secure socially inclusive jobs and working conditions for all	10%	8%

The United Nations adopted 17 Sustainable Goals (SDGs) in 2015, with an ambition to achieve them by 2030. Please see an overview relating to all SDGs (1-17) on the UN's website: www.un.org/sustainabledevelopment/sustainable-development-goals/. This chart displays to what extent an asset contributes to the UN Sustainable Development Goals ('SDGs'). Mirova has signed an agreement with Cambridge University, based on a research partnership focusing on sustainable development themes as well as the establishment of a task force in 2013, the Investors Leaders Group. To illustrate the main sustainability impacts of our investments, six impact pillars have been developed, three environmental and three social, for each asset (as displayed on the left). The same assets may contribute to several pillars / SDGs.

The percentages indicated represent the share of portfolio values (by weight) that contribute positively to the pillar concerned (companies with an ESG opinion "Committed" or "Positive" on the pillar). Our evaluation of the contribution is based both on the capacity of companies to offer products and services with positive impact and on the quality of their environmental and social practices across their value chain.
 * For more information on our methodologies, please refer to our Mirova website: <https://www.mirova.com/en/research>
 **In 2015, all countries around the world agreed on 17 universal sustainable development goals (SDG) to end poverty, combat inequality and injustice and fight against climate change between now and 2030.

ESTIMATED IMPACT ON GLOBAL AVERAGE INCREASE OF TEMPERATURE

	Fund	Index
	 1.5°C	 2.5-3°C
Induced Emissions <i>(tCO₂ / million € company value)</i>	113.3	181.9
Avoided Emissions <i>(tCO₂ / million € company value)</i>	316.2	51.5
Coverage rate <i>(% of holdings analysed)</i>	78%	91%

Overall fund AuM help to avoid

122,161 tCO₂

equivalent to

37,018 European households

In Europe, a household emits an average of 3.3 tCO₂/year for heating and electricity

or

71,859 Cars

In Europe, a standard car emits on average around 1.7 tCO₂/year

In 2015, Mirova and Carbone 4 jointly developed a method* which assesses carbon data in view of the specific challenges facing a low carbon economy. Carbon Impact Analytics (CIA).

Companies are initially assessed individually according to a specific sector framework. This method focuses on two main indicators:

- "induced" emissions arising from the "lifecycle" of a company's activities, taking into account both direct emissions and those of suppliers and products
- "avoided" emissions due to improvements in energy efficiency or "green" solutions

These indicators are enhanced with an assessment of corporate policies and decarbonisation targets.

Individual company assessments are then used to calculate the fund's alignment with a global warming pathway of 1.5°C to 5°C by 2100.

For more information about our methodologies, please refer to our Mirova website www.mirova.com/en/research/demonstrating-impact.

*As of 05/31/2022, this methodology has changed. The main change concerns how we determine the temperature (which now includes a qualitative analysis of the company's decarbonization strategy), and how we display the temperature (by ranges rather than exact 0.1 precision temperatures).

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainability analysis aims to identify the relevant residual environmental and social risks originating from issuers' activities and practices and assesses the quality of the issuer's measures to mitigate these risks (the "DNSH test"). Such analysis considers notably the degree of exposure of the investee company to certain sectors or activities that may be considered to be damaging for the environment and/or the society and exposure to relevant environmental or social controversies.

As a result of this qualitative analysis, the Investment Manager issues a binding opinion based on which the issuers whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution.

Therefore, over the reporting period, all investments in the Fund were complying with the Investment Manager's DNSH criteria.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the analysis of residual ESG risks conducted on each investee company, the Fund systematically assesses and monitors indicators that are deemed to indicate the presence of principal adverse impact (including consideration of data relating to the mandatory PAI indicators referred to in the consolidated Regulatory Technical Standards for assessment of sustainable investment in accordance with art. 2 (17) SFDR). When the data necessary for the calculation of certain PAI indicators are not available, the Investment Manager may use qualitative or quantitative proxies that cover themes similar to the PAI indicators in question.

Adverse impacts are prioritized according to the specificities of sectors and business models of issuers or project financed by the use of proceeds bond considered for investment by using a combination of criteria based on:

- analysis of the issuer's exposure or project financed by the bond to environmental impacts based on science-based data from international organisations (e.g. energy intensity, impacts on biodiversity, etc),
- analysis of the issuer's exposure or project financed by the bond to fundamental rights and employee matters through its locations, business model and supply chain organization (e.g. exposure to health and safety risks, exposure to countries with specific human rights risks, etc),
- analysis of the issuer's footprint (or footprint of the project financed by the bond) on local communities and consumers,
- screening of on-going or potential controversies.

Where the Investment Manager deems the issuer's processes and practices are insufficient to mitigate environmental, social and governance risks, notably with regards to the relevant PAIs, the investment's impact is deemed as negative which makes it ineligible for investment.

Further details can be found in the table hereunder, which lists the main indicators taken into account by Mirova when taking PAIs into account.

Adverse Sustainability indicator		How PAIs are taken into account by Mirova
Greenhouse gas emissions	1. GHG emissions	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions
	2. Carbon footprint	- Systematic integration in qualitative internal analysis
	3. GHG intensity of investee companies	
	4. Exposure to companies active in the fossil fuel sector	- Exclusion of companies active in the fossil fuel sector For companies involved in fossil fuel extraction, processing/refining, and trading, exclusion applies to companies with: • >5% of revenues from coal or oil, including unconventional oil, • >10% of revenues from unconventional gas. For companies that produce dedicated equipment/services for the fossil fuel sector, exclusion applies to companies with >50% of revenues from these equipment/services. For companies involved in electricity production (>10% of sales related to electricity production), exclusion applies to companies with a generation mix dominated by coal, with a carbon intensity >350 gCO ₂ /kWh.
	5. Share of non-renewable energy consumption and production	- Integration in qualitative internal analysis when relevant
	6. Energy consumption intensity per high impact climate sector	- Integration in qualitative internal analysis when relevant
Biodiversity	7. Activities negatively affecting biodiversity-sensitive areas	- Exclusion of companies or projects significantly harming biodiversity sensitive areas - Systematic integration in qualitative internal analysis - Part of controversy analysis
Water	8. Emissions to water	- Integration in qualitative internal analysis when relevant
Waste	9. Hazardous waste and radioactive waste ratio	- Integration in qualitative internal analysis when relevant
Social and Employee matters	10. Violations of UNGC principles and OECD guidelines for Multinational Enterprises	- Exclusion of companies violating UNGC and OECD principles - Systematic integration in qualitative internal analysis - Part of controversy analysis
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	- Exclusion for large companies, case-by-case for small companies or projects - Systematic integration in qualitative internal analysis - Engagement plans / ESAP with investees when relevant
	12. Unadjusted gender pay gap	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
	13. Board gender diversity	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
Additional PAI Indicators	4. Investments in companies without carbon emission reduction initiatives	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions - Systematic integration in qualitative internal analysis
	14. Number of identified cases of severe human rights issues and incidents	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis
	17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager screens investee companies against adherence with OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights.

The Investment Manager continuously reviews companies' track records and news flows to identify significant controversies. Companies' involvement and resolving measures are taken into account. Risks of potential breach may be monitored through engagement to obtain additional assurance.

Companies determined by the Investment Manager to be in serious breach of OECD Guidelines for Multinational Enterprises or UN Guiding Principles on Business and Human Rights are recognized as doing significant harm and are therefore rendered non-eligible.

As a consequence, over the reporting period, all investments were considered to be respectful with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

How did this financial product consider principal adverse impacts on sustainability factors?

PAI indicators are incorporated into the sustainability analysis framework and the results are part of the DNSH test. As described above, the DNSH test's result is a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. PAI indicators are therefore continuously considered by these financial products.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 31/12/2022

Largest investments	Sector	% Assets	Country
BBVASM 4.375% 10-29*	Fixed-rate bond	2.09%	Spain
SRBANK TR 07-27*	Floating-rate bond	1.58%	Norway

***Green Bonds**

Please note that the name of the investment and the percentage of assets may differ from the ones shown in the portfolio. The displayed country is the country of risk

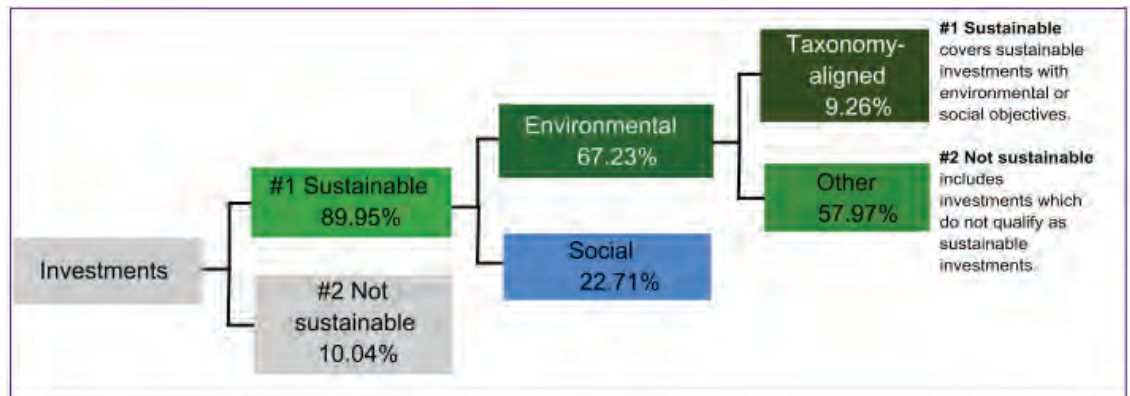

What was the proportion of sustainability-related investments?

The Fund aims at investing only in sustainable investments as defined in Article 2(17) SFDR. 89.95% of the Fund's net assets have been aligned with sustainable investment objectives as of 31/12/2022.

The Fund may use derivatives for hedging and investment purposes (authorised but very rarely used).

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

In which economic sectors were the investments made?

BREAKDOWN BY TYPE OF ISSUER	Fund %	Index	Fund Modified duration	Index
Government	0.3	-	-0.2	-

BCLASS Nomenclature. Bond futures are embedded in government bonds

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

As a result of its sustainable objective, this Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Regulation (EU) 2020/852 (the “Taxonomy Regulation”): (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

The alignment of the economic activities of each company with the above objectives (limited to the objective (a) as of today) is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. They may also stem from estimations in case when certain amount of information is missing.

The estimations are performed under conditions defined by the regulations and respect the principle of prudence. The methodology for collecting alignment data and the quality of available data are being improved. As a result, the alignment percentage provided is conservative.

9.26% of the Fund’s net assets are aligned with the EU taxonomy as of 31/12/2022.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with EU Taxonomy¹?**

Yes :

In fossil gas In nuclear energy

No

At the reporting date, based on the available reported and estimated issuer data, the management company did not identify any gas or nuclear taxonomy alignment in the investment portfolio.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 100% of the total investments.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The share of investments in transitional and enabling activities was 1.23%.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund has invested 67.23% in sustainable investments with an environmental objective that may include sustainable investments that are not aligned with the EU taxonomy.

The Investment Manager's sustainable impact assessment framework identifies certain activities that are not currently covered by the EU Taxonomy or considered as making a substantial contribution to environmental Taxonomy objectives.

This is affected by performing an overall sustainability assessment on each investment, which includes a review of positive impacts regarding three environmental themes: Climate Stability, Biodiversity and Circular Economy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

These themes aim at identifying issuers which activities or practices (or use of proceeds bonds which aim at financing projects):

- help develop low carbon energy, eco-efficiency, clean transportation, green building or align with an advanced decarbonation strategy; or
- support sustainable land use, land preservation and sustainable water management or align with an advanced biodiversity preservation strategy; or
- foster sustainable waste management or circular business model.

The Fund does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned to the EU Taxonomy.

What was the share of socially sustainable investments?

The Fund has invested 22.71% in issuances or issuers that contribute to tackling inequality or that foster social cohesion, social integration and labor relations, or an investment in human capital or economically or socially disadvantaged communities, provided that such investments do not significantly harm any of the environmental/social objectives and that the issuance or issuer follow good governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three social themes: Socio-economic development, Health wellness and Diversity inclusion.

These themes aim at identifying issuers which activities or practices (or use of proceeds bonds which aim at financing projects):

- help foster access to basic and sustainable services, local impact or promote advanced working conditions;
- support the development of healthcare, healthy nutrition, knowledge, education or safety;
- promote diversity and inclusion through dedicated products and services or through advanced practices targeting the workforce.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund aims at investing only in securities qualifying as sustainable investment.

For technical or hedging purposes, the Fund may hold cash or cash equivalents and derivatives for currency risk management purposes. Due to the technical and neutral nature of the asset, such instruments are not considered as investments and thus no minimum safeguards have been put in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

Engagement activity forms an integral part of Mirova's responsible investment approach.

Mirova's engagement strategy seeks to monitor and thrive to improve companies' products and practices from an environmental, social, and governance point of view. As a result, one of the core functions of the Sustainability Research team is engagement, both on individual and collaborative levels:

- Individual engagement: in which Mirova's ESG analysts interact one-on-one with the companies to monitor performance and progress on ESG topics, and to encourage improvement in their sustainability practices. The purpose of individual engagement is not only to ensure responsible practices in line with our standards, but also to promote better ESG practices and encourage the development of solutions for the major environmental and social challenges associated with each sector.
- Collaborative engagement: Mirova joins with other investors and representatives of civil society to identify controversial practices, encourage greater transparency and demand, where necessary, that companies change their practices.

Additionally, Mirova leverages its voting rights to further push companies towards the development of more sustainable portfolios and the adoption of best practices, by systematically exercising their voting rights based on an in-house voting policy that largely embeds the concepts of a sustainable-at-core, stakeholder-oriented governance. Proxy voting is used to convey messages during pre/post vote dialogue and via opposition to ad hoc items. Where possible, Mirova may co-sign or lead the filing of shareholder items.

Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment. Mirova is committed to promoting regulations, including legislative changes, standards or labels, and practices that support sustainable investment and create long-term value.

Further information in relation to engagement priorities and engagement policy carried out by Mirova can be found on the website at <https://www.mirova.com/en/research/voting-and-engagement>.

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

- *How did the reference benchmark differ from a broad market index?*
Not applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?*
Not applicable

- *How did this financial product perform compared with the reference benchmark?*
Not applicable

- *How did this financial product perform compared with the broad market index?*
Not applicable

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: **MIROVA FUNDS - Mirova Euro Sustainable Equity Fund**
 Legal entity identifier: 549300JITTGS73M7F683

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input checked="" type="checkbox"/> Yes	<input type="radio"/> <input type="radio"/> <input type="checkbox"/> No
<input checked="" type="checkbox"/> It made sustainable investments with an environmental objective : 52.61% <ul style="list-style-type: none"> <input checked="" type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input checked="" type="checkbox"/> It made sustainable investments with a social objective : 43.88%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Fund is to allocate the capital towards companies:

- that address opportunities linked to major sustainable themes such as biodiversity, climate, diversity human capital, health human development, and

- whose economic activities contribute positively through their products, services and/or practices to the achievement of one or more of the United Nations Sustainable Development Goals (the “SDGs”).

The Fund aims at contributing to keeping the maximum global temperature rise to a maximum 2 degrees Celsius.

The Regulation (EU) 2020/852 (the “Taxonomy Regulation”) aims to establish the criteria for determining whether an economic activity is considered environmentally sustainable. This Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Taxonomy Regulation: (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

To date, only two of the environmental objectives have been defined and only a limited number of activities are eligible to be screened against the EU technical screening criteria.

The alignment of the economic activities of each company with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. Depending on the investment opportunities available, the Fund may contribute to any of the above environmental objectives and may not at all times contribute to all of the objectives.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective.

96.49% of the Fund’s net assets were aligned with sustainable investment objectives as of 31/12/2022. Alignment with EU Taxonomy amounted to 5.61%.

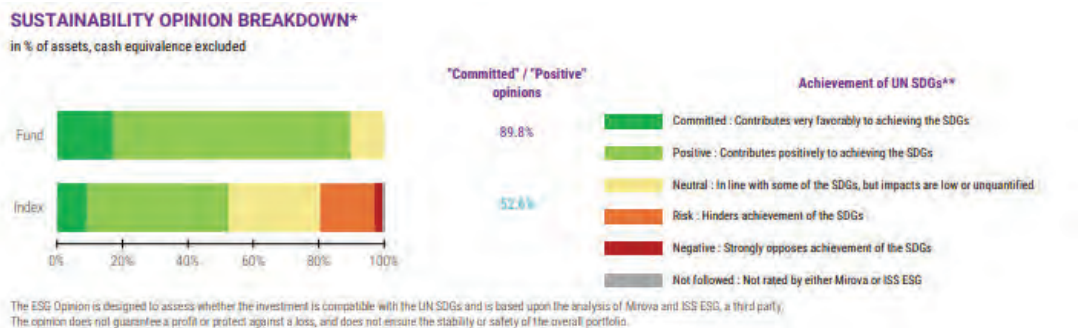

The indicators have not been subject to an assurance provided by an auditor or a review by a third party.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

● **How did the sustainability indicators perform?**

Benchmark: MSCI EMU DNR €

The benchmark is not intended to be aligned with environmental and social ambitions as promoted by the fund.

CONTRIBUTION TO UN SUSTAINABLE DEVELOPMENT GOALS (SDGs)

in % of assets with Committed/positive opinions

	Mirova pillars	Extent to which an asset contributes to the SDGs corresponding to each pillar	
		Fund	Index
Environment	CLIMATE STABILITY	67%	27%
	Limit greenhouse gas levels to stabilize global temperature rise under 2°C		 
	HEALTHY ECO-SYSTEMS	32%	12%
	Maintain ecologically sound landscape and seas for nature and people		 
Social	RESOURCE SECURITY	40%	17%
	Preserve stocks of natural resources through efficient and circular use		
	BASIC NEEDS	16%	12%
Basic services (food, water, energy, transport, health, etc.) for all		         	
WELL BEING	33%	23%	
Enhanced health education, justice and equality of opportunity for all		     	
DECENT WORK	37%	26%	
Secure socially inclusive jobs and working conditions for all		  	

The United Nations adopted 17 Sustainable Goals (SDGs) in 2015, with an ambition to achieve them by 2030. Please see an overview relating to all SDGs (1-17) on the UN's website: www.un.org/sustainabledevelopment/sustainable-development-goals/

This chart displays to what extent an asset contributes to the UN Sustainable Development Goals ("SDGs"). Mirova has signed an agreement with Cambridge University, based on a research partnership focusing on sustainable development themes as well as the establishment of a task force in 2013, the Investors' Leaders' Group. To illustrate the main sustainability impacts of our investments, six impact pillars have been developed, three environmental and three social, for each asset (as displayed on the left). The same assets may contribute to several pillars / SDGs.

The percentages indicated represent the share of portfolio values (by weight) that contribute positively to the pillar concerned (companies with an ESG opinion "Committed" or "Positive" on the pillar).

Our evaluation of the contribution is based both on the capacity of companies to offer products and services with positive impact and on the quality of their environmental and social practices across their value chain.

* For more information on our methodologies, please refer to our Mirova website: <https://www.mirova.com/en/research/>

**In 2015, all countries around the world agreed on 17 universal sustainable development goals (SDG) to end poverty, combat inequality and injustice and fight against climate change between now and 2030.

ESTIMATED IMPACT ON GLOBAL AVERAGE INCREASE OF TEMPERATURE

	Fund	Index
	 <2°C	 2.5-3°C
Induced Emissions (tCO ₂ / million € company value)	172.1	212.2
Avoided Emissions (tCO ₂ / million € company value)	25.3	17.3
Coverage rate (% of holdings analysed)	99%	99%

In 2015, Mirova and Carbone 4 jointly developed a method* which assesses carbon data in view of the specific challenges facing a low carbon economy, Carbon Impact Analytics (CIA).

Companies are initially assessed individually according to a specific sector framework. This method focuses on two main indicators:

- "induced" emissions arising from the "lifecycle" of a company's activities, taking into account both direct emissions and those of suppliers and products
- "avoided" emissions due to improvements in energy efficiency or "green" solutions

These indicators are enhanced with an assessment of corporate policies and decarbonisation targets.

Individual company assessments are then used to calculate the fund's alignment with a global warming pathway of 1.5°C to 5°C by 2100.

For more information about our methodologies, please refer to our Mirova website: www.mirova.com/en/research/demonstrating-impact/

*As of 05/31/2022, this methodology has changed. The main change concerns how we determine the temperature (which now includes a qualitative analysis of the company's decarbonization strategy), and how we display the temperature (by ranges rather than exact 0.1 precision temperatures).

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainability analysis aims to identify the relevant residual environmental and social risks originating from companies' activities and practices and assesses the quality of the company's measures to mitigate these risks (the "DNSH test"). Such analysis considers notably the degree of exposure of the investee company to certain sectors or activities that may be considered to be damaging for the environment and/or the society and exposure to relevant environmental or social controversies.

As a result of this qualitative analysis, the Investment Manager issues a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution.

Therefore, over the reporting period, all investment in the Fund were complying with the Investment Manager's DNSH criteria.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the analysis of residual ESG risks conducted on each investee company, the Fund systematically assesses and monitors indicators that are deemed to indicate the presence of principal adverse impact (including consideration of data relating to the mandatory PAI indicators referred to in the consolidated Regulatory Technical Standards for assessment of sustainable investment in accordance with art. 2 (17) SFDR). When the data necessary for the calculation of certain PAI indicators are not available, the Investment Manager may use qualitative or quantitative proxies that cover themes similar to the PAI indicators in question.

Adverse impacts are prioritized according to the specificities of sectors and business models of companies considered for investment by using a combination of criteria based on:

- analysis of the company's exposure to environmental impacts based on science-based data from international organizations (e.g. energy intensity, impacts on biodiversity, etc),
- analysis of the company's exposure to fundamental rights and employee matters through its locations, business model and supply chain organization (e.g. exposure to health and safety risks, exposure to countries with specific human rights risks, etc),
- analysis of the company's footprint on local communities and consumers,
- screening of on-going or potential controversies.

Where the Investment Manager deems the investee company's processes and practices are insufficient to mitigate environmental, social and governance risks, notably with regards to the relevant PAIs, the company's impact is deemed as negative which makes it ineligible for investment.

Further details can be found in the table hereunder, which lists the main indicators taken into account by Mirova when taking PAIs into account.

Adverse Sustainability indicator		How PAIs are taken into account by Mirova
Greenhouse gas emissions	1. GHG emissions	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions
	2. Carbon footprint	- Systematic integration in qualitative internal analysis
	3. GHG intensity of investee companies	
	4. Exposure to companies active in the fossil fuel sector	- Exclusion of companies active in the fossil fuel sector For companies involved in fossil fuel extraction, processing/refining, and trading, exclusion applies to companies with: <ul style="list-style-type: none"> • >5% of revenues from coal or oil, including unconventional oil, • >10% of revenues from unconventional gas. For companies that produce dedicated equipment/services for the fossil fuel sector, exclusion applies to companies with >50% of revenues from these equipment/services. For companies involved in electricity production (>10% of sales related to electricity production), exclusion applies to companies with a generation mix dominated by coal, with a carbon intensity >350 gCO ₂ /kWh.
	5. Share of non-renewable energy consumption and production	- Integration in qualitative internal analysis when relevant
	6. Energy consumption intensity per high impact climate sector	- Integration in qualitative internal analysis when relevant
Biodiversity	7. Activities negatively affecting biodiversity-sensitive areas	- Exclusion of companies or projects significantly harming biodiversity sensitive areas - Systematic integration in qualitative internal analysis - Part of controversy analysis
Water	8. Emissions to water	- Integration in qualitative internal analysis when relevant
Waste	9. Hazardous waste and radioactive waste ratio	- Integration in qualitative internal analysis when relevant
Social and Employee matters	10. Violations of UNGC principles and OECD guidelines for Multinational Enterprises	- Exclusion of companies violating UNGC and OECD principles - Systematic integration in qualitative internal analysis - Part of controversy analysis
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	- Exclusion for large companies, case-by-case for small companies or projects - Systematic integration in qualitative internal analysis - Engagement plans / ESAP with investees when relevant
	12. Unadjusted gender pay gap	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
	13. Board gender diversity	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	- Exclusion (0% sales threshold)
Additional PAI Indicators	4. Investments in companies without carbon emission reduction initiatives	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions - Systematic integration in qualitative internal analysis
	14. Number of identified cases of severe human rights issues and incidents	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis
	17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment manager screens investee companies against adherence with OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights.

The investment manager continuously reviews companies' track records and news flows to identify significant controversies. Companies' involvement and resolving measures are taken into account. Risks of potential breach may be monitored through engagement to obtain additional assurance.

Companies determined by the investment manager to be in serious breach of OECD Guidelines for Multinational Enterprises or UN Guiding Principles on Business and Human Rights are recognized as doing significant harm and are therefore rendered non-eligible.

Therefore, over the reporting period, all investments were considered to be respectful of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

How did this financial product consider principal adverse impacts on sustainability factors?

PAI indicators are incorporated into the sustainability analysis framework and the results are part of the DNSH test. As described above, the DNSH test's result is a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. PAI indicators are therefore continuously considered by these financial products.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 31/12/2022

MSCI Breakdown

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

As a result of its sustainable objective, this Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Regulation (EU) 2020/852 (the “Taxonomy Regulation”) : (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

The alignment of the economic activities of each company with the above objectives (limited to the objective (a) as of today) is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. They may also stem from estimations in case when certain amount of information is missing. The estimations are performed under conditions defined by the regulations and respect the principle of prudence. As a result, the alignment percentage provided is conservative.

5.61% of the Fund’s net assets are aligned with the EU taxonomy as of 31/12/2022.

● Did the financial product invest in fossil gas and/or nuclear energy related activities that comply with EU Taxonomy¹?

Yes :

In fossil gas In nuclear energy

No

At the reporting date, based on the available reported and estimated issuer data, the management company did not identify any gas or nuclear taxonomy alignment in the investment portfolio.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 100% of the total investments.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The share of investments in transitional and enabling activities was 1.92%.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund has invested 52.61% in sustainable investments with an environmental objective that may include sustainable investments that are not aligned with the EU taxonomy.

The Investment Manager's sustainable impact assessment framework identifies certain activities that are not currently covered by the EU Taxonomy or considered as making a substantial contribution to environmental Taxonomy objectives.

This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three environmental themes: Climate Stability, Biodiversity and Circular Economy.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

These themes aim at identifying companies which activities or practices:

- help develop low carbon energy, eco-efficiency, clean transportation, green building or align with an advanced decarbonation strategy; or
- support sustainable land use, land preservation and sustainable water management or align with an advanced biodiversity preservation strategy; or
- foster sustainable waste management or circular business model.

The Fund does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned to the EU Taxonomy.

What was the share of socially sustainable investments?

The Fund has invested 43.88% in companies that contribute to tackling inequality or that foster social cohesion, social integration and labor relations, or an investment in human capital or economically or socially disadvantaged communities, provided that such investments do not significantly harm any of the environmental/social objectives and that the investee companies follow good governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three social themes: Socio-economic development, Health wellness and Diversity inclusion.

These themes aim at identifying companies which activities or practices:

- help foster access to basic and sustainable services, local impact or promote advanced working conditions;
- support the development of healthcare, healthy nutrition, knowledge, education or safety;
- promote diversity and inclusion through dedicated products and services or through advanced practices targeting the workforce.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund aims at investing only in equity securities qualifying as sustainable investment.

For technical or hedging purposes, the Fund may hold cash or cash equivalents and derivatives for currency risk management purposes. Due to the technical and neutral nature of the asset, such instruments are not considered as investments and thus no minimum safeguards have been put in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

Engagement activity forms an integral part of Mirova's responsible investment approach.

Mirova's engagement strategy seeks to monitor and thrive to improve companies' products and practices from an environmental, social, and governance point of view. As a result, one of the core functions of the Sustainability Research team is engagement, both on individual and collaborative levels:

Individual engagement: in which Mirova's ESG analysts interact one-on-one with the companies to monitor performance and progress on ESG topics, and to encourage improvement in their sustainability practices. The purpose of individual engagement is not only to ensure responsible practices in line with our standards, but also to promote better ESG practices and encourage the development of solutions for the major environmental and social challenges associated with each sector.

Collaborative engagement: Mirova joins with other investors and representatives of civil society to identify controversial practices, encourage greater transparency and demand, where necessary, that companies change their practices.

Additionally, Mirova leverages its voting rights to further push companies towards the development of more sustainable portfolios and the adoption of best practices, by systematically exercising their voting rights based on an in-house voting policy that largely embeds the concepts of a sustainable-at-core, stakeholder-oriented governance. Proxy voting is used to convey messages during pre/post vote dialogue and via opposition to ad hoc items. Where possible, Mirova may co-sign or lead the filing of shareholder items.

Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment. Mirova is committed to promoting regulations, including legislative changes, standards or labels, and practices that support sustainable investment and create long-term value.

Further information in relation to engagement priorities and engagement policy carried out by Mirova can be found on the website at <https://www.mirova.com/en/research/voting-and-engagement>.

How did this financial product perform compared to the reference sustainable benchmark?

Not Applicable

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

- *How did the reference benchmark differ from a broad market index?*
Not Applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?*

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: **MIROVA FUNDS - Mirova Global Climate Ambition Equity Fund**
 Legal entity identifier: 54930071Q8WMCP1ZLH72

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Did this financial product have a sustainable investment objective?	
<input checked="" type="checkbox"/> <input checked="" type="checkbox"/> <input checked="" type="checkbox"/> Yes	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> No
<input checked="" type="checkbox"/> It made sustainable investments with an environmental objective : 37.88% <ul style="list-style-type: none"> <input checked="" type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input checked="" type="checkbox"/> It made sustainable investments with a social objective : 46.53%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Fund is to allocate the capital towards companies:

- that address opportunities linked to major sustainable themes such as biodiversity, climate, diversity human capital, health human development, and

- whose economic activities contribute positively through their products, services and/or practices to the achievement of one or more of the United Nations Sustainable Development Goals (the “SDGs”).

The Fund aims at contributing to keeping the maximum global temperature rise to a maximum 2 degrees Celsius.

The Regulation (EU) 2020/852 (the “Taxonomy Regulation”) aims to establish the criteria for determining whether an economic activity is considered environmentally sustainable. This Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Taxonomy Regulation: (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

To date, only two of the environmental objectives have been defined and only a limited number of activities are eligible to be screened against the EU technical screening criteria.

The alignment of the economic activities of each company with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. Depending on the investment opportunities available, the Fund may contribute to any of the above environmental objectives and may not at all times contribute to all of the objectives.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective.

84.42% of the Fund’s net assets were aligned with sustainable investment objectives as of 31/12/2022. Alignment with EU Taxonomy amounted to 11.84%.

The indicators have not been subject to an assurance provided by an auditor or a review by a third party.

Some securities selected according to the approach to Impact and ESG assessments in effect before 31.12.2022 meet the criteria for managing the risks of obstruction to the SDGs (DNSH test) and good governance practices but may have a positive contribution assessed as low or unquantifiable.

As the analysis framework has been enhanced to date, the positive contribution of certain securities has been reviewed. An adjustment of the portfolios under the conditions set out in the investment process has been made.

● ***How did the sustainability indicators perform?***

Benchmark: MSCI WORLD NET TOTAL RETURN EUR INDEX

The benchmark is not intended to be aligned with environmental and social ambitions as promoted by the fund.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

SUSTAINABILITY OPINION BREAKDOWN*

in % of assets, cash equivalence excluded

The ESG Opinion is designed to assess whether the investment is compatible with the UN SDGs and is based upon the analysis of Mirova and ISS ESG, a third party. The opinion does not guarantee a profit or protect against a loss, and does not ensure the stability or safety of the overall portfolio.

CONTRIBUTION TO UN SUSTAINABLE DEVELOPMENT GOALS (SDGS)

in % of assets with Committed/positive opinions

Mirova pillars		Extent to which an asset contributes to the SDGs corresponding to each pillar	
		Fund	Index
Environment	CLIMATE STABILITY Limit greenhouse gas levels to stabilize global temperature rise under 2°C	40%	17%
	HEALTHY ECO-SYSTEMS Maintain ecologically sound landscape and seas for nature and people	16%	8%
	RESOURCE SECURITY Preserve stocks of natural resources through efficient and circular use	20%	7%
	Social		
BASIC NEEDS Basic services (food, water, energy, transport, health, etc.) for all	26%	11%	
WELL BEING Enhanced health education, justice and equality of opportunity for all	27%	16%	
DECENT WORK Secure socially inclusive jobs and working conditions for all	10%	9%	

The United Nations adopted 17 Sustainable Goals (SDGs) in 2015, with an ambition to achieve them by 2030. Please see an overview relating to all SDGs (1-17) on the UN's website: www.un.org/sustainabledevelopment/sustainable-development-goals/. This chart displays to what extent an asset contributes to the UN Sustainable Development Goals ("SDGs"). Mirova has signed an agreement with Cambridge University, based on a research partnership focusing on sustainable development themes as well as the establishment of a task force in 2013, the Investors Leaders Group. To illustrate the main sustainability impacts of our investments, six impact pillars have been developed, three environmental and three social, for each asset (as displayed on the left). The same assets may contribute to several pillars / SDGs.

The percentages indicated represent the share of portfolio values (by weight) that contribute positively to the pillar concerned (companies with an ESG opinion "Committed" or "Positive" on the pillar). Our evaluation of the contribution is based both on the capacity of companies to offer products and services with positive impact and on the quality of their environmental and social practices across their value chain.

* For more information on our methodologies, please refer to our Mirova website: <https://www.mirova.com/en/research>

**In 2015, all countries around the world agreed on 17 universal sustainable development goals (SDG) to end poverty, combat inequality and injustice and fight against climate change between now and 2030.

ESTIMATED IMPACT ON GLOBAL AVERAGE INCREASE OF TEMPERATURE

	Fund	Index
	<2°C	3.5-4°C
Induced Emissions (tCO ₂ / million € company value)	75.1	142.0
Avoided Emissions (tCO ₂ / million € company value)	22.0	8.1
Coverage rate (% of holdings analysed)	98%	99%

In 2015, Mirova and Carbone 4 jointly developed a method* which assesses carbon data in view of the specific challenges facing a low carbon economy. Carbon Impact Analytics (CIA).

Companies are initially assessed individually according to a specific sector framework. This method focuses on two main indicators:

- "induced" emissions arising from the "lifecycle" of a company's activities, taking into account both direct emissions and those of suppliers and products
- "avoided" emissions due to improvements in energy efficiency or "green" solutions

These indicators are enhanced with an assessment of corporate policies and decarbonisation targets.

Individual company assessments are then used to calculate the fund's alignment with a global warming pathway of 1.5°C to 5°C by 2100.

For more information about our methodologies, please refer to our Mirova website www.mirova.com/en/research/demonstrating-impact.

*As of 05/31/2022, this methodology has changed. The main change concerns how we determine the temperature (which now includes a qualitative analysis of the company's decarbonization strategy), and how we display the temperature (by ranges rather than exact 0.1 precision temperatures).

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainability analysis aims to identify the relevant residual environmental and social risks originating from companies' activities and practices and assesses the quality of the company's measures to mitigate these risks (the "DNSH test"). Such analysis considers notably the degree of exposure of the investee company to certain sectors or activities that may be considered to be damaging for the environment and/or the society and exposure to relevant environmental or social controversies.

As a result of this qualitative analysis, the Investment Manager issues a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution.

Therefore, over the reporting period, all investments in the Fund were complying with the Investment Manager's DNSH criteria.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the analysis of residual ESG risks conducted on each investee company, the Fund systematically assesses and monitors indicators that are deemed to indicate the presence of principal adverse impact (including consideration of data relating to the mandatory PAI indicators referred to in the consolidated Regulatory Technical Standards for assessment of sustainable investment in accordance with art. 2 (17) SFDR). When the data necessary for the calculation of certain PAI indicators are not available, the Investment Manager may use qualitative or quantitative proxies that cover themes similar to the PAI indicators in question.

Adverse impacts are prioritized according to the specificities of sectors and business models of companies considered for investment by using a combination of criteria based on:

- analysis of the company's exposure to environmental impacts based on science-based data from international organisations (e.g. energy intensity, impacts on biodiversity, etc),
- analysis of the company's exposure to fundamental rights and employee matters through its locations, business model and supply chain organization (e.g. exposure to health and safety risks, exposure to countries with specific human rights risks, etc),
- analysis of the company's footprint on local communities and consumers,
- screening of on-going or potential controversies.

Where the Investment Manager deems the investee company's processes and practices are insufficient to mitigate environmental, social and governance risks, notably with regards to the relevant PAIs, the company's impact is deemed as negative which makes it ineligible for investment.

Further details can be found in the table hereunder, which lists the main indicators taken into account by Mirova when taking PAIs into account.

Adverse Sustainability indicator		How PAIs are taken into account by Mirova
Greenhouse gas emissions	1. GHG emissions	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions
	2. Carbon footprint	- Systematic integration in qualitative internal analysis
	3. GHG intensity of investee companies	
	4. Exposure to companies active in the fossil fuel sector	- Exclusion of companies active in the fossil fuel sector For companies involved in fossil fuel extraction, processing/refining, and trading, exclusion applies to companies with: • >5% of revenues from coal or oil, including unconventional oil, • >10% of revenues from unconventional gas. For companies that produce dedicated equipment/services for the fossil fuel sector, exclusion applies to companies with >50% of revenues from these equipment/services. For companies involved in electricity production (>10% of sales related to electricity production), exclusion applies to companies with a generation mix dominated by coal, with a carbon intensity >350 gCO ₂ /kWh.
	5. Share of non-renewable energy consumption and production	- Integration in qualitative internal analysis when relevant
	6. Energy consumption intensity per high impact climate sector	- Integration in qualitative internal analysis when relevant
Biodiversity	7. Activities negatively affecting biodiversity-sensitive areas	- Exclusion of companies or projects significantly harming biodiversity sensitive areas - Systematic integration in qualitative internal analysis - Part of controversy analysis
Water	8. Emissions to water	- Integration in qualitative internal analysis when relevant
Waste	9. Hazardous waste and radioactive waste ratio	- Integration in qualitative internal analysis when relevant
Social and Employee matters	10. Violations of UNGC principles and OECD guidelines for Multinational Enterprises	- Exclusion of companies violating UNGC and OECD principles - Systematic integration in qualitative internal analysis - Part of controversy analysis
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	- Exclusion for large companies, case-by-case for small companies or projects - Systematic integration in qualitative internal analysis - Engagement plans / ESAP with investees when relevant
	12. Unadjusted gender pay gap	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
	13. Board gender diversity	- Systematic integration of gender equality in qualitative internal analysis - Engagement plans / ESAP with investees
Additional PAI Indicators	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	- Exclusion (0% sales threshold)
	4. Investments in companies without carbon emission reduction initiatives	- Exclusion of the most carbon intensive entities and companies with no or insufficient plan to reduce GHG emissions - Systematic integration in qualitative internal analysis
	14. Number of identified cases of severe human rights issues and incidents	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis
	17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws	- Exclusion of companies with severe human rights issues and incidents - Systematic integration in qualitative internal analysis - Part of controversy analysis

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager screens investee companies against adherence with OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights.

The Investment Manager continuously reviews companies' track records and news flows to identify significant controversies. Companies' involvement and resolving measures are taken into account. Risks of potential breach may be monitored through engagement to obtain additional assurance.

Companies determined by the Investment Manager to be in serious breach of OECD Guidelines for Multinational Enterprises or UN Guiding Principles on Business and Human Rights are recognized as doing significant harm and are therefore rendered non-eligible.

As a consequence, over the reporting period, all investments were considered to be respectful with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

How did this financial product consider principal adverse impacts on sustainability factors?

PAI indicators are incorporated into the sustainability analysis framework and the results are part of the DNSH test. As described above, the DNSH test's result is a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. PAI indicators are therefore continuously considered by these financial products.

As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 100% of the total investments.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The share of investments in transitional and enabling activities was 6.14%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund has invested 37.88% in sustainable investments with an environmental objective that may include sustainable investments that are not aligned with the EU taxonomy.

The Investment Manager's sustainable impact assessment framework identifies certain activities that are not currently covered by the EU Taxonomy or considered as making a substantial contribution to environmental Taxonomy objectives.

This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three environmental themes: Climate Stability, Biodiversity and Circular Economy.

These themes aim at identifying companies which activities or practices:

- help develop low carbon energy, eco-efficiency, clean transportation, green building or align with an advanced decarbonation strategy; or
- support sustainable land use, land preservation and sustainable water management or align with an advanced biodiversity preservation strategy; or
- foster sustainable waste management or circular business model.

The Fund does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned to the EU Taxonomy.

What was the share of socially sustainable investments?

The Fund has invested 46.53% in companies that contribute to tackling inequality or that foster social cohesion, social integration and labor relations, or an investment in human capital or economically or socially disadvantaged communities, provided that such investments do not significantly harm any of the environmental/social objectives and that the investee companies follow good governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance.

This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three social themes: Socio-economic development, Health wellness and Diversity inclusion.

These themes aim at identifying companies which activities or practices:

- help foster access to basic and sustainable services, local impact or promote advanced working conditions;
- support the development of healthcare, healthy nutrition, knowledge, education or safety;
- promote diversity and inclusion through dedicated products and services or through advanced practices targeting the workforce.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund aims at investing only in securities qualifying as sustainable investment.

For technical or hedging purposes, the Fund may hold cash or cash equivalents and derivatives for currency risk management purposes. Due to the technical and neutral nature of the asset, such instruments are not considered as investments and thus no minimum safeguards have been put in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

Engagement activity forms an integral part of Mirova's responsible investment approach.

Mirova's engagement strategy seeks to monitor and thrive to improve companies' products and practices from an environmental, social, and governance point of view. As a result, one of the core functions of the Sustainability Research team is engagement, both on individual and collaborative levels:

- Individual engagement: in which Mirova's ESG analysts interact one-on-one with the companies to monitor performance and progress on ESG topics, and to encourage improvement in their sustainability practices. The purpose of individual engagement is not only to ensure responsible practices in line with our standards, but also to promote better ESG practices and encourage the development of solutions for the major environmental and social challenges associated with each sector.
- Collaborative engagement: Mirova joins with other investors and representatives of civil society to identify controversial practices, encourage greater transparency and demand, where necessary, that companies change their practices.

Additionally, Mirova leverages its voting rights to further push companies towards the development of more sustainable portfolios and the adoption of best practices, by systematically exercising their voting rights based on an in-house voting policy that largely embeds the concepts of a sustainable-at-core, stakeholder-oriented governance. Proxy voting is used to convey messages during pre/post vote dialogue and via opposition to ad hoc items. Where possible, Mirova may co-sign or lead the filing of shareholder items.

Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment. Mirova is committed to promoting regulations, including legislative changes, standards or labels, and practices that support sustainable investment and create long-term value.

Further information in relation to engagement priorities and engagement policy carried out by Mirova can be found on the website at <https://www.mirova.com/en/research/voting-and-engagement>.

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

- *How did the reference benchmark differ from a broad market index?*
Not applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?*
Not applicable

- *How did this financial product perform compared with the reference benchmark?*
Not applicable

- *How did this financial product perform compared with the broad market index?*
Not applicable

Modello di informativa periodica per i prodotti finanziari di cui all'articolo 8, paragrafi 1, 2 e 2 bis, del regolamento (UE) 2019/2088 e all'articolo 6, primo comma, del regolamento (UE) 2020/852

Nome del prodotto: Muzinich Global High Yield Low Carbon Credit Fund

Identificativo della persona giuridica: 49300MBB0IKQASDXP90

Caratteristiche ambientali e/o sociali

Questo prodotto finanziario aveva un obiettivo di investimento sostenibile?

Sì

Ha effettuato **investimenti sostenibili con un obiettivo ambientale:** ___%

in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE

in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE

Ha effettuato **investimenti sostenibili con un obiettivo sociale:** ___%

No

Ha promosso **caratteristiche ambientali/sociali (A/S)** e pur non avendo come obiettivo un investimento sostenibile, aveva una quota del 3,04% di investimenti sostenibili

con un obiettivo ambientale in attività economiche considerate ecosostenibili conformemente alla tassonomia dell'UE

con un obiettivo ambientale in attività economiche che non sono considerate ecosostenibili conformemente alla tassonomia dell'UE

con un obiettivo sociale

Ha promosso caratteristiche A/S, ma **non ha effettuato alcun investimento sostenibile**

Si intende per **investimento sostenibile** un investimento in un'attività economica che contribuisce a un obiettivo ambientale o sociale, purché tale investimento non arrechi un danno significativo a nessun obiettivo ambientale o sociale e l'impresa beneficiaria degli investimenti segua prassi di buona governance.

La **tassonomia dell'UE** è un sistema di classificazione istituito dal regolamento (UE) 2020/852, che stabilisce un elenco di **attività economiche ecosostenibili**. Tale regolamento non stabilisce un elenco di attività economiche socialmente sostenibili. Gli investimenti sostenibili con un obiettivo ambientale potrebbero essere allineati o no alla tassonomia.

In che misura sono state soddisfatte le caratteristiche ambientali e/o sociali promosse da questo prodotto finanziario?

Questo prodotto finanziario ha promosso determinate caratteristiche ambientali e/o sociali nel suo portafoglio applicando un elenco di esclusione settoriale e determinati criteri di condotta per evitare investimenti in società che il Gestore degli Investimenti considera fundamentalmente non sostenibili. Questo prodotto finanziario si conforma inoltre a un obiettivo di intensità di carbonio media ponderata (WACI) per rimanere almeno il 40% al di sotto di quella dell'indice di riferimento del prodotto finanziario. Inoltre, gli investimenti in portafoglio sono tenuti a seguire pratiche di buona governance.

Gli **indicatori di sostenibilità** misurano il raggiungimento delle caratteristiche ambientali o sociali promosse dal prodotto finanziario.

● **Qual è stata la prestazione degli indicatori di sostenibilità?**

Gli indicatori di sostenibilità del prodotto finanziario hanno avuto la seguente prestazione:

Indicatore di sostenibilità	Prestazione dell'indicatore di sostenibilità
Percentuale dei ricavi di un singolo emittente che può essere ottenuta da specifiche attività commerciali (ad esempio, la produzione di armi controverse).	<p>Alla fine di ciascuno dei quattro trimestri del periodo di riferimento, questo prodotto finanziario:</p> <ul style="list-style-type: none"> • deteneva 0 emittenti (0% in termini di ponderazione) coinvolti nella fabbricazione finale di armi controverse • deteneva 0 emittenti (0% in termini di ponderazione) che generavano più del 10% dei ricavi dalla produzione di tabacco • deteneva 0 emittenti (0% in termini di ponderazione) che generavano più del 10% dei ricavi dall'estrazione di combustibili fossili convenzionali e non convenzionali • deteneva 0 emittenti (0% in termini di ponderazione) che generavano più del 10% dei ricavi dall'estrazione del carbone o dalla produzione di elettricità legata al carbone, o emittenti con un massimo del 30% di ricavi legati al carbone che non si erano impegnati pubblicamente a smantellare i loro attivi di carbone entro il 2025.
Allineamento dell'emittente alle norme riconosciute e/o agli standard internazionali relativi al rispetto dei diritti umani, ai rapporti di lavoro, alla protezione da gravi danni ambientali e alle norme in materia di frode e/o corruzione grave.	<p>Il Gestore degli Investimenti ha utilizzato questi indicatori per segnalare gli emittenti che potenzialmente violano i suoi criteri interni di idoneità ESG sulla condotta aziendale. Gli emittenti segnalati dai fornitori indipendenti di dati ESG del Gestore degli Investimenti poiché potenzialmente in contrasto con tali norme o standard sono stati discussi dal Comitato di idoneità ESG del Gestore degli Investimenti. Alla fine di ciascuno dei quattro trimestri del periodo di riferimento, questo prodotto finanziario deteneva 0 emittenti (o un'esposizione dello 0,06% in termini di ponderazione) che il Comitato di idoneità ESG del Gestore degli Investimenti considerava a rischio di grave violazione di norme o standard riconosciuti in materia di diritti umani, rapporti di lavoro, protezione da gravi danni ambientali e frode e/o corruzione grave.</p>
Limiti al punteggio ESG e alla copertura della ricerca	<p>Alla fine di ciascuno dei quattro trimestri del periodo di riferimento, questo prodotto finanziario:</p> <ul style="list-style-type: none"> • deteneva 0 emittenti (0% in termini di ponderazione) con un rating di rischio ESG pari o superiore a 40, come specificato dalla politica ESG • aveva una media ponderata del rating di rischio ESG inferiore a 30, come specificato dalla politica ESG • ha mantenuto un portafoglio che, escludendo le disponibilità liquide, era coperto per oltre il 90% da un fornitore indipendente di dati ESG.
Punteggio delle controversie ESG, che misura la gravità degli incidenti legati alla sostenibilità di un emittente.	<p>Il Gestore degli Investimenti ha monitorato il punteggio delle controversie ESG degli emittenti in portafoglio nell'ambito del suo processo di ricerca e monitoraggio continuo per identificare le società che potrebbero presentare rischi eccessivi per gli emittenti. Tuttavia questi indicatori non sono utilizzati come elementi vincolanti della politica ESG di questo prodotto d'investimento. La quota di partecipazioni del fondo con un punteggio delle controversie di 5/5, calcolata come media delle quattro percentuali di fine trimestre nel periodo di riferimento, è pari a 0.06% degli attivi in gestione a causa di una "violazione passiva" di una posizione esistente.</p>
Indicatori dei principali effetti negativi secondo la definizione dell'SFDR.	<p>Il Gestore degli Investimenti ha considerato i principali effetti negativi delle sue decisioni di investimento sui fattori di sostenibilità. I risultati di tali considerazioni sono presentati nell'Allegato I annesso al presente documento.</p>

Margine percentuale tra l'intensità di carbonio media ponderata del portafoglio del prodotto finanziario e quella di un universo investibile comparabile di titoli, per determinare se il prodotto finanziario soddisfa o viola i suoi criteri di intensità di carbonio.

L'intensità di carbonio media ponderata di questo prodotto finanziario è rimasta inferiore di oltre il 10% (cioè meno intensiva in carbonio) rispetto a un universo investibile comparabile di titoli rappresentato dall'indice di riferimento per tutto il periodo di investimento, come illustrato nel grafico seguente.

Non è stato designato un benchmark di riferimento per il raggiungimento delle caratteristiche ambientali o sociali promosse da questo prodotto finanziario, tuttavia è stato utilizzato un indice di riferimento per misurare e pubblicare il raggiungimento dell'obiettivo WACI. Il benchmark di riferimento utilizzato da questo prodotto finanziario è un indice mainstream ed è utilizzato solo per il confronto delle caratteristiche ambientali.

L'obiettivo WACI di questo prodotto finanziario è stato aumentato da un delta del 10% inferiore all'indice di riferimento a un delta del 40% nel febbraio del 2022.

L'indice utilizzato è l'ICE BofA Global High Yield Constrained Index (HWOC) ed è stato scelto come universo d'investimento rappresentativo della strategia d'investimento di questo prodotto finanziario. La linea grigia delta ("Δ") mostra la differenza tra l'intensità di carbonio media ponderata di questo prodotto finanziario e quella dell'indice di riferimento, che dovrebbe rimanere al di sopra del "target minimo WACI".

● **...e rispetto ai periodi precedenti?**

Non applicabile, in quanto si tratta del primo periodo di riferimento per il quale il Gestore degli Investimenti presenta una relazione.

● **Quali erano gli obiettivi degli Investimenti sostenibili che il prodotto finanziario in parte ha realizzato e in che modo l'investimento sostenibile ha contribuito a tali obiettivi?**

Questo prodotto d'investimento non aveva l'obiettivo ambientale di investire in attività economiche che si qualificano come ecosostenibili secondo la tassonomia dell'UE o che non si allineano alla tassonomia dell'UE, né in attività socialmente sostenibili. Tuttavia, il prodotto ha effettuato alcuni investimenti che rientrano nella definizione di attività commerciali allineate alla tassonomia dell'UE con attività di mitigazione e/o adattamento al clima.

In che modo gli investimenti sostenibili che il prodotto finanziario in parte ha realizzato non hanno arrecato un danno significativo a nessun obiettivo di investimento sostenibile sotto il profilo ambientale o sociale?

Nel corso del periodo di riferimento, il Gestore degli Investimenti ha preso in considerazione alcuni criteri di condotta aziendale relativi ai diritti umani, ai diritti del lavoro, alla tutela dell'ambiente e alle pratiche di governance attraverso il processo di due diligence e di monitoraggio continuo, al fine di garantire che le partecipazioni non danneggiassero in modo significativo gli obiettivi ambientali o sociali.

In che modo si è tenuto conto degli indicatori degli effetti negativi sui fattori di sostenibilità?

Nel corso del periodo di riferimento, il Gestore degli Investimenti ha preso in considerazione i principali effetti negativi ("PAI") sui fattori di sostenibilità al momento di prendere le decisioni di investimento relative a questo prodotto finanziario, nell'ambito della due diligence, della ricerca e del monitoraggio continuo dei singoli emittenti e attraverso l'impegno con alcuni emittenti. Il Gestore degli Investimenti ha preso in considerazione i PAI monitorando gli indicatori obbligatori di cui alla Tabella 1 dell'Allegato 1 del regolamento delegato (UE) 2022/1288 della Commissione in relazione alle norme tecniche di regolamentazione che integrano l'SFDR. Ulteriori informazioni sulla considerazione dei fattori PAI sono disponibili alla fine di questo documento.

Gli investimenti sostenibili erano allineati con le linee guida OCSE destinate alle imprese multinazionali e con i Principi guida delle Nazioni Unite su imprese e diritti umani? Descrizione particolareggiata:

Il Gestore degli Investimenti considera l'allineamento degli emittenti con queste linee guida e principi come parte del suo processo di ricerca degli investimenti. Il Gestore degli Investimenti ha utilizzato indicatori forniti da fornitori indipendenti di dati ESG che segnalano gli emittenti che potenzialmente violano le linee guida dell'OCSE destinate alle imprese multinazionali e i Principi guida delle Nazioni Unite su imprese e diritti umani, che a loro volta violerebbero i suoi criteri interni di idoneità ESG sulla condotta aziendale. Gli emittenti segnalati sono stati discussi dal Comitato di idoneità ESG del Gestore degli Investimenti. Il Gestore degli Investimenti ritiene che gli investimenti effettuati nel corso del periodo di riferimento siano conformi a tali linee guida e principi.

Durante il periodo d'investimento questo prodotto finanziario è stato sottoposto a screening su base trimestrale per determinare l'allineamento con tali linee guida. Il Gestore degli Investimenti non ha ritenuto che nel periodo di riferimento si siano verificate gravi violazioni da parte delle partecipazioni a questo prodotto finanziario.

La tassonomia dell'UE stabilisce il principio "non arrecare un danno significativo", in base al quale gli investimenti allineati alla tassonomia non dovrebbero arrecare un danno significativo agli obiettivi della tassonomia dell'UE, ed è corredata di criteri specifici dell'Unione.

Il principio "non arrecare un danno significativo" si applica solo agli investimenti sottostanti il prodotto finanziario che tengono conto dei criteri dell'Unione per le attività economiche ecosostenibili. Gli investimenti sottostanti la parte restante di questo prodotto finanziario non tengono conto dei criteri dell'Unione per le attività economiche ecosostenibili.

Nessun altro investimento sostenibile deve arrecare un danno significativo agli obiettivi ambientali o sociali.

In che modo questo prodotto finanziario ha preso in considerazione i principali effetti negativi sui fattori di sostenibilità?

I **principali effetti negativi** sono gli effetti negativi più significativi delle decisioni di investimento sui fattori di sostenibilità relativi a problematiche ambientali, sociali e concernenti il personale, il rispetto dei diritti umani e le questioni relative alla lotta alla corruzione attiva e passiva.

Il Gestore degli Investimenti ha preso in considerazione i PAI sui fattori di sostenibilità quando ha adottato le decisioni di investimento relative a questo prodotto finanziario attraverso una combinazione di decisioni di allocazione di attivi, esclusioni o sottopesi a livello di settore o di società, esclusioni basate sulla condotta, coinvolgimento degli emittenti e l'applicazione di un obiettivo di riduzione dell'intensità di carbonio. Gli elementi vincolanti della politica ESG di questo prodotto finanziario si riferiscono direttamente alla mitigazione dei PAI. Il Gestore degli Investimenti prende in considerazione altri PAI nell'ambito del suo processo di ricerca sugli investimenti, compresa la sua metodologia proprietaria di punteggio ESG, e/o delle attività di engagement. Il Gestore degli Investimenti ha classificato i PAI nella tabella sottostante secondo una priorità "bassa", "media" o "elevata", in base all'importanza che attribuisce **a ciascun fattore, alla qualità o alla copertura dei dati generalmente disponibili su tali fattori** e alla capacità di influenzare materialmente le società in portafoglio su tali fattori attraverso l'engagement. La politica ESG di questo prodotto finanziario ha affrontato direttamente i PAI ad alta priorità escludendo o limitando l'esposizione agli emittenti rilevanti.

In particolare, in relazione a questo prodotto finanziario, il Gestore degli Investimenti considera i fattori PAI elencati nella tabella seguente. Il Gestore degli Investimenti si procura i dati PAI da fornitori indipendenti di dati ESG e indirettamente da altre fonti di dati ESG, come i punteggi sulle controversie. I dati sui fattori PAI relativi a questo prodotto finanziario sono disponibili alla fine del presente Allegato.

PAI considerato	Priorità	Azione/i chiave relativa/e ai PAI
Emissioni GHG	Elevata	1) Il presente prodotto finanziario escludeva gli emittenti direttamente coinvolti in entità che traevano più del 10% dei loro ricavi annuali dall'estrazione di carbone termico e/o dalla produzione di energia da carbone termico, fatta salva una possibilità per le entità che il Gestore degli Investimenti riteneva avessero un piano di transizione credibile per ridurre la loro dipendenza o esposizione al carbone termico a favore di forme di energia a minore intensità di carbonio, come le energie rinnovabili. 2) Il Gestore degli Investimenti ha mantenuto un obiettivo WACI al fine di ridurre l'intensità di carbonio complessiva di questo prodotto finanziario rispetto a un indice di riferimento scelto.
Impronta di carbonio	Elevata	
Intensità di gas serra delle imprese beneficiarie degli investimenti	Elevata	
Esposizione ad attività nel settore dei combustibili fossili	Elevata	
Consumo e produzione di energie non rinnovabili	Media	Il Gestore degli Investimenti ha monitorato questi PAI attraverso rapporti mensili sulle emissioni di carbonio del portafoglio, che includono i mix energetici delle società in portafoglio e sono collegati all'obiettivo di efficienza di carbonio di questo prodotto finanziario. Il Gestore degli Investimenti ha effettuato attività di engagement con alcuni emittenti laddove ritiene che vi sia l'opportunità per l'emittente di mitigare il proprio impatto su questo fattore.
Intensità del consumo energetico per settore ad alto impatto climatico	Bassa	
Attività che incidono negativamente sulle aree sensibili sotto il profilo della biodiversità	Media	Il Gestore degli Investimenti monitora le controversie relative a questo fattore PAI e può scegliere di coinvolgere emittenti che non forniscono un'informativa adeguata, o di gestire i rischi relativi a questo fattore PAI. Il periodo di riferimento rappresenta il primo anno in cui il Gestore degli Investimenti ha monitorato formalmente questo PAI. Il Gestore degli Investimenti prenderà in considerazione ulteriori azioni per mitigarlo una volta che avrà potuto confrontare i diversi investimenti su un periodo di ricerca più lungo. In alcune circostanze il Gestore degli Investimenti può decidere di rifiutare un'opportunità
Emissioni in acqua	Bassa	
Tasso di rifiuti pericolosi	Bassa	

		di investimento o di disinvestire da entità che causano gravi effetti negativi su questo fattore. Principali effetti
Violazione dei principi del Global Compact delle Nazioni Unite e delle linee guida dell'Organizzazione per la cooperazione e lo sviluppo economico (OCSE) destinate alle imprese multinazionali	Elevata	Nei casi in cui il Gestore degli Investimenti o il suo fornitore indipendente di dati ESG ritenga che un emittente abbia violato gravemente i principi UNGC e le linee guida dell'OCSE destinate alle imprese multinazionali, è stato chiesto al Comitato di idoneità ESG interno del Gestore degli Investimenti di stabilire se tale emittente debba rimanere idoneo all'investimento in questo prodotto finanziario. Le decisioni del Comitato di idoneità vengono registrate e attuate tramite il team di rischio e i gestori di portafoglio del Gestore degli Investimenti.
Politiche, procedure e meccanismi di conformità per monitorare la conformità ai principi del Global Compact delle Nazioni Unite e alle linee guida OCSE destinate alle imprese multinazionali	Elevata	
Divario retributivo di genere non corretto	Media	Il Gestore degli Investimenti monitora le controversie relative a questo fattore PAI e può scegliere di coinvolgere emittenti che non forniscono un'informativa adeguata, o di gestire i rischi relativi a questo fattore PAI. Il periodo di riferimento rappresenta il primo anno in cui il Gestore degli Investimenti ha monitorato formalmente questo PAI. Il Gestore degli Investimenti prenderà in considerazione ulteriori azioni per mitigarlo una volta che avrà potuto confrontare i diversi investimenti su un periodo di ricerca più lungo. In alcune circostanze il Gestore degli Investimenti può decidere di rifiutare un'opportunità di investimento o di disinvestire da entità che causano gravi effetti negativi su questo fattore. Principali effetti.
Diversità di genere nel consiglio	Media	
Esposizione ad armi controverse	Elevata	
Investimenti effettuati in imprese che non adottano iniziative per ridurre le emissioni di carbonio	Media	
Insufficiente protezione degli informatori	Media	
Assenza di una politica in materia di diritti umani	Elevata	
Assenza di politiche di lotta alla corruzione attiva e passiva	Elevata	

Quali sono stati i principali investimenti di questo prodotto finanziario?

Investimenti di maggiore entità	Settore	% di attivi	Paese
Treasury Bill	Amministrazione pubblica e difesa; assicurazione sociale obbligatoria	2,22%	US
Royal Caribbean Cruises	Trasporto e magazzinaggio	1,20%	US
Onemain Finance Corp	Attività finanziarie e assicurative	1,06%	US
Carnival Corp	Trasporto e magazzinaggio	1,05%	US
Tenet Healthcare Corp	Attività dei servizi sanitari e di assistenza sociale	1,03%	US
US Treasury N/b	Amministrazione pubblica e difesa; assicurazione sociale obbligatoria	0,95%	US
Csc Holdings Llc	Informazione e comunicazione	0,84%	US
Navient Corp	Attività finanziarie e assicurative	0,79%	US
Cco Hldgs Llc/cap Corp	Informazione e comunicazione	0,76%	US
Service Corp Intl	Altre attività di servizi	0,75%	US
Arabian Centres Sukuk Ii	Attività immobiliari	0,74%	SA
Caesars Entertain Inc	Arte, spettacoli e tempo libero	0,72%	US
Virgin Media Vendor Fin	Informazione e comunicazione	0,70%	IE
Ford Motor Company	Attività manifatturiere	0,68%	US
Service Properties Trust	Attività immobiliari	0,68%	US

L'elenco comprende gli investimenti che hanno costituito la **quota maggiore di investimenti** del prodotto finanziario durante il periodo di riferimento, ossia:

1° gennaio 2022 – 31 dicembre 2022

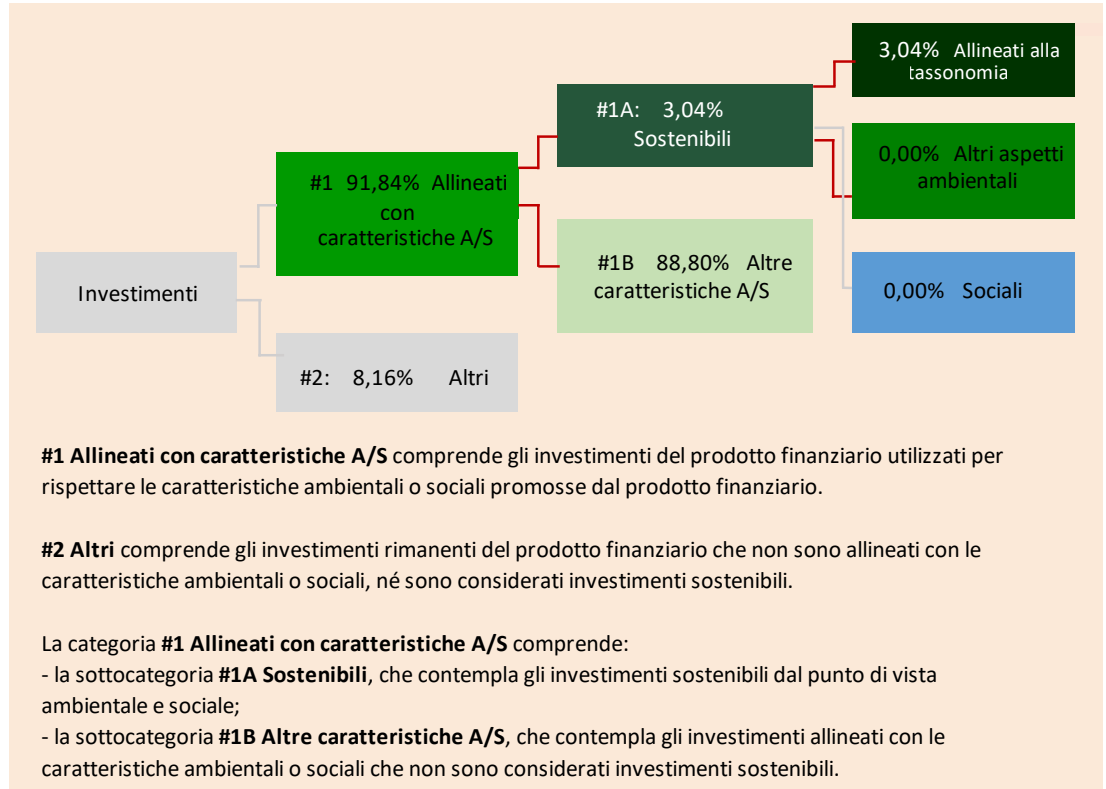

Le percentuali di attivi indicate sono calcolate come allocazione media agli emittenti al 31/03/2022, 30/06/2022, 30/09/2022 e 31/12/2022.

Qual è stata la quota degli investimenti in materia di sostenibilità?

La quota di investimenti legati alla sostenibilità per questo prodotto finanziario nel corso del periodo di riferimento è illustrata nel grafico seguente.

Qual è stata l'allocazione degli attivi?

In quali settori economici sono stati effettuati gli investimenti?

L'allocazione settoriale è calcolata come allocazione media di questo prodotto finanziario al 31/03/2022, 30/06/2022, 30/09/2022 e 31/12/2022. I calcoli escludono le allocazioni in contanti.

In quale misura gli investimenti sostenibili con un obiettivo ambientale erano allineati alla tassonomia dell'UE?

Questo prodotto finanziario non ha fissato un'allocazione minima per gli investimenti sostenibili allineati alla tassonomia dell'UE. Tuttavia, ha effettuato alcuni investimenti allineati alla tassonomia dell'UE, come illustrato di seguito.

Il prodotto finanziario ha investito in attività legate al gas fossile e/o all'energia nucleare conformi alla tassonomia dell'UE¹?

Sì _____

In gas fossile

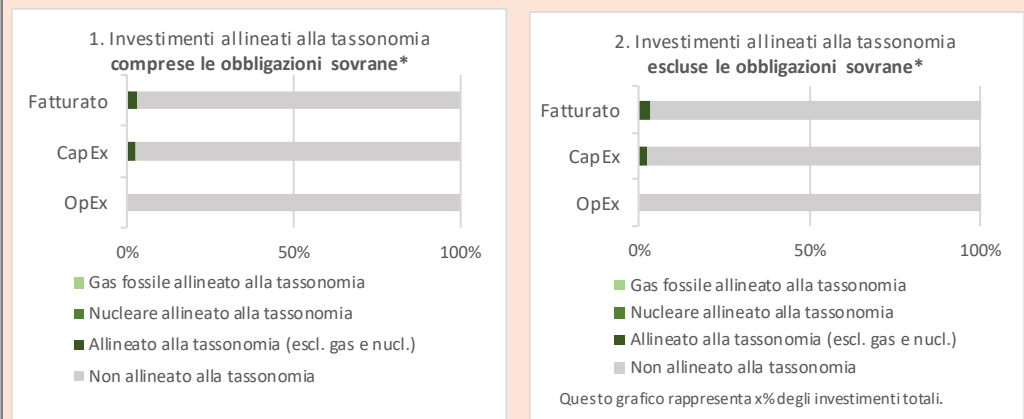

In energia nucleare

No

Le attività allineate alla tassonomia sono espresse in percentuale di:

- **fatturato**: riflette il carattere ecologico attuale delle imprese beneficiarie degli investimenti;
- **spese in conto capitale (CapEx)**: rivelano gli investimenti verdi effettuati dalle imprese beneficiarie degli investimenti, utili per la transizione verso un'economia verde;
- **spese operative (OpEx)**: illustrano le attività operative verdi delle imprese beneficiarie degli investimenti.

I due grafici che seguono mostrano in verde la percentuale di investimenti che erano allineati alla tassonomia dell'UE. Poiché non esiste una metodologia adeguata per determinare l'allineamento delle obbligazioni sovrane* alla tassonomia, il primo grafico mostra l'allineamento alla tassonomia in relazione a tutti gli investimenti del prodotto finanziario comprese le obbligazioni sovrane, mentre il secondo grafico mostra l'allineamento alla tassonomia solo in relazione agli investimenti del prodotto finanziario diversi dalle obbligazioni sovrane.

*Ai fini dei grafici di cui sopra, per "obbligazioni sovrane" si intendono tutte le esposizioni sovrane.

1. Investimenti allineati alla tassonomia comprese le obbligazioni sovrane*			
	OpEx	CapEx	Fatturato
Gas fossile allineato alla tassonomia	0,00%	0,00%	0,00%
Nucleare allineato alla tassonomia	0,00%	0,06%	0,01%
Allineato alla tassonomia (escl. gas e nucl.)	0,00%	2,28%	3,03%
Non allineato alla tassonomia	100,00%	97,66%	96,96%

2. Investimenti allineati alla tassonomia escluse le obbligazioni sovrane*			
	OpEx	CapEx	Fatturato
Gas fossile allineato alla tassonomia	0,00%	0,00%	0,00%
Nucleare allineato alla tassonomia	0,00%	0,06%	0,01%
Allineato alla tassonomia (escl. gas e nucl.)	0,00%	2,36%	3,14%
Non allineato alla tassonomia	100,00%	97,58%	96,85%

¹Le attività legate al gas fossile e/o al nucleare saranno conformi alla tassonomia dell'UE solo se contribuiranno a limitare i cambiamenti climatici ("mitigazione dei cambiamenti climatici") e non arrecheranno danni significativi ad alcun obiettivo della tassonomia dell'UE - si veda la nota esplicativa sul margine sinistro. I criteri completi per le attività economiche legate all'energia fossile e nucleare conformi alla tassonomia dell'UE sono stabiliti nel regolamento delegato (UE) 2022/1214 della Commissione.

I dati di allineamento alla tassonomia dell'UE sono calcolati come allocazione media di questo prodotto finanziario al 31/03/2022, 30/06/2022, 30/09/2022 e 31/12/2022. I calcoli escludono le allocazioni in contanti. L'allineamento alla tassonomia del gas fossile e/o dell'energia nucleare comprende qualsiasi emittente che abbia ricavi superiori allo 0% derivanti da tali settori.

● **Qual era la quota degli investimenti effettuati in attività transitorie e abilitanti?**

Questo prodotto finanziario ha effettuato investimenti in attività di transizione e/o abilitanti come segue:

Investimenti in attività di transizione e abilitanti	
Attività di transizione	0,64%
Attività abilitanti	0,00%

Questi dati di allineamento alla tassonomia sono calcolati come allocazione media di questo prodotto finanziario al 31/03/2022, 30/06/2022, 30/09/2022 e 31/12/2022. I calcoli escludono le allocazioni in contanti.

● **Qual è l'esito del raffronto della percentuale di investimenti che erano allineati alla tassonomia dell'UE rispetto ai precedenti periodi di riferimento?**

Non applicabile, in quanto si tratta del primo periodo per il quale il Gestore degli Investimenti presenta una relazione su questo prodotto finanziario.

Sono investimenti sostenibili con un obiettivo ambientale che **non tengono conto dei criteri** per le attività economiche ecosostenibili a norma del regolamento (UE) 2020/852.

● **Qual era la quota di investimenti sostenibili con un obiettivo ambientale non allineati alla tassonomia dell'UE?**

Non applicabile, in quanto questo prodotto finanziario non ha effettuato investimenti sostenibili non allineati con la tassonomia UE.

● **Qual era la quota di investimenti socialmente sostenibili?**

Non applicabile, in quanto questo prodotto finanziario non ha effettuato investimenti socialmente sostenibili.

● **Quali investimenti erano compresi nella categoria "Altri", qual era il loro scopo ed esistevano garanzie minime di salvaguardia ambientale o sociale??**

Gli investimenti inclusi nella voce "#2 Altri" rappresentano liquidità ed equivalenti di liquidità, strumenti del mercato monetario e alcuni strumenti di copertura, compresi i derivati. Tali investimenti sono detenuti per una serie di motivi, tra cui, a titolo esemplificativo, la gestione del rischio e/o per garantire un'adeguata liquidità, copertura e garanzia. Il Gestore degli Investimenti ritiene che queste partecipazioni non si riferiscano direttamente a un emittente specifico e quindi non siano collegate alla gestione dei rischi di sostenibilità e/o dei PAI. Il Gestore degli Investimenti non ritiene pertanto che sia possibile effettuare una determinazione ragionevole su considerazioni relative a salvaguardie ambientali o sociali minime, in parte a caUS della mancanza di dati rilevanti relativi a tali strumenti.

Quali azioni sono state adottate per soddisfare le caratteristiche ambientali e/o sociali durante il periodo di riferimento?

Il Gestore degli Investimenti effettua uno screening dell'universo investibile di questo prodotto finanziario su base trimestrale per produrre elenchi di emittenti idonei o non idonei all'investimento. Tali elenchi sono stati programmati nei sistemi di trade compliance del Gestore degli Investimenti per evitare investimenti in emittenti non idonei e per monitorare e identificare qualsiasi potenziale violazione passiva dei criteri.

Il Gestore degli Investimenti ha redatto rapporti mensili sull'impronta di carbonio per quilibrio presente esteso prodotto finanziario per garantire il rispetto del suo obiettivo di intensità di carbonio. Il Gestore degli Investimenti viene informato di eventuali violazioni per garantire che vengano rettificate entro la fine del mese successivo. Al Gestore degli Investimenti viene fornito un elenco degli emittenti con le emissioni più elevate in portafoglio, in modo da poter prendere decisioni informate in merito al mantenimento di un'intensità di carbonio inferiore agli obiettivi dichiarati.

Qual è stata la prestazione di questo prodotto finanziario rispetto all'indice di riferimento?

Non è stato designato un benchmark di riferimento per il raggiungimento delle caratteristiche ambientali o sociali promosse da questo prodotto finanziario. Tuttavia è stato utilizzato un indice di riferimento per misurare e pubblicare il raggiungimento dell'obiettivo WACI. Il benchmark di riferimento utilizzato da questo prodotto finanziario è un indice mainstream ed è utilizzato solo per il confronto delle caratteristiche ambientali. L'indice mainstream non considera i fattori ESG e non è quindi coerente con le caratteristiche ambientali e/o sociali promosse dal prodotto finanziario. L'allocazione degli attivi del portafoglio di questo prodotto finanziario non è vincolata ad alcun benchmark.

Gli **indici di riferimento** sono indici atti a misurare se il prodotto finanziario rispetti le caratteristiche ambientali o sociali che promuove.

Template periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: **Pictet - Clean Energy Transition**

Legal entity identifier: **549300R01K3C2PFOGH13**

SUSTAINABLE INVESTMENT OBJECTIVE

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good Governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

DID THIS FINANCIAL PRODUCT HAVE A SUSTAINABLE INVESTMENT OBJECTIVE?	
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No
<input checked="" type="checkbox"/> It made sustainable investments with an environmental objective: 88.08% <ul style="list-style-type: none"> <input checked="" type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input checked="" type="checkbox"/> It made sustainable investments with a social objective: 10.46%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Note: Sustainable investments were calculated on a pass/fail basis including labelled bonds (where relevant to the asset class) and securities from issuers with minimum 20% exposure (as measured by revenue, EBIT, enterprise value or similar metrics) to economic activities that contributed to at least one environmental or social objective.

To what extent was the sustainable investment objective of this financial product met?

Main ways in which the fund achieved its sustainable objective:

- **Positive impact:**
 The fund achieved a positive environmental impact by investing at least two-thirds of its total assets/total wealth in shares issued companies that support the structural change towards a sustainable, low-carbon economy, helping to reduce greenhouse gas emissions and air pollution.
 No reference index has been designated for the purpose of attaining the sustainable investment objective.
 The fund invested mainly in companies whose significant proportion of their activities are related to, but not limited to, renewable energy, technologies that reduce CO2 emissions or energy consumption in areas such as industry, buildings or transportation, and enabling technologies and infrastructure that are critical preconditions for the transition to a low carbon economy, such as energy storage, power semiconductors, investments into the power grid and other relevant economic activities.
 Eligible securities included equities issued by companies with a significant proportion of activities (as measured by revenue, EBIT, enterprise value or similar metrics) derived from such economic activities.
- **Norms- and values-based exclusions:**
 The fund excluded issuers that have significant activities with adverse impacts on society or the environment or are in severe breach of international norms as detailed below:

Company Exclusions based on Controversial Activities and Revenue Thresholds

Activity	Revenue Thresholds
Fossil Fuels and Nuclear Energy	
Thermal Coal Extraction	>25%
Thermal Coal Power Generation	>25%
Oil & Gas Production	>25%
Oil Sands Extraction	>10%
Shale Energy Extraction	>10%
Off-shore Arctic Oil & Gas Exploration	>10%
Nuclear Power Generation	>50%
Weapons	
Production of controversial weapons[1]	>0%
Military Contracting Weapons	>10%
Military Contracting Weapon-Related Products and/or Services	>50%
Small Arms Civilian Customers (Assault Weapons)	>10%
Small Arms Civilian Customers (Non-Assault Weapons)	>10%
Small Arms Military/Law Enforcement Customers	>25%
Small Arms Key Components	>25%
Other Controversial Activities	
Adult Entertainment Production	>10%
Gambling Operations	>10%
Genetically Modified Plants and Seeds Development	>25%
Genetically Modified Plants and Seeds Growth	>25%
Pesticides Production	>10%
Pesticides Retail	>10%
Tobacco Products Production	>10%
Company Exclusions based on Breaches of International Norms	
Companies in severe breach of UN Global Compact Principles on human rights, labour standards, environmental protection and anti-corruption	Excluded
Country Exclusions	
Countries (i) listed as State Sponsors of Terrorism as defined by the Office of Foreign Assets Control[2] or (ii) subject to EU financial sanctions targeting central banks and/or State-Owned enterprises (SOEs)	Excluded
Countries (i) classified as very high or high risk in the Fragile State Index or (ii) affected by violent conflict as defined by the World Bank	Yes
Countries (i) listed under "alert" on the Fragile State Index or (ii) subject to export related sanctions by the EU	Watchlist[3]

[1] Controversial weapons include anti-personnel mines, cluster munitions, biological & chemical weapons (including white phosphorous) and nuclear weapons from countries not signatory to the Treaty on the Non-Proliferation of Nuclear Weapons (NPT).

[2] "State Sponsors of Terrorism" is a designation applied by the United States Department of State to countries that repeatedly provided support to acts of international terrorism.

[3] In addition to hard exclusions, Pictet Asset Management maintains a watchlist including countries that require additional due diligence by investment teams prior to investment.

For further details please refer to Pictet Asset Management's Responsible Investment policy (Appendix B).

In addition to the above exclusions based on Pictet Asset Management's Responsible Investment policy, the strategy applied stricter exclusion limits based on internal guidelines.

- **Active ownership:**

The fund methodically exercised its voting rights. The fund also engaged with the management of companies on material ESG issues.

- **Sustainable Investments:**

Pictet Asset Management used a proprietary framework as well as the objectives of the EU Taxonomy to define sustainable investments.

The fund invested in securities financing economic activities that substantially contributed to environmental and/or social objectives such as:

Environmental

- climate change mitigation or adaptation
- sustainable use and protection of water and marine resources
- transition to a circular economy
- pollution prevention and control, or
- protection and restoration of biodiversity and ecosystem

Social

- inclusive and sustainable communities
- adequate living standards and well-being for end users, or
- decent work

- **How did the sustainability indicators perform?**

Over the reporting period the sustainability indicators performed as follows:

- **Exposure to companies that derive a significant proportion of revenue, EBIT, enterprise value or similar metrics from economic activities that contribute to environmental or social objectives, and labelled bonds where relevant to the asset class (sustainable investments):**

98.54%

- **Exposure to revenues from economic activities that contribute to climate change adaption and/or climate change mitigation (EU taxonomy-aligned investments):**

9.27%

Additional information on specific environmental objectives will be available in next year's report.

- **Overall ESG profile**

The fund increased the weight of securities with low sustainability risks and/or decreased the weight of securities with high sustainability risks.

As a result, the fund has achieved a better environmental, social and governance (ESG) profile than the reference index after removing the bottom 20% of issuers with the weakest ESG characteristics.

- **Principle Adverse Impact (PAI)**

The fund used a combination of approaches to consider and, where possible, mitigate material adverse impacts of its investments on society and the environment, such as GHG emissions, air pollution, biodiversity loss, emissions to water, hazardous/radioactive waste, human rights, labour standards, corruption and bribery and public health.

The degree and the way these impacts were considered depended on factors such as the specific context of the investment that is causing the adverse impact, or the availability of reliable data.

In line with Pictet Asset Management's exclusion policy outlined in the firm's Responsible Investment policy (see table above for excluded activities and applied exclusion thresholds), the fund did not have any exposure to companies that derived a significant portion of their revenue from activities detrimental to society or the environment as detailed below:

Controversial activities (weighted average company revenues, in %)*:

	Fund (%)	Reference Index (%)
Fossil fuels and nuclear energy	1.99	4.15
Weapons	0.45	0.99
Other controversial activities	0.01	1.02
Not applicable:	0.32	0.00
Not covered:	0.03	0.02

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

**Fossil fuels and nuclear energy include thermal coal extraction and power generation, oil & gas production and extraction, shale energy extraction, off-shore arctic oil & gas exploration, and nuclear power generation. Weapons include military contracting (weapon and weapon related services), and small arms (civilian customers (assault/ non-assault weapons, military law enforcement, key components). Other controversial activities include tobacco production, adult entertainment production, gambling operation, GMS development or growth, pesticides production or retail. Exposures are based on third-party data and may not reflect our internal view. Pictet Asset Management retains full discretion over the implementation of exclusion criteria and reserves the right to deviate from third-party information on a case-by-case basis in instances where it is deemed incorrect or incomplete.*

Source: Pictet Asset Management, Sustainalytics.

In addition, the fund excluded issuers that had exposure to:

- (i) PAI 10: Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises.
- (ii) PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons).

- **Voting rights**

During the reference period, the fund voted at 50 general assembly meetings out of 50 votable meetings (100.00%). We voted “against” (incl. “abstained” or “withhold”) at least one resolution at 30.00% of meetings.

Out of 688 management resolutions, we voted against management on 26 items (3.78%) and abstained on 20 items (2.91%).

We supported 7 (46.67%) shareholder resolutions out of 15 proposals.

In respect to Environmental and/or Social issues we voted for 3 out of 3 management resolutions and for 0 out of 2 shareholder resolutions.

Source: Pictet Asset Management, ISS ESG.

- **Engagement**

The fund engaged with 17 companies on ESG topics (data as of 30.09.2023). This includes in-house-led dialogues, collaborative investor initiatives, and third-party engagement services. To be considered an engagement, a dialogue with a targeted company must have a clear and measurable objective within a pre-defined time horizon. It is important to note that not all routine or monitoring interactions, even if they involve senior management or Board of Directors, are regarded as engagements in our assessment.

Source: Pictet Asset Management, Sustainalytics.

- **...and compared to previous periods?**

This question will be addressed in future annual reports due to lack of a track record.

- **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

To prevent sustainable investments from causing significant harm to any other environmental or social objective, the fund applied the following screening criteria on a best effort basis:

- (i) Exclusions of issuers that have significant activities with adverse impacts on society or the environment (see description of RI exclusion framework).
- (ii) Issuers associated with high and severe controversies were excluded.

Information were obtained from third-part providers and/or internal research. ESG information from third-party data providers may have been incomplete, inaccurate or unavailable. As a result, there was a risk that the Investment Manager may incorrectly assessed a security or issuer, resulting in the incorrect inclusion or exclusion of a security in the fund. Incomplete, inaccurate or unavailable ESG data may also acted as a methodological limitation to a non-financial investment strategy (such as the application of ESG criteria or similar). Where identified, the Investment Manager sought to mitigate this risk through its own assessment. In the event that the ESG characteristics of a security held by the fund changed, resulting in the security being sold, the Investment Manager does not accept liability in relation to such change.

- *How were the indicators for adverse impacts on sustainability factors taken into account?*

Pictet Asset Management monitors all mandatory Principal Adverse Impact indicators (included in Annex 1 of the Commission Delegated Regulation (EU) 22 / 1288) where we have robust data available. The quality and the availability of data are expected to improve over time.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors

relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

The fund considered and, where possible, mitigated adverse impacts of its investments on society and the environment that are deemed material to the investment strategy through a combination of portfolio management decisions, active ownership activities, and exclusion of issuers associated with controversial conduct or activities.

More information is disclosed in the PAI entity report available under:

<https://documents.am.pictet/?cat=marketing-permalink&dtyp=PAI&dla=en&bl=PAM>

- *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?*

To ensure that sustainable investment did not cause significant harm to any sustainable investment objective, the fund excluded companies with high and severe violations of (i) the UN Global Compact principles on human rights, labour standards, environmental protection and anti-corruption or (ii) OECD Guidelines for Multinationals, including severe social and employee issues.

How did this financial product consider principal adverse impacts on sustainability factors?

The fund considered and, where possible, mitigated adverse impacts that were deemed material to the investment strategy. Such adverse impacts included but were not limited to GHG emissions, air pollution, biodiversity loss, emissions to water, hazardous/radioactive waste, social and employee matters and corruption and were addressed through a combination of:

(i) portfolio management decisions

The investment team scored holdings according to an assessment of Environmental, Social & Governance risks and opportunities as well as the exposure to sustainable investments as part of the fund's scoring framework. Scores are determined on a qualitative basis by the investment managers, informed by fundamental research and quantitative ESG data - including data on Principle Adverse Impact, ESG data provided by the companies and data provided by third-party ESG data providers. The investment team's scoring process was a key component of the compartment's portfolio construction process, determining target weights in the portfolio.

(ii) proxy voting

The fund followed Pictet Asset Management's voting guidelines which are designed to support a strong culture of corporate governance, effective management of environmental and social issues and comprehensive reporting according to credible standards. These guidelines also seek to support recognized global governing bodies promoting sustainable business practices advocating for stewardship of environment, fair labour practices, non-discrimination, and the protection of human rights. All voting activities of the fund were logged and can be shared upon request.

(iii) engagement

Interaction with issuers took the form of one-to-one discussions, shareholder/bondholder meetings, investor roadshows and/or conference calls. The objectives of these interactions were to assess an organization, monitor that their strategy was implemented in line with our expectations and ensure that issuers were on track to meet their goals and objectives.

Where appropriate, we engaged issuers to address either significant ESG concerns, improve companies' sustainability practices or engage on positive impact topics to satisfy ourselves that they fully understood and addressed them effectively over the short, medium and long term. Our engagement activities included a combination of targeted in-house-led discussions, collaborative institutional investor initiatives, and third-party engagement services.

(iv) exclusion of issuers associated with controversial conduct or activities

The fund did not have any exposure to (i) companies that derived a significant portion of their revenue from activities detrimental to society or the environment as defined in Pictet Asset Management's Responsible Investment policy and/or (ii) companies that severely violated the UN Global Compact principles on human rights, labour standards, environmental protection and anti-corruption and controversial weapons.

What were the top investments of this financial product?

The list includes the investments constituting the greatest proportion of investments of the

LARGEST INVESTMENTS	SECTOR	% ASSETS	COUNTRY
NEXTERA ENERGY INC	Utilities	5.0	United States
ON SEMICONDUCTOR	Information Technology	4.8	United States

financial product during the reference period which is: 01.10.2022 - 30.09.2023

LARGEST INVESTMENTS	SECTOR	% ASSETS	COUNTRY
APPLIED MATERIALS INC	Information Technology	4.5	United States
SYNOPTIS INC	Information Technology	4.4	United States
NXP SEMICONDUCTORS NV	Information Technology	4.1	Netherlands
ANALOG DEVICES INC	Information Technology	4.0	United States
ASML HOLDING NV	Information Technology	3.9	Netherlands
RWE AG	Utilities	3.8	Germany
MARVELL TECHNOLOGY INC	Information Technology	3.8	United States

IBERDROLA SA	Utilities	3.4	Spain
ALBEMARLE CORP	Materials	3.1	United States

Source: Pictet Asset Management, GICS/MSCI.

What was the proportion of sustainability-related investments?

98.54%

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The fund allocated 98.54% of its assets to Sustainable investments (#1 Sustainable) and 1.46% to Not sustainable investments (#2 Not sustainable). 88.08% of its assets is allocated to environmental objectives and 10.46% to social objectives.

#1 Sustainable covers sustainable investments with environmental or social objectives.
 #2 Not sustainable includes investments which do not qualify as sustainable investments.

Notes:

- "#1A Sustainable", "Other Environmental" and "Social" investments were calculated on a pass/fail basis. They include labelled bonds (where relevant to the asset class) and securities from issuers with minimum 20% exposure to economic activities that contributed to at least one environmental or social objective.
- EU taxonomy-aligned investments were calculated on a revenue-weighted basis (ie security weights are multiplied by the proportion of revenues from economic activities that contribute to climate mitigation and climate adaptation) and cannot be consolidated with other numbers following a pass/fail approach.
- In the absence of an EU social taxonomy, Pictet has developed a proprietary social taxonomy framework based on the Report on Social Taxonomy published in 2022 by the EU Platform on Sustainable Finance. Eligible activities are defined as goods and services that substantially contribute to one of the following three objectives: (1) inclusive and sustainable communities, (2) adequate living standards and well-being for end users and (3) decent work.

Source: Pictet Asset Management, FTSE Green revenues, Factset RBICS.

● In which economic sectors were the investments made?

Source: Pictet Asset Management, GICS/MSCI.

We are evaluating the availability and the quality of data that would allow us to disclose more granular information in future reports on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council.

● To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The fund made investments in economic activities that contributed to the first two environmental objectives (climate change adaption and climate change mitigation) as set out in the Article 9 of Regulation (EU) 2020/852.

EU taxonomy-aligned investments were calculated on a revenue-weighted basis (ie security weights are multiplied by the proportion of revenues from economic activities that contribute to relevant environmental objectives) and cannot be consolidated with other numbers following a pass/fail approach.

EU Green Taxonomy alignment data were sourced from publicly available reports. Calculations may also include estimates in a limited number of cases when EU Green Taxonomy alignment reported data were not available. Estimates were performed on a best effort basis and following a conservative approach so as to produce a prudent outcome.

The monitoring procedures have been implemented to verify at all times compliance with Article 3 of the EU taxonomy regulation.

Data provided have not been verified by an external auditor or reviewed by an independent third-party.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

Yes:

In fossil gas In nuclear energy

No

The insufficient quality and availability of the data currently available on the market does not allow to provide such breakdown. We are working with data providers to increase quality and availability over time.

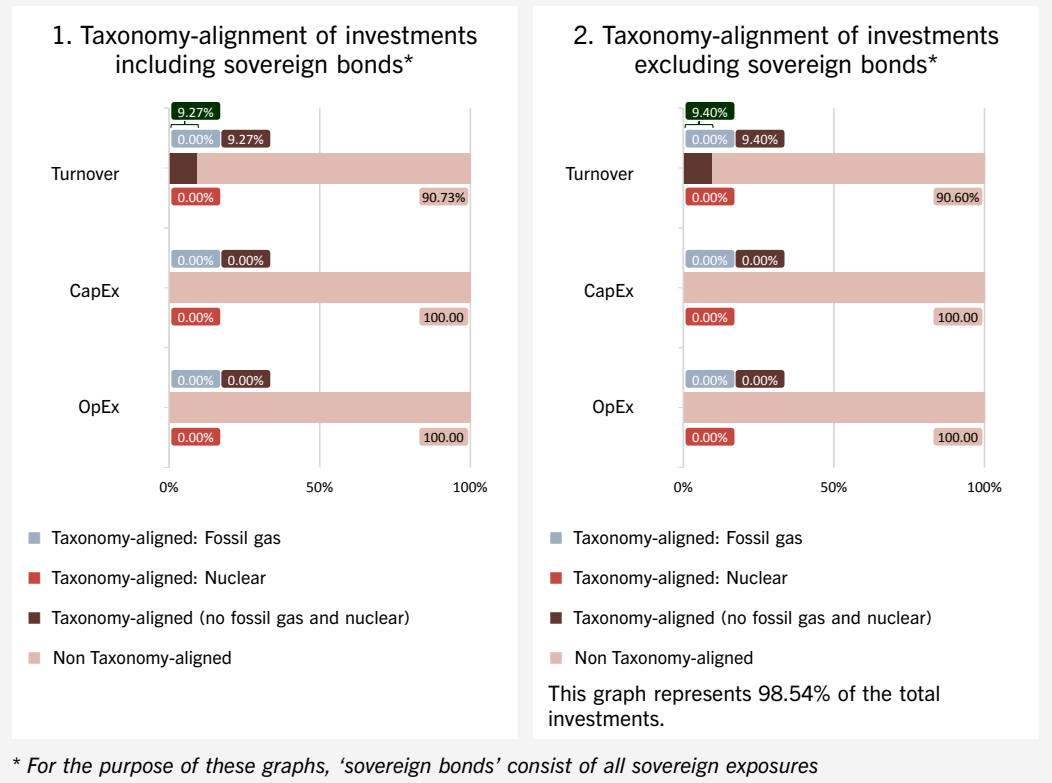

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

Note:

- We use revenues as the key metric for setting target allocation to, and actual alignment with, the EU taxonomy due to limited availability and lack of reliable data for OpEx and CapEX.

Source: Pictet Asset Management.

● **What was the share of investments made in transitional and enabling activities?**

The share of investments made in:

- Transitional activities: Not applicable*
- Enabling activities: Not applicable*

*The insufficient quality and availability of the data currently available on the market does not allow to provide such breakdown. We are working with data providers to increase quality and availability over time.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

88.08%

These Sustainable Investments are not aligned with the EU Taxonomy because their economic activities either (i) are not covered by the EU Taxonomy, or (ii) do not comply with the technical screening criteria to achieve substantial contribution in the sense of the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally

What was the share of socially sustainable investments?

10.46%

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The fund’s “other” investments included cash positions primarily held for meeting daily liquidity and risk management purposes as allowed and foreseen by the fund’s investment policy. Where relevant, minimum environmental or social safeguards apply to the underlying securities.

What actions have been taken to attain the sustainable investment objective during the reference period?

During the reference period, the attainment of the sustainable investment objective was met by following the investment strategy and adhering to the binding elements.

The fund’s binding elements include:

- at least 80% of sustainable investments, i.e. investments in companies that have a significant exposure to activities such as renewable energy, technologies that reduce CO2 emissions or energy consumption in areas such as industry, buildings or transportation, and enabling technologies and infrastructure that are critical preconditions for the transition to a low carbon economy, such as energy storage, power semiconductors and investments into the power grid and other relevant economic activities (as measured by revenue, enterprise value, earnings before interest and tax, or similar)
- exclusion of issuers that:
 - are involved in the production of controversial weapons including anti-personnel mines, cluster munitions, biological and chemical weapons, nuclear weapons and depleted uranium
 - derive a significant portion of their revenue from activities detrimental to society or the environment, such as thermal coal extraction and power generation, unconventional oil and gas exploration and production, conventional oil and gas production, nuclear power generation, conventional weapons and small arms, military contracting weapons and weapon-related products and services, tobacco production, adult entertainment production, gambling operations, genetically modified organisms development/growth, pesticides product/retail. Please refer to Pictet Asset Management's Responsible Investment policy for further details on exclusion thresholds applicable to the above activities
 - severely violate international norms including the UN Global Compact principles on human rights, labour standards, environmental protection and anti-corruption
- a better ESG profile than the reference index after removing the bottom 20% of issuers with the weakest ESG characteristics
- ESG criteria analysis of eligible securities that covers at least 90% of net assets or the number of issuers in the portfolio

Furthermore, the fund engaged with 17 companies as of 30.09.2023.

How did this financial product perform compared to the reference benchmark?

No reference index has been designated for the purpose of attaining the sustainable investment objective.

- **How did the reference benchmark differ from a broad market index?**
Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**
Not applicable.
- **How did this financial product perform compared with the reference benchmark?**
Not applicable.
- **How did this financial product perform compared with the broad market index?**
Not applicable.

SUSTAINABLE INVESTMENT OBJECTIVE

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good Governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

DID THIS FINANCIAL PRODUCT HAVE A SUSTAINABLE INVESTMENT OBJECTIVE?	
<input checked="" type="checkbox"/> <input checked="" type="checkbox"/> Yes	<input type="checkbox"/> <input type="checkbox"/> No
<input checked="" type="checkbox"/> It made sustainable investments with an environmental objective: 71.18%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input checked="" type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	
<input checked="" type="checkbox"/> It made sustainable investments with a social objective: 26.53%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Note: Sustainable investments were calculated on a pass/fail basis including labelled bonds (where relevant to the asset class) and securities from issuers with minimum 20% exposure (as measured by revenue, EBIT, enterprise value or similar metrics) to economic activities that contributed to at least one environmental or social objective.

To what extent was the sustainable investment objective of this financial product met?

Main ways in which the fund achieved its sustainable objective:

- Positive impact:

This fund achieved a positive environmental and/or social impact by investing mainly in companies with a low environmental footprint that contribute to solving global environmental challenges by providing products and services in the environmental value chain. These products and services are needed to support the transition towards a lower carbon economy, a circular economy model, monitor and prevent pollution or for example protect scarce resources such as water.

No reference index has been designated for the purpose of attaining the sustainable investment objective.

The fund invested mainly in companies whose significant proportion of their activities are related to, but not limited to, energy efficiency, renewable energy, pollution control, water supply & technology, waste management & recycling, sustainable agriculture & forestry, dematerialized economy and other relevant economic activities.

Eligible securities included equities issued by companies with a significant proportion of activities (as measured by revenue, EBIT, enterprise value or similar metrics) derived from such economic activities.

- Norms- and values-based exclusions:

The fund excluded issuers that have significant activities with adverse impacts on society or the environment or are in severe breach of international norms as detailed below:

Company Exclusions based on Controversial Activities and Revenue Thresholds

Activity	Revenue Thresholds
Fossil Fuels and Nuclear Energy	
Thermal Coal Extraction	>25%
Thermal Coal Power Generation	>25%
Oil & Gas Production	>25%
Oil Sands Extraction	>10%
Shale Energy Extraction	>10%
Off-shore Arctic Oil & Gas Exploration	>10%
Nuclear Power Generation	>50%
Weapons	
Production of controversial weapons[1]	>0%
Military Contracting Weapons	>10%
Military Contracting Weapon-Related Products and/or Services	>50%

Company Exclusions based on Breaches of International Norms	
Companies in severe breach of UN Global Compact Principles on human rights, labour standards, environmental protection and anti-corruption	Excluded
Country Exclusions	
Countries (i) listed as State Sponsors of Terrorism as defined by the Office of Foreign Assets Control[2] or (ii) subject to EU financial sanctions targeting central banks and/or State-Owned enterprises (SOEs)	Excluded
Countries (i) classified as very high or high risk in the Fragile State Index or (ii) affected by violent conflict as defined by the World Bank	Yes
Countries (i) listed under "alert" on the Fragile State Index or (ii) subject to export related sanctions by the EU	Watchlist[3]

[1] Controversial weapons include anti-personnel mines, cluster munitions, biological & chemical weapons (including white phosphorous) and nuclear weapons from countries not signatory to the Treaty on the Non-Proliferation of Nuclear Weapons (NPT).

[2] "State Sponsors of Terrorism" is a designation applied by the United States Department of State to countries that repeatedly provided support to acts of international terrorism.

[3] In addition to hard exclusions, Pictet Asset Management maintains a watchlist including countries that require additional due diligence by investment teams prior to investment.

For further details please refer to Pictet Asset Management's Responsible Investment policy (Appendix B).

In addition to the above exclusions based on Pictet Asset Management's Responsible Investment policy, the strategy applied stricter exclusion limits based on internal guidelines.

- **Active ownership:**

The fund methodically exercised its voting rights. The fund also engaged with the management of companies on material ESG issues.

- **Sustainable Investments:**

Pictet Asset Management used a proprietary framework as well as the objectives of the EU Taxonomy to define sustainable investments.

The fund invested in securities financing economic activities that substantially contributed to environmental and/or social objectives such as:

Environmental

- climate change mitigation or adaptation
- sustainable use and protection of water and marine resources
- transition to a circular economy
- pollution prevention and control, or
- protection and restoration of biodiversity and ecosystem

Social

- inclusive and sustainable communities
- adequate living standards and well-being for end users, or
- decent work

- **How did the sustainability indicators perform?**

Over the reporting period the sustainability indicators performed as follows:

- **Exposure to companies that derive a significant proportion of revenue, EBIT, enterprise value or similar metrics from economic activities that contribute to environmental or social objectives, and labelled bonds where relevant to the asset class (sustainable investments):**

97.71%

- **Exposure to revenues from economic activities that contribute to climate change adaption and/or climate change mitigation (EU taxonomy-aligned investments):**

3.08%

Additional information on specific environmental and/or social objectives will be available in next year's report.

- **Overall ESG profile**

The fund increased the weight of securities with low sustainability risks and/or decreased the weight of securities with high sustainability risks.

As a result, the fund has achieved a better environmental, social and governance (ESG) profile than the reference index after removing the bottom 20% of issuers with the weakest ESG characteristics.

- **Principle Adverse Impact (PAI)**

The fund used a combination of approaches to consider and, where possible, mitigate material adverse impacts of its investments on society and the environment, such as GHG emissions, air pollution, biodiversity loss, emissions to water, hazardous/radioactive waste, human rights, labour standards, corruption and bribery and public health.

The degree and the way these impacts were considered depended on factors such as the specific context of the investment that is causing the adverse impact, or the availability of reliable data.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

In line with Pictet Asset Management’s exclusion policy outlined in the firm’s Responsible Investment policy (see table above for excluded activities and applied exclusion thresholds), the fund did not have any exposure to companies that derived a significant portion of their revenue from activities detrimental to society or the environment as detailed below:

Controversial activities (weighted average company revenues, in %)*:

	Fund (%)	Reference Index (%)
Fossil fuels and nuclear energy	0.02	4.15
Weapons	0.28	0.99
Other controversial activities	0.02	1.02
Not applicable:	0.54	0.00
Not covered:	0.05	0.02

**Fossil fuels and nuclear energy include thermal coal extraction and power generation, oil & gas production and extraction, shale energy extraction, off-shore arctic oil & gas exploration, and nuclear power generation. Weapons include military contracting (weapon and weapon related services), and small arms (civilian customers (assault/ non-assault weapons, military law enforcement, key components). Other controversial activities include tobacco production, adult entertainment production, gambling operation, GMS development or growth, pesticides production or retail. Exposures are based on third-party data and may not reflect our internal view. Pictet Asset Management retains full discretion over the implementation of exclusion criteria and reserves the right to deviate from third-party information on a case-by-case basis in instances where it is deemed incorrect or incomplete.*

Source: Pictet Asset Management, Sustainalytics.

In addition, the fund excluded issuers that had exposure to:

- (i) PAI 10: Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises.
- (ii) PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons).

● **Voting rights**

During the reference period, the fund voted at 43 general assembly meetings out of 43 votable meetings (100.00%). We voted “against” (incl. “abstained” or “withhold”) at least one resolution at 20.93% of meetings.

Out of 645 management resolutions, we voted against management on 12 items (1.86%) and abstained on 0 items (0.00%).

We supported 4 (44.44%) shareholder resolutions out of 9 proposals.

In respect to Environmental and/or Social issues we voted for 1 out of 1 management resolutions and for 1 out of 3 shareholder resolutions.

Source: Pictet Asset Management, ISS ESG.

● **Engagement**

The fund engaged with 22 companies on ESG topics (data as of 30.09.2023). This includes in-house-led dialogues, collaborative investor initiatives, and third-party engagement services. To be considered an engagement, a dialogue with a targeted company must have a clear and measurable objective within a pre-defined time horizon. It is important to note that not all routine or monitoring interactions, even if they involve senior management or Board of Directors, are regarded as engagements in our assessment.

Source: Pictet Asset Management, Sustainalytics.

● **...and compared to previous periods?**

This question will be addressed in future annual reports due to lack of a track record.

● **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

To prevent sustainable investments from causing significant harm to any other environmental or social objective, the fund applied the following screening criteria on a best effort basis:

- (i) Exclusions of issuers that have significant activities with adverse impacts on society or the environment (see description of RI exclusion framework).

(ii) Issuers associated with high and severe controversies were excluded.

Information were obtained from third-party providers and/or internal research. ESG information from third-party data providers may have been incomplete, inaccurate or unavailable. As a result, there was a risk that the Investment Manager may incorrectly assessed a security or issuer, resulting in the incorrect inclusion or exclusion of a security in the fund. Incomplete, inaccurate or unavailable ESG data may also acted as a methodological limitation to a non-financial investment strategy (such as the application of ESG criteria or similar). Where identified, the Investment Manager sought to mitigate this risk through its own assessment. In the event that the ESG characteristics of a security held by the fund changed, resulting in the security being sold, the Investment Manager does not accept liability in relation to such change.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● *How were the indicators for adverse impacts on sustainability factors taken into account?*

Pictet Asset Management monitors all mandatory Principal Adverse Impact indicators (included in Annex 1 of the Commission Delegated Regulation (EU) 22 / 1288) where we have robust data available. The quality and the availability of data are expected to improve over time.

The fund considered and, where possible, mitigated adverse impacts of its investments on society and the environment that are deemed material to the investment strategy through a combination of portfolio management decisions, active ownership activities, and exclusion of issuers associated with controversial conduct or activities.

More information is disclosed in the PAI entity report available under:

<https://documents.am.pictet/?cat=marketing-permalink&dtyp=PAI&dla=en&bl=PAM>

● *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?*

To ensure that sustainable investment did not cause significant harm to any sustainable investment objective, the fund excluded companies with high and severe violations of (i) the UN Global Compact principles on human rights, labour standards, environmental protection and anti-corruption or (ii) OECD Guidelines for Multinationals, including severe social and employee issues.

How did this financial product consider principal adverse impacts on sustainability factors?

The fund considered and, where possible, mitigated adverse impacts that were deemed material to the investment strategy. Such adverse impacts included but were not limited to GHG emissions, air pollution, biodiversity loss, emissions to water, hazardous/radioactive waste, social and employee matters and corruption and bribery and were addressed through a combination of:

(i) portfolio management decisions

The investment team scored holdings according to an assessment of Environmental, Social & Governance risks and opportunities as well as the exposure to sustainable investments as part of the fund's scoring framework. Scores are determined on a qualitative basis by the investment managers, informed by fundamental research and quantitative ESG data - including data on Principle Adverse Impact, ESG data provided by the companies and data provided by third-party ESG data providers. The investment team's scoring process was a key component of the compartment's portfolio construction process, determining target weights in the portfolio.

(ii) proxy voting

The fund followed Pictet Asset Management's voting guidelines which are designed to support a strong culture of corporate governance, effective management of environmental and social issues and comprehensive reporting according to credible standards. These guidelines also seek to support recognized global governing bodies promoting sustainable business practices advocating for stewardship of environment, fair labour practices, non-discrimination, and the protection of human rights. All voting activities of the fund were logged and can be shared upon request.

(iii) engagement

Interaction with issuers took the form of one-to-one discussions, shareholder/bondholder meetings, investor roadshows and/or conference calls. The objectives of these interactions were to assess an organization, monitor that their strategy was implemented in line with our expectations and ensure that issuers were on track to meet their goals and objectives.

Where appropriate, we engaged issuers to address either significant ESG concerns, improve companies' sustainability practices or engage on positive impact topics to satisfy ourselves that they fully understood and addressed them effectively over the short, medium and long term. Our engagement activities included a combination of targeted in-house-led discussions, collaborative institutional investor initiatives, and third-party engagement services.

(iv) exclusion of issuers associated with controversial conduct or activities

The fund did not have any exposure to (i) companies that derived a significant portion of their revenue from activities detrimental to society or the environment as defined in Pictet Asset Management’s Responsible Investment policy and/or (ii) companies that severely violated the UN Global Compact principles on human rights, labour standards, environmental protection and anti-corruption and controversial weapons.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01.10.2022 - 30.09.2023

LARGEST INVESTMENTS	SECTOR	% ASSETS	COUNTRY
AMERICAN WATER WORKS CO INC	Utilities	3.9	United States
REPUBLIC SERVICES INC	Industrials	3.7	United States

XYLEM INC	Industrials	2.6	United States

Source: Pictet Asset Management, GICS/MSCI.

What was the proportion of sustainability-related investments?

97.71%

Asset allocation describes the share of investments in specific assets.

● What was the asset allocation?

The fund allocated 97.71% of its assets to Sustainable investments (#1 Sustainable) and 2.29% to Not sustainable investments (#2 Not sustainable). 71.18% of its assets is allocated to environmental objectives and 26.53% to social objectives.

#1 Sustainable covers sustainable investments with environmental or social objectives.
 #2 Not sustainable includes investments which do not qualify as sustainable investments.

Notes:

- "#1A Sustainable", "Other Environmental" and "Social" investments were calculated on a pass/fail basis. They include labelled bonds (where relevant to the asset class) and securities from issuers with minimum 20% exposure to economic activities that contributed to at least one environmental or social objective.
- EU taxonomy-aligned investments were calculated on a revenue-weighted basis (ie security weights are multiplied by the proportion of revenues from economic activities that contribute to climate mitigation and climate adaptation) and cannot be consolidated with other numbers following a pass/fail approach.
- In the absence of an EU social taxonomy, Pictet has developed a proprietary social taxonomy framework based on the Report on Social Taxonomy published in 2022 by the EU Platform on Sustainable Finance. Eligible activities are defined as goods and services that substantially contribute to one of the following three objectives: (1) inclusive and sustainable communities, (2) adequate living standards and well-being for end users and (3) decent work.

Source: Pictet Asset Management, FTSE Green revenues, Factset RBICS.

● **In which economic sectors were the investments made?**

Source: Pictet Asset Management, GICS/MSCI.

We are evaluating the availability and the quality of data that would allow us to disclose more granular information in future reports on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The fund made investments in economic activities that contributed to the first two environmental objectives (climate change adaption and climate change mitigation) as set out in the Article 9 of Regulation (EU) 2020/852.

EU taxonomy-aligned investments were calculated on a revenue-weighted basis (ie security weights are multiplied by the proportion of revenues from economic activities that contribute to relevant environmental objectives) and cannot be consolidated with other numbers following a pass/fail approach.

EU Green Taxonomy alignment data were sourced from publicly available reports. Calculations may also include estimates in a limited number of cases when EU Green Taxonomy alignment reported data were not available. Estimates were performed on a best effort basis and following a conservative approach so as to produce a prudent outcome.

The monitoring procedures have been implemented to verify at all times compliance with Article 3 of the EU taxonomy regulation.

Data provided have not been verified by an external auditor or reviewed by an independent third-party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

- Yes:
- In fossil gas
 - In nuclear energy

No
 The insufficient quality and availability of the data currently available on the market does not allow to provide such breakdown. We are working with data providers to increase quality and availability over time.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Note:

- We use revenues as the key metric for setting target allocation to, and actual alignment with, the EU taxonomy due to limited availability and lack of reliable data for OpEx and CapEX.

Source: Pictet Asset Management.

● **What was the share of investments made in transitional and enabling activities?**

- The share of investments made in:
- Transitional activities: Not applicable*
 - Enabling activities: Not applicable*

*The insufficient quality and availability of the data currently available on the market does not allow to provide such breakdown. We are working with data providers to increase quality and availability over time.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

71.18%

These Sustainable Investments are not aligned with the EU Taxonomy because their economic activities either (i) are not covered by the EU Taxonomy, or (ii) do not comply with the technical screening criteria to achieve substantial contribution in the sense of the EU Taxonomy.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of socially sustainable investments?

26.53%

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The fund’s “other” investments included cash positions primarily held for meeting daily liquidity and risk management purposes as allowed and foreseen by the fund’s investment policy. Where relevant, minimum environmental or social safeguards apply to the underlying securities.

What actions have been taken to attain the sustainable investment objective during the reference period?

During the reference period, the attainment of the sustainable investment objective was met by following the investment strategy and adhering to the binding elements.

The fund’s binding elements include:

- at least 80% of sustainable investments, i.e. investments in companies that have a significant exposure to activities that provide solutions to environmental challenges such as energy efficiency, renewable energy, pollution control, water supply and technology, waste management and recycling, sustainable agriculture and forestry and other relevant economic activities (as measured by revenue, enterprise value, earnings before interest and tax, or similar)
- exclusion of issuers that:
 - are involved in the production of controversial weapons including anti-personnel mines, cluster munitions, biological and chemical weapons, nuclear weapons and depleted uranium
 - derive a significant portion of their revenue from activities detrimental to society or the environment, such as thermal coal extraction and power generation, unconventional oil and gas exploration and production, conventional oil and gas production, nuclear power generation, conventional weapons and small arms, military contracting weapons and weapon-related products and services, tobacco production, adult entertainment production, gambling operations, genetically modified organisms development/growth, pesticides product/retail. Please refer to Pictet Asset Management’s Responsible Investment policy for further details on exclusion thresholds applicable to the above activities
 - severely violate international norms including the UN Global Compact principles on human rights, labour standards, environmental protection and anti-corruption
- a better ESG profile than the reference index after removing the bottom 20% of issuers with the weakest ESG characteristics
- ESG criteria analysis of eligible securities that covers at least 90% of net assets or the number of issuers in the portfolio

Furthermore, the fund engaged with 22 companies as of 30.09.2023.

How did this financial product perform compared to the reference benchmark?

No reference index has been designated for the purpose of attaining the sustainable investment objective.

- **How did the reference benchmark differ from a broad market index?**
Not applicable.
- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**
Not applicable.
- **How did this financial product perform compared with the reference benchmark?**
Not applicable.
- **How did this financial product perform compared with the broad market index?**
Not applicable.

Product name: **Pictet - Global Megatrend Selection**

Legal entity identifier: **549300HMJRYVBYQOZ025**

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good Governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

DID THIS FINANCIAL PRODUCT HAVE A SUSTAINABLE INVESTMENT OBJECTIVE?	
<input checked="" type="radio"/> <input checked="" type="radio"/> Yes	<input checked="" type="checkbox"/> <input type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 84.19% of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Note: Sustainable investments were calculated on a pass/fail basis including labelled bonds (where relevant to the asset class) and securities from issuers with minimum 20% exposure (as measured by revenue, EBIT, enterprise value or similar metrics) to economic activities that contributed to at least one environmental or social objective.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and social characteristics of this financial product were promoted using:

- **Positive impact:**
The fund achieved a positive environmental and/or social impact by investing at least two-thirds of its total assets in securities that may benefit from global megatrends, i.e. long-term market trends resulting from secular changes in economic, social and environmental factors such as demographics, lifestyle or regulations.
The fund invested mainly in companies whose significant proportion of their activities are related to products and services supporting the energy transition, circular economy, energy efficiency, water quality and supply, sustainable forestry, sustainable cities, nutrition, human health and therapeutics, personal self-fulfilment and security and other relevant economic activities.
No reference index has been designated for the purpose of attaining the environmental or social characteristics promoted by the fund.

- **Norms- and values-based exclusions:**
The fund excluded issuers that have significant activities with adverse impacts on society or the environment or are in severe breach of international norms as detailed below:

Company Exclusions based on Controversial Activities and Revenue Thresholds

Activity	Revenue Thresholds
Fossil Fuels and Nuclear Energy	

Company Exclusions based on Controversial Activities and Revenue Thresholds

Thermal Coal Extraction	>25%
Thermal Coal Power Generation	>25%
Oil & Gas Production	>25%
Oil Sands Extraction	>10%
Shale Energy Extraction	>10%
Off-shore Arctic Oil & Gas Exploration	>10%
Nuclear Power Generation	>50%
Weapons	
Production of controversial weapons[1]	>0%
Military Contracting Weapons	>10%
Military Contracting Weapon-Related Products and/or Services	>50%
Small Arms Civilian Customers (Assault Weapons)	>10%
Small Arms Civilian Customers (Non-Assault Weapons)	>10%
Small Arms Military/Law Enforcement Customers	>25%
Small Arms Key Components	>25%
Other Controversial Activities	
Adult Entertainment Production	>10%
Gambling Operations	>10%
Genetically Modified Plants and Seeds Development	>25%
Genetically Modified Plants and Seeds Growth	>25%
Pesticides Production	>10%
Pesticides Retail	>10%
Tobacco Products Production	>10%
Company Exclusions based on Breaches of International Norms	
Companies in severe breach of UN Global Compact Principles on human rights, labour standards, environmental protection and anti-corruption	Excluded
Country Exclusions	
Countries (i) listed as State Sponsors of Terrorism as defined by the Office of Foreign Assets Control[2] or (ii) subject to EU financial sanctions targeting central banks and/or State-Owned enterprises (SOEs)	Excluded
Countries (i) classified as very high or high risk in the Fragile State Index or (ii) affected by violent conflict as defined by the World Bank	Yes
Countries (i) listed under "alert" on the Fragile State Index or (ii) subject to export related sanctions by the EU	Watchlist[3]

[1] Controversial weapons include anti-personnel mines, cluster munitions, biological & chemical weapons (including white phosphorous) and nuclear weapons from countries not signatory to the Treaty on the Non-Proliferation of Nuclear Weapons (NPT).

[2] "State Sponsors of Terrorism" is a designation applied by the United States Department of State to countries that repeatedly provided support to acts of international terrorism.

[3] In addition to hard exclusions, Pictet Asset Management maintains a watchlist including countries that require additional due diligence by investment teams prior to investment.

For further details please refer to Pictet Asset Management's Responsible Investment policy (Appendix B).

In addition to the above exclusions based on Pictet Asset Management's Responsible Investment policy, the strategy applied stricter exclusion limits based on internal guidelines.

- **Active ownership:**

The fund methodically exercised its voting rights and engaged with the management of companies on material ESG issues.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Over the reporting period the sustainability indicators performed as follows:

- **Exposure to companies that derive a significant proportion of revenue, EBIT, enterprise value or similar metrics from economic activities that contribute to environmental or social objectives, and labelled bonds where relevant to the asset class (sustainable investments):**

84.19%

- **Exposure to revenues from economic activities that contribute to climate change adaption and/or climate change mitigation (EU taxonomy-aligned investments):**

1.66%

Additional information on specific environmental and/or social objectives will be available in next year’s report.

- **Overall ESG profile**

The fund increased the weight of securities with low sustainability risks and/or decreased the weight of securities with high sustainability risks.

As a result the fund has achieved a better environmental, social and governance (ESG) profile than the reference index.

- **Principle Adverse Impact (PAI)**

The fund used a combination of approaches to consider and, where possible, mitigate material adverse impacts of our investments on society and the environment, such as GHG emissions, air pollution, biodiversity loss, emissions to water, hazardous/radioactive waste, human rights, labour standards, corruption and bribery and public health.

The degree and the way these impacts were considered depended on factors such as the specific context of the investment that is causing the adverse impact, or the availability of reliable data.

In line with Pictet Asset Management’s exclusion policy outlined in the firm’s Responsible Investment policy (see table above for excluded activities and applied exclusion thresholds), the fund did not have any exposure to companies that derived a significant portion of their revenue from activities detrimental to society or the environment:

Controversial activities (weighted-average company revenues, in %)*:

	Fund (%)	Reference Index (%)
Fossil fuels and nuclear energy	0.19	4.15
Weapons	0.09	0.99
Other controversial activities	0.07	1.02
Not applicable:	0.88	0.00
Not covered:	0.40	0.02

**Fossil fuels and nuclear energy include thermal coal extraction and power generation, oil & gas production and extraction, shale energy extraction, off-shore arctic oil & gas exploration, and nuclear power generation. Weapons include military contracting (weapon and weapon related services), and small arms (civilian customers (assault/ non-assault weapons, military law enforcement, key components). Other controversial activities include tobacco production, adult entertainment production, gambling operation, GMS development or growth, pesticides production or retail. Exposures are based on third-party data and may not reflect our internal view. Pictet Asset Management retains full discretion over the implementation of exclusion criteria and reserves the right to deviate from third-party information on a case-by-case basis in instances where it is deemed incorrect or incomplete.*

Source: Pictet Asset Management, Sustainalytics.

In addition, the fund excluded issuers that had exposure to:

- (i) PAI 10: Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises.
- (ii) PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons).

- **Voting rights**

During the reference period, the fund voted at 465 general assembly meetings out of 471 votable meetings (98.73%). We voted “against” (incl. “abstained” or “withhold”) at least one resolution at 40.55% of meetings.

Out of 5652 management resolutions, we voted against management on 296 items (5.24%) and abstained on 142 items (2.51%).

We supported 120 (59.70%) shareholder resolutions out of 201 proposals.

In respect to Environmental and/or Social issues we voted for 24 out of 24 management resolutions and for 66 out of 98 shareholder resolutions.

Source: *Pictet Asset Management, ISS ESG.*

- **Engagement**

The fund engaged with 131 companies on ESG topics (data as of 30.09.2023). This includes in-house-led dialogues, collaborative investor initiatives, and third-party engagement services. To be considered an engagement, a dialogue with a targeted company must have a clear and measurable objective within a pre-defined time horizon. It is important to note that not all routine or monitoring interactions, even if they involve senior management or Board of Directors, are regarded as engagements in our assessment.

Source: *Pictet Asset Management, Sustainalytics.*

- **...and compared to previous periods?**

This question will be addressed in future annual reports due to lack of a track record.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Pictet Asset Management used a proprietary reference frameworks as well as the objectives of the EU Taxonomy to define sustainable investments.

The fund invested in securities financing economic activities that substantially contributed to environmental and/or social objectives such as:

Environmental

- climate change mitigation or adaptation
- sustainable use and protection of water and marine resources
- transition to a circular economy
- pollution prevention and control, or
- protection and restoration of biodiversity and ecosystems

Social

- inclusive and sustainable communities
- adequate living standards and well-being for end users, or
- decent work

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To prevent sustainable investments from causing significant harm to any other environmental or social objective, the fund applied the following screening criteria on a best effort basis:

(i) Exclusions of issuers that have significant activities with adverse impacts on society or the environment (see description of RI exclusion framework).

(ii) Issuers associated with high and severe controversies were not counted as Sustainable Investments.

Information were obtained from third-part providers and/or internal research. ESG information from third-party data providers may have been incomplete, inaccurate or unavailable. As a result, there was a risk that the Investment Manager may incorrectly assessed a security or issuer, resulting in the incorrect inclusion or exclusion of a security in the fund. Incomplete, inaccurate or unavailable ESG data may also acted as a methodological limitation to a non-financial investment strategy (such as the application of ESG criteria or similar). Where identified, the Investment Manager sought to mitigate this risk through its own assessment. In the event that the ESG characteristics of a security held by the fund changed, resulting in the security being sold, the Investment Manager does not accept liability in relation to such change.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

- *How were the indicators for adverse impacts on sustainability factors taken into account?*
 Pictet Asset Management monitors all mandatory Principal Adverse Impact indicators (included in Annex 1 of the Commission Delegated Regulation (EU) 22 / 1288) where we have robust data available. The quality of available data is expected to improve over time.
 The fund considered and, where possible, mitigated adverse impacts of its investments on society and the environment that are deemed material to the investment strategy through a combination of portfolio management decisions, active ownership activities, and exclusion of issuers associated with controversial conduct or activities. More information is disclosed in the PAI entity report available under:

<https://documents.am.pictet/?cat=marketing-permalink&dtyp=PAI&dla=en&bl=PAM>

- *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?*
 To ensure that sustainable investment did not cause significant harm to any sustainable investment objective, the fund excluded companies with high and severe violations of (i) the UN Global Compact principles on human rights, labour standards, environmental protection and anti-corruption or (ii) OECD Guidelines for Multinationals, including severe social and employee issues.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The fund considered and, where possible, mitigated adverse impacts that were deemed material to the investment strategy. Such adverse impacts included but were not limited to GHG emissions, air pollution, biodiversity loss, emissions to water, hazardous/radioactive waste, social and employee matters and corruption and bribery and were addressed through a combination of:

(i) portfolio management decisions

The investment team scored holdings according to an assessment of Environmental, Social & Governance risks and opportunities as part of the fund’s scoring framework. Scores are determined on a qualitative basis by the investment managers, informed by fundamental research and quantitative ESG data - including data on Principle Adverse Impact, ESG data provided by the companies and data provided by third-party ESG data providers. The investment team’s scoring process was a key component of the compartment’s portfolio construction process, determining target weights in the portfolio.

(ii) proxy voting

The fund followed Pictet Asset Management’s voting guidelines which are designed to support a strong culture of corporate governance, effective management of environmental and social issues and comprehensive reporting according to credible standards. These guidelines also seek to support recognized global governing bodies promoting sustainable business practices advocating for stewardship of environment, fair labour practices, non-discrimination, and the protection of human rights. All voting activities of the fund were logged and can be shared upon request.

(iii) engagement

Interaction with issuers took the form of one-to-one discussions, shareholder/bondholder meetings, investor roadshows and/or conference calls. The objectives of these interactions were to assess an organisation, monitor that their strategy was implemented in line with our expectations and ensure that issuers were on track to meet their goals and objectives.

Where appropriate, we engaged issuers on material ESG issues such as GHG reduction targets, governance improvements and on a range of environmental, social or governance controversies, to satisfy ourselves that they fully understood and addressed them effectively over the short, medium and long term. Our engagement activities included a combination of targeted in-house-led discussions, collaborative institutional investor initiatives, and third-party engagement services.

(iv) exclusion of issuers associated with controversial conduct or activities

The fund did not have any exposure to (i) companies that derived a significant portion of their revenue from activities detrimental to society or the environment as defined in Pictet Asset Management’s Responsible Investment policy and/or (ii) companies that severely violated the UN Global Compact principles on human rights, labour standards, environmental protection and anti-corruption and controversial weapons.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01.10.2022 - 30.09.2023

LARGEST INVESTMENTS	SECTOR	% ASSETS	COUNTRY
THERMO FISHER SCIENTIFIC INC	Health Care	1.2	United States
VISA INC-CLASS A SHARES	Financials	1.0	United States

Source: Pictet Asset Management, GICS/MSCI.

What was the proportion of sustainability-related investments?

84.19%

Asset allocation describes the share of investments in specific assets.

● What was the asset allocation?

The fund was 97.40% aligned with E/S characteristics (#1 Aligned with E/S characteristics) and had 2.60% invested in Other (#2 Other). 84.19% were allocated to Sustainable Investments (#1A Sustainable Investments) and the remainder was invested in investments aligned with other environmental and/or social characteristics (#1B Other E/S characteristics).

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Notes:

- “#1A Sustainable”, “Other Environmental” and “Social” investments were calculated on a pass/fail basis. They include labelled bonds (where relevant to the asset class) and securities from issuers with minimum 20% exposure to economic activities that contributed to at least one environmental or social objective.
- EU taxonomy-aligned investments were calculated on a revenue-weighted basis (ie security weights are multiplied by the proportion of revenues from economic activities that contribute to climate mitigation and climate adaptation) and cannot be consolidated with other numbers following a pass/fail approach.
- In the absence of an EU social taxonomy, Pictet has developed a proprietary social taxonomy framework. The framework is based on the Report on Social Taxonomy published by the EU Platform on Sustainable Finance in 2022. Eligible activities are defined as socially beneficial goods and services that substantially contribute to one of the following three social objectives: (1) inclusive and sustainable communities, (2) adequate living standards and well-being for end users and (3) decent work.

Source: Pictet Asset Management, Sustainalytics, FTSE Green Revenues, Factset RBICS.

● **In which economic sectors were the investments made?**

Source: Pictet Asset Management, GICS/MSCI.

We are evaluating the availability and the quality of data that would allow us to disclose more granular information in future reports on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The fund made investments in economic activities that contributed to the first two environmental objectives (climate change adaption and climate change mitigation) as set out in the Article 9 of Regulation (EU) 2020/852.

EU taxonomy-aligned investments were calculated on a revenue-weighted basis (ie security weights are multiplied by the proportion of revenues from economic activities that contribute to relevant environmental objectives) and cannot be consolidated with other numbers following a pass/fail approach.

EU Green Taxonomy alignment data were sourced from publicly available reports. Calculations may also include estimates in a limited number of cases when EU Green Taxonomy alignment reported data were not available. Estimates were performed on a best effort basis and following a conservative approach so as to produce a prudent outcome.

The monitoring procedures have been implemented to verify at all times compliance with Article 3 of the EU taxonomy regulation.

Data provided have not been verified by an external auditor or reviewed by an independent third-party.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

Yes:

In fossil gas In nuclear energy

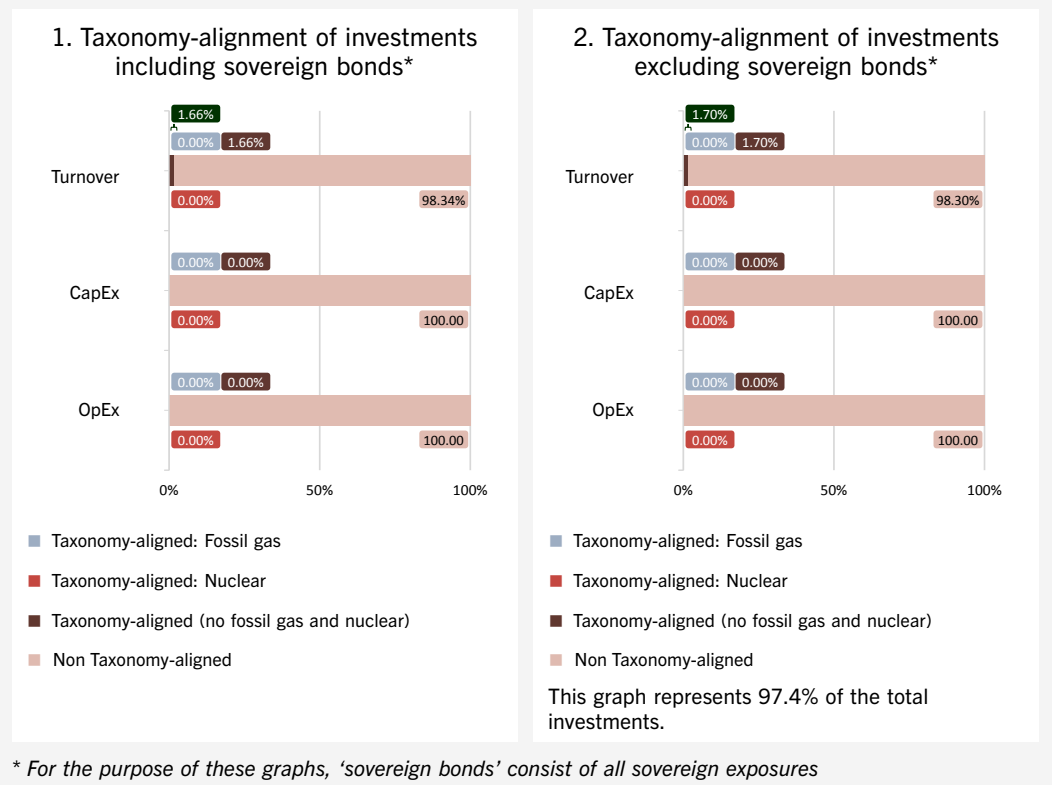

No

The insufficient quality and availability of the data currently available on the market does not allow to provide such breakdown. We are working with data providers to increase quality and availability over time.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Taxonomy-aligned activities are expressed as a share of:
 - **turnover** reflects the "greenness" of investee companies today.
 - **capital expenditure (CapEx)** shows the green investments made by investee companies, relevant for a transition to a green economy.
 - **operational expenditure (OpEx)** reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

Note:

- We use revenues as the key metric for setting target allocation to, and actual alignment with, the EU taxonomy due to limited availability and lack of reliable data for OpEx and CapEX.

Source: Pictet Asset Management.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The share of investments made in:

- Transitional activities: Not applicable*
- Enabling activities: Not applicable*

*The insufficient quality and availability of the data currently available on the market does not allow to provide such breakdown. We are working with data providers to increase quality and availability over time.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

31.00%

These Sustainable Investments are not aligned with the EU Taxonomy because their economic activities either (i) are not covered by the EU Taxonomy, or (ii) do not comply with the technical screening criteria to achieve substantial contribution in the sense of the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

53.19%

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The fund’s “other” investments included cash positions primarily held for meeting daily liquidity and risk management purposes as allowed and foreseen by the fund’s investment policy. Where relevant, minimum environmental or social safeguards apply to the underlying securities.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the attainment of the sustainable investment objective was met by following the investment strategy and adhering to the binding elements.

The fund’s binding elements include:

- at least 51% of sustainable investments, i.e. investments in companies that have a significant exposure to activities such as products and services supporting the energy transition, circular economy, energy efficiency, water quality and supply, sustainable forestry, sustainable cities, nutrition, human health and therapeutics, personal self-fulfilment and security and other relevant economic activities (as measured by revenue, enterprise value, earnings before interest and tax, or similar)
- exclusion of issuers that:
 - are involved in the production of controversial weapons including anti-personnel mines, cluster munitions, biological and chemical weapons, nuclear weapons and depleted uranium
 - derive a significant portion of their revenue from activities detrimental to society or the environment, such as thermal coal extraction and power generation, unconventional oil and gas exploration and production, conventional oil and gas production, nuclear power generation, conventional weapons and small arms, military contracting weapons and weapon-related products and services, tobacco

production, adult entertainment production, gambling operations, genetically modified organisms development/growth, pesticides product/retail. Please refer to Pictet Asset Management's Responsible Investment policy for further details on exclusion thresholds applicable to the above activities

- severely violate international norms including the UN Global Compact principles on human rights, labour standards, environmental protection and anti-corruption
- a better ESG profile than the reference index
- ESG criteria analysis of eligible securities that covers at least 90% of net assets or the number of issuers in the portfolio

Furthermore, the fund engaged with 131 companies as of 30.09.2023.

How did this financial product perform compared to the reference benchmark?

No reference index has been designated for the purpose of attaining the environmental or social characteristics promoted by the fund.

● How did the reference benchmark differ from a broad market index?

Not applicable.

● How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

● How did this financial product perform compared with the reference benchmark?

Not applicable.

● How did this financial product perform compared with the broad market index?

Not applicable.

Template periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: **Pictet - Timber**

Legal entity identifier: **5493007Y7JCK1EBOLJ63**

SUSTAINABLE INVESTMENT OBJECTIVE

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good Governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

DID THIS FINANCIAL PRODUCT HAVE A SUSTAINABLE INVESTMENT OBJECTIVE?	
<input checked="" type="checkbox"/> <input checked="" type="checkbox"/> Yes	<input type="checkbox"/> <input type="checkbox"/> No
<input checked="" type="checkbox"/> It made sustainable investments with an environmental objective: 69.36%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
<input checked="" type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	<input type="checkbox"/> with a social objective
<input checked="" type="checkbox"/> It made sustainable investments with a social objective: 27.95%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Note: Sustainable investments were calculated on a pass/fail basis including labelled bonds (where relevant to the asset class) and securities from issuers with minimum 20% exposure (as measured by revenue, EBIT, enterprise value or similar metrics) to economic activities that contributed to at least one environmental or social objective.

To what extent was the sustainable investment objective of this financial product met?

Main ways in which the fund achieved its sustainable objective:

- Positive impact:

The fund achieved a positive environmental and/or social impact by investing at least two-thirds of its total assets / total wealth in companies that contribute to solving global environmental challenges through sustainable forest management and wood-based materials. Sustainable management of forestland and the wood fibre value chain play a vital role in the sequestration of atmospheric carbon (CO2). Sustainably managed forests are also reservoirs of biodiversity and help to safeguard soil and water resources. Timber is the raw material for a growing variety of bio-based material that can substitute plastics and other non- biodegradable materials and are essential in a circular economy model.

No reference index has been designated for the purpose of attaining the sustainable investment objective.

The fund invested in companies whose significant proportion of their activities are related to, but not limited to, financing, planting, and management of forests and wooded areas and/or in the processing, production and distribution of wood and wood fibre based materials, products and related services along the entire forest value chain and other relevant economic activities.

Eligible securities included equities issued by companies with a significant proportion of activities (as measured by revenue, EBIT, enterprise value or similar metrics) derived from such economic activities.

- Norms- and values-based exclusions:

The fund excluded issuers that have significant activities with adverse impacts on society or the environment or are in severe breach of international norms as detailed below:

Company Exclusions based on Controversial Activities and Revenue Thresholds	
Activity	Revenue Thresholds
Fossil Fuels and Nuclear Energy	
Thermal Coal Extraction	>25%
Thermal Coal Power Generation	>25%
Oil & Gas Production	>25%
Oil Sands Extraction	>10%
Shale Energy Extraction	>10%
Off-shore Arctic Oil & Gas Exploration	>10%
Nuclear Power Generation	>50%
Weapons	
Production of controversial weapons[1]	>0%
Military Contracting Weapons	>10%
Military Contracting Weapon-Related Products and/or Services	>50%
Small Arms Civilian Customers (Assault Weapons)	>10%
Small Arms Civilian Customers (Non-Assault Weapons)	>10%
Small Arms Military/Law Enforcement Customers	>25%
Small Arms Key Components	>25%
Other Controversial Activities	
Adult Entertainment Production	>10%
Gambling Operations	>10%
Genetically Modified Plants and Seeds Development	>25%
Genetically Modified Plants and Seeds Growth	>25%
Pesticides Production	>10%
Pesticides Retail	>10%
Tobacco Products Production	>10%
Company Exclusions based on Breaches of International Norms	
Companies in severe breach of UN Global Compact Principles on human rights, labour standards, environmental protection and anti-corruption	Excluded
Company Exclusions based on Breaches of International Norms	
Companies in severe breach of UN Global Compact Principles on human rights, labour standards, environmental protection and anti-corruption	Yes
Country Exclusions	
Countries (i) listed as State Sponsors of Terrorism as defined by the Office of Foreign Assets Control[2] or (ii) subject to EU financial sanctions targeting central banks and/or State-Owned enterprises (SOEs)	Excluded
Countries (i) classified as very high or high risk in the Fragile State Index or (ii) affected by violent conflict as defined by the World Bank	Yes
Countries (i) listed under "alert" on the Fragile State Index or (ii) subject to export related sanctions by the EU	Watchlist[3]

[1] Controversial weapons include anti-personnel mines, cluster munitions, biological & chemical weapons (including white phosphorous) and nuclear weapons from countries not signatory to the Treaty on the Non-Proliferation of Nuclear Weapons (NPT).

[2] "State Sponsors of Terrorism" is a designation applied by the United States Department of State to countries that repeatedly provided support to acts of international terrorism.

[3] In addition to hard exclusions, Pictet Asset Management maintains a watchlist including countries that require additional due diligence by investment teams prior to investment.

For further details please refer to Pictet Asset Management's Responsible Investment policy (Appendix B).

In addition to the above exclusions based on Pictet Asset Management's Responsible Investment policy, the strategy applied stricter exclusion limits based on internal guidelines.

- **Active ownership:**

The fund methodically exercised its voting rights. The fund also engaged with the management of companies on material ESG issues.

- **Sustainable Investments:**

Pictet Asset Management used a proprietary framework as well as the objectives of the EU Taxonomy to define sustainable investments.

The fund invested in securities financing economic activities that substantially contributed to environmental and/or social objectives such as:

Environmental

- climate change mitigation or adaptation
- sustainable use and protection of water and marine resources
- transition to a circular economy
- pollution prevention and control, or
- protection and restoration of biodiversity and ecosystem

Social

- inclusive and sustainable communities
- adequate living standards and well-being for end users, or
- decent work

- **How did the sustainability indicators perform?**

Over the reporting period the sustainability indicators performed as follows:

- **Exposure to companies that derive a significant proportion of revenue, EBIT, enterprise value or similar metrics from economic activities that contribute to environmental or social objectives, and labelled bonds where relevant to the asset class (sustainable investments):**

97.30%

- **Exposure to revenues from economic activities that contribute to climate change adaption and/or climate change mitigation (EU taxonomy-aligned investments):**

1.11%

Additional information on specific environmental and/or social objectives will be available in next year's report.

- **Overall ESG profile**

The fund increased the weight of securities with low sustainability risks and/or decreased the weight of securities with high sustainability risks.

As a result, the fund has achieved a better environmental, social and governance (ESG) profile than the reference index after removing the bottom 20% of issuers with the weakest ESG characteristics.

- **Principle Adverse Impact (PAI)**

The fund used a combination of approaches to consider and, where possible, mitigate material adverse impacts of its investments on society and the environment, such as GHG emissions, air pollution, biodiversity loss, emissions to water, hazardous/radioactive waste, human rights, labour standards, corruption and bribery and public health.

The degree and the way these impacts were considered depended on factors such as the specific context of the investment that is causing the adverse impact, or the availability of reliable data.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

In line with Pictet Asset Management’s exclusion policy outlined in the firm’s Responsible Investment policy (see table above for excluded activities and applied exclusion thresholds), the fund did not have any exposure to companies that derived a significant portion of their revenue from activities detrimental to society or the environment as detailed below:

Controversial activities (weighted average company revenues, in %)*:

	Fund (%)	Reference Index (%)
Fossil fuels and nuclear energy	0.12	4.15
Weapons	0.00	0.99
Other controversial activities	0.06	1.02
Not applicable:	0.86	0.00
Not covered:	0.74	0.02

**Fossil fuels and nuclear energy include thermal coal extraction and power generation, oil & gas production and extraction, shale energy extraction, off-shore arctic oil & gas exploration, and nuclear power generation. Weapons include military contracting (weapon and weapon related services), and small arms (civilian customers (assault/ non-assault weapons, military law enforcement, key components). Other controversial activities include tobacco production, adult entertainment production, gambling operation, GMS development or growth, pesticides production or retail. Exposures are based on third-party data and may not reflect our internal view. Pictet Asset Management retains full discretion over the implementation of exclusion criteria and reserves the right to deviate from third-party information on a case-by-case basis in instances where it is deemed incorrect or incomplete.*

Source: Pictet Asset Management, Sustainalytics.

In addition, the fund excluded issuers that had exposure to:

- (i) PAI 10: Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises.
- (ii) PAI 14: Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons).

- **Voting rights**

During the reference period, the fund voted at 61 general assembly meetings out of 66 votable meetings (92.42%). We voted “against” (incl. “abstained” or “withhold”) at least one resolution at 37.88% of meetings.

Out of 860 management resolutions, we voted against management on 49 items (5.70%) and abstained on 16 items (1.86%).

We supported 11 (42.31%) shareholder resolutions out of 26 proposals.

In respect to Environmental and/or Social issues we voted for 1 out of 1 management resolutions and for 1 out of 4 shareholder resolutions.

Source: Pictet Asset Management, ISS ESG.

- **Engagement**

The fund engaged with 11 companies on ESG topics (data as of 30.09.2023). This includes in-house-led dialogues, collaborative investor initiatives, and third-party engagement services. To be considered an engagement, a dialogue with a targeted company must have a clear and measurable objective within a pre-defined time horizon. It is important to note that not all routine or monitoring interactions, even if they involve senior management or Board of Directors, are regarded as engagements in our assessment.

Source: Pictet Asset Management, Sustainalytics.

- **...and compared to previous periods?**

This question will be addressed in future annual reports due to lack of a track record.

- **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

To prevent sustainable investments from causing significant harm to any other environmental or social objective, the fund applied the following screening criteria on a best effort basis:

- (i) Exclusions of issuers that have significant activities with adverse impacts on society or the environment (see description of RI exclusion framework).

(ii) Issuers associated with high and severe controversies were excluded.

Information were obtained from third-party providers and/or internal research. ESG information from third-party data providers may have been incomplete, inaccurate or unavailable. As a result, there was a risk that the Investment Manager may incorrectly assessed a security or issuer, resulting in the incorrect inclusion or exclusion of a security in the fund. Incomplete, inaccurate or unavailable ESG data may also acted as a methodological limitation to a non-financial investment strategy (such as the application of ESG criteria or similar). Where identified, the Investment Manager sought to mitigate this risk through its own assessment. In the event that the ESG characteristics of a security held by the fund changed, resulting in the security being sold, the Investment Manager does not accept liability in relation to such change.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

● *How were the indicators for adverse impacts on sustainability factors taken into account?*

Pictet Asset Management monitors all mandatory Principal Adverse Impact indicators (included in Annex 1 of the Commission Delegated Regulation (EU) 22 / 1288) where we have robust data available. The quality and the availability of data are expected to improve over time.

The fund considered and, where possible, mitigated adverse impacts of its investments on society and the environment that are deemed material to the investment strategy through a combination of portfolio management decisions, active ownership activities, and exclusion of issuers associated with controversial conduct or activities.

More information is disclosed in the PAI entity report available under:

<https://documents.am.pictet/?cat=marketing-permalink&dtyp=PAI&dla=en&bl=PAM>

● *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?*

To ensure that sustainable investment did not cause significant harm to any sustainable investment objective, the fund excluded companies with high and severe violations of (i) the UN Global Compact principles on human rights, labour standards, environmental protection and anti-corruption or (ii) OECD Guidelines for Multinationals, including severe social and employee issues.

How did this financial product consider principal adverse impacts on sustainability factors?

The fund considered and, where possible, mitigated adverse impacts that were deemed material to the investment strategy. Such adverse impacts included but were not limited to GHG emissions, air pollution, biodiversity loss, emissions to water, hazardous/radioactive waste, social and employee matters and corruption and bribery and were addressed through a combination of:

(i) portfolio management decisions

The investment team scored holdings according to an assessment of Environmental, Social & Governance risks and opportunities as well as the exposure to sustainable investments as part of the fund's scoring framework. Scores are determined on a qualitative basis by the investment managers, informed by fundamental research and quantitative ESG data - including data on Principle Adverse Impact, ESG data provided by the companies and data provided by third-party ESG data providers. The investment team's scoring process was a key component of the compartment's portfolio construction process, determining target weights in the portfolio.

(ii) proxy voting

The fund followed Pictet Asset Management's voting guidelines which are designed to support a strong culture of corporate governance, effective management of environmental and social issues and comprehensive reporting according to credible standards. These guidelines also seek to support recognized global governing bodies promoting sustainable business practices advocating for stewardship of environment, fair labour practices, non-discrimination, and the protection of human rights. All voting activities of the fund were logged and can be shared upon request.

(iii) engagement

Interaction with issuers took the form of one-to-one discussions, shareholder/bondholder meetings, investor roadshows and/or conference calls. The objectives of these interactions were to assess an organization, monitor that their strategy was implemented in line with our expectations and ensure that issuers were on track to meet their goals and objectives.

Where appropriate, we engaged issuers to address either significant ESG concerns, improve companies' sustainability practices or engage on positive impact topics to satisfy ourselves that they fully understood and addressed them effectively over the short, medium and long term. Our engagement activities included a combination of targeted in-house-led discussions, collaborative institutional investor initiatives, and third-party engagement services.

(iv) exclusion of issuers associated with controversial conduct or activities

The fund did not have any exposure to (i) companies that derived a significant portion of their revenue from activities detrimental to society or the environment as defined in Pictet Asset Management’s Responsible Investment policy and/or (ii) companies that severely violated the UN Global Compact principles on human rights, labour standards, environmental protection and anti-corruption and controversial weapons.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01.10.2022 - 30.09.2023

LARGEST INVESTMENTS	SECTOR	% ASSETS	COUNTRY
POTLATCHDELTIC CORP	Real Estate	6.4	United States

Source: Pictet Asset Management, GICS/MSCI.

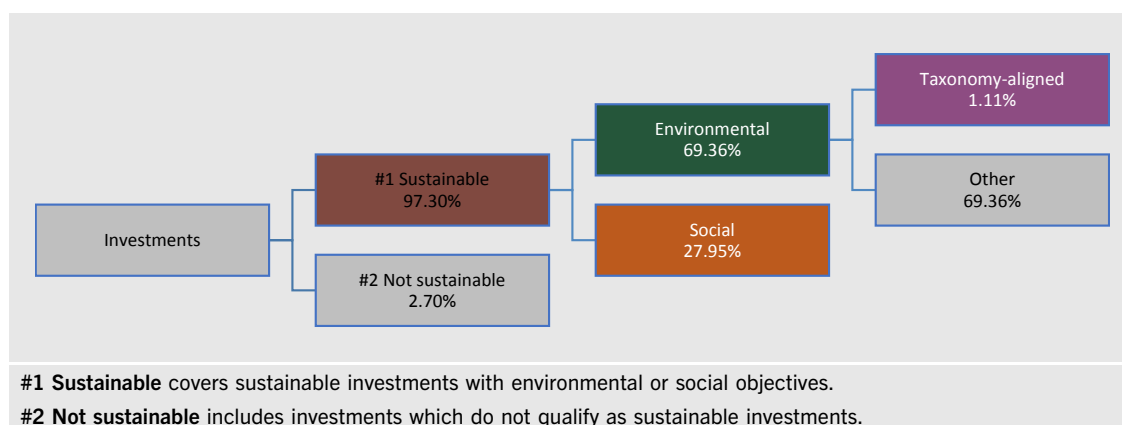

What was the proportion of sustainability-related investments?

97.3%

Asset allocation describes the share of investments in specific assets.

● What was the asset allocation?

The fund allocated 97.30% of its assets to Sustainable investments (#1 Sustainable) and 2.70% to Not sustainable investments (#2 Not sustainable). 69.36% of its assets is allocated to environmental objectives and 27.95% to social objectives.

Notes:

- "#1A Sustainable", "Other Environmental" and "Social" investments were calculated on a pass/fail basis. They include labelled bonds (where relevant to the asset class) and securities from issuers with minimum 20% exposure to economic activities that contributed to at least one environmental or social objective.
- EU taxonomy-aligned investments were calculated on a revenue-weighted basis (ie security weights are multiplied by the proportion of revenues from economic activities that contribute to climate mitigation and climate adaptation) and cannot be consolidated with other numbers following a pass/fail approach.
- In the absence of an EU social taxonomy, Pictet has developed a proprietary social taxonomy framework based on the Report on Social Taxonomy published in 2022 by the EU Platform on Sustainable Finance. Eligible activities are defined as goods and services that substantially contribute to one of the following three objectives: (1) inclusive and sustainable communities, (2) adequate living standards and well-being for end users and (3) decent work.

Source: Pictet Asset Management, FTSE Green revenues, Factset RBICS.

● In which economic sectors were the investments made?

Source: Pictet Asset Management, GICS/MSCI.

We are evaluating the availability and the quality of data that would allow us to disclose more granular information in future reports on sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The fund made investments in economic activities that contributed to the first two environmental objectives (climate change adaption and climate change mitigation) as set out in the Article 9 of Regulation (EU) 2020/852.

EU taxonomy-aligned investments were calculated on a revenue-weighted basis (ie security weights are multiplied by the proportion of revenues from economic activities that contribute to relevant environmental objectives) and cannot be consolidated with other numbers following a pass/fail approach.

EU Green Taxonomy alignment data were sourced from publicly available reports. Calculations may also include estimates in a limited number of cases when EU Green Taxonomy alignment reported data were not available. Estimates were performed on a best effort basis and following a conservative approach so as to produce a prudent outcome.

The monitoring procedures have been implemented to verify at all times compliance with Article 3 of the EU taxonomy regulation.

Data provided have not been verified by an external auditor or reviewed by an independent third-party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

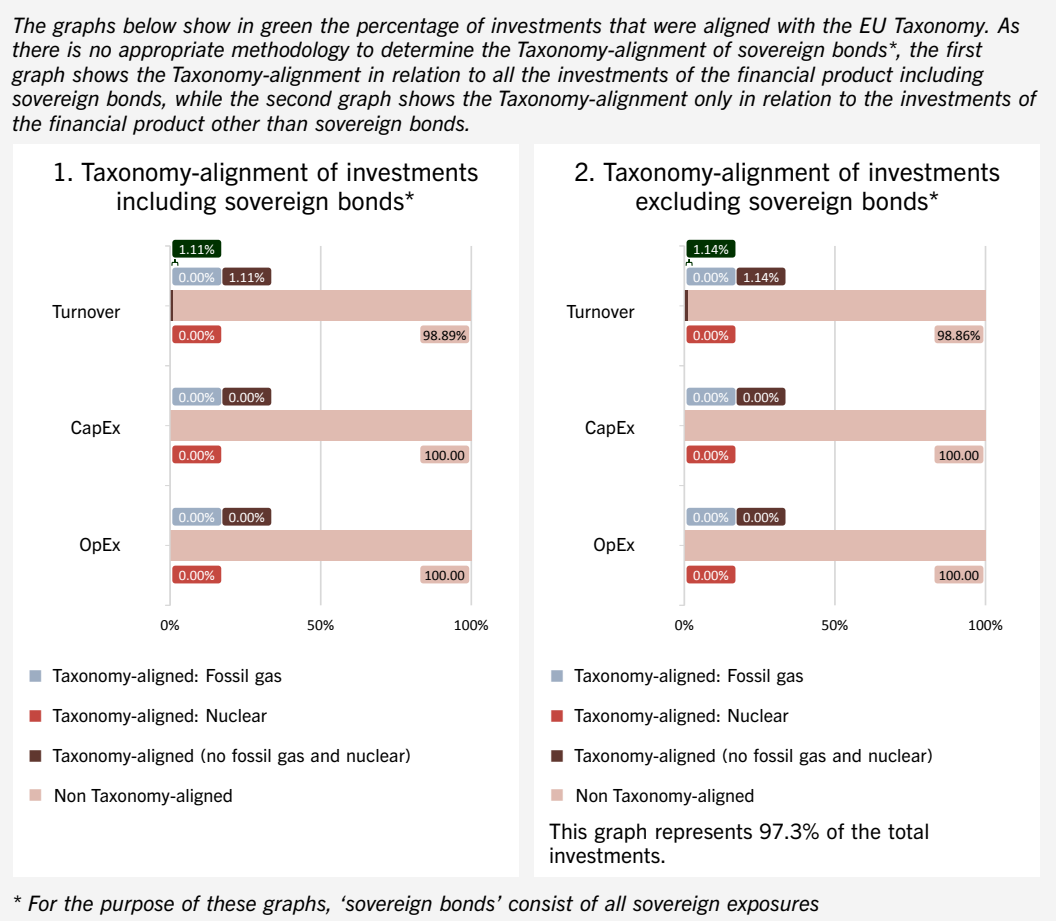

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

- Yes:
- In fossil gas
 - In nuclear energy

No
 The insufficient quality and availability of the data currently available on the market does not allow to provide such breakdown. We are working with data providers to increase quality and availability over time.

Note:

- We use revenues as the key metric for setting target allocation to, and actual alignment with, the EU taxonomy due to limited availability and lack of reliable data for OpEx and CapEX.

Source: Pictet Asset Management.

● **What was the share of investments made in transitional and enabling activities?**

- The share of investments made in:
- Transitional activities: Not applicable*
 - Enabling activities: Not applicable*

*The insufficient quality and availability of the data currently available on the market does not allow to provide such breakdown. We are working with data providers to increase quality and availability over time.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

69.36%

These Sustainable Investments are not aligned with the EU Taxonomy because their economic activities either (i) are not covered by the EU Taxonomy, or (ii) do not comply with the technical screening criteria to achieve substantial contribution in the sense of the EU Taxonomy.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of socially sustainable investments?

27.95%

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The fund’s “other” investments included cash positions primarily held for meeting daily liquidity and risk management purposes as allowed and foreseen by the fund’s investment policy. Where relevant, minimum environmental or social safeguards apply to the underlying securities.

What actions have been taken to attain the sustainable investment objective during the reference period?

During the reference period, the attainment of the sustainable investment objective was met by following the investment strategy and adhering to the binding elements.

The fund’s binding elements include:

- at least 80% of sustainable investments, i.e. investments in companies that have a significant exposure to activities such as financing, planting, and management of forests and wooded areas and/or in the processing, production and distribution of wood and wood fibre based materials, products and related services along the entire forest value chain and other relevant economic activities (as measured by revenue, enterprise value, earnings before interest and tax, or similar)
- exclusion of issuers that:
 - are involved in the production of controversial weapons including anti-personnel mines, cluster munitions, biological and chemical weapons, nuclear weapons and depleted uranium
 - derive a significant portion of their revenue from activities detrimental to society or the environment, such as thermal coal extraction and power generation, unconventional oil and gas exploration and production, conventional oil and gas production, nuclear power generation, conventional weapons and small arms, military contracting weapons and weapon-related products and services, tobacco production, adult entertainment production, gambling operations, genetically modified organisms development/growth, pesticides product/retail. Please refer to Pictet Asset Management’s Responsible Investment policy for further details on exclusion thresholds applicable to the above activities
 - severely violate international norms including the UN Global Compact principles on human rights, labour standards, environmental protection and anti-corruption
- a better ESG profile than the reference index after removing the bottom 20% of issuers with the weakest ESG characteristics
- ESG criteria analysis of eligible securities that covers at least 90% of net assets or the number of issuers in the portfolio

Furthermore, the fund engaged with 11 companies as of 30.09.2023.

How did this financial product perform compared to the reference benchmark?

No reference index has been designated for the purpose of attaining the sustainable investment objective.

- **How did the reference benchmark differ from a broad market index?**
Not applicable.
- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**
Not applicable.
- **How did this financial product perform compared with the reference benchmark?**
Not applicable.
- **How did this financial product perform compared with the broad market index?**
Not applicable.

(Original German name: Raiffeisen-GreenBonds)

Legal entity identifier: 529900G72T0PJFILI22

This product (the fund) is managed by Raiffeisen Kapitalanlage-Gesellschaft m. b. H. as the management company.

Fund manager: Raiffeisen Kapitalanlage-Gesellschaft m.b.H.

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EUTaxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input checked="" type="checkbox"/> Yes	<input type="radio"/> <input type="radio"/> <input type="checkbox"/> No
<input checked="" type="checkbox"/> It made sustainable investments with an environmental objective: 98.0 % <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective: ____%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ____ % of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

To what extent was the sustainable investment objective of this financial product met?

The fund pursued a sustainable investment objective (within the meaning of the Sustainable Finance Disclosure Regulation). The focus was on climate protection and the adaptation to climate change. No derivatives were used to achieve the sustainable investment objective. No reference benchmark has been determined.

How did the sustainability indicators perform?

The Raiffeisen ESG indicator is used by the management company as an internal sustainability indicator. The management company continually analyses companies and sovereigns based on internal and external research sources. The results of this sustainability research are combined with a comprehensive ESG evaluation, including an ESG risk assessment, to create the so-called Raiffeisen ESG indicator. The Raiffeisen ESG indicator is measured on a scale from 0 to 100. The assessment also takes into account the relevant sector.

At the end of the accounting period the Raiffeisen ESG indicator amounted to 76.55.

- **...and compared to previous periods?**
Accounting period 1.9.2021-31.8.2022: Raiffeisen ESG indicator: 74.5

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- **How did the sustainable investments not cause significant harm to any sustainable investment objective?**
Green bonds serve to raise financing for environmental projects. These were categorised as sustainable investments if the issuer was not excluded from investment based on the investment criteria according to the investment strategy and if they complied with the Green Bond Principles of the International Capital Markets Association or the EU Green Bond Principles.

How were the indicators for adverse impacts on sustainability factors taken into account?

See the information under „How did this financial product consider principal adverse impacts on sustainability factors?“.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The positive and negative criteria contained in the investment strategy covered all aspects of the OECD Guidelines for Multinational Enterprises (such as avoidance of environmental destruction, corruption, and human rights violations as well as adherence to the core ILO labour standards). The fund management continuously monitored various channels of information such as the media and research agencies to determine whether investments are affected by serious controversies. In addition, the fund assets were assessed for potential violations of the OECD Guidelines for Multinational Enterprises by means of a screening tool from a recognised ESG research provider. A company that did not comply with the OECD Guidelines for Multinational Enterprises was not eligible for investment. A violation was assumed to exist if a company was involved in one or more controversial incidents in which there were credible allegations that the company or its management had caused substantial damage of a significant scope in violation of global standards.

How did this financial product consider principal adverse impacts on sustainability factors?

The consideration of the principal adverse impacts of investment decisions on sustainability factors occurred through negative criteria, through the integration of ESG research into the investment process (ESG scores), and in security selection (positive criteria). The use of positive criteria included the absolute and relative assessment of companies regarding stakeholder-related data, e.g. relating to employees, society, suppliers, business ethics, and the environment, as well as the absolute and relative assessment of sovereigns regarding the development of factors related to sustainable development such as the political system, human rights, social structures, environmental resources, and climate change policy. In addition, the instrument of shareholder engagement was used with companies in the form of corporate dialogue and especially the exercise of voting rights so as to reduce adverse sustainability impacts. These shareholder engagement activities were conducted irrespective of any concrete investment in the respective company and are not documented at the fund level at the moment. The table shows the topics from which sustainability scores for adverse impacts were considered in particular, as well as the main methods that were applied.

Companies		Negative criteria	Positive criteria
Environment	Greenhouse gas emissions	✓	✓
	Activities with adverse impacts on areas with protected biodiversity	✓	✓
	Water (pollution, consumption)		✓
	Hazardous waste		✓
Social affairs and employment	Violations or lack of policy regarding the United Nations Global Compact (initiative for responsible corporate governance) and OECD guidelines for multinational companies; work accidents	✓	✓
	Gender justice		✓
	Controversial weapons	✓	✓

Countries and supranational organizations		Negative criteria	Positive criteria
Environment	Greenhouse gas emissions	✓	✓
Social issues	Violation of social provisions in international agreements and conventions and the principles of the United Nations	✓	✓

What were the top investments of this financial product?

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the sustainable investment objective within the scope of the investment strategy.

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The values given below refer to the end of the accounting year. No derivatives were used to achieve the sustainable investment objective.

At the end of the reporting period, 98.0% of total fund assets were sustainable investments with environmental or social objectives aligned with Art. 2 (17) of Regulation (EU) 2019/2088 (Sustainable Finance Disclosure Regulation) (#1). 2.0% of total fund assets were other investments (#2, see also information under "What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?").

#1 Sustainable covers sustainable investments with environmental or social objectives.

#2 Not sustainable includes investments which do not qualify as sustainable investments.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

In which economic sectors were the investments made?

Investment structure	Share fund in %
Government	34.88
Financial	34.63
Utilities	16.83
Industrial	5.18
Communications	4.09
Consumer, Cyclical	1.55
Sonstige / Others	2.84
Gesamt / Total	100.00

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

At the end of the accounting year, the level of investments in economic activities that are environmentally sustainable within the meaning of the EU Taxonomy Regulation did not exceed a de minimis level.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy³?

- Yes:
 - In fossil gas
 - In nuclear energy
- No.
- Not applicable

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

● **What was the share of investments made in transitional and enabling activities?**
At the end of the accounting year, the level of investments in economic activities that are environmentally sustainable within the meaning of the EU Taxonomy Regulation did not exceed a de minimis level.

● **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**
In previous reference periods, the level of investments in economic activities that are environmentally sustainable within the meaning of the EU Taxonomy Regulation did not exceed a de minimis level.

 **What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?**
The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy amounted to 98.0% of total assets and was calculated on an issuer basis.

 **What was the share of socially sustainable investments?**
Due to the investment strategy the focus is on environmental objectives. The extent to which these investments are also socially sustainable has not been assessed.

 **What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?**
Not sustainable investments were mainly sight deposits. Sight deposits were not subject to the sustainability criteria of the investment strategy and were primarily used for liquidity management. Accruals and deferrals were included in the position “not sustainable”.

What actions have been taken to attain the sustainable investment objective during the reference period?

The attainment of the sustainable investment objective promoted by the fund was continuously monitored against defined limits as part of the internal limit system.

The implementation of the investment strategy included mandatory negative criteria, a comprehensive sustainability-related analysis and the construction of a portfolio taking into account the contribution to climate protection, e.g. the reduction of CO₂ emissions due to the projects. The sustainability assessment focused not only on the issuers of bonds, but also on the use of proceeds, i.e. the environmental projects financed via the green bonds (climate protection bonds).

The minimum share of sustainable investments according to the Sustainable Finance Disclosure Regulation was 90%.

More detailed information on the implementation of the engagement policy can be found in the annual engagement report on the website of the management company in the section "Our Topics/Sustainability" within the paragraph "Policies & Reports".

Appendix V – Sustainable Finance Disclosure (Unaudited)

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> Yes	<input type="radio"/> No
<input checked="" type="checkbox"/> It made sustainable investments with an environmental objective: 16%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of __% of sustainable investments
<input type="checkbox"/> In economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> With an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> In economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> With an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> It made sustainable investments with a social objective: 82%	<input type="checkbox"/> With a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Appendix V – Sustainable Finance Disclosure (Unaudited)

To what extent was the sustainable investment objective of this financial product met?

The Fund's sustainable investment objective was met.

The Fund invested at least 75% of its assets in real estate companies worldwide that contributed towards more environmentally resilient and innovative cities and infrastructure. The Fund also invested in investments that the Investment Manager deemed to be neutral under its sustainability criteria, which was cash.

No reference benchmark was designated for the purpose of attaining the sustainable investment objective.

The reference period for this Fund is 1 January to 31 December 2022.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

• *How did the sustainability indicators perform?*

The Fund invested 98% of its assets in sustainable investments. This percentage represents the average of the reference period, based on quarter-end data.

The Investment Manager was responsible for determining whether an investment met the criteria of a sustainable investment. The Investment Manager used a combination of a revenue based approach in this assessment, by considering whether a certain percentage of the relevant issuer's revenues, capital expenditure or operating expenditure contributed to an environmental and/or social objective, and specific sustainability key performance indicators to assess the investment's contribution to an environmental and/or social objective. Compliance with the minimum percentage in sustainable investments was monitored daily via our automated compliance controls.

The Investment Manager used different sustainability indicators to measure the impact contribution at an investee company level. In particular, the Investment Manager used a proprietary sustainability tool which rates companies based on their treatment of key stakeholders, including communities and the environment. Examples of the indicators include, but are not limited to, employee fatality rates, board independence and carbon intensity.

For example, the Fund invested in a company which develops and manages affordable housing in a market which is known to have a large supply constraint. Rents are regulated and the company's average rent per square meter sits 15% below market rents. This company is aligned with SDG 11 Sustainable Cities and Communities, ensuring the urban population is not pushed towards inadequate housing or informal settlements. The Fund also invested in a prime office operator and developer which acquires buildings with poor ESG credentials and refurbishes these assets into efficient and EPC (Energy Performance Certificate) compliant buildings. Therefore these assets operating emissions are reduced, minimising water waste and energy intensity.

The Investment Manager encouraged companies to join GRESB, a benchmark which has been set up specifically for the real estate sector. GRESB gives access to vital information about submitting member companies, such as, greenhouse gas emissions, energy or water use. This information can be carefully monitored and used to hold companies accountable for their actions. GRESB is used within the second stage of the investment process, 52% of the company's scorecard is derived from GRESB metrics which

Appendix V – Sustainable Finance Disclosure (Unaudited)

allows the Investment Manager to gauge the performance credentials of each company's assets allowing it to append a risk score.

The Fund also applied certain exclusions, with which the Investment Manager monitored compliance on an ongoing basis via its portfolio compliance framework. The Fund did not invest in any issuers within this exclusionary criteria.

• *...and compared to previous periods?*

As this is our first reporting period, this question is not applicable.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

• *How did the sustainable investments not cause significant harm to any sustainable investment objective?*

The Investment Manager's approach to not causing significant harm to any environmental or social sustainable investment objective included the following:

- Firm-wide exclusions applied to Schroders funds. These relate to international conventions on cluster munitions, anti-personnel mines, and chemical and biological weapons. A detailed list of all companies that are excluded is available at <https://www.schroders.com/en/sustainability/active-ownership/group-exclusions/>.
- Schroders became a signatory to the UN Global Compact (UNGC) principles on 6 January 2020. The Fund excluded companies in violation of the UNGC principles from the portfolio, as Schroders considers violators cause significant harm to one or more environmental or social sustainable investment objectives. The areas determining whether an issuer is an UNGC violator include issues that are covered by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, such as human rights, bribery and corruption, labour rights, child labour, discrimination, health and safety, and collective bargaining. The list of UNGC violators is provided by a third party and compliance with the list was monitored via our automated compliance controls. Schroders applied certain exceptions to the list during the reference period.
- Firm-wide exclusions also applied to companies that derived revenues above certain thresholds from activities related to tobacco and thermal coal, especially tobacco production, tobacco value chain (suppliers, distributors, retailers, licensors), thermal coal mining and coal fired power generation.
- The Fund also applied certain other exclusions.
- Further information on all of the Fund's exclusions is to be found under "Sustainability Related Disclosures" on the Fund's webpage, accessed via <https://www.schroders.com/en/lu/private-investor/gfc>.

• *How were the indicators for adverse impacts on sustainability factors taken into account?*

Where the Investment Manager set levels in relation to the indicators for adverse impacts on sustainability factors, compliance with these thresholds was monitored on an ongoing basis via its portfolio compliance framework. Investee companies in breach of these levels were not eligible to be considered as a sustainable investment.

For example, the Fund excluded companies in violation of the UNGC principles (principal adverse impact (PAI) 10) from the portfolio. The list of UNGC violators is provided by a third party and

Appendix V – Sustainable Finance Disclosure (Unaudited)

compliance with the list was monitored via our automated compliance controls. Schroders applied certain exceptions to the list during the reference period.

In addition the Fund excluded companies that were deemed to contribute significantly to climate change (related to PAIs 1, 2 and 3 covering GHG emissions). The thresholds that were applied were companies deriving >10% revenue from thermal coal mining and >30% revenue from coal power generation. The Fund may have applied stricter thresholds, as disclosed on the website. Compliance with these exclusions was monitored via our automated compliance controls.

In other areas Schroders set principles of engagement. We have aligned each of the PAIs to one of Schroders six core engagement themes. We summarise below the thresholds that apply and the engagement actions we have for each:

Climate Change

PAIs 1, 2, 3, 4, 5, 6 and 19 relate to the Engagement Blueprint theme of Climate Change. Details of our Engagement Blueprint can be found here: (Link <https://prod.schroders.com/en/sysglobalassets/about-us/schroders-engagement-blueprint-2022.pdf>). We engage to understand how companies are responding to the challenges climate change may pose to their long-term financial position. Through our engagement activity we seek to understand different areas, such as the speed and scale of emission reduction targets and steps being taken to meet climate goals.

Biodiversity and Natural Capital

PAIs 7, 8 and 9 align to the Engagement Blueprint theme of Biodiversity and Natural Capital. We recognise the importance of all companies assessing and reporting on their exposure to natural capital and biodiversity risk. We focus our engagement on improving disclosure around a number of themes such as deforestation and sustainable food and water.

Human Rights

PAIs 10 and 14 relate to the Engagement Blueprint theme of Human Rights. There is increasing pressure on the role that businesses can and should play to respect human rights. We understand the higher operational and financial risks, and the reputational risk that human rights controversies cause. Our engagement focuses on three core stakeholders: workers, communities and customers.

Human Capital Management

PAIs 11, 12 and 13 align to the Engagement Blueprint theme of Human Capital Management. We identify human capital management as a priority issue for engagement, noting that people in an organisation are a significant source of competitive advantage and that effective human capital management is essential to drive innovation and long-term value creation. We also recognise a number of links between high standards of human capital management and the achievement of the Sustainable Development Goals (SDGs). Our engagement activities address themes such as health and safety, corporate culture and investment into the workforce.

Diversity and Inclusion

PAIs 12 and 13 relate to the Engagement Blueprint theme of Diversity and Inclusion. Improving disclosure on board diversity and the gender pay gap are two of the priority objectives outlined in our Engagement Blueprint. We request that companies implement a policy that requires each board

Appendix V – Sustainable Finance Disclosure (Unaudited)

vacancy to consider at least one or more diverse candidates. Our engagement approach also addresses diversity of the executive management, the workforce and in the value chain.

Corporate Governance

PAIs 20, 12 and 13 align to the Engagement Blueprint theme of Corporate Governance. We engage with companies to seek to ensure businesses act in the best interest of shareholders and other key stakeholders. We also recognise that, in most cases, in order to see progress and performance on other material Environmental, Social and Governance (ESG) issues, strong governance structures need to first be in place. We therefore engage on a number of corporate governance aspects such as executive remuneration, boards and management, and strategy.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

We used a list of UNGC violators as provided by a third party. Issuers on that list were not categorised as sustainable investments. The areas considered when determining whether an issuer is an UNGC violator included those covered by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, such as human rights, bribery and corruption, labour rights, child labour, discrimination, health and safety, and collective bargaining.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager’s approach to considering principal adverse impacts on sustainability factors involved classifying the indicators into three categories:

1. Set thresholds

For certain PAIs (e.g. PAI 10 on violations of UNGC principles), we set thresholds for considering an investment to be a sustainable investment. Investments in breach of these thresholds were not eligible to be held as sustainable investments. Compliance with these thresholds was monitored on an ongoing basis via the Investment Manager’s portfolio compliance framework.

2. Active ownership

Appendix V – Sustainable Finance Disclosure (Unaudited)

The team undertook 50 engagements covering 74 topics which were related to the principal adverse impacts. These were in addition to sustainability discussions that occurred during the normal course of company management meetings throughout the year. Environmental engagements focused on climate goals and biodiversity, and governance engagements focused on remuneration and board independence.

During the reference period, the Investment Manager engaged in line with the approach and expectations set out in our Engagement Blueprint (Link <https://prod.schroders.com/en/sysglobalassets/about-us/schroders-engagement-blueprint-2022.pdf>) and as further described above. A summary of Schroders firm-wide engagement activity, during the reference period, including the relevant engagement theme, is shown below:

Engagement Theme	# Issuers
Climate Change	738
Diversity and Inclusion	72
Governance and Oversight	3,096
Human Capital Management	130
Human Rights	121
Natural Capital and Biodiversity	95

3. Improve coverage

Some of the engagements identified in the table above involved discussions where the primary focus was to increase reporting on sustainability data. The purpose is to improve coverage of the PAIs, for example PAI 9 on hazardous waste ratio.

Our approach is subject to ongoing review, particularly as the availability, and quality, of PAI data evolves.

What were the top investments of this financial product?

During the reference period the top 15 investments were:

Appendix V – Sustainable Finance Disclosure (Unaudited)

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: **1 Jan 2022 to 31 Dec 2022**

Largest Investments	Sector	% Assets	Country
EQUINIX INCORPORATED REIT USD0.001	Real Estate	4.93	United States
PUBLIC STORAGE REIT USD0.10	Real Estate	4.45	United States
REXFORD INDUSTRIAL REALTY IN REIT USD0.01	Real Estate	4.10	United States
PROLOGIS INCORPORATED REIT USD0.01	Real Estate	4.04	United States
UDR INCORPORATED REIT USD0.01	Real Estate	4.04	United States
WELLTOWER INCORPORATED REIT USD1	Real Estate	3.77	United States
EXTRA SPACE STORAGE INCORPORATED REIT USD0.01	Real Estate	3.42	United States
EQUITY RESIDENTIAL SBI REIT USD0.01	Real Estate	3.10	United States
KIMCO REALTY CORPORATION REIT USD0.01	Real Estate	2.79	United States
SUN COMMUNITIES INC REIT USD0.01	Real Estate	2.75	United States
ALEXANDRIA REAL ESTATE EQUITIES INCORPORATED REIT USD0.01	Real Estate	2.69	United States
HEALTHPEAK PROPERTIES INCORPORATED USD1	Real Estate	2.62	United States
FEDERAL REALTY INVESTMENT TRUST REIT USD0.01	Real Estate	2.59	United States
INVITATION HOMES INCORPORATED REIT USD0.01	Real Estate	2.44	United States
MITSUI FUDOSAN COMPANY LIMITED NPV	Real Estate	2.22	Japan

The list above represents the average of the Fund's holdings at each quarter end during the reference period.

The largest investments and % of assets referred to above are derived from the Schroders Investment Book of Record (IBoR) data source. The largest investments and % of assets detailed elsewhere in the Audited Annual Report are derived from the Accounting Book of Record (ABoR) maintained by the administrator. As a result of these differing data sources, there may be differences in the largest investments and % of assets due to the differing calculation methodologies of these alternative data sources.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

• What was the asset allocation?

The Fund's investments that were used to meet its sustainable investment objective are summarised below.

#1 Sustainable are investments in real estate companies worldwide that contributed towards more environmentally resilient and innovative cities and infrastructure.

The Fund invested 98% of its assets in sustainable investments. This percentage represents the average of the reference period, based on quarter-end data. Within this, 16% was invested in sustainable investments with an environmental objective and 82% was invested in sustainable investments with a social objective.

#2 Not sustainable includes investments that were treated as neutral for sustainability purposes, which was cash.

Appendix V – Sustainable Finance Disclosure (Unaudited)

• In which economic sectors were the investments made?

During the reference period investments were made in the following economic sectors:

Sector	Sub-Sector	% Assets
Real Estate	Real Estate	93.44
Cash	Cash	2.22
Information Technology	Software & Services	2.14
Communication Services	Telecommunication Services	1.11
Industrials	Transportation	0.95
Industrials	Commercial & Professional Services	0.15

The list above represents the average of the Fund's holdings at each quarter end during the reference period.

The % of assets and sector classifications aligned to economic sectors referred to above are derived from the Schroders Investment Book of Record (IBoR) data source. The % of assets and sector classifications aligned to economic sectors detailed elsewhere in the Audited Annual Report are derived from the Accounting Book of Record (ABoR) maintained by the administrator. As a result of these differing data sources, there may be differences in the % of assets and sector classifications aligned to economic sectors, due to the differing calculation methodologies and data availability of these alternative data sources.

Appendix V – Sustainable Finance Disclosure (Unaudited)

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

There was no extent to which the Fund's investments (including transitional and enabling activities) with an environmental objective were aligned with the Taxonomy. Taxonomy alignment of this Fund's investments has therefore not been calculated and has as a result been deemed to constitute 0% of the Fund's portfolio.

• Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

Appendix V – Sustainable Finance Disclosure (Unaudited)

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

• **What was the share of investments made in transitional and enabling activities?**

As per the above, the share of investments by the Fund in transitional and enabling activities has been deemed to constitute 0% of the Fund's portfolio.

• **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

As this is our first reporting period, this question is not applicable.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

Appendix V – Sustainable Finance Disclosure (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 16%.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 82%.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

#2 Not sustainable includes investments that were treated as neutral for sustainability purposes, which was cash.

Minimum safeguards were applied where relevant to investments by restricting (as appropriate) investments in counterparties where there were ownership links or exposure to higher risk countries (for the purpose of money laundering, terrorist financing, bribery, corruption, tax evasion and sanctions risks). A firm-wide risk assessment considers the risk rating of each jurisdiction; which includes reference to a number of public statements, indices and world governance indicators issued by the UN, the European Union, the UK Government, the Financial Action Task Force and several Non-Government Organisations (NGOs), such as Transparency International and the Basel Committee.

In addition, new counterparties were reviewed by Schroders' credit risk team and approval of a new counterparty was based on a holistic review of the various sources of information available, including, but not limited to, quality of management, ownership structure, location, regulatory and social environment to which each counterparty is subject, and the degree of development of the local banking system and its regulatory framework. Ongoing monitoring was performed through a Schroders' proprietary tool, which supports the analysis of a counterparty's management of environmental, social and governance trends and challenges.

Schroders' credit risk team monitored the counterparties and during the reference period a number of counterparties were removed from the approved list for all funds in line with our policy and compliance requirements. This meant that such counterparties were ineligible for use by the Fund in respect of any relevant investments from the date they were removed.

What actions have been taken to attain the sustainable investment objective during the reference period?

The actions taken during the reference period to meet the sustainable investment objective by the Fund were the following:

Appendix V – Sustainable Finance Disclosure (Unaudited)

- The Fund invested at least 75% of its assets in real estate companies worldwide that contributed towards more environmentally resilient and innovative cities and infrastructure.
- The Fund invested in companies that did not cause significant environmental or social harm.
- The Investment Manager utilised a Schroders' proprietary tool to help assess good governance practices of investee companies.
- The Investment Manager engaged with issuers held in the portfolio and on average aimed to meet or speak with company management once a year. During these meetings sustainability topics were regularly discussed alongside business trends and financial performance.
- During 2022, the Investment Manager conducted 22 dedicated sustainability engagements across the investible universe on a number of different topics, including but not limited to climate change which includes building efficiency and emissions, human rights including salary compared to local living wages and corporate governance including remuneration and independence.

How did this financial product perform compared to the reference sustainable benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

No index was designated as a reference benchmark for the purpose of attaining the sustainable investment objective of the Fund.

• *How did the reference benchmark differ from a broad market index?*

This question is not applicable for this Fund.

• *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?*

This question is not applicable for this Fund.

• *How did this financial product perform compared with the reference benchmark?*

This question is not applicable for this Fund.

• *How did this financial product perform compared with the broad market index?*

This question is not applicable for this Fund.

Appendix V – Sustainable Finance Disclosure (Unaudited)

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product : Schroder ISF Global Climate Change Equity

Legal Entity Identifier : TA82R10NRIZRTKERSH09

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Did this financial product have a sustainable investment objective?

Yes
 No

<input type="checkbox"/> It made sustainable investments with an environmental objective: __%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 52% of sustainable investments
<input type="checkbox"/> In economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> With an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> In economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> With an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input checked="" type="checkbox"/> With a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Appendix V – Sustainable Finance Disclosure (Unaudited)

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and/or social characteristics promoted by the Fund were met.

The Fund maintained a higher overall level of avoided emissions than the MSCI All Country World (Net TR) Index, based on the Investment Manager's rating system. This means that the Fund's overall level of avoided emissions over a rolling six-month period up to the end of the reference period was higher than the benchmark's overall level of avoided emissions over the same period, based on month-end data. This benchmark (which is a broad market index) is not a reference benchmark for the purposes of the environmental and social characteristics promoted by the Fund.

Avoided emissions are measured by Schroders' proprietary tool that provides an estimate of the future emissions saved indirectly by companies' products and services through the substitution of high carbon activities with lower carbon alternatives. It does this by identifying certain carbon-avoiding activities and industries that if adopted would contribute to reducing economy-wide emissions. Schroders' proprietary tool uses third party data as well as Schroders own estimates and assumptions and the outcome may differ from other sustainability tools and measures. The level of avoided emissions of the Fund is the aggregate avoided emissions of all issuers in the Fund's portfolio covered by Schroders' proprietary tool. Avoided emissions are calculated per million dollars of investment and expressed as tons CO₂e / \$M investment.

The reference period for this Fund is 1 January 2022 to 31 December 2022.

The Fund also invested at least 40% of its assets in sustainable investments from when this commitment came into effect in August 2022 to the end of the reference period.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

• *How did the sustainability indicators perform?*

The Fund's level of avoided emissions at the end of the reference period was 207 CO₂e / \$M and the benchmark's level of avoided emissions at the end of the reference period was 10 CO₂e / \$M.

The Investment Manager monitored compliance with the characteristic to maintain a higher overall level of avoided emissions than the MSCI All Country World (Net TR) Index by reference to the weighted average avoided emissions of the Fund compared against the weighted average avoided emissions of the MSCI All Country World (Net TR) Index over a rolling six-month period up to the end of the reference period, based on month-end data.

The Investment Manager invested 52% of the Fund's assets in sustainable investments. This figure represents the average percentage of sustainable investments over the four months prior to the end of the reference period, based on month-end data.

The Investment Manager monitored compliance with the characteristic to invest at least 40% of its assets in sustainable investments by reference to the sustainability score of each asset in Schroders' proprietary tool. Compliance with this was monitored daily via our automated compliance controls.

The Fund also applied certain exclusions, with which the Investment Manager monitored compliance on an ongoing basis via its portfolio compliance framework.

Appendix V – Sustainable Finance Disclosure (Unaudited)

• *...and compared to previous periods?*

As this is our first reporting period, this question is not applicable.

• *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

In respect of the proportion of the Fund's portfolio that was invested in sustainable investments, each sustainable investment demonstrated a net positive effect across a range of environmental or social objectives, as scored by Schroders' proprietary tool.

The objectives of the sustainable investments that the Fund made included, but were not limited to increasing benefits by way of the following:

- **Avoided Emissions:** the estimated environmental benefits of companies that enable system-or economy-wide reductions in carbon emissions;
- **Connectivity:** the estimated societal benefits from companies' that enable or support the connection of communities through telecommunication services;
- **High Salaries:** the estimated societal benefit of paying staff above local living wages (for regions in which they operate). Assigned in proportion to the surplus companies are paying employees compared to the average living wage;
- **Medicine:** the estimated societal benefits arising from the additional social value the sale of such products and services exhibits of the wider economy. Assigned in proportion to the company's involvement in the healthcare value chain and proportion of company market share to global sub-sector revenue;
- **Power Provision:** the estimated societal benefits of access to power and electricity. Assigned in proportion to a company's share of power provision revenues;

The above examples of the objectives of the sustainable investments that the Fund made are based on data as at the end of the reference period. Other objectives may have applied during the reference period.

• *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

The Investment Manager's approach to not causing significant harm to any environmental or social sustainable investment objective included the following:

- Firm-wide exclusions applied to Schroders funds. These relate to international conventions on cluster munitions, anti-personnel mines, and chemical and biological weapons. A detailed list of all companies that are excluded is available at <https://www.schroders.com/en/sustainability/active-ownership/group-exclusions/>.
- Schroders became a signatory to the UN Global Compact (UNGC) principles on 6 January 2020. The Fund excluded companies in violation of the UNGC principles from the portion of the portfolio in sustainable investments, as Schroders considers violators cause significant harm to one or more environmental or social sustainable investment objectives. The areas determining whether an issuer is an UNGC violator include issues that are covered by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, such as human rights, bribery and

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Appendix V – Sustainable Finance Disclosure (Unaudited)

corruption, labour rights, child labour, discrimination, health and safety, and collective bargaining. The list of UNGC violators is provided by a third party and compliance with the list was monitored via our automated compliance controls. Schroders applied certain exceptions to the list during the reference period.

- Firm-wide exclusions also applied to companies that derived revenues above certain thresholds from activities related to tobacco and thermal coal, especially tobacco production, tobacco value chain (suppliers, distributors, retailers, licensors), thermal coal mining and coal fired power generation.

- The Fund also applied certain other exclusions.

- Further information on all of the Fund's exclusions is to be found under "Sustainability Related Disclosures" on the Fund's webpage, accessed via <https://www.schroders.com/en/lu/private-investor/gfc>.

How were the indicators for adverse impacts on sustainability factors taken into account?

Where the Investment Manager set levels in relation to the indicators for adverse impacts on sustainability factors, compliance with these thresholds was monitored on an ongoing basis via its portfolio compliance framework. Investee companies in breach of these levels were not eligible to be considered as a sustainable investment.

For example, the Fund excluded companies in violation of the UNGC principles (principal adverse impact (PAI) 10) from the portion of the portfolio in sustainable investments. The list of UNGC violators is provided by a third party and compliance with the list was monitored via our automated compliance controls. Schroders applied certain exceptions to the list during the reference period.

In addition, the Fund excluded companies that were deemed to contribute significantly to climate change (related to PAIs 1, 2 and 3 covering GHG emissions). The thresholds that were applied were companies deriving >10% revenue from thermal coal mining and >30% revenue from coal power generation. The Fund also excluded companies deriving >5% revenue from fossil fuel extraction and production and >5% revenue from the oil and gas value chain. The Fund also excludes companies on the Carbon Underground 200 list which includes the top 100 public coal companies globally and the top 100 public oil and gas companies globally, ranked by the potential carbon emissions content of their reported reserves. Compliance with these exclusions was monitored via our automated compliance controls.

In other areas Schroders set principles of engagement. We have aligned each of the PAIs to one of Schroders six core engagement themes. We summarise below the thresholds that apply and the engagement actions we have for each:

Climate Change

PAIs 1, 2, 3, 4, 5, 6 and 19 relate to the Engagement Blueprint theme of Climate Change. Details of our Engagement Blueprint can be found here: (Link <https://prod.schroders.com/en/sysglobalassets/about-us/schroders-engagement-blueprint-2022.pdf>). We engage to understand how companies are responding to the challenges climate change may pose to their long-term financial position. Through our engagement activity we seek to understand different areas, such as the speed and scale of emission reduction targets and steps being taken to meet climate goals.

Biodiversity and Natural Capital

Appendix V – Sustainable Finance Disclosure (Unaudited)

PAIs 7, 8 and 9 align to the Engagement Blueprint theme of Biodiversity and Natural Capital. We recognise the importance of all companies assessing and reporting on their exposure to natural capital and biodiversity risk. We focus our engagement on improving disclosure around a number of themes such as deforestation and sustainable food and water.

Human Rights

PAIs 10 and 14 relate to the Engagement Blueprint theme of Human Rights. There is increasing pressure on the role that businesses can and should play to respect human rights. We understand the higher operational and financial risks, and the reputational risk that human rights controversies cause. Our engagement focuses on three core stakeholders: workers, communities and customers.

Human Capital Management

PAIs 11, 12 and 13 align to the Engagement Blueprint theme of Human Capital Management. We identify human capital management as a priority issue for engagement, noting that people in an organisation are a significant source of competitive advantage and that effective human capital management is essential to drive innovation and long-term value creation. We also recognise a number of links between high standards of human capital management and the achievement of the Sustainable Development Goals (SDGs). Our engagement activities address themes such as health and safety, corporate culture and investment into the workforce.

Diversity and Inclusion

PAIs 12 and 13 relate to the Engagement Blueprint theme of Diversity and Inclusion. Improving disclosure on board diversity and the gender pay gap are two of the priority objectives outlined in our Engagement Blueprint. We request that companies implement a policy that requires each board vacancy to consider at least one or more diverse candidates. Our engagement approach also addresses diversity of the executive management, the workforce and in the value chain.

Corporate Governance

PAIs 20, 12 and 13 align to the Engagement Blueprint theme of Corporate Governance. We engage with companies to seek to ensure businesses act in the best interest of shareholders and other key stakeholders. We also recognise that, in most cases, in order to see progress and performance on other material Environmental, Social and Governance (ESG) issues, strong governance structures need to first be in place. We therefore engage on a number of corporate governance aspects such as executive remuneration, boards and management, and strategy.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The portion of the portfolio in sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

We used a list of UNGC violators as provided by a third party. Issuers on that list were not categorised as sustainable investments. The areas considered when determining whether an issuer is an UNGC violator included those covered by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, such as human rights, bribery and corruption, labour rights, child labour, discrimination, health and safety, and collective bargaining.

Appendix V – Sustainable Finance Disclosure (Unaudited)

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager’s approach to considering principal adverse impacts on sustainability factors involved classifying the indicators into three categories:

1. Set thresholds

For certain PAIs (e.g. PAI 10 on violations of UNGC principles), we set thresholds for considering an investment to be a sustainable investment. Investments in breach of these thresholds were not eligible to be held as sustainable investments. Compliance with these thresholds was monitored on an ongoing basis via the Investment Manager’s portfolio compliance framework.

2. Active ownership

During the reference period, the Investment Manager engaged in line with the approach and expectations set out in our Engagement Blueprint (Link <https://prod.schroders.com/en/sysglobalassets/about-us/schroders-engagement-blueprint-2022.pdf>) and as further described above. A summary of Schroders firm-wide engagement activity during the reference period, including the relevant engagement theme, is shown below:

Engagement Theme	# Issuers
Climate Change	738
Diversity and Inclusion	72
Governance and Oversight	3,096
Human Capital Management	130
Human Rights	121
Natural Capital and Biodiversity	95

3. Improve coverage

Some of the engagements identified in the table above involved discussions where the primary focus was to increase reporting on sustainability data. The purpose is to improve coverage of the PAIs, for example PAI 9 on hazardous waste ratio.

Our approach is subject to ongoing review, particularly as the availability, and quality, of PAI data evolves.

Appendix V – Sustainable Finance Disclosure (Unaudited)

What were the top investments of this financial product?

During the reference period the top 15 investments were:

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: **1 Jan 2022 to 31 Dec 2022**

Largest Investments	Sector	% Assets	Country
MICROSOFT CORPORATION COMMON STOCK USD0.0000125	Information Technology	4.81	United States

DEERE & COMPANY COMMON STOCK USD1	Industrials	2.08	United States

The list above represents the average of the Fund's holdings at each quarter end during the reference period.

The largest investments and % of assets referred to above are derived from the Schroders Investment Book of Record (IBoR) data source. The largest investments and % of assets detailed elsewhere in the Audited Annual Report are derived from the Accounting Book of Record (ABoR) maintained by the administrator. As a result of these differing data sources, there may be differences in the largest investments and % of assets due to the differing calculation methodologies of these alternative data sources.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

• What was the asset allocation?

The Fund's investments that were used to meet its environmental or social characteristics are summarised below.

#1 Aligned with E/S characteristics includes the Fund's assets that were used to attain the environmental or social characteristics, which is equal to 97%. The Fund maintained a higher overall level of avoided emissions than the MSCI All Country World (Net TR) Index and so the Fund's investments that were measured by Schroders' proprietary sustainability tool are included within #1 on the basis that they contributed to the Fund's overall level of avoided emissions (whether such individual investment had a high or low level). The percentage in #1 Aligned E/S characteristics represents the average of the last four months of the reference period, based on month-end data. Also included within #1 is the proportion of assets that were invested in sustainable investments, as indicated in #1A.

Appendix V – Sustainable Finance Disclosure (Unaudited)

Avoided emissions are measured by Schroders' proprietary tool that provides an estimate of the future emissions saved indirectly by companies' products and services through the substitution of high carbon activities with lower carbon alternatives. It does this by identifying certain carbon-avoiding activities and industries that if adopted would contribute to reducing economy-wide emissions. Schroders' proprietary tool uses third party data as well as Schroders own estimates and assumptions and the outcome may differ from other sustainability tools and measures.

The Fund invested 52% of its assets in sustainable investments. This percentage represents the average of the last four months of the reference period, based on month-end data. Within this, 27% was invested in sustainable investments with an environmental objective and 25% was invested in sustainable investments with a social objective. In respect of the proportion of the Fund's portfolio that was invested in sustainable investments, each sustainable investment demonstrated a net positive effect across a range of environmental or social objectives, as scored by Schroders' proprietary tool. A sustainable investment is classified as having an environmental or social objective depending on whether the relevant issuer has a higher score in Schroders' proprietary tool relative to its applicable peer group for its environmental indicators or its social indicators. In each case, indicators are comprised of both "costs" and "benefits".

#2 Other includes cash and warrants, which were treated as neutral for sustainability purposes.

Appendix V – Sustainable Finance Disclosure (Unaudited)

• *In which economic sectors were the investments made?*

During the reference period investments were made in the following economic sectors:

Sector	Sub-Sector	% Assets
Industrials	Capital Goods	29.79
Industrials	Transportation	2.19
Information Technology	Semiconductors & Semiconductor Equipment	11.38
Information Technology	Software & Services	6.29
Information Technology	Technology Hardware & Equipment	4.86
Consumer Discretionary	Retailing	5.17
Consumer Discretionary	Consumer Durables & Apparel	4.10
Consumer Discretionary	Automobiles & Components	2.67
Utilities	Utilities	9.42
Materials	Materials	6.25
Consumer Staples	Food & Staples Retailing	3.03
Consumer Staples	Food, Beverage & Tobacco	1.34
Communication Services	Media & Entertainment	4.09
Financials	Insurance	1.89
Financials	Diversified Financials	1.27
Health Care	Pharmaceuticals, Biotechnology & Life Sciences	2.47
Cash	Cash	1.97
Real Estate	Real Estate	1.80

Appendix V – Sustainable Finance Disclosure (Unaudited)

The list above represents the average of the Fund's holdings at each quarter end during the reference period.

The % of assets and sector classifications aligned to economic sectors referred to above are derived from the Schroders Investment Book of Record (IBoR) data source. The % of assets and sector classifications aligned to economic sectors detailed elsewhere in the Audited Annual Report are derived from the Accounting Book of Record (ABoR) maintained by the administrator. As a result of these differing data sources, there may be differences in the % of assets and sector classifications aligned to economic sectors, due to the differing calculation methodologies and data availability of these alternative data sources.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

There was no extent to which the Fund's investments (including transitional and enabling activities) with an environmental objective were aligned with the Taxonomy. Taxonomy alignment of this Fund's investments has therefore not been calculated and has as a result been deemed to constitute 0% of the Fund's portfolio.

• Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Appendix V – Sustainable Finance Disclosure (Unaudited)

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

• **What was the share of investments made in transitional and enabling activities?**

As per the above, the share of investments by the Fund in transitional and enabling activities has been deemed to constitute 0% of the Fund's portfolio.

• **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

As this is our first reporting period, this question is not applicable.

Appendix V – Sustainable Finance Disclosure (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund invested 27% of its assets in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy. This percentage is a proportion of the total percentage of sustainable investments, which is calculated as the average of the last four months of the reference period, based on month-end data.

What was the share of socially sustainable investments?

The Fund invested 25% of its assets in sustainable investments with a social objective. This percentage is a proportion of the total percentage of sustainable investments, which is calculated as the average of the last four months of the reference period, based on month-end data.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

#2 Other includes cash and warrants, which were treated as neutral for sustainability purposes.

Minimum safeguards were applied where relevant to investments and derivatives by restricting (as appropriate) investments in counterparties where there were ownership links or exposure to higher risk countries (for the purpose of money laundering, terrorist financing, bribery, corruption, tax evasion and sanctions risks). A firm-wide risk assessment considers the risk rating of each jurisdiction; which includes reference to a number of public statements, indices and world governance indicators issued by the UN, the European Union, the UK Government, the Financial Action Task Force and several Non-Government Organisations (NGOs), such as Transparency International and the Basel Committee.

In addition, new counterparties were reviewed by Schroders' credit risk team and approval of a new counterparty was based on a holistic review of the various sources of information available, including, but not limited to, quality of management, ownership structure, location, regulatory and social environment to which each counterparty is subject, and the degree of development of the local banking system and its regulatory framework. Ongoing monitoring was performed through a Schroders' proprietary tool, which supports the analysis of a counterparty's management of environmental, social and governance trends and challenges.

Schroders' credit risk team monitored the counterparties and during the reference period a number of counterparties were removed from the approved list for all funds in line with our policy and compliance requirements. This meant that such counterparties were ineligible for use by the Fund in respect of any relevant investments from the date they were removed.

What actions have been taken to meet the sustainable investment objective during the reference period?

Appendix V – Sustainable Finance Disclosure (Unaudited)

The actions taken during the reference period to meet the environmental and social characteristics promoted by the Fund were the following:

- The Investment Manager applied sustainability criteria when selecting investments for the Fund;
- The Investment Manager considered the level of avoided emissions of the Fund when selecting the assets held by the Fund;
- The Investment Manager utilised a Schroders' proprietary tool to help assess good governance practices of investee companies; and
- The Investment Manager undertook engagements covering one or more of the six priority themes set out in our Engagement Blueprint (Link <https://prod.schroders.com/en/sysglobalassets/about-us/schroders-engagement-blueprint-2022.pdf>). A summary of Schroders engagement activity, including the number of issuers engaged with and the related theme, is shown above in the question 'How did this financial product consider principal adverse impacts on sustainability factors?'. Through our engagement activities, we build relationships and have a two-way dialogue with our investee companies. We aim to drive change that protects and enhances the value of our investments.

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

No index was designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the Fund.

• How did the reference benchmark differ from a broad market index?

This question is not applicable for this Fund.

• How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

This question is not applicable for this Fund.

• How did this financial product perform compared with the reference benchmark?

This question is not applicable for this Fund.

• How did this financial product perform compared with the broad market index?

This question is not applicable for this Fund.

Appendix V – Sustainable Finance Disclosure (Unaudited)

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product : Schroder ISF Global Energy Transition
Legal Entity Identifier : 549300IS8ME9YA6EM043

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Did this financial product have a sustainable investment objective?

Yes
 No

<input checked="" type="checkbox"/> It made sustainable investments with an environmental objective: 92%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of __% of sustainable investments
<input type="checkbox"/> In economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> With an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> In economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> With an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective: __%	<input type="checkbox"/> With a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Appendix V – Sustainable Finance Disclosure (Unaudited)

To what extent was the sustainable investment objective of this financial product met?

The Fund's sustainable investment objective was met. The Fund invested at least 75% of its assets in companies worldwide that generated at least 50% of their revenue from activities that contributed towards the global transition towards lower-carbon and more sustainable sources of energy, such as lower-carbon energy production, distribution, storage, transport and associated supply chain, material provider and technology companies. The Fund also invested in other companies worldwide that generated a lower percentage of their revenue from these activities where the Investment Manager considered they are playing critical roles in the energy transition. All companies held by the Fund were deemed to be sustainable investments by the Investment Manager.

The Fund also invested in investments that the Investment Manager deemed to be neutral under its sustainability criteria, which were cash and warrants used with the aim of managing the Fund more efficiently.

No reference benchmark was designated for the purpose of attaining the sustainable investment objective.

The reference period for the Fund is 1 January 2022 to 31 December 2022.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

• *How did the sustainability indicators perform?*

The Fund invested 92% of its assets in sustainable investments. This percentage represents the average of the reference period, based on quarter-end data.

The Investment Manager was responsible for determining whether an investment met the criteria of a sustainable investment. The Investment Manager assessed whether a certain percentage of the relevant issuer's revenues, capital expenditure or operating expenditure contributed to an environmental objective. At least 75% of issuers generated at least 50% of their revenue from activities that contributed towards the global transition towards lower-carbon and more sustainable sources of energy. The Investment Manager manually added companies that met certain criteria with revenue exposure of below 50% to the Fund's investment universe.

Compliance with the minimum percentage in sustainable investments was monitored daily via the Investment Manager's automated compliance controls.

The Investment Manager used different sustainability indicators to measure the impact contribution at an investee company level. In particular, the Investment Manager used a quantitative screening tool to identify companies that derive a certain percentage of their revenues from their main activity that is associated with specific energy transition activities: including (1) renewable energy equipment; (2) renewable energy generation; (3) transmission and distribution; (4) batteries, storage and other equipment; (5) hydrogen; (6) electrical equipment and energy; and (7) clean mobility.

Subsequently, the Investment Manager used a number of indicators to derive a sustainability score out of ten for each company. Based on this score, each company was placed within one of the following categories: (1) Best-in-class, (2) Neutral and (3) Laggard. The indicators used to determine the score included but were not limited to metrics such as carbon intensity, board gender diversity and management remuneration. The information was drawn from company management meetings,

Appendix V – Sustainable Finance Disclosure (Unaudited)

publicly available corporate information as well as the Investment Manager's internal proprietary tools. The Investment Manager invested 53% of the portfolio in issuers classified as Best-in-class and 39% of the portfolio in issuers classified as Neutral. These figures were calculated as the average of the reference period based on quarter-end data. The Fund did not invest in any companies classified as laggards during the reference period.

The Fund also applied certain exclusions, including companies deriving direct revenue from fossil fuels, with which the Investment Manager monitored compliance on an ongoing basis via its portfolio compliance framework. The Fund did not invest in any issuers within the exclusionary criteria.

• *...and compared to previous periods?*

As this is our first reporting period, this question is not applicable.

• *How did the sustainable investments not cause significant harm to any sustainable investment objective?*

The Investment Manager's approach to not causing significant harm to any environmental or social sustainable investment objective included the following:

- Firm-wide exclusions applied to Schrodgers funds. These relate to international conventions on cluster munitions, anti-personnel mines, and chemical and biological weapons. A detailed list of all companies that are excluded is available at <https://www.schrodgers.com/en/sustainability/active-ownership/group-exclusions/>.
- Schrodgers became a signatory to the UN Global Compact (UNGC) principles on 6 January 2020. The Fund excluded companies in violation of the UNGC principles from the portfolio, as Schrodgers considers violators cause significant harm to one or more environmental or social sustainable investment objectives. The areas determining whether an issuer is an UNGC violator include issues that are covered by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, such as human rights, bribery and corruption, labour rights, child labour, discrimination, health and safety, and collective bargaining. The list of UNGC violators is provided by a third party and compliance with the list was monitored via our automated compliance controls. Schrodgers applied certain exceptions to the list during the reference period.
- Firm-wide exclusions also applied to companies that derived revenues above certain thresholds from activities related to tobacco and thermal coal, especially tobacco production, tobacco value chain (suppliers, distributors, retailers, licensors), thermal coal mining and coal fired power generation.
- The Fund also applied certain other exclusions.
- Further information on all of the Fund's exclusions is to be found under "Sustainability Related Disclosures" on the Fund's webpage, accessed via <https://www.schrodgers.com/en/lu/private-investor/gfc>.

• *How were the indicators for adverse impacts on sustainability factors taken into account?*

Where the Investment Manager set levels in relation to the indicators for adverse impacts on sustainability factors, compliance with these thresholds was monitored on an ongoing basis via its portfolio compliance framework. Investee companies in breach of these levels were not eligible to be considered as a sustainable investment.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Appendix V – Sustainable Finance Disclosure (Unaudited)

For example, the Fund excluded companies in violation of the UNGC principles (principal adverse impact (PAI) 10) from the portfolio. The list of UNGC violators is provided by a third party and compliance with the list was monitored via our automated compliance controls. Schroders applied certain exceptions to the list during the reference period.

In addition the Fund excluded companies that were deemed to contribute significantly to climate change (related to PAIs 1, 2 and 3 covering GHG emissions). The thresholds that were applied were companies deriving direct revenue from fossil fuels. Compliance with these exclusions was monitored via our automated compliance controls.

In other areas Schroders set principles of engagement. We have aligned each of the PAIs to one of Schroders six core engagement themes. We summarise below the thresholds that apply and the engagement actions we have for each:

Climate Change

PAIs 1, 2, 3, 4, 5, 6 and 19 relate to the Engagement Blueprint theme of Climate Change. Details of our Engagement Blueprint can be found here: (Link <https://prod.schroders.com/en/sysglobalassets/about-us/schroders-engagement-blueprint-2022.pdf>). We engage to understand how companies are responding to the challenges climate change may pose to their long-term financial position. Through our engagement activity we seek to understand different areas, such as the speed and scale of emission reduction targets and steps being taken to meet climate goals.

Biodiversity and Natural Capital

PAIs 7, 8 and 9 align to the Engagement Blueprint theme of Biodiversity and Natural Capital. We recognise the importance of all companies assessing and reporting on their exposure to natural capital and biodiversity risk. We focus our engagement on improving disclosure around a number of themes such as deforestation and sustainable food and water.

Human Rights

PAIs 10 and 14 relate to the Engagement Blueprint theme of Human Rights. There is increasing pressure on the role that businesses can and should play to respect human rights. We understand the higher operational and financial risks, and the reputational risk that human rights controversies cause. Our engagement focuses on three core stakeholders: workers, communities and customers.

Human Capital Management

PAIs 11, 12 and 13 align to the Engagement Blueprint theme of Human Capital Management. We identify human capital management as a priority issue for engagement, noting that people in an organisation are a significant source of competitive advantage and that effective human capital management is essential to drive innovation and long-term value creation. We also recognise a number of links between high standards of human capital management and the achievement of the Sustainable Development Goals (SDGs). Our engagement activities address themes such as health and safety, corporate culture and investment into the workforce.

Diversity and Inclusion

PAIs 12 and 13 relate to the Engagement Blueprint theme of Diversity and Inclusion. Improving disclosure on board diversity and the gender pay gap are two of the priority objectives outlined in

Appendix V – Sustainable Finance Disclosure (Unaudited)

our Engagement Blueprint. We request that companies implement a policy that requires each board vacancy to consider at least one or more diverse candidates. Our engagement approach also addresses diversity of the executive management, the workforce and in the value chain.

Corporate Governance

PAIs 20, 12 and 13 align to the Engagement Blueprint theme of Corporate Governance. We engage with companies to seek to ensure businesses act in the best interest of shareholders and other key stakeholders. We also recognise that, in most cases, in order to see progress and performance on other material Environmental, Social and Governance (ESG) issues, strong governance structures need to first be in place. We therefore engage on a number of corporate governance aspects such as executive remuneration, boards and management, and strategy.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

We used a list of UNGC violators as provided by a third party. Issuers on that list were not categorised as sustainable investments. The areas considered when determining whether an issuer is an UNGC violator included those covered by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, such as human rights, bribery and corruption, labour rights, child labour, discrimination, health and safety, and collective bargaining.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager’s approach to considering principal adverse impacts on sustainability factors involved classifying the indicators into three categories:

1. Set thresholds

For certain PAIs (e.g. PAI 10 on violations of UNGC principles), we set thresholds for considering an investment to be a sustainable investment. Investments in breach of these thresholds were not eligible to be held as sustainable investments. Compliance with these thresholds was monitored on an ongoing basis via the Investment Manager’s portfolio compliance framework.

2. Active ownership

Appendix V – Sustainable Finance Disclosure (Unaudited)

During the reference period, the Investment Manager engaged in line with the approach and expectations set out in our Engagement Blueprint (Link <https://prod.schroders.com/en/sysglobalassets/about-us/schroders-engagement-blueprint-2022.pdf>) and as further described above.

During the year the Investment Manager conducted a number of dedicated sustainability engagements across the investible universe on a number of different topics, including but not limited to climate change, human rights and corporate governance. In particular the Investment Manager engaged with companies on setting net zero emissions transition plans and the issue of human rights in the solar value chain where we continue to build our understanding of the allegations faced by the sector. The Investment Manager also engaged with companies with regard to corporate governance structures and/or remuneration structures.

A summary of Schroders firm-wide engagement activity, during the reference period, including the relevant engagement theme, is shown below:

Engagement Theme	# Issuers
Climate Change	738
Diversity and Inclusion	72
Governance and Oversight	3,096
Human Capital Management	130
Human Rights	121
Natural Capital and Biodiversity	95

3. Improve coverage

Some of the engagements identified in the table above involved discussions where the primary focus was to increase reporting on sustainability data. The purpose is to improve coverage of the PAIs, for example PAI 9 on hazardous waste ratio.

Our approach is subject to ongoing review, particularly as the availability, and quality, of PAI data evolves.

What were the top investments of this financial product?

During the reference period the top 15 investments were:

Appendix V – Sustainable Finance Disclosure (Unaudited)

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: **1 Jan 2022 to 31 Dec 2022**

Largest Investments	Sector	% Assets	Country
VESTAS WIND SYSTEMS	Industrials	6.21	Denmark

The list above represents the average of the Fund's holdings at each quarter end during the reference period.

The largest investments and % of assets referred to above are derived from the Schroders Investment Book of Record (IBoR) data source. The largest investments and % of assets detailed elsewhere in the Audited Annual Report are derived from the Accounting Book of Record (ABoR) maintained by the administrator. As a result of these differing data sources, there may be differences in the largest investments and % of assets due to the differing calculation methodologies of these alternative data sources.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

• What was the asset allocation?

The Fund's investments that were used to meet its sustainable investment objective are summarised below.

#1 Sustainable are investments in companies worldwide that generated a certain percentage of their revenue (for 75% of the assets of the Fund, at least 50%) from activities that contributed towards the global transition towards lower-carbon sources of energy, such as lower-carbon energy production, distribution, storage, transport and associated supply chain, material provider and technology companies or are playing critical roles in the energy transition.

The Fund invested 92% of its assets in sustainable investments. This percentage represents the average of the reference period, based on quarter-end data. All the sustainable investments had an environmental objective.

#2 Not sustainable includes investments that were treated as neutral for sustainability purposes, which were cash and warrants used with the aim of managing the Fund more efficiently.

Appendix V – Sustainable Finance Disclosure (Unaudited)

• In which economic sectors were the investments made?

During the reference period investments were made in the following economic sectors:

Sector	Sub-Sector	% Assets
Industrials	Capital Goods	30.47
Industrials	Transportation	0.02
Information Technology	Semiconductors & Semiconductor Equipment	16.17
Information Technology	Technology Hardware & Equipment	7.90
Utilities	Utilities	18.18
Materials	Materials	11.04
Consumer Discretionary	Automobiles & Components	6.84
Consumer Discretionary	Consumer Durables & Apparel	1.31
Cash	Cash	8.07

The list above represents the average of the Fund's holdings at each quarter end during the reference period.

The % of assets and sector classifications aligned to economic sectors referred to above are derived from the Schroders Investment Book of Record (IBoR) data source. The % of assets and sector classifications aligned to economic sectors detailed elsewhere in the Audited Annual Report are derived from the Accounting Book of Record (ABoR) maintained by the administrator. As a result of these differing data sources, there may be differences in the % of assets and sector classifications aligned to

Appendix V – Sustainable Finance Disclosure (Unaudited)

economic sectors, due to the differing calculation methodologies and data availability of these alternative data sources.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

There was no extent to which the Fund's investments (including transitional and enabling activities) with an environmental objective were aligned with the Taxonomy. Taxonomy alignment of this Fund's investments has therefore not been calculated and has as a result been deemed to constitute 0% of the Fund's portfolio.

• Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- Yes:
- In fossil gas In nuclear energy
- No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

Appendix V – Sustainable Finance Disclosure (Unaudited)

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

• **What was the share of investments made in transitional and enabling activities?**

As per the above, the share of investments by the Fund in transitional and enabling activities has been deemed to constitute 0% of the Fund's portfolio.

• **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

As this is our first reporting period, this question is not applicable.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

Appendix V – Sustainable Finance Disclosure (Unaudited)

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

All sustainable investments made by the Fund had environmental objectives that were not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

There were no sustainable investments with a social objective.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

#2 Not sustainable includes investments that were treated as neutral for sustainability purposes, which were cash and warrants used with the aim of managing the Fund more efficiently.

Minimum safeguards were applied where relevant to investments and derivatives by restricting (as appropriate) investments in counterparties where there were ownership links or exposure to higher risk countries (for the purpose of money laundering, terrorist financing, bribery, corruption, tax evasion and sanctions risks). A firm-wide risk assessment considers the risk rating of each jurisdiction; which includes reference to a number of public statements, indices and world governance indicators issued by the UN, the European Union, the UK Government, the Financial Action Task Force and several Non-Government Organisations (NGOs), such as Transparency International and the Basel Committee.

In addition, new counterparties were reviewed by Schroders’ credit risk team and approval of a new counterparty was based on a holistic review of the various sources of information available, including, but not limited to, quality of management, ownership structure, location, regulatory and social environment to which each counterparty is subject, and the degree of development of the local banking system and its regulatory framework. Ongoing monitoring was performed through a Schroders’ proprietary tool, which supports the analysis of a counterparty’s management of environmental, social and governance trends and challenges.

Schroders’ credit risk team monitored the counterparties and during the reference period a number of counterparties were removed from the approved list for all funds in line with our policy and compliance requirements. This meant that such counterparties were ineligible for use by the Fund in respect of any relevant investments from the date they were removed.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The actions taken during the reference period to attain the sustainable investment objective of the Fund were the following:

Appendix V – Sustainable Finance Disclosure (Unaudited)

- The Fund invested at least 75% of its assets in companies that generated at least 50% of their revenue from activities that contributed towards the global transition towards lower-carbon sources of energy.
- The Fund invested in companies that did not cause significant environmental or social harm.
- The Investment Manager utilised a Schroders' proprietary tool to help assess good governance practices of investee companies.
- The Investment Manager engaged with issuers held in the portfolio and on average aimed to meet or speak with company management once every six months. During these meetings sustainability topics were regularly discussed alongside business trends and financial performance.
- During 2022 the Investment Manager conducted 22 dedicated sustainability engagements across the investible universe on a number of different topics, including but not limited to climate change, human rights and corporate governance.
- In addition, the Investment Manager worked on a mass engagement project during the reference period which encouraged companies within the portfolio and the wider investible universe to set net zero emissions transition plans. This project will continue into the next reference period.

How did this financial product perform compared to the reference sustainable benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

No index was designated as a reference benchmark for the purpose of attaining the sustainable investment objective of the Fund.

• *How did the reference benchmark differ from a broad market index?*

This question is not applicable for this Fund.

• *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?*

This question is not applicable for this Fund.

• *How did this financial product perform compared with the reference benchmark?*

This question is not applicable for this Fund.

• *How did this financial product perform compared with the broad market index?*

This question is not applicable for this Fund.
